Early Cultural Writings
Publisher’s Note

Early Cultural Writings consists of essays and other prose writings on literature, education, art and other cultural subjects. Most of them were written between 1890 and 1910, a few between 1910 and 1920. The editors have arranged the material by topic in nine parts and two appendixes. Many of the pieces were published in journals or books during Sri Aurobindo’s lifetime. The others are reproduced from his manuscripts. The editors have checked all the texts against the relevant printed or manuscript versions. Simple editorial problems arising from incomplete revision, etc., are indicated by means of the system explained in the Guide to Editorial Notation on the next page. More complex problems are discussed in footnotes or in the Note on the Texts at the end of the volume.
Guide to Editorial Notation

About half the material in this volume was not prepared by Sri Aurobindo for publication. This material has been transcribed from manuscripts that present a variety of textual difficulties. As far as possible the editors have indicated these problems by means of the notation shown below.

<table>
<thead>
<tr>

Part One

The Harmony of Virtue

Sri Aurobindo wrote all the pieces in this part in England between 1890 and 1892. He did not publish any of them during his lifetime.
The Sole Motive of Man’s Existence

The banquet was half over and the wine in lively progress round the table; yet the ladies did not retire. The presence of women over the wine was one of the cardinal articles of Julian’s social creed.

The conversation turned on the Christian religion which finally emerged from the arena stripped of all its plumes and in a condition woefully besmirched and bedraggled. Julian, who had taken the lead in blasphemy, closed the subject by observing “The popular Gods should be denied but respected.”

“Yet you couple women and wine in your banquet-room” said Erinna.

“Ah, my friend, I only observe Nature’s ordinances: in social life sex does not exist. Besides conversation requires speech as well as reason.”

“You insinuate?”

“Nature gave man reason, speech to woman.”

The men laughed.

“I will quote you two sentences from my new catechism, Julian” said Helen Woodward. “To what end has man used reason? To make Truth incredible. To what purpose has woman employed speech? To say nothing.”

Julian felt that the tone of talk was becoming too serious and he glided away from the subject. During the flow of the wine someone coupled the names of Aphrodite and Bacchus.

“Ah yes” said Julian “how is it that we have not honoured the goddess who presides over this feast?”

“Let Julian do it in his master’s fashion” suggested Corydon.

“I cannot tread beaten ground, Lionel.”

“Ah but Love is as bottomless as the sea.”

“Yet Plato was an excellent diver and brought up the richest pearls.”
“Scarcely in one dive, Julian” said Powell.
“In five, if I remember aright.”
“Yet Agathon’s pearl was not flawless.”
“Do you propose to amend it?”
“I should but spoil it; but I could dive for a pearl of my own
finding perhaps.”
“You shall have a rich meed of praise.”
“But, my dear critic” said Erinna “what ground was untrod
by Plato?”
“Agathon painted the loveliness of Love but not Love him-
self.”
“Describe him then you” said Julian and raised his hand for
silence.
Powell lay back a moment with his dark Welsh eyes fixed
upon the ceiling and then spoke.
“I am told to describe Love” began Powell “yet in order to
describe I must first define. And how is that possible with a being
intangible as the air and inconstant as the moon? For Love is
as slippery and mutable as Proteus, chameleon-hued, multiform,
amorphous, infinite; the transmigrations of a Hindu soul are not
more various and elastic; the harmony of his outlines are not
blurred by chaos or the weird; rather like poetry and summer
he wraps himself in a cool soft robe of velvet air and his feet
are kissed by the laughing sea. But the translucent air which
promises to reveal is a cloak far thicker than the gathering dusk.
Thus the Eros of Praxiteles is not Love himself but the soul of the
sculptor in one of her phases. Yet though Love has no one form,
the idea, the soul of Love, that strange essence which walks for
ever in the peopled Shadow-land, he is shackled in a single and
uniform shape. How then shall I paint the idea of Love? The
Greeks have described a child with a warlike bow of horn and
bitter arrows tipped with steel, and modern poets inspired by
this rude conception have fabled of the smart which is the herald
of Love’s shaft. But these ideas however happy in themselves
are by no means suitable to Love; for they are without two of
his most essential elements, the subtle and the impalpable. The
Hindus are more felicitous when they sing of Kama — for poetry
The Sole Motive of Man’s Existence

alone can express him — the divine and radiant youth mounted on [an] emerald parrot, and bearing in his right hand a bow of flowers; the arrows too must be of the same soft and voluptuous material — for a preference I would name the shefali, the only blossom which has a soul. For Love’s arrow never pains while in the wound — it is too subtle and flower-like — if a lover is in pain, it is because he loves himself more than Love — and that is the fault of Nature, not of Eros. Again Love has been painted as blind; and in this too the poets of Europe have conceived a lyrical fiction; for they say that Love looses his shafts and knows not whom they strike, whereas indeed he knows too well. It is his delight to unite those who should never have so much as met and to blind them to their own misery until the shefali arrow has withered in their hearts; and this he does with eyes open and of deliberate purpose. So far poets have sinned; but it is a vulgar error to suppose Love garrulous, a bastard child of Momus and Aphrodite; whereas in truth he is the lawful son of Hephaistos; but he has swallowed his father down, and for that reason those lovely lips, the scarlet portals of Passion’s treasury, do not yield up their store of pearls and rubies — nay dare not so much as open lest Hephaistos escape and in his anger blast the world.

“Thus then I paint Love.”

A murmur of applause flew like a wild spirit from mouth to mouth.

“Record me a confirmed Pythagorean” said Julian “the soul of Agathon did not perish in Macedonia.”

“Yet I dare say, Vernon” replied Erinna “you do not believe a word of what Agathon has been saying.”

“Yet your belief is the bastard of Momus rather than the heir of Peitho” rejoined Helen Woodward.

“I confess, Powell” replied Julian “that the manner pleased me better than the matter.”

“Your reason, Julian?”

“Your picture was too beautiful to be true.”

“That is a recommendation” said Erinna.

“To the artist but not to the critic.”

“How would you define Love, Julian?” asked Corydon.
“Give me a moment to think.”
“You will be harshly criticised.”
“Heine speed me! How will this do — the smile of a drunken God.”

There was applause.
“Ah but it is perfect” exclaimed Dufresne between a laugh and a sigh.
“But Marc might give us a better” suggested Philip.
“In its own way” assented Marc “Love is spiritual champagne, the best of wines if the briefest.”

The characteristic answer set the echoes rocking to Homeric mirth.
“A poisonous purple flower” said Helen “but its chalice collects the pure wine of heaven.”
“It is the paean of the soul heavenward or its dithyramb hell-ward” subjoined Corydon.

O’Ruark dissented. “It is a strange mania which everyone is bound to catch, mostly at a certain age — in short the spiritual measles.”

A burst of laughter greeted this Irish flight.
“Love is a runner in the race of life with the parsley wreath of joy for his prize” said Philip, formulating the sensations of the moment in an aphorism.
“Alas, to wear it for a day” said Pattison Ely “he is the bridegroom of Sin and the father of Satiety.”
“Ah no, but the child of Sin” corrected Julian “beautiful child of a more beautiful mother.”
“Is it not Sin itself” suggested Erinna “Sin, the true philosopher’s stone which turns life from dull lead to gold.”
“What is Sin?” asked Julian smiling.
“The invention of spiritual alchemists; it turns a leaden life to gold.”
“A modern discovery, I think” said Powell.
“A modern revival” corrected Erinna “they lost the secret in the Dark Ages; that is why the history of the time is so dull. Sin was legalised and therefore gave no pleasure.”

Julian laughed.
“You have given me what I have long been in search of.”
“What is that, Julian?”
“A good reason for the existence of Laws.”
Erinna smiled and went on. “They lost the secret of Love too and found in its place the gorgeous phantasm of chivalry. I maintain that Love is only a form of Sin.”
“Yet they recognise marriage.”
“They raise a monument over the corpse of Love.”
“She who could best tell us what Love is, sits silent” said Helen Woodward, looking at Ella.
“It is the sole motive of man’s existence” replied Ella. It was the first time she had opened her lips but the thought in her mind leaped out before she could bring it back.
There was tender laughter as of disillusioned September lenient to the emerald hopes of April; yet in the company no one save only Julian had passed the farther bourne of youth. In these days men live too fast to reckon their age by years.
But Helen Woodward looked at Ella with a world of compassion in her beautiful wild eyes.
Night flew on wingèd feet and the wine was in their speech.
At last the ladies rose and left the room; to the heart of Ella it seemed as [incomplete]
The Harmony of Virtue
Book One

*Keshav Ganesh — Broome Wilson*

*Keshav* — My dear Broome, how opportune is your arrival! You will save me from the malady of work, it may be, from the dangerous opium of solitude. How is it I have not seen you for the last fortnight?

*Wilson* — Surely, Keshav, you can understand the exigencies of the Tripos?

*Keshav* — Ah, you are a happy man. You can do what you are told. But put off your academical aspirations until tomorrow and we will talk. The cigarettes are on the mantelpiece — pardon my indolence! — and the lucifers are probably stowed on the fruit-shelf. And here is coffee and a choice between cake and biscuits. Are you perfectly happy?

*Wilson* — In Elysium. But do not let the cigarettes run dry; the alliance of a warm fire and luxurious cushions will be too strong for my vigilance. Do you mean to tell me you can work here?

*Keshav* — Life is too precious to be wasted in labour, & above all this especial moment of life, the hour after dinner, when we have only just enough energy to be idle. Why, it is only for this I tolerate the wearisome activity of the previous twelve hours.

*Wilson* — You are a living paradox. Is it not just like you to pervert indolence into the aim of life?

*Keshav* — Why, what other aim can there be?

*Keshav* — I cannot consent to cherish an opinion until I realise the meaning of duty.

*Wilson* — I suppose I have pledged myself to an evening of metaphysics. We do our duty when we do what we ought to do.

*Keshav* — A very lucid explanation; but how do we know
that we are doing what we ought to do?

Wilson — Why, we must do what society requires of us.

Keshav — And must we do that, even when society requires something dissonant with our nature or repugnant to our convictions?

Wilson — I conceive so.

Keshav — And if society requires us to sacrifice our children or to compel a widow to burn herself we are bound to comply?

Wilson — No; we should only do what is just and good.

Keshav — Then the fiat of society is not valid; duty really depends on something quite different.

Wilson — It appears so.

Keshav — Then what is your idea of that something quite different on which duty depends?

Wilson — Would it be wrong to select morality?

Keshav — Let us inquire. But before that is possible, let me know what morality is or I shall not know my own meaning.

Wilson — Morality is the conduct our ethical principles require of us.

Keshav — Take me with you. This ethical principle is then personal, not universal?

Wilson — I think so. For different localities different ethics. I am not a bigot to claim infallibility for my own country.

Keshav — So we must act in harmony with the code of ethics received as ideal by the society we move in?

Wilson — I suppose it comes to that.

Keshav — But, my dear Broome, does not that bring us back to your previous theory that we should do what society requires of us?

Wilson — I am painfully afraid it does.

Keshav — And we are agreed that this is not an accurate plumbline?

Wilson — Yes.

Keshav — You see the consequence?

Wilson — I see I must change my ground and say that we must do what our personal sense of the right and just requires of us.
Keshav — For example if my personal sense of the right and just, tells me that to lie is meritorious, it is my duty to lie to the best of my ability.

Wilson — But no one could possibly think that.

Keshav — I think that the soul of Ithacan Ulysses has not yet completed the cycle of his transmigrations, nor would I wrong the author of the Hippias by ignoring his conclusions. Or why go to dead men for an example? The mould has not fallen on the musical lips of the Irish Plato nor is Dorian Gray forgotten on the hundred tongues of Rumour.

Wilson — If our sense of right is really so prone to error, we should not rely upon it.

Keshav — Then, to quote Mrs Mountstuart, you have just succeeded in telling me nothing. Duty is not based on our personal sense of the right and just.

Wilson — I allow it is not.

Keshav — But surely there is some species of touchstone by which we can discern between the false and the true?

Wilson — If there is I cannot discover it.

Keshav — Ah, but do try again. There is luck in odd numbers.

Wilson — The only other touchstone I can imagine is religion; and now I come to think of it, religion is an infallible touchstone.

Keshav — I am glad you think so; for all I know at present you are very probably right. But have you any reason for your conviction?

Wilson — A code of morality built upon religion has no commerce with the demands of society or our personal sense of the right and just, but is the very law of God.

Keshav — I will not at present deny the reality of a personal God endowed with passions & prejudices; that is not indispensable to our argument. But are there not many religions and have they not all their peculiar schemes of morality?

Wilson — No doubt, but some are more excellent than others.

Keshav — And do you cherish the opinion that your own
peculiar creed — I believe it to be Christianity without Christ —
is indubitably the most excellent of all religions?

    Wilson — By far the most excellent.
    Keshav — And your own ethical scheme, again the Christian without the emotional element, the best of all ethical schemes?
    Wilson — I have no doubt of it.
    Keshav — And they are many who dissent from you, are there not?
    Wilson — Oh without doubt.
    Keshav — And you would impose your ethical scheme on them?
    Wilson — No; but I imagine it to be the goal whither all humanity is tending.
    Keshav — That is a very different question. Do you think that when a man’s life is in harmony with his own creed, but not with yours, he is therefore not virtuous, or in your own phrase, deviates from his duty?
    Wilson — God forbid!
    Keshav — Then you really do believe that a man does his duty when he lives in harmony with the ethical scheme patronised by his own religion, as a Mohammadan if he follows the injunctions of the Prophet, a Hindu if he obeys the Vedic Scriptures, a Christian, if his life is a long self-denial.
    Wilson — That I admit.
    Keshav — Then the ethical scheme of Islam is as much the very law of God, as the ethical scheme of Christianity, and the morals of Hinduism are not less divine than the morals of Islam.
    Wilson — I hardly understand how you arrive at that conclusion.
    Keshav — Did you not say, Broome, that religion is an infallible test of duty, because it is the very law of God?
    Wilson — I still say so.
    Keshav — And that everyone must adopt his own religion as the test of what he should do or not do?
    Wilson — I cannot deny it.
    Keshav — Then must you not either admit the reason to be
invalid or that anyone’s peculiar religion, to whatever species it may belong, is the very law of God?

Wilson — I prefer the second branch of the dilemma.

Keshav — But tho’ every religion is the very law of God, nevertheless you will often find one enjoining a practice which to another is an abomination. And can God contradict himself?

Wilson — You mistake the point. Islam, Hinduism, indeed all Scriptural religions were given, because the peoples professing them were not capable of receiving a higher light.

Keshav — Is not God omnipotent?

Wilson — A limited God is not God at all.

Keshav — Then was it not within his omnipotent power to so guide the world, that there would be no necessity for different dealings with different peoples?

Wilson — It was within his power, but he did not choose.

Keshav — Exactly: he did not choose. He of set purpose preferred a method which he knew would bring him to falsehood and injustice.

Wilson — What words you use! The truth is merely that God set man to develop under certain conditions and suited his methods to those conditions.

Keshav — Oh, then God is practically a scientist making an experiment; and you demand for him reverence and obedience from the creature vivisected. Then I can only see one other explanation. Having created certain conditions he could not receive the homage of mankind without various and mutually dissentient revelations of his will.

Now imagine a physician with theosophical power who for purposes of gain so modified the climatic features of Judaea & Arabia that the same disease required two distinct methods of treatment in the one & the other. This he does wilfully and deliberately and with foreknowledge of the result. As soon as his end is assured, our physician goes to Judaea and gives the people a drug which, he tells them, is the sole remedy for their disease, but all others are the property of quacks and will eventually induce an increase of the malady. Five years later the same
physician goes off to Arabia and here he gives them another
drug of an accurately opposite nature about which he imparts
the same instructions. Now if we remember that the climatic
conditions which necessitated the deception, were the deliberate
work of the deceiver, shall we not call that physician a liar and
an impostor? Is God a liar? or an impostor?

Wilson — We must not measure the Almighty by our poor
mortal standards.

Keshav — Pshaw, Broome, if the legislator overrides his
own laws, how can you hope that others will observe them?

Wilson — But if God in his incomprehensible wisdom and
goodness —

Keshav — Incomprehensible indeed! If there is any meaning
in words, the God you have described, can neither be wise nor
good. Will you show me the flaw in my position?

Wilson — I cannot discover it.

Keshav — Then your suspicion is born of your disgust at
the conclusion to which I have forced you.

Wilson — I am afraid it is.

Keshav — Well, shall we go on with the discussion or should
I stop here?

Wilson — Certainly let us go on. I need not shy at a truth
however disagreeable.

Keshav — First let me give you a glass of this champagne.
I do not keep any of those infernal concoctions of alcohol and
perdition of which you in Europe are so enamoured. Now here
is the conclusion I draw from all that we have been saying:
There are two positions open to you. One is that of the fanatic.
You may say that you and those who believe with you are the
specially chosen of God to be the receptacles of his grace and
that all who have heard and rejected his gospel together with
those who have not so much as imagined its possibility must
share a similar fate and go into the outer darkness where there
is wailing and gnashing of teeth. If that is the line you take up,
my answer is that God is an unjust God and the wise will prefer
the torments of the damned to any communion with him. The
fanatic of course would be ready with his retort that the potter
has a right to do what he will with his vessels. At that point I usually abandon the conversation; to tell him that a metaphor is no argument would be futile. Even if he saw it, he would reply that God’s ways are incomprehensible and therefore we should accept them without a murmur. That is a position which I have not the patience to undermine, nor if I had it, have I sufficient self-control to preserve my gravity under the ordeal.

Wilson — I at least, Keshav, am not in danger of burdening your patience. I have no wish to evade you by such a back-door as that.

Keshav — Then is it not plain to you, that you must abandon the religious basis as unsound?

Wilson — Yes, for you have convinced me that I have been talking nonsense the whole evening.

Keshav — Not at all, Broome: only you like most men have not accustomed yourself to clear and rigorous thought.

Wilson — I am afraid, logic is not sufficiently studied.

Keshav — Is it not studied too much? Logic dwindles the river of thought into a mere canal. The logician thinks so accurately that he is seldom right. No, what we want is some more of that sense which it is a mockery to call common.

Wilson — But if we were to eliminate the divine element from the balance, would not religion be a possible basis?

Keshav — No, for religious ethics would then be a mere expression of will on the part of Society. And that is open to the criticism that the commands of Society may be revolting to the right and just or inconsistent with the harmony of life.

Wilson — But supposing everyone to interpret for himself the ethics approved by his own creed?

Keshav — The Inquisitors did that. Do you consider the result justified the method?

Wilson — The Inquisitors?

Keshav — They were a class of men than whom you will find none more scrupulous or in their private lives more gentle, chivalrous & honourable, or in their public conduct more obedient to their sense of duty. They tortured the bodies of a few, that the souls of thousands might live. They did murder in the
sight of the Lord and looked upon their handiwork and saw that it was good.

Wilson — My dear Keshav, surely that is extravagant.

Keshav — Why, do you imagine that they were actuated by any other motive?

Wilson — Yes, by the desire to preserve the integrity of the Church.

Keshav — And is not that the first duty of every Christian?

Wilson — Only by the permissible method of persuasion.

Keshav — That is your opinion but was it theirs? Duty is a phantasm spawned in the green morass of human weakness & ignorance, but perpetuated by vague thought and vaguer sentiment. And so long as we are imperatively told to do our duty, without knowing why we should do it, the vagueness of private judgment, the cruelty of social coercion will be the sole arbiters and the saint will be a worse enemy of virtue than the sinner.

Will you have another cigarette?

Wilson — Thanks, I will.

But, Keshav, I am not disposed to leave the discussion with this purely negative result. Surely there is some guiding principle which should modify and harmonize our actions. Or are you favourable to an anarchy in morals?

Keshav — No, Broome. If culture and taste were universal, principle would then be a superfluous note in the world’s composition. But so long as men are crude, without tact, formless, incapable of a balanced personality, so long the banner of the ideal must be waved obtrusively before the eyes of men, and education remain a necessity, so long must the hateful phrase, a higher morality, mean something more than empty jargon of sciolists. Yes, I think there is that guiding principle you speak of, or at least we may arrive at something like it, if we look long enough.

Wilson — Then do look for it, Keshav. I am sure you will find something original and beautiful. Come, I will be idle tonight and abandon the pursuit of knowledge to waste time in the pursuit of thought. Begin and I will follow my leader.

Keshav — Before I begin, let me remove one or two of those popular fallacies born of indolence which encumber the wings
of the speculator. And first let me say, I will not talk of duty: it is a word I do not like, for it is always used in antagonism to pleasure, and brings back the noisome savour of the days when to do what I was told, was held out as my highest legitimate aspiration. I will use instead the word virtue, whose inherent meaning is manliness, in other words, the perfect evolution by the human being of the inborn qualities and powers native to his humanity.

Another thing I would like to avoid is the assumption that there is somewhere and somehow an ideal morality, which draws an absolute and a sharp distinction between good and evil. Thus it is easy to say that chastity is good, licence is evil. But what if someone were to protest that this is a mistake, that chastity is bad, licence is good. How are you going to refute him? If you appeal to authority, he will deny that your authority is valid; if you quote religion, he will remind you that your religion is one of a multitude; if you talk of natural perception, he will retort that natural perception cancels itself by arriving at opposite results. How will you unseat him from his position?

Wilson — Yes, you can show that good is profitable, while evil is hurtful.

Keshav — You mean the appeal to utility?

Wilson — Yes.

Keshav — That is without doubt an advance. Now can you show that good is profitable, that is to say, has good effects, while evil is hurtful, that is to say, has bad effects?

Wilson — Easily. Take your instance of chastity and licence. One is the ground-work of that confidence which is the basis of marriage and therefore the keystone of society; the other kills confidence and infects the community with a bad example.

Keshav — You fly too fast for me, Broome. You say chastity is the basis of marriage?

Wilson — Surely you will not deny it?

Keshav — And licence in one leads to prevalent unchastity?

Wilson — It has that tendency.

Keshav — And you think you have proved chastity to be profitable and licence hurtful?
Wilson — Why, yes. Do not you?
Keshav — No, my friend; for I have not convinced myself that marriage is a good effect and prevalent unchastity a bad effect.
Wilson — Only paradox can throw any doubt on that. Assuredly you will not deny that without marriage and public decency, society is unimaginable?
Keshav — I suppose you will allow that in Roman society under the Emperors marriage was extant? And yet will you tell me that in those ages chastity was the basis of marriage?
Wilson — I should say that marriage in the real sense of the word was not extant.
Keshav — Then what becomes of your postulate that without marriage and public decency society is unimaginable?
Wilson — Can you bestow the name on the world of Nero & Caracalla?
Keshav — Certainly, if I understand the significance of the word. Wherever the mutual dependence of men builds up a community cemented by a chain of rights and liabilities, that, I imagine, is a society.
Wilson — Certainly, that is a society.
Keshav — And will you then hesitate to concede the name to imperial Italy?
Wilson — Yes, but you will not deny that from the unreality of marriage and the impudent disregard of common decency, — at once its cause and effect — there grew up a prevalence of moral corruption, but for which the Roman world would not have succumbed with such nerveless ease to Scythia and its populous multitude.
Keshav — What then? I do not deny it.
Wilson — Was not that a bad effect?
Keshav — By bad, I presume you mean undesirable?
Wilson — That of course.
Keshav — Perhaps it was, but should we not say that Rome fell because barbarism was strong not because she was feeble?
Wilson — Rome uncorrupted was able to laugh at similar perils.
Keshav — Then to have Rome safe, you would have had her remain barbarous?
Wilson — Did I say so?
Keshav — You implied it. In Rome the triumphal chariot of Corruption was drawn by the winged horses, Culture and Art. And it is always so. From the evergreen foliage of the Periclean era there bloomed that gorgeous and overblown flower, Athens of the philosophers, a corrupt luxurious city, the easy vassal of Macedon, the easier slave of Rome. From the blending of Hellenic with Persian culture was derived that Oriental pomp and lavish magnificence which ruined the kingdoms of the East. And Rome, their conqueror, she too when the Roman in her died and the Italian lived, when the city of wolves became the abode of men, bartered her savage prosperity for a splendid decline. Yes, the fulness of the flower is the sure prelude of decay.

Look at the India of Vikramaditya. How gorgeous was her beauty! how Olympian the voices of her poets! how sensuous the pencil of her painters! how languidly voluptuous the outlines of her sculpture! In those days every man was marvellous to himself and many were marvellous to their fellows; but the mightiest marvel of all were the philosophers. What a Philosophy was that! For she scaled the empyrean on the wingèd sandals of meditation, soared above the wide fires of the sun and above the whirling stars, up where the flaming walls of the universe are guiltless of wind or cloud, and there in the burning core of existence saw the face of the most high God. She saw God and did not perish; rather fell back to earth, not blasted with excess of light, but with a mystic burden on her murmuring lips too large for human speech to utter or for the human brain to understand. Such was she then. Yet five rolling centuries had not passed when sleepless, all-beholding Surya saw the sons of Mahomet pour like locusts over the green fields of her glory and the wrecks of that mighty fabric whirling down the rapids of barbarism into the shores of night. They were barbarous, therefore mighty: we were civilized, therefore feeble.

Wilson — But was not your civilization premature? The
building too hastily raised disintegrates and collapses, for it has the seeds of death in its origin. May not the utilitarian justly condemn it as evil?

Keshav — What the utilitarian may not justly do, it is beyond the limits of my intellect to discover. Had it not been for these premature civilizations, had it not been for the Athens of Plato, the Rome of the Caesars, the India of Vikramaditya, what would the world be now? It was premature, because barbarism was yet predominant in the world; and it is wholly due to our premature efflorescence that your utilitarians can mount the high stool of folly and defile the memory of the great. When I remember that, I do not think I can deny that we were premature. I trust and believe that the civilization of the future will not come too late rather than too early. No, the utilitarian with his sordid creed may exalt the barbarian and spit his livid contempt upon culture, but the great heart of the world will ever beat more responsive to the flame-winged words of the genius than to the musty musings of the moralists. It is better to be great and perish, than to be little and live. But where was I when the wind of tirade carried me out of my course?

Wilson — You were breaching the defences of utilitarian morality.

Keshav — Ah, I remember. What I mean is this; the utilitarian arrives at his results by an arbitrary application of the epithets “good” and “bad”.¹ This mistake is of perpetual occurrence in Bentham and gives the basis for the most monstrous and shocking of his theories. For example the servitude of women is justified by the impossibility of marriage without it. Again he condemns theft by a starving man as a heinous offence because it is likely to disturb security. He quite forgets to convince us, as the author of a system professedly grounded on logic should

¹ The following passage was written at the top of the manuscript page. Its place of insertion was not marked:

When we say a fruit is wholesome or unwholesome, we mean that it is harmless & nutritious food or that it tends to dysentery & colic, but when we say that anything is good or bad, we apply the epithets like tickets without inquiring what we mean by them; we have no moral touchstone that tells gold from spurious metal.
have done, that the survival of marriage is a desirable effect or property more valuable than life.

Wilson — I confess that Bentham on those two subjects is far too cavalier and offhand to please me, but the utilitarian system can stand on another basis than Bentham supplies.

Keshav — Yours is a curious position, Broome. You are one of those who would expunge the part of Hamlet from the play that bears his name. Your religion is Christianity without Christ, your morality Benthamism without Bentham. Nevertheless my guns are so pointed that they will breach any wall you choose to set up. For this is common to all utilitarians that they lose sight of a paramount consideration: the epithets “good” and “bad” are purely conventional and have no absolute sense, but their meaning may be shifted at the will of the speaker. Indeed they have been the root of so many revolting ideas and of so many and such monstrous social tyrannies, that I should not be sorry to see them expelled from the language, as unfit to be in the company of decent words. Why do you smile?

Wilson — The novelty of the idea amused me.

Keshav — Yes, I know that “original” and “fool” are synonymous in the world’s vocabulary.

Wilson — That was a nasty one for me. However I am afraid I shall be compelled to agree with you.

Keshav — Do you admit that there is only one alternative, faith without reason or the recognition of morality as a conventional term without any absolute meaning?

Wilson — I should rather say that morality is the idea of what is just and right in vogue among a given number of people.

Keshav — You have exactly described it. Are you content to take this as your touchstone?

Wilson — Neither this, nor faith without reason.

Keshav — Two positions abandoned at a blow? That is more than I had the right to expect. Now, as the time is slipping by, let us set out on the discovery of some law, or should I not rather say, some indicating tendency by which we may arrive at a principle of life?

Wilson — I am anxious to hear it.
Keshav — Let us furnish ourselves with another glass of claret for the voyage. You will have some?

Wilson — Thanks.

Keshav — My first difficulty when I set out on a voyage of discovery is to select the most probable route. I look at my chart and I see one marked justice along which the trade winds blow; but whoever has weighed anchor on this path has arrived like Columbus at another than the intended destination, without making half so valuable a discovery. Another route is called “beauty” and along this no-one has yet sailed. An Irish navigator has indeed attempted it and made some remarkable discoveries, but he has clothed his account in such iridescent wit and humour, that our good serious English audience either grin foolishly at him from a vague idea that they ought to feel amused or else shake their heads and grumble that the fellow is corrupting the youth and ruining their good old Saxon gravity; why he actually makes people laugh at the beliefs they have been taught by their venerable and aged grandmothers. But as for believing his traveller’s tales — they believe them not a whit. Possibly if we who do not possess this dangerous gift of humour, were to follow the path called beauty, we might hit the target of our desires: if not we might at least discover things wonderful and new to repay us for our labour. And so on with other possible routes. Now which shall we choose? for much hangs on our selection. Shall we say justice?

Wilson — Let me know first what justice is.

Keshav — I do not know, but I think no-one would hesitate to describe it as forbearance from interfering with the rights of others.

Wilson — That is a good description.

Keshav — Possibly, but so long as we do not know what are the rights of others, the description, however good, can have no meaning.

Wilson — Can we not discover, what are the rights of others?

Keshav — We have been trying for the last three-thousand years; with how much or how little success, I do not like to say.
Wilson — Then let us try another tack.
Keshav — Can you tell me which one we should choose? My own idea is that the word “beauty” is replete with hopeful possibilities.
Wilson — Is not that because it is used in a hundred different senses?
Keshav — I own that the word, as used today, is like so many others a relative term. But if we were to fix a permanent and absolute meaning on it, should we not say that beauty is that which fills us with a sense of satisfying pleasure and perfect fitness?
Wilson — Yes, I think beauty must certainly be judged by its effects.
Keshav — But are there not minds so moulded that they are dead to all beauty and find more charm in the showy and vulgar than in what is genuinely perfect and symmetrical?
Wilson — There can be no doubt of that.
Keshav — Then beauty still remains a relative term?
Wilson — Yes.
Keshav — That is unfortunate. Let us try and find some other test for it. And in order to arrive at this, should we not take something recognized by all to be beautiful and examine in what its beauty lies?
Wilson — That is distinctly our best course. Let us take the commonest type of beauty, a rose.
Keshav — Then in what lies the beauty of a rose if not in its symmetry? Why has the whole effect that satisfying completeness which subjugates the senses, if not because Nature has blended in harmonious proportion the three elements of beauty; colour, perfume, and form? Now beauty may exist separately in any two of these elements and where it does so, the accession of the third would probably mar the perfection of that species of beauty; as in sculpture where form in its separate existence finds a complete expression and is blended harmoniously with perfume — for character or emotion is the perfume of the human form; just as sound is the perfume of poetry and music — but if a sculptor tints his statue, the effect
displeases us, because it seems gaudy or tinsel, or in plain words disproportionate.

In some cases beauty seems to have only one of these elements, for example frankincense and music which seem to possess perfume only, but in reality we shall find that they have each one or both of the other elements. For incense would not be half so beautiful, if we did not see the curling folds of smoke floating like loose drapery in the air, nor would music be music if not harmoniously blended with form and colour, or as we usually call them, technique and meaning. Again there are other cases in which beauty undoubtedly has one only of the three elements: and such are certain scents like myrrh, eucalyptus and others, which possess neither colour nor form, isolated hues such as the green and purple and violet painted on floor and walls by the afternoon sun and architectural designs which have no beauty but the isolated beauty of form.

The criticism of ages has shown a fit appreciation of these harmonies by adjudging the highest scale of beauty to those forms which blend the three elements and the lowest to those which boast only of one. Thus sculpture is a far nobler art than architecture, for while both may compass an equal perfection of form, sculpture alone possesses the larger harmony derived by the union of form and perfume. Similarly the human form is more divine than sculpture because it has the third element, colour; and the painting of figures is more beautiful than the portrayal of landscapes, because the latter is destitute of perfume, while figures of life have always that character or emotion which we have called the perfume of the living form.

Again if we take two forms of beauty otherwise exactly on the same level, we shall find that the more beautiful in which the three elements are more harmoniously blended. As for instance a perfect human form and a perfect poem; whichever we may admire, we shall find our reason, if we probe for it, to be that the whole is more perfectly blended and the result a more satisfying completeness.

If we think of all this, it will assuredly not be too rash to describe beauty by calling the general effect harmony and the
ulterior cause proportion. What is your opinion, Broome?

Wilson — Your idea is certainly remarkable and novel, but the language you have selected is so intricate that I am in the dark as to whether it admits of invariable application.

Keshav — The usual effect of endeavouring to be too explicit is to mystify the hearer. I will try to dive into less abysmal depths. Can you tell me, why a curve is considered more beautiful than a straight line?

Wilson — No, except that the effect is more pleasing.

Keshav — Ah yes, but why should it be more pleasing?

Wilson — I cannot tell.

Keshav — I will tell you. It is because a curve possesses that variety which is the soul of proportion. It rises, swells and falls with an exact propriety — it is at once various and regular as rolling water; while the stiff monotony of a straight line disgusts the soul by its meaningless rigidity and want of proportion. On the other hand a system of similar curves, unless very delicately managed, cannot possibly suggest the idea of beauty: and that is because there is no proportion, for proportion, I would impress on you, consists in a regular variety. And thus a straight line, tho' in itself ugly, can be very beautiful if properly combined with curves. Here again the like principle applies.

Do you now understand?

Wilson — Yes, I admit that your theory is wonderfully complete and consistent.

Keshav — If you want a farther illustration, I will give you one. And just as before we selected the most commonly received type of beauty, I will now select the most perfect: and that, I think, is a perfect poem. Would you not agree with me?

Wilson — No, I should give the palm to a perfectly beautiful face.

Keshav — I think you are wrong.

Wilson — Have you any reason for thinking so?

Keshav — Yes, and to me a very satisfying reason. The three elements of beauty do not blend with absolutely perfect harmony in a human face. Have you not frequently noticed that those faces which express the most soul, the most genius, the most
character, are not perfectly harmonious in their form?

Wilson — Yes, the exceptions are rare.

Keshav — And the reason is that to emphasize the character, the divine artist has found himself compelled to emphasize certain of the features above the others, for instance, the lips, the eyes, the forehead, the chin, and to give them an undue prominence which destroys that proportion without which there can be no perfect harmony. Do you perceive my meaning?

Wilson — Yes, and I do not think your conclusions can be disputed.

Keshav — In a perfectly beautiful face the emotion has to be modified and discouraged, so as not to disturb the harmony of form; but in a perfectly beautiful poem the maker has indeed to blend with exquisite nicety the three elements of beauty, but though the colour may be gorgeous, the emotion piercingly vivid, the form deliriously lovely, yet each of these has so just a share of the effect, that we should find it difficult to add to or to detract from any one of them without fatally injuring the perfection of the whole.

And so it is with every form of beauty that is not originally imperfect; to detract or add would be alike fatal; for alteration means abolition. Each syllable is a key-stone and being removed, the whole imposing structure crumbles in a moment to the ground.

Can we better describe this perfect blending of parts than by the word proportion? or is its entire effect anything but harmony?

Wilson — There are indeed no better words.

Keshav — And this harmony runs through the warp and woof of Nature. Look at the stars, the brain of heaven, as Meredith calls them. How they march tossing on high their golden censers to perfume night with the frankincense of beauty! They are a host of wingèd insects crawling on the blue papyrus of heaven, a swarm of golden gnats, a cloud of burning dust, a wonderful effect of sparkling atoms caught and perpetuated by the instantaneous pencil of Nature. And yet they are none of all these, but a vast and interdependent economy of worlds.
Those burning globes as they roll in silent orbits through the infinite inane, are separated by an eternity of space. They are individual and alone, but from each to each thrill influences unfathomed and unconscious, marvellous magnetisms, curious repulsions that check like adverse gales or propel like wind in bellying canvas, and bind these solitary splendours into one supernal harmony of worlds. The solar harmony we know. How gloriously perfect it is, how united in isolation, how individual in unity! How star answers to star and the seven wandering dynasts of destiny as they roll millions of leagues apart, drag with them the invisible magnetic cord which binds them for ever to the sun. We believe that those lights we call fixed are each a sun with a rhythmic harmony of planets dancing in immeasurable gyrations around one immovable, immortal star. More, is it extravagant to guess that what to us is fixed, is a planet to God? Perhaps to the inhabitants of the moon this tumbling earth of ours is a fixed and constant light, and perhaps the glorious ball of fire we worship as the Lord of Light, is the satrap of some majesty more luminous and more large. Thus we may conceive of the universe as a series of subordinate harmonies, each perfect in itself and helping to consummate the harmony which is one and universal.

Well may the poet give the stars that majestic synonym

The army of unalterable law.

But the law that governs the perishable flower, the ephemeral moth, is not more changeful than the law that disciplines the movements of the eternal fires. The rose burns in her season; the moth lives in his hour: not even the wind bloweth where it listeth unless it preserve the boundaries prescribed by Nature. Each is a separate syllable in the grand poem of the universe: and it is all so inalterable because it is so perfect. Yes, Tennyson was right, tho’ like most poets, he knew not what he said, when he wrote those lines on the flower in the crannies: if we know what the flower is, we know also what God is and what man.

Wilson — I begin to catch a glimpse of your drift. But is there no discordant element in this universal harmony?
Keshav—There is. As soon as we come to life, we find that God’s imagination is no longer unerring; we almost think that he has reached a conception which it is beyond his power to execute. It is true that there are grand and beautiful lines in the vast epic of life, but others there are so unmusical and discordant that we can scarcely believe but that Chance was the author of existence. The beautiful lines are no doubt wonderful; among the insects the peacock-winged butterfly, the light spendthrift of unclouded hours; the angry wasp, that striped and perilous tiger of the air; the slow murmuring bee, an artist in honey and with the true artist’s indolence outside his art: and then the birds—the tawny eagle shouting his clangorous aspiration against the sun; the cruel shrike, his talons painted in murder; the murmuring dove robed in the pure and delicate hue of constancy: the inspired skylark with his matin-song descending like a rain of fire from the blushing bosom of the dawn. Nay the beasts too are not without their fine individualities: the fire-eyed lion, the creeping panther, the shy fawn, the majestic elephant; each fill a line of the great poem and by contrast enhance harmony.

But what shall we say of the imaginations that inspire nothing but disgust, the grub, the jackal, the vulture? And when we come to man, we are half inclined to throw up our theory in despair. For we only see a hideous dissonance, a creaking melody, a ghastly failure. We see the philosopher wearing a crown of thorns and the fool robed in purple and fine linen: the artist drudging at a desk and the average driving his quill thro’ reams of innocent paper: we see genius thrust aside into the hedges and stupidity driving her triumphal chariot on the beaten paths of social existence. Once we might have said that nature like a novice in art was rising through failures and imperfections into an artistic consummation and that when Evolution had exhausted her energies, her eyes would gaze on a perfect universe. But when we come to the human being, her most ambitious essay, the cynicism of frustrated hope steals slowly over us. I am reminded of some lines in a sonnet more remarkable for power than for felicitous expression.
She crowned her wild work with one foulest wrong
When first she lighted on a seeming goal
And darkly blundered on man’s suffering soul.

It is as if nature in admitting action into her universe were in the position of a poet who trusted blindly to inspiration without subjecting his work to the instincts of art or the admonitions of the critical faculty; but once dissatisfied with his work begins to pass his pen repeatedly thro’ his after performances, until he seems at last to have lighted on a perfect inspiration. His greatest essay completed he suddenly discovers that one touch of realism running thro’ the whole work has fatally injured its beauty. Similarly Nature in moulding man, made a mistake of the first importance. She gave him the faculty of reason and by the use of her gift he has stultified the beauty of her splendid imaginations.

Tennyson, by one of his felicitous blunders, has again hit upon the truth when he conceives the solemn wail of a heaven-born spirit in the agony of his disillusioning.

I saw him in the shining of his stars,
I marked him in the flowering of his fields,
But in his ways with men I found him not.

How true is every syllable! God burns in the star, God blossoms in the rose: the cloud is the rushing dust of his chariot, the sea is the spuming mirror of his moods. His breath whistles in the wind, his passion reddens in the sunset, his anguish drops in the rain. The darkness is the soft fall of his eyelashes over the purple magnificence of his eyes: the sanguine dawn is his flushed and happy face as he leaves the flowery pillow of sleep; the moonlight is nothing but the slumberous glint of his burning tresses when thro’ them glimmer the heaving breasts of Eternity. What to him are the petty imaginings of human aspiration; our puny frets, our pitiable furies, our melodramatic passions? If he deigns to think of us, it is as incompetent actors who have wholly misunderstood the bent of our powers. The comedian rants in the vein of Bombastes; the tragic artist plays the buffoon in the pauses of
a pantomime, and the genius that might have limned the passion of a Romeo, moulds the lumpish ineptitude of a Cloten. God lifting his happy curls from the white bosom of Beauty, shoots the lightning of his glance upon our antics and we hear his mockery hooting at us in the thunder. Why should he squander a serious thought on a farce so absurd and extravagant?

Wilson — And are these the ultimate syllables of Philosophy?

Keshav — You are impatient, Broome. What I have arrived at is the discovery that human life is, if not the only, at any rate the principal note in Nature that jars with the grand idea underlying her harmony. Do you agree with me?

Wilson — He would be a hopeless optimist who did not.

Keshav — And are you of the opinion that it is the exercise by man of his will-power to which we owe the discord?

Wilson — No, I would throw the blame on Nature.

Keshav — After the example of Adam? “The woman tempted me and I did eat.” I too am a son of Adam and would throw the blame on Nature. But once her fault is admitted, has not the human will been manifestly her accomplice?

Wilson — Her instrument rather.

Keshav — Very well, her instrument. You admit that?

Wilson — Yes.

Keshav — Then if the human will, prompted by Nature or her servant, False Reason, has marred the universal harmony, may not the human will, prompted by Right Reason who is also the servant of Nature, mend the harmony he has marred? Or if that puzzles you, let me put the question in another form. Does not a wilful choice of sensuality imply an alternative of purity?

Wilson — It does.

Keshav — And a wilful choice of unbelief an alternative of belief?

Wilson — Yes.

Keshav — Then on the same principle, if the human will chose to mar the harmony of nature, was it not within its power to choose the opposite course and fulfil the harmony?

Wilson — Certainly that follows.
Keshav — And through ignorance and the promptings of False Reason we preferred to spoil rather than to fulfil?
Wilson — Yes.
Keshav — And we can mend what we mar?
Wilson — Sometimes.
Keshav — Well then, can we not choose to mend the harmony we originally chose to mar?
Wilson — I do not think it probable.
Keshav — An admission that it is possible, is all I want to elicit from you.
Wilson — I do not know that.
Keshav — Have not some episodes of the great epic rung more in unison with the grand harmony than others?
Wilson — Yes; the old-world Greeks were more in tune with the Universe than we.
Keshav — The name of the episode does not signify. You admit a race or an epoch which has fallen into the harmony more than others?
Wilson — Freely.
Keshav — Then as you admit the more and the less, will you not admit that the more may become in its turn the less — that there may be the yet more? May we not attain to a more perfect harmony with the universe than those who have been most in harmony with it?
Wilson — It is possible.
Keshav — If it is possible, should we not go on and inquire how it is possible?
Wilson — That is the next step.
Keshav — And when we have found an answer to our inquiries, shall we not have solved this difficult question of a new basis for morality?
Wilson — Yes, we shall: for I see now that to be in harmony with beauty, or, in other words, to take the guiding principle of the universe as the guiding principle of human life, is the final and perfect aim of the human species.
Keshav — Broome, you have the scent of a sleuth-hound.
Wilson — I am afraid that is ironical. You must remember
that we are not all philosophers yet. Still I should have liked to see how the idea came out in practice.

_ Keshav — _ If you can spare me another night or it may be two, we will pursue the idea through its evolutions. I am deeply interested, for to me as to you it is perfectly novel.

_ Wilson — _ Shall you be free on Thursday night?

_ Keshav — _ As free as the wind.

_ Wilson — _ Then I will come. Goodnight.

_ Keshav — _ Goodnight, and God reward you for giving me your company.

End of Book the First
Keshav — Ah, Broome, so the magnetism of thought has broken the chains of duty? May I introduce you? Mr. Trevor of Kings, Mr. Broome Wilson of Jesus. Would you like wine or coffee?

Wilson — Perhaps for an evening of metaphysics wine is the most appropriate prelude.

Keshav — You agree then with the Scythians who made a point of deliberating when drunk? They were perhaps right; one is inclined to think that most men are wiser drunk than sober. I have been endeavouring to explain my line of argument to Trevor, I am afraid with indifferent success.

Wilson — Can I do anything to help you?

Keshav — I have no doubt you can. Would you mind stating your difficulty, Trevor? I think you allow that every other basis of morality is unsound but uphold the utilitarian model as perfectly logical and consistent.

Trevor — Yes, that is what I hold to, and I do not think, Desai, you have at all shaken its validity.

Keshav — You do not admit that the epithets “good” and “bad” have a purely conventional force.

Trevor — Yes, I admit that, but I add that we have fixed a definite meaning on the epithets and adhered to it all through our system.

Keshav — If so, you are fortunate. Can you tell me the definite meaning to which you refer?

Trevor — The basis of our system is this, that whatever is profitable, is good, whatever is the reverse, is evil. Is not that an unassailable basis?

Keshav — I do not think so; for two ambiguous words you have merely substituted two others only less ambiguous.
Trevor — I fail to see your reasoning.

Keshav — I will endeavour to show you what I mean. You will admit that one man’s meat is another man’s poison, will you not?

Trevor — Yes, and that is where our system works so beautifully; for we bring in our arithmetical solution of balancing the good and the evil of an action and if the scale of the evil rises, we stamp it as good, if the scale of the good rises, we brand it as evil. What do you say to that?

Keshav — Dear me! that does indeed sound simple and satisfying. I am afraid, Broome, we shall have to throw up our theory in favour of Bentham’s. Your system is really so attractive and transparent, Trevor, that I should dearly like to learn more about it.

Trevor — Now you are indulging in irony, Desai; you know Bentham as well as I do.

Keshav — Not quite so well as all that; but I avow I have studied him very carefully. Yet from some cause I have not discovered, his arguments seldom seemed to me to have any force, while you on the other hand do really strike home to the judgment. And therefore I should like to see whether you are entirely at one with Bentham. For example I believe you prefer the good of the community to the good of the individual, do you not?

Trevor — Not at all: it is the individuals who are the community.

Keshav — It is gratifying to learn that: but if the interests of a few individuals conflict with the interests of the general body, you prefer the interests of the general body, do you not?

Trevor — As a matter of course.

Keshav — And, as a general rule, if you have to deal with a number of persons and the good of some is not reconcilable with the good of others, you prefer the good of the greater number?

Trevor — That again is obvious.

Keshav — So you accept the dogma “the greatest good of the greatest number”, for if one interest of a given person or number of persons conflict with another interest, you prefer the greater?
Trevor — Without hesitation.
Keshav — And so the Athenians were right when they put Socrates to death.
Trevor — What makes you advance so absurd a paradox?
Keshav — Why, your arithmetical system of balancing the good and the evil. The injury to Socrates is not to be put in comparison with the profit to the State, for we prefer the good of the greater number, and the pleasure experienced by the youths he corrupted in his discourse and the enjoyment of their corruption is not to be so much considered as the pain they would experience from the effects of their corruption and the pain inflicted on the state by the rising generation growing up corrupt and dissolute, for among conflicting interests we prefer the greatest.
Trevor — But Socrates did not corrupt the youth of Athens.
Keshav — The Athenians thought he was corrupting their youth and they were bound to act on their opinion.
Trevor — They were not bound to act on their opinion, but on the facts.
Keshav — What is this you are telling me, Trevor? We are then only to act when we have a correct opinion, and, seeing that a definitely correct opinion can only be formed by posterity after we are dead, we are not to use your arithmetical balance or at least can only use it when we are dead? Then I do not see much utility in your arithmetical balance.
Trevor — Now I come to think of it, the Athenians were right in putting Socrates to death.
Keshav — And the Jews in crucifying Christ?
Trevor — Yes.
Keshav — I admire your fortitude, my dear Trevor. And if the English people had thought Bentham was corrupting their youth, they would have been right in hanging Bentham, would they not?
Trevor — What a fellow you are, Desai! Of course what I mean is that the Athenians & the Jews did not listen to their honest opinion but purely to the voice of malice.
Keshav — Then if these wicked people who put wise men to death not in honest folly but from malice, were to have said
to you, “Come now, you who accuse us of pure malice, are you not actuated by pure benevolence? If our approval is founded on sentiment, your disapproval is founded on the same flimsy basis; you have no reasonable objection to the poisoning of Socrates or the crucifixion of Christ or the hanging of Bentham as the case may be” and you were to tell them that your arithmetical balance said it was not profitable, would they not be justified in asking whether your arithmetical balance was infallible and whether you had a satisfactory principle which guided your calculations?

Trevor — Yes, and I should tell them that I valued as profitable what conduces to happiness and as unprofitable what detracts from or does not add to happiness.

Keshav — I am afraid that would not satisfy them, for the nature of happiness is just as disputable as the nature of profit. You do not think so? Well, for example do not some think that happiness lies in material comfort, while others look for it in the province of the intellect?

Trevor — These distinctions are mere nonsense; both are alike essential.

Keshav — Indeed we have reason to thank heaven that there are still some of the sages left who are sufficiently impartial to condemn every opinion but their own. Yet under correction, I should like to venture on a question; if the good that conduces to material comfort is not reconcilable with the good that conduces to intellectual pleasure, how do you manage your arithmetical balance?

Trevor — Material comfort before all things! that is a necessity, intellect a luxury.

Keshav — You are a consistent change-artist, Trevor; yet may there not be diverse opinions on the point?

Trevor — I do not see how it is possible. The human race may be happy without intellectual pleasure, but never without material comfort.

Keshav — Have you any historical data to bear out your generalisation?

Trevor — I cannot say I have, but I appeal to common sense.
Keshav — Oh, if you appeal to Caesar, I am lost; but be sure that if you bring your case before the tribunal of common sense, I will appeal not to common, but to uncommon sense — and that will arbitrate in my favour.

Trevor — Well, we must agree to differ.

Keshav — At any rate we have arrived at this, that you assign material comfort as the most important element in happiness, while I assign the free play of the intellect.

Trevor — So it seems.

Keshav — And you maintain that I am wrong because I disagree with you?

Trevor — No, because you disagree with reason.

Keshav — That is, with reason as you see it.

Trevor — If you like.

Keshav — And you think I am unique in my opinion?

Trevor — No indeed! there are too many who agree with you.

Keshav — Now we have gone a step farther. Apparently the nature of happiness is a matter of opinion.

Trevor — Oh, of course, if you like to say so.

Keshav — And happiness is the basis of morality. You agree? Very well, the nature of the basis is a matter of opinion, and it seems to follow that morality itself is a matter of opinion. And so we have come to this, that after rejecting as a basis of morality our individual sense of what is just and right, we have accepted our individual sense of what conduces to happiness. Therefore it is moral for you to refrain from stealing and for me to steal.

Trevor — That is a comfortable conclusion at any rate.

Keshav — Yet I think it is borne out by our premisses. Do you not imagine the security of property to be essential to happiness and anything that disturbs it immoral?

Trevor — That goes without saying and I admit that it is immoral for me to steal.

Keshav — Now I on the other hand am indeed of the opinion that material comfort is essential to happiness, for without it the intellect cannot have free play, but believing as I do that
the system of private property conduces to the comfort of the few, but its abolition will conduce to the comfort of the many, I, on the principle you have accepted, the greatest good of the greatest number, am opposed to the system of private property. And I believe that the prevalence of crimes against property will accelerate the day of abolition. I recognise indeed that the immediate effects will be evil, but put a greater value on the ultimate good than on the immediate evil. It follows that, if my reasoning be correct and we agreed that individual judgment must be the arbiter, it is perfectly moral for me to steal.

Trevor — There is no arguing with you, Desai. You wrest the meaning of words until one does not remember what one is talking about. The enormous length to which you carry your sophistries is appalling. If I had time, I would stop and refute you. As it is, I will leave you to pour your absurdities into more congenial ears.

Keshav — You are not going, Trevor?

Trevor — I am afraid I must. Goodnight.

Keshav — Goodnight.

That was rather brisker towards the close. I hope you were not bored, Broome.

Wilson — No, I was excellently amused. But do your arguments with him usually terminate in this abrupt fashion?

Keshav — Very often they do so terminate. Trevor is a good fellow — a fine intellect spoiled — but he cannot bear adversity with an equal mind. Now let us resume our inquiry.

I think we had gone so far as to discover that human life is the great element of discord in the Cosmos, and the best system of morality is that which really tends to restore the harmony of the universe, and we agreed that if we apply the principles governing the universe to human life, we shall discover the highest principle of conduct. That was the point where we broke off, was it not?

Wilson — Yes, we broke off just there.

Keshav — So we profess to have found a sense in which the theory advanced by philosophers of every age has become true, that life ought to be lived in accordance with nature and not in
accordance with convention. The error we impute to them was that they failed to keep nature distinct from human nature and forgot that the latter was complicated by the presence of that fallible reason, of which conventions are the natural children. Thus men of genius like Rousseau reverted to the savage for a model and gave weight to the paradox that civilization is a mistake. Let us not forget that it is useless to look for unalloyed nature in the savage, so long as we cannot trace human development from its origin: to the original man the savage would seem nothing but a mass of conventions. We have nothing to learn from savages; but there is a vast deal to be learned from the errors of civilized peoples. Civilization is a failure, not a mistake.

Wilson — That is a subtle distinction.

Keshav — Not at all. Civilization was necessary, if the human race was to progress at all. The pity of it is that it has taken the wrong turn and fallen into the waters of convention. There lies the failure. When man at the very first step of his history used his reason to confound the all-pervading Cosmos or harmonious arrangement of Nature, conventions became necessary in order to allure him into less faulty modes of reasoning, by which alone he could learn to rectify his error. But after the torrent had rolled for a time along its natural course and two broad rivers of Thought, the Greek and the Hindu, were losing themselves in the grand harmony, there was a gradual but perceptible swerve, and the forces of convention which had guided, began to misguide, and the Sophists in Greece, in India the Brahmans availed themselves of these mighty forces to compass their own supremacy, and once at the helm of thought gave permanence to the power by which they stood, until two religions, the most hostile to Nature, in the east Buddhism, her step-child Christianity in the west, completed the evil their predecessors had begun.

Hear the legend of Purush, the son of Prithivi, and his journey to the land of Beulah, the land of blooming gardens and yellow-vested acres and wavering tree-tops, and two roads lead to it. One road is very simple, very brief, very direct, and this leads over the smiling summit of a double-headed peak, but the other through the gaping abysses of a lion-throated antre and
it is very long, very painful, very circuitous. Now the wise and beautiful instructress of Purush had indeed warned him that all other wayfarers had chosen the ascent of the beautiful hill, but had not explicitly forbidden him to select the untried and perilous route. And the man was indolent and thought it more facile to journey smoothly through a tunnel than to breast with arduous effort the tardy and panting slope, yet plumed himself on a nobler nature than all who had gone before him, because they had obeyed their monitress, but he was guided by his reason and honourably preferred the unknown and perilous to the safe and familiar. From this tangle of motives he chose the cavernous lion-throat of the gaping antre, not the swelling breasts of the fruitful mother.

Very gaily he entered the cave singing wild ballads of the deeds his fathers wrought, of Krishna and Arjun and Ram and Ravan and their glory and their fall, but not so merrily did he journey in its entrails, but rather in hunger and thirst groped wearily with the unsleeping beak of the vulture Misery in his heart, and only now and then caught glimpses of an elusive light, yet did not realise his error but pursued with querulous reproaches the beautiful gods his happy imagination had moulded or bitterly reviled the double-dealing he imputed to his lovely and wise instructress — “for she it was” he complained “who told me of the route through the cavern”. None the less he persevered until he was warmed by the genuine smiles of daylight and joy blossoming in his heart, made his step firmer and his body more erect.

And he strode on until he arrived where the antre split in two branches, the one seeming dark as Erebus to his eyes, though indeed it was white and glorious as a naked girl and suffused by the light of the upper heaven with seas of billowing splendour, had not his eyes, grown dim from holding communion with the night and blinded by the unaccustomed brilliance, believed that the light was darkness, through which if he had persevered, he had arrived in brief space among the blooming gardens and the wavering tree-tops and the acres in their glorious golden garb and all the imperishable beauty of Beulah. And the other branch
he thought the avenue of the sunlight, because the glimmer was feeble enough to be visible, like a white arm through a sleeve of black lace. And down this branch he went, for ever allured by unreal glimpses of a dawning glory, until he has descended into the abysmal darkness and the throne of ancient night, where he walks blindly like a machine, carrying the white ashes of hope in the funeral urn of youth, and knows not whence to expect a rescue, seeing the only heaven above him is the terrible pillared roof, the only horizon around him the antre with its hateful unending columns and demogorgon veil of visible darkness, and the beautiful gods he imagined are dead and his heart is no longer sweetened with prayers, and his throat no longer bubbles with hymns of praise. His beautiful gods are dead and her who was his lovely guide and wise monitress, he no longer sees as the sweet and smiling friend of his boyhood, but as a fury slinging flame and a blind Cyclops hurling stones she knows not whither nor why and a ghastly skeleton only the more horrible for its hideous mimicry of life. He sends a wailing cry to heaven, but only jeering echoes fall from the impenetrable ceiling, for there is no heaven, and he sends a hoarse shriek for aid to hell, but only a gurgling horror rises from the impenetrable floor, for there is no hell, and he looks around for God, but his eyes cannot find him, and he gropes for God in the darkness, but his fingers cannot find him but only the clammy fingers of night, and goblin fancies are rioting in his brain, and hateful shapes pursue him with clutching fingers, and horrible figures go rustling past him half-discerned in the familiar gloom. He is weary of the dreadful vaulted ceiling, he is weary of the dreadful endless floor. And what shall he do but lie down and die, who if he goes on, will soon perish of weariness and famine and thirst? Yet did he but know it, he has only to turn back at a certain angle and he will see through a chink of the cavern a crocus moon with a triple zone of burning stars, which if he will follow, after not so very painful a journey, not so very long an elapse of hours, he will come into a land of perennial fountains, where he may quench his thirst, and glistening fruit-groves where he may fill his hunger, and sweet cool grass where he may solace
his weariness, and so pursue his journey by the nearest way to the wavering tree-tops, and the blooming gardens and the acres in their yellow gaberdines for which his soul has long panted.

This is the legend of Purush, the son of Prithivi and his journey to the land of Beulah.

Wilson — That is a fine apologue, Keshav; is it your own, may I ask?

Keshav — It is an allegory conceived by Vallabha Swami, the Indian Epicurus, and revealed to me by him in a vision.

Wilson — There we see the false economy of Nature; only they are privileged to see these beautiful visions, who can without any prompting conceive images not a whit less beautiful.

Keshav — The germ of the story was really a dream, but the form and application are my own. The myth means, as I dare say you have found out, that our present servitude to conventions which are the machinery of thought and action, is principally due to weaknesses forming a large element in human nature. Our lives ought not to be lived in accordance with human nature which can nowhere be found apart from the disturbing element of reason, but according to nature at large where we find the principle of harmony pure and undefiled.

Wilson — On that we are both at one; let us start directly from this base of operations. I am impatient to follow the crocus moon with her triple zone of burning stars into the Eden of murmuring brooks and golden groves and fields of asphodel.

Keshav — The basis of morality is then the application to human life of the principles governing the universe; and the great principle of the universe is beauty, is it not?

Wilson — So we have discovered.

Keshav — And we described beauty as harmony in effect and proportion in detail.

Wilson — That was our description.

Keshav — Then the aim of morality must be to make human life harmonious. Now the other types in the universe are harmonious not merely in relation to their internal parts, but in relation to each other and the sum of the universe, are they not?
Wilson — Yes.

Keshav — We mean, I suppose, that the star fills its place in the Cosmos and the rose fills her place, but man does not fill his.

Wilson — That is what we mean.

Keshav — Then the human race must not only be harmonious within itself, but must be harmonious in relation to the star and the rose and so fill its place as to perfect the harmony of the universe.

Wilson — Are we not repeating ourselves?

Keshav — No, but we are in danger of it. I am aiming at a clear and accurate wording of my position and that is not easy to acquire at a moment's notice. I think our best way would be to consider the harmony of man with the universe and leave the internal harmony of the race for subsequent inquiry.

Wilson — Perhaps it would be best.

Keshav — When we say that man should fill his place in the Cosmos, we mean that he should be in proportion with its other elements, just as the thorn is in proportion to the leaf and the leaf to the rose, for proportion is the ulterior cause of harmony. And we described proportion as a regular variety, or to use a more vivid phrase, a method in madness. If this is so, it is incumbent on man to be various in his development from the star, the rose and the other elements of the Cosmos, in a word to be original.

Wilson — That follows.

Keshav — But is it enough to be merely original? For instance if he were to hoist himself into the air by some mechanical contrivance and turn somersaults unto all eternity, that would be original, but he would not be helping much towards universal harmony, would he?

Wilson — Well, not altogether.

Keshav — Then if we want to describe the abstract idea of virtue, we want something more than originality. I think we said that proportion is not merely variety, but regular variety?

Wilson — Yes, that is obvious.

Keshav — Then man must be not merely original but regular in his originality.

Wilson — I cannot exactly see what you mean.
Keshav — I cannot at all see what I mean; yet, unless our whole theory is unsound, and that I am loth to believe, I must mean something. Let us try the plan we have already adopted with such success, when we discovered the nature of beauty. We will take some form of harmony and inquire how regularity enters into it; and it occurs to me that the art of calligraphy will be useful for the purpose, for a beautifully-written sentence has many letters just as the universe has many types and it seems that proportion is just as necessary to it.

Wilson — Yes, calligraphy will do very well.

Keshav — I recollect that we supposed beauty to have three elements, of which every type must possess at least one, better two, and as a counsel of perfection all three. If we inquire, we shall find that form is absolutely imperative, seeing that if the form of the letters is not beautiful or the arrangement of the lines not harmonious, then the sentence is not beautifully written. Colour too may be an element of calligraphy, for we all know what different effects we can produce by using inks of various colours. And if the art is to be perfect, I think that perfume will have to enter very largely into it. Let us write the word “beautiful”. Here you see the letters are beautifully formed, their arrangement is beautiful, this bright green ink I am using harmonizes well with the word, and moreover the sight of this peculiar combination of letters written in this peculiar way brings to my mind a peculiar association of ideas, which I call the perfume of the written word.

Wilson — But is it not the combination, not of letters but of sounds, which lingers in your mind and calls up the idea?

Keshav — I do not think so, for I often find sentences that seem to me beautiful in writing or in print, but, once I utter them aloud, become harsh and unmusical; and sometimes the reverse happens, especially in Meredith, in whom I have often at first sight condemned a sentence as harsh and ugly, which, when I read it aloud, I was surprised to find apt and harmonious. From this I infer that if a writer’s works appear beautiful in print or manuscript, but not beautiful when read aloud, he may be set down as a good artist in calligraphy, but a bad artist in literature,
since suggestion to the eye is the perfume of the written, but suggestion to the ear the perfume of the spoken word.

In this however I seem to have been digressing to no purpose; for whatever else is uncertain, this much is certain, that form is essential to calligraphy, and this is really all that concerns us. Now if the form is to be beautiful it must be harmonious in effect, and to be harmonious in effect it must be proportionate in detail, and to be proportionate in detail, the words and letters of which it is made must exhibit a regular variety. We can easily see that the letters and words in a sentence are various, but how can they be said to be regular in their variety?

Wilson — I do not know at present, but I can see that the variety is regular.

Keshav — This we must find out without delay. Let us take the alphabet and see if the secret is patent there.

Wilson — That is indeed looking for Truth at the bottom of a well.

Keshav — Do you not see at a glance that the letters in the Latin alphabet are regular in this sense, that the dominant line is the curve and there is no written letter without it, for the straight lines are only used to prevent the monotony generated by an unrelieved system of curves? In the Bengali alphabet again, which is more elaborate, but less perfect than the Latin, there is a dominant combination of one or more straight lines with one or more curves and to obviate monotony letters purely composed of straight lines are set off by others purely composed of curves. In the Burmese and other dialects, I believe but from hearsay only, no line but the curve is admitted and I am told that the effect is undeniably pretty but a trifle monotonous. Here then we have a clue. If we consider, as we have previously considered, every type in the universe to be a word, then, if the sentence is to be beautifully written each word must not only be various from its near companions but must allow one dominant principle to determine the lines on which it must vary; and to avoid monotony there must be straight lines in the letters, that is to say each type must have individual types within it departing from the general type by acknowledging another dominant principle. I am afraid
this is rather intricate. Would you like it to be made clearer?

Wilson — No, I perfectly understand; but I should like to guard myself against being misled by the analogy between a beautifully-written sentence and the beautifully-arranged universe. If this rule does not apply to every other form of beauty, we may not justly compare the universe to one in which it does happen to apply.

Keshav — I hope you will only require me to adduce examples of perfect beauty, for the aim of morality is to arrange a perfect, not an imperfect harmony.

Wilson — Oh certainly, that is all I am entitled to require.

Keshav — Then you will admit that the stars are various, yet built on a dominant principle?

Wilson — Without doubt.

Keshav — And in making the flowers so various, the divine artist did not fail to remember a dominant principle which prevails in the structure and character of his episode in flowers.

Wilson — But this is merely to take an unfair advantage of the method of species so largely indulged in by Nature.

Keshav — Well, if you prefer particulars to generals, we will inquire into the beauty of a Greek design, for the Greeks were the only painters who understood the value of design, and we will as usual take an example of perfect beauty. Do you know the Nereid and Sea-Horse?

Wilson — Very intimately.

Keshav — Then, if you have not forgotten how in that incomparable work of art to every mass there is another and answering mass and to the limbs floating forward limbs floating backwards and to every wisp of drapery an answering wisp of drapery, and in short how the whole design is built on the satisfying principle of balancing like by like, you will admit that here is a dominant idea regulating variety. And the principle of balancing like with like is not peculiar to Greek designing but prevalent in the designs of Nature, for example, the human face, where eye answers to luminous eye and both are luminous with one and the same brilliance, nor is one hazel while the other is azure, and the porches of hearing are two but similar in their
curious workmanship, and the sweep of the brow to one ear does not vary from the sweep of the brow to the other and the divergence of the chin describes a similar curve on either face of the design, nor is one cheek pallid with the touch of fear while the other blushes with the flag of joy and health, but in everything the artist has remembered the principle of balancing like with like, both here and in the emerald leaf and swaying apple which if you tear along the fibrous spine or slice through the centre of the core, will leave in your hands two portions, diverse in entity but alike in material and workmanship. And yet the impertinent criticism of the moderns claims for themselves a keener appreciation of Nature, than those great pupils who learned her lessons so gloriously well. If you would like farther examples of the dominant principle regulating variety in a design, you need only look at a blowing rose, a wind-inspired frigate, an evergreen poem, and you will not be disappointed. With all this in your mind, you will surely admit that even if we compare the universe to a system of designs we shall not arrive at other results than when we compared it to God's episode in flowers and his marshalled pomp of stars and a sentence beautifully written.

Wilson — Yet I should like to ask one more question.

Keshav — My dear Broome, you are at liberty to ask a thousand, for I am always ready to answer.

Wilson — A single answer will satisfy me. Why do you compare the universe to a system of designs and not to a single design?

Keshav — The universe itself is a system of designs, first the harmony of worlds and within it the lands and seas and on that the life of flowers and trees & the life of birds and beasts and fishes and the life of human beings. Imagine the Greeks in search of a dominant idea to regulate the variety of their designs and hitting on the human figure as their model; would they not have been foolish, if they had gone away from their study of the human figure and drawn a system, balancing like design by like design?

Wilson — I suppose they would.
Keshav — Nor should we be less foolish to draw up an ideal universe or system of designs on the principle of a single design. Are you satisfied?

Wilson — Perfectly.

Keshav — And our conclusion is that we ought to regulate the variety of the types in the universe, not by balancing like with like, but by determining the lines of variance on one dominant principle.

Wilson — That is the indisputable conclusion.

Keshav — And so, now we have panted up to the ridge we once thought the crowning summit, we find that we have to climb another slope as arduous which was lying in wait for us behind. We have discovered the presence of a dominant idea in the variety of types, but we do not know what the idea may be.

Wilson — That is what we have to find.

Keshav — But if we find that all the diverging types observe a single requisite in divergence, shall we not infer that we have found the idea of which we are inquisitive?

Wilson — Obviously.

Keshav — And we shall find it most easily by comparing one type with another, shall we not?

Wilson — That is our first idea.

Keshav — But if we compare a rose to a star, we shall not find them agree in any respect except the brilliance of their hues and that is not likely to be the dominant idea.

Wilson — They are both beautiful.

Keshav — Exactly, but we wish to learn the elements of their beauty, and we agreed that these were variety, to begin with, and method in variety. Now we are inquiring what the method is they observe in their variety. We know that they are both beautiful; but we wish to know why they are both beautiful.

Wilson — And how are you going to do it?

Keshav — Well, since it will not do to compare a rose with a star, we will compare a star with a star; and here we find, that, however widely they differ, there is a large residuum of properties, such as brilliance and light, which are invariably present in one and the other, and they diverge not in the possession
and absence of properties peculiar to a star, but in things accidental, in their size and the exactness of their shape and the measure of their brilliance and the character of the orbits they are describing. And if we compare flower with flower, we shall find a residuum of properties invariably present in one and the other but the divergence of flower from flower, just like the divergence of star from star, not in properties peculiar to a flower, but in accidents like size and peculiarities of shape and varying vividness of hues and time and length of efflorescence. Moreover we perceive that the star is content to pierce the darkness with its rays and to burn like a brilliant diamond in the bodice of heaven, and is not ambitious to shed sweet perfumes upon space or to burden the heart of the night with song, but develops the virtues of a star without aspiring to the virtues of a flower or a bird, and the rose content to be an empress in colour and perfume and a gorgeous harmony of petals and is not ambitious to give light in the darkness or to murmur a noontide song in response to the bee, but develops the virtues of a rose without aspiring to the virtue of a bee or a star. And so if we compare with the help of this new light the rose and the star, we see that they are both alike in developing their own virtues without aspiring to the virtues of one another. And this is the case with every natural form of beauty animate or inanimate, is it not?

Wilson — There can be no doubt of that.
Keshav — Then have we not found the dominant idea which governs the variety of types?
Wilson — I really believe we have.
Keshav — And man if he wishes to be in proportion with the other elements of the Cosmos, must be content to develop the virtues of a man without aspiring to the virtues of a rose or a star, or any other element of the Cosmos?
Wilson — So it seems.
Keshav — And when we talk of the virtues of a star, do we not mean the inborn qualities and powers which are native to its sidereal character, for example brilliance and light?
Wilson — Of course.
Keshav — And by the virtues of a flower the inborn qualities and powers which are native to its floral character, such as fragrance, colour, delicacy of texture?

Wilson — Yes.

Keshav — Then by the virtues of a man we shall have to mean the inborn qualities and powers which are native to his humanity, such as — what shall we say?

Wilson — That we can discover afterwards.

Keshav — Very well; but at any rate we can see already that some things are not inborn qualities and powers native to our humanity; and we know now why it is not an act of splendid virtue to turn somersaults in the air without any visible means of support; for if we did that, we should not be developing the virtues of a man, but we should be aspiring to the virtues of a kite; or, to use one of our phrases, we should be mad without method.

Wilson — That is evident.

Keshav — So a man’s virtue lies not in turning somersaults without any visible means of support, but in the perfect evolution of the inborn qualities and powers which are native to his humanity.

Wilson — Yes, and I believe these are the very words in which you described virtue before we started on our voyage of discovery.

Keshav — That is indeed gratifying: and if we have shown any constancy and perseverance in following our clue through the labyrinth, I at least am amply rewarded, who feel convinced by the identity of the idea I have derived from the pedestrian processes of logical inference with the idea I once caught on the wings of thought and instinct, that as far as human eyes are allowed to gaze on the glorious visage of Truth unveiled, we shall be privileged to unveil her and embrace her spiritual presence, and are not following a will-o’-the-wisp of the imagination to perish at last in a quagmire.

We have then laid a firm hold on that clear and accurate wording, for which we were recently groping as blindly as Purush in his delusive cavern. And since the human brain is impatient of abstract ideas but easily fixed and taken by concrete
images, let me embody our ideas in a simile. I have an accurate remembrance of climbing a very steep and ragged rock on the Yorkshire beaches, where my only foothold was a ladder carved in the rock with the rungs so wide apart that I had to grasp tightly the juts and jags and so haul myself up as slowly as a lizard, if I did not prefer by a false step or misplaced confidence to drop down some thirty feet on a rough sediment of sharp and polished pebbles. It occurs to me that what I did then in the body, I am doing now in the spirit, and it is a reason for self-gratulation that I have mounted safely to the second rung of the perilous ladder and am not lying shattered on the harsh and rasping pebbles of disappointment. And if I aspire to the third rung, I shall have less cause for apprehension than in my Yorkshire peril, since I can hardly fall to the beach but shall merely slip back to the rung from which I am mounting. Let us then estimate our progress. Our first rung was the basis of morality which we may describe by the golden rule “apply to human life the principles dominant in the Cosmos”, and our second, as we now see, is the conception of abstract virtue or the perfect expression of the human being as a type in the Cosmos, and this we describe as “the consistent evolution of the inborn qualities and powers native to our humanity”.

Here then we have two rungs of the ladder, we must now be very careful in our selection of the third.

Wilson — Is it not obviously the next stage to discover what are the inborn qualities and powers native to our humanity?

Keshav — Possibly. Yet have we not forgotten a signal omission we made when we drew inferences from the comparison of a beautifully written sentence to the beautifully arranged universe?

Wilson — I am afraid I at least have forgotten. What was it?

Keshav — Did we not compare the broad types in the Cosmos to the words in a sentence and infer that as the dominant principle governing the word was the prevalence of the curve, so there must be a dominant principle governing the type?

Wilson — We did.

Keshav — And also that as in the letters within the word
there were two prevalent lines, the curve and the straight line, so within the broad or generic type there are individual types governed by quite another principle.

Wilson — That also. But surely you are not going to argue from analogies?

Keshav — Did we not argue from the beautifully written sentence merely because the principles of calligraphy proved to be the principles of every sort of harmony?

Wilson — I confess we did; otherwise all we have been saying would be merely a brilliant explosion of fancy.

Keshav — Then we are logically justified in what we have been doing. Consider then how in a system of harmony, every part has to be harmonious in itself or else mar the universal music.

Wilson — That is true.

Keshav — And the human race is a part of such a system, is it not?

Wilson — Yes.

Keshav — Then must the human race become harmonious within itself or continue to spoil the universal harmony.

Wilson — Of course. How foolish of me to lose sight of that.

Keshav — And so we have been elucidating the harmony of man with the Cosmos and saying nothing about the harmony of man with man?

Wilson — Did we not relegate that for subsequent inquiry?

Keshav — We did, but I think the time for subsequent inquiry has come.

Wilson — It is too late in the day for me to distrust your guidance.

Keshav — I do not think you will have reason to regret your confidence in me. Our line then will be to consider the internal harmony of the race before we proceed farther.

Wilson — So it is best.

Keshav — Here again we must start from our description of beauty as harmony in effect and proportion in detail and our description of the latter as a regular variety or method in
The Harmony of Virtue

madness. Then just as in the Cosmos, the individual type must vary from all the other types, so in the human Cosmos the individual man must vary from all other men.

Wilson — That is rather startling. Do you mean that there ought to be no point of contact?

Keshav — No, Broome; for we must always remember that the elements of a generic type must have certain virtues without which they would not belong to the type: as the poet says

One touch of nature makes the whole world kin.

Wilson — Then where do you find your variety?

Keshav — If you will compare the elements of those types in which the harmony is perfect, your ignorance will vanish like a mist. You will see at once that every planet develops indeed his planetary qualities, but varies from every other planet, and if Venus be the name and the star be feminine, is a dovelike white in complexion and yields an effulgence more tender than a girl’s blush, but if he is Mars, burns with the sanguine fire of battle and rolls like a bloodshot eye through space, and if he is Saturn, has seven moons in his starry seraglio, and is richly orange in complexion like vapour coloured by the sun’s pencil when he sets, and wears a sevenfold girdle of burning fire blue as a witch’s eye and green as Love’s parrot and red as the lips of Cleopatra and indeed of all manner of beautiful colours, and if he is Jupiter or any one of the planets, has the qualities of that planet and has not the qualities of another, but develops his own personality and has no regard for any model or the example of any other planet.

And if you drop your eyes from the sublimer astral spaces to the modest gauds of Earth our mother, you will see that every flower has indeed the qualities of its floral nature, but varies widely from her sister beauties, and if she is a lily, hides in her argent beaker a treasure of golden dust and her beauty is a young and innocent bride on her marriage-morning, but if she is a crocus, has a bell-like beauty and is absorbed in the intoxication of her own loveliness and wears now the gleaming robe of sunrise and now a dark and delicate purple, and now a
soft and sorrowful pallor, but, if she is a rose, has the fragrance of a beautiful soul and the vivid colour of a gorgeous poem, yet conceals a sharp sting beneath the nestling luxury of her glorious petals, and if she is a hyacinth or honeysuckle or meadow-sweet, has the poisonous perfume of the meadow-sweet or the soul-subduing fragrance of the honeysuckle or the passionate cry of the hyacinth, and not the beautiful egoism of the crocus or the oriental splendour of the rose, but develops her own qualities without aspiring to the qualities of any and every flower.

May we not then say that the dominant principle regulating the variety of individual types is the evolution of individual as distinct from generic virtues?

Wilson — That is the logical consequence.

Keshav — Then the description of individual virtue runs thus, the evolution by the human being of the inborn qualities and powers native to his personality; that is to say, just as every beautiful building has the solid earth for its basis but is built in a distinct style of architecture, so the beautiful human soul will rest on the solid basis of humanity but build up for itself a personality distinct and individual.

Wilson — That is exactly what the virtuous man must do.

Keshav — And so with infinite ease and smoothness we have glided up to the third rung of our ladder, as if we were running up a broad and marble stair-case. Here then let us stop and reflect on all we have said and consider whether from confusion of mind or inability to comprehend the whole situation we have made any mistake or omission. For my part I avow that my thoughts have not been so lucid tonight as I could have wished. We are then to continue the inquiry in the Gardens on Tuesday afternoon? I think that was what you suggested.

Wilson — Yes, on Tuesday at half-past two.

Keshav — Would you mind my bringing Prince Paradox with me? He is anxious to hear how we are dealing with our idea and as he will be perfectly willing to go the lengths we have so far gone, we need not fear that he will be a drag on us.

Wilson — I am perfectly willing that he should come. The more, the merrier.
Keshav — Not at this stage; for this intellectual ascent up the precipice of discovery, is indeed very exciting and pleasant, but strains the muscles of the mind more than a year’s academical work; and I trust that next time we shall bring it to a satisfying conclusion.

End of the Second Book
Book Three

Keshav Ganesh — Broome Wilson — Treneth

Treneth — But we must not forget our purpose in being here.

Keshav — Well, Broome, what do you say to our resuming our cruise for the discovery of virtue? I avow the speculation weighs on me, and I am impatient to see the last of it.

Wilson — I have not to learn that you are the most indolent of men. No sooner are you in a novel current of thought than you tire and swim back to the shore. I am indignant with Nature for wasting on you a genius you so little appreciate.

Treneth — Ah but you are really quite wrong, Wilson. Genius is a capacity for being indolent.

Wilson — Enter Prince Paradox! But seriously, Keshav, I think the argument will live beyond this afternoon and I give warning that I shall drag you all over the field of ethics before we have done with it.

Keshav — It will be the corpse of my intellect you will maltreat. But in extremity I rely upon Treneth to slay my Argus with the bright edge of a paradox.

Wilson — We were at the third rung of the ladder, were we not?

Keshav — Yes, thou slave-driving Ishmaelite. I declare it is impious on a day like this to bury ourselves in the gloomy vaults of speculation. But as you will.

To remember how far we have climbed, is the best incentive to climb farther, and will give Treneth an idea of the situation. We happened to be weighing the ordinary principles of morality and finding them all wanting cast about for a new principle and discovered that beauty was the sole morality of the universe, and it had colour, form and perfume as elements, harmony as its general effect and proportion, which we described as regular
variety or method in madness, as the ulterior cause of the harmony, and we ventured to imagine that as all the other elements of the universe were harmonious notes in a perfect sonata, but the human element had wilfully chosen to jar upon and ruin the exquisite music, the right principle of virtue was wilfully to choose to mend the harmony we had ruined.

With these projections from the rock of speculation to help us we climbed up the three steep and difficult rungs I am going to describe to you. We argued that the only way to remedy a note that rebels against the spirit of the composition is to reduce it into harmony with that spirit, and so arrived at the conclusion that the principle of morality is to apply to human life the principles that govern the rest of the Cosmos. There you have the first rung of our ladder.

We recommenced from this basis and by remembrance of the nature of proportion or regular variety which is the cause of harmony and throughout every natural type of beauty appears in the common principle which determines their line of variance from each other, we thought that in the elements of the Cosmos there must be such a common principle and found it to be the evolution by each element of its own peculiar virtue as distinct from the peculiar virtues of every other element, and so reached our second conclusion, that just as astral virtue lies in the evolution by the star of the inborn qualities and powers native to its astral character, just so human virtue lies in the evolution by the human being of the inborn qualities and powers native to his humanity. This is the second rung of our ladder.

With this second secure basis behind us, we went on to discover that within generic types such as the star, the flower, the human being, there were individual types governed by the similar but different principle of evolving the individual as distinct from the generic virtues, or, when applied to the human being, of evolving the inborn qualities and powers native to his personality. This is the third rung of our ladder.

Have I been correct in my statement, Broome?

Wilson — Perfectly correct.

Treneth — My only quarrel with your conclusions is that
you have wasted a couple of evenings in arriving at them. Why, except the first they are mere axioms.

Keshav — Yes, to the seeing eye they are axioms, but to the unseeing eye they are paradoxes. The truths that are old and stale to the philosopher, are to the multitude new and startling and dangerous. But now that we have all mounted to the same rung, let us pursue the ascent. And I suppose our immediate step will be to find whether the mere evolution of the inborn qualities and powers is or is not the sole requisite for virtue.

Wilson — Before we go to that, Keshav, you will have to meet a difficulty which you show every sign of evading.

Keshav — Whatever difficulty there is, I am ready to solve, but I cannot guess to what you refer.

Wilson — I suppose you will admit that a definition, to be adequate, must have nothing vague or indefinite about it?

Keshav — If there is anything vague, it must be elucidated or our statement falls to the ground.

Treneth — I dissent: a definite definition is a contradiction in terms. I am for definite indefinitions.

Keshav — I am not in extremities yet, Prince Paradox.

Wilson — Well now, is not your phrasing “the inborn qualities and powers native to our humanity” very vague and indefinite?

Keshav — Indefinite, I admit, and I cannot think that an objection but I plead not guilty to the charge of vagueness.

Wilson — You think with Treneth that a definition should not be definite?

Keshav — If by being definite is implied reduction to its primal elements you will agree with me that a definition need not be definite: or do you want me to enumerate the qualities native to our humanity such as physical vigour, and the faculty of inference and sexual passion and I do not know how many more?

Wilson — You shall not escape me so easily, Keshav. You are merely spinning dialectical cobwebs which give a specious appearance to the pit in which you would have us fall.

Keshav — Then by pointing out the trap, you can easily sweep away my sophistical cobwebs, my good Broome.
Treneth — What penalty for a pun?
Keshav — No penalty, for to punish a lie on the information of Beelzebub is to do God’s work at the devil’s bidding.
Wilson — Yes, a penalty: you shall be taken at your word. You are setting a trap for us, when you try to shuffle in your phrase about the qualities native to our humanity. If we leave this inexplicit and unlimited, you will be at liberty to describe any quality you choose as a virtue and any other quality you choose as a defect by assuming in your own insinuating manner that it is or is not native to our humanity. And in reality there is a very distinct gulf between those of our qualities which are native to our humanity and those others which belong to the animal nature we are working out of our composition; for example between lust and love, of which one belongs to the lower animal nature and the other to the higher spiritual. You are ignoring the distinction and by ignoring it, you ignore the patent fact of evolution.
Treneth — To ignore facts is the beginning of thought.
Keshav — No, but to forget facts for the time being — that is the beginning of thought.
Wilson — My dear Keshav, pray don’t trail a red paradox across the path.
Keshav — It was the other boy who did it. To return to the subject, are you really unconscious of the flagrant errors of which you have been so lavish in a little space?
Wilson — I am quite unconscious of any error.
Keshav — You have made three to my knowledge, and the first is your assumption that what is animal, cannot be human.
Wilson — Can you disprove it?
Keshav — Can you prove it? In the first place you cannot tell what is animal and what is not.
Wilson — Why, the qualities possessed by human beings as distinct from animals are those which are not animal.
Keshav — And, I suppose, qualities possessed in common by human beings and animals, are animal?
Wilson — You are right.
Keshav — And such qualities ought to be worked out of our composition?
Wilson — Yes, as Tennyson says, we ought to be
working out
The tiger and the ape.

Keshav — Then we ought to get rid of fidelity, ought we not?
Wilson — Why so?
Keshav — Because it is a quality possessed in common by
the dog and the human being, and the dog is an animal.
Treneth — Of course we should. Fidelity is a disease like
conscience.
Keshav — And infidelity is a quality possessed in common
by the cat and the human being, and therefore we ought to get
rid of infidelity.
Treneth — Again of course; for infidelity is merely a relative
term, and if fidelity is not, then how can infidelity be?
Keshav — And so we must get rid of all opposing qualities
and acquire a dead neutrality? Your ambition then is not to be
a personality, but to be a — negative?
Treneth — I confess you have taken me in the flank: even
my paradoxes will not carry me so far.
Keshav — And you, Broome, are you willing to break down
the ladder by which we are climbing?
Wilson — Not for a moment. What I mean is that the qual-
ities possessed in common by all the animals and the human
being are animal.
Keshav — Is not the human being an animal?
Wilson — Yes, scientifically.
Keshav — But not really?
Wilson — Well, he is something more than an animal.
Keshav — You mean he has other qualities besides those
which belong to the animal type?
Wilson — That is what I mean.
Keshav — And has not the planet other qualities besides
those which belong to the astral type?
Wilson — Yes.
Keshav — Does that warrant us in saying that a planet is
not really a star?
Wilson — No.

Keshav — And are we warranted in saying that man is not really an animal?

Wilson — We are not.

Keshav — And the animal world is an element in the Cosmos, is it not?

Wilson — Yes.

Keshav — Is it not then the virtue of an animal to evolve the qualities and powers native to his animality?

Wilson — I suppose so.

Keshav — And man, being an animal, ought also to evolve the qualities and powers native to his animality?

Wilson — That seems to follow, but is not this to cancel our old description of human virtue and break down our second rung?

Keshav — No, for just as the qualities native to a planet include the qualities native to a star, so the qualities native to the human type include the qualities native to the animal type.

Wilson — I quite agree with you now. What was my second error?

Keshav — You talked of the lower animal nature and the higher spiritual nature and in so talking assumed that the qualities peculiar to the human being are higher than the qualities he shares with some or all of the animals. Is dissimulation higher than love? You reject the idea with contempt: yet dissimulation is peculiar to the human being but love, and love of the most spiritual kind, he shares with the turtle-dove and with the wild-duck of the Indian marshes, who cannot sleep the live-long night because Nature has severed him from his mate but ever wails across the cold and lapping water with passionate entreatry that she may solace his anguish with even a word, and travellers straying in the forest hear his forlorn cry “Love, speak to me!” No, we can only say of varying qualities that one is beautiful and another less beautiful, or not beautiful at all; and beauty does not reside in being animal or being more than animal but in something very different.

Wilson — And my third error?
Keshav — Your third error was to confound evolution with elimination.

Wilson — And does it not really come to that?

Keshav — The vulgar opinion, which finds a voice as usual in Tennyson — what opinion of the British average does he not echo? — the vulgar opinion learns that the principle of evolution or gradual perfection is the reigning principle of life and adapts the idea to its own stupid fallacy that perfection implies the elimination of all that is vivid and picturesque and likely to foster a personality. Evolution does not eliminate but perfects.

Wilson — But surely perfection tends to eliminate what is imperfect?

Keshav — Oh I don’t deny that we have lost our tails, but so has a Manx cat.

Treneth — Dear me! that is a fruitful idea. A dissertation proving that the Manx cat is the crowning effort of Evolution might get me a Fellowship.

Keshav — It would deserve it for its originality. Moreover if we have lost our tails, we have also lost our wings.

Treneth — I maintain that the tails are the more serious loss. Wings would have been useful and we do not want them but we do want tails, for they would have been lovely appendages and a magnificent final flourish to the beauty of the human figure. Just fancy the Dean and Provost pacing up to the Communion Table with a fine long tail swishing about their ears! What a glorious lesson! What a sublime and instructive spectacle!

Wilson — You are incorrigibly frivolous, Treneth.

Keshav — If Prince Paradox is frivolous, he is virtuous, insofar as he is developing the virtue most intimately native to his personality; and the inquiry is dull enough at present to bear occasional touches of enlivening laughter.

Wilson — Yet the inquiry must pass through stifling underground galleries and to avoid them is puerile.

Keshav — I am at one with you, but if we must dive under the ground, there is no need to linger there.

Evolution does not eliminate, but perfects. The cruelty that blossoms out in the tiger, has its seeds deep down in the nature
of man and if it is minimised in one generation will expand in another, nor is it possible for man to eradicate cruelty without pulling up in the same moment the bleeding roots of his own being. Yet the brute ferocity that in the tiger is graceful and just and artistic, is in the man savage and crude and inharmonious and must be cultured and refined, until it becomes a virtue and fits as gracefully and harmlessly into the perfect character, as its twin-brother physical courage and physical love, its remote relative.

Wilson — You are growing almost as paradoxical as Prince Paradox, Keshav.

Keshav — Look for Truth and you will find her at the bottom of a paradox. Are you convinced that animal qualities are not the worse for being animal?

Wilson — Perfectly convinced.

Keshav — And here I cannot do better than quote a sentence that like so many of Meredith’s sentences, goes like a knife to the root of the matter. “As she grows in the flesh when discreetly tended, nature is unimpeachable, flowerlike, yet not too decoratively a flower; you must have her with the stem, the thorns, the roots, and the fat bedding of roses.” And since I have quoted that immortal chapter so overloaded with truth critical, truth psychologic and truth philosophic, let me use two other sentences to point the moral of this argument and bid you embrace “Reality’s infinite sweetness” and “touch the skirts of Philosophy by sharing her hatred of the sham decent, her derision of sentimentalism.” May we not now ascend to the fourth rung?

Wilson — Yes, I think we may go on.

Keshav — I am especially eager to do so because I am more and more convinced that our description of virtue is no longer adequate: for if the only requisite is to evolve our innate qualities, will it not be enough to be merely cruel and not to be cruel in a refined and beautiful manner?

Wilson — Plainly it will.

Keshav — And is it really enough to be merely cruel?

Treneth — No, for to be inartistic is the only sin.
Keshav — Your paradox cuts to the heart of the truth. Can you tell me, Broome, whether is the rose more beautiful than the bramble or the bramble than the rose?

Wilson — Obviously the rose than the bramble.

Keshav — And why is this? Is it not because the thorn develops unduly the thorn and does not harmonize it with leaves but is careless of proportion and the eternal principle of harmony, and is beautiful indeed as an element in the harmony of plants but has no pretensions to personal beauty but the rose subdues the thorn into harmony with the leaf and the blossom and is perfectly beautiful in herself no less than as an element in the harmony of flowers?

Wilson — I believe you are right.

Keshav — And must not cruelty, the thorn of our beautiful human rose, be subdued into harmony with his other qualities and among them tenderness and clemency and generous forbearance and other qualities seemingly the most opposed to cruelty and then only will it be a real virtue but until then nothing more than a potential virtue?

Wilson — You are right; then only will it be a real virtue.

Keshav — So we must modify our description of virtue by affixing an epithet to the word “evolution”, and preferably I think the epithet “perfect” which does not imply size or degree or intensity or anything but justness of harmony, for example in a poem, which is not called perfect when it is merely long-drawn-out or overflowing with passion or gorgeous even to swooning, but when it blends all the elements of beauty into an irreproachable harmony. We shall then describe virtue as the perfect evolution by the human being of the inborn qualities and powers native to his personality.

Wilson — With that I have no quarrel, but am I too inquisitive when I ask you how cruelty and tenderness can live together?

Keshav — My dear Broome, I shall never think you too inquisitive but above all things desire that you should have a clear intelligence of my meaning. Have you never learned by experience or otherwise how a girl will torment her favoured
lover by a delicate and impalpable evasion of his desires and will not give him even the loan of a kiss without wooing, but must be infinitely entreated and stretch him on the rack of a half-serious refusal and torture him with the pangs of hope just as a cat will torture a mouse, yet all the while means to give him everything he asks for and would indeed be more bitterly disappointed than he, if any accident precluded her from making him happy?

Wilson — Yes, I know, some women are like that.

Keshav — If you had said most women were like that, you would have hit the truth more nearly. And this trait in women we impute to feminine insincerity and to maiden coyness and to everything but the real motive, and that is the primitive and eternal passion of cruelty appearing in the coarse fibre of man as crude and inartistic barbarity, but in the sweet and delicate soul of woman as a refined and beautiful playfulness and the inseparable correlative of a gentle and suave disposition.

Wilson — But I am inclined to credit the girl with the pur- pose of giving a keener relish to the gratified desire by enhancing the difficulty of attainment, and in that case she will be actuated not by cruelty but always by tenderness.

Keshav — You think she is actuated by the principles of Political Economy? I cannot agree with you.

Treneth — And I deny the truth of the principle. A precious thing easily acquired is treasured for its beauty and worth, but if acquired with pain and labour, the memory of the effort leaves a bad taste in the mouth which it is difficult to expunge. I read Vergil at school and never read a line of him now but Catullus I skimmed through in my arm-chair and love and appreciate.

Keshav — Your distinction is subtle and suggestive, Tren- eth, but it never occurred to me in that light before.

Treneth — It never occurred to me in that light before.

Keshav — Yet I do not think it applies to our lovers, and it does not apply always, for the poem I have perfected with labour and thought is surely dearer to me than the light carol thrown off in the happy inspiration of the moment. Rapid generalities seldom cover more than a few cases. So I will take Broome on his own ground, not because I cannot adduce other instances of
cruelty and tenderness living in wedded felicity, but because I do not want to fatigue myself by recollecting them.

And now, Broome, will you say that a tyrant who desires to give his favourite a keener relish of luxury and strains him on the rack and washes him with scalding oil and dries him with nettles and flays him with whips and then only comforts him with the luxury of downy pillows and velvet cushions and perfect repose, has not been actuated by cruelty but always by tenderness?

Wilson — Oh, of course, if you cite extravagant instances —!

Keshav — And will you say that the girl who wishes to give her kiss a sweeter savour on the lips of her favourite and strains him on the rack of suspense and washes him with the scalding oil of despair and dries him with the nettles of hope and flays him with the whips of desire and then only comforts him with the velvet luxury of a kiss and the downy cushion of an embrace and the perfect repose of desire fulfilled, has not been actuated by cruelty but always by tenderness and not rather that all unnecessary pain is cruelty to the sufferer?

Wilson — Certainly, unnecessary pain is cruelty.

Keshav — Are you perfectly satisfied?

Wilson — Perfectly satisfied.

Keshav — We have discovered then that perfect evolution is requisite for perfect virtue, but I do not think we have distilled its full flavour into the epithet. Or are you of the opinion that we want nothing more than the harmonizing of all the inborn qualities?

Wilson — I cannot think of any other requisite.

Keshav — Can you, Treneth?

Treneth — I was much attracted by something you said in the beginning about the elements of beauty and I suspect it is these we want now.

Keshav — You have exactly hit it. We described it as not merely harmony in effect and proportion in detail but as possessed of one of the three elements, colour, perfume and form, and in most types combining at least two and in many all three. But in confining our outlook to harmony and proportion we have talked as if human virtue were merely possessed of one
of the elements; yet is there any reason to suppose that human virtue does not possess the whole three?

Wilson — No reason whatever.

Keshav — Well, might we not inquire whether it does possess all three, and if it does not, whether it may not legitimately or, to speak more properly, may not artistically possess all three?

Wilson — By all means, let us inquire.

Keshav — And if we find that it may artistically possess them, then, if our theory that beauty should be the governing principle in all things, is really correct, must we not say that they not only may but ought to possess all three?

Wilson — Evidently we must.

Treneth — That is as plain as a Cambridge laundress.

Keshav — And it is clear that all qualities may, with diligence, be entirely divested of colour, form and perfume, and when they have reached the stage of wanting every single element of beauty, we need take no notice of them, for they have no longer anything to do with virtue, until they begin to redevelop.

Wilson — Obviously, for we are talking of perfect virtue or perfect beauty of character.

Keshav — Now if we have not the qualities requisite for a given action, we shall not achieve the action, supposing we attempt it, but shall only achieve a blunder, is it not so?

Wilson — Clearly.

Keshav — But if we have the qualities, we are likely to achieve the action?

Wilson — Necessarily.

Keshav — Then is not action the outward manifestation of a quality, and I include in action any movement physical or intellectual which is visible or whose effects are visible to the human understanding?

Wilson — Yes, but may not an action manifest the want of a quality?

Keshav — No doubt, but we need not touch on those, since we have not to develop defects in order to be virtuous, or do you think we need?
Treneth — Clearly not: negatives cannot be virtues.

Keshav — That is a very just sentiment and I shall have occasion to recall it. Now is not a battle the outward manifestation of the warlike qualities?

Wilson — Evidently.

Keshav — And composition the outward manifestation of the poetical qualities, I mean, of course, the qualities of a maker?

Wilson — Yes.

Keshav — And do we not mean that the poetical qualities express themselves in composition just as the sidereal in a star?

Wilson — We do.

Keshav — And is not the star the form of the sidereal qualities?

Wilson — Yes.

Keshav — Then is not composition the form of the poetical qualities?

Wilson — That follows.

Keshav — Then is not action the form of a quality, that is to say the shape in which it expresses itself?

Wilson — So it seems.

Keshav — So we find that virtue has a form.

Wilson — But may not qualities have a form apart from action?

Treneth — For example, thought.

Keshav — But the expression of thought is included in action for our purpose.

Treneth — For our purpose only.

Keshav — As you please. I merely want to use one projection from the rock and not imperil my neck by clutching two in one hand.

Treneth — I am satisfied.

Keshav — I suppose, Broome, you mean by form a concrete shape?

Wilson — I suppose so.

Keshav — Then you must see that qualities unexpressed in
action are wholly chaotic and formless; and I mean within the scope of action, the expression of thought and the act of sitting or standing or lying down and the act of being indolent and anything that by any legitimate stretch of language may be called an act.

Wilson — I too am satisfied.

Keshav — Then we are agreed that a quality must possess form, that is to say, express itself in action or it will not be a virtue?

Treneth — May it not prefer to express itself in perfume and colour?

Keshav — I had forgotten that.

Now if we inquire what colour is, we shall see that it is nothing concrete but merely an effect on the retina of the eye, and its prosperity lies in the eye that sees it, and if the retina of the eye is perfect, every different shade impresses itself, but if imperfect, then the eye is blind to one or more colours. Will you agree with me when I say that anything to which we give the name of colour must be the reverse of concrete?

Wilson — That follows.

Keshav — Then the colour of a virtue must be the reverse of concrete.

Wilson — Evidently.

Keshav — Now let us take metaphor into our counsel, for metaphor has sometimes an intuitive way of chiming consonantly with the truth; and metaphor tells us that we often talk of a scarlet and sinful character and of a white and innocent character and of a neutral and drab-coloured character, and assign various colours to various women and call one woman a splendid carnation, for we are fond of comparing women to flowers and another a beautiful and gorgeous rose, and a third a pure and sinless lily and yet another a modest violet betraying herself only by her fragrance, and are all the while implying that to the imaginative eye, if the retina is perfect, various characters have various colours. Do you follow me?

Treneth — Yes, the idea is fine.

Wilson — And true.
Treneth — That is immaterial.
Keshav — And character is the composition of qualities just as a poem is the composition of sounds and a painting the composition of pigments.
Wilson — Yes, just in that sense.
Keshav — Then is it not plain that if a character has colour, the qualities of which it is composed must have colour.
Wilson — I think it is.
Keshav — And colour is not concrete, but an effect on the retina of the eye?
Wilson — So we said.
Keshav — Then is not the colour of a quality its effect on the retina of the imaginative eye?
Wilson — Yes.
Keshav — And a quality in itself may be formless?
Wilson — Yes.
Keshav — Then to the imaginative eye is not a quality pure colour?
Wilson — I suppose so.
Keshav — But the imaginative eye is not one with the perceptive eye, for it perceives what does not exist, but the perceptive eye only what does exist.
Wilson — You are right.
Keshav — I mean that nothing without form can have an effect on the retina of the perceptive eye.
Wilson — That is evident.
Keshav — Then to be visible to the perceptive eye, the colour of a quality, which is really the soul of the quality, must suffuse the action which expresses it, which is the body of the quality.
Wilson — It must.
Keshav — And is colour without form a perfect type of beauty?
Wilson — No.
Keshav — Then a quality must suffuse its body with its soul, or, since the word action is growing ambiguous, its expression with its colour.
Wilson — Yes, I agree to that.

Keshav — And so the quality will so suffuse its expression as to be visible to the perceptive eye, just as the soul of a rose, which is the effect on the retina of the imaginative eye, suffuses her form with colour which is the effect on the retina of the perceptive eye, and varies according to the variety of colours, and if two roses have the same form but one is crimson and the other yellow, the soul of the red rose is seen to be scarlet with unholy passion, but the soul of the yellow rose is seen to be dull and blanched and languid, like the reaction after intensely voluptuous enjoyment.

And so virtue may possess both form and colour, and, I suppose, may artistically possess both, or will colour be detrimental to the perfection of virtue as tinting to the perfection of sculpture?

Treneth — By no means; for qualities are not hewn out of marble or cast in beaten gold or chiselled in Indian ivory, but are moulded in the delicate and flower-like texture of human emotion and, if colourless, are scarcely beautiful.

Keshav — Then we are agreed that a quality must possess both form and colour, or will not be a perfect virtue?

Treneth — Plainly.

Wilson — I am afraid I hardly understand what we are saying.

Keshav — I am certain I do not; but we must follow where the argument leads us, and I have a glimmering intelligence which I hope to see expanding into perfect daylight; but I do not want any side issue to distract my thoughts and will go on to inquire what is the perfume of a quality: for I am like a frail canoe that wavers through a tranquil to be buffeted outside by the swelling waters and have with difficulty plunged through these two waves of form and colour, when I see rolling down on me with its curled forehead this third wave of perfume which I do not hope to outlive. But to the venturous Fortune is as compliant as a captive Briseis and I will boldly plunge into the crash of the breaking water and call manner the perfume of a quality, for in manner resides the subtle aroma and sense of
something delicious but impalpable which is what we mean by perfume.

_Treneth_ — With your usual good luck you have notched your mark in the centre.

_Keshav_ — So by audacity I have outlived the third wave and am more than ever convinced that you must take liberties with Fortune before she will love you.

I suppose you will agree with me that for a virtue to be beautiful, there must be a perfect harmony in the elements of beauty, and the colour not too subdued as in the clover nor too glaring as in the sunflower, and the perfume not too slight to be noticeable as in the pansy nor too intense for endurance as in the meadow-sweet, and the form not too monotonous as in a canal or too irregular as in the leafless tree, but all perfectly harmonious in themselves and in fit proportion to each other?

_Wilson_ — From our description of beauty, that is evident.

_Treneth_ — I plead not guilty on behalf of the sunflower, but agree with the sentiment.

_Keshav_ — And now since Broome and I are at a loss to conjecture what we mean, do you not think we shall be enlightened by a concrete example?

_Treneth_ — It is likely.

_Wilson_ — Let us at least make an attempt.

_Keshav_ — We will call on the stage the girl and her lover, who have been so useful to us. It is clear at once that if she is not virtuous but harmonizes the elements of beauty unskilfully, the passion of her favourite will wither and not expand.

_Wilson_ — That is clear.

_Keshav_ — What then will be her manner of harmonizing them?

_Wilson_ — I return the question to you.

_Keshav_ — Well now, will she not harmonize the phases of her dalliance, and hesitate on the brink of yielding just at the proper pitch of his despair, and elude his kiss just at the proper pitch of his expectancy, and fan his longing when it sinks, and check it when it rises, and surrender herself when he is smouldering with hopeless passion?

www.holybooks.com
Wilson — That is probably what she will do.

Keshav — And is not that to cast her dalliance in a beautiful form?

Wilson — It is.

Keshav — But she will not do this grossly and palpably, but will lead up to everything by looks and tones and gestures so as to glide from one to the other without his perceiving and will sweeten the hard and obvious form by the flavour of the simple and natural, yet will be all the while the veriest coquette and artist in flirtation.

Wilson — Yes, that is what a girl like that would do.

Keshav — And is not that to give a subtle perfume to her dalliance?

Wilson — I suppose it is.

Keshav — But if she is perfect in the art, will she not, even when repulsing him most cruelly, allow a secret tenderness to run through her words and manner, and when she is most tenderly yielding, will she not show the sharp edge of asperity through the flowers, and in a word allow the blended cruelty and sweetness of her soul to be just palpable to his perceptive senses?

Wilson — She will.

Keshav — And is not that to suffuse her dalliance with colour?

Wilson — Plainly.

Keshav — And moreover she will not allow her affectation of the natural to be too imperfect to conceal her art or so heavily scented as to betray the intention, or the colour to be unnoticeable from slightness or from intensity to spoil the delicate effect of her perverseness, or the form to engross too largely the attention, or indeed any element to fall too short or carry too far, but will subdue the whole trio into a just and appropriate harmony.

Wilson — If she wants to be a perfect flirt, that is what she will do.

Keshav — And if coquetry is native in her, to be a perfect flirt will be highest pinnacle of virtue.

Wilson — That follows from the premisses.
Keshav — And so here we have a concrete example of perfect virtue, and begin to understand what we mean by the perfect evolution of an inborn quality, or are you still unenlightened?

Wilson — No, I perfectly understand.

Keshav — Hither then we have climbed with much more laborious effort and have almost cut our hands in two on the projections, but do at last really stand on the fourth and last rung of the ladder.

Wilson — The last? I rather fancy we are only half way up and shall have to ascend another three or four rungs before we are kissed by the fresh winds that carol on the brow. I have many things to ask you and you have as yet spoken nothing of the relations between man and man and how this new morality is to be modified by the needs of society and what justice means and what self-sacrifice and indeed a thousand things which will need many hours to investigate.

Keshav — I am Frankenstein saddled with a monster of my own making and have made a man to my ruin and a young man to my hurt. Nevertheless “lead on, monster: we’ll follow.”

Treneth — Will you not rest on the fourth rung and have a cup of tea in my rooms before you resume?

Keshav — But shall we not put a stop to your spheroids and trianguloids and asinoids and all the other figures of mathematical ingenuity?

Treneth — I am at present watching a body which revolves on six screws and is consequently very drunk, and a day off will sensibly assist my speculations.

Keshav — So let it be, but before we go I may as well recall to you at a glance what is our fourth rung.

We have expanded our description of virtue as the evolution of the inborn qualities native to our personality, by throwing in the epithet “perfect”, and have interpreted the full flavour of the epithet in words to the effect that qualities in their evolved perfection must be harmonious one with another and have a beautiful form or expression, and a beautiful colour or revelation of the soul, and a beautiful perfume or justly-attempered manner and must subdue all three into a just and appropriate harmony.
With this conviction in our souls we will journey on, despising the censure and alarm of the reputable, and evolve our inborn qualities and powers into a beautiful and harmonious perfection, until we walk delicately like living poems through a radiant air, and will not stunt the growth of any branch or blossom, but will prefer to the perishable laurels of this world a living crown of glory, and hear through the chaotic murmur of the ages the solemn question of Christ “What profiteth it a man if he own the whole world and lose his own soul?” and will answer according to the melodious doctrines of philosophy and acquire by a life of perfect beauty the peace of God that passeth all understanding.
Beauty in the Real

I had ridden down by Shelsford thro’ the glittering lustre of an afternoon in March and as I was returning somewhat cold and tired, saw at a distance the pink hat and heavy black curls of Keshav Ganesh and with him Broome Wilson and Prince Paradox. As I trotted up Prince Paradox hailed me. “Come round and have tea with me” he said “we are speculating at large on the primitive roots and origin of the universe, and I know your love for light subjects.” “I shall be a delighted listener” I said, and was genuine in the assurance, for I had many a while listened with subtle delight to the beautiful and imaginative talk of Keshav Ganesh. I rode to the stables and returned to the College and quickly changing my apparel repaired to Chetwynd Court, but found them already drinking tea with the liberality of artists. “A cup of nectar” I cried “ere the bowl be empty!” “It seems that Pegasus is blind” said Wilson “or he would not see the drink of Gods in the brown tincture of tea-leaves and the chased bowls of Hephaestus in a common set of China.” “If not the drink of Gods” I replied “it is the nectar of poets and women.” “And that is a more splendid title” put in Prince Paradox. “You are right” said Keshav “poets and women are the efflorescence of being and the crowning rapture of creation, and if poets are roses in their delicate texture and have the crimson luxury and the heavy fragrance and the petalled sublimity of a blowing rose, women are moulded of as fine material but are flowers perpetually in the bud and are only seen in a glint of peeping splendour and not in the consummated outburst of glory, which is only fostered by the living waters of culture and the nurturing warmth of independence.” Broome interposed. “No more of that” he said “if you escape into a byway, Keshav, you will never be wooed back into the high-road.” “But what is the high-road?” I inquired. Broome Wilson, who was gifted with a retentive memory undertook to
inform me. “I understand” I said when he had finished “and am pleased to see my own ideas garbed in the beautiful dialect of poetical analogy; but have you not finished or is there more wine to be pressed from the cluster?” “There is more to be pressed” he answered. Then began an amusing scene, for Broome baited his hook for the argument and kept throwing the line repeatedly, but Keshav was the wariest fish that ever cheated an angler and if he ever appeared to bite, was seen, as the line went flying up, to dart away into some fine thought or voluptuous image. At last when we least expected it, he plunged into the argument.

“And so on the gnarled brow of Pisgah we stand and look down on a land flowing with milk and honey. Now whether is it wiser to descend and take the kingdom of heaven by violence or to linger here and feel on our temples the breath of the winds wafting us hints of the beauty we relinquish? Below there are truculent peoples to conquer and strong cities to storm and giants, the sons of Anak, to slaughter, but above the stainless heavens and the sweet, fresh morning and one lingering star.”

“Let us go down” I said “and enjoy the full meaning of the beauty below us.”

“Yes” added Broome eagerly “leave hints to the spiritually indolent.”

Treneth threw in a paradox.

“I love the pleasure of anticipation better than the pain of enjoyment.”

“We are very far from the enjoyment” said Keshav “for we have yet to make the descent of Pisgah.”

“But what is Pisgah?” I asked.

“In thought, the knowledge of virtue, and, in action, the purpose of evolving the inborn qualities and powers native to our personality.”

“Shall I let you off, Keshav,” said Broome “or are you ready to answer my inquiries?”

“Pray do not” he said “for like Gorgias I profess to answer any question and not be at a loss however strange the inquiry.”

“I am glad to hear it, and I hope you will answer and tell me why you have ignored the qualities that are native neither to

www.holybooks.com
our human nature nor to our personality but to a more subtle part of us."

“I see;” he replied with a smile “you shy at the spectre of heredity. Well, we will lay the spectre.”

“And a spectre it is, or rather a scarecrow;” put in Prince Paradox “for it seems to me neither beautiful as an idea nor sound as a theory but merely the last resource of bad psychologists.”

“I see the lovers of the past are as iconoclastic from regret as the lovers of the future from aspiration. We are then agreed that our first step will be to reject or accept heredity?”

We all assented.

“And now, Prince Paradox” he said “will you tell me that you do not believe in race?”

“God forbid.”

“And you agree with me that an Aryan is various from a non-Aryan, and a Teuton from a Celt and a Celt from a Hindu, and a Rajput from a Mahratta, and that this is fine as an idea and sound as a theory and consonant with Nature, which is fond of sphering harmony within harmony?”

“Yes, I agree with all that.”

“And by origin the Saxon varies from the Celt, and is meant for the drudgery of Life and not for its beauty and splendour, just as by origin the thistle varies from the rose and is not glorious nor wonderful but simply decent and useful and good diet for donkeys?”

“That is true.”

“Then if race divergences result from origin, and origin is heredity, is it not?, is not heredity real and not a sciolism?”

“Yes, in broad masses, but not in the individual. What is sauce for the goose abstract is not sauce for the positive gander.”

“It would take a positive goose to deny that. But synthesis is the secret of Philosophy and not analysis, and we err widely when we work from without rather than from within. Let us rectify our methods or we shall arrive at incomplete results. I trust none of you are proficient in text-book Psychology?”

We all disclaimed the text-book.
“That is fortunate, for I can now make ridiculous mistakes without fear of ridicule. This is the theory of race as I conceive it. Temperament is the basis or substratum of character, and the character built on anything other than temperament is an edifice rooted in the sea-waves which in a moment will foam away into nothing or tumble grovelling under the feet of fresh conquerors. Indeed it would be more apt to call temperament the root of character, and the character itself the growing or perfect tree with its hundred branches and myriads of leaves. And temperament is largely due to race, or, in another phrasing, varies with the blood, and if the blood is quick and fiery the temperament is subtle and sensitive and responds as promptly to social influences and personal culture as a flower to sunlight and rain, and shoots up into multitudinous leaves and branches, but if the blood is slow and lukewarm, the temperament is dull and phlegmatic and will not answer to the most earnest wooing, but grows up stunted and withered in aspect and bald of foliage and miserly of branches and altogether unbeautiful. On the blood depends the sensitiveness of the nerves to impressions and the quick action of the brains and the heat of the passions, and all that goes to the composition of a character, which if they are absent, leave only the heavy sediment and dregs of human individuality. Hence the wide gulf between the Celt and the Saxon.”

“You are the dupe of your own metaphors, Keshav” said Broome “the quick nature is the mushroom, but the slow is the gradual and majestic oak.”

“If the Athenians were mushrooms and the Lowland Scotch are oaks, the mushroom is preferable. To be slow and solid is the pride of the Saxon and the ox, but to be quick and songful and gracile is the pride of the Celt and the bird. There is no virtue in inertia, but only absence of virtue; for without growth there is no development, and the essence of growth and the imperative need of the spirit is movement, which if you lose, you lose all that separates the human from the brute.”

Broome avowed that on our theory of virtue the remark was convincing.
“And do we all recognize” said he “blood as the seed of temperament and temperament as the root of character?”

We all signified assent.

“Then, Prince Paradox, does it not follow that if our ancestors had quick blood, we shall have quick blood and a quick temperament, and if they had slow blood, we shall have slow blood and a slow temperament, and if they had some of both characters, we shall have the elements of either temperament, and either they will amalgamate, one predominant and the other subordinate or driven under, or they will pervert our souls into a perpetual field of battle?”

“Obviously” he assented.

“Then here we have heredity in the individual as in the broad masses.”

“But only a racial heredity and to that I do not object, but what I loath is to be told that my virtues are mere bequests and that I am not an original work but a kind of anthology of ancestral qualities.”

“But if I called you a poem, in which peculiar words and cadences have been introduced and assimilated and blended in a new and beautiful manner, would you loath to be told that?”

“Dear me, no: it quite reconciles me to the idea.”

“And it is the more accurate comparison. Nature does not go to work like a mere imitator of herself, as modern poets do, but transplants the secrets of her old poems and blends them with new secrets, so as to enrich the beauty of her new poem, and however she may seem to grow grapes from thistles, is really too wise and good, to do anything so discordant, and only by her involved and serpentine manner gives an air of caprice and anarchy to what is really apt and harmonious. She often leaves the ground fallow for a generation and the world is surprised when it sees spring from Sir Timothy Shelley, Baronet and orthodox, Percy Bysshe Shelley, poet and pioneer of free-thought, but learns in a little while that Percy Shelley had a grandfather, and marvels no longer. Could we trace the descent of Goethe and Shakespeare we should find the root of the Italian in the one and the Celt in the other — but the world did not then and
Beauty in the Real

does not now appreciate the value of genealogies to philosophy. We are vexed and are sceptical of harmony in nature, when we find Endymion a Londoner, but look back a step and learn that his parents were Devonshire Celts and recover our faith in the Cosmos. And why should we exclaim at the Julian emperors as strange products for stoical virtue-ridden Rome, when we know that Tiberius was a Clausus, one of the great Italian houses renowned for its licence, cruelty, pride and genius, and Caligula the son and Nero the grandson of Germanicus, who drew his blood from Mark Antony. Science is right in its materialist data, though not always in the inferences it draws from them and when she tells us that nothing proceeds from nothingness and that for every effect there is a cause and for every growth a seed, we must remember that her truths apply as much to the spiritual as to the material world. Mommsen has said rightly that without passion there is no genius. We shall not gather beauty from ugliness, nor intellect from a slow temperament, nor fiery passion from disciplined apathy, but in all things shall reap as we sow, and must sow the wind before we can reap the whirlwind.”
Stray Thoughts

Flowers and trees are the poetry of Nature; the gardener is a romantic poet who has added richness, complexity of effect and symmetry to a language otherwise distinguished merely by facility, by directness and by simplicity of colour and charm.

Sound is more essential to poetry than sense. Swinburne who often conveys no meaning to the intellect, yet fills his verse with lovely & suggestive melodies, can put more poetry into one such line than Pope into a hundred couplets of accurate sense and barren music. A noble thought framed in a well-rounded sentence, will always charm by virtue of its satisfying completeness, but will never convey that exquisite agony of rapture which a line of perfect melody conveys to the sensitive soul.

The melody of words has this advantage over the melody of mere sounds that it needs only a soul to understand poetry but to comprehend music a technical education as well.

To govern life by fixed laws and a pocket-hand-book.

Beware of heavy touches above all in tragedy: comedy heavily stressed becomes the grotesque, which has its value in Art: tragedy heavily stressed becomes melodrama, which has no value anywhere.

One step beyond the sublime & you are in the grotesque.

The Greek mythology was evolved by poets and sculptors; therefore it is beautiful. The Hindu mythology fell into the hands of priests and moralists; therefore it has become hideous.

Art holds the mirror up to Nature that Nature may see her own image beside that of Art and realise her own deformity and imperfections.
It was Meredith who taught me that the epigram is the soul of style, and Plato who whispered that rhythm is its body. Words are the texture of the flesh and sentences the system of hard matter that gives it consistency: the texture of the flesh may be coarse or delicate, and as you design so you shall build.

Just as Socrates was nothing without his daemon, so the artist is helpless if he has not his daemon at his elbow. And who is the artist’s daemon? The artistic conscience.

Inspiration means that the papyrus of your imagination is held to the fire of memory and reveals characters written in Indian ink by unseen compositors.
Part Two

On Literature

Sri Aurobindo wrote all the pieces in this part in Baroda between 1893 and 1906. He published the essays making up *Bankim Chandra Chatterji* in a newspaper in 1893–94. He published two of the essays on Kalidasa, “The Age of Kalidasa” and “The Seasons”, in 1902 and 1909 respectively. He did not publish any of the pieces in the sections headed “On Poetry and Literature” and “On the Mahabharata”.

Bankim Chandra Chatterji
I

His Youth and College Life

ANKIM Chandra Chattopadhyaya, the creator and king of Bengali prose, was a high-caste Brahman and the son of a distinguished official in Lower Bengal. Born at Kantalpara on the 27th June 1838, dead at Calcutta on the 8th April 1894, his fifty-six years of laborious life were a parcel of the most splendid epoch in Bengali history; yet among its many noble names, his is the noblest. His life shows us three faces, his academical career, his official labours and his literary greatness; it will be here my endeavour to give some description of each and all. The first picture we have of his childhood is his mastering the alphabet at a single reading; and this is not only the initial picture but an image and prophecy of the rest. Even thus early men saw in him the three natural possessions of the cultured Bengali, a boundless intellect, a frail constitution and a temper mild to the point of passivity. And indeed Bankim was not only our greatest; he was also our type and magnified pattern. He was the image of all that is most finely characteristic in the Bengali race. At Midnapur, the home of his childhood, the magnificence of his intellect came so early into view, that his name grew into a proverb. “You will soon be another Bankim,” — for a master to say that was the hyperbole of praise, and the best reward of industry. He ascended the school by leaps and bounds; so abnormal indeed was his swiftness that it put his masters in fear for him. They grew nervous lest they should spoil by over-instruction the delicate fibre of his originality, and with a wise caution they obstructed his entrance into the highest class. Bankim had always an extraordinary luck. Just as at school his fine promise was saved by the prudence of its guardians from the altar of High Education, the Moloch to whom we stupidly sacrifice India’s most hopeful sons, so it was saved at Hugly College by his own distaste for hard work. At Hugly College
quite as much as at Midnapur he had the reputation of an intel-
tlectual miracle. And indeed his ease and quickness in study 
were hardly human. Prizes and distinctions cost him no effort in 
the attaining. He won his honours with a magical carelessness 
and as if by accident while others toiled and failed. But while 
unconquerably remiss in his duties, he bestowed wonderful pains 
on his caprices. He conceived at this time a passion for Sanskrit 
and read with great perseverance at a Pandit's tol. In a single year 
he had gone through the Mugdhabodh, Raghuvansa, Bhatti and 
the Meghaduta. Advancing at this pace he managed in something 
under four years to get a sense of mastery in the ancient tongue 
and a feeling for its literary secrets which gave him immense 
leverage in his work of creating a new prose. Not that there is 
the least touch of pedantry in his Bengali style: rather it was he 
and Madhu Sudan Dutt who broke the tyranny of the Sanskrit 
tradition: but one feels how immensely his labour was simplified 
by a fine and original use of his Sanskrit knowledge. At the age 
of seventeen, being then a student of five years' standing, he 
cut short his attendance at Hugly College. He left behind him 
a striking reputation, to which, except Dwarkanath Mitra, no 
student has ever come near. Yet he had done positively nothing 
in the way of application or hard work. As with most geniuses 
his intellectual habits were irregular. His spirit needed larger 
bounds than a school routine could give it, and refused, as every 
free mind does, to cripple itself and lose its natural suppleness. 
It was his constant habit, a habit which grew on him with the 
lapse of time, to hide himself in a nook of the College Library 
and indulge his wandering appetite in all sorts of reading. At the 
eleventh hour and with an examination impending, he would 
catch up his prescribed books, hurry through them at a can-
ter, win a few prizes, and go back to his lotus-eating. I believe 
this is a not uncommon habit with brilliant young men in all 
countries and it saves them from the sterilizing effects of over-
instruction; but it hardly strikes one as a safe policy for slower 
minds. At the Presidency College, his next seat of instruction, 
he shaped his versatile intellect to the study of law. He had then 
some project of qualifying as a High Court Pledger, but at the
right moment for literature the Calcutta University came into being and Bankim took literary honours instead of legal. The Courts lost a distinguished pleader and India gained a great man. Bankim, however, seems to have had some hankering after Law; for he subsequently snatched time from hard official drudgery and larger literary toil to appear with his usual distinguished success for the B.L. But his chief pretension to academical originality is perhaps that he was, together with Jodunath Bose, our first B.A., even in this detail leading the way for his countrymen. His official appointment followed close on the heels of his degree. At the age of twenty he was sent as Deputy Magistrate to Jessore.

I have drawn out in a manner as little perfunctory as I could manage, this skeleton of Bankim's academical life. In any account of an eminent Hindu a dry sketch of this sort is a form that must be gone through; for we are a scholastic people and in our life examinations and degrees fill up half the book. But examinations and degrees are a minor episode in the history of a mind. An European writer has acutely observed that nothing which is worth knowing can be taught. That is a truth which Dr. Bhandarkar, when he can spare time from his Carlyle, might ponder over with profit. Not what a man learns, but what he observes for himself in life and literature is the formative agency in his existence, and the actual shape it will take is much determined by the sort of social air he happens to breathe at that critical moment when the mind is choosing its road. All else is mere dead material useless without the breath of a vivifying culture. If examinations and degrees are the skeleton of university life, these are its soul and life-blood, and where they exist poorly or not at all, education, except for the one or two self-sufficing intellects, becomes mere wind and dust. Among what sort of men did the student Bankim move? From what social surroundings did his adolescent personality take its colour? These are questions of a nearer interest than the examinations he passed or the degrees he took; and to them I shall give a larger answer.
II

The Bengal He Lived In

The society by which Bankim was formed, was the young Bengal of the fifties, the most extraordinary perhaps that India has yet seen,—a society electric with thought and loaded to the brim with passion. Bengal was at that time the theatre of a great intellectual awakening. A sort of miniature Renascence was in process. An ardent and imaginative race, long bound down in the fetters of a single tradition, had had suddenly put into its hands the key to a new world thronged with the beautiful or profound creations of Art and Learning. From this meeting of a foreign Art and civilisation with a temperament differing from the temperament which created them, there issued, as there usually does issue from such meetings, an original Art and an original civilisation. Originality does not lie in rejecting outside influences but in accepting them as a new mould into which our own individuality may run. This is what happened and may yet happen in Bengal. The first impulse was gigantic in its proportions and produced men of an almost gigantic originality. Rammohan Ray arose with a new religion in his hand, which was developed on original lines by men almost greater one thinks than he, by Rajnarain Bose and Debendranath Tagore. The two Dutts, Okhay Kumar and Michael Madhu Sudan, began a new Prose and a new Poetry. Vidyasagara, scholar, sage and intellectual dictator, laboured hugely like the Titan he was, to create a new Bengali language and a new Bengali society, while in vast and original learning Rajendra Lal Mitra has not met his match. Around these arose a class of men who formed a sort of seed-bed for the creative geniuses, men of fine critical ability and appreciative temper, scholarly, accomplished, learned in music and the arts, men in short not only of culture, but of original culture. Of these perhaps the most finished patterns were Madhu Sudan’s friends,
Gourdas Byshak, and that scholarly patron of letters, Rajah Jyotindra Mohun Tagore. At the same time there arose, as in other parts of India, a new social spirit and a new political spirit, but these on a somewhat servilely English model. Of all its channels the released energies of the Bengali mind ran most violently into the channel of literature. And this was only natural; for although the Bengali has by centuries of Brahmantic training acquired a religious temper, a taste for law and a taste for learning, yet his peculiar sphere is language. Another circumstance must not be forgotten. Our renascence was marked like its European prototype, though not to so startling an extent, by a thawing of old moral custom. The calm, docile, pious, dutiful Hindu ideal was pushed aside with impatient energy, and the Bengali, released from the iron restraint which had lain like a frost on his warm blood and sensuous feeling, escaped joyously into the open air of an almost Pagan freedom. The ancient Hindu cherished a profound sense of the nothingness and vanity of life; the young Bengali felt vividly its joy, warmth and sensuousness. This is usually the moral note of a Renascence, a burning desire for Life, Life in her warm human beauty arrayed gloriously like a bride. It was the note of the sixteenth century, it is the note of the astonishing return to Greek Paganism, which is now beginning in England and France; and it was in a slighter and less intellectual way the note of the new age in Bengal. Everything done by the men of that day and their intellectual children is marked by an unbounded energy and passion. Their reading was enormous and ran often quite out of the usual track. Madhu Sudan Dutt, besides English, Bengali and Sanskrit, studied Greek, Latin, Italian and French, and wrote the last naturally and with ease. Toru Dutt, that unhappy and immature genius, who unfortunately wasted herself on a foreign language and perished while yet little more than a girl, had, I have been told, a knowledge of Greek. At any rate she could write English with perfect grace and correctness and French with energy and power. Her novels gained the ear of the French public and her songs breathed fire into the hearts of Frenchmen in their fearful struggle with Germany. And as was their reading so was their life. They were
giants and did everything gigantically. They read hugely, wrote hugely, thought hugely, and drank hugely.

Bankim’s student days did not happen among that circle of original geniuses; his time fell between the heroes of the Renascence and the feebler Epigoni of our day. But he had contemporary with him men of extraordinary talent, men like Dinabandhu Mitra and Dwarkanath Mitra, men so to speak of the second tier. Bankim was the last of the original geniuses. Since then the great impulse towards originality has gone backward like a receding wave. After Bankim came the Epigoni, Hemchandra Banerji, Nobin Sen, Robindranath Tagore, men of surprising talent, nay, of unmistakable genius, but too obviously influenced by Shelley and the English poets. And last of all came the generation formed in the schools of Keshab Chandra Sen and Kristo Das Pal, with its religious shallowness, its literary sterility and its madness in social reform. Servile imitators of the English, politicians without wisdom and scholars without learning, they have no pretensions to greatness or originality. Before they came the first mighty impulse had spent itself and Bengal lay fallow for a new. It rests with the new generation, the generation that will soon be sitting in the high places and judging the land, whether there shall be scope for any new impulse to work itself out. Two years ago it looked as if this mighty awakening would lose itself, as the English sixteenth century lost itself, in Puritanism and middle-class politics.

But when Bankim was a student, the traditions of the Hindu college were yet powerful, the Hindu college, that nursery of geniuses, where the brain of the New Age had worked most powerfully and the heart of the New Age had beat with the mightiest vehemence. The men around Bankim were calmer, sedater, more temperate; but they walked in the same ways and followed the same ideals. To that life of hard thinking and hard drinking Bankim was drawn not merely, as some were, by the power of youthful imitativeness, but by sympathy of temperament. He had the novelist’s catholicity of taste and keen sense for life, and the artist’s repugnance to gloom and dreariness. Even when the thoughts turned to old faith, the clear sanity of the
man showed itself in his refusal to admit asceticism among the essentials of religion. He never indulged in that habit of frightful and inveterate riot which has killed one or two of our second-rate talents, but it cannot quite be said that he never overstepped the limits or always observed the principle of “nothing in excess,” which is the only sure rule for a man’s conduct. Some would like to see in this sensuous exuberance the secret of his early decay. It may be so; but speculation on this subject will remain a solemn farce, until it is taken up in a disinterested spirit. At present all our wise disquisitions proceed from unchastened sentiment. Dr. Bhandarkar is a violent social reformer and wants to throw odium upon Hindu society; Mr. Ranade’s hobby is a Conservative Radicalism and the spirit moves him to churn the ocean of statistics in a sense more agreeable to his own turn of mind; a third authority, prejudiced against Western Culture, traces all premature deaths to pleasure and wine-bibbing. Each starts from his own sensations, each builds his web of argument in the spirit of a sophist. To this Dr. Bhandarkar brings his moral ardour and grave eloquence, Mr. Ranade his trained reason and distinguished talent, the religionist his prejudices and cold precepts. Widely as they differ, they have this in common that they have not for their aim to speak usefully: they are simply trying to find reasons for their own likes and dislikes. Dealing with subjects of scientific interest in a spirit of this sort is only to invite confusion and exclude light. We in Bengal with our tendency to the sins of the blood are perhaps more apt than others to call to our aid the gloomy moralities of the Puritan; in censuring Bankim we are secretly fortifying ourselves against ourselves; but in this instance it is a false caution. The cultured Bengali begins life with a physical temperament already delicate and high-strung. He has the literary constitution with its femineity and acute nervousness. Subject this to a cruel strain when it is tenderest and needs the most careful rearing, to the wicked and wantonly cruel strain of instruction through a foreign tongue; put it under the very worst system of training; add enormous academical labour, immense official drudgery in an unhealthy climate and constant mental application; crown all with the
nervous expense of thought and fever of composition plus the unfailing exhaustion that comes after; and we need not go to the momentary excesses of a generous blood to find the explanation of broken health and an early decline. The miracle of it is not that the victims die prematurely but that they live so long. Perhaps we might begin to enquire into the causes of that phenomenon for a change.

One thing however is certain that whatever else Bankim lost, he gained from his youthful surroundings much emotional experience and great flexibility of mind. There too he got his initial stimulus. Like Telang, and perhaps even more than Telang, Bankim was blessed or cursed with an universal talent. Everything he touched, shaped itself to his hand. It would have been easy for him to make disastrous mistakes, to miss his vocation, waste himself in English and at the end to leave no enduring monument of his personality behind. What saved him? It was the initial stimulus and the cultured environment; it was that he lived among men who could distinguish a talent when they saw it and once distinguished were bent on realizing it; among men in fact who had some instinct for finding their way. With a limited creature like man, the power of the environment is immense. Genius it is true exists independently of environment and by much reading and observation may attain to self-expression but it is environment that makes self-expression easy and natural; that provides sureness, verve, stimulus. Here lies the importance to the mind in its early stage of self-culture of fine social surroundings; — that sort of surroundings which our Universities do nothing and ought to have done everything to create.
Thus equipped, thus trained Bankim began his human journey, began in the radiance of joy and strength and genius the life which was to close in suffering and mortal pain. The drudgery of existence met him in the doorway, when his youth was still young. His twenty-first year found him at Jessore, his fifty-third was the last of his long official labour. Here too however his inveterate habit of success went always with him. The outward history of his manhood reads more brilliantly even than that of his youth, and if he did not climb to the highest posts, it was only because these are shut to indigenous talent. From start to finish, his ability, delicacy of judgment and careful work were recognised as something unusual: yet it would not be easy to find a more careful or cleverer set of administrators than the Hindu civilians of Bengal. At Jessore his life was chequered by a great boon and a great sorrow. It was here that he made fast his friendship with the dramatist Dinabandhu Mitra, which remained close-soldered to the end, and it was here that his young wife died. At Kanthi, the next stage of his official wanderings, he married again and more fortunately. Khulna, the third step in the ladder, was also the theatre of his most ambitious exploits. Entangled in the Sundarban, that rude and unhealthy tract of marsh and jungle, the zillah was labouring under two morbid ailments, for which none of its official doctors had found an efficient panacea,—the small-pox of piracy and the greater pox of Indigoism. Ruffians from Europe were in hot competition with the native breed which should deserve best the Government Scholarship for lawlessness and brutality; and as they had a racial gift for these things and a wider field it might have been safely awarded to them. Unluckily Bankim stept into their happy hunting-grounds and spoiled the game. But to the unhappy ryots, the battle-field for these rival
rascalities, he came as a champion and a deliverer. At Khulna he came as a champion and a deliverer. At Khulna this mild, thoughtful Bengali wears the strange appearance of a Hercules weeding out monsters, clearing augean stables, putting a term to pests. His tranquil energy quite broke the back of the Indigo tyrants. Their master-criminals and chief indigocrats fled to Anam and Brindaban, but they were overtaken by Bankim’s warrant and persuaded to come back. Fine and imprisonment meted out with a healthy severity, shattered their prestige and oppressed their brutal spirit. Khulna then saw the last of government by organised ruffiandom. No less terse and incisive were Bankim’s dealings with the water-thieves who lurking in creek and brushwood dominated to the perpetual alarm and molestation of travellers the hundred waters of the Sundarban. The out-laws were hunted down and imprisoned and their principal spirits relegated where there was less room for their genius to find self-expression. The hydra of the waters had been crushed as effectually as the indigo pest; and since the era of Bankim’s magistracy one may travel the length and breadth of Khulna without peril except from malaria and ague. By a little quiet decisiveness he had broken the back of two formidable tyrannies and given an object-lesson in what a Government can do when it heartily intends the good of the people.

Baruipur, consecrated a place in the calendar of literature, was next put into his hands. The event of his residence here was his appointment vice Mr. Justice Princep to the chair of an Official Emoluments Commission then sitting. The Government intended this to look like an extraordinary distinction, and had not the genius of the man raised him unmeasurably above any Englishman in the country, we might have regarded it as such. Barhampur was the next step in his journey, and after Barhampur Maldeh, and after Maldeh the important Suburban district of Hugly. He was now nearing his high-water mark and his official existence which had been till then more than ordinarily smooth, began to be ploughed up by unaccustomed storms. The Government wanted to give some inadequate expression to its sense of his extraordinary merits and could think of nothing better than a place in the Secretariat. It was here
that he came into collision with the spirit of bureaucracy. His superior was a certain Macaulay, a hard working official, whose brains were tied together with red tape. The diligent mediocrity of this man was goaded to extra hours by flickering visions of a Lieutenant-Governorship, but Bankim, having no such high incentive, was careful to close his work at the strict office-hour. For this Macaulay took him severely to task. “It is natural enough” replied Bankim, forgetting unfortunately that he was talking to a piece of red tape “it is natural enough for you to work hard. You are of the ruling caste and may rise, who knows? to be Lieutenant-Governor. But why should I be subservient to your example? Here is the bourne and goal of my promotion. Beyond it what prospect have I? No, I have no idea of sweating myself to death over extraordinary work.” When independence and red tape come into collision, it is usually independence that gets tripped up. Bankim was sent back in a hurry to Magistrate’s work, this time at Alipur. But his ill-luck followed him. He was shipwrecked again in a collision with Anglo-Indianism. Walking in Eden Garden he chanced across Munro, the Presidency Commissioner, a farouche bureaucrat with the manners of an Englishman and the temper of a badly-educated hyena. Bankim examined the queer curiosity, as one might any queer curiosity, with a certain lazy interest, but no signal of respect. He was unaware at this time that to Salaam any stray European you may meet is the highest privilege of a Hindu and the whole duty of a Deputy Magistrate. But he was soon to receive instruction: for His Hyenaship was off in a rage to the Government and by a little private roaring easily got Bankim transferred to Jhajapur in Orissa. Bankim was considerably taken aback and not a little angry. “Have I then committed some grave fault?” he enquired of the Chief Secretary “or is it that the Government has found out a new way to pay its old debts? Resolve me, for I am in doubt.” The gibe told. He had hardly set foot in Orissa, when he was gazetted back to Hugly. After a lapse of time, — Munro, I believe, had in the mean time been struck by his own astonishing likeness to the founder of Christianity and was away to spread the light of the Gospel among the heathen — after a lapse of time
Bankim was allowed to come back to Alipur. But this was the last stage of that thankless drudgery in which he had wasted so much precious force. His term of service was drawing to a close, and he was weary of it all: he wished to devote his remnant of life to literature. But the days that remained to him were few and evil. One or two years clouded with sickness, sorrow and suffering stood between him and the end.
His Versatility

WHENEVER a literary man gives proof of a high capacity in action people always talk about it as if a miracle had happened. The vulgar theory is that worldly abilities are inconsistent with the poetic genius. Like most vulgar theories it is a conclusion made at a jump from a few superficial appearances. The inference to be drawn from a sympathetic study of the lives of great thinkers and great writers is that except in certain rare cases versatility is one condition of genius. Indeed the literary ability may be said to contain all the others, and the more so when it takes the form of criticism or of any art, such as the novelist’s, which proceeds principally from criticism. Goethe in Germany, Shakespeare, Fielding and Matthew Arnold in England are notable instances. Even where practical abilities seem wanting, a close study will often reveal their existence rusting in a lumber-room of the man’s mind. The poet and the thinker are helpless in the affairs of the world, because they choose to be helpless: they sacrifice the practical impulse in their nature, that they may give full expression to the imaginative or speculative impulse; they choose to burn the candle at one end and [not] at the other, but for all that the candle has two ends and not one. Bankim, the greatest of novelists, had the versatility developed to its highest expression. Scholar, poet, essayist, novelist, philosopher, lawyer, critic, official, philologian and religious innovator,—the whole world seemed to be shut up in his single brain. At first sight he looks like a bundle of contradictions. He had a genius for language and a gift for law; he could write good official papers and he could write a matchless prose; he could pass examinations and he could root out an organised tyranny; he could concern himself with the largest problems of metaphysics and with the smallest details of word-formation: he had a feeling for the
sensuous facts of life and a feeling for the delicate spiritualities of religion: he could learn grammar and he could write poetry.

What shall we say in the presence of this remarkable versatility? Over-borne by the pomp of it and the show, shall we set it down as an adjunct of intellectual kingliness? Yes, to have it is an adjunct of intellectual kingliness, but to give expression to it is an intellectual mistake. To give impartial expression to all your gifts is to miss your vocation. Bankim was never so far led astray as that. His province was literature, prose literature, and he knew it. His lyrics are enchanting, but few; metaphysics he followed at the end of his life and law at the beginning; and he used scholarship and philology, simply as other great writers have used them, to give subtlety of suggestion and richness of word-colour to his literary style. Even in the province of prose literature, where he might have worked out his versatility to advantage, he preferred to specialise. He never stepped unpardonably out of his province, but he was occasionally led astray by this or that lure to allow small drains on his fund of energy; and so far as he did so, he sinned against his own soul. The one great and continuous drain was the tax put upon him by official drudgery. Under the morbid and wasteful conditions of middle-class life in India genius, when not born in the purple, has put before it, like the fair Rosamund of Norman romance, a choice between two methods of suicide, the Services and the Law. It must either take the poisoned bowl or the dagger. And in this limited circle of professions the Educational Service with its system of respites and remissions, and the Executive Service with its indirect rather than direct tax on the pure intellect, present, it may be, the points of least repulsion. But they are none the less a fearful drain because they are, under existing circumstances, necessary.

In this versatility Bankim was only a type of the intellectual Hindu. This gift, at once a blessing and a curse, is the most singular characteristic of those two Hindu races, which have the destinies of the country in their keeping. It is the evidence of our high blood, our patent of nobility among the nations; for
it comes of the varied mental experience of our forefathers, of the nation's three thousand years of intellectual life. But it is at the same time a rock ahead, of which the Hindu genius has yet to pilot itself clear. To find your vocation and keep to it, that is not indeed a showy, but it is a simple and solid rule of life. We however prefer to give an impartial expression to all our gifts, forgetting that the mind is as mortal and as much subject to wear and tear as any perishable thing, forgetting that specialism is one condition of the highest accomplishment, forgetting that our stock of energy is limited and that what we expend in one direction, we lose in another. We insist on burning the candle at both ends. This spirit appears in our system of public instruction, the most ingeniously complete machine for murder that human stupidity ever invented, and murder not only of a man's body but of a man's soul, of that sacred fire of individuality in him which is far holier and more precious than this mere mortal breath. It appeared too with melancholy effects in the literary fate of Kashinath Telang. It was one reason why he, a man of such large abilities, the most considerable genius a highly intellectual people has produced, yet left nothing to which the world will return with unfailing delight. Telang, it is true, worked mainly in English, a language he had learned; and in a language you have learned, you may write graciously, correctly, pleasingly, but you will never attain to the full stature of your genius. But it was a yet more radical mistake that he, whose power was pre-eminently literary, as any eye trained to these things can see that it was, yet allowed it to run in every direction except the very one that nature had marked out for it. Bankim was more fortunate. He wrote in his own beautiful mother-tongue, his best work was literary and his immense originality would in any case have forced its way out. But one cannot think without a pang of the many delightful master-pieces he might have brought into his garner, if he had had leisure to work single-heartedly in the field of his richest harvests. The body of work he gave us in nearly forty years of intellectual activity amounts to ten novels, two critical works on religion and some scattered literature. Small in quantity, it is pure gold
in quality. And it may be that in no case would he have written much. Nature gives us quartz profusely and mixed alloy in abundance, but pure gold only in rare parcels and infinitesimal portions.
ANKIM’S literary activity began for any serious purpose at Khulna, but he had already trifled with poetry in his student days. At that time the poet Iswara Chandra Gupta was publishing two papers, the Sangbad Prabhakar and the Sadhuranjan, which Dwarkanath Mitra and Dinbandhu Mitra were helping with clever school-boy imitation of Iswara Chandra’s style. Bankim also entered these fields, but his striking originality at once distinguished him from the mere cleverness of his competitors, and the fine critical taste of Iswara Chandra easily discovered in this obscure student a great and splendid genius. Like Madhu Sudan Dutt Bankim began by an ambition to excel in English literature, and he wrote a novel in English called Rajmohan’s Wife. But, again like Madhu Sudan, he at once realised his mistake. The language which a man speaks and which he has never learned, is the language of which he has the nearest sense and in which he expresses himself with the greatest fulness, subtlety and power. He may neglect, he may forget it, but he will always retain for it a hereditary aptitude, and it will always continue for him the language in which he has the safest chance of writing with originality and ease. To be original in an acquired tongue is hardly feasible. The mind, conscious of a secret disability with which it ought not to have handicapped itself, instinctively takes refuge in imitation, or else in bathos and the work turned out is ordinarily very mediocre stuff. It has something unnatural and spurious about it like speaking with a stone in the mouth or walking upon stilts. Bankim and Madhu Sudan, with their overflowing originality, must have very acutely felt the tameness of their English work. The one wrote no second English poem after the Captive Lady, the other no second English novel after Rajmohan’s Wife.

Bankim’s first attempt of any importance was begun at
Khulna and finished at Baruipur, the birthplace of some of his finest work. It was the *Durgesh Nandini*, a name ever memorable as the first-born child of the New Prose. At Baruipur he wrote also *Kopal Kundala* and *Mrinalini* and worked at the famous *Poison-Tree*. At Barhampur, his next station, he began editing the *Bangadarshan*, a magazine which made a profound impression and gave birth to that increasing periodical literature of to-day, of which *Bharati*, the literary organ of the cultured Tagore family, is the most finished type. Since then Bankim has given us some very ripe and exquisite work, *Chandrashekhar, Krishna Kanta's Will, Debi Chaudhurani, Anandmath, Sitaram, Indira* and *Kamal Kanta*. Dating from his magistracy at Barhampur broken health and increasing weakness attended the great novelist to his pyre; but the strong unwearied intellect struggled with and triumphed over the infirmities of the body. His last years were years of suffering and pain, but they were also years of considerable fruitfulness and almost unceasing labour. He had been a sensuous youth and a joyous man. Gifted supremely with the artist’s sense for the warmth and beauty of life, he had turned with a smile from the savage austerities of the ascetic and with a shudder from the dreary creed of the Puritan. But now in that valley of the shadow of death his soul longed for the sustaining air of religion. More and more the philosophic bias made its way into his later novels, until at last the thinker in him proved too strong for the artist. Amid his worst bodily sufferings he was poring over the Bhagavadgita and the Vedas, striving to catch the deeper and sacred sense of those profound writings. To give that to his countrymen was the strenuous aim of his dying efforts. A *Life of Krishna*, a book on the Essence of Religion, a rendering of the Bhagavadgita and a version of the Vedas formed the staple of his literary prospects in his passage to the pyre. The first realised themselves and the Bhagavadgita was three parts finished, but the version of the Vedas, which should have been a priceless possession, never got into the stage of execution. Death, in whose shadow he had so long dwelt, took the pen from his hand, before it could gather up the last gleanings of that royal intellect. But his ten master-
HIS PLACE IN LITERATURE

To assign Bankim’s place in Bengali literature is sufficiently easy: there is no prose-writer, and only one poet who can compete with him. More difficulties enter into any comparison of him with the best English novelists; yet I think he stands higher than any of them, except one; in certain qualities of each he may fall short, but his sum of qualities is greater; and he has this supreme advantage over them all that he is a more faultless artist. In his life and fortunes, and sometimes even in his character, he bears a striking resemblance to the father of English fiction, Henry Fielding; but the literary work of the two men moves upon different planes. Philosophical culture, and deep feeling for the poetry of life and an unfailing sense of beauty are distinguishing marks of Bankim’s style; they find no place in Fielding’s. Again, Bankim, after a rather silly fashion of speaking now greatly in vogue, has been pointed at by some as the Scott of Bengal. It is a marvellous thing that the people who misuse this phrase as an encomium, cannot understand that it conveys an insult. They would have us imagine that one of the most perfect and original of novelists is a mere replica of a faulty and incomplete Scotch author! Scott had many marvellous and some unique gifts, but his defects are at least as striking. His style is never quite sure; indeed, except in his inspired moments, he has no style: his Scotch want of humour is always militating against his power of vivid incident; his characters, and chiefly those in whom he should interest us most, are usually very manifest puppets; and they have all this shortcoming, that they have no soul: they may be splendid or striking or bold creations, but they live from outside and not from within. Scott could paint outlines, but he could not fill them in. Here Bankim excels; speech and action with him are so closely interpenetrated and suffused with a deeper existence that his characters give us the sense of their being real men and women. Moreover to the
wonderful passion and poetry of his finest creations there are in English fiction, outside the Brontës and that supreme genius, George Meredith, no parallel instances. Insight into the secrets of feminine character, that is another notable concomitant of the best dramatic power, and that too Bankim possesses. Wade as you will through the interminable bog of contemporary fiction, you will meet no living woman there. Even novelists of genius stop short at the outside: they cannot find their way into the soul. Here Fielding fails us; Scott’s women are a mere gallery of wax figures, Rebecca herself being no more than a highly-coloured puppet; even in Thackeray the real women are only three or four. But the supreme dramatic genius has found out this secret of femineity. Shakespeare had it to any degree, and in our own century Meredith, and among ourselves Bankim. The social reformer, gazing, of course, through that admirable pair of spectacles given to him by the Calcutta University, can find nothing excellent in Hindu life, except its cheapness, or in Hindu woman, except her subserviency. Beyond this he sees only its narrowness and her ignorance. But Bankim had the eye of a poet and saw much deeper than this. He saw what was beautiful and sweet and gracious in Hindu life, and what was lovely and noble in Hindu woman, her deep heart of emotion, her steadfastness, tenderness and lovableness, in fact, her woman’s soul; and all this we find burning in his pages and made diviner by the touch of a poet and an artist. Our social reformers might learn something from Bankim. Their zeal at present is too little ruled by discretion. They are like bad tailors very clever at spoiling the rich stuffs given over to their shaping but quite unable to fit the necessities of the future. They have passed woman through an English crucible and in place of the old type, which, with all its fatal defects, had in it some supreme possibilities, they have turned out a soulless and superficial being fit only for flirtation, match-making and playing on the piano. They seem to have a passion for reforming every good thing out of existence. It is about time this miserable bungling should stop. Surely it would be possible, without spoiling that divine nobleness of soul, to give it a wider culture and mightier channels! So we should have
a race of women intellectually as well as emotionally noble, fit to be the mothers not of chatterers and money-makers, but of high thinkers and heroic doers.

Of Bankim’s style I shall hardly trust myself to speak. To describe its beauty, terseness, strength and sweetness is too high a task for a pen like mine. I will remark this only that what marks Bankim above all, is his unfailing sense of beauty. This is indeed the note of Bengali literature and the one high thing it has gained from a close acquaintance with European models. The hideous grotesques of old Hindu Art, the monkey-rabble of Ram and the ten heads of Ravan, are henceforth impossible to it. The *Shakuntala* itself is not governed by a more perfect graciousness of conception or suffused with a more human sweetness than *Kopal Kundala* and the *Poison-Tree*. 
What He Did for Bengal

I HAVE kept so far to Bankim’s achievement looked at purely as literature. I now come to speak of it in the historic sense, of its relations to the Bengali language and potency over the Bengali race. Of this it is not easy to suggest any image without speaking in superlatives. I had almost said in one place that he created the language, and if one couples his name with Madhu Sudan Dutt’s, the statement is hardly too daring. Before their advent the Bengali language, though very sweet and melodious, was an instrument with but one string to it. Except the old poet Bharatchandra, no supreme genius had taken it in hand; hence while prose hardly existed except in Baital Pachisi and some other tales about Vikramaditya, Bengali verse had very little to recommend it beyond a certain fatiguing sweetness. Virility, subtlety, scope, these were wanting to it. Then came Madhu Sudan and Bankim, and, like Terpander and Orpheus added fresh strings to the lyre. In Madhu Sudan’s hands that nerveless and feminine dialect became the large utterance of the early Gods, a tongue epic and Titanie, a tongue for the storms and whirlwinds to speak in: he caught and studied his diction from the echo and rumour of the sea. All the stormiest passions of man’s soul he expressed in gigantic language. We seem to hear Milton’s Satan speaking in every line he wrote. But in Bankim’s hands the Bengali language, before stammering and inarticulate, became a rich, musical and flexible organ vibrating to every human emotion and expressive of every beautiful or noble thought. I do not mean that there were no labourers in the field before Bankim and Madhu Sudan. The paths of the Gods are always prepared for them. Many daring minds were already at work, but they fell short of their high conception. Rammohan Ray, the great Vidyasagara, Okhay Kumar Dutt and the Bengali playwrights were all working bravely towards the same consummation. But
Vidyasagara, though he had much in him of the scholar and
critic, was nothing of an artist; Okhay Kumar's audience ran
only to the subscribers of a single magazine; and the literary
originality of the rest was not equal to their audacity. None
of them could transform and recreate with that sure and easy
touch, which reveals the true maker of language.

Bankim moreover has this splendid distinction, that he more
than anyone exalted Bengali from the status of a dialect to the
majesty of a language. The immediate effect of English education
had been to foster an undiscriminating love of things English
and an unwise contempt for things Bengali. Among the rest
the Bengali tongue was put by as an instrument hopelessly bad
and unsatisfying; even Madhu Sudan in his youth neglected and
forgot it. The strivings of Vidyasagara and Okhay Kumar Dutt
were the strivings of a few far-sighted and patriotic men in a
generation misled by false ideals. On that generation Madhu
Sudan's first great poems, *Sharmishtha* and *Tilottama*, had a
complex effect much of a piece with the sensation created by
Marlowe's *Tamburlaine* in Elizabethan England or Hugo's *Her-
nani* in nineteenth century France. They took men's imaginations
by storm with their splendour, passion and mighty imagery;
by creating the Bengali blank verse they freed poetry from the
facilities and prettinesses of the old rhymed stanza; by their
magnificencies of style and emotion they brought new elements
into Hindu literature, and they gave battle with their strange and
fiery coloured music to the classic frigidity of the Sanscritists.
They first sounded the note of Romanticism which still governs
our literature. They revealed too those magnificent possibilities,
latent in every Sanscritic language, which only wait for the magic
touch of original genius to open out their store; and they set
flowing that perennial fountain of gracious and noble poetry
which is doing so much to bring beauty and high feeling into
our lives and to produce a race of Bengalis braver and better
than we. But at the same time they had to overcome a vast
opposition. Lauded with rapturous enthusiasm by the cultured,
they were anathematised by the pedants. All the Pandits, all
the Sanscritists, all the fanatics of classicism, even the great

www.holybooks.com
Vidyasagara himself, then the intellectual dictator of Bengal, were startled out of their senses by these magnificent and mighty poems. *Tilottama* was a gauntlet thrown down by the Romantic school to the classical. Romanticism won: it was bound to win: it had on its side youth, fire, enthusiasm, the future, and the poems of an unexampled genius for its battle-cry. *Tilottama* had been the *casus belli*; that marvellous epic, the *Meghnad-badh*, was the *coup de grâce*. When Vidyasagara praised the *Meghnad-badh* as a supreme poem, the day of the Sanscritists was over. That cabal of Pandits which had shouted against Madhu Sudan, could only murmur weakly against Bankim; the conscience of the nation had passed out of their keeping. But still the victor’s audience was small and went little beyond the class that followed him into battle, the geniuses, the literary men, the women, the cultured zamindars and those men of the stamp of Rajah Jyotindra Mohan Tagore, men of an extraordinary and original culture, who were then so common in Bengal, but are now almost obsolete. The great poet died with a limited audience and before the full consummation of his fame.

Bankim came into that heritage of peace which Madhu Sudan had earned. There is, indeed, a curious contrast between these two builders of the Bengali language, so alike in their mission, but in their fortunes so dissimilar. Both were equipped with enormous stores of reading, both were geniuses of a vast originality, both had creative power, a fine sense for beauty, and a gift for emotion and pathos: both made the same false start. But here all likeness between them stops. One was the king of prose, the other the king of poetry; and their lives were of a piece with their writings. Madhu Sudan’s is full of sound and passion, violence of heart, extravagance, intemperance, self-will, a life passing through grief, bitterness and anguish to a mournful and untimely doom. As we read the passage of that Titanic personality over a world too small for it, we seem to be listening again to the thunder-scene in *Lear*, or to some tragic piece out of Thucydides or Gibbon narrating the fall of majestic nations or the ruin of mighty kings. No sensitive man can read it without being shaken to the very heart. Even after his death
Madhu Sudan’s evil star followed him. Though a great poet among the greatest, he is read nowhere outside Bengal and the Panjáb; and his name is not heard even in Bombay and Madras, provinces of his own native land. How different was it with Bankim, the genius of prose. His nature, with plenty of strength in it, was yet mild, calm and equable, clear and joyous, but not intemperate. Fortune’s favourite to whom every door opened without keys, his life had in it that sedate maturity and august quiet, which, according to Epicurus, is the true attitude of the Gods, and which the Gods only give to those mortals, who, like themselves, have seen life steadily and seen it whole. And if his last years were stained with suffering, yet he died in the fruition of his greatness, amid the mourning of a nation which he had done much to create and whose imagination he had filled with so many beautiful thoughts and so many tender, passionate or glorious images.

Bankim’s influence has been far-reaching and every day enlarges its bounds. What is its result? Perhaps it may very roughly be summed up thus. When a Mahratta or Gujerati has anything important to say, he says it in English; when a Bengali, he says it in Bengali. That is, I think, the fact which is most full of meaning for us in Bengal. It means besides other things less germane to literature, that, except in politics and journalism which is the handmaid of politics, English is being steadily driven out of the field. Soon it will only remain to weed it out of our conversation; and even to that wheel I am told that Babu Kali Prasunna Ghose has set his shoulder. However that may be, the works of this distinguished prose-writer are a remarkable proof of what I have just been saying. Not long ago anyone moving in that province of the mind which Babu Kali Prasunna has annexed, would have held it beneath the dignity of his subject to write in any medium but English. Work like Babu Kali Prasunna’s marks an important stage in the great revolution of sentiment which our literary class has set going, the revolution of sentiment which promises to make the Bengalis a nation.
Our Hope in the Future

But profound as have been its effects, this revolution is yet in its infancy. Visible on every side, in the waning influence of the Sadharan Brahmo Samaj, in the triumph of the Bengali language, in the return to Hinduism, in the pride of birth, the angry national feeling and the sensitiveness to insult, which are growing more and more common among our young men, it has nevertheless only begun its work and has many more fields to conquer. Calcutta is yet a stronghold of the Philistines; officialdom is honeycombed with the antinational tradition: in politics and social reform the workings of the new movement are yet obscure. The Anglicised Babu sits in the high place and rules the earth for a season. It is he who perorates on the Congress, who frolics in the abysmal fatuity of interpellation on the Legislative Council, who mismanages civic affairs in the smile of the City Corporation. He is the man of the present, but he is not the man of the future. On his generation, a generation servilely English and swayed by Keshab Chandra Sen and Kristo Das Pal, Bankim had little effect. Even now you will hear Anglicised Bengalis tell you with a sort of triumph that the only people who read Bengali books are the Bengali ladies. The sneer is a little out of date, but a few years ago it would not have been so utterly beside the mark. All honour then to the women of Bengal, whose cultured appreciation kept Bengali literature alive! And all honour to the noble few who with only the women of Bengal and a small class of cultured men to appreciate their efforts, adhered to the language our forefathers spoke, and did not sell themselves to the tongue of the foreigner! Their reward is the heartfelt gratitude of a nation and an immortal renown. Yes, the women of Bengal have always been lovers of literature and may they always remain so; but it is no longer true that they are its only readers. Already we see the embryo of a new generation
soon to be with us, whose imagination Bankim has caught and who care not for Keshab Chandra Sen and Kristo Das Pal, a generation national to a fault, loving Bengal and her new glories, and if not Hindus themselves, yet zealous for the honour of the ancient religion and hating all that makes war on it. With that generation the future lies and not with the Indian Unnational Congress or the Sadharan Brahmo Samaj. Already its vanguard is upon us. It has in it men of culture, men of talent, men of genius. Let it only be true to itself and we shall do yet more marvellous things in the future than we have done in the past. A Bengali may be pardoned who looking back to a splendid beginning and on to a hopeful sequel, indulges in proud and grandiose hopes.

Literature and learning are the provinces in which the Bengali is fitted to have kingship, and of the two literature rather than learning; but signs are not wanting that in other spheres also he may win laurels only less splendid. In painting and sculpture, in the plastic arts, the Hindu imagination has had no gift. The favourite style is evidence of a debauched eye and a perverted taste. Yet even in this alien sphere a Bengali has been winning noble renown, and that too in Italy, the native land of painting, the land of Raphael, Da Vinci and Angelo, and among Italians, with whom artistic taste is an instinct. In religion too, the Bengali has the future in his hands. He was the first to revolt against the shortcomings of Hinduism, and he is the first who has attempted to give some shape to that New Hinduism, which is, one feels, his religious destiny. He has sojourned for some time in the religious thought of the foreigner, but he is now coming back to the creed of his fathers with strange and precious gifts in his hands. In politics he has always led and still leads. The Congress in Bengal is dying of consumption; annually its proportions shrink into greater insignificance; its leaders, the Bonnerjis and Banerjis and Lalmohan Ghoses have climbed into the rarefied atmosphere of the Legislative Council and lost all hold on the imagination of the young men. The desire for a nobler and more inspiring patriotism is growing more intense; and already in the Hindu revival and the rise of an Indigenous
Trade Party we see the handwriting on the wall. This is an omen of good hope for the future; for what Bengal thinks tomorrow, India will be thinking tomorrow week. Even towards commerce and science, spheres in which he has been painfully helpless, the Bengali is casting wistful glances; but whether he will here as elsewhere ascend the ladder, can only be settled by experiment. He is almost too imaginative, restless and swayed by his feelings for paths in which a cold eye or an untroubled brain is the one thing needful. Nevertheless let Bengal only be true to her own soul, and there is no province in which she may not climb to greatness. That this is so, is largely due to the awakening and stimulating influence of Bankim on the national mind. Young Bengal gets its ideas, feelings and culture not from schools and colleges, but from Bankim’s novels and Robindranath Tagore’s poems; so true is it that language is the life of a nation.

Many are carrying on the great work in prose and poetry: Hemchandra, Nobin, Kamini Sen, Robindranath and Robindranath’s sister, that flower of feminine culture in Bengal, Swarna Kumari Devi, and many more whose names it would take long to repeat; but another Bankim, another Madhu Sudan comes not again. Some are pointing to this as a sign of intellectual barrenness; but it is not so. Shakespeare and Milton came within the limits of a century! Since then there have been Keats, Wordsworth, Shelley, Tennyson, but not a second Shakespeare or Milton. Dante and Boccaccio came successively: since then there have been Berni, Boiardo, Alfieri, Tasso, but not a second Dante or Boccaccio. Such men come rarely in the lapse of centuries. Greece alone has presented the world an unbroken succession of supreme geniuses. There is nothing to prevent us Hindus, a nation created for thought and literature, from repeating that wonderful example. Greece is a high name, but what man has once done, man may again strive to do. All we need is not to tie ourselves down to a false ideal, not to load our brains with the pedantry of a false education, but to keep like those first builders a free intellect and a free soul. If we are careful to do that, there is no reason why the creative impulse in Bengal should for a moment die out. But whatever
else may perish or endure, Bankim’s fame cannot die. Already it has overleaped the barrier between East and West; translations of his works are already appearing in English and German, and wherever they are read, they excite admiration, wonder and delight. O sage politicians, and subtle economists, whose heads run on Simultaneous Examinations and whose vision is bounded by Legislative Councils, what a lesson is here for you! Not in this way shall we exalt ourselves in the scale of nations, not in this way, O sages of the bench and sophists of the bar, but by things of which your legal wisdom takes little cognizance, by noble thoughts, by high deeds, by immortal writings. Bankim and Madhu Sudan have given the world three noble things. They have given it Bengali literature, a literature whose pricelier creations can bear comparison with the proudest classics of modern Europe. They have given it the Bengali language. The dialect of Bengal is no longer a dialect, but has become the speech of Gods, a language unfading and indestructible, which cannot die except with the death of the Bengali nation, and not even then. And they have given it the Bengali nation; a people spirited, bold, ingenious and imaginative, high among the most intellectual races of the world, and if it can but get perseverance and physical elasticity, one day to be high among the strongest. This is surely a proud record. Of them it may be said in the largest sense that they, being dead, yet live. And when Posterity comes to crown with her praises the Makers of India, she will place her most splendid laurel not on the sweating temples of a place hunting politician nor on the narrow forehead of a noisy social reformer, but on the serene brow of that gracious Bengali who never clamoured for place or for power, but did his work in silence for love of his work, even as nature does, and just because he had no aim but to give out the best that was in him, was able to create a language, a literature and a nation.
On Poetry and Literature
Poetry

Poetry I take to be the measured expression of emotion. Of prose one asks, does the matter please, stimulate or instruct the intellect; does the style satisfy a cultured taste & observant literary sense; if it does so, it is good prose, whether it moves the heart or not. Of poetry we ask, does the matter move, stimulate, enlarge, heighten, or deepen the feelings; does it excite emotions of delight, sorrow, awe, sublimity, passionate interest, or if the nature of the subject matter is not such as to excite actual emotions, does it excite certain vague & nameless sensations, the quiet stirring of the heart which attends the perception of beauty, or the august tumult which goes with the sense of largeness & space or the quick delight of increased horizons & heart-searching perceptions, does it give us the sense of power & passion? If it does, we have the material of poetry, but not yet poetry. Prose can and often does create similar effects. Great thoughts, beautiful description, noble narrative will always have this power on the soul. We have also to ask, does the language & verse harmonise with the emotion, become part of it & expressive of it, swell with its fullness and yet bound & restrain it? If it does, then we have poetry, a thing mighty & unanalysable, to usurp whose place prose vainly aspires. Matter by itself does not make poetry; skill in verse & diction is not poetry; striking & brilliant phrases, melodious weavings of sound are not poetry; it is the natural & predestined blending or rather inseparable existence of great matter with great verse producing high emotions or beautiful matter with beautiful verse producing soft emotions that gives us genuine poetry. An identity of word & sound, of thought & word, of sound & emotion which seems to have been preordained from the beginning of the world and only awaited its destined hour to leap into existence, or rather was
there from the beginning of the world & only dawned into sight at the right time, this rare identity is what we call poetry.
Characteristics of Augustan Poetry

Relation of Gray to the poetry of his times

The poetry of Gray marks the transition from the eighteenth-century or Augustan style of poetry to the nineteenth-century style; i.e. to say almost all the tendencies of poetry between the death of Pope and the production of the Lyrical Ballads in 1798 are to be found in Gray's writings. Of the other poets of the time, Johnson & Goldsmith mark the last development of the Augustan style, while Collins, Blake, Cowper, Burns, Chatterton each embody in their poetry the beginnings of one or more tendencies which afterwards found their full expression in the nineteenth century. Gray alone seems to include in himself along with many characteristics of the conservative school of Johnson & Goldsmith all the revolutionary tendencies, not one or many but all, of the later poets. His earliest poem, the Ode on Spring, has many of the characteristics of Pope and Dryden; one of his latest, the Ode on Vicissitude, has many of the characteristics of Wordsworth. He is therefore the typical poet of his age, which, as regards poetry, was an age of transition.

What is meant by the Augustan or eighteenth-century style? In what sense is it less poetical than the poetry of Wordsworth & Shelley?

The poetry of the eighteenth century differs entirely from that of another period in English literature. It differs alike in subject-matter, in spirit and in form. Many modern critics have denied the name of poetry to it altogether. Matthew Arnold calls Pope and Dryden classics not of poetry, but of prose, he says that they are great in the regions of half poetry; other critics while hesitating to go so far, say in substance much the same thing; Gosse, for instance, calls their poetry the poetry of English rhetoric, which exactly amounts to Matthew Arnold's description of it as
half poetry. Its own admirers give it the name of classic poetry, that is to say a poetry in which imagination and feeling are subordinated to correctness and elegance.

Poetry as generally understood, the poetry of Shakespeare and Wordsworth, may be defined as a deeper and more imaginative perception of life and nature expressed in the language and rhythm of restrained emotion. In other words its subject-matter is an interpretation of life and nature which goes deeper into the truth of things than ordinary men can do, what has been called a poetic criticism of life; its spirit is one of imagination and feeling, it is not intellectual but imaginative, not rational but emotional; and its form is a language impassioned and imaginative but restrained by a desire for perfect beauty of expression; and a rhythm generally taking the form of metre, which naturally suits the expression of deep feeling. It differs from rhetoric in this that rhetoric expresses feeling which is not deep & not quite sincere, and tries to strike and influence the reader instead of being satisfied with expressing itself and for that purpose relies mainly on tricks of language such as antithesis, epigram etc. Rhetoric tries to excite admiration and appeals to the intellect; poetry is content with adequate self-expression and appeals to the heart.

Eighteenth-century poetry differs from ordinary poetry, in subject-matter, in spirit and in form.

**Spirit**

The spirit of ordinary poetry is one of imagination and feeling, that is to say imaginative and emotional; that of eighteenth-century poetry is one of commonsense and reason, that is to say intellectual and rational. Pope and Johnson are the two chief critics of the school. Pope expressly lays it down in his Essay on Criticism that sense and wit are the bases of all true poetry and Johnson is continually appealing to them as criterions, especially in his life of Gray, where he objects to what he considers the excess of imagery, the incredibility of his subjects, the use of imaginative mythological language and the occasional absence of a didactic purpose. In their opinion nothing should
Characteristics of Augustan Poetry

be admitted in poetry which is not consistent with sense & wit, that is to say which is not intellectual and rational. Accordingly we find no striking imagery & no passion in eighteenth-century poetry; the poets as a rule avoid subjects in which emotion is required and when they do try to deal with the passions and feelings, they fail, their expression of these is rhetorical and not poetic. This is the reason why the drama in the eighteenth century is such an utter failure.

Subject-matter

The difference in subject-matter is manifold. In the first place, instead of dealing with the whole of life and nature, they limit themselves to a very narrow part of it. This limitation is partly due to the restriction of poetry to sense and wit and partly to the nature of the audience the poets addressed. It was a period in which literature depended mainly on the patronage of the aristocracy, and it was therefore for the English aristocracy of the time that the poets wrote. They were therefore bound to limit themselves to such subject-matter as might suit the tastes of their patrons. These two considerations led to three very important limitations of subject-matter.

1. The exclusion of the supernatural from poetry. The temper of the times was rationalistic and sceptical and to the cultured aristocracy of the times Shakespeare’s ghosts and fairies and Milton’s gods and angels would have seemed absurdities; it resulted also from the idea of commonsense as the cardinal rule of poetry, that nothing incredible should be admitted unless it was treated humorously, like the sylphs and gnomes in Pope’s Rape of the Lock or the beasts in the fables of Gay & Swift. Poetry however seems naturally to demand the element of the supernatural & the only way to admit the supernatural without offending against reason was by Personification. We therefore find a tendency to create a sort of makeshift mythology by personifying the qualities of the mind. Otherwise the supernatural practically disappears from English poetry for a whole century.

2. The exclusion of rural life and restriction to the life of the
town and of good society. The aristocracy of the time took no interest in anything but the pleasures, occupations and mental pursuits of the town and it is accordingly only with this part of life that eighteenth-century poetry deals. The country is only treated as a subject of ridicule as in Gay’s Shepherd’s Week or of purely conventional description as in Pope’s Pastorals and Windsor Forest.¹

3d. As a natural result of this, the exclusion of external Nature. The sense of natural beauty is quite absent from eighteenth-century poetry and we do not have even so much as the sense of the picturesque except in subjects such as landscape gardening where art could modify nature. Whenever the poets try to write of natural scenery or natural objects, they fail; their descriptions are either conventional and do not recall the object at all or only describe it in a surface manner recalling just so much as may be perceived by a casual glance. Of sympathy with Nature or close observation of it, there is hardly a single instance in English poetry between Dryden and Thomson.

4th. The exclusion of human emotion, i.e. to say poetry was not only limited to the workings of the human mind and human nature but to cultured society and to the town, & not only to this but to the intellect and weaknesses of men purely; the deeper feelings of the heart are not touched or only touched in an inadequate manner; and it is a characteristic fact that the passion of love which is the most common subject of English poetry, is generally left alone by these poets or if handled, handled in a most unreal and rhetorical manner.

It followed from the exclusion of so much subject-matter that the forms of poetry which demanded this subject-matter almost disappeared. Lyrical poetry & the drama, both of which demand passion, feeling and fancy, epic poetry, which requires a grasp of entire human and external nature, a wide view of

¹ The poets of the time have a tendency to the false or conventional pastoral; i.e. to say a mechanical imitation of Latin & Greek rural poetry, & especially when they try to write love poetry, they use Latin & Greek pastoral names; but these pastorals have nothing to do with any real country life past or present, nor do they describe any rural surroundings and scenery that ever existed, but are mere literary exercises.
life and some element of the supernature, and serious narrative poetry are very little represented in the age of Pope and then only by second-rate productions. The poetry of the age is mainly didactic, i.e. its subjects are literary criticism, ethics, science or theology or humorous, i.e. consists of satire, mock-epic, humorous narrative and light society verse. All these are subjects which are really outside the scope of poetry strictly so called, as they give no room for imagination and emotion, the cardinal elements of poetry. The subjects and the way they are treated, making allowance for the difference involved by the use of metre & especially the heroic metre which necessitates a very condensed expression of thought, is not very different from that of the prose periodicals of the time. The poetry of the age taken in the mass gives one the impression of a great social journal in verse, somewhat more brilliant and varied than the Tatler and Spectator but identical in spirit.

Form

Lastly the poetry of the eighteenth century differs widely in form, i.e. in language & metre, from that of preceding & subsequent poetry. This difference proceeds from a revolt against the poetical language of the seventeenth century, just as the language of Wordsworth & Keats is a revolt against that of the eighteenth. The Elizabethan poets aimed at a poetry which should be romantic, sensuous and imaginative; romantic, that is to say, full of the strange and wonderful, sensuous, that is to say, expressing the perceptions of the senses & especially the sense of the beautiful in vivid and glowing colours, and imaginative in the sense of being full of splendid and original imagery, & especially of striking phrases & vivid metaphors. In the later Elizabethans & even many of the earlier all this was carried to great excess; the love of the strange and wonderful was carried into unnaturalness and distortion, sensuousness became lost in exaggeration and poetry became a sort of hunt for metaphors, metaphors used not as aids to the imagination, but for their own sake, and the more absurd and violent, the better. Waller &
Dryden first and Pope to a much greater extent revolted against this style of forced ingenuity and proclaimed a new kind of poetry. They gave to Elizabethan language the name of false wit and Pope announced the objects of the new school in an often quoted couplet

True wit is nature to advantage dressed
What oft was thought, but ne’er so well expressed.

This couplet gives the three main principles of eighteenth-century style out of which all its distinctive characteristics rise.

1. The poets were to write only of what oft was thought; they were to avoid the Elizabethan romantic tendency to search after the strange & wonderful. But these poets went much further. Not only all that was peculiar or eccentric but all that was original, individual or unusual was avoided as offensive to reason & commonsense. There are no ideas in Augustan poetry which are not perfectly obvious and common, nothing which might not occur to an average educated man. This was fatal to poetry which to be poetry at all must be unusual; unusually lofty, unusually beautiful or unusually impassioned, & which dries up in an atmosphere of commonsense and commonplace. Augustan poetry has neither feeling for greatness nor for beauty nor for passion and it is therefore not without justice that it is described as at best a half poetry or a poetry of rhetoric.

But the obvious & commonplace will not be read, unless it is made to look new & interesting by brilliant language.

2. The second principle is that while the obvious & commonplace should be the staple of poetry, it should be expressed in new and brilliant language, and this should be done by means of true wit. That is to say, while false ingenuity should be avoided, true ingenuity should be the rule of poetry. Accordingly we find that striking poetical expressions are singularly absent, the imagery is cold, obvious & conventional & their place is taken by brilliant cleverness and rhetoric. In order to conceal the barrenness of subject-matter every line is made an antithesis, an epigram or some other rhetorical turn of language. The Augustan poets did not realise that wit, whether false or true, has
nothing to do with poetry & so they fell from one extreme to
the other; poetry with them became even more an exercise for
mere ingenuity than with the Elizabethans, in a way less open
to ridicule but more barren & prosaic.2

(3) The eighteenth century was not contented with nature,
it wanted nature to be dressed & dressed to advantage. Eliza-
abethan poetry had been even at its best either rude & unpolished
or extravagant & lawless. It broke through all the ordinary rules
which restrain poetry; in their recoil from this tendency the Au-
gustans determined to restrict themselves by the greatest number
of rules possible, not only those rules which are universal and
for all time but many which were artificial & unsuitable. They
made the language & metre of their poetry not only smooth &
elegant, but formal and monotonous; the tendency was, as has
been often said, to cut out poetry according to a uniform &
mechanical pattern. Cowper said that Pope

Made poetry a mere mechanic art;
And every warbler has his tune by heart

and Taine has expanded the charge in his History of English
Literature, II p. 194, “One would say that the verse had been
fabricated by a machine, so uniform is the make.” The charge
though exaggerated is well founded; there is a tendency to a
uniform construction & turn of sentence and the unchanging
repetition of 3 or 4 rhetorical artifices. It is the language of a
school rather than of individual genius.

When we examine the metre, we find it treated in the same
way. Poetical harmony depends upon two things, the choice
of the metre and the combination of all the various cadences
possible within the limits of the metre chosen. The poet chooses

2 The following passage was written on a separate page of the manuscript. Its place of
insertion was not marked:

Besides this in order to dignify the obviousness of their ideas & sentiments, a sort
of conventional poetic language was adopted, wherever wit and epigram could not be
employed; ordinary words were avoided as ignoble and literary words often with an
artificial meaning were employed, or else a sounding paraphrase was employed or a
pretentious turn of language. The universal rule was that an idea should not be stated
simply, but either cleverly or as it was called nobly.
a particular stanza or a couplet form or blank verse just as he
thinks most suitable to his subject; but the pauses and accents
in the lines of the stanza or successive verses may be arranged
many different ways, the disposition of long and short syllables
and the combination of assonances and alliterations are almost
infinite in their variety & great poets always vary one line from
another so that not only the language but the sound of the verse,
or as it is technically called the movement may suggest the exact
emotion intended. This variation of cadences is a matter not for
rules, but for individual genius to work out. But the Augustan
poets in their passion for regularity determined to subject even
this to rules. They chose as their favourite & almost only form
of verse, the couplet and especially the heroic couplet. All ambi-
tious poetical work of Pope’s school is in the heroic couplet; only
in light verse do they try any other. The part of their poetry in
lyrical metres or in stanzas is insignificant in quantity and almost
worthless in quality. Having confined themselves to the heroic
couplet, they tried to make even this as formal and monotonous
as possible; they put a pause regularly at the end of the first line
and a full stop or colon at the end of the second; they place the
accent almost invariably on every second syllable; they employ
assonance without the slightest subtlety and, though without
some skill in the disposition of long & short syllables good metre
itself is impossible, yet they only use it in the most elementary
manner. The only variety then possible was a very minute and
almost imperceptible one which gave great scope for ingenuity
but little for real poetic power.3

One more characteristic of the school must be noticed, i.e.
the narrowness of its culture. In the eighteenth century it was the
tendency to consider all the age between the third and sixteenth
centuries as barbarous and best forgotten; even the sixteenth
and early seventeenth were regarded as half barbarous times;
and the only things besides contemporary science, philosophy

3 The following sentence was written on a separate page. Its place of insertion was not
marked:

These restrictions forced the writers to be extremely condensed & ingenious and as
has been said reduced every couplet to the point of an epigram.
and literature which were regarded with interest were ancient classical literature and French civilisation. Even of the classics, little was known of Greek literature though it was held in formal honour; French & Latin and Latin rather of the second best than the best writers were the only foreign influences that affected Augustan literature to any appreciable extent.

The main characteristics of eighteenth-century poetry may therefore be summed up as follows; — a rational & intellectual rather than imaginative & emotional spirit; a restriction to town society and town life, and inability to deal with rural life, with Nature, with passion or with the supernatural; a tendency to replace the supernatural by personification; an almost exclusive preference for didactic, satirical and humorous poetry; a dislike of originality and prevalence of merely obvious ideas and sentiments; an excess of rhetorical artifice in style; a monotonous, rhetorical and conventional style; a restricted and cut-and-dried metre and an exclusion of all poetic influences & interests except the Latin writers & contemporary and French thought & literature. Its merits were smoothness, regularity & correctness; great cleverness and brilliance of wit; great eloquence; and the attainment of perfection within its own limits & according to its own ideals.4

4 The following sentence was written on a separate page. Its place of insertion was not marked:

The history of our period is partly that of a breaking away from formality in language and metre & a revival of lyric poetry, but still more of a struggle to widen the range of poetry by bringing all nature and all human activity both past & present into its scope, to increase interests and subject-matter as well as to inspire new life and sincerity into its style.
The Age of transition from the poetry of Pope to that of Wordsworth begins strictly speaking with Thomson. This transition was not an orderly and consistent development, but consisted of different groups of poets or sometimes even single poets each of whom made a departure in some particular direction which was not followed up by his or their successors. The poetry of the time has the appearance of a number of loose and disconnected threads abruptly broken off in the middle. It was only in the period from 1798 to 1830 that these threads were gathered together and a definite, consistent tendency imparted to poetry. It was an age of tentatives and for the most part of failures. Meanwhile the main current of verse up till 1798 followed the direction given it by Pope only slightly modified by the greater and more original writers.

These different groups of writers may be thus divided. (1) The school of natural description & elegiac moralising, consisting of Thomson, Dyer, Green, Young and other inferior writers. (2) The school of Miltonic Hellenists, begun by Warton & consisting besides of Gray, Collins, Akenside and a number of followers. (3) The school of Johnson, Goldsmith & Churchill, who continued the eighteenth-century style tho’ some of them tried to infuse it with emotion, directness and greater simplicity. To this school belong the minor writers who formed the main current of verse during the time; of whom Erasmus Darwin & Gifford are the only notable ones. (4) The school of country life and the simpler feelings, consisting of Cowper and Crabbe. (5) The school of romantic poets & restorers of mediaevalism, consisting of Chatterton, Macpherson and Percy. (6) The Scotch lyric poets of whom Ferguson and Burns are the head. (7) William Blake standing by himself as a romantic, mystical & lyric poet. Besides these there are two writers who cannot
be classed, Smart & Beattie. Last come the first nineteenth-century poets, who published their earliest work in 1798–1800, Wordsworth, Coleridge, Southey, Landor & Campbell.

School of Natural Description

The first to break away from Pope were Thomson & Dyer. The original departures made by their school were as follows. (1) In subject-matter an almost exclusive devotion of their poetry to the description of natural objects and natural scenery. In dealing with human emotion or human life they are generally even more incapable than the Pope school. There is beside a tendency to force poetry to the service of the most unpoetical subjects, Armstrong writing in verse of the Art of Medicine, Dyer of Agriculture & Thomson of jail reform. On the other hand Satire is less practised or even abandoned. (2) In language, the discarding of the idea of wit as the basis of poetry; there is no straining for wit and cleverness, but its place is taken by a pseudo-Miltonic eloquence or an attempt at Miltonic imaginativeness. The influence of Milton is paramount in these writers. (3) In metre an almost entire abandonment of the heroic couplet and the return to old metres, especially blank verse, the Spenserian stanza & the octosyllabic couplet as used by the later Elizabethans. The main influences of this school on future poetry are (1st) the habit of describing Nature for its own sake (2) the Thomsonian form of blank verse which was afterwards adopted by Cowper & Wordsworth and improved by Shelley (3) the use of the Spenserian stanza in narrative poetry (4) the sense for antiquity & for the picturesque as regards ruins (5) the habit of moralising on subjects of general human interest as opposed to those which concern towns & highly civilized society only.

1 The following sentence was written on the opposite page of the manuscript. Its exact place of insertion was not marked: An attempt is made to reintroduce emotion and a more general appeal to all humanity, in the form of elegiac moralizing on the subjects of death & decay, as shown in Dyer’s Ruins of Rome & Young’s Night Thoughts.
The Thomsonian school however broke off suddenly about the middle of the century & was replaced by the school of Gray.

*School of Gray*

There are considerable differences between Gray, Collins and Akenside, who are the chief representatives of the school, but they all resemble each other in certain main tendencies. The general aim of all seems to have been to return to the Miltonic style of writing while preserving the regularity and correctness of the eighteenth-century style. They attempted in other words to substitute the true classical style of writing for the pseudoclassical.

By classical poetry is meant verse which with entire correctness and perfection of form, i.e. of metre and language and a careful observance of restraint, i.e. to say avoidance of that extravagance & excess which injure the work of Shakespeare and the Elizabethans, unites a high imagination and deep emotion. This is the character of Milton’s poetry, which is based upon Greek & Latin models. Pope and his school aimed at correctness & restraint without high imagination and deep emotion; their poetry is therefore not really classical. Gray, Collins and Akenside endeavoured by study of Milton & the Greek writers to recover the true classical style. They were however all greatly hampered by the traditions of eighteenth-century poetry and none of them quite succeeded.

Besides this similarity in general aim, there are several particular resemblances. 1st in metre. They all avoided the heroic couplet. Collins’ Persian Eclogues, the work of his youth, & a few of Gray’s fragments are in this metre, but in their mature & accomplished work it is not represented. Akenside wrote either in blank verse or in lyrical metres. Secondly Gray and Collins are the restorers of the English lyric; since the reign of Charles II no one had written any even decently good lyrics, if a few of Gay’s & Prior’s are excepted, until this school appeared. The only form of lyric however which the three writers tried were Odes, which is the most stately & the least lyrical of lyrical forms; i.e. the true lyrical stanza is always short & simple so
Sketch of the Progress of Poetry

as to express particular emotion freely & naturally; the stanza of an Ode is long and elaborate and expresses properly high and broad, not intense emotion. This restriction to the statelier lyrical forms partly results from the attempt at classical dignity. But the Augustan tradition of smooth & regular verse has also hampered the writers; the cadences are not managed with sufficient subtlety and the infinitely varied and flexible verse of Shakespeare & Milton has remained beyond their reach. Their verse at its best is on the second plane, not on the first; it shows however a great advance in freedom & variety on that of the Augustans.

2d. in language. The aim of all three is at an elevated style of language, a diction more or less Miltonic. Here again none of them are successful. Akenside’s elevation is mainly rhetorical, rarely, at his best, as in the Hymn to the Naiads, it is poetical; there he almost catches something of the true Miltonic tone; Gray’s is marked by nobleness, strength, much real sublimity, but he is often betrayed into rhetoric tho’ even then more vigorous than Akenside’s and the Augustan love of epigram and antithesis often spoil his work; Collins’ elevation tho’ free from these faults is usually wanting in power. There is to some extent in Collins and still more in Gray a tendency to what the eighteenth century thought noble language, to the avoidance of simple and common words & phrases as below the dignity of poetry.\(^2\)

3d. in subject-matter. It was in this that there was the farthest departure from the eighteenth century. All the poets have a tendency to dwell on rural life and rural scenes; all turn away from town life. Both Gray & Collins, so far as they deal with Nature, deal with it in a really poetical manner, but unlike the Thomsonian school, they have not described Nature for the sake of describing it but only in connection with the thoughts or feelings suggested by it. The one exception to this is Collins’

\(^2\) *The following sentence was written on the opposite page of the manuscript. Its exact place of insertion was not marked:*

On the other hand their language is mainly imaginative & not drily intellectual like Augustan language.
Ode to Evening. There is also an attempt to reintroduce the supernatural into poetry. This is partly done by carrying the eighteenth-century habit of personification to an almost ridiculous extreme, but more successfully by dwelling like Milton on the images of Greek mythology, as in the Hymn to the Naiads, or Gray’s earlier poems, especially the Progress of Poesy; also by dwelling on the ideas of the Celtic romantic fancy, such as ghosts, fairies, spirits as in Gray’s Bard & Collins’ Ode or of Norwegian mythology as in Gray’s translations from the Norse. This impulse towards the supernatural is extremely marked in Gray & finds its way even into his humorous poems; & tho’ less prominent in Collins, it was sufficient to offend Johnson, the chief critic of the Pope school, who especially animadverts on it in his life of Collins & his remarks on Gray’s sister Odes. Again they tried to deal with human emotion but there also they were hampered by the Augustan tradition. They deal with it rather in an abstract than a direct manner; Collins’ Ode on the Passions is the main instance of this abstract handling of emotion which is peculiar to the school. In the same spirit they dealt with high & general feelings, especially the love of Liberty, which inspires Collins’ Ode to Liberty, Gray’s Bard & Progress of Poesy, and much of Akenside’s writing. It is noticeable that Collins was a republican, Akenside had republican sympathies and Gray was a pronounced Whig. Over the personal emotions Collins & Akenside had no mastery, & Gray only shows it occasionally as in the Elegy & then only over the most general of all of them, the love of life and the melancholy feelings attending death.

(4) In spirit, the school departed from the critical, didactic and satiric tendency of eighteenth-century poetry; so far as their poetry teaches or criticises it is with some exceptions in the indirect, incidental & emotional manner proper to poetry. Even Akenside who wrote on a philosophical theme aimed at teaching poetically, tho’ he did not succeed. Their poetry is inspired not by intellect & reason, but by imagination and feeling. On the other hand it must be noticed that their ideas & sentiments are always obvious & on the surface like those of the Pope school and the feeling that inspires their poetry, tho’ not false, is not
very deep; Collins & Akenside are extremely cold compared with poets of other periods & Gray is rather enthusiastic or at his best sublime than impassioned. 3

(5) It was in the influences which governed their poetry that this school departed most radically from Pope. They rejected French influence altogether & were little influenced by the inferior Latin poets; they were above all things Hellenists, lovers & followers of Greek literature; the English poet who influenced them most was Milton whom Johnson considers to be rough in his verse & language; Gray even declared the diction of Shakespeare to be the true poetic diction. Besides this they opened new fields of interest. Collins took an interest [in] late mediaeval history & literature & Gray was the first Englishman of eminence who studied the Norse language or interested himself in Welsh literature or was a competent & appreciative critic of Gothic architecture.

The Thomsonian school had a little but only a little influence on that of Gray. The Elegy carries to its highest point of perfection the vein of elegiac moralising started by Young & Dyer, Collins’ Ode to Evening is a study of Nature as faithful but more sympathetic and imaginative than Thomson’s descriptions; & his Ode on Popular Superstitions recalls several passages in the Seasons; but this is practically all.

The influences of Gray’s school on future poetry consist mainly in (1) the first attempt to handle Nature in a new poetic fashion afterwards perfected by Wordsworth, (2) the reintroduction of the supernatural influencing all subsequent writers but mainly Coleridge, Shelley & Keats, (3) the introduction of Hellenism into poetry, carried out by Keats & Shelley & (4) the restoration of the lyric & especially the Ode form, which became a favourite one in the early nineteenth century & of the general subjects suited to the Ode form.

3 The following sentence was written on the facing page of the manuscript. Its exact place of insertion was not marked:
It was perhaps partly as a result of this that none of these poets was able to write much or to write long poems; Akenside’s Pleasures of Imagination is the only exception and that is a failure.
Later Augustan School

The Gray school exhausted itself almost as quickly as the Thom-sonian school. It was followed by a reaction in favour of the eighteenth-century ideal. This movement had been already antici-pated by Johnson who wrote contemporaneously with Gray & even with Thomson. It was now taken up by Goldsmith, carried on by Churchill & culminated in Erasmus Darwin.

Johnson & Goldsmith returned to the ideals of Pope, they violently opposed & disparaged Gray, they kept to the use of the heroic couplet & conventional language, to the narrowness of culture and to the exclusion of all that does not square with or proceed from the reason & intellect; their characteristics are broadly the same as the Pope school’s, but there is a difference which shows that the dryness of this school could no longer satisfy the mind. In Johnson at least in his Vanity of Wishes there is a far deeper & wider tone of thought & feeling & a far greater sincerity; tho’ the style is so different, the tone is almost the same as that of Gray’s Elegy; in fact in tone & subject-matter it belongs to the same type of elegiac moralizing as the Elegy & the Night Thoughts. Goldsmith carried this departure in tone from Pope yet farther; he wrote what were professedly didactic poems, but instead of teaching by satirical portraits [and] epigrammatic maxims, he tried to do it by touching the feelings & drawing portraits full of humour rather than wit, of natural truth & pathos rather than cleverness & eloquence. While not touching subjects of general appeal like Johnson & Gray, he goes more widely afield than Pope, dealing with foreign countries in the Traveller, with the rural life of an Irish village in the Deserded Village. [There is a sort of natural lyrical power in Goldsmith which is always breaking through the restraints of the mechanical metre & style he chose to adopt.]4 Churchill reverted to Pope far more than either Goldsmith or Johnson; he is purely satirical & has neither Goldsmith’s feeling & sweetness nor Johnson’s depth & strength; he is hardly a poet at all, but he

4 Sentence bracketed in the manuscript. — Ed.
also helped the disintegration of the eighteenth-century style by a complete abandonment of Pope’s elaborate & rhetorical art, which he attempted to replace by a rude & direct vigour. Lastly Erasmus Darwin took the exact model of Pope’s style, not only the metre & language but the very construction & balance of his sentences & reduced this & the didactic spirit to absurdity by trying to invest with poetical pomp of style & imagery a treatise on botany. This school may be considered as an attempt in various directions to make the eighteenth-century style compatible with the new impulses in poetry, the impulses towards sincerity on the one hand & sublimity on the other. In the poetry of Darwin this attempt finally breaks down. No poet of eminence except Byron afterwards attempted the style. Besides these four writers however there was a crowd of versifiers, of whom only Gifford need be named, who went on making feeble copies of Pope right into the nineteenth century.
APPENDIX

Test Questions

The Mediaevalists

1. Describe the nature & influence on English poetry of Percy’s Reliques.
2. Sketch the career of Chatterton.
3. Describe the character of Chatterton’s forgeries and estimate their effects on the value of his poetry.
4. Discuss the conflicting estimates of Chatterton’s poetry.
5. What is the Ossian controversy? What stage has the controversy reached at present?
6. Macpherson’s work is often condemned as empty and turgid declamation. How far is this view justified?
7. State the author & nature of the following works: Ella, an Interlude; Bristow Tragedy.
8. Who were the distinctly mediaevalist writers of the period? What was their importance in the history of the period?

[Draft-answers to the first three questions]

1. 1765 Percy’s Reliques
3. Speght’s Glossary to Chaucer. Kersey’s Dictionary. metres not 15th century; rhymes inconsistent with 15th century pronunciation; words either noted down from above & often incorrectly used; or invented by C. himself.

Appendix: Test Questions

Pope School

1. Trace the history of the classical eighteenth-century style thro’ this period.
2. Describe the career of Goldsmith, or of a typical man of letters during this period.
3. Estimate Goldsmith as a poet.
4. Describe briefly the subject & character of the following poems; the Deserted Village, the Traveller, Retaliation.
5. What rank would you assign to Churchill among English satirists? Give your reasons for your answer.
6. Describe briefly the subject & character of the Rosciad, the Ghost, Gotham, the Times, the Prophecy of Famine.

*  

[Incomplete draft-answer to the second question]

1728 Goldsmith born in Ireland. Father a clergyman, the original of Dr Primrose. Education. 1744 Dublin Un?. Made attempts to become clergyman, private tutor; [incomplete]
Marginalia

ON MADHUSUDAN DUTT'S VIRANGANA KAVYA

A Virgilian elegance and sweetness and a Virgilian majesty of diction ennoble the finer epistles of these Heroïdes; there is too a Virgilian pathos sad & noble breaking out in detached lines and passages, as in Shacountala’s sorrowful address to the leaf and the single melancholy line এই কি যে ফলে ফল প্রেম তত-শাখে, but the more essential poetical gifts, creative force, depth or firmness of meditation, passionate feeling, a grasp of the object, consistency & purity of characterisation are still absent. They were not in the poet’s nature and such gifts if denied by Nature, are denied for ever. What exists even faintly can be developed, transformed, strengthened but what does not exist, cannot be produced by labour.

The Epistle of Tara is perhaps less satisfactory; the fiery outbursts of a monstrous and lawless passion needed a stronger imagination than Madhusudan's to conceive and execute them. The elegances of the Epistle, with its graceful rephrasing of outworn classical images and its stately love-conceits is out of place where the volcanic sheerness of a Webster could alone have been appropriate. Nevertheless the passage in which Tara complains of the unclean love she cannot avoid or control is not without a noble dignity of passion; and shows with what charm the poet could invest the plainest and most hackneyed images. And there are lines in this latter part which have the true note of that terrific passion, [for example] her cry তব ভিক্ষা, তব ভিক্ষা; the magnificent
distichs  কলজী শাস্ত্রী  etc. and লিখিতু লেখন  etc. and the powerful closing line have all a dramatic simplicity, fire and force which belong to the highest poetry only. Would that Madhusudan had written not only stray lines, distichs, passages, but whole poems in this spirit. The deplorable want of a discerning criticism and false conceptions of poetry early imbibed have done untold harm to our best and most promising writers.
Originality in National Literatures

It is a singular and as yet unexplained phenomenon in the psychology of mankind that out of so many magnificent civilisations, so many powerful, cultured & vigorous nations & empires whose names and deeds crowd the pages of history, only a select few have been able to develop a thoroughly original and self-revealing literature. Still fewer have succeeded in maintaining these characteristics from beginning to end of their literary development. There have been instances in which a nation at some period of especial energy and stress of life has for a moment arrived at a perfect self-expression, but with the effort the literary originality of the race seems to exhaust itself. We have the picture of an age, not the spiritual and mental history of a nation. Such a period of partial self-revelation we find in the flowering of Italian literature; in the Divine Comedy, the Decameron, the works of Petrarch, Machiavelli, Cellini, Castiglione, mediaeval Italy lives before our eyes for all time; but the rest of Italian prose and poetry is mere literature and nothing more. Again when we have seen the romantic spirit of Spain, its pride, punctilious sense of honour, courage, cruelty, intrigue, passion and the humour & pathos of its decline mirrored in the work of Calderon & Cervantes we seem to have exhausted all that need interest the student of humanity in Spanish literature. Similar instances offer themselves in the Sagas of the Scandinavian peoples and Germany’s Nibelungenlied, in the extraordinary picture of Mahomedan civilisation of which the Thousand & One Nights are the setting. On the other hand there are literatures of high quality and world-wide interest which are yet almost purely derivative in their character and hardly succeed in rendering the national spirit to us at all, so overloaded are they with foreign material, with things learned rather than experienced; such are the American literature, the modern German literature. Instances there
are again of the nation freeing itself from foreign domination in one or two kinds of writing which partially reflect its inner mind and life, while the rest of its literature remains derivative and secondhand in its every fibre. We get to the heart of Roman life and character in Roman Satires, the annalistic histories of Livy & Tacitus, the Letters of Cicero or Pliny, but in the more splendid & ambitious portions of Latin literature we get only the half Greek dress in which the Roman mind learned to disguise itself. Let us suppose that all historical documents, archives, records were destroyed or disappeared in the process of Time and the catastrophes of civilisation, and only the pure literature survived. Of how many nations should we have the very life, heart & mind, the whole picture of its life & civilisation and the story of its development adequately revealed in its best writing? Three European nations would survive immortally before the eyes of posterity, the ancient Greeks, the modern English and French, and two Asiatic nations, the Chinese & the Hindus, — no others.

Of all these the Hindus have revealed themselves the most perfectly, continuously and on the most colossal scale, precisely because they have been the most indomitably original in the form & matter of their literature. The Vedas, Upanishads & Puranas are unique in their kind; the great Epics in their form and type of art stand apart in the epic literature of the world, the old Sanscrit drama has its affinities with a dramatic species which developed itself in Europe more than a thousand years later, and the literary epic follows laws of form and canons of art which are purely indigenous. And this immense body of firstrate work has left us so intimate & complete a revelation of national life & history, that the absence of pure historical writings becomes a subject of merely conventional regret. The same intense originality and depth of self-expression are continued after the decline of the classical language in the national literatures of Maharashtra, Bengal & the Hindi-speaking North.
The Poetry of Kalidasa
A Proposed Work on Kalidasa

Chapter I. Kalidasa’s surroundings. Chapter II. Kalidasa & his work. The Malavas—the three ages, Valmekie.. Vyasa.. Kalidasa.. materialism & sensuousness..] the historic method.. psychological principles of criticism.. variety of Kalidasa’s work.. probable chronological succession of his works. Chapter III. The Seasons. Chapter IV. The House of Raghu; its scope & outline; nature of the poem; descriptive epic of later Hindu civilisation; its limitations. Qualities of verse diction. Similes. Description. Sentiment; pathos and eloquence. Relative merits of later & earlier cantos. Comparison of Kalidasa’s pathos & Bhavabhuti’s. Chapter V. The Cloud Messenger. Kalidasa’s treatment of the Supernatural.. Substance of the poem.. Chastened style.. Perfection of the harmony.. moderation & restraint.. pathos & passion.. Chapter VI. The Drama before Kalidasa; elements of Hindu drama.. the three plays studies of one subject. Chapter VII. The Agnimitra; its plot; perfection of dramatic workmanship; Kalidasa’s method of characterisation; the characters. Dramatic style. Relation of the Agnimitra to the Raghu. Chapter VIII. The Urvasi.. dramatic workmanship & conception; character of the poetry; relation to Meghaduta. Chapter IX. The Characters. Chapter X XI XII. The Shacountala. Chapter XIII XIV. The Kumara. Chapter XV. Retrospect; poetic greatness of Kalidasa; comparisons with other classical [writers]. Chapter XVI XVII. Hindu civilisation in the time of Kalidasa (this may go with Raghu or Kumara).
The Malavas

Once in the long history of poetry the great powers who are ever working the finest energies of nature into the warp of our human evolution, met together and resolved to unite in creating a poetical intellect & imagination that, endowed with the most noble & various poetical gifts, capable in all the great forms used by creative genius, should express once & for all in a supreme manner the whole sensuous plane of our life, its heat & light, its joy, colour & sweetness. And since to all quality there must be a corresponding defect, they not only gifted this genius with rich powers and a remarkable temperament but drew round it the necessary line of limitations. They then sought for a suitable age, nation and environment which should most harmonise with, foster and lend itself to his peculiar powers. This they found in the splendid & luxurious city of Ujjaini, the capital of the great nation of the Malavas, who consolidated themselves under Vikramaditya in the first century before Christ. Here they set the outcome of their endeavour & called him Kalidasa. The country of Avunti had always played a considerable part in our ancient history for which the genius, taste and high courage of its inhabitants fitted it & Ujjaini their future capital was always a famous, beautiful & wealthy city; but until the rise of Vikrama it seems to have been disunited and therefore unable to work out fully the great destiny for which the taste, genius [ ] marked it out. Moreover the temperament of the nation had not fitted it to be the centre of Aryan civilisation in the old times when that civilisation was preponderatingly moral and intellectual. Profoundly artistic and susceptible to material beauty and the glory of the senses, they had neither the large, mild and pure temperament, spiritual & emotional, of the eastern nations which produced Janaca, Valmekie & Buddha, nor the bold intellectual temperament, heroic, ardent and severe, of the
Central nations which produced Draupadie, Bhema, Urjouna, Bhishma, Vyasa and Srikrishna; neither were they quite akin to the searchingly logical, philosophic & scholastic temperament of the half Dravidian southern nations which produced the great grammarians and commentators and the mightiest of the purely logical philosophers, Madhva, Ramanuja, Shankaracharya. The Malavas were Westerners and the Western nations of India have always been material, practical & sensuous. For the different races of this country have preserved their basic temperaments with a marvellous conservative power; modified & recombined they have been in no case radically altered. Bengal colonised from the west by the Chedies & Haihayas & from the north by Coshalas & Magadhans, contains at present the most gentle, sensitive and emotional of the Indian races, also the most anarchic, self-willed, averse to control and in all things extreme; there is not much difference between the characters of Shishupal and that thoroughly Bengali king & great captain, Pratapaditya; the other side shows itself especially in the women who are certainly the tenderest, purest & most gracious & loving in the whole world. Bengal has accordingly a literature far surpassing any other in an Indian tongue for emotional and lyrical power, loveliness of style & form and individual energy & initiative. The North West, inheritor of the Kurus, has on the other hand produced the finest modern Vedantic poetry full of intellectual loftiness, insight and profundity, the poetry of Suradasa & Tulsi; its people are still the most sincerely orthodox and the most attached to the old type of thought & character, while the Rajputs, who are only a Central Nation which has drifted westward, preserved longest the heroic & chivalrous tradition of the Bharatas. The Dravidians of the South, though they no longer show that magnificent culture and originality which made them the preservers & renovators of the higher Hindu thought & religion in its worst days, are yet, as we all know, far more genuinely learned & philosophic in their cast of thought & character than any other Indian race. Similarly the West also preserves its tradition; the Punjab is typified by its wide acceptance of such crude, but practical & active religions as those of Nanak
& Dayananda Saraswati, religions which have been unable to take healthy root beyond the frontier of the five rivers; Gujarat & Sindh show the same practical temper by their success in trade & commerce, but the former has preserved more of the old Western materialism & sensuousness than its neighbours. Finally the Mahrattas, perhaps the strongest and sanest race in India today, present a very peculiar & interesting type; they are southwestern & blend two very different characters; fundamentally a material and practical race — they are for instance extremely deficient in the romantic & poetical side of the human temperament — a race of soldiers & politicians, they have yet caught from the Dravidians a deep scholastic & philosophical tinge which along with a basic earnestness & capacity for high things has kept them true to Hinduism, gives a certain distinction to their otherwise matter-of-fact nature and promises much for their future development.

But the Malavas were a far greater, more versatile and cultural race than any which now represent the West; they had an aesthetic catholicity, a many sided curiosity and receptiveness which enabled them to appreciate learning, high moral ideals and intellectual daring & ardour and assimilate them as far as was consistent with their own root-temperament. Nevertheless that root-temperament remained material and sensuous. When therefore the country falling from its old pure moral ideality and heroic intellectualism, weakened in fibre & sunk towards hedonism & materialism, the centre of its culture & national life began to drift westward. Transferred by Agnimitra in the second century to Videsha of the Dasharnas close to the Malavas, it finally found its true equilibrium in the beautiful and aesthetic city of Ujjaini which the artistic & sensuous genius of the Malavas had prepared to be a fit & noble capital of Hindu art, poetry and greatness throughout its most versatile & luxurious age. That position Ujjaini enjoyed until the nation began to crumble under the shock of new ideas & new forces and the centre of gravity shifted southwards to Devagirrie of the Jadhavas and finally to Dravidian Vijayanagara, the last considerable seat of independent Hindu culture & national greatness. The consolidation of
The Malavas

the Malavas under Vikramaditya took place in 56 BC, and from that moment dates the age of Malava preeminence, the great era of the Malavas afterwards called the Samvat era. It was doubtless subsequent to this date that Kalidasa came to Ujjaini to sum up in his poetry, the beauty of human life, the splendours of art & the glory of the senses.
VALMIKI, Vyasa and Kalidasa are the essence of the history of ancient India; if all else were lost, they would still be its sole and sufficient cultural history. Their poems are types and exponents of three periods in the development of the human soul, types and exponents also of the three great powers which dispute and clash in the imperfect and half-formed temperament and harmonise in the formed and perfect. At the same time their works are pictures at once minute and grandiose of three moods of our Aryan civilisation, of which the first was predominatingly moral, the second predominatingly intellectual, the third predominatingly material. The fourth power of the soul, the spiritual, which can alone govern and harmonise the others by fusion with them, had not, though it pervaded and powerfully influenced each successive development, any separate age of predominance, did not like the others possess the whole race with a dominating obsession. It is because, conjoining in themselves the highest and most varied poetical gifts, they at the same time represent and mirror their age and humanity by their interpretative largeness and power that our three chief poets hold their supreme place and bear comparison with the greatest world-names, with Homer, Shakespeare and Dante.

It has been said, truly, that the Ramayana represents an ideal society and assumed, illogically, that it must therefore represent an altogether imaginary one. The argument ignores the alternative of a real society idealised. No poet could evolve entirely out of his own imagination a picture at once so colossal, so minute and so consistent in every detail. No number of poets could do it without stumbling into fatal incompatibilities either of fact or of view, such as we find defacing the Mahabharata. This is not the place to discuss the question of Valmiki’s age and authorship. This much, however, may be said that after excluding the
Uttarakanda, which is a later work, and some amount of interpolation, for the most part easy enough to detect, and reforming the text which is not unfrequently in a state of truly shocking confusion, the Ramayana remains on the face of it the work of a single mighty and embracing mind. It is not easy to say whether it preceded or followed in date Vyasa’s epic; it is riper in form and tone, has some aspects of a more advanced and mellow culture, and yet it gives the general impression of a younger humanity and an earlier less sophisticated and complex mind. The nature of the poem and much of its subject matter might at least justify the conclusion that Valmiki wrote in a political and social atmosphere much resembling that which surrounded Vyasa. He lived, that is to say, in an age of approaching if not present disorder and turmoil, of great revolutions and unbridled aristocratic violence, when the governing chivalry, the Kshatriya caste, in its pride of strength was asserting its own code of morals as the one rule of conduct. We may note the plain assertion of this stand-point by Jarasandha in the Mahabharata and Valmiki’s emphatic and repeated protest against it through the mouth of Rama. This ethical code was like all aristocratic codes of conduct full of high chivalry and the spirit of noblesse oblige, but a little loose in sexual morality on the masculine side and indulgent to violence and the strong hand. To the pure and delicate moral temperament of Valmiki, imaginative, sensitive, enthusiastic, shot through with rays of visionary idealism and ethereal light, this looseness and violence were shocking and abhorrent. He could sympathise with them, as he sympathised with all that was wild and evil and anarchic, with the imaginative and poetical side of his nature, because he was a universal creative mind driven by his art-sense to penetrate, feel and re-embody all that the world contained; but to his intellect and peculiar emotional temperament they were distasteful. He took refuge therefore in a past age of national greatness and virtue, distant enough to be idealised, but near enough to have left sufficient materials for a great picture of civilisation which would serve his purpose,—an age, it is important to note, of grandiose imperial equipoise, such as must have existed in some form at least since
a persistent tradition of it runs through Sanskrit literature. In
the framework of this imperial age, his puissant imagination
created a marvellous picture of the human world as it might
be if the actual and existing forms and material of society were
used to the best and purest advantage, and an equally marvell-
ous picture of another non-human world in which aristocratic
violence, strength, self-will, lust and pride ruled supreme and
idealised or rather colossalised. He brought these two worlds
into warlike collision by the hostile meeting of their champions
and utmost evolutions of their peculiar character-types, Rama
and Ravana, and so created the Ramayana, the grandest and
most paradoxical poem in the world, which becomes unmatch-
ably sublime by disdaining all consistent pursuit of sublimity,
supremely artistic by putting aside all the conventional limita-
tions of art, magnificently dramatic by disregarding all dramatic
illusion, and uniquely epic by handling the least as well as the
most epic material. Not all perhaps can enter at once into the
spirit of this masterpiece; but those who have once done so, will
never admit any poem in the world as its superior.

My point here, however, is that it gives us the picture of
an entirely moralised civilisation, containing indeed vast ma-
terial development and immense intellectual power, but both
moralised and subordinated to the needs of purity of temper-
ament and delicate ideality of action. Valmiki’s mind seems
nowhere to be familiarised with the high-strung intellectual
gospel of a high and severe Dharma culminating in a passionless
activity, raised to a supreme spiritual significance in the Gita,
which is one great keynote of the Mahabharata. Had he known
it, the strong leaven of sentimentalism and femininity in his
nature might well have rejected it; such temperaments when they
admire strength, admire it manifested and forceful rather than
self-contained. Valmiki’s characters act from emotional or imag-
inative enthusiasm, not from intellectual conviction; an enthui-
siasm of morality actuates Rama, an enthusiasm of immorality
tyrannises over Ravana. Like all mainly moral temperaments, he
instinctively insisted on one old established code of morals being
universally observed as the only basis of ethical stability, avoided

www.holybooks.com
casuistic developments and distasted innovators in metaphysical thought as by their persistent and searching questions dangerous to the established bases of morality, especially to its wholesome ordinariness and everydayness. Valmiki, therefore, the father of our secular poetry, stands for that early and finely moral civilisation which was the true heroic age of the Hindu spirit.

The poet of the Mahabharata lives nearer to the centre of an era of aristocratic turbulence and disorder. If there is any kernel of historic truth in the story of the poem, it records the establishment of those imperial forms of government and society which Valmiki had idealised. Behind its poetic legend it celebrates and approves the policy of a great Kshatriya leader of men who aimed at the subjection of his order to the rule of a central imperial power which should typify its best tendencies and control or expel its worst. But while Valmiki was a soul out of harmony with its surroundings and looking back to an ideal past, Vyasa was a man of his time, profoundly in sympathy with it, full of its tendencies, hopeful of its results and looking forward to an ideal future. The one might be described as a conservative idealist advocating return to a better but departed model, the other is a progressive realist looking forward to a better but unborn model. Vyasa accordingly does not revolt from the aristocratic code of morality; it harmonises with his own proud and strong spirit and he accepts it as a basis for conduct, but purified and transfigured by the illuminating idea of the niskāma dharma.

But above all intellectuality is his grand note, he is profoundly interested in ideas, in metaphysics, in ethical problems; he subjects morality to casuistic tests from which the more delicate moral tone of Valmiki’s spirit shrank; he boldly erects above ordinary ethics a higher principle of conduct having its springs in intellect and strong character; he treats government and society from the standpoint of a practical and discerning statesmanlike mind, idealising solely for the sake of a standard. He touches in fact all subjects, and whatever he touches he makes fruitful and interesting by originality, penetration and a sane and bold vision. In all this he is the son of the civilisation
he has mirrored to us, a civilisation in which both morality and material development are powerfully intellectualised. Nothing is more remarkable in all the characters of the Mahabharata than this puissant intellectualism; every action of theirs seems to be impelled by an immense driving force of mind solidifying in character and therefore conceived and outlined as in stone. This orgiastic force of the intellect is at least as noticeable as the impulse of moral or immoral enthusiasm behind each great action of the Ramayana. Throughout the poem the victorious and manifold mental activity of an age is prominent and gives its character to its civilisation. There is far more of thought in action than in the Ramayana, far less of thought in repose; the one pictures a time of gigantic creative ferment and disturbance; the other, as far as humanity is concerned, an ideal age of equipoise, tranquillity and order.

Many centuries after these poets, perhaps a thousand years or even more, came the third great embodiment of the national consciousness, Kalidasa. There is a far greater difference between the civilisation he mirrors than between Vyasa’s and Valmiki’s. He came when the daemonic orgy of character and intellect had worked itself out and ended in producing at once its culmination and reaction in Buddhism. There was everywhere noticeable a petrifying of the national temperament, visible to us in the tendency to codification; philosophy was being codified, morals were being codified, knowledge of any and every sort was being codified; it was on one side of its nature an age of scholars, logists, dialecticians, philosophical formalisers. On the other side the creative and aesthetic enthusiasm of the nation was pouring itself into things material, into the life of the senses, into the pride of life and beauty. The arts of painting, architecture, song, dance, drama, gardening, jewellery, all that can administer to the wants of great and luxurious capitals, received a grand impetus which brought them to their highest technical perfection. That this impetus came from Greek sources or from the Buddhists seems hardly borne out: the latter may rather have shared in the general tendencies of the time than originated them, and the Greek theory gives us a maximum of conclusions with a minimum
of facts. I do not think, indeed, it can be maintained that this period, call it classical or material or what one will, was marked off from its predecessor by any clear division: such a partition would be contrary to the law of human development. Almost all the concrete features of the age may be found as separate facts in ancient India: codes existed from old time; art and drama were of fairly ancient origin, to whatever date we may assign their development; physical yoga processes existed almost from the first, and the material development portrayed in the Ramayana and Mahabharata is hardly less splendid than that of which the Raghuvamsa is so brilliant a picture. But whereas, before, these were subordinated to more lofty ideals, now they prevailed and became supreme, occupying the best energies of the race and stamping themselves on its life and consciousness. In obedience to this impulse the centuries between the rise of Buddhism and the advent of Shankaracharya became, though not agnostic and sceptical, for they rejected violently the doctrines of Charvak, yet profoundly scientific and outward-going even in their spiritualism. It was therefore the great age of formalised metaphysics, science, law, art and the sensuous luxury which accompanies the arts.

Nearer the beginning than the end of this period, when India was systematising her philosophies and developing her arts and sciences, turning from Upanishad to Purana, from the high rarefied peaks of early Vedanta and Sankhya with their inspiring sublimities and bracing keenness to physical methods of ascetic yoga and the dry intellectualism of metaphysical logic or else to the warm sensuous humanism of emotional religion, — before its full tendencies had asserted themselves, in some spheres before it had taken the steps its attitude portended, Kalidasa arose in Ujjayini and gathered up in himself its present tendencies while he foreshadowed many of its future developments. He himself must have been a man gifted with all the learning of his age, rich, aristocratic, moving wholly in high society, familiar with and fond of life in the most luxurious metropolis of his time, passionately attached to the arts, acquainted with the sciences, deep in law and learning, versed in the formalised
philosophies. He has some notable resemblances to Shakespeare; among others his business was, like Shakespeare’s, to sum up the immediate past in the terms of the present: at the same time he occasionally informed the present with hints of the future. Like Shakespeare also he seems not to have cared deeply for religion. In creed he was a Vedantist and in ceremony perhaps a Siva-worshipper, but he seems rather to have accepted these as the orthodox forms of his time and country, recommended to him by his intellectual preference and aesthetic affinities, than to have satisfied with them any profound religious want. In morals also he accepted and glorified the set and scientifically elaborate ethics of the codes, but seems himself to have been destitute of the finer elements of morality. We need not accept any of the ribald and witty legends with which the Hindu decadence surrounded his name; but no unbiassed student of Kalidasa’s poetry can claim for him either moral fervour or moral strictness. His writings show indeed a keen appreciation of high ideal and lofty thought, but the appreciation is aesthetic in its nature: he elaborates and seeks to bring out the effectiveness of these on the imaginative sense of the noble and grandiose, applying to the things of the mind and soul the same aesthetic standard as to the things of sense themselves. He has also the natural high aristocratic feeling for all that is proud and great and vigorous, and so far as he has it, he has exaltation and sublimity; but aesthetic grace and beauty and symmetry sphere in the sublime and prevent it from standing out with the bareness and boldness which is the sublime’s natural presentation. His poetry has, therefore, never been, like the poetry of Valmiki and Vyasa, a great dynamic force for moulding heroic character or noble or profound temperament. In all this he represented the highly vital and material civilisation to which he belonged.

Yet some dynamic force a poet must have, some general human inspiration of which he is the supreme exponent; or else he cannot rank with the highest. Kalidasa is the great, the supreme poet of the senses, of aesthetic beauty, of sensuous emotion. His main achievement is to have taken every poetic element, all great poetical forms, and subdued them to a harmony of artistic
perfection set in the key of sensuous beauty. In continuous gift of seizing an object and creating it to the eye he has no rival in literature. A strong visualising faculty such as the greatest poets have in their most inspired descriptive moments, was with Kalidasa an abiding and unfailing power, and the concrete presentation which this definiteness of vision demanded, suffused with an intimate and sovereign feeling for beauty of colour and beauty of form, constitutes the characteristic Kalidasic manner. He is besides a consummate artist, profound in conception and suave in execution, a master of sound and language who has moulded for himself out of the infinite possibilities of the Sanskrit tongue a verse and diction which are absolutely the grandest, most puissant and most full-voiced of any human speech, a language of the Gods. The note struck by Kalidasa when he built Sanskrit into that palace of noble sound, is the note which meets us in almost all the best work of the classic literature. Its characteristic features of style are a compact but never abrupt brevity, a soft gravity and smooth majesty, a noble harmony of verse, a strong and lucid beauty of chiselled prose, above all an epic precision of phrase, weighty, sparing and yet full of colour and sweetness. Moreover it is admirably flexible, suiting itself to all forms from the epic to the lyric, but most triumphantly to the two greatest, the epic and the drama. In his epic style Kalidasa adds to these permanent features a more than Miltonic fullness and grandiose pitch of sound and expression, in his dramatic an extraordinary grace and suavity which makes it adaptable to conversation and the expression of dramatic shade and subtly blended emotion.

With these supreme gifts Kalidasa had the advantage of being born into an age with which he was in temperamental sympathy and a civilisation which lent itself naturally to his peculiar descriptive genius. It was an aristocratic civilisation, as indeed were those which had preceded it, but it far more nearly resembled the aristocratic civilisations of Europe by its material luxury, its aesthetic tastes, its polite culture, its keen worldly wisdom and its excessive appreciation of wit and learning. Religious and ethical thought and sentiment were cultivated much as in France under Louis XIV, more in piety and profession than
as swaying the conduct; they pleased the intellect or else touched the sentiment, but did not govern the soul. It was bad taste to be irreligious, but it was not bad taste to be sensual or even in some respects immoral. The splendid and luxurious courts of this period supported the orthodox religion and morals out of convention, conservatism, the feeling for established order and the inherited tastes and prejudices of centuries, not because they fostered any deep religious or ethical sentiment. Yet they applauded high moral ideas if presented to them in cultured and sensuous poetry much in the same spirit that they applauded voluptuous description similarly presented. The ideals of morality were much lower than of old; free drinking was openly recognised and indulged in by both sexes; purity of life was less valued than in any other period of our civilisation. Yet the unconquerable monogamous instinct of the high-class Hindu woman seems to have prevented promiscuous vice and the disorganisation of the home which was the result of a similar state of society in ancient Rome, in Italy of the Renascence, in France under the Bourbons and in England under the later Stuarts. The old spiritual tendencies were also rather latent than dead, the mighty pristine ideals still existed in theory, — they are outlined with extraordinary grandeur by Kalidasa, — nor had they yet been weakened or lowered to a less heroic key. It was a time in which one might expect to meet the extremes of indulgence side by side with the extremes of renunciation; for the inherent spirituality of the Hindu nature finally revolted against the splendid and unsatisfying life of the senses. But of this phase Bhartrihari and not Kalidasa is the poet. The greater writer lived evidently in the full heyday of the material age, and there is no sign of any setting in of the sickness and dissatisfaction and disillusionment which invariably follow a long outburst of materialism.

The flourishing of the plastic arts had prepared surroundings of great external beauty of the kind needed for Kalidasa’s poetic work. The appreciation of beauty in nature, of the grandeur of mountain and forest, the loveliness of lakes and rivers, the charm of bird and beast life had become a part of contemporary culture. These and the sensitive appreciation of trees and plants and hills
as living things, the sentimental feeling of brotherhood with animals which had influenced and been encouraged by Buddhism, the romantic mythological world still farther romanticised by Kalidasa’s warm humanism and fine poetic sensibility, gave him exquisite grace and grandeur of background and scenic variety. The delight of the eye, the delight of the ear, smell, palate, touch, the satisfaction of the imagination and taste are the texture of his poetical creation, and into this he has worked the most beautiful flowers of emotion and intellectual or aesthetic ideality. The scenery of his work is a universal paradise of beautiful things. All therein obeys one law of earthly grace; morality is aestheticised, intellect suffused and governed with the sense of beauty. And yet this poetry does not swim in languor, does not dissolve itself in sensuous weakness; it is not heavy with its own dissoluteness, heavy of curl and heavy of eyelid, cloyed by its own sweets, as the poetry of the senses usually is. Kalidasa is saved from this by the chastity of his style, his aim at burdened precision and energy of phrase, his unsleeping artistic vigilance.

As in the Ramayana and Mahabharata we have an absorbing intellect impulse or a dynamic force of moral or immoral excitement driving the characters, so we have in Kalidasa an intense hedonistic impulse thrilling through speech and informing action. An imaginative pleasure in all shades of thought and of sentiment, a rich delight of the mind in its emotions, a luxuriousness of ecstasy and grief, a free abandonment to amorous impulse and rapture, a continual joy of life and seeking for beauty mark the period when India, having for the time exhausted the possibilities of soul-experience attainable through the spirit and the imaginative reason, was now attempting to find out the utmost each sense could feel, probing and sounding the soul-possibilities in matter and even seeking God through the senses. The emotional religion of the Vaishnava Puranas which takes as its type of the relation between the human soul and the Supreme the passion of a woman for her lover, was already developing. The corresponding Tantric development of Shaivism may not yet have established itself fully; but the concretisation of the idea of Purusha-Prakriti, the union of Ishwara and Shakti,
from which it arose, was already there in the symbolic legends of the Puranas and one of these is the subject of Kalidasa’s greatest epic poem. The Birth of the War-God stands on the same height in classical Sanskrit as the Paradise Lost in English literature: it is the masterpiece and magnum opus of the age on the epic level. The central idea of this great unfinished poem, the marriage of Siva and Parvati, typified in its original idea the union of Purusha and Prakriti, the supreme Soul and dynamic Nature by which the world is created; but this type of divine legend was used esoterically to typify also the Nature-Soul’s search for and attainment of God, and something of this conception pierces through the description of Parvati’s seeking after Siva. Such was the age of Kalidasa, the temper of the civilisation which produced him; other poets of the time expressed one side of it or another, but his work is its splendid integral epitome, its picture of many composite hues and tones. Of the temperament of that civilisation the Seasons is an immature poetic self-expression, the House of Raghu the representative epic, the Cloud Messenger the descriptive elegy, Shakuntala with its two sister loveplays intimate dramatic pictures and the Birth of the War-God the grand religious fable. Kalidasa, who expressed so many sides and facets of it in his writings, stands for its representative man and genius, as was Vyasa of the intellectual mood of Indian civilisation and Valmiki of its moral side.

It was the supreme misfortune of India that before she was able to complete the round of her experience and gather up the fruit of her long millenniums of search and travail by commencing a fourth and more perfect age in which moral, intellectual and material development should be all equally harmonised and all spiritualised, the inrush of barbarians broke in finally on her endless solitary tapasya of effort and beat her national life into fragments. A preparation for such an age may be glimpsed in the new tendencies of spiritual seeking that began with Shankara and continued in later Vaishnavism and Shaivism and in new turns of poetry and art, but it found no opportunity of seizing on the total life of the nation and throwing it into another mould. The work was interrupted before it had well begun;
and India was left with only the remnants of the culture of the material age to piece out her existence. Yet even the little that was done afterwards, proved to be much; for it saved her from gradually petrifying and perishing as almost all the old civilisations, Assyria, Egypt, Greece, Rome, petrified and perished, as the material civilisation of Europe, unless spiritualised, must before long petrify and perish. That there is still an unexhausted vitality in her, that she yet nourishes the seeds of re-birth and renewal, we owe to Shankara and his successors and the great minds and souls that came after them. Will she yet arise, new combine her past and continue the great dream where she left it off, shaking off on the one hand the soils and filth that have grown on her in her period of downfall and futile struggle, and re-asserting on the other her peculiar individuality and national type against the callow civilisation of the West with its dogmatic and intolerant knowledge, its still more dogmatic and intolerant ignorance, its deification of selfishness and force, its violence and its ungoverned Titanism? In doing so lies her one chance of salvation.
The Historical Method

Of Kalidasa, the man who thus represents one of the greatest periods in our civilisation and typifies so many sides and facets of it in his writing, we know if possible even less than of Valmekie and Vyasa. It is probable but not certain that he was a native of Malwa born not in the capital Ujjaini, but in one of those villages of which he speaks in the Cloud-Messenger and that he afterwards resorted to the capital and wrote under the patronage of the great Vicramaditya who founded the era of the Malavas in the middle of the first century before Christ. Of his attainments, his creed, his character we may gather something from his poetry, but external facts we have none. There is indeed a mass of apocryphal anecdotes about him couching a number of witticisms & ingenuities mostly ribald, but these may be safely discredited. Valmekie, Vyasa and Kalidasa, our three greatest names, are to us, outside their poetical creation, names merely and nothing more.

This is an exceedingly fortunate circumstance. The natural man within us rebels indeed against such a void; who Kalidasa was, what was his personal as distinguished from his poetic individuality, what manner of man was the great King whose patronage he enjoyed, who were his friends, who his rivals and how he dealt with either or both, whether or not he was a lover of wine & women in practice as well as in imagination, under what special surroundings he wrote and who were the minds by whom he was most influenced, all this the natural man clamours to know; and yet all these are things we are very fortunate not to know. The historical method is certainly an attractive one and it leads to some distinct advantages, for it decidedly aids those who are not gifted with fine insight and literary discrimination, to understand certain sides of a poet's work more clearly and intelligently. But while it increases our
knowledge of the workings of the human mind it does not in the end assist or improve our critical appreciation of poetry; it helps to an understanding of the man and of those aspects of his poetry which concern his personal individuality but it obstructs our clear and accurate impression of the work and its value. The supporters of the historical method put the cart before the horse and placing themselves between the shafts do a great deal of useless though heroic labour in dragging both. They insist on directing that attention to the poet which should be directed to the poem. After assimilating a man’s literary work and realizing its value first to ourselves and then in relation to the eternal nature and scope of poetry, we may and indeed must,—for if not consciously aimed at, it must have been insensibly formed in the mind,—attempt to realize to ourselves an idea of his poetic individuality from the data he himself has provided for us; and the idea so formed will be the individuality of the man so far as we can assimilate him, the only part of him therefore that is of real value to us. The individuality of Shakespeare as expressed in his recorded actions & his relations to his contemporaries is a matter of history and has nothing to do with appreciation of his poetry. It may interest me as a study of human character & intellect but I have no concern with it when I am reading Hamlet or even when I am reading the Sonnets; on the contrary it may often come between me and the genuine revelation of the poet in his work, for actions seldom reveal more than the outer, bodily and sensational man while his word takes us within to the mind and the reason, the receiving and the selecting parts of him which are his truer self. It may matter to the pedant or the gossip within me whether the sonnets were written to William Herbert or to Henry Wriothesley or to William Himself, whether the dark woman whom Shakespeare loved against his better judgment was Mary Fitton or someone else or nobody at all, whether the language is that of hyperbolical compliment to a patron or that of an actual passionate affection; but to the lover of poetry in me these things do not matter at all. It may be a historical fact that Shakespeare when he sat down to write these poems intended to use the affected language of conventional and fulsome flattery; if
so, it does not exalt our idea of his character; but after all it was only the bodily and sensational case of that huge spirit which so intended,—the food-sheath and the life-sheath of him, to use Hindu phraseology; but the mind, the soul which was the real Shakespeare felt, as he wrote, every phase of the passion he was expressing to the very utmost, felt precisely those exultations, chills of jealousy and disappointment, noble affections, dark and unholy fires, and because he felt them, he was able so to express them that the world still listens and is moved. The passion was there in the soul of the man,—whether as a potential force or an experience from a past life, matters very little,—and it forms therefore part of his poetic individuality. But if we allow the alleged historical fact to interfere between us and this individuality, the feelings with which we ought to read the Sonnets, admiration, delight, sympathy, rapt interest in a soul struggling through passion towards self-realisation, will be disturbed by other feelings of disgust and nausea or at the best pity for a man who with such a soul within him, prostituted its powers to the interests of his mere bodily covering. Both our realisation of the true Shakespeare & our enjoyment of his poetry will thus be cruelly and uselessly marred. This is the essential defect which vitiates the theory of the man and his milieu. The man in Dr. Johnson expressed himself in his conversation and therefore his own works are far less important to us than Boswell’s record of his daily talk; the man in Byron expresses himself in his letters as well as his poetry and both have therefore to be read. It is only the most sensational and therefore the lowest natures that express themselves mainly by their actions. In the case of great poets with whom expression is an instrument that answers spontaneously and accurately to the touch of the soul, it is in their work that we shall find them, the whole of them and not only that meagre part which struggled out brokenly and imperfectly in the shape of action. It is really this difference that makes the great figures of epic poetry so much less intimately and thoroughly known to us than the great figures of drama. Kalidasa was both an epic poet and a dramatist, yet Sheva and Parvatie are merely grand paintings while Dushyanta, Shacountala, Sharngarava,
Priyumvada & Anasuya, Pururavus and Urvasie and Chitraleqha, Dharinie and Iravatie and Agnimitra are living beings who are our friends, whom we know. The difference arises from the importance of speech in self-revelation and the comparative inadequacy of acts, except as a corroboration or a check. The only epics which have creations equal to dramatic creation in their nearness to us are the Mahabharata and the Ramayan; and the art-form of those far more closely resembles the methods of the modern novel than those of epic poetry as it is understood in Europe; they combine, that is to say, the dramatic method with the epic and introduce a minuteness of observant detail with which European poets would have shrunk from tempting the patience of the sensational and soon-wearied West.

The importance of the milieu to criticism has likewise been immensely exaggerated. It is important as literary history, but history is not criticism; a man may have a very wide and curious knowledge of literary history and yet be a very poor critic and the danger of the present times lies in the immense multiplication of literary historians with their ass’s load of facts and theories and opinions and tendencies and the comparative rarity of really illuminating critics. I do not say that these things are not in a measure necessary but they are always the scaffolding and not the pile. The tendency of the historical method beginning with and insisting on the poet rather than the poem is to infer from him as a “man” the meaning & value of his poetry,— a vicious process for it concentrates the energies on the subordinate and adds the essential as an appendix. It has been said that in a rightly constituted mind the knowledge of the man and his milieu will help to a just appreciation of his poetry; but this knowledge in its nature rather distorts our judgment than helps it, for instead of giving an honest account to ourselves of the impression naturally made by the poem on us, we are irresistibly led to cut & carve that impression so as to make it square with our knowledge and the theories, more or less erroneous & ephemeral, we deduce from that knowledge. We proceed from the milieu to the poem, instead of arguing from the poem to the milieu. Yet the latter is the only fair method, for it is not the whole of the milieu that
affects the man nor every part of it that affects him equally; the extent to which it affects him and the distribution of its various influences can only be judged from the poem itself.

The milieu of Shakespeare or of Homer or of Kalidasa so far as it is important to an appreciation of their poetry, can be gathered from their poetry itself, and a knowledge of the history of the times would only litter the mind with facts which are of no real value as they mislead and embarrass the judgment instead of assisting it. This is at least the case with all poets who represent their age in some or most of its phases and with those who do not do this, the milieu is of very small importance. We know from literary history that Marlowe and Kyd and other writers exercised no little influence on Shakespeare in his young and callow days; and it may be said in passing that all poets of the first order & even many of the second are profoundly influenced by the inferior and sometimes almost worthless work which was in vogue at the time of their early efforts, but they have the high secret of mental alchemy which can convert not merely inferior metal but even refuse into gold. It is only poets of a onesided or minor genius who can afford to be aggressively original. Now as literary history, as psychology, as part of the knowledge of intellectual origins this is a highly important and noteworthy fact. But in the task of criticism what do we gain by it? We have simply brought the phantoms of Marlowe & Kyd between ourselves and what we are assimilating and so disturbed & blurred the true picture of it that was falling on our souls; and if we know our business, the first thing we shall do is to banish those intruding shadows and bring ourselves once more face to face with Shakespeare.

The historical method leads besides to much confusion and is sometimes a veil for a bastard impressionism and sometimes a source of literary insincerity or at the best anaemic catholicity. As often as not a critic studies, say, the Elizabethan age because he has a previous sympathy with the scattered grandeurs, the hasty and vehement inequalities, the profuse mixture of flawed stones, noble gems and imitation jewellery with which that school overwhelms us. In that case the profession with which he
starts is insincere, for he professes to base his appreciation on study, whereas his study begins from, continues with and ends in appreciation. Often on the contrary he studies as a duty and praises in order to elevate his study; because he has perused all and understood all, he must sympathise with all, or where is the proof of his having understood? Perfect intelligence of a man’s character and work implies a certain measure of sympathy and liking; antipathy has only half sight and indifference is blind. Hence much false criticism misleading the public intelligence and causing a confusion in critical weights & measures, a depreciation of the literary currency from which in the case of the frank impressionist we are safe. In mere truth the historical method is useful only with inferior writers who not having had full powers of expression are more interesting than their work; but even here it has led to that excessive and often absurd laudation of numberless small names in literature, many of them “discoveries”, which is the curse of latterday criticism. The historical method is in fact the cloven foot of science attempting to insinuate itself into the fair garden of Poetry. By this I mean no disrespect to Science. The devil is a gentleman, & Shakespeare himself has guaranteed his respectability; but he is more than that, he is a highly useful and even indispensable personage. So also is Science not only a respectable branch of intellectual activity,—when it does not indulge its highly civilized propensity for cutting up live animals,—but it is also a useful and indispensable branch. But the devil had no business in Paradise and Science has no business in the sphere of Poetry. The work of Science is to collect facts and generalize from them; the smallest and meanest thing is as important to it as the highest, the weed no less than the flower and the bug that crawls & stinks no less than man who is a little lower than the angels. By introducing this method into criticism, we are overloading ourselves with facts and stifling the literary field with the host of all the mediocrities more or less “historically” important but at any rate deadly dull & uninspiring, who at one time or another had the misfortune to take themselves for literary geniuses. And just as scientific history tends to lose individual genius in movements, so the historical
method tends to lose the individual poem in tendencies. The result is that modern poets instead of holding up before them as their ideal the expression of the great universal feelings and thoughts which sway humanity, tend more and more to express tendencies, problems, realisms, romanticisms, mysticisms and all the other local & ephemeral aberrations with which poetry has no business whatever. It is the sign of a decadent & morbid age which is pushing itself by the mass of its own undigested learning into Alexandrianism and scholasticism, cutting itself off from the fountainheads of creation and wilfully preparing its own decline and sterility. The age of which Callimachus & Apollonius of Rhodes were the Simonides & the Homer and the age of which Tennyson is the Shakespeare & Rudyard Kipling the Milton present an ominous resemblance.
The Seasons

I

ITS AUTHENTICITY

The “SEASONS” of Kalidasa is one of those early works of a great poet which are even more interesting to a student of his evolution than his later masterpieces. We see his characteristic gift even in the immature workmanship and uncertain touch and can distinguish the persistent personality in spite of the defective self-expression. Where external record is scanty, this interest is often disturbed by the question of authenticity, and where there is any excuse for the doubt, it has first to be removed. The impulse which leads us to deny authenticity to early and immature work, is natural and almost inevitable. When we turn from the great harmonies and victorious imaginations of the master to the raw and perhaps faltering workmanship of these uncertain beginnings, we are irresistibly impelled to cry out, “This is not by the same hand.” But the impulse, however natural, is not always reasonable. The maxim that a poet is born and not made is only true in the sense that great poetical powers are there in the mind of the child, and in this sense the same remark might be applied with no less truth to every species of human genius; philosophers, sculptors, painters, critics, orators, statesmen are all born and not made. But because poetical genius is rarer or at any rate wider and more lasting in its appeal than any other, the popular mind with its ready gift for seizing one aspect of truth out of many and crystallizing error into the form of a proverb, has exalted the poet into a splendid freak of Nature exempt from the general law. If a man without the inborn oratorical fire may be trained into a good speaker or another without the master’s inspiration of form and colour
work out for himself a blameless technique, so too may a mea-
gre talent become by diligence a machine for producing elegant
verse. But poetic genius needs experience and self-discipline as
much as any other, and by its very complexity more than most.
This is eminently true of great poets with a varied gift. A narrow
though a high faculty works best on a single line and may show
perfection at an early stage; but powerful and complex minds
like Shakespeare or Kalidasa seldom find themselves before a
more advanced period. Their previous work is certain to be full
of power, promise and genius, but it will also be flawed, unequal
and often imitative. This imperfection arises naturally from the
greater difficulty in imposing the law of harmony of their various
gifts on the bodily case which is the instrument of the spirit’s self-
expression. To arrive at this harmony requires time and effort,
and meanwhile the work will often be halting and unequal,
varying between inspiration expressed and the failure of vision
or expression.

There is no more many-sided, rich and flexible genius in
literature than Kalidasa’s, and in his case especially we must
be on our guard against basing denial of authenticity on im-
perfection and minor differences. We have to judge, first, by
the presence or absence of the essential and indefinable self of
Kalidasa which we find apparent in all his indubitable work,
however various the form or subject, and after that on those
nameable characteristics which are the grain and fibre of his
genius and least imitable by others. In the absence of external
evidence, which is in itself of little value unless received from
definite and contemporary or almost contemporary sources, the
test of personality is all-important. Accidents and details are only
useful as corroborative evidence, for these are liable to variation
and imitation; but personality is a distinguishable and perma-
nent presence as fugitive to imitation as to analysis. Even a slight
fineness of literary palate can perceive the difference between
the Nalodaya and Kalidasa’s genuine work. Not only does it
belong to an age or school in which poetic taste was debased and
artificial, — for it is a poetical counterpart of those prose works
for whose existence the display of scholarship seems to be the
chief justification, — but it presents in this matter of personality and persistent characteristics no sufficient point of contact either with the Shakuntala or the Kumarasambhava or even with the House of Raghu. But in the Seasons, Kalidasa’s personality is distinctly perceived as well as his main characteristics, his force of vision, his architecture of style, his pervading sensuousness, the peculiar temperament of his similes, his characteristic strokes of thought and imagination, his individual and inimitable cast of description. Much of it is as yet in a half-developed state, crude consistence not yet fashioned with the masterly touch he soon manifested, but Kalidasa is there quite as evidently as Shakespeare in his earlier work, the Venus and Adonis or Lucrece. Defects which the riper Kalidasa avoids, are not uncommon in this poem,— repetition of ideas, use of more words than are absolutely required, haphazard recurrence of words and phrases, not to produce a designed effect but from carelessness, haste or an insufficient vocabulary; there is moreover a constant sense of uncertainty in the touch and a frequent lack of finished design. The poet has been in too much haste to vent his sense of poetic power and not sufficiently careful that the expression should be the best he could compass. And yet immature, greatly inferior in chastity and elegance to his best work, marred by serious faults of conception, bearing evidence of hurry and slovenliness in the execution, the Seasons is for all this not only suffused by a high though unchastened beauty, but marked with many of the distinctive signs of Kalidasa’s strong and exuberant genius. The defects are those natural to the early work of a rich sensuous temperament, eagerly conscious of poetic power but not yet instructed and chastened.

II

THE SUBSTANCE OF THE POEM

Kalidasa’s Seasons is perhaps the first poem in any literature written with the express object of describing Nature. It is precisely similar in its aim to a well-known eighteenth-century
failure in the same direction—Thomson’s Seasons. The names tally, the forms correspond, both poems adopting the plan of devoting a canto to each season, and the method so far agrees that the poets have attempted to depict each season in its principal peculiarities, scenes and characteristic incidents. But here all parallel ends. Wide as the gulf between the genius of one of the greatest world-poets and the talent of the eighteenth-century versifier is the difference between the gathered strength and compact force, the masterly harmonies and the living truth of the ancient Indian poem and the diffuse artificiality and rhetoric of the modern counterpart. And the difference of spirit is not less. A poet of the prosaic and artificial age when the Anglo-Saxon mind emerged in England and got itself Gallicised, Thomson was unable to grasp the first psychological laws of such descriptive poetry. He fixed his eye on the object, but he could only see the outside of it. Instead of creating he tried to photograph. And he did not remember or did not know that Nature is nothing to poetry except in so far as it is either a frame, setting or ornament to life or else a living presence to the spirit. Nature interpreted by Wordsworth as a part of his own and the universal consciousness, by Shakespeare as an accompaniment or note in the orchestral music of life, by more modern poets as an element of decoration in the living world-picture is possible in poetry; as an independent but dead existence it has no place either in the world itself or in the poet’s creation. In his relations to the external, life and mind are the man, the senses being only instruments, and what he seeks outside himself is a response in kind to his own deeper reality. What the eye gathers is only important in so far as it is related to this real man or helps this expectation to satisfy itself. Kalidasa with his fine artistic feeling, his vitality and warm humanism and his profound sense of what true poetry must be, appears to have divined from the beginning the true place of Nature in the poet’s outlook. He is always more emotional and intellectual than spiritual, like Shakespeare to whom he has so many striking resemblances. We must not expect from him the magical insight of Valmiki, still less the spiritual discernment of Wordsworth. He looks inside, but not
too far inside. But he realises always the supreme importance of life as the only abiding foundation of a poem’s immortality.

The first canto is surcharged with the life of men and animals and the life of trees and plants in summer. It sets ringing a note of royal power and passion and promises a poem of unexampled vigour and interest. But to play variations on this note through six cantos seems to have been beyond the young poet’s as yet limited experience and narrow imaginative mastery. He fell back on the life of sensuous passion with images of which, no doubt, his ungoverned youth was most familiar. But instead of working them into the main thought he turned to them for a prop and, when his imaginative memory failed him, multiplied them to make up the deficiency. This lapse from artistic uprightness brought its own retribution, as all such lapses will. From one error indeed Kalidasa’s vigorous and aspiring temperament saved him. He never relaxed into the cloying and effeminate languor of sensuous description which offends us in Keats’ earlier work. The men of the age with all their sensuousness, luxury and worship of outward beauty were a masculine and strenuous race, and their male and vigorous spirit is as prominent in Kalidasa as his laxer tendencies. His sensuousness is not coupled with weak self-indulgence, but is rather a bold and royal spirit seizing the beauty and delight of earth to itself and compelling all the senses to minister to the enjoyment of the spirit rather than enslaving the spirit to do the will of the senses. The difference perhaps amounts to no more than a lesser or greater force of vitality, but it is, for the purposes of poetry, a real and important difference. The spirit of delightful weakness swooning with excessive beauty gives a peculiar charm of soft laxness to poems like the Endymion, but it is a weakening charm to which no virile temperament will trust itself. The poetry of Kalidasa satisfies the sensuous imagination without enervating the virile chords of character; for virile energy is an unfailing characteristic of the best Sanskrit poetry, and Kalidasa is inferior to none in this respect. His artistic error has nevertheless had disastrous effects on the substance of his poem.

It is written in six cantos answering to the six Indian seasons,
Summer, Rain, Autumn, Winter, Dew and Spring. Nothing can exceed the splendour and power of the opening. We see the poet revelling in the yet virgin boldness, newness and strength of his genius and confident of winning the kingdom of poetry by violence. For a time the brilliance of his work seems to justify his ardour. In the poem on Summer we are at once seized by the marvellous force of imagination, by the unsurpassed closeness and clear strenuousness of his gaze on the object; in the expression there is a grand and concentrated precision which is our first example of the great Kalidasiian manner, and an imperial power, stateliness and brevity of speech which is our first instance of the high classical diction. But this canto stands on a higher level than the rest of the poem. It is as if the poet had spent the best part of his force in his first enthusiasm and kept back an insufficient reserve for the sustained power proper to a long poem. The decline in energy does not disappoint at first. The poem on the Rains gives us a number of fine pictures with a less vigorous touch but a more dignified restraint and a graver and nobler harmony, and even in the Autumn, where the falling off of vigour becomes very noticeable, there is compensation in a more harmonious finish of style, management and imagery. We are led to believe that the poet is finding himself and will rise to a finale of flawless beauty. Then comes disappointment. In the next two cantos Kalidasa seems to lose hold of the subject; the touches of natural description cease or are, with a few exceptions, perfunctory and even conventional, and the full force of his genius is thrown into a series of extraordinary pictures, as vivid as if actually executed in line and colour, of feminine beauty and sensuous passion. The two elements, never properly fused, cease even to stand side by side. For all description of Winter we have a few stanzas describing the cold and the appearance of fields, plants, waters in the wintry days, by no means devoid of beauty but wanting in vigour, closeness of vision and eagerness. In the poem on Dew-tide the original purpose is even fainter. Perhaps the quietness of these seasons, the absence in them of the most brilliant pictorial effects and grandest distinctive features, made them a subject uninspiring to the unripeness and
The Seasons

love of violence natural to a richly-endowed temperment in its unschooled youth. But the Spring is the royal season of the Indian year and should have lent itself peculiarly to Kalidasa’s inborn passion for colour, sweetness and harmony. The closing canto should have been the crown of the poem. But the poet’s sin pursues him and, though we see a distinct effort to recover the old pure fervour, it is an effort that fails to sustain itself. There is no falling off in harmonious splendour of sound and language, but the soul of inspired poetic observation ceases to inform this beautiful mould and the close fails and languishes. It is noticeable that there is a double close to the Spring, the two versions having been left, after the manner of the old editions, side by side. Kalidasa’s strong artistic perception must have suffered acutely from the sense of failure in inspiration and he has accordingly attempted to replace the weak close by an improved and fuller cadence. What is we may presume, the rejected version, is undoubtedly the weaker of the two but neither of them satisfies. The poem on Spring which should have been the finest, is the most disappointing in the whole series

III

ITS POETIC VALUE

Nevertheless the Seasons is not only an interesting document in the evolution of a poetic genius of the first rank, but in itself a work of extraordinary force and immense promise. Many of the most characteristic Kalidasian gifts and tendencies are here, some of them in crude and unformed vigour, but characteristic and unmistakable, giving the poem a striking resemblance of spirit and to some extent of form to the House of Raghu, with a far-off prophecy of the mature manner of Kalidasa in the four great masterpieces. There is his power of felicitous and vivid simile; there is the individual turn of his conceits and the single-minded force with which he drives them home; there is his mastering accuracy and lifeliness in description conspicuous
especially in the choice and building of the circumstantial epithets. That characteristic of the poet, not the most fundamental and important, which most struck the ancient critics, *upamāsu kalidāsah*, Kalidasa for similes, is everywhere present even in such early and immature work, and already they have the sharp clear Kalidasián ring, true coin of his mint though not yet possessed of the later high values. The deep blue midsummer sky is like a rich purple mass of ground collyrium; girls with their smiling faces and lovelit eyes are like “evenings beautifully jewelled with the moon”; the fires burning in the forest look far-off like clear drops of vermilion; the new blades of grass are like pieces of split emerald; rivers embracing and tearing down the trees on their banks are like evil women distracted with passion slaying their lovers. In all these instances we have the Kalidasián simile, a little superficial as yet and self-conscious, but for all that Kalidasián. When again he speaks of the moon towards dawn growing pale with shame at the lovelier brightness of a woman’s face, of the rains coming like the pomp of some great king all blazing with lights, huge clouds moving along like elephants, the lightning like a streaming banner and the thunder like a peal of drums, of the clouds like archers shooting their rains at the lover from the rainbow stringed with lightning, one recognises, in spite of the occasional extravagance of phrase and violent fancifulness, the Kalidasián form of conceit, not only in the substance which can be borrowed, but in the wording and most of all in the economy of phrase expressing a lavish and ingenious fancy. Still more is this apparent in the sensuous and elaborate comparison of things in Nature to women in ornamental attire,—rivers, autumn, the night, the pale priyungou creeper.

Most decisive of all are the strokes of vivid description that give the poem its main greatness and fulfil its purpose. The seasons live before our eyes as we read. Summer is here with its sweltering heat, the sunbeams burning like fires of sacrifice and the earth swept with whirling gyres of dust driven by intolerable gusts. Yonder lies the lion forgetting his impulse and his mighty leap; his tongue lolls and wearily from time to time he shakes
his mane; the snake with lowered head panting and dragging his coils labours over the blazing dust of the road; the wild boars are digging in the dried mud with their long snouts as if they would burrow their way into the cool earth; the bisons wander everywhere dumbly desiring water. The forests are grim and parched, brown and sere; and before long they are in the clutch of fire.... But the rains come, and what may be yonder writhing lines we see on the slopes? It is the young water of the rains, a new-born rivulet, grey and full of insects and dust and weeds, coiling like a snake down the hillside. We watch the beauty of the mountains streaked everywhere with waterfalls, their high rocks kissed by the stooping clouds and their sides a gorgeous chaos of peacocks: on the horizon the great clouds blue as lotus-petals climb hugely into the sky and move across it in slow procession before a sluggish breeze. Or look at yonder covidara tree, its branches troubled softly with wind, swarming with honey-drunk bees and its leaves tender with little opening buds. The moon at night gazes down at us like an unveiled face in the skies, the racing stream dashes its ripples in the wild-duck's face, the wind comes trembling through the burdened rice-stalks, dancing with the crowding courboucs, making one flowery ripple of the lotus-wooded lake. Here there can be no longer any hesitation.

These descriptions which remain perpetually with the eye, visible and concrete as an actual painting, belong, in the force with which they are visualised and the magnificent architecture of phrase with which they are presented, to Kalidasa alone among Sanskrit poets. Other poets, his successors or imitators, such as Bana or even Bhavabhuti, overload their description with words and details; they have often lavish colouring but never an equal power of form; their figures do not appear to stand out of the canvas and live.

And though we do not find here quite the marvellous harmonies of verse and diction we meet in the Raghu, yet we do come across plenty of preparation for them. Here for instance is a verse whose rapidity and lightness restrained by a certain half-hidden gravity is distinctly Kalidasa's:
“Clinging to the woodland edges the forest fire increases with the wind and burns in the glens of the mountains; it crackles with shrill shoutings in the dry bamboo reaches; it spreads in the grasses gathering hugeness in a moment and harasses the beasts of the wilderness.”

And again for honeyed sweetness and buoyancy what can be more Kalidasian than this?

“The male cuckoo, drunk with wine of the juice of the mango flower, kisses his beloved, glad of the sweet attraction, and here the bee murmuring in the lotus-blossom hums flattery’s sweetness to his sweet.”

There are other stanzas which anticipate something of the ripest Kalidasian movements by their gravity, suavity and strength.

“If we take Kalidasa anywhere in his lighter metres we shall
at once perceive their essential kinship with the verse of the Seasons.

“Already Love torments my mind importunate in prayer for a thing unattainable; what shall it be when the woodland mango-trees display their buds, a pallid whiteness opening to the southern wind?”

It is the same suave and skilful management, the same exquisite and unobtrusive weaving of labial, dental and liquid assonances with a recurring sibilant note, the same soft and perfect footing of the syllables. Only the language is richer and more developed. We do not find this peculiar kind of perfection in any other master of classical verse. Bhavabhuti’s manner is bold, strenuous, external; Jayadeva’s music is based palpably upon assonance and alliteration which he uses with extraordinary brilliance and builds into the most enchanting melodies, but without delicacy, restraint or disguise. If there were any real cause for doubt of the authorship, the verse would clearly vindicate the Seasons for Kalidasa.

Such is this remarkable poem which some, led away by its undoubted splendours, have put in the first rank of Kalidasa’s work. Its artistic defects and its comparative crudity forbid us to follow them. It is uncertain in plan, ill-fused, sometimes raw in its imagery, unequal in its execution. But for all that, it must have come upon its contemporaries like the dawning of a new sun in the skies. Its splendid diction and versification, its vigour, fire and force, its sweetness of spirit and its general promise and to some extent actual presentation of a first-rate poetic genius must have made it a literary event of the first importance. Especially is it significant in its daring gift of sensuousness. The prophet of a hedonistic civilisation here seizes with no uncertain hand on the materials of his work. A vivid and virile interpretation
of sense-life in Nature, a similar interpretation of all elements of human life capable of greatness or beauty, seen under the light of the senses and expressed in the terms of an aesthetic appreciation,—this is the spirit of Kalidasa’s first work as it is of his last. At present he is concerned only with the outward body of Nature, the physical aspects of things, the vital pleasures and emotions, the joy and beauty of the human body; but it is the first necessary step on the long road of sensuous and poetic experience and expression he has to travel before he reaches his goal in his crowning work, the Birth of the War-God, in which he takes up for treatment one of the supreme fables of the life of the Gods and the Cosmos and in its handling combines sublimity with grace, height of speech with fullness and beautiful harmony of sound, boldness of descriptive line with magnificence of sensuous colour in a degree of perfection never before or afterwards surpassed or even equalled in poetic literature.
Hindu Drama

The origin of the Sanscrit drama, like the origin of all Hindu arts and sciences, is lost in the silence of antiquity; and there one might be content to leave it. But European scholarship abhors a vacuum, even where Nature allows it; confronted with a void in its knowledge, it is always ready to fill it up with a conjecture and this habit of mind while it has led to many interesting discoveries, has also fostered a spirit of fantasy and dogmatism in fantasy, which is prejudicial to sane and sober thinking. Especially in the field of Sanscrit learning this spirit has found an exceptionally favourable arena for the exercise of its ingenuity; for here there is no great body of general culture and well-informed lay opinion to check the extravagances to which a specialised knowledge is always prone. Undaunted therefore by the utter silence of history on the question, European scholars have set about filling up the void with theories which we are asked or rather bidden to accept not as ingenious scholastic playthings, but as serious solutions based upon logical and scientific deduction from convincing internal evidence. It is necessary for reasons I shall presently touch on to cast a cursory glance at the most important of these attempts.

The first thought that would naturally suggest itself to an average European mind in search of an origin for Hindu drama is a Greek parentage. The one great body of original drama prior to the Hindu is the Greek; from Greece Europe derives the beginnings of her civilization in almost all its parts; and especially in poetry, art and philosophy. And there was the alluring fact that Alexander of Macedon had entered India and the Bactrians established a kingdom on the banks of the Indus before the time of the earliest extant Hindu play. To the European mind the temptation to build upon this coincidence a theory was irresistible, more especially as it has always been
incurably loath to believe that the Asiatic genius can be original or vigorously creative outside the sphere of religion. In obedience to this [incomplete]

Deftness & strength in dialogue, masterly workmanship in plot-making & dramatic situation and vital force of dramatic poetry are enough in themselves to make a fine and effective poetical play for the stage, but for a really great drama a farther & rarer gift is needed, the gift of dramatic characterisation. This power bases itself in its different degrees sometimes on great experience of human life, sometimes on a keen power of observation and accurate imagination making much matter out of a small circle of experience but in its richest possessors on a boundless sympathy with all kinds of humanity accompanied by a power of imbibing and afterwards of selecting & bringing out from oneself at will impressions received from others. This supreme power, European scholars agree, is wanting in Hindu dramatic literature. A mere poet like Goethe may extend unstinted & even superlative praise to a Shacountala but the wiser critical & scholarly mind passes a far less favourable verdict; there is much art in Hindu poetry, it is said, but no genius; there is plenty of fancy but no imagination; beautiful and even moving poetry is abundant, but the characters are nil; the colouring is rich but colour is all. Indian scholars trained in our schools to repeat what they have learnt do not hesitate to add their voice to the chorus. A Hindu scholar of acute diligence and wide Sanscrit learning has even argued that the Hindu mind is constitutionally incapable of original & living creation; he has alleged the gigantic, living and vigorous personalities of the Mahabharat as an argument to prove that these characters must have been real men and women, copied from the life; since no Hindu poet could have created character with such truth and power. On the other side the Bengali critics, men of no mean literary taste and perception though inferior in pure verbal scholarship, are agreed in regarding the characters of Kalidasa and Bhavabhuti as beautiful and energetic creations, not less deserving of study than the personalities of Elizabethan drama.
This contradiction, violent as it is, is not difficult to understand, since it takes its root in an element always more or less present in criticism, the national element. National character, national prejudices, national training preordain for the bulk of us the spirit in which we shall approach unfamiliar poetry. Now the average English mind is capable of appreciating character as manifested in strong action or powerfully revealing speech, but constitutionally dull to the subtleties of civilized character which have their theatre in the mind and the heart and make of a slight word, a gesture or even silence their sufficient revelation. The nations of Europe, taken in the mass, are still semicivilized; their mind feeds on the physical, external and grossly salient features of life; where there is no brilliance & glare, they are apt to condemn the personality as characterless. A strength that shuns ostentation, a charm that is not luxuriant, not naked to the first glance, are appreciable only to the few select minds who have chastened their natural leanings by a wide and deep culture. The Hindu on his side distastes violence in action, excess in speech, ostentation or effusiveness in manner; he demands from his ideal temperance and restraint as well as nobility, truth and beneficence; the Aryan or true gentleman must be नित्यचा तत्पर: and नित्यनादी, restrained in action and temperate in speech.

This national tendency shows itself even in our most vehement work. The Mahabharat is that section of our literature which deals most with the external and physical and corresponds best to the European idea of the epic; yet the intellectualism of even the Mahabharat, its preference of mind-issues to physical and emotional collisions and catastrophes, its continual fusion of these when they occur with mind and ideality, the civilisation, depth and lack of mere sensational turbulence, in one word the Aryan cast of its characters, are irritating to European scholars. Thus a historian of Indian literature complains that Bhema is the one really epic character in this poem. He meant, evidently, the one character in which vast and irresistible strength, ungovernable impetuosity of passion, warlike fury & destroying anger are grandiosely displayed. But to the Hindu, whose ideas of epic are not coloured with the wrath of Achilles,
epic motive and character are not confined to what is impetuous, huge and untamed; he demands a larger field for the epic and does not confine it to savage and half-savage epochs. Gentleness, patience, self-sacrifice, purity, the civilized virtues, appear to him as capable of epic treatment as martial fire, brute strength, revenge, anger, hate and ungovernable self-will. Rama mildly and purely renouncing the empire of the world for the sake of his father's honour seems to them as epic & mighty a figure as Bhema destroying Kechaka in his wild fury of triumphant strength and hatred. It is noteworthy that the European temperament finds vice more interesting than virtue, and in its heart of hearts damns the Christian qualities with faint praise as negative, not positive virtues; the difficulty European writers experience in making good men sympathetic is a commonplace of literary observation. In all these respects the Hindu attitude is diametrically opposed to the European. This attitude of the Hindu mind as evinced in the Mahabharata is so intolerable to European scholars that they have been forced to ease their irritation by conjuring up the phantom of an original ballad-epic more like their notions of what an epic should be, an epic in which the wicked characters of the present Mahabharata were the heroes and the divine champions of right of the present Mahabharata were the villains! The present Mahabharata is, they say, a sanctimonious monastic corruption of the old vigorous and half-savage poem. To the Hindu the theory naturally seems a grotesque perversion of ingenuity but its very grotesqueness is eloquent of the soil it springs from, the soil of the half barbarous temperament of the martial & industrial Teuton which cannot, even when civilised, entirely sympathise with the intellectual working of more radically civilised types. This fundamental difference of outlook on character, generating difference in critical appreciation of dramatic and epic characterisation is of general application, but it acquires a peculiar force when we come to consider the Hindu drama; for here the ingrained disparity is emphasized by external conditions.

It has been pointed out, perhaps too often, that the Hindu drama presents some remarkable points of contact with the
Elizabethan. In the mixture of prose and poetry, in the complete
freedom with which time & scene vary, in the romantic lifelike-
ness of the action, in the mixture of comedy with serious matter,
in the gorgeousness of the poetry and the direct appeal to the
feelings, both these great literatures closely resemble each other.
Yet the differences, though they do not strike us so readily as the
similarities, are yet more vital and go deeper; for the similarities
are of form, the differences of spirit. The Elizabethan drama was
a great popular literature which aimed at a vigorous and realistic
presentation of life and character such as would please a mixed
and not very critical audience; it had therefore the strength and
weakness of great popular literature; its strength was an abounding
vigour in passion & action, and an unequalled grasp upon
life; its weakness a crude violence, imperfection and bungling
in workmanship combined with a tendency to exaggerations,
horrors & monstrosities. The Hindu drama, on the contrary,
was written by men of accomplished culture for an educated,
often a courtly audience and with an eye to an elaborate and
well-understood system of poetics.

The vital law governing Hindu poetics is that it does not
seek to represent life and character primarily or for their own
sake; its aim is fundamentally aesthetic, by the delicate & har-
monious rendering of passion to awaken the aesthetic sense of
the onlooker and gratify it by moving or subtly observed pic-
tures of human feeling; it did not attempt to seize a man’s spirit
by the hair and drag it out into a storm of horror & pity &
fear and return it to him drenched, beaten and shuddering. To
the Hindu it would have seemed a savage and inhuman spirit
that could take any aesthetic pleasure in the sufferings of an
Oedipus or a Duchess of Malfi or in the tragedy of a Macbeth
or an Othello. Partly this arose from the divine tenderness of
the Hindu nature, always noble, forbearing & gentle and at that
time saturated with the sweet & gracious pity & purity which
flowed from the soul of Buddha; but it was also a necessary
result of the principle that aesthetic & intellectual pleasure is the
first object of all poetic art. Certainly poetry was regarded as a
force for elevation as well as for charm, but as it reaches these
objects through aesthetic beauty, aesthetic gratification must be the whole basis of dramatic composition; all other objects are superstructural. The Hindu mind therefore shrank not only from violence, horror & physical tragedy, the Elizabethan stock-in-trade, but even from the tragic moral problems which attracted the Greek mind; still less could it have consented to occupy itself with the problems of disease, neurosis and spiritual medicology generally which are the staple of modern drama and fiction. An atmosphere of romantic beauty, a high urbanity and a gracious equipoise of the feelings, a perpetual confidence in the sunshine & the flowers, are the essential spirit of a Hindu play; pity and terror are used to awaken the feelings, but not to lacerate them, and the drama must close on the note of joy and peace; the clouds are only admitted to make more beautiful the glad sunlight from which all came & into which all must melt away. It is in an art like this that the soul finds the repose, the opportunity for being, confirmed in gentleness and in kindly culture, the unmixed intellectual and aesthetic pleasure in quest of which it has turned away from the crudeness & incoherence of life to the magic regions of Art.

When therefore English scholars, fed on the exceedingly strong & often raw meat of the Elizabethans, assert that there are no characters in the Hindu drama, when they attribute this deficiency to the feebleness of inventive power which leads “Asiatic” poetry to concentrate itself on glowing description and imagery, seeking by excess of ornament to conceal poverty of substance, when even their Indian pupils perverted from good taste and blinded to fine discrimination by a love of the striking & a habit of gross forms & pronounced colours due to the too exclusive study of English poetry, repeat & reinforce their criticisms, the lover of Kalidasa & his peers need not be alarmed; he need not banish from his imagination the gracious company with which it is peopled as a gilded & soulless list of names. For these dicta spring from prejudice and the echo of a prejudice; they are evidence not of a more vigorous critical mind but of a restricted critical sympathy. Certainly if we expect a Beautiful White Devil or a Jew of Malta from the Hindu dramatist, we
shall be disappointed; he deals not in these splendid or horrible masks. If we come to him for a Lear or a Macbeth, we shall go away discontented; for these also are sublimities which belong to cruder civilisations and more barbarous national types; in worst crimes & deepest suffering as well as in happiness & virtue, the Aryan was more civilized & temperate, less crudely enormous than the hard, earthy & material African peoples whom in Europe he only half moralised. If he seeks a Père Goriot or a Madame Bovary, he will still fail in his quest; for though such types doubtless existed at all times among the mass of the people with its large strain of African blood, Hindu Art would have shrunk from poisoning the moral atmosphere of the soul by elaborate studies of depravity. The true spirit of criticism is to seek in a literature what we can find in it of great or beautiful, not to demand from it what it does not seek to give us.
Vikramorvasie
The Play

Vikram and the Nymph is the second, in order of time, of Kalidasa’s three extant dramas. The steady development of the poet’s genius is easy to read even for a superficial observer. Malavica and the King is a gracious and delicate trifle, full of the sweet & dainty characterisation which Kalidasa loves, almost too curiously admirable in the perfection of its structure and dramatic art but with only a few touches of that nobility of manner which raises his tender & sensuous poetry and makes it divine. In the Urvasie he is preening his wings for a mightier flight; the dramatic art is not so flawless, but the characters are far deeper and nobler, the poetry stronger and more original and the admirable lyrical sweetness of the first and fourth acts as well as the exaltation of love and the passion of beauty which throb through the whole play, lift it into a far rarer creative atmosphere. It is a worthy predecessor of the Shacountala, that loveliest, most nobly tender and most faultless of all romantic plays. Other indications of this development may be observed. The conventional elements of an Indian romantic comedy, the humours of the Brahmin buffoon and the jealousy of the established wife for the new innamorata occupy the whole picture in the Malavica, though they are touched with exquisite skill and transfigured into elements of a gracious and smiling beauty. In the Urvasie the space given to them is far more limited and their connection with the main action less vital; and they are less skilfully handled: finally in the Shacountala we have only vestiges of them, — a perfunctory recognition of their claims to be admitted rather than a willing use of them as good dramatic material. The prologues of the three plays point to a similar conclusion. In producing the Malavica Kalidasa comes forward as a new and unrecognized poet challenging the fame of the great dramatic classics and apprehensive of severe criticism for
his audacity, which he anticipates by a defiant challenge. When
the Urvasie is first represented, his position as a dramatist is
more assured; only the slightest apology is given for displacing
the classics in favour of a new play and the indulgence of the
audience is requested not for the poet but for the actors. The
prologue of the Shacountala on the other hand breathes of the
dignified and confident silence of the acknowledged Master. No
apology is needed; none is volunteered.

The prologue of this play contains an apparent allusion to
the great Vikramaditya, Kalidasa’s patron, and tradition seems
to hint, if it does not assert, connection of a kind between the
plot of the drama and, perhaps, some episode in the King’s life.
At any rate the name of the drama is an obvious compliment to
that great ruler & conqueror and one or two double entendres
in the play which I have not thought it worth while to transfer
into English, are, it is clear, strokes of delicate flattery pointed
to the same quarter. The majority of European scholars identify
this Vikrama with Harsha of Ujjaini, the Grand Monarque of
classical India; indigenous scholarship mostly dissents from this
view, and an imaginative mind may well prefer to associate our
greatest classical poet with the earlier and more heroic, if also
more shadowy, Vikram, who united the Malavas and founded
the power of that great nation, the most gifted and artistic of
the earlier Hindu peoples. There are no sufficient data to fix
Kalidasa’s epoch; he was certainly not later than the 6th century
after Christ, certainly not earlier than the 1st century before; but
a chronological margin of seven hundred years is too wide to
encourage dogmatism.

The legend which forms the subject of the plot is one of
the older Indian myths; it may have been a sun myth dear to
the heart of the late Prof. Max Muller,—or it may have meant
something very different. The literary critic is only concerned
with the changes and developments it has undergone in the
hands of Kalidasa; that these are all in the direction of emotional
sweetness and artistic beauty, may easily be seen by comparing
with the drama a translation of the original story as it appears
in the [Shatapatha Brahmana.]
Vikramorvasie
The Characters

Pururavus is the poet’s second study of kinghood; he differs substantially from Agnimitra. The latter is a prince, a soldier & man of the world yielding by the way to the allurements of beauty, but not preoccupied with passion; the subtitle of the piece might be, in a more innocent sense than Victor Hugo’s, “Le Roi s’amuse”. He is the mirror of a courteous & self-possessed gentleman, full of mildness & grace, princely tact, savoir-faire, indulgent kindliness, yet energetic withal & quietly resolute in his pleasure as well as in his serious affairs. “Ah, Sire” says Dharinie with sharp irony “if you only showed as much diplomatic skill & savoir-faire in the affairs of your kingdom, what a good thing it would be”. But one feels that these are precisely the gifts he would show in all his action, that the innocently unscrupulous & quite delightful tact & diplomacy with which he pursues his love-affair is but the mirror of the methods he pursued in domestic politics. We see in him the typical & ideal king of an age hedonistic, poetic, worldly but withal heroic & capable. Pururavus is made of very different material. He is a king and a hero, a man of high social & princely virtues, otherwise Kalidasa would not have taken the trouble to depict him; but these qualities are like splendid robes which his nature has put on, & which have become so natural to him that he cannot put them off if he would; they are not the naked essential man. The fundamental Pururavus is not the king and the hero but the poet & lover. The poet on a throne has been the theme of Shakespeare in his Richard II and of Renan in his Antéchrist; and from these two great studies we can realise the European view of the phenomenon. To the European mind the meeting of poet & king in one man wears always the appearance of an anomaly, a misplacement, the very qualities which have fitted him to be a poet unfit him to rule. A mastering egotism
becomes the mainspring of the poetic temperament so placed; the imagination of the man is centred in himself, and the realm & people whose destinies are in his hands, seem to him to be created only to minister to his ingenious or soaring fancies & his dramatic, epic or idealistic sense of what should be; his intellect lives in a poetic world of its own and thinks in tropes & figures instead of grappling with the concrete facts of the earth; hence he is unfitted for action and once absolute power is out of his hands, once he is no longer able to arrange men & events to his liking as if he were a dramatist manoeuvring the creatures of his brain but is called upon to measure his will & ability against others, he fails & his failure leads to tragic issues; for he persists in attempting to weave his own imaginations into life; he will not see facts; he will not recognize the inexorable logic of events. Hence, though not necessarily a coward, though often a man of real courage & even ability, he plays the part of an incompetent or a weakling or both. Moreover he tends to become a tyrant, to lose moral perspective & often all sense of proportion and sanity; for he regards himself as the centre of a great drama, and to all who will not play the part he assigns them and satisfy his emotional needs & impulses, to all who get in the way of his imaginative egotism he becomes savage & cruel; his rage when a word of his life-drama is mispronounced or a part ill-studied or a conception not complied with is a magnified reflection of the vexation felt by a dramatist at a similar contretemps in the performance of his darling piece; and unfortunately unlike the playwright he has the power to vent his indignation on the luckless offenders in a fashion only too effective. The last end of the poet-king is almost always tragic, the madhouse, the prison, suicide, exile or the dagger of the assassin. It must be admitted that this dramatic picture largely reflects the facts of history. We know some instances of poet-kings in history, Nero & Ludwig of Bavaria were extreme instances; but we have a far more interesting because typical series in the history of the British isles. The Stuarts were a race of born poets whom the irony of their fate insisted upon placing one after the other upon a throne; with the single exception of Charles II (James VI was a pedant, which
for practical purposes is as bad as a poet) they were all men of
an imaginative temper, artistic tastes & impossible ideals, and
the best of them had in a wonderful degree the poet’s faculty
of imparting this enthusiasm to others. The terrible fate which
dogged them was no mysterious doom of the Atridae, but the
natural inexorable result of the incompatibility between their
temperament & their position. Charles II was the only capable
man in his line, the only one who set before him a worldly &
unideal aim & recognising facts & using the only possible ways
& means quietly & patiently accomplished it. The first James
had some practical energy, but it was marred by the political
idealism, the disregard of a wise opportunism and the tyrannical
severity towards those who thwarted him which distinguished
his whole dreamy, fascinating & utterly unpractical race. Nor
is the type wanting in Indian History. Sriharsha of Cashmere
in the pages of Kalhana affords a most typical picture of the
same unhappy temperament. It is interesting therefore to see
how Kalidasa dealt with a similar character. To our surprise
we find that the Hindu poet does not associate incompetence,
failure & tragedy with his image of the poet-king; on the con-
trary Pururavus is a Great Emperor, well-loved of his people,
an unvanquished hero, the valued ally of the Gods, successful in
empire, successful in war, successful in love. Was then Kalidasa at
fault in his knowledge of the world and of human nature? Such
a solution would be inconsistent with all we know of the poet’s
genius as shown in his other work. The truth is that Kalidasa
simply gives us the other side of the shield. It is not an invariable
law of human nature that the poetic temperament should be
by its nature absolutely unfitted for practical action & regal
power. Nero & Charles I were artistic temperaments cursed with
the doom of kingship. But Alexander of Macedon & Napoleon
Buonaparte were poets on a throne, and the part they played
in history was not that of incompetents & weaklings. There are
times when Nature gifts the poetic temperament with a peculiar
grasp of the conditions of action and an irresistible tendency to
create their poems not in ink & on paper, but in living characters
& on the great canvas of the world; such men become portents
& wonders, whom posterity admires or hates but can only imperfectly understand. Like Joan of Arc or Mazzini & Garibaldi they save a dying nation, or like Napoleon & Alexander they dominate a world. They are only possible because they only get full scope in races which unite with an ardent & heroic temperament a keen susceptibility to poetry in life, idealism, & hero worship. Now the Hindus, before the fibre of their temperament had been loosened by hedonistic materialism on the one side & Buddhistic impracticability on the other, were not only the most ardent & idealistic race in the world, the most ready to put prose behind them, the most dominated by thought & imagination, but also one of the most heroic, and they still preserved much of this ancient temper in the days of Kalidasa. It was only natural therefore that the national dramatist in representing the great legendary founder of the Kurus as of the poet-emperor type, should mould him of stronger make & material & not as one of the beautiful porcelain vessels that are broken. Yet always, even when gifted with the most extraordinary practical abilities, the poetic temperament remains itself and keeps a flaw of weakness in the heart of its strength. The temperaments of Alexander & Napoleon were both marked by megalomania, gigantic imaginations, impossible ideals; though not wantonly cruel or tyrannical, they at times showed a singular insensibility to moral restraints and the demands of generous & humane feeling; especially in times of abnormal excitement or temporary indulgence of their passions, the birthmark came out and showed itself in acts of often insane tyranny. This was especially the case with Alexander; but Napoleon was not free from the same taint. Alexander, we know, strove consciously to mould his life into an Iliad; Napoleon regarded his as a Titanic epic and when facts would not fit in ideally with his conception of himself as its great protagonist, he would alter & falsify them with as little scruple as a dramatist would feel in dealing licentiously with the facts of history. All men of this type, moreover, show a strange visionary impracticability in the midst of their practical energy & success, make huge miscalculations & refuse to receive correction, insist that facts shall mould themselves according to

www.holybooks.com
their own imaginations and are usually dominated by an unconquerable egoism or self-absorption which is not necessarily base or selfish; their success seems as much the result of a favouring destiny as of their own ability & when the favour is withdrawn, they collapse like a house of cards at one blow. Joan of Arc dreamed dreams & saw visions, Mazzini & Garibaldi were impracticable idealists and hated Cavour because he would not idealise along with them. The rock of St Helena, the blazing stake at Rouen, the lifelong impotent exile of Mazzini, the field of [_____] & the island of Caprera, such is the latter end of these great spirits. Alexander was more fortunate, but his greatest good fortune was that he died young; his next greatest that the practical commonsense of his followers prevented him from crossing the Ganges; had Napoleon been similarly forced to recognise his limit, his end might have been as great as his beginning. Pururavus in the play is equally fortunate; we feel throughout that the power & favour of the Gods is at his back to save him from all evil fortune and the limits of a legend help him as effectually as an early death helped Alexander.

Kalidasa’s presentation of Pururavus therefore is not that of a poetic nature in a false position working out its own ruin; it is rather a study of the poetic temperament in a heroic & royal figure for no issue beyond the study itself. This is in accordance with the temper of the later poetry which, as I have said, troubles itself little with problems, issues & the rest, but is purely romantic, existing only to express disinterested delight in the beauty of human life & emotion & the life & emotion of animate & inanimate Nature.

When Pururavus first appears on the scene it is as the king and hero, the man of prompt courage and action, playing the part which he has assumed like a royal robe of purple; but it is not in the practical side of his character that Kalidasa is interested. He has to introduce it only as a background to his inner temperament, in order to save him from the appearance

1 Blank in manuscript. Apparently Aspromonte or Mentana, sites of defeats suffered by Garibaldi, was intended. — Ed.
of frivolous weakness & unworthiness which always surrounds the dilettante in life, the epicure of his own emotions. This he does with his usual consummate art. Pururavus is introduced to us at the very beginning in a scene of extraordinary swiftness, decision & tumultuous excitement like an eagle cleaving the winds in the rushing swoop upon his prey. The remembrance of this rapid & heroic episode lingers with us & gives us a sense of concealed iron behind his most feminine moods as lover & poet. Then again at the end of the play Kalidasa skilfully strikes the same note & when we take leave of the Ilian it is again as the King & hero whose strong arm is needed by the Gods in their approaching war with the Titans. Thus finding & leaving him as the warlike prince, we always have the impression that however great the part played by his love for Urvasie in his life, it is not the whole; that we are listening only to a love episode in some high epic. This impression again is skilfully aided by brief but telling touches in each Act, such as the song of the Bards, for example, which remind us of the King of Kings, the toiling administrator & the great warrior; in not a single Act are these necessary strokes omitted & the art with which they are introduced naturally & as if without design is beyond praise. But here again Kalidasa does not depart from his artistic principle of “nothing too much, nothing too little”; the purple robes of the Emperor and the bow of the hero being needed only for the background are not allowed to intrude upon the main interest, which is Pururavus the man in his native temperament.

From the very first utterance that temperament reveals itself; the grandiose & confident announcement of his name & his communion with the Gods is characteristic of the epic megalomania; we are not deceived by his proud assumption of modesty, which he only wears as a fit outward ornament of the role he is playing on the world’s stage, part of the conventional drapery of the heroic king. “For modesty was ever valour’s crown.” Through this drapery we see the man glorying in himself as a poet might glory in some great creation & when madness has removed all conventional disguise, his temper breaks out with the most splendid frankness. We see his mind empurpled with
the consciousness of his worldwide fame, “This is too much; it is not possible he should not know me”; of his marvellous birth “the grandson to the Sun & Moon”; of his matchless achievements as “the chariot-warrior, great Pururavus”; of his mighty empire, “the universal sceptre of the world and sovran footstool touched by jewelled heads of tributary monarchs”. The glory of this triple purple in which he has wrapped himself, matchless valour, matchless fame, matchless empire, dominates his imagination, and he speaks in the proud brief language of the hero but with an evident consciousness of their fine suitability to the part. We seem to see Napoleon robing himself in the dramatic splendour of his despatches and proclamations or Alexander dragging Batis at his chariot wheels in order that he may feel himself to be Achilles. Shall we accuse these men as some do of being liars, theatrical braggarts, inhuman madmen, mountebanks? Let us not so in our feeble envy spit our venom on these mighty souls to half whose heights we could never rise even if we have no opportunity given us of sinking to their depths!

And then as he rushes in pursuit of the Titan and revels in the speed of his chariot and the scenic splendour of the crumbling thunderclouds flying up like dust beneath it, all the poet in him breaks out into glories of speech. Surely no king before or after, not even Richard II, had such a royal gift of language as this grandson of the Sun & Moon. It is peculiar to him in the play. Others, especially those who habitually move near him, Manavaca, the Chamberlain, the Huntsman, the Charioteer, catch something at times of his enthusiastic poetry, but their diction is usually simple & unpretending and when it is most ambitious pale to the colour, energy & imaginativeness which floods all his utterance. For example in the scene of the vulture how he catches fire from a single trope of the Huntsman’s and his imagination continues coruscating & flashing over the jewel until it has vanished from sight. I have said that his imagination has become empurpled; but the tendency is really inborn in him; he sees, thinks & speaks in purple. Not only is his mind stored with pictures which break out in the most splendid tropes and similes, but he cannot see any natural object or feel any simplest
emotion without bathing it in the brilliant tones of his imagination & expressing it in regal poetry. He has also the poet’s close & inspired observation, the poet’s visualising power, the poet’s sensuousness & aim at the concrete. Little things that he has seen in Nature, a portion of the bank of a river collapsing into the current, the rapid brightening of a dark night by the moon, fire at night breaking its way through a volume of smoke, a lotus reddening in early sunlight, a wild swan flying through the sky with a lotus fibre in his beak, remain with his inner eye and at a touch burst out in poetry. So inveterate is this habit of seizing on every situation & emotion & turning it into a poem, that even when he affects a feeling as in his flattery of the queen, he takes fire & acts his part with a glory & fervour of speech which make the feigned emotion momentarily genuine. Thus with a mind stored & brimming with poetry, a habit of speech of royal splendour & fulness and an imagination fired & enlarged by the unequalled grandeur of his own destiny, Pururavus comes to the great event which shall be the touchstone of his nature. Such a man was alone fit to aspire to & win the incarnate Beauty of the world & of its sensuous life, the Opsara who sprang from the thigh of the Supreme. The Urvasie of the myth, as has been splendidly seen & expressed by a recent Bengali poet, is the Spirit of imaginative beauty in the Universe, the unattainable ideal for which the soul of man is eternally panting, the goddess adored of the nympholept in all lands & in all ages. There is but one who can attain her, the man whose mind has become one mass of poetry & idealism and has made life itself identical with poetry, whose glorious & starlike career has itself been a conscious epic and whose soul holds friendship & close converse with the Gods. This is Pururavus, “the noise of whom has gone far & wide”, whose mother was Ida, divine aspiration, the strange daughter of human mind (Manu) who was once male & is female, and his father Budha, Hermes of the moonlike mind, inspired & mystic wisdom, and his near ancestors therefore are the Sun & Moon. For Urvasie he leaves his human wife, earthly fame & desire, giving her only the passionless kindness which duty demands & absorbs his whole real soul in the divine. Even he,
however, does not enjoy uninterrupted the object of his desire; he transgresses with her into that fatal grove of the Virgin War-God where ethereal beauty & delight are not suffered to tread but only ascetic self-denial & keen swordlike practical will; at once she disappears from his ken. Then must his soul wander through all Nature seeking her, imagining her or hints & tokens of her in everything he meets, but never grasping unless by some good chance he accept the Jewel Union born from the crimson on the marvellous feet of Himaloy’s Child, Uma, daughter of the mountains, the Mighty Mother, She who is the Soul behind Nature. Then he is again united with her and their child is Ayus, human life & action glorified & ennobled by contact with the divine. It is therefore one of the most profound & splendid of the many profound & splendid allegories in the great repertory of Hindu myth that Kalidasa has here rendered into so sweet, natural & passionate a story of human love & desire. [The religious interpretation of the myth, which is probably older than the poetical, is slightly but not materially different.]

In one sense therefore the whole previous life of Pururavus has been a preparation for his meeting with Urvasie. He has filled earth & heaven even as he has filled his own imagination with the splendour of his life as with an epic poem, he has become indeed Pururavus, he who is noised afar; but he has never yet felt his own soul. Now he sees Urvasie and all the force of his nature pours itself into his love for her like a river which has at last found its natural sea. The rich poetry of his temperament, the sights & images with which his memory is stored, his dramatic delight in his own glory & greatness & heroism, are now diverted & poured over this final passion of his life, coruscate & light it up & reveal it as in a wonderful faeryland full of shimmering moonlight. Each thought, image, emotion of his mind as it issues forth, connects itself with his love and for a moment stands illumined in the lustre of his own speech. The same extraordinary vividness of feeling & imagination is poured over Ayus when Pururavus finds himself

2 The square brackets are Sri Aurobindo’s. — Ed.
a father; never has the passion of paternity been expressed with such vivid concreteness or with such ardent sensuousness of feeling. Yet the conventions of life & the dramatic part in it he feels bound to sustain clinging about him and hamper his complete utterance. In order therefore to give him his full opportunity, Kalidasa has separated him from Urvasie by a more romantic device than the dramatically unmanageable contrivance of the original legend, and liberated him into the infinite freedom of madness. The fourth Act, therefore, which seems at first sight episodical, is really of essential importance both to the conduct of the play & the full revelation of its protagonist.

Yet madness is hardly the precise word for the condition of Pururavus; he is not mad like Lear or Ophelia; it is rather a temporary exaltation than a perversion or aberration from his natural state. An extraordinarily vivid & active imagination which has always felt a poetic sense of mind & sympathy in brute life & in “inanimate” Nature leaps up under the shock of sudden & inexplicable loss & the encouragement of romantic surroundings into gigantic proportions; it is like a sudden conflagration in a forest which transfigures & magnifies every petty object it enlightens and fills the world with the rush & roar & volume of its progress. The whole essential temperament of the man comes whirling out in a gyrating pomp of tropes, fancies, conceits, quick & changing emotions; everything in existence he gifts with his own mind, speech, feelings and thus moves through the pageantry of Nature draping it in the regal mantle of his imagination until the whole world exists only to be the scene & witness of his sorrow. For splendour of mere poetry united with delicate art of restraint and management, this scene is not

3 Sri Aurobindo wrote the following passage on a separate page of the manuscript used for this essay. He did not mark its place of insertion:

That accomplished scholar & litterateur Prof Wilson in introducing the Vicramorvasieum to English readers, is at pains to inform them that in the “mad scene” of this play they must not expect the sublime madness of King Lear, but a much tamer affair conformable to the mild, domestic & featureless Hindu character & the feebler pitch of Hindu poetic genius. The good Professor might have spared himself the trouble. Beyond the fact that both Lear & Pururavus go about raving in a storm, there is no point of contact between the two dramas.

www.holybooks.com
easily surpassed. We may note one of the smaller & yet essential features of its beauty, the skill with which the gradations of his excitement are indicated. When he first rushes in he is in the very height & tumult of it mistaking the cloud for a Titan who carries off his Urvasie and threatening him with a clod of earth which he imagines to be a deadly weapon. But he is not really mad; the next moment he realises his hallucination, and the reaction produces a certain calming down of the fever; yet his mind is still working tumultuously & as he ranges through the forest, every object is converted for a moment into a sign of Urvasie and the megalomaniac in him bursts out into the most splendid flights of self-magnification. But each fresh disappointment brings a reaction that sobers him just a little more; he turns from the inanimate objects of nature to the bee in the flower, then to the birds, then to the beasts; he gifts them with a voice, with articulate words, with thoughts lent out of the inexhaustible treasury of his teeming imagination. Next he appeals to the God of the mountain and fancies the Echo to be his answer. Mark that now for the first time it is a real articulate voice that he hears, though but the reflection of his own. Immediately afterwards his mind coming nearer & nearer to sanity, hits upon something very close to the truth; he realises that a divine force may have transformed her to some object of nature & at first by a natural misapprehension imagines that it must be the river which has the appearance Urvasie wore when she fled from him. Then reason as it returns tells him that if he wishes to find her, it must be nearer the place where she disappeared. As he hurries back, he appeals for the last time to an animal to speak to him, but does not lend him a voice or words; again also he sees tokens of her in flower & tree, but they are no longer hallucinations but real or at least possible tokens. He touches the Jewel Union & hears the actual voice of the sage; he is now perfectly restored to his normal state of mind & when he embraces the creeper, it is not as Urvasie but as an “imitatress of my beloved”. Through the rest of the scene it is the old natural Pururavus we hear though in his most delicate flights of imagination. What a choice of a “conveyance” is that with which the scene closes & who but
Pururavus could have imagined it? I dwell on these subtle and just perceptible features of Kalidasa’s work, the art concealing art, because the appreciation of them is necessary to the full reception on our mind-canvas of Kalidasa’s art & genius and therefore to the full enjoyment of his poetry.

And while Pururavus glorifies & revels in his passion, he is also revealed by it; and not only in the strength of the poetic temperament at its strongest, its grasp of, devotion to & joy in its object, its puissant idealism & energy & the dynamic force with which for a time at least it compels fate to its will, but also in its weaknesses. I have spoken of his self-magnification & touches of megalomania. There is besides this a singular incompetence or paralysis of activity in occasional emergencies which, as I have before suggested, often overtakes the poetic temperament in action even in its most capable possessors. His helplessness when confronted by Aushinarie compares badly with the quiet self-possession & indulgent smile with which Agnimitra faces Iravatie in a much more compromising situation. Characteristic too is his conduct when the jewel is lost. We feel certain that Agnimitra when rushing out of his tent would have caught up his bow & arrows & and shot the thief on the spot; Pururavus occupies time in pouring out splendid tropes & similes over the bird & the jewel and appeals helplessly to Manavaca for advice. This is characteristic of the poetic temperament whose mind has long trained itself to throw out its imagination to meet every new object or situation and not its acting faculties; except in natures of a very firm balance the habit must lead to paralysis of the will. Such a sapping of vigour has been going on in Pururavus during the long years of absorption in his romantic passion. One must hope that when he stands again in the forefront of battle “Heaven’s great soldier” will have sufficient elasticity of character to recover in the shock of action what he has lost in the peace of the seraglio. Then there are certain

4 Alternative to this sentence:

This growing incompetence is the result of vigour being sapped by long indulgence in the poetical sensibilities to the comparative exclusion of the practical side of the temperament.
moral insensibilities, certain feelings which seem to have been left out in his composition. It is part of his self-assumed rôle in life to be the ideal king, the mirror of gallantry & conjugal duty, the champion of the gods & of religion. Yet it is Urvasie and not he who remembers that his “high capital awaits him long” and who shrinks from the displeasure of the people. He exhibits deference & a show of love to Aushinarie because he “owes” her respect & affection, but in spite of his glowing language and fine acting we feel that he cherishes towards her none of the genuine respect & affection or of the real & indulgent kindliness Agnimitra feels for Dharinie & Iravatie. In the last Act he expresses some fear that he may lose religious calm; one feels that religious calm in Pururavus must have been something like the King’s robe in Hans Andersen’s story. But it was one of the necessary “belongings” of the great semi-divine king which Pururavus considered his “part” in life, just as impassive calm & insensibility to human misfortune & grief was one of the necessary “belongings” of the great demigod, the human Jove which Napoleon thought to be his destined rôle. If that vast, flaming and rushing mass of genius & impetuosity which we call Napoleon was incompatible with stoical calm & insensibility, so was the ardent mass of sensuousness & imagination which Kalidasa portrayed in Pururavus incompatible with the high austerity of religion. It is in the mouth of this champion of Heaven Kalidasa has placed one of the few explicit protests in Sanscrit of the ordinary sensuous man against the ascetic idealism of the old religion

And yet I cannot think of her
Created by a withered hermit cold.
How could an aged anchoret dull & stale
With poring over Scripture & oblivious
To all this rapture of the senses build
A thing so lovely?

The minor male characters of the piece look too wan in the blaze of this great central figure to command much attention except as his adjuncts. As such the Charioteer, the Huntsman &
the Chamberlain, Latavya, appear; the former two merely cross
the stage and are only interesting for the shadow of tropical
magnificence that their master’s personality has thrown over
their mode of speech.

In nothing does the delicacy & keen suavity of Kalidasa’s dra-
matic genius exhibit itself with a more constant & instinctive
perfection than in his characterisation of women. He may some-
times not care to individualise his most unimportant male fig-
ures, but even the slightest of his women have some personality
of their own, something which differentiates them from others &
makes them better than mere names. Insight into feminine char-
acter is extraordinarily rare even among dramatists for whom
one might think it to be a necessary element of their art. For
the most part a poet represents with success only one or two
unusual types known to him or in sympathy with his own tem-
perament or those which are quite abnormal and therefore easily
drawn; the latter are generally bad women, the Clytaemnestras,
Vittoria Corombonas, Beatrice Joannas. The women of Vyasa
& of Sophocles have all a family resemblance; all possess a quiet
or commanding masculine strength of character which reveals
their parentage. Other poets we see succeeding in a single femi-
nine character & often repeating it but failing or not succeeding
eminently in the rest. Otherwise women in poetry are generally
painted very much from the outside. The poets who have had an
instinctive insight into women, can literally be counted on the
fingers of one hand. Shakespeare in this as in other dramatic gifts
is splendidly & unapproachably first or at least only equalled in
depth though not in range by Valmekie; Racine has the same gift
within his limits & Kalidasa without limits, though in this as in
other respects he has not Shakespeare’s prodigal abundance and
puissant variety. Other names I do not remember. There are a
few poets who succeed with coarse easy types, but this is the
fruit [of] observation rather than an unfailing intuitive gift. The
Agnimitra is a drama of women; it passes within the women’s
apartments and pleasure gardens of a great palace and is full of
the rustling of women’s robes, the tinkling of their ornaments,
the scent of their hair, the music of their voices. In the Urvasie where he needs at least half the canvas for his hero, the scope for feminine characterisation is of necessity greatly contracted, but what is left Kalidasa has filled in with a crowd of beautiful & shining figures & exquisite faces each of which is recognizable. These are the Opsaras and Urvasie the most beautiful of them all. To understand the poetry & appeal of these nymphs of heaven, we must know something of their origin & meaning.

In the beginning of things, in the great wide spaces of Time when mankind as yet was young and the azure heavens & the interregions between the stars were full of the crowding figures of luminous Gods & gigantic Titans by the collision of whose activities the cosmos was taking form & shape, the opposing forces once made a truce and met in common action on the waves of the milky ocean. The object for which they had met could not have been fulfilled by the efforts of one side alone; good must mingle with evil, the ideal take sides with the real, the soul work in harmony with the senses, virtue & sin, heaven & earth & hell labour towards a common end before it can be accomplished; for this object was no less than to evolve all that is beautiful & sweet & incredible in life, all that makes it something more than mere existence; and in especial to realise immortality, that marvellous thought which has affected those even who disbelieve in it, with the idea of unending effort and thus lured men on from height to height, from progress to progress, until mere beast though he is in his body & his sensations, he has with the higher part of himself laid hold upon the most distant heavens. Therefore they stood by the shore of the milky Ocean and cast into it the mountain Mundara for a churning stick and wound round it Vasuqie, the Great Serpent, the snake of desire, for the rope of the churning and then they set to with a will, god & devil together, and churned the milky ocean, the ocean of spiritual existence, the ocean of imagination & aspiration, the ocean of all in man that is above the mere body and the mere life.

They churned for century after century, for millennium upon millennium and yet there was no sign of the nectar of immortality. Only the milky ocean swirled & lashed & roared, like
a thing tortured, and the snake Vasuqie in his anguish began to faint & hang down his numberless heads hissing with pain over the waves and from the lolling forked tongues a poison streamed out & mingled with the anguish of the ocean so that it became like a devastating fire. Never was poison so terrible for it contained in itself all the long horror & agony of the ages, all the pain of life, its tears & cruelty & despair & rage & madness, the darkness of disbelief & the grey pain of disillusionment, all the demoniac & brute beast that is in man, his lust & his tyranny & his evil joy in the sufferings of his fellows. Before that poison no creature could stand and the world began to shrivel in the heat of it. Then the Gods fled to Shankara where he abode in the ice and snow & the iron silence & inhuman solitudes of the mountains where the Ganges streams through his matted locks; for who could face the fire of that poison? who but the great ascetic Spirit clothed in ashes who knows not desire and sorrow, to whom terror is not terrible & grief has no sting, but who embraces grief & madness & despair and

And now wonderful things began to arise from the Ocean; Uc- chaisravus arose, neighing & tossing his mighty mane, he who can gallop over all space in one moment while hooves make music in the empyrean; Varunie arose, Venus Anadyomene from the waters, the daughter of Varuna, Venus Ourania, standing on a lotus & bringing beauty, delight and harmony & all opulence into the universe; Dhunwuntari arose, cup in hand, the physician of the Gods, who can heal all pain & disease & sorrow, minister to a mind diseased & pluck out from the bosom its rooted sorrow; the jewel Kaustubha arose whose pure luminousness fills all the world & worn on the bosom of the Saviour & helper becomes the cynosure of the suffering & striving nations;

There is nothing more charming, more attractive in Kalidasa than his instinct for sweet & human beauty; everything he

The Poetry of Kalidasa touches becomes the inhabitant of a moonlit world of romance and yet — there is the unique gift, the consummate poetry — remains perfectly natural, perfectly near to us, perfectly human. Shelley’s Witch of Atlas & Keats’ Cynthia are certainly lovely creations, but they do not live; misty, shimmering, uncertain beings seen in some half dream when the moon is full and strange indefinable figures begin to come out from the skirts of the forest, they charm our imagination but our hearts take no interest in them. They are the creations of the mystic Celtic imagination with its singular intangibility, its fascinating otherworldliness. The Hindu has been always decried as a dreamer & mystic. There is truth in the charge but also a singular inaccuracy. The Hindu mind is in one sense the most concrete in the world; it seeks after abstractions, but is not satisfied with them so long as they remain abstractions. But to make the objects of this world concrete, to realise the things that are visited by sun & rain or are, at their most ethereal, sublimated figures of fine matter, that is comparatively easy, but the Hindu is not contented till he has seized things behind the sunlight also as concrete realities. He is passionate for the infinite, the unseen, the spiritual, but he will not rest satisfied with conceiving them, he insists on mapping the infinite, on seeing the unseen, on visualising the spiritual. The Celt throws his imagination into the infinite and is rewarded with beautiful phantoms out of which he evolves a pale, mystic and intangible poetry; the Hindu sends his heart & his intellect & eventually his whole being after his imagination and for his reward he has seen God and interpreted existence. It is this double aspect of Hindu temperament, extreme spirituality successfully attempting to work in harmony with extreme materialism, which is the secret of our religion, our life & our literature, our civilisation. On the one side we spiritualise the material out of all but a phenomenal & illusory existence, on the other we materialise the spiritual in the most definite & realistic forms; this is the secret of the high philosophic idealism which to the less capable European mind seems so impossible an intellectual atmosphere and of the prolific idolatry which to the dogmatic & formalising Christian reason seems so gross.
In any other race-temperament this mental division would have split into two broadly disparate & opposing types whose action, reaction & attempts at compromise would have comprised the history of thought. In the myriad minded & undogmatic Hindu it worked not towards mental division but as the first discord which prepares for a consistent harmony; the best & most characteristic Hindu thought regards either tendency as essential to the perfect & subtle comprehension of existence; they are considered the positive & negative sides of one truth, & must both be grasped if we are not to rest in a half light. Hence the entire tolerance of the Hindu religion to all intellectual attitudes except sheer libertinism; hence also the marvellous perfection of graded thought-attitudes in which the Hindu mind travels between the sheer negative & the sheer positive and yet sees in them only a ladder of progressive & closely related steps rising through relative conceptions to one final & absolute knowledge.

The intellectual temperament of a people determines the main character-stamp of its poetry. There is therefore no considerable poet in Sanscrit who has not the twofold impression, (spiritual & romantic in aim, our poetry is realistic in method), who does not keep his feet on the ground even while his eyes are with the clouds. The soaring lark who loses himself in light, the ineffectual angel beating his luminous wings in the void are not denizens of the Hindu plane of temperament. Hence the expectant critic will search ancient Hindu literature in vain for the poetry of mysticism; that is only to be found in recent Bengali poetry which has felt the influence of English models. The old Sanscrit poetry was never satisfied unless it could show colour, energy & definiteness, & these are things incompatible with true mysticism. Even the Upanishads which declare the phenomenal world to be unreal, yet have a rigidly practical aim and labour in every line to make the indefinite definite & the abstract concrete. But of all our great poets Kalidasa best exemplifies this twynatured Hindu temperament under the conditions of supreme artistic beauty & harmony. Being the most variously learned of Hindu poets he draws into his net all our traditions, ideas, myths, imaginations, allegories; the grotesque...
& the trivial as well as the sublime or lovely; but touching them with his magic wand teaches them to live together in the harmonising atmosphere of his poetic temperament; under his touch the grotesque becomes strange, wild & romantic; the trivial refines into a dainty & gracious slightness; the sublime yields to the law of romance, acquires a mighty grace, a strong sweetness; and what was merely lovely attains power, energy & brilliant colour. His creations in fact live in a peculiar light, which is not the light that never was on sea or land but rather our ordinary sunshine recognisable though strangely & beautifully altered. The alteration is not real; rather our vision is affected by the recognition of something concealed by the sunbeams & yet the cause of the sunbeams; but it is plain human sunlight we see always. May we not say it is that luminousness behind the veil of this sunlight which is the heaven of Hindu imagination & in all Hindu work shines through it without overpowering it? Hindu poetry is the only Paradise in which the lion can lie down with the lamb.

The personages of Kalidasa’s poetry are with but few exceptions gods & demigods or skiey spirits, but while they preserve a charm of wonder, sublimity or weirdness, they are brought onto our own plane of experience, their speech and thought & passion is human. This was the reason alleged by the late Bunkim Chundra Chatterji, himself a poet and a critic of fine & strong insight, for preferring the Birth of the War God to Paradise Lost; he thought that both epics were indeed literary epics of the same type, largely-planned and sublime in subject, diction and thought, but that the Hindu poem if less grandiose in its pitch had in a high degree the humanism and sweetness of simple & usual feeling in which the Paradise Lost is more often than not deficient. But the humanism of which I speak is not the Homeric naturalism; there is little of the sublime or romantic in the essence of the Homeric gods though there is much of both in a good many of their accidents & surroundings. But Kalidasa’s divine & semidivine personages lose none of their godhead by living on the plane of humanity. Perhaps the most exquisite masterpiece in this kind is the Cloud Messenger. The
actors in that beautiful love-elegy might have been chosen by Shelley himself; they are two lovers of Faeryland, a cloud, rivers, mountains, the gods & demigods of air & hill & sky; the goal of the cloud’s journey is the ethereal city of Ullaca upon the golden hill crowned by the clouds and bathed at night in the unearthly moonlight that streams from the brow of Sheva, the mystic’s God. The earth is seen mainly as a wonderful panorama by one travelling on the wings of a cloud. Here are all the materials for one of those intangible harmonies of woven & luminous mist with which Shelley allures & baffles us. The personages & scenery are those of Queen Mab, Prometheus Unbound & the Witch of Atlas. But Kalidasa’s city in the mists is no evanescent city of sunlit clouds; it is his own beautiful & luxurious Ujjayini idealised & exempted from mortal affection; like a true Hindu he insists on translating the ideal into the terms of the familiar, sensuous & earthy.

For death and birth keep not their mystic round
In Ullaca; there from the deathless trees
The blossom lapses never to the ground
But lives for ever garrulous with bees
All honey-drunk — nor yet its sweets resign.
For ever in their girdling companies. etc.7

And when he comes to describe the sole mourner in that town of delight eternal & passion unsated, this is how he describes her.8 How human, how touching, how common it all is; while we read, we feel ourselves kin to & one with a more beautiful world than our own. These creatures of fancy hardly seem to be an imaginary race but rather ourselves removed from the sordidness & the coarse pains of our world into a more gracious existence. This, I think, is the essential attraction which makes his countrymen to this day feel such a passionate delight in Kalidasa; after reading a poem of his the world and life and

7 The “etc.” indicates that Sri Aurobindo intended to quote more from his now-lost translation of The Cloud Messenger. — Ed.
8 Sri Aurobindo evidently intended to insert another passage from his translation of The Cloud Messenger here. — Ed.

www.holybooks.com
our fellow creatures human, animal or inanimate have become suddenly more beautiful & dear to us than they were before; the heart flows out towards birds & beasts and the very trees seem to be drawing us towards them with their branches as if with arms; the vain cloud & the senseless mountain are no longer senseless or empty, but friendly intelligences that have a voice to our souls. Our own common thoughts, feelings & passions have also become suddenly fair to us; they have received the sanction of beauty. And then through the passion of delight & the sense of life & of love in all beautiful objects we reach to the Mighty Spirit behind them whom our soul recognizes no longer as an object of knowledge or of worship but as her lover, to whom she must fly, leaving her husband the material life & braving the jeers & reprobation of the world for His sake. Thus by a singular paradox, one of those beautiful oxymorons of which the Hindu temperament is full, we reach God through the senses, just as our ancestors did through the intellect and through the emotions; for in the Hindu mind all roads lead eventually to the Rome of its longing, the dwelling of the Most High God. One can see how powerfully Kalidasa’s poetry must have prepared the national mind for the religion of the Puranas, the worship of Kali, Our Mother & of Srikrishna, of Vrindavun, our soul’s Paramour. Here indeed lies his chief claim to rank with Valmekie & Vyasa as one of our three national poets, in that he gathered the mind-life of the nation into his poetry at a great & critical moment and helped it forward into the groove down which it must henceforth run.

This method is employed with conspicuous beauty & success in the Urvasie. The Opsaras are the most beautiful & romantic conception on the lesser plane of Hindu mythology. From the moment that they arose out of the waters of the milky Ocean robed in ethereal raiment & heavenly adornments, waking melody from a million lyres, the beauty and light of them has transformed the world. They crowd in the sunbeams, they flash & gleam over heaven in the lightnings, they make the azure beauty of the sky; they are the light of sunrise & sunset, and the haunting voices of forest & field. They dwell too in the life of
the soul; for they are the ideal pursued by the poet through his lines, by the artist shaping his soul on his canvas, by the sculptor seeking a form in his marble; for the joy of their embrace the hero flings his life into the rushing torrent of battle; the sage, musing upon God, sees the shining of their limbs & falls from his white ideal. The delight of life, the beauty of things, the attraction of sensuous beauty, this is what the mystic & romantic side of the Hindu temperament strove to express in the Opsara. The original meaning is everywhere felt as a shining background, but most in the older allegories, especially the strange and romantic legend of Pururavus as we first have it in the Brahmans and the Vishnupurana.

But then came in the materialistic side of the Hindu mind and desired some familiar term, the earthlier the better, in which to phrase its romantic conception; this was found in — the Hetaira. The class of Hetairae was as recognized an element in Hindu society as in Greek, but it does not appear to have exercised quite so large an influence on social life. As in the Greek counterpart they were a specially learned and accomplished class of women, but their superiority over ladies of good families was not so pronounced; for in ancient India previous to the Mahomedan episode respectable women were not mere ignorant housewives like the Athenian ladies, they were educated though not in a formal manner; that is to say they went through no systematic training such as men had but parents were always expected to impart general culture & accomplishments to them by private tuition at home; singing, music, dancing and to some extent painting were the ordinary accomplishments, general knowledge of morality, Scripture and tradition was imperative, and sometimes the girls of highborn, wealthy or learned families received special instruction in philosophy or mathematics. Some indeed seem to have pursued a life of philosophic learning either as virgins or widows; but such instances were in preBuddhistic times very rare; the normal Hindu feeling has always been that the sphere of woman is in the home and her life incomplete unless merged in her husband’s. In any case the majority of the kulabadhus, women of respectable families, could hardly
be more than amateurs in the arts & sciences, whereas with the Hetairae (Gunicas) such accomplishments were pursued and mastered as a profession. Hence beside their ordinary occupation of singing & dancing in the temples & on great public occasions such as coronations & holy days, they often commanded the irregular affections of highborn or wealthy men who led openly a double life at home with the wife, outside with the Hetaira. As a class, they held no mean place in society; for they must not be confused with the strolling actor or mountebank caste who were a proverb for their vileness of morals. Many of them, no doubt, as will inevitably happen when the restraints of society are not recognized, led loose, immoral & sensual lives; in such a class Lais & Phryne must be as common as Aspasia. Nevertheless the higher & intellectual element seems to have prevailed; those who arrogated freedom in their sexual relations but were not prostitutes, are admirably portrayed in Vasuntséna of the Toy Cart, a beautiful melodrama drawn straight from the life; like her they often exchanged, with the consent of their lover’s family, the unveiled face of the Hetaira for the seclusion of the wife. This class both in its higher & lower type lasted late into the present century, but are now under the auspices of Western civilisation almost entirely replaced by a growing class of professional prostitutes, an inevitable consummation which it seems hardly worth while to dub social reform & accelerate by an active crusade.

The Opsaras then are the divine Hetairae of Paradise, beautiful singers & actresses whose beauty and art relieve the arduous & worldlong struggle of the Gods against the forces that tend towards disruption & dissolution, of disruption represented by the Titans who would restore matter to its original atomic condition or of dissolution by the sages & hermits who would make phenomena dissolve prematurely into the One who is above Phenomena. They rose from the Ocean, says Valmekie, seeking who should choose them as brides, but neither the Gods nor the Titans accepted them, therefore are they said to be common or universal.
We see then the appropriateness of the Hetaira as a material form into which the vague idea of sensuous beauty in the world might run. For the charm of the Opsara even when working on the plane of the mind, is still vital & sensational; it does not belong to the more rarefied regions of the spirit. Now vital & sensational charm in seeking its fulfilment demands that the pursuit of sensuous beauty shall be its sole object, that it shall be without check as without any sideglance or afterthought; it does not seek to be immoral, but simply rejects all moral tests; it recognizes no law but the fulfilment of its own being. This is the very spirit of the Hetaira. The beauty of nakedness sculptured, painted or shaped into words, is not immoral; but the moment we apply the test of morality, it becomes clear that we must either rule it out as not belonging to the world of morality, or rule out morality itself for the moment as not belonging to the world of beauty, which is essentially a world of nakedness in the sense that dress there is an occasional ornament, not a necessary covering — not because there is any essential opposition between them but because there is no essential connection or necessary point of contact. The ideals of all the plastic & sensuous arts fall within the scope of the Opsara; she is actress, songstress, musician, painter. When they arose from the waves, neither the gods nor the demons accepted them; accepted by none, they became common to all; for neither the great active faculties of man nor the great destructive recognize sensuous delight & charm as their constant & sufficient mistress, but rather as the joy & refreshment of an hour, an accompaniment or diversion in their constant pursuit of the recognized ideal to which they are wedded. Moreover sensuous beauty has a certain attraction & splendour which seem to some minds finally & occasionally to most, fairer & brighter than that other ideal which by daily occupation with it, by permissibility & by sameness, grows stale for some, fades into homeliness & routine for others & preserves its real undying, unageing and unforsakeable freshness & delight only to the few constant & unswerving souls, who are the elect of our human evolution. In all this the idea of the Opsara coincides with the actuality of the Hetaira. In choosing the Hetaira therefore for the
Opsara’s earthly similitude, the Hindu mind showed once more that wonderful mythopoeic penetrativeness which is as unerring & admirable in its way as the Greek mythopoeic felicity & tact.

But in the Opsaras the beauty and allurements of the sensuous universe are diffused, scattered, broken up into a million facets just as they first present themselves to human observation. The Hindu imagination needed some one figure into which all this should be compressed, a figure essential & superlative, compressed & running over with beauty. This was at first sought in Tilottama, the wonderful maiden to whose loveableness every gracious thing in the world gave a portion of its own subtlest charm; but this was too much of a fancy, not sufficiently profound & searching for the Hindu mind. It attempted to find a more perfect expression of its idea & created for the purpose a characteristic & therefore favourite legend.

When Naraian, the primeval and dateless sage of old, entered upon austerities in the most secret & desolate recesses of the Snowy Mountains, Indra, prince of the air, always hostile to asceticism, always distrustful of the philosophic & contemplative spirit, was alarmed for the balance of the world and the security of his own rule. He therefore sent the Opsaras to disturb the meditations of Naraian. Then upon the desolate Himalaya Spring set the beauty of his feet; the warm south wind breathed upon those inclement heights, blossoming trees grew in the eternal snow and the voice of the cuckoo was heard upon the mountain tops. It was amidst this vernal sweetness that the Opsaras came to Naraian; they were the loveliest of all the sisterhood who came, & subtlest & most alluring of feminine arts & enchantments was the way of their wooing; but Naraian, who is Vishnu the World Saviour when he comes in the guise of the ascetic, moved neither by the passion of love nor by the passion of anger, smiled in the large & indulgent mood of his world embracing nature and opening his thigh took from it a radiant and marvellous creature of whose beauty the loveliest Opsaras seemed but pale & broken reflections. Ashamed they
veiled their faces & stole silently away from the snowy hermitage. But Naraian called this daughter of his creation Urvasie (she who lies in the thigh of the Supreme, the thigh being the seat of sensuousness) and gave her to Indra to be his most potent defence against the austerities of spiritual longing.

The legend is characteristic of the Hindu mythopoeic faculty both in its slight and unpretentious build and in the number of searching & suggestive thoughts with which it is packed. Indra is the universal cosmic energy limited in the terrestrial forces of conservation; like all active & conservative forces he distrusts the contemplative spirit of philosophy because it is disruptive and tends to cast thought & therefore life into solution towards the creation of fresh forms. Thus he is besieged by a double anxiety; on one side the spirits entrusted with the work of destruction & anarchy are ever endeavouring to seat themselves in the place of Indra, the high conserving force, on the other he dreads to be dethroned by some embodiment of the contemplative spirit, examining, analysing, synthetising new forms. His method of defence against the former is usually though by no means invariably open warfare, against the latter sensuous seduction. He tempts the mind of the philosopher to sacrifice that aloofness from ordinary sensuous life & its average delights on which his perfect effectiveness depends; or if he cannot succeed in this, to move him to an angry and abhorrent recoil from sensuousness which is equally fatal to complete philosophic efficiency. This then is the inwardness of the sending of the Opsaras by Indra. Naraian conquers the temptation, not by ignoring or repelling it, but by producing out of the sensuous in himself a lovelier sensuousness than any that can be brought to tempt him. Here is a peculiarity in the highest Indian conception of ascetism. The sage who delivers the world by his philosophy must not be a half nature; he must contain the whole world in himself. It is told that the great Shankaracharya in the midst of his triumphant religious activity had to turn aside and learn by personal experience the delights of sensuous life and the love of women, because the defect of this experience left him maimed for his philosophic
The philosopher must be superior to sensuousness not because he is incapable of experiencing passion & delight, but because he has fathomed their utmost depth and measured their utmost reach, and far passed the stage of soul-evolution where they can satisfy.

And yet the work of the philosophic mind incidentally serves sensuous and material life by increasing its resources and the depth of its charm. For the power of the philosophic ideals which have profoundly affected humanity is not limited to the domain of the intellect but also affects, enlarges and strengthens man’s aesthetic outlook upon the world. The sensuous world becomes fuller of beauty, richer in colours, shades and suggestions, more profound and attractive with each widening of the human ideal. It is Urvasie who sprang from the thigh of the withered hermit cold and not any of those original daughters of the inconstant waves who is the loveliest and most dangerous of the Opsaras.

Such then is Urvasie, Naraian born, the brightness of sunlight & the blush of the dawn, the multitudinous laughter of the sea, the glory of the skies and the leap of the lightning, all in brief that is bright, far-off, unseizable & compellingly attractive in this world; all too that is wonderful, sweet to the taste & intoxicating in human beauty, human life, the joy of human passion & emotion: all finally that seizes, masters & carries away in art, poetry, thought & knowledge, is involved in this one name.

Of these outward brilliances Kalidasa’s conception of Urvasie is entirely void. His presentation of her is simply that of a beautiful and radiant woman deeply in love. Certainly the glories of her skiey residence, the far-off luminousness and the free breath of the winds are about her, but they are her atmosphere rather than part of herself. The essential idea of her is a natural, frank & charming womanliness; timidity, a quick temper, a harmless petulance and engaging childishness afterwards giving way to a matronly sedateness & bloom, swift, innocent & frank passion, warm affections as mother, sister & friend, speech
always straight from the heart, the precise elements in fact that
give their greatest charm to ideal girlhood & womanhood are
the main tones that compose her picture. There is nothing here
of the stately pace & formal dignity of the goddess, no cothurnus
raising her above human stature, no mask petrifying the simple
& natural play of the feelings, the smile in the eyes, the ready
tears, the sweetness of the mouth, the lowered lashes, the quick
and easy gesture full of spontaneous charm. If this is a nymph
of heaven, one thinks, then heaven must be beautifully like the
earth. Her terror & collapse in the episode of her abduction &
rescue, where Chitraleqha manages pretty successfully to keep
up her courage as a goddess should, is certainly not Opsalarike
— Chitraleqha with sisterly impatience expresses her sense of
that, “Fie, sweet! thou art no Opsara” — but it is nevertheless
attractively human and seizes our sympathies for her from the
outset. Still more engaging is her timidity. There is also a sen-
sitiveness in her love, a quickness to take alarm & despond
which makes her very human. If this is jealousy, it is a quick
& generous jealousy having nothing in it of “jealous baseness”,
but rather born of a panic of timidity and an extreme diffidence
& ignorance of the power of her own beauty. This detail is very
carefully observed & emphasized as if Kalidasa wished to take
especial pains to prevent even the most hidebound commentator
from reading in her character any touch of the heavenly courte-
san. The ostentatious splendours, the conscious allurements of
the courtesan are not here, but rather a divine simplicity and
white candour of soul. It is from an innate purity & openness
that the frankness & impulsiveness of her love proceeds. In-
capable of disguise, hastily open, even tremulously playful at
times, she is easily dashed in her advances & quick to distrust
her own merit. There are few more graceful touches in lighter
love-drama than her hasty appearance, unconsciously invisible,
before Pururavus, and her panic of dismay when he takes no
notice of her. In the same scene, her half playful, half serious self-
justification on embracing her lover and her immediate abashed
silence at his retort, portray admirably the mixture of frank
impulsiveness and shy timidity proper to her character. These
are the little magic half-noticeable touches of which Kalidasisan characterisation is mainly composed, the hundred significant trifles which Kalidasa’s refined taste in life felt to be the essence of character in action. A shade of wilfulness, the occasional childlike petulance, the delighted abandonment of herself to her passion, which are part of her charm, proceed also from the same surface lightness & quickness of a deep & strong nature. With all this she can be very sweet and noble too, even dignified as in a few utterances of the Third Act, her reunion with Pururavus in the fourth and all through the fifth where she is wife and mother and while losing the girlishness, petulance & playfulness of the earlier scenes has greatly deepened her charm. I see nothing of the heavenly courtesan which some over-precise commentators insist on finding in her; within the four corners of the play, which is all Kalidasa allows us to consider, she is wholly delightful, innocent, even modest, at any rate not immodest. Certainly she is more frank and playful in her love than Shacountala or even Malavica could venture to be, but something must be allowed to a goddess and her demeanour is too much flavoured with timidity, her advances too easily dashed to give any disagreeable impression of forwardness. Urvasie’s finest characteristic, however, is her sincerity in passion and affection. The poet has taken great pains to discharge her utterance of all appearance of splendour, ornament & superfluity; her simple, direct & earnest diction is at the opposite pole to the gorgeous imaginativeness of the Ilian. And while her manner of speech is always simple and ordinary, what she says is exactly the unstudied & obvious thing that a woman of no great parts, but natural and quick in her affections would spontaneously say under the circumstances; it is even surprisingly natural. For example when she sees Ayus fondled by Pururavus, “Who is this youth” she asks with the little inevitable undertone of half-jealousy “Himself my monarch binds his hair into a crest! Who should this be so highly favoured”; and then she notices Satyavatie & understands. But there is no poetical outburst of maternal joy & passion. “It is my Ayus! How he has grown!” That is all; & nothing could be better or truer. Yet for all the surface colourlessness there is a charm in
everything Urvasie says, the charm of absolute sincerity & direct unaffected feeling. Her passion for Pururavus is wonderfully genuine and fine from her first cry of “O Titans! You did me kindness!” to her last of “O a sword is taken Out of my heart!” Whatever the mood its speech has always a tender force and reality. Her talk with Chitraleqha and the other Opsaras from the outburst “O sisters, sisters, take me to your bosoms” to her farewell “Chitraleqha, my sister! do not forget me”, is instinct, when moved, with “a passion of sisterliness” and at other times, bright & limpid in its fair kindness & confidence. To her son she comes “with her whole rapt gaze Grown mother, the veiled bosom heaving towards him And wet with sacred milk.” & her farewell to the Hermitess sets a model for the expression of genuine & tender friendship. Urvasie is doubtless not so noble & strong a portraiture as Shacountala, but she is inferior to no heroine of Sanscrit drama in beauty & sweetness of womanly nature.

In dramatic tone and build therefore this is an admirable creation, but there is so far no hint of the worldwide divineness of Urvasie, of the goddess within the woman. In direct allegory Kalidasa was too skilful an artist to deal, but we expect the larger conception of this beautiful and significant figure to enter into or at least colour the dramatic conception of the woman; some pomp of words, some greatness of gesture, some large divinity whether of speech or look to raise her above a mere nymph, however charming, into the goddess we know. Yet in rigidly excluding the grandiose or the coloured Kalidasa has shown, I think, his usual unerring dramatic and psychological tact. Dramatically, to have made Pururavus & Urvasie equally romantic in spirit & diction, to have clothed both in the external purple of poetry, would have been to offend the eye with unrelied gorgeousness and converted the play from an interesting & skilfully woven drama into a confused splendour of lyrical dialogue. Psychologically, the divinity and universal charm of Urvasie would have been defaced rather than brought out by investing her with grandeur of feeling or a pomp of poetic
ornament. Perfect beauty has in it a double aspect, its intrinsic self and the impression it makes on the vivid & receptive mind. In itself it is simple, unconscious & unadorned, most effective when it is most naked, ceasing to be these, it loses its perfection and a great part of its universal charm. The nude human figure in painting and sculpture, unadorned magic or strength of style & conception in poetry, clear, luminous & comprehensive thought in philosophy, these are what the pursuing human spirit feels to be ideal, highest, most worthy of itself. Drapery blurs the effulgence of the goddess, ornament distracts the spirit and disappoints it of its engrossed and undisturbed sense of possession. On the other hand the mind while most moved by what is simple and natural in its appeal, is romantic in its method of receiving the impression; becoming engrossed and steeped with the idea of it, it directs to it and surrounds it with all the fresh impressions that continually flow in on the consciousness, gathers from it colour, fire & passion, creates around it a host of splendid associations and clothes it in the pomp of its own passionate imagery. The first period of a literary race when its mind is yet virgin & has to create beauty is invariably simple and classical, the last period when its mind is saturated and full of past beauty is always romantic and aesthetic. The relations of Urvasie & Pururavus are true to this psychological principle. She herself is mere beauty and charm sufficient to itself and commanding delight and worship because she is herself, not because of any graces of expression, imagination or intellectual profundity. But the mind of Pururavus receiving her pure and perfect image steeps her in its own fire and colour, surrounding her with a halo of pomp and glory, which reveals himself while seeking to interpret her.

Minor Characters

Nothing more certainly distinguishes the dramatic artist from the poet who has trespassed into drama than the careful pain he devotes to his minor characters. To the artist nothing is small; he bestows as much of his art within the narrow limit of his small
characters as within the wide compass of his greatest. Shakespeare lavishes life upon his minor characters, but in Shakespeare it is the result of an abounding creative energy; he makes living men, as God made the world, because he could not help it, because it was in his nature and must out. But Kalidasa’s dramatic gift, always suave and keen, had not this godlike abundance; it is therefore well to note the persistence of this feature of high art in all his dramas. In the Urvasie the noble figure of Queen Aushinariie is the most striking evidence of his fine artistry, but even slight sketches like the Opsaras are seen upon close attention to be portrayed with a subtle & discriminating design; thought has been bestowed on each word they speak, an observable delicacy of various touch shows itself in each tone & gesture they employ. A number of shining figures crowded into a corner of the canvas, like in meaning, like in situation, like in nature, they seem to offer the very narrowest scope for differentiation; yet every face varies just a little from its sister, the diction of each tongue has its revealing individuality. The timid, warmhearted Rumbha, easily despondent, full of quick outbursts of eagerness and tenderness is other than the statelier Menaca with her royal gift of speech and her high confidence. Sahajunya is of an intenser, more silent, less imaginative, more practical type than either of these. It is she who gives Pururavus the information of the road which the ravisher has taken, and from that point onward amid all the anxious and tender chatter of her sisters she is silent until she has the practical fact of Pururavus’ reappearance to seize upon. This she is again the first to descry and announce. Her utterance is brief, of great point & substance. From the few words she has uttered we unconsciously receive a deep impression of helpfulness, earnestness and strength; we know her voice and are ready [to] recognise it again in the Fourth Act. Her attitude there is characteristic; since help she cannot, she will not waste time over vain lamentation; Fate has divided the lovers, Fate will unite them again; so with a cheerful & noble word of consolation she turns to the immediate work in hand.

Chitralaqha, more fortunate than the other Opsaras in obtaining through three acts a large canvas as the favourite and
comrade of Urvasie, suffers dramatically from her good fortune, for she must necessarily appear a little indistinct so near to the superior light of her companion. Indeed dramatic necessity demands subdued tones in her portraiture lest she should deflect attention from Urvasie where it is her task to attract it to her; she must be always the cloud’s dim legion that prepares us to watch for the lightning. Richness of colour & prominence of line are therefore not permissible; yet in spite of these hampering conditions the poet has made her a sufficiently definite personality. Indeed her indulgent affection, her playful kindliness, her little outbreaks of loving impatience or sage advice,—the neglect of which she takes in excellent part—her continual smiling surrender to Urvasie’s petulance & wilfulness and her whole half matron-like air of elder-sisterly protection, give her a very sensible charm and attractiveness; there is a true nymphlike & divine grace, tact & felicity in all that she says & does. Outside the group of Opsaras the Hermitess Satyavatie is a slighter but equally attractive figure, venerable, kind, a little impersonal owing to the self-restraint which is her vocation, but with glimpses through it of a fine motherliness and friendliness. The perpetual grace of humanness, which is so eminently Kalidasian, forming the atmosphere of all his plays, seems to deepen with a peculiar beauty around his ascetics, Kunwa, Satyavatie, the learned & unfortunate lady of the Malavica. The “little rogue of a tiring-woman” Nipounica, sly & smooth-tongued, though with no real harm in her beyond a delight in her own slyness and a fine sense of exhilaration in the midst of a family row, pleasantly brings up the rear of these slighter feminine personalities. The masculine sketches are drawn in more unobtrusive outlines and, after Kalidasa’s manner, less individualized than his women. The Charioteer & the Huntsmen are indeed hardly distinct figures; they have but a few lines to utter between them and are only remarkable for the shadow of the purple which continual association with Pururavus has cast over their manner of speech. The Chamberlain again, fine as he is in his staid melancholy, his aged fidelity, his worn-out and decrepit venerableness and that continual suggestion of the sorrowfulness of grey hairs, is still

www.holybooks.com
mainly the fine Kalidastian version of a conventional dramatic figure. The one touch that gives him a personal humanity is the sad resignation of his “It is your will, Sire” when Pururavus, about to depart to asceticism in the forests, commands the investiture of his son. For it is the last & crowning misfortune that the weary old man must bear; the master over whose youth & greatness he has watched, for whose sake he serves in his old age, with the events of whose reign all the memories of his life are bound up, is about to depart and a youthful stranger will sit in his place. With that change all meaning must go out of the old man’s existence; but with a pathetic fidelity of resignation he goes out to do his master’s last bidding uttering his daily formula,— how changed in its newly acquired pathos from the old pompous formality “It is your will, Sire.” Manavaca & Ayus need a larger mention, yet they are less interesting in themselves than for their place, one in the history of Kalidasa’s artistic development, the other among the finest evidences of his delicacy in portraiture & the scrupulous economy, almost miserliness, with which he extracts its utmost artistic utility, possibility, value from each detail of his drama.

The age of childhood, its charm and sportive grace and candour, seems to have had a peculiar charm for Kalidasa’s imagination; there is an exquisite light and freshness of morning and dew about his children; an added felicity of touch, of easy and radiant truth in his dramatic presentation. Vasuluxmie in the Malavica does not even appear on the stage, yet in that urbane & gracious work there is nothing more charming than her two fateful irruptions into the action of the play. They bring up a picture of the laughing, lighthearted and innocent child, which remains with us as vividly as the most carefully-drawn character in the piece. The scene of the child playing with the lion’s cub in the Shacountula has the same inevitable charm; ninety-one poets out of a hundred would have hopelessly bungled it, but in Kalidasa’s hands it becomes so admirably lifelike and spontaneous that it seems as natural as if the child were playing with a kitten. Kalidasa’s marvellous modesty of dramatic effect and power
of reproducing ordinary hardly observable speech, gesture and action magicalising but not falsifying them saves him from that embarrassment which most poets feel in dealing dramatically with children. Even Shakespeare disappoints us. This great poet with his rich & complex mind usually finds it difficult to attune himself again to the simplicity, irresponsibility & naive charm of childhood.

Arthur, whom the Shakespeare-worshipper would have us regard as a masterpiece, is no real child; he is too voluble, too eloquent, too much dressed up for pathos and too conscious of the fine sentimental pose he strikes. Children do pose & children do sentimentalise, but they are perfectly naive and unconscious about it; they pose with sincerity, they sentimentalise with a sort of passionate simplicity, indeed an earnest businesslikeness which is so sincere that it does not even require an audience. The greatest minds have their limitations and Shakespeare's over-abounding wit shut him out from two Paradises, the mind of a child and the heart of a mother. Constance, the pathetic mother, is a fitting pendant to Arthur, the pathetic child, as insincere and falsely drawn a portraiture, as obviously dressed up for the part. Indeed throughout the meagre and mostly unsympathetic list of mothers in Shakespeare's otherwise various & splendid gallery there is not even one in whose speech there is the throbbing of a mother's heart; the sacred beauty of maternity is touched upon in a phrase or two; but from Shakespeare we expect something more, some perfect & passionate enshrining of the most engrossing & selfless of human affections. And to this there is not even an approach. In this one respect the Indian poet, perhaps from the superior depth and keenness of the domestic feelings peculiar to his nation, has outstripped his greater English compeer.

Kalidasa like Shakespeare seems to have realised the paternal instinct of tenderness far more strongly than the maternal; his works both dramatic and epic give us many powerful & emotional expressions of the love of father & child to which there are few corresponding outbursts of maternal feeling. Valmekie's Cowshalya has no parallel in Kalidasa. Yet he expresses the true
sentiment of motherhood with sweetness & truth if not with passion.

Ayus & Urvasie in this play were certainly not intended for the dramatic picture of mother & child; this mother has abandoned her child to the care of strangers; this child is new to the faces of his parents. Such a situation might easily have been made harsh and unsympathetic but for the fine dramatic tact of the poet which has purified it from everything that might repel and smoothed away all the angles of the incident. But here the circumstances excuse if not justify Urvasie. Acting under hard conditions, she has chosen the lesser of two evils; for by keeping Ayus, she would have lost both her child and Pururavus; by delivering him into wise and tender hands she has insured his welfare & for her part only anticipated the long parting which the rule of education in ancient India demanded from parents as their sacrifice to the social ideal. Knowing that the child was in good hands she solaces herself with the love of her husband, but it is not from maternal insensibility that she bears quietly the starvation of the mother within her. When he returns to her, there is a wonderful subdued intensity characteristic of her simple & fine nature in the force with which that suppressed passion awakes to life. She approaches her son, wordless, but her veiled bosom heaves towards him and is “wet with sacred milk”; in her joy over him she forgets even that impending separation from the husband to avert which she has sacrificed the embrace of his infancy. It is this circumstance, not any words, that testifies to the depth of her maternal feeling; her character forbids her to express it in splendours of poetic emotion such as well spontaneously from the heart of Pururavus. A look, a few ordinary words are all; if it were not for these & the observation of others, we should have to live with her daily before we could realise the depth of feeling behind her silence.

Ayus himself is an admirable bit of dramatic craftsmanship. There is a certain critical age when the growing boy is a child on one side of his nature and a young man on the other, and of all psychological states such periods of transitional unstable
equilibrium are the most difficult to render dramatically without making the character either a confused blur or an illjoined piece of carpenter’s work. Here Kalidasa excels. He has the ready tact of speech gradations, the power of simple & telling slightness that can alone meet the difficulty. By an unlaboured and inevitable device the necessary materials are provided. The boy comes straight from the wild green & ascetic forest into the luxurious splendours of an Oriental court and the presence of a father and mother whom he has never seen; a more trying situation could not easily be imagined; he inevitably becomes self-conscious, embarrassed, burdened with the necessity of maintaining himself against the oppressions of his surroundings. He attempts therefore to disguise his youthful nervousness behind the usual shield of an overdone & formal dignity, a half unconscious pompousness and an air of playing the man. We are even aware of a slight touch of precocity not unbecoming in one who has been put through the “complete education of a prince” by the mightiest scholar and sage of his time. Confronted with all these new faces making claims upon him to which his past consciousness is an alien, the whole adult side of his nature turns uppermost. But fortunately for our comprehension of his true state of mind, something of the green forest which is his home has come with him in the person of his fostermother, Satyavatie. With her he feels as a child may feel with his mother. When he turns to her or speaks to her, he is again and instinctively in manner, utterance and action the child who ran by her side clutching the skirts of her dress in the free woodland. He speaks like a child, thinks like a child, acts docilely at her bidding like a child. Nothing could be more finely artistic in execution or more charmingly faithful to nature in its conception.

Manavaca on the other hand is an element of weakness rather than of strength. I have already spoken of the progressive attenuation of the traditional buffoon part which keeps pace with Kalidasa’s dramatic development. Gautama in the Malavica is a complete and living personality who has much to say to the action of the plot; witty, mischievous, mendacious & irresponsible
he adds to the interest of the play even independently of this functional importance. But in the Urvasie to have made the main action of the plot turn in any way on the buffoon would have been incongruous with the high romantic beauty of the drama and therefore a serious dramatic error. The function of Manavaca is accordingly reduced to that of an interlocutor; he is there because Pururavus must have somebody to confide in & talk with, otherwise his only dramatic purpose is to give rise by his carelessness to the episode of Aushinarie’s jealousy & self-subdual. Nevertheless his presence affects the composite tone of the picture. He is other than the buffoons of the Malavica & Shacountala, far more coarse in the grain, far less talented & highspirited than Gautama, yet not a mere stupid block like [Mandhavya]. He has along with the stock characteristics of gluttony, ugliness & cowardice, an occasional coarse humour, infertile & broad, and even a real gift of commonsense and rather cynical practicality, to say nothing of that shadow of the purple flung across the speech of all those who associate habitually with Pururavus; he is at the same time low in mind, unable to understand characters higher than his own. His best virtue is perhaps his absence of all pretensions & readiness to make a gibe of himself. Such a figure necessarily tends to set off by its drab colour & squat dimensions the lyric idealism of Pururavus, the radiant charm of Urvasie & the pale loftiness of the Queen. But it is by his place in the picture and not by what he is in himself that he justifies his existence. He does not attract or interest, indeed he at times only just escapes being tiresome. At the same time he lives.

Among all these minor figures who group themselves around the two protagonists and are of purely accessory interest there is one who stands out and compels the eye both by her nobler proportions and her independent personality. Queen Aushinarie has no real claim by any essentiality in her actions to the large space she occupies in the play; her jealousy does not retard and her renunciation sanctifies rather than assists the course of Pururavus’ love for Urvasie. The whole episode in which she figures fits more loosely into the architecture of the piece than can be
exampled elsewhere in Kalidasa’s dramatic workmanship. The interest of her personality justifies the insertion of the episode rather than the episode that justifies the not inconsiderable space devoted to her. The motif of her appearance is the same conventional element of wifely rivalry, the jealousy of the rose-in-bloom against the rose-in-bud that has formed the whole groundwork of the Malavica. There the groundwork, here its interest is brief and episodical. And yet none of the more elaborated figures in the earlier play, not even Dharinie herself, is as fine and deep a conception as the wife of Pururavus. Princess of Kashie and daughter of the Ushenors, acknowledged by her rival to deserve by right of her noble majesty of fairness “the style of Goddess and of Empress,” we feel that she has a right to resent the preference to her even of an Opsara from heaven and the completeness of Pururavus’ absorption in Urvasie gives a tragic significance to her loss which is not involved in the lighter loves & jealousies of Videsha. The character is more profoundly & boldly conceived. The passion of her love strikes deeper than the mere heyday of youth and beauty and the senses in Iravatie as the noble sadness of her self-renunciation moves more powerfully than the kind & gentle wifeliness of Queen Dharinie. And in the manner of her delineation there is more incisiveness and restraint with a nobler economy of touch. The rush of her jealousy comes with less of a storm than Iravatie’s but it has a fierier & keener edge and it is felt to be the disguise of a deep and mighty love. The passion of that love leaps out in the bitter irony of her self-accusal

Not yours the guilt, my lord. I am in fault
Who force my hated and unwelcome face
Upon you.

and again when in the very height of her legitimate resentment she has the sure consciousness of her after-repentance.

And yet the terror
Of the remorse I know that I shall feel
If I spurn his kindness, frightens me.

Anger for the time sweeps her away, but we are prepared for her
repentance and sacrifice in the next act. Even in her anger she has been imperially strong & restrained and much of the poetic force of her renunciation comes from the perfect sweetness, dignity & self-control with which she acts in that scene. The emotion of self-sacrificing love breaks out only once at the half sneering reproach of the buffoon

    Dull fool!
    I with the death of my own happiness
    Would give my husband ease. From this consider
    How dearly I love him.

Putting gently but sorrowfully away from her the King’s half-sincere protestations of abiding love, she goes out of the drama, a pure, devoted & noble nature, clad in gracious white “and sylvanly adorned with flowers, her raven tresses spangled with young green Of sacred grass”; but the fragrance of her flowers of sacrifice and the mild beauty of the moonlight remain behind her. She does not reappear unless it is in the haste of Urvasi to bring her recovered child to his “elder mother”. This haste with its implied fulness of gratitude & affection is one of Kalidasa’s careful side touches telling us better than words that in spirit & letter she has fulfilled utterly the vow she made on the moonlit terrace under seal of

    The divine wife & husband, Rohinnie
    And Mrigolanchon named the spotted moon.

The deepening of moral perception, the increase in power & pathos, the greater largeness of drawing and finer emotional strength and restraint show the advance Kalidasa has made in dramatic characterisation. Grace, sweetness, truth to life and character, perfect & delicate workmanship, all that reveals the presence of the artist were his before; but the Urvasi reveals a riper & larger genius widening its scope, raising mightier vans before yet it take its last high and surpassing flight.
The Spirit of the Times

The life & personality of Kalidasa, the epoch in which he lived and wrote, the development of his poetical genius as evidenced by the order of his works, are all lost in a thick cloud of uncertainty and oblivion. It was once thought an established fact that he lived & wrote in the 6th century at the court of Harsha Vikramaditya, the Conqueror of the Scythians. That position is now much assailed, and some would place him in the third or fourth century; others see ground to follow popular tradition in making him a contemporary of Virgil, if not of Lucretius.

The exact date matters little. It is enough that we find in Kalidasa’s poetry the richest bloom and perfect expression of the long classical afternoon of Indian civilisation. The soul of an age is mirrored in this single mind. It was an age when the Indian world after seeking God through the spirit and through action turned to seek Him through the activity of the senses, an age therefore of infinite life, colour and splendour, an age of brilliant painting and architecture, wide learning, complex culture, developing sciences; an age of great empires and luxurious courts and cities; an age, above all, in which the physical beauty and grace of woman dominated the minds and imaginations of men.

The spirit of the times pulses through all Kalidasa’s poetry. His pages are often ablaze with its light & colour, often pregnant, sometimes indeed overweighted with its rich and manifold learning, its keen pleasure in every phase and aspect of life fills them with a various vividness and infinite richness of matter. Language & verse thrill with the rustling of woman’s raiment, the heavy scent of her cosmetics, the tinkling and lustre of her ornaments; they are sinuous with the swaying grace of her motion or subtle with the delicate charm of her ways and words; the beauty & pleasure of her body possesses & besieges the poet's

www.holybooks.com
imagination. And behind the luxurious ease and sensuousness of
court life we hear the clash of arms and glimpse the great &
ergetic motions of statesmanship and diplomacy. The variety
of his genius specially fits Kalidasa for the interpretation of a rich &
complex national life. From pages heavy with the obsession
of the senses, the delight of the eye and the lust of the flesh we
turn to others sweet and gracious with the virgin purity
of the woodlands; the same poem which gives us a glowing
picture of the luxurious voluptuousness of courts gives us also
the sternest philosophy and the most vigorous expression of the
noble, aspiring morality proper to an active and heroic age. His
wonderful visualising power turns whole cantos into a series of
almost physically vivid pictures. All his senses are on the alert, his
ear for music and the sweetness of words and laughter, thunder,
the cries of birds; his sense of smell for the scent of flowers, incense,
the perfumes in women’s attire, his sense of touch for
every tactual pleasure, his mind for all subtlety of knowledge and all possible delicacies, richnesses, grandeurs in the world of
thought. He will miss nothing; lose no joy of sense or intellect,
throw away no chance of feeling himself alive.

And he has the touch of the perfect artist, turning all he
handles to gold. Among his achievements we number the most
exquisite, tender and delicately lovely of romantic dramas; the
most varied and splendid panorama of human life; the noblest &
most grandiose epic of our classical literature; and its one
matchless poem of passionate love and descriptive beauty.

In Europe the Shacountala is the one poem of Kalidasa
universally known and appreciated. In India the Cloud has gone
even nearer home to the national imagination. For this there is
good reason. It is, essentially and above all, the poem of India, the
poem of the country, its soil and its scenes, its thoughts & its
atmosphere. No one who has not lived the life of India, till it has
become part of his breathing and woven in with every thread of his
imagination, can fully appreciate the poem. If one does not
know the charm of its hills, the scent of its flowers, the beauty of its skies, [the] flowing sacredness of its rivers with all the phases & emotions of an Indian river’s life, if one cannot distinguish
& thrill to the touch of its various winds, if one cannot clothe its local places with ancient historic & mythical association or people them with the strange host of beautiful & weird figures & faces which the imagination of its people has created, if one does not recreate for himself the ancient splendours of its cities, the sense of peace & infinity in its temples & hermitages and the simple sweetness of its rural life, for him the Meghaduta offers only its shell. But all these, everything that is redolent of India, the visible, material, sensuous India has been fused and poured into one perfect mould by the genius of this supreme artist.

And then as if more utterly to ensnare the imagination of his race, after showing them the beautiful scenes, sights, sounds, scents, the sacred & cherished places, the historic cities of their country as they are — or alas as they were — he lifts these cherished things into a magic world, bathes them in an immortal beauty. Ullaca, the city without death, is but Kalidasa’s beloved Ujjaini taken up into the clouds & transformed into a seat of ideal bliss & loveliness. In the same moment he strikes straight home at one of the most deepseated feelings in human nature, its repining at the shortness of life & the more tragic shortness of youth, and imaginative dream of an eternal beauty, youth & joy. These he satisfies and turns from a source of unrest into a new source of pleasure & joy, showing himself the great poet as well as the delicate artist.

The human interest which gives the breath of life to the poem, is exquisitely treated. A faery attendant of Cuvere, God of Wealth, banished for a year from his home & wife sends his imagination travelling on the wings of the northward-bound cloud over the sacred places, the great cities & rivers of India to the snowbound Himaloy and the homes of the Gods. There his mind sees his wife, breathes to her all its sorrow & longing and prays for an answering message. The love described may not be on the highest altitudes, but it is utterly real & human, full of enduring warmth, tenderness & passion, of strife & joy, tears & kisses, the daily food of love.
On Translating Kalidasa

Since the different tribes of the human Babel began to study each other’s literatures, the problem of poetical translation has constantly defied the earnest experimenter. There have been brilliant versions, successful falsifications, honest renderings, but some few lyrics apart a successful translation there has not been. Yet it cannot be that a form of effort so earnestly & persistently pursued and so necessary to the perfection of culture and advance of civilisation, is the vain pursuit of a chimera. Nothing which mankind earnestly attempts is impossible, not even the conversion of copper into gold or the discovery of the elixir of life or the power of aerial motion; but so long as experiment proceeds on mistaken lines, based on a mistaken conception of the very elements of the problem, it must necessarily fail. Man may go on fashioning wings for himself for ever but they will never lift him into the empyrean: the essence of the problem is to conquer the attraction of the earth which cannot be done by any material means. Poetical translation was long dominated by the superstition that the visible word is the chief factor in language and the unit which must be seized on as a basis in rendering; the result is seen in so-called translations which reproduce the sense of the original faultlessly & yet put us into an atmosphere which we at once recognize to be quite alien to the atmosphere of the original; we say then that the rendering is a faithful one or a success of esteem or a makeshift or a caput mortuum according to the nature of our predilections and the measure of our urbanity. The nineteenth century has been the first to recognize generally that there is a spirit behind the word & dominating the word which eludes the “faithful” translator and that it is more important to get at the spirit of a poet than his exact sense. But after its manner it has contented itself with the generalisation and not attempted to discover the lines on which the generalisation must
The Poetry of Kalidasa

be crystallised into practice, its extent & its limitations. Every translator has been a law to himself; and the result is anarchic confusion. As the sole tangible benefit there has been discovered a new art not yet perfected of translation into prose poetry. Such translation has many advantages; it allows the translator to avail himself of manifold delicacies of rhythm without undergoing the labour of verse formation and to compromise with the orthodox superstition by rendering the word unit yet with some show of preserving the original flavour. But even in the best of these translations it is little more than a beautiful show. Poetry can only be translated by poetry and verse forms by verse forms. It remains to approach the task of translation in a less haphazard spirit, to realise our essential aim, to define exactly what elements in poetry demand rendering, how far & by what law of equivalent values each may be rendered and if all cannot be reproduced, which of them may in each particular case be sacrificed without injuring the essential worth of the translation. Most of the translations of Kalidasa here offered to the public have been written after the translator had arrived at such a definite account with himself and in conscientious conformity to its results. Others done while he yet saw his goal no more than dimly and was blindly working his way to the final solution, may not be so satisfactory. I do not pretend that I have myself arrived at the right method; but I am certain that reasoned & thoughtful attempts of this sort can alone lead to it. Now that nations are turning away from the study of the great classical languages to physical & practical science and resorting even to modern languages, if for literature at all then for contemporary literature, it is imperative that the ennobling influences spiritual, romantic & imaginative of the old tongues should be popularised in modern speech; otherwise the modern world, vain of its fancied superiority & limiting itself more & more to its own type of ideas with no opportunity of saving immersions in the past & recreative destructions of the present, will soon petrify & perish in the mould of a rigid realism & materialism. Among their influences the beauty & power of their secular & religious poetry is perhaps the most potent & formative.
The choice of meter is the first & most pregnant question that meets a translator. With the growth of Alexandrianism and the diffusion of undigested learning, more & more frequent attempts are being made to reproduce in poetical versions the formal metre of the original. Such attempts rest on a fundamental misconception of the bases of poetry. In poetry as in all other phenomena it is spirit that is at work and form is merely the outward expression & instrument of the spirit. So far is this true that form itself only exists as a manifestation of spirit and has no independent being. When we speak of the Homeric hexameter, we are speaking of a certain balance [of] spiritual force called by us Homer working through emotion into the material shape of a fixed mould of rhythmical sound which obeys both in its limiting sameness & in its variations the law of the spirit within.

The mere quantities are but the most mechanical & outward part of metre. A fanciful mind might draw a parallel between the elements of man & the elements of metre. Just as in man there is the outward food-plasm and within it the vital or sensational man conditioned by & conditioning the food-plasm & within the vital man the emotional or impressional man similarly related and again within that the intellectual man governing the others and again within that the delight of the spirit in its reasoning existence & within that delight like the moon within its halo the Spirit who is Lord of all these, the sitter in the chariot & the master of its driving, so in metre there is the quantitative or accentual arrangement which is its body, & within that body conditioning & conditioned by it the arrangement of pauses & sounds, such as assonance, alliteration, composition of related & varying letters, and again within it conditioning & conditioned by this sensational element & through it the mechanical element is the pure emotional movement of the verse and again within these understanding and guiding all three, bringing the element of restraint, management, subordination to a superior law of harmony, is the intellectual element, the driver of the chariot of sound; within this again is the poetic delight in the creation of
harmonious sound, the august & disinterested pleasure of the really great poet which has nothing in it of frenzy or rather has the exultation & increased strength of frenzy without its loss of self-control; and within this even is the spirit, that unanalysable thing behind metre, style & diction which makes us feel “This is Homer, this is Shakespeare, this is Dante.”

[All these are essential before really great verse can be produced; everyone knows that verse may scan well enough & yet be very poor verse; there may beyond this be skilful placings of pause & combinations of sound as in Tennyson’s blank verse, but the result is merely artificially elegant & skilful technique; if emotion movement is super-added, the result is melody, lyric sweetness or elegiac grace or flowing & sensuous beauty, as in Shelley, Keats, Gray, but the poet is not yet a master of great harmonies; for this intellect is necessary, a great mind seizing, manipulating & moulding all these by some higher law of harmony, the law of its own spirit. But such management is not possible without the august poetical delight of which I have spoken, and that again is but the outflow of the mighty spirit within, its sense of life & power & its pleasure in the use of that power with no ulterior motive beyond its own delight.]¹

But just as the body of a man is also soul, has in each of its cells a separate portion of spirit, so it is with the mechanical form of a verse. The importance of metre arises from the fact that different arrangements of sound have different spiritual and emotional values, tend to produce that is to say by virtue of the fixed succession of sounds a fixed spiritual atmosphere & a given type of emotional exaltation & the mere creative power of sound though a material thing is yet near to spirit, is very great; great on the material & ascending in force through the moral & intellectual, culminating on the emotional plane. It is a factor of the first importance in music & poetry. In these different

¹ Paragraph bracketed in the manuscript. Written at the end of the piece, it was apparently intended for insertion here. — Ed.
arrangements of syllabic sound metre forms the most important, at least the most tangible element. Every poet who has sounded his own consciousness must be aware that management of metre is the gate of his inspiration and the law of his success. There is a double process, his state of mind and spirit suggesting its own syllabic measure, and the metre again confirming, prolonging and recreating the original state of mind and spirit. Inspiration itself seems hardly so much a matter of ideas or feeling as of rhythm. Even when the ideas or the feelings are active, they will not usually run into the right form, the words will not take their right places, the syllables will not fall into a natural harmony. But if one has or succeeds in awaking the right metrical mood, if the metrical form instead of being deliberately created, creates itself or becomes, a magical felicity of thought, diction & harmony attends it & seems even to be created by it. Ideas & words come rapidly & almost as rapidly take their right places as in a well ordered assembly where everyone knows his seat. When the metre comes right, everything else comes right; when the metre has to be created with effort, everything else has to be done with effort, and the result has to be worked on over & over again before it satisfies.

This supreme importance of the metrical form might seem at first sight to justify the transplanters of metre. For if it be the aim of good translation to reproduce not merely the mechanical meanings of words, the corresponding verbal counters used in the rough & ready business of interlingual commerce, but to create the same spiritual, emotional & aesthetic effect as the original, the first condition is obviously to identify our spiritual condition, as far as may be, with that of the poet at the time when he wrote & then to embody the emotion in verse. This cannot be done without finding a metre which shall have the same spiritual and emotional value as the metre of the original. Even when one has been found, there will naturally be no success unless the mind of the translator has sufficient kinship, sufficient points of spiritual & emotional contact and a sufficient basis of common poetical powers not only to enter into but to render the spiritual temperament & the mood of that temperament,
of which his text was the expression; hence a good poetical translation is the rarest thing in the world. Conversely even if all these requisites exist, they will not succeed to the full without the discovery of the right metre. Is the right metre then the metre of the original? Must an adequate version of Homer, a real translation, be couched in the hexameter? At first sight it would seem so. But the issue is here complicated by the hard fact that the same arrangement of quantities or of accents has very seldom the same spiritual & emotional value in two different languages. The hexameter in English, however skilfully managed, has not the same value as the Homeric, the English alexandrine does not render the French; terza rima in Latinised Saxon sounds entirely different from the noble movement of the Divina Commedia, the stiff German blank verse of Goethe & Schiller is not the golden Shakespearian harmony. It is not only that there are mechanical differences, a strongly accentuated language hopelessly varying from those which distribute accent evenly, or a language of ultimate accent like French from one of penultimate accent like Italian or initial accent like English, or one which courts elision from one which shuns it, a million grammatical & syllabic details besides, lead to fundamental differences of sound-notation. Beyond & beneath these outward differences is the essential soul of the language from which they arise, and which in its turn depends mainly upon the ethnological type always different in different countries because the mixture of different root races in two types even when they seem nearly related is never the same. The Swedish type for instance which is largely the same as the Norwegian is yet largely different, while the Danish generally classed in the same Scandinavian group differs radically from both. This is that curse of Babel, after all quite as much a blessing as a curse, which weighs upon no one so heavily as on the conscientious translator of poetry; for the prose translator being more concerned to render the precise idea than emotional effects and the subtle spiritual aura of poetry, treads an immeasurably smoother & more straightforward path. For some metres at least it seems impossible to find adequate equivalents in other languages. Why has there never been a real rendering of Homer
in English? It is not the whole truth to say that no modern can put himself back imaginatively into the half-savage Homeric period; a mind with a sufficient basis of primitive sympathies & sufficient power of imaginative self-control to subdue for a time the modern in him may conceivably be found. But the main, the insuperable obstacle is that no one has ever found or been able to create an English metre with the same spiritual & emotional equivalent as Homer's marvellous hexameters.

That transmetrisation is a false method, is therefore clear. The translator's only resource is to steep himself in the original, quelling that in him which conflicts with its spirit, and remain on the watch for the proper metrical mood in himself. Sometimes the right metre will come to him, sometimes it will not. In the latter case effort in this direction will not have been entirely wasted; for spirit, when one gives it a chance, is always stronger than matter & he will be able to impose something of the desired spiritual atmosphere even upon an unsuitable metrical form. But if he seize on the right metre, he has every chance, supposing him poetically empowered, of creating a translation which shall not only be classical, but shall be the translation. Wilful choice of metre is always fatal. William Morris' Homeric translation failed hopelessly partly because of his affected "Anglosaxon" diction, but still more because he chose to apply a metre good enough possibly for the Volsungasaga to the rendering of a far more mighty & complex spirit. On the other hand Fitzgerald might have produced a very beautiful version in English had he chosen for his Rubaiyat some ordinary English metre, but his unique success was his reward for discovering the true equivalent of the quatrain in English. One need only imagine to oneself the difference if Fitzgerald had chosen the ordinary English quatrain instead of the rhyme system of his original. His Rubaiyat in spite of the serious defect of unfaithfulness will remain the final version of Omar in English, not to be superseded by more faithful renderings, excluding therefore the contingency of a superior poetical genius employing the same metre for a fuller & closer translation.

In Kalidasa another very serious difficulty over & beyond
the usual pitfalls meets the unhappy translator. Few great Sanskrit poems employ the same metre throughout. In the dramas where metrical form is only used when the thought, image or emotion rises above the ordinary level, the poet employs whatever metre he thinks suitable to the mood he is in. In English however such a method would result in opera rather than drama. I have therefore thought it best, taking into consideration the poetical feeling & harmonious flow of Kalidasa’s prose, to use blank verse throughout varying its pitch according as the original form is metrical or prose & the emotion or imagery more or less exalted. In epic work the licence of metrical variation is not quite so great; yet there are several metres considered apt to epic narrative & Kalidasa varies them without scruple in different cantos, sometimes even in the same canto. If blank verse be, as I believe it is, a fair equivalent for the anustubh, the ordinary epic metre, how shall one find others which shall correspond as well to the “Indra’s thunderbolt sloka”, the “lesser Indra’s thunderbolt sloka”, the “gambolling of the tiger sloka” and all those other wonderful & grandiose rhythmic structures with fascinating names of which Kalidasa is so mighty a master? Nor would such variation be tolerated by English canons of taste. In the epic & drama the translator is driven to a compromise and therefore to that extent a failure; he may infuse good poems or plays reproducing the architecture & idea-sense of Kalidasa with something of his spirit; but it is a version & not a translation. It is only when he comes to the Cloud Messenger that he is free of this difficulty; for the Cloud Messenger is written throughout in a single & consistent stanza. This Mandakranta or “gently stepping” stanza is entirely quantitative and too complicated to be rendered into any corresponding accentual form. The arrangement of metrical divisions is as follows: spondee-long, dactyl, tribrach, two spondee-shorts, spondee; four lines of this build make up the stanza. Thus

\[
\begin{align*}
\text{śabdāyan|te madhu|ramani|laiḥ kīca|kāh pūrya|māṇāḥ} & | \\
\text{samsaktābhis tripū|ravi|ya | giya|te kinna|ribhīḥ} & | 
\end{align*}
\]
In casting about for a metre I was only certain of one thing that neither blank verse nor the royal quatrain would serve my purpose; the one has not the necessary basis of recurring harmonies; in the other the recurrence is too rigid, sharply defined & unvarying to represent the eternal swell and surge of Kalidasa’s stanza. Fortunately by an inspiration, & without deliberate choice, Kalidasa’s lines as I began turning them flowed or slipped into the form of triple rhyme and that necessarily suggested the terza rima. This metre, as I have treated it, seems to me to reproduce with as much accuracy as the difference between the languages allows, the spiritual & emotional atmosphere of the Cloud Messenger. The terza rima in English lends itself naturally to the principle of variation in recurrence, which imparts so singular a charm to this poem, recurrence in especial of certain words, images, assonances, harmonies, but recurrence always with a difference so as to keep one note sounding through the whole performance underneath its various harmony. In terza rima the triple rhyme immensely helps this effect, for it allows of the same common rhymes recurring but usually with a difference in one or more of their company.

It is a common opinion that terza rima does not suit the English language and cannot therefore be naturalised, that it must always remain an exotic. This seems to me a fallacy. Any metre capable of accentual representation in harmony with the accentual law of the English language, can be naturalised in English. If it has not yet been done, we must attribute it to some initial error of conception. Byron & Shelley failed because they wanted to create the same effect with this instrument as Dante had done; but terza rima in English can never have the same effect as in Italian. In the one it is a metre of woven harmonies suitable to noble & intellectual narrative; in the other it can only be a metre of woven melodies suitable to beautiful description or elegiac sweetness. To occasional magnificences or sublimities it lends itself admirably, but I should doubt whether it could even
in the strongest hands sustain the burden of a long & noble epic of the soul & mind like the Divina Commedia. But it is not true that it cannot be made in English a perfectly natural, effective & musical form. It is certainly surprising that Shelley with his instinct for melody, did not perceive the conditions of the problem. His lyric metres & within certain limitations his blank verse are always fine, so fine that if the matter & manner were equal to the melody, he would have been one of the few great poets instead of one of the many who have just missed being great. But his Triumph of Life is a metrical failure. We feel that the poet is aiming at a metrical effect which he has not accomplished.

The second question, but a far simpler one, is the use of rhyme. It may be objected that as in the Sanscrit there is no rhyme, the introduction of this element into the English version would disturb the closeness of the spiritual equivalent by the intrusion of a foreign ornament. But this is to argue from a quantitative to an accentual language, which is always a mistake. There are certain effects easily created within the rich quantitative variety of ancient languages, of which an equivalent in English can only be found by the aid of rhyme. No competent critic would declare Tennyson’s absurd experiment in Boadicea an equivalent to the rushing, stumbling & leaping metre of the Attis with its singular & rare effects. A proper equivalent would only be found in some rhymed system and preferably I should fancy in some system of unusually related but intricate & closely recurring rhymes. Swinburne might have done it; for Swinburne’s work, though with few exceptions poor work as poetry, is a marvellous repertory of successful metrical experiments. I have already indicated the appropriateness of the triple rhyme system of the terza rima to the Cloud Messenger. English is certainly not a language of easy rhyming like the southern tongues of Europe; but given in the poet a copious command of words and a natural swing and felicity, laeta rather than curiosa, it is amply enough provided for any ordinary call upon its resources. There are however two critical superstitions which seriously interfere with the naturalness & ease rhymed poetry

www.holybooks.com
demands, the superstition of the perfect rhyme and the superstition of the original rhyme. It is no objection to a rhyme that it is imperfect. There is nothing occult or cryptic in rhyme, no divine law compelling us to assimilate two rhymed endings to the very letter such as the law of the Vedic chant by which a single letter mispronounced sterilizes the mantra. Rhyme is a convenience and an ornament intended to serve certain artistic purposes, to create certain sound-effects, and if the effect of a perfect rhyme is beautiful, melodious and satisfying, an imperfect rhyme has sometimes its own finer effect far more subtle, haunting and suggestive; by limiting the satisfaction of the ear, it sets a new chord vibrating in the soul. A poem with an excessive proportion of imperfect rhymes is unsatisfactory, because it would not satisfy the natural human craving for regularity & order; but the slavish use of perfect rhymes only would be still more inartistic because it would not satisfy the natural human craving for liberty & variety. In this respect and in a hundred others the disabilities of the English language have been its blessings; the artistic labour & the opportunity for calling a subtler harmony out of discord have given its best poetical literature a force & power quite out of proportion to the natural abilities of the race. There are of course limits to every departure from rigidity but the degree of imperfection admissible in a rhyme is very great so long as it does not evolve harshness or vulgarism. Mrs. Browning’s rhymes are bad in this respect, but why? Because “tyrants” & “silence” is no rhyme at all, while “candles” & “angels” involves a hideous vulgarism; and in less glaring instances the law of double rhymes generally requiring closer correspondence than single is totally disregarded. The right use of imperfect rhymes is not to be forbidden because of occasional abuse. It is also no objection to a rhyme that it is “hackneyed”. A hackneyed thought, a hackneyed phrase there may be, but a hackneyed rhyme seems to me a contradiction in terms. Rhyme is no part of the intellectual warp & woof of a poem, but a pure ornament the only object of which is to assist the soul with beauty; it appeals to the soul not through the intellect or imagination but through the ear. Now the oldest & most often used rhymes are generally the most
beautiful and we ought not to sacrifice that beauty merely out of an unreasoning impatience of what is old. Common rhymes have a wonderful charm of their own and come to us laden with a thousand beautiful associations. The pursuit of mere originality can only lead us to such unpardonable extravagances as “haunches stir” & “Manchester”. Such rhymes any poet can multiply who chooses to prostitute his genius to the amusement of the gallery, or is sufficiently unpoetic to prefer the freedom of barbarous uncouthness to that self-denial which is the secret of grace & beauty. On the other hand if we pursue originality & beauty together, we end in preciosity or an artificial grace, and what are these but the spirit of Poetry lifting her wings to abandon that land and that literature for a long season or sometimes for ever? Unusual & peculiar rhymes demand to be sparingly used & always for the definite object of setting in relief common rhymes rather than for the sake of their own strangeness.

The question of metre and rhymes being satisfactorily settled there comes the crucial question of fidelity, on which every translator has to make his own choice at his own peril. On one side is the danger of sacrificing the spirit to the letter, on the other the charge of writing a paraphrase or a poem of one’s own under the cloak of translation. Here as elsewhere it seems to me that rigid rules are out of place. What we have to keep in mind is not any rigid law, but the object with which we are translating. If we merely want to render, to acquaint foreign peoples with the ideas & subject matter of the writer, as literal a rendering as idiom will allow, will do our business. If we wish to give a poetical version, to clothe the general sense & spirit of the writer in our own words, paraphrase & unfaithfulness become permissible; the writer has not intended to translate and it is idle to criticise him with reference to an ideal he never entertained. But the ideal of a translation is something different from either of these. The translator seeks first to place the mind of the reader in the same spiritual atmosphere as the original; he seeks next to produce in him the same emotions & the same kind of poetical delight and aesthetic gratification, and lastly he seeks to convey to him the thought of the poet & substance in such words as will create,
On Translating Kalidasa

as far as may be, the same or a similar train of associations, the same pictures or the same sensuous impressions. This is an ideal to which one can never do more than approximate; but the nearer one approximates to it, the better the translation. How it shall be done, depends upon the judgment, the sympathetic instinct of the poet, the extent to which he is imbued with the associations of both languages and can render not merely word by word but shade by shade, not only signification by signification, but suggestion by suggestion. There is one initial stumbling block which can never be quite got over; the mythology, fauna & flora of Indian literature are absolutely alien to Europe. (We are in a different world; this is no peaceful English world of field or garden & woodland with the cheerful song of the thrush or the redbreast, the nightingale warbling in the night by some small & quiet river, the lark soaring in the morning to the pale blue skies; no country of deep snows & light suns & homely toil without spiritual presences save the borrowed fancies of the Greeks or shadowy metaphysical imaginations of the poet’s brain that haunt thought’s aery wildernesses, no people homely [and] matter of fact, never rising far above earth or sinking far below it. We have instead a mother of gigantic rivers, huge sombre forests and mountains whose lower slopes climb above the clouds; the roar of the wild beasts fills those forests & the cry of innumerable birds peoples those rivers; & in their midst lives a people who have soared into the highest heavens of the spirit, experienced the grandest & most illimitable thoughts possible to the intellect & sounded the utmost depths of sensuous indulgence; so fierce is the pulse of life that even trees & inanimate things seem to have life, emotions, a real & passionate history and over all move mighty presences of gods & spirits who are still real to the consciousness of the people.)

The life & surroundings in which Indian poetry moves cannot be rendered in the terms of English poetry. Yet to give up

---

2 An alternative version reads, after “forests”:
-under a burning sun or a magical moonlight;

www.holybooks.com
the problem and content oneself with tumbling out the warm, throbbing Indian word to shiver & starve in the inclement atmosphere of the English language seems to me not only an act of literary inhumanity & a poorspirited confession of failure, but a piece of laziness likely to defeat its own object. An English reader can gather no picture from & associate no idea of beauty with these outlandish terms. What can he understand when he is told that the atimukta creeper is flowering in the grove of késara trees and the mullica or the [ ] is sending out its fragrance into the night and the chocrovaque is complaining to his mate amid the still ripples of the river that flows through the jambous? Or how does it help him to know that the scarlet mouth of a woman is like the red bimba fruit or the crimson bandhoul flower? People who know Sanscrit seem to imagine that because these words have colour & meaning & beauty to them, they must also convey the same associations to their reader. This is a natural but deplorable mistake; this jargon is merely a disfigurement in English poetry. The cultured may read their work in spite of the jargon out of the unlimited intellectual curiosity natural to culture; the half-cultured may read it because of the jargon out of the ingrained tendency of the half-cultured mind to delight in what is at once unintelligible & inartistic. But their work can neither be a thing of permanent beauty nor serve a really useful object; & work which is neither immortal nor useful what self-respecting man would knowingly go out of his way to do? Difficulties are after all given us in order that we may brace our sinews by surmounting them; the greater the difficulty, the greater our chance of the very highest success. I can only point out rather sketchily how I have myself thought it best to meet the difficulty; a detailed discussion would require a separate volume. In the first place a certain concession may be made but within very narrow & guarded limits to the need for local colour; a few names of trees, flowers, birds etc. may be transliterated into English, but only when they do not look hopelessly outlandish in that form or else have a liquid or haunting beauty of sound; a similar indulgence may be yet more freely permitted in the transliteration of mythological names. But here
the licence ends; a too liberal use of it would entirely destroy
the ideal of translation; what is perfectly familiar in the original
language must not seem entirely alien to the foreign audience;
there must be a certain toning down of strangeness, an attempt
to bring home the association to the foreign intelligence, to give
at least some idea to a cultured but not Orientally erudite mind.
This may be done in many ways & I have availed myself of
all. A word may be rendered by some neologism which will
help to convey any prominent characteristic or idea associated
with the thing it expresses; blossom o’ ruby may, for instance,
render bandhoula, a flower which is always mentioned for its
redness. Or else the word itself may be dropped & the charac-
teristic brought into prominence; for instance instead of saying
that a woman is lipped like a ripe bimba, it is, I think, a fair
translation to write “Her scarlet mouth is a ripe fruit & red.”
This device of expressingly declaring the characteristics which
the original only mentions, I have frequently employed in the
Cloud Messenger, even when equivalent words exist in English,
because many objects known in both countries are yet familiar
& full of common associations to the Indian mind while to
the English they are rare, exotic and slightly associated or only
with one particular & often accidental characteristic. A kindred
method especially with mythological allusions is to explain fully
what in the original is implicit; Kalidasa for instance compares a
huge dark cloud striding northwards from Crouncharundhra to
“the dark foot of Vishnu lifted in impetuous act to quell Bali”,
śyāmāḥ pādō balinyamanābhyadyatasyeva viṣṇoh. This I have
translated

3 The following passage was written in the top margins of these pages of the
manuscript. Its place of insertion was not indicated:

It is an unfortunate tendency of the English mind to seize on what seems to it grotesque
or ungainly in an unfamiliar object; thus the elephant & peacock have become almost
impossible in English poetry, because the one is associated with lumbering heaviness &
the other with absurd strutting. The tendency of the Hindu mind on the other hand is
to seize on what is pleasing & beautiful in all things & even to see a charm where the
English mind sees a deformity & to extract poetry & grace out of the ugly. The classical
instances are the immortal verses in which Valmkei by a storm of beautiful & costly
images & epithets has immortalised the hump of Manthara & the still more immortal
passage in which he has made the tail of a monkey epic.
“Dark like the cloudy foot of highest God
When starting from the dwarfscale world-immense
With Titan-quelling step through heaven he strode.”

It will be at once objected that this is not translation, but the most licentious paraphrase. This is not so if my original contention be granted that the business of poetical translation is to reproduce not the exact words but the exact image, associations & poetical beauty & flavour of the original. There is not a single word in the translation I have instanced which does not represent something at once suggested to the Indian reader by the words of the text. Vishnu is nothing to the English reader but some monstrous & bizarre Hindu idol; to the Hindu He is God Himself; the word is therefore more correctly represented in English by “highest God” than by Vishnu; syāmah pādah is closely represented by “dark like the cloudy foot”, the word cloudy being necessary both to point the simile which is not so apparent & natural to the English reader as to the Indian and to define the precise sort of darkness indicated by the term syāmah; Bali has no meaning or association in English, but in the Sanscrit it represents the same idea as “Titan”; only the particular name recalls a certain theosophic legend which is a household word to the Hindu, that of the dwarf-Vishnu who obtained from the Titan Bali as much land as he could cover with three steps, then filling the whole world with himself with one stride measured the earth, with another the heavens and with the third placing his foot on the head of Bali thrust him down into bottomless Hell. All this immediately arises before the mental eye of the Hindu as he reads Kalidasa’s finely chosen words. The impetuous & vigorous term abhyudyatasya both in sound & sense suggests the sudden starting up of the world-pervading deity from the dwarf shape he had assumed while the comparison to the cloud reminds him that the second step of the three is referred to, that of Vishnu striding “through heaven.” But to the English reader the words of Kalidasa literally transliterated would be a mere artificial conceit devoid of the original sublimity. It is the inability to seize the associations & precise poetical force of Sanscrit words that
has led so many European Sanscritists to describe the poetry of Kalidasa which is hardly surpassed for truth, bold directness & native beauty & grandeur as the artificial poetry of an artificial period. A literal translation would only spread this erroneous impression to the general reader. It must be admitted that in the opposite method one of Kalidasa’s finest characteristics is, it is true, entirely lost, his power of expressing by a single simple direct & sufficient word ideas & pictures of the utmost grandeur or shaded complexity; but this is a characteristic which could in no case be possible in any language but the classical Sanscrit which Kalidasa did more than any man to create or at least to perfect. Even the utmost literalness could not transfer this characteristic into English. This method of eliciting all the idea-values of the original of which I have given a rather extreme instance, I have applied with great frequency where a pregnant mythological allusion or a strong or subtle picture or image calls for adequate representation; more especially perhaps in pictures or images connected with birds & animals unfamiliar or but slightly familiar to the English reader. (At the same time I must plead guilty to occasional excesses, to reading into Kalidasa perhaps in a dozen instances what is not there. I can only plead in apology that translators are always incorrigible sinners in this respect and that I have sinned less than others; moreover except in one or two instances these additions have always been suggested either by the sound or substance of the original. I may instance the line

A flickering line of fireflies seen in sleep,

Kalidasa says nothing equivalent to or suggesting “seen in sleep”, but I had to render somehow the impression of night & dim unreality created by the dreamy movement & whispering assonances of the lines

\[
\text{alpālpabhāsaṁ} \\
\text{khadyotālivilasitanibhāṁ vidyudunmesadrśtīm}
\]

with their soft dentals & their wavering & gliding liquids and sibilants. Unable to do this by sound I sought to do it by verbal
The Poetry of Kalidasa

expression; and in so far made a confession of incompetence, but in a way that may perhaps carry its own pardon.)

There is yet another method which has to be applied far more cautiously, but is sometimes indispensable. Occasionally it is necessary or at least advisable to discard the original image altogether and replace it by a more intelligible English image. There is no commoner subject of allusion in Sanscrit poetry than the passionate monotonized threnody of the forlorn bird who is divided at night by some mysterious law from his mate, divided if by a single lotus leaf, yet fatally divided. Such at least was the belief suggested by its cry at night to the imaginative Aryans. Nothing can exceed the beauty, pathos & power with which this allusion is employed by Kalidasa. Hear for instance Pururavus as he seeks for his lost Urvasie

Thou wild drake when thy love,
Her body hidden by a lotus-leaf,
Lurks near thee in the pool, deemest her far
And wailest musically to the flowers
A wild deep dirge. Such is thy conjugal
Yearning, thy terror such of even a little
Division from her nearness. Me thus afflicted,
Me so forlorn thou art averse to bless
With just a little tidings of my love.

And again in the Shacountala, the lovers are thus gracefully warned

O Chocrovaque, sob farewell to thy mate.
The night, the night comes down to part you.

Fable as it is, one who has steeped himself in Hindu poetry can never bring himself wholly to disbelieve it. For him the melancholy call of the bird will sound for ever across the chill dividing stream & make musical with pity the huge and solemn night. But when the Yaksha says to the cloud that he will recognize her who is his second life by her sweet rare speech and her loneliness in that city of happy lovers “sole like a lonely Chocrovaque with me her comrade far away”, the simile has no
On Translating Kalidasa

pathos to an English mind and even when explained would only seem “an artificiality common to the court-poetry of the Sanscrit age”. I have therefore thought myself justified by the slightness of the allusion in translating “Sole like a widowed bird when all the nests Are making”, which translates the idea & the emotion while suggesting a slightly different but related image.

I have indicated above the main principles by which I have guided myself in the task of translation. But there still remains the question, whether while preserving the ideals one may not still adhere more or less closely to the text. The answer to this is that such closeness is imperative, but it must be a closeness of word-value, not merely of word-meaning; into this word-value there enter the elements of association, sound and aesthetic beauty. If these are not translated, the word is not translated, however correct the rendering may be. For instance the words salila, āpaḥ and jala in Sanscrit all mean water, but if jala may be fairly represented by the common English word & the more poetic āpaḥ by “waters” or “ocean” according to the context, what will represent the beautiful suggestions of grace, brightness, softness & clearness which accompany salila? Here it is obvious that we have to seek refuge in sound suggestions & verse-subtleties to do what is not feasible by verbal rendering. Everything therefore depends on the skill & felicity of the translator and he must be judged rather by the accuracy with which he renders the emotional & aesthetic value of each expression than brought to a rigid [accounting] for each word in the original. Moreover the idiom of Sanscrit, especially of classical Sanscrit, is too far divided from the idiom of English. Literal translation from the Greek is possible though sometimes disastrous, but literal translation from the Sanscrit is impossible. There is indeed a school endowed with more valour than discretion and more metaphor than sense who condemn the dressing up of the Aryan beauty in English clothes and therefore demand that not only should the exact words be kept, but the exact idiom. For instance they would perpetrate the following: “Covering with lashes water-heavy from anguish, her eye gone to meet from former pleasantness the nectar-cool lattice-path-entered feet of
the moon and then at once turned away, like a land-lotus-plant on a cloudy day not awake, not sleeping.” Now quite apart from the execrable English & the want of rhythm, the succession of the actions and the connexions of thought which are made admirably clear in the Sanscrit by the mere order of the words, is here entirely obscured & lost; moreover the poetic significance of the words pritýā (pleasantness) and sābhre, implying here rain as well as cloud and the beautiful force of salilagurubhih (water-heavy) are not even hinted at; while the meaning & application of the simile quite apparent in the original needs bringing out in the English. For the purpose of immediate comparison I give here my own version. “The moon-beams.” This I maintain though not literal is almost as close and meets without overstepping all the requirements of good translation. For the better illustration of the method, I prefer however to quote a more typical stanza.

Sabdāyante madhuram anilaih kicakāh puryamānāh,
Samsaktābhis tripuravijayo giyate kinnarībhīh;
Nirhrādas te muraja iva cet kandaresu dhvaniḥ syāt,
Saṅgitārtho nanu paśupates tatra bhāvi samagraḥ.

Rendered into [literal English] this is “The bamboos filling with the winds are noising sweetly, the Tripour-conquest is being sung by the glued-together Kinnaries; if thy thunder should be in the glens like the sound on a drum the material of the concert of the Beast-Lord is to be complete there, eh?” My own translation runs

Of Tripour slain in lovely dances joined
And linkèd troops the Oreads of the hill
Are singing and inspired with rushing wind
Sweet is the noise of bamboos fluting shrill;
Thou thundering in the mountain-glens with cry
Of drums shouldst the sublime orchestra fill.

4 Sri Aurobindo apparently intended to transcribe a passage from his now-lost translation here. — Ed.
“Of Tripour slain are singing” (tripuravijayo gīyate) requires little comment. The word tripura means the “three cities” and refers to the three material qualities of rajas, sattva & tamas, light, passion & darkness, which have to be slain by Sheva the emancipator before the soul can rejoin God; but there is no reference here to the theosophic basis of the legend, but purely to the legend itself, the conquest of the demon Tripoura by Mahadeva. There was no means of avoiding the mythological allusion & its unfamiliarity had simply to be accepted. Sansaktābhīḥ, meaning “linked close together in an uninterrupted chain”, is here rendered by “joined in linked troops”; but this hardly satisfies the requirement of poetic translation, for the term suggests to an Indian a very common practice which does not, I think, exist in Europe, women taking each other’s hands and dancing as they sing, generally in a circle; to express this in English, so as to create the same picture as the Sanscrit conveys, it was necessary to add “in lovely dances”. The word Kinnaries presents a serious initial difficulty. The Purana mythologising partly from false etymology has turned these Kinnars into men & women with horsefaces & this description has been copied down into all Sanscrit dictionaries, but the Kinnaries of Valmekie had little resemblance with these Puranic grotesques; they are beings of superhuman beauty, unearthly sweetness of voice & wild freedom who seldom appear on the earth, their home is in the mountains & in the skies; he speaks of a young Kinnar snared & bound by men & the mother wailing over her offspring; and Kekayie lying on the ground in her passion of grief & anger is compared to a Kinnarie fallen from the skies. In all probability they were at first a fugitive image of the strange wild voices of the wind galloping and crying in the mountaintops. The idea of speed would then suggest the idea of galloping horses and by the usual principle of Puranic allegory, which was intellectual rather than artistic, the head, the most prominent & essential member of the human body, would be chosen as the seat of the symbol. Kalidasa had in this as in many other instances to take the Puranic allegorisation of the old poetic figure and new-subject it to the law of artistic beauty. In no case does he depart from the Puranic conception, but his
method is to suppress the ungainly elements of the idea, often preserving it only in an epithet, and bring into prominence all the elements of beauty. Here the horsefaces are entirely suppressed & the picture offered is that of women singing with unearthly voices on the mountain-tops. The use of the word Kinnarī here would have no poetic propriety; to the uninstructed it would mean nothing and to the instructed would suggest only the ungainly horseface which Kalidasa here ignores and conflict with the idea of wild & divine melody which is emphasized. I have therefore translated “the Oreads of the hills”; these spirits of the mountains are the only image in English which can at all render the idea of beauty & vague strangeness here implied; at the same time I have used the apparently tautologous enlargement “of the hills” because it was necessary to give some idea of the distant, wild & mystic which the Greek Oreads does not in itself quite bring out. I have moreover transposed the two lines in translation for very obvious reasons.

The first line demands still more careful translation. The word śabdāyante means literally “sound, make a noise,” but unlike its English rendering it is a rare word used by Kalidasa for the sake of a certain effect of sound and a certain shade of signification; while therefore rendering by “noise” I have added the epithet “shrill” to bring it up to the required value. Again the force & sound of pūryamānāḥ cannot be rendered by its literal rendering “filled” and anīla, one of the many beautiful & significant Sanscrit words for wind, — vāyu, anīla, pavana, samīra, samīraṇa, vāta, prabhaṇjanā, marut, sadāgati, — suggests powerfully the breath and flowing of wind & is in the Upanishad used as equivalent to prana, the breath or emotional soul; to render adequately the word “inspired” has been preferred to “filled” and the epithet “rushing” added to “wind”. Kīcakāḥ pūryamānāḥ anīlaih in the original suggests at once the sound of the flute, because the flute is in India made of the hollow bamboo & the shrillness of the word kīcakāḥ assists the suggestion; in English it was necessary to define the metaphor. The last two lines of the stanza have been rendered with great closeness except for the omission of nanu and the substitution of
the epithet “sublime” for paśupates. Nanu is a Sanscrit particle which sometimes asks a rhetorical question but more often suggests one answered; the delicate shades suggested by the Sanscrit particles cannot be represented in English or only by gross effects which would be intolerably excessive & rhetorical. The omission of Pasupati, the name of Sheva as the Lord of Wildlife, though not necessary, is I think justified. He is sufficiently suggested by the last stanza & to those who understand the allusion, by the reference to Tripoura; the object of suggesting the wild & sublime which is served in Sanscrit by introducing this name, is equally served in English by the general atmosphere of wild remoteness & the insertion of the epithet “sublime”.

This analysis of a single stanza, ex uno disce omnes, will be enough to show the essential fidelity which underlies the apparent freedom of my translation. At the same time it would be disingenuous to deny that in at least a dozen places of each poem,—more perhaps in the longer ones—I have slipped into words & touches which have no justification in the original. This is a literary offence which is always condemnable and always committed. In mitigation of judgment I can only say that it has been done rarely and that the superfluous word or touch is never out of harmony with or unsuggested by the original; it has sprung out of the text and not been foisted upon it. I may instance the line

The remarks I have made apply to all the translations but more especially to the Cloud Messenger. In the drama except in highly poetical passages I have more often than not sacrificed subtlety in order to preserve the directness & incisiveness of the Sanscrit, qualities of great importance to dramatic writing, and in the epic to the dread of diffuseness which would ruin the noble harmony of the original. But the Cloud Messenger demands rather than shuns the careful & subtle rendering of every effect of phrase, sound & association. The Meghaduta of Kalidasa is the most marvellously perfect descriptive and elegiac poem

---

5 Sri Aurobindo did not write the line he intended to “instance” in his manuscript.
— Ed.
in the world's literature. Every possible beauty of phrase, every possible beauty of sound, every grace of literary association, every source of imaginative & sensuous beauty has been woven together into an harmony which is without rival & without fault; for amidst all its wealth of colour, delicacy & sweetness, there is not a word too much or too little, no false note, no excessive or defective touch; the colouring is just & subdued in its richness, the verse movement regular in its variety, the diction simple in its suggestiveness, the emotion convincing & fervent behind a certain high restraint, the imagery precise, right & helpful, not overdone as in the Raghuvansa & yet quite as full of beauty & power. The Shacountala and the Cloud Messenger are the ne plus ultra of Hindu poetic art. Such a poem asks for & repays the utmost pains a translator can give it; it demands all the wealth of word & sound effect, all the power of literary beauty, of imaginative & sensuous charm he has the capacity to extract from the English language. At the same time its qualities of diction & verse cannot be rendered. The diffuseness of English will neither lend itself to the brief suggestiveness of the Sanscrit without being too high-strung, nervous & bare in its strength & so falsifying its flowing harmony & sweetness; nor to its easy harmony without losing closeknit precision & so falsifying its brevity, gravity & majesty. We must be content to lose something in order that we may not lose all.

The prose of Kalidasa's dialogue is the most unpretentious & admirable prose in Sanscrit literature; it is perfectly simple, easy in pitch & natural in tone with a shining, smiling, rippling lucidity, a soft, carolling gait like a little girl running along in a meadow & smiling back at you as she goes. There is the true image of it; a quiet English meadow with wild flowers on a bright summer morning, breezes abroad, the smell of hay in the neighbourhood, honeysuckle on the bank, hedges full of convolvuli or wild roses, a ditch on one side with cress & forget-me-nots & nothing pronounced or poignant except perhaps a stray whiff of meadowsweet from a distance. This admirable unobtrusive charm and just observed music (Coleridge) makes it run easily
On Translating Kalidasa

into verse in English. In translating one has at first some vague idea of reproducing the form as well as the spirit of the Sanscrit, rendering verse stanza by verse stanza & prose movement by prose movement. But it will soon be discovered that except in the talk of the buffoon & not always then Kalidasa’s prose never evokes its just echo, never finds its answering pitch, tone or quality in English prose. The impression it creates is in no way different from Shakespeare’s verse taken anywhere at its easiest & sweetest

Your lord does know my mind: I cannot love him:
Yet I suppose him virtuous, know him noble,
Of great estate, of fresh and stainless youth;
In voices well divulged, free, learned and valiant;
And in dimension in the shape of nature
A gracious person; but yet I cannot love him.
He might have took his answer long ago.

Or again still more close in its subtle & telling simplicity

Ol. What is your parentage?
Vi. Above my fortunes, yet my state is well.
    I am a gentleman.
Ol. Get you to your lord;
    I cannot love him: let him send no more;
    Unless perchance you come to me again
    To tell me how he takes it.

There is absolutely no difference between this & the prose of Kalidasa, since even the absence of metre is compensated by the natural majesty, grace & rhythmic euphony of the Sanscrit language & the sweet seriousness & lucid effectiveness it naturally wears when it is not tortured for effects.
APPENDIX

ALTERNATIVE AND UNUSED PASSAGES
AND FRAGMENTS

1

[An early fragment]

Kalidasa does best in more complicated & grandiose metres where his majesty of sound and subtle power of harmony have most opportunity; his treatment of the Anustubh is massive & noble, but compares unfavourably with the inexhaustible flexibility of Valmekie and the nervous ease of Vyasa.

2

[Alternative opening to “The Historical Method”]

Kalidasa

Of Kalidasa the man we are fortunate to know nothing beyond what we can gather from the evidence of his own writings. There are many anecdotes current throughout India that have gathered around his name, some of them witty, some merely ribald, some purely strokes of scholastic ingenuity; they differ little in character from the stock facetiae which are associated with the name of famous jesters & wits like Akbar’s Rajah Birbal; in any case the ascription to Kalidasa is fanciful and arbitrary. Even the date of our chief classical poet is a subject for the unprofitable ingenuity of scholars; fixed yesterday in the 11th century B.C. , today in the sixth, tomorrow in the 3rd, there seems to be not even a remote prospect of any finality in the matter. Even to this day no valid reason has been alleged for questioning the traditional ascription of Kalidasa to the 1st century B.C. , a date with which nothing
in his poetry is inconsistent; on the contrary there is much that seems to demand it.

3

[Passages from the manuscript of “The Seasons — I: Its Authenticity” that Sri Aurobindo did not include in the published version.]

The Seasons

Early and immature work of a great poet of which the authenticity is not put beyond doubt by definite external evidence, is always the especial joy of scholars, for it gives an opening to the spirit of denial which is the lifebreath of scholastic criticism. To show original scholarship by denying what the past has believed, is easy and congenial, but to establish one’s originality by positive & helpful criticism is not so readily done. No one has suffered more in this respect at the hands of European scholars than Kalidasa, about whom we have no external evidence until the artificial revival of Sanscrit literature in the later centuries of the first millennium of the Christian era. Some

Kalidasa’s authorship of his earliest extant poem has been first questioned in very recent times by a number of European Sanscritists. It is doubtful whether the spirit of modern criticism, restless, revolutionary, & prizing novelty and inventiveness above truth, is superior in all respects to the saner if less subtle outlook of older scholarship.

The old criticism was cautious and quiet, seldom doubting tradition, except under strong justifying reasons. Modern scholarship on the contrary is ready to pursue the most fleeting will-o’-the-
wisp of theory across the deepest morasses of assumption and petitio principii and once in pursuit shows a radical violence and obstinacy of prejudice to which the prejudice of the conservative is vacillating and feeble. New theories are born with each revolution of the seasons and each while it lasts is dogmatically & even hotly asserted as alone consistent with sane and enlightened scholarship. The arguments which are

*The Seasons is the only production included in the reasonable canon of his work which justifies the slightest doubt as to its authenticity. There is a marked difference between this and the rest of Kalidasa’s admitted poetry, consisting mainly in a great inferiority of artistic execution and a far cruder yet not absolutely dissimilar verse & diction which sounds like a rough sketch for the mighty style & movement of Kalidasa. If it is not then an early work of the poet, it must be either a production of an earlier poet who influenced Kalidasa or of a later poet who imitated him. The first hypothesis is hardly credible, unless the writer died young; for it is otherwise impossible that the author of such a work as the Seasons should have executed no later & riper work of a more ambitious & enduring character. A similar difficulty attends though to a less degree the second alternative; a poet who could catch some of the finest characteristics of so great a model without slavishly copying his best work, must have had in him the capacity for much more serious and lasting accomplishment. On the other hand

*The imagination of the West has not been trained to recognize that the body is an entity different and initially independent of the spirit within. Yet such a division helps materially to the proper understanding of man & is indeed essential to it unless we rule out a great mass of recorded experience as false or illusory. Each cell out of which the body is built has a life of its own and
therefore tendencies of its own. These tendencies are largely, if not entirely determined by heredity. The spirit too comes into the womb with an individuality already determined, a future development already built up; and its struggle is to impose the law of that individuality and that development on the plasm of matter in which it has to encase itself. It is naturally attracted to birth in a race & a family where the previous dispositions are favourable to the production of a suitable body; and in the case of great minds this is oftenest where attempts at genius have occurred before, attempts which being unsuccessful have not unfrequently led to madness & physical or moral disease resulting from the refusal of the body to bear the strain of the spirit. Even from the womb it struggles to impose itself on the embryonic plasm, to build up the cells of the brain to its liking and stamp its individuality on every part of the body. Throughout childhood and youth the struggle proceeds; the spirit not so much developing itself, as developing the body into an image of itself, accustoming the body to express it & respond to its impulses as a musical instrument responds to the finger of the performer. And therefore it is that the Upanishad speaks of the body as the harp of the spirit. Hence natural gifts are much more valuable and work with much more freedom and power than acquired; for when we acquire, we are preparing fresh material for our individuality in another existence; when we follow our gifts, we are using what we have already prepared for this. In the first case we are painful & blundering learners, in the second to the extent we have prepared ourselves, masters. This process of subjecting the personality of the body to the personality of the spirit, of finding one’s self, lasts for various periods with various men. But it is seldom really over before the age of 30 in men of a rich and varied genius, and even afterwards they never cease sounding themselves still farther, finding fresh possibilities, developing mightier masteries, until the encasing plasm wears away with the strain of life. The harp grows old & shabby, the strings are worn and frayed, the music deteriorates or ceases, and finally the spirit breaks & throws away its instrument and departs to assimilate its experiences and acquirements for a fresh
existence. But that the man of genius may successfully find himself, he must have fit opportunities, surroundings, influences, training. If he is not favoured with these, the genius will remain but it will be at the mercy of its body; it will express its body and not its self. The most famous ballads, those which never perish, have been written by such thwarted geniuses. Although the influence of romanticism has made it a literary fashion to couple these ballads with Homer, yet in truth balladwriting is the lowest form of the poetical art; its method is entirely sensational. The impact of outward facts on the body is carried through the vital principle, the sensational element in man, to the mind, and mind obediently answers the knocking outside, photographs the impression with force & definiteness. But there has been no exercise of the higher faculty of understanding, considering, choosing, moulding what it receives. Hence the bare force & realism which so powerfully attracts in the best ballads; but this force is very different from the high strength and this involuntary realism very different from the artistic imaginative & self-chosen realism of great poetry. There is the same difference as separates brilliant melodrama from great tragedy. Another sign of the undeveloped self is uncertainty of work. There are some poets who live by a single poem. In some moment of exaltation, of rapt excitement the spirit throws off for a moment the bonds of the flesh and compels the body to obey it. This is what is vulgarly termed inspiration. Everyone who has felt this state of mind, can recall its main features. There is a sudden exaltation, a glow, an excitement and a fiery and rapid activity of all the faculties; every cell of the body & of the brain feeling a commotion and working in excited unison under the law of something which is not themselves; the mind itself becomes illuminated as with a rush of light and grows like a crowded and surging thoroughfare in some brilliantly lighted city, thought treading on the heels of thought faster than the tongue can express or the hand write or the memory record them. And yet while the organs of sense remain overpowered and inactive, the main organs of action may be working with abnormal rapidity, not only the speech and the hand but sometimes even the feet, so that often the writer cannot
remain still, but has to walk up and down swiftly or if he sits down, is subject to an involuntary mechanical movement of the limbs. When this state reaches beyond bounds, when the spirit attempts to impose on the mind & body work for which they are not fitted, the result is, in the lower human organisms insanity, in the higher epilepsy. In this state of inspiration every thought wears an extraordinary brilliance and even commonplace ideas strike one as God-given inspirations. But at any rate the expression they take whether perfect or not is superior to what the same man could compass in his ordinary condition. Ideas & imaginations throng on the mind which one is not aware of having formerly entertained or even prepared for; some even seem quite foreign to our habit of mind. The impression we get is that thoughts are being breathed into us, expressions dictated, the whole poured in from outside; the saints who spoke to Joan of Arc, the daemon of Socrates, Tasso’s familiar, the Angel Gabriel dictating the Koran to Mahomet are only exaggerated developments of this impression due to an epileptic, maniac or excited state of the mind; and this, as I have already suggested, is itself due to the premature attempts of the Spirit to force the highest work on the body.1 Mahomet’s idea that in his epileptic fits he went up into the seventh heaven & took the Koran from the lips of God, is extremely significant;2 if Caesar & Richelieu had been Oriental prophets instead of practical & sceptical Latin statesmen they might well have recorded kindred impressions. In any case such an impression is purely sensational. It is always the man’s own spirit that is speaking, but the sensational part of him feeling that it is working blindly in obedience to some

---

1 Sri Aurobindo wrote the following passage at the top of two pages of the manuscript. He did not mark its place of insertion. A piece of the manuscript is broken off at the beginning; “supported by” is a conjectural reconstruction:

The fact, [supported by] overwhelming evidence, that Jeanne could foretell the immediate future in all matters affecting her mission, does not militate against this theory; past, present & future are merely conventions of the mind, to the spirit time is but one, tomorrow as present as today. At the same time I do not wish to exclude the possibility of supracorporeal beings outside her own guiding Jeanne within the limits of her mission; the subject is too profound & subtle a problem to be settled offhand.

2 Sri Aurobindo put a question mark beside this clause in his manuscript. — Ed.

irresistible power which is not itself, conveys to the mind an erroneous impression that the power comes from outside, that it is an inspiration and not an inner process; for it is as naturally the impulse of the body as of the mind to consider itself the self of the organism and all impressions & impulses not of its own sphere as exterior to the organism. If the understanding happens to be firm and sane, it refuses to encourage the mind in its error, but if the understanding is overexcited or is not sufficiently master of its instruments, it easily allows itself to be deluded. Now when the spirit is no longer struggling with the body, but has become its master and lord, this state of inspiration ceases to be fortuitous and occasional, and becomes more and more within the will of the man and, subject to the necessarily long intervals of repose & recreation, almost a habitually recurring state. At the same time it loses its violent & abnormal character and the outward symptoms of it disappear; the outer man remains placid and the mind works with great power and illumination indeed, but without disturbance or loss of equilibrium. In the earlier stages the poet swears & tears his hair if a fly happens to be buzzing about the room; once he has found himself, he can rise from his poem, have a chat with his wife or look over & even pay his bills and then resume his inspiration as if nothing had happened. He needs no stimulant except healthy exercise and can no longer be classed with the genus irritabile vatum; nor does he square any better with the popular idea that melancholy, eccentricity and disease are necessary concomitants of genius. Shakespeare, Milton, Dante, Sophocles, Aeschylus, Goethe, the really great poets, were men of high sanity — except perhaps in the eyes of those to whom originality & strong character are in themselves madness.

But to arrive at this harmony requires time and effort and meanwhile the work will surely be unequal, often halting, varying between inspiration and failure. Especially will this be the case with a rich, many-sided and flexible genius like Kalidasa’s.  

3 The passage that follows in the manuscript was incorporated in the final version of the second paragraph of “The Seasons — I: Its Authenticity” — Ed.
We shall now understand why the Opsara is represented as the Hetaira of heaven. They represent all that is sensuous, attractive & voluptuous in the Universe, the element of desire which being unspiritual & non-moral, finds its sphere in the satisfaction of the sense of beauty and for that satisfaction needs freedom.

Vishnu, the Almighty Spirit, incarnate in Naraian, the saint and hermit, was meditating in the voiceless solitude of mountains. Indra, always jealous of austerity & sacrifice, sent the Opsaras to allure him & enslave him to the charm of beauty & sensuousness. They came to Naraian in the wilderness and displayed before him all their beauty & every feminine art of conversation, but in vain. Naraian, with an indulgent smile smote his thigh and produced from it a woman of so shining a loveliness that the beauty of all the Opsaras together was as nothing to her beauty.

According to this story Naraian, the great Rishi, who is also Vishnu & therefore the type of the World-Saviour when he comes in the guise of the Ascetic, was meditating in the Himalayas. Indra, always hostile to ascetism, always distrustful of the contemplative & philosophic mind, sent the Opsaras to break down the concentration of Naraian’s mind and lure him into sensuous feeling. They were the fairest of the worldsisters who went and they displayed before Naraian their most marvellous grace and their sweetest words & arts. So the World Saviour smiled and from his thigh there sprang all the beauty of sensuous existence concentrated into a single form. Then the temptresses covered their faces with their veils & silently returned to heaven. Thus was born Urvasie, she that lay hid in the thigh of the Supreme.
The grace of childhood seems to have had a charm for the mind of Kalidasa; for whenever he introduces a child it is with a double measure of his magical felicity and naturalness. There is a child in each of his plays; the princess Vasuluxmie in Malavica does not appear on the stage in the course of the play, yet she twice intervenes with considerable effect in its action, and each time what a delightful fragrance of home, of the beauty and innocence and loveableness of childhood, comes breathing about the scene. It is part of the marvellous genius of Kalidasa that packing beauty into each word he writes with so little he can suggest so much. In Ayus we find not quite the same beauty, but the same tender and skilful portraiture and the same loving knowledge of child nature. It seems to me that in two respects at least Kalidasa far surpasses Shakespeare, in knowledge of a mother’s heart, in knowledge of the child. Shakespeare’s mothers, and how few of them there are! are either null or intolerable. In only one of his plays does Shakespeare really attempt to give us a mother’s heart and a child. But Arthur is not a success, he is too voulu, too much dressed up for pathos, too eloquent and full of unchildlike sentimentality & posing. Children are fond of posing and children are sentimental, but not in that way. As for the Princes in King Henry VI and Richard III no real lover of children could endure them; one feels almost thankful to the crookback for mercifully putting them out of the way. Nor is Constance a sympathetic figure; her shrieking, her rant, her selfishness, her bold and bitter volubility, could Shakespeare give us no sweeter & truer picture of a mother?

Urvasie seems at first sight to be deficient in feeling; she sends Ayus away from her at his birth & though there is an indication that she must have visited him occasionally, yet long years of separation are also implied which she appears to have borne with some equanimity. In reality she has no choice. By keeping him she would lose both husband & child, by
Urvasie sends Ayus away from her at his birth, but it is as the choice between a mixed evil and an unmixed calamity; in sending him away she only anticipates the inevitable separation between a royal child & his parents which the necessity of education in the forest always imposed;\(^4\) by keeping him she would lose both him and her husband. He returns to her & the mother in her at once wakes to life “her veiled bosom heaving towards him and wet with sacred milk”; so in her joy over her son she even forgets the impending separation from the husband who is all in all to her. It is consistent with Kalidasa’s conception of her that she says little or nothing to show her depth of emotion but reveals it rather by her actions & little side touches in her speech.

\(^4\) Urvasie’s words “How he has grown” imply that she must have secretly seen him in the hermitage several times after his birth, though necessarily not for many years, since once the boy’s education began such visits would necessarily cease.
On the Mahabharata
Notes on the Mahabharata

of Krishna Dwypaiana Vyasa.

prepared with a view to disengage the original epic of Krishna of the island from the enlargements, accretions and additions made by Vyshampaian, Ugrosravas & innumerable other writers.

by Aurobind Ghose

Proposita.

An epic of the Bharatas was written by Krishna of the Island called Vyasa, in 24,000 couplets or something more, less at any rate than 27,000, on the subject of the great civil war of the Bharatas and the establishment of the Dhurmarajya or universal sovereignty in that house.

This epic can be disengaged almost in its entirety from the present poem of nearly 100,000 slokas.
It was hinted in a recent article of the Indian Review, an unusu-
ally able and searching paper on the date of the Mahabharata
war that a society is about to be formed for discovering the
genuine and original portions of our great epic. This is glad
tidings to all admirers of Sanscrit literature and to all lovers of
their country. For the solution of the Mahabharata problem is
essential to many things, to any history worth having of Aryan
civilisation & literature, to a proper appreciation of Vyasa’s
poetical genius and, far more important than either, to a definite
understanding of the great ethical gospel which Srikrishna came
down on earth to teach as a guide to mankind in the dark Kali
yuga then approaching. But I fear that if the inquiry is to be
pursued on the lines the writer of this article seemed to hint, if
the Society is to rake out 8000 lines from the War Purvas &
dub the result the Mahabharata of Vyasa, then the last state of
the problem will be worse than its first. It is only by a patient
scrutiny & weighing of the whole poem, disinterestedly, can-
idly & without preconceived notions, a consideration Canto
by Canto, paragraph by paragraph, couplet by couplet that we
can arrive at anything solid or permanent. But this implies a
vast and heartbreaking labour. Certainly, labour however vast
ought not to have any terrors for a scholar, still less for a Hindu
scholar; yet before one engages in it, one requires to be assured
that the game is worth the candle. For that assurance there
are three necessary requisites, the possession of certain, sound
and always applicable tests to detect later from earlier work, a
reasonable chance that such tests if applied will restore the real
epic roughly if not exactly in its original form and an assurance
that the epic when recovered will repay from literary, historical
or other points of view, the labour that has been bestowed on it.
I believe that these three requisites are present in this case and
shall attempt to adduce a few reasons for my judgment. I shall
try to show that besides other internal evidence on which I do
not propose just now to enter, there are certain traits of poetical
On the Mahabharata

style, personality and thought which belong to the original work and are possessed by no other writer. I shall also try to show that these traits may be used and by whom they may be used as a safe guide through this huge morass of verse. In passing I shall have occasion to make clear certain claims the epic thus disengaged will possess to the highest literary, historical and practical value.

It is certainly not creditable to European scholarship that after so many decades of Sanscrit research, the problem of the Mahabharata which should really be the pivot for all the rest, has remained practically untouched. For it is not exaggeration to say that European scholarship has shed no light whatever on the Mahabharata beyond the bare fact that it is the work of more than one hand. All else it has advanced, and fortunately it has advanced little, has been rash, arbitrary or prejudiced; theories, theories, always theories without any honestly industrious consideration of the problem. The earliest method adopted was to argue from European analogies, a method pregnant of error & delusion. If we consider the hypothesis of a rude ballad-epic doctored by “those Brahmins” — anyone who is curious on the matter may study with both profit & amusement Frazer’s History of Indian Literature — we shall perceive how this method has been worked. A fancy was started in Germany that the Iliad of Homer is really a pastiche or clever rifacimento of old ballads put together in the time of Pisistratus. This truly barbarous imagination with its rude ignorance of the psychological bases of all great poetry has now fallen into some discredit; it has been replaced by a more plausible attempt to discover a nucleus in the poem, an Achilleid, out of which the larger Iliad has grown. Very possibly the whole discussion will finally end in the restoration of a single Homer with a single poem, subjected indeed to some inevitable interpolation and corruption, but mainly the work of one mind, a theory still held by more than one considerable scholar. In the meanwhile, however, haste has been made to apply the analogy to the Mahabharata; lynx-eyed theorists have discovered in the poem — apparently without taking the trouble to study it — an early and rude ballad epic worked up, doctored and defaced by those wicked Brahmins, who are made responsible for all the
literary and other enormities which have been discovered by the bushelful, and not by European lynxes alone — in our literature and civilisation. Now whether the theory is true or not, and one sees nothing in its favour, it has at present no value at all; for it is a pure theory without any justifying facts. It is not difficult to build these intellectual cardhouses; anyone may raise them by the dozen who can find no better manner of wasting valuable time. A similar method of “arguing from Homer” is probably at the bottom of Professor Weber’s assertion that the War Purvas contain the original epic. An observant eye at once perceives that the War Purvas are far more hopelessly tangled than any that precede them except the first. It is here & here only that the keenest eye becomes confused & the most confident explorer begins to lose heart & self-reliance. But the Iliad is all battles and it therefore follows in the European mind that the original Mahabharata must have been all battles. Another method is that of ingenious, if forced argument from stray slokas of the poem or equally stray & obscure remarks in Buddhist compilations. The curious theory of some scholars that the Pandavas were a later invention and that the original war was between the Kurs and Panchalas only and Professor Weber’s singularly positive inference from a sloka which does not at first sight bear the meaning he puts on it, that the original epic contained only 8800 lines, are ingenuities of this type. They are based on the Teutonic art of building a whole mammoth out of a single and often problematical bone, and remind one strongly of Mr. Pickwick and the historic inscription which was so rudely, if in a Pickwickian sense, challenged by the refractory [Mr. Blotton.] All these theorisings are idle enough; they are made of too airy a stuff to last. ‘Only a serious scrutiny of the Mahabharata made with a deep sense of critical responsibility and according to the methods of patient scientific inference, can justify one in advancing any considerable theory on this wonderful poetic structure.’

Yet to extricate the original epic from the mass of accretions is not, I believe, so difficult a task as it may at first appear. One is struck in perusing the Mahabharata by the presence of a mass of poetry which bears the style and impress of a single,
strong and original, even unusual mind, differing in his manner of expression, tone of thought & stamp of personality not only from every other Sanscrit poet we know but from every other great poet known to literature. When we look more closely into the distribution of this peculiar style of writing, we come to perceive certain very suggestive & helpful facts. We realise that this impress is only found in those parts of the poem which are necessary to the due conduct of the story, seldom to be detected in the more miraculous, Puranistic or trivial episodes, but usually broken up by passages and sometimes shot through with lines of a discernibly different inspiration. Equally noteworthy is it that nowhere does this poet admit any trait, incident or speech which deviates from the strict propriety of dramatic characterisation & psychological probability. Finally Krishna’s divinity is recognized, but more often hinted at than aggressively stated. The tendency is to keep it in the background as a fact to which, while himself crediting it, the writer does not hope for universal consent, still less is able to speak of it as of a general tenet & matter of dogmatic belief; he prefers to show Krishna rather in his human character, acting always by wise, discerning and inspired methods, but still not transgressing the limit of human possibility. All this leads one to the conclusion that in the body of poetry I have described, we have the real Bharata, an epic which tells plainly and straightforwardly of the events which led to the great war and the empire of the Bharata princes. Certainly if Prof. Weber’s venturesome assertion as to the length of the original Mahabharata be correct, this conclusion falls to the ground; for the mass of this poetry amounts to considerably over 20,000 slokas. Professor Weber’s inference, however, is worth some discussion; for the length of the original epic is a very important element in the problem. If we accept it, we must say farewell to all hopes of unravelling the tangle. His assertion is founded on a single & obscure verse in the huge prolegomena to the poem which take up the greater part of the Adi Purva, no very strong basis for so far-reaching an assumption. The sloka itself says no more than this that much of the Mahabharata was written in so difficult a style that Vyasa himself could remember only 8800 of
the slokas, Suka an equal amount and Sanjaya perhaps as much, perhaps something less. There is certainly here no assertion such as Prof. Weber would have us find in it that the Mahabharata at any time amounted to no more than 8800 slokas. Even if we assume what the text does not say that Vyasa, Suka & Sanjaya knew the same 8800 slokas, we do not get to that conclusion. The point simply is that the style of the Mahabharat was too difficult for a single man to keep in memory more than a certain portion of it. This does not carry us very far. If however we are to assume that there is more in this verse than meets the eye, that it is a cryptic way of stating the length of the original poem; and I do not deny that this is possible, perhaps even probable — we should note the repetition of वैति — अहं वैति मुक्तार्थ वैति मन्त्रां वैति वा न वा. Following the genius of the Sanscrit language we are led to suppose the repetition was intended to recall अहं वैति मन्त्रां वैति वा न वा etc. with each name; otherwise the repetition has no raison d’être; it is otiose & inept. But if we understand it thus, the conclusion is irresistible that each knew a different 8800, or the writer would have no object in wishing us to repeat the number three times in our mind. The length of the epic as derived from this single sloka should then be 26,400 slokas or something less, for the writer hesitates about the exact number to be attributed to Sanjaya. Another passage further on in the prolegomena agrees remarkably with this conclusion and is in itself much more explicit. It is there stated plainly enough that Vyasa first wrote the Mahabharata in 24,000 slokas and afterwards enlarged it to 100,000 for the world of men as well as a still more unconscionable number of verses for the Gandhurva and other worlds. In spite of the embroidery of fancy, of a type familiar enough to all who are acquainted with the Puranic method of recording facts, the meaning of this is unmistakeable. The original Mahabharata consisted of 24,000 slokas, but in its final form it runs to 100,000. The figures are probably loose & slovenly, for at any rate the final form of the Mahabharata is considerably under 100,000 slokas. It is possible therefore that the original epic was something over 24,000 and under 26,400 slokas, in which case the two passages would agree well.
enough. But it would be unsafe to found any dogmatic assertion on isolated couplets; at the most we can say that we are justified in taking the estimate as a probable and workable hypothesis and if it is found to be corroborated by other facts, we may venture to suggest its correctness as a moral certainty.

But it is not from European scholars that we must expect a solution of the Mahabharata problem. They have no qualifications for the task except a power of indefatigable research and collocation; and in dealing with the Mahabharata even this power seems to have deserted them. It is from Hindu scholarship renovated & instructed by contact with European that the attempt must come. Indian scholars have shown a power of detachment and disinterestedness and a willingness to give up cherished notions under pressure of evidence, which are not common in Europe. They are not, as a rule, prone to the Teutonic sin of forming a theory in accordance with their prejudices and then finding facts or manufacturing inferences to support it. When therefore they form a theory on their own account, it has usually some clear justification and sometimes an overwhelming array of facts and solid arguments behind it. German scholarship possesses infinite capacity of labour marred by an irresponsible & fantastic imagination, the French a sane acuteness of inference marred by insufficient command of facts, while in soundness of judgment Indian scholarship has both; it should stand first, for it must naturally move with a far greater familiarity and grasp in the sphere of Sanscrit studies than any foreign mind however able & industrious. But above all it must clearly have one advantage, an intimate feeling of the language, a sensitiveness to shades of style & expression and an instinctive feeling of what is or is not possible, which the European cannot hope to possess unless he sacrifices his sense of racial superiority and lives in some great centre like Benares as a Pundit among Pundits. I admit that even among Indians this advantage must vary with the amount of education and natural fineness of taste; but where other things are equal, they must possess it in an immeasurably greater degree than an European of similar information & critical power. For to the European Sanscrit words are
no more than dead counters which he can play with and throw as
he likes into places the most unnatural or combinations the most
monstrous; to the Hindu they are living things the very soul of
whose temperament he understands & whose possibilities he can
judge to a hair. That with these advantages Indian scholars have
not been able to form themselves into a great & independent
school of learning, is due to two causes, the miserable scantiness
of the mastery in Sanscrit provided by our Universities, crippling
to all but born scholars, and our lack of a sturdy independence
which makes us overready to defer to European authority. These
however are difficulties easily surmountable.

In solving the Mahabharat problem this intimate feeling
for the language is of primary importance; for style & poetical
personality must be not indeed the only but the ultimate test
of the genuineness of any given passage in the poem. If we
rely upon any other internal evidence, we shall find ourselves
irresistibly tempted to form a theory and square facts to it. The
late Rai Bahadur Bunkim Chundra Chatterji, a genius of whom
modern India has not produced the parallel, was a man of ripe
scholarship, literary powers of the very first order and a strong
critical sagacity. In his Life of Krishna (Krishnacharitra), he deals
incidentally with the Mahabharata problem; he perceived clearly
enough that there were different recognizable styles in the poem,
and he divided it into three layers, the original epic by a very
great poet, a redaction of the original epic by a poet not quite
so great and a mass of additions by very inferior hands. But
being concerned with the Mahabharata only so far as it covered
the Life of Krishna, he did not follow up this line of scrutiny
and relied rather on internal evidence of a quite different kind.
He saw that in certain parts of the poem Krishna's godhead is
either not presupposed at all or only slightly affirmed, while
in others it is the main objective of the writer; certain parts
again give us a plain, unvarnished & straightforward biography
& history, others are a mass of wonders and legends, often
irrelevant extravagances; in some parts also the conception of
the chief characters is radically departed from and defaced. He
therefore took these differences as his standard and accepted
only those parts as genuine which gave a plain & consistent account of Krishna the man and of others in their relation to him. Though his conclusions are to a great extent justifiable, his a priori method led him to exaggerate them, to enforce them too rigidly without the proper flexibility & scrupulous hesitation and to resort occasionally to special pleading. His book is illuminating and full of insight, and the chief contentions will, I believe, stand permanently; but some parts of his argument are exaggerated & misleading and others, which are in the main correct, are yet insufficiently supported by reasons. It is the failure to refer everything to the ultimate test of style that is responsible for these imperfections. Undoubtedly inconsistencies of detail & treatment are of immense importance. If we find grave inconsistencies of character, if a man is represented in one place as stainlessly just, unselfish & truthful and in another as a base & selfish liar or a brave man suddenly becomes guilty of incomprehensible cowardice, we are justified in supposing two hands at work; otherwise we must either adduce very strong poetic and psychological justification for the lapse or else suppose that the poet was incompetent to create or portray consistent and living characters. But if we find that one set of passages belongs to the distinct and unmistakeable style of a poet who has shown himself capable of portraying great epic types, we shall be logically debarred from this saving clause. And if the other set of passages show not only a separate style, but quite another spirit and the stamp of another personality, our assurance will be made doubly sure. Further if there are serious inconsistencies of fact, if for instance Krishna says in one place that he can only do his best as a man & can use no divine power in human affairs and in another foolishly uses his divine power where it is quite uncalled for, or if a considerable hero is killed three or four times over, yet always pops up again with really commendable vitality but without warning or explanation until some considerate person gives him his coup de grâce, or if totally incompatible statements are made about the same person or the same event, we may find in either or all of these inconsistencies sufficient ground to assume diversity of authorship. Still even here we must ultimately refer to the
style as corroborative evidence; and when the inconsistencies are
grate enough to raise suspicion, but not so totally incompatible
as to be conclusive, difference of style will at once turn the sus-
picion into certainty, while similarity may induce us to suspend
judgment. And where there is no inconsistency of fact or concep-
tion and yet the difference in expression & treatment is marked,
the question of style & personality becomes all-important. Now
in the Mahabharata we are struck at first by the presence of
two glaringly distinct & incompatible styles. There is a mass
of writing in which the verse & language is unusually bare,
simple and great, full of firm and knotted thinking & a high &
heroic personality, the imagination strong and pure, never florid
or richly-coloured, the ideas austere, original & noble. There is
another body of work sometimes massed together but far oftener
interspersed in the other, which has exactly opposite qualities;
it is Ramayanistic, rushing in movement, full & even overabun-
dant in diction, flowing but not strict in thought, the imagination
bold & vast, but often garish & highly-coloured, the ideas ingenious & poetical, sometimes of astonishing subtlety, but at
others common & trailing, the personality much more relaxed,
much less heroic, noble & severe. When we look closer we find
that the Ramayanistic part may possibly be separated into two
parts, one of which has less inspiration and is more deeply im-
bued with the letter of the Ramayan, but less with its spirit. The
first portion again has a certain element often in close contact
with it which differs from it in a weaker inspiration, in being
a body without the informing spirit of high poetry. It attempts
to follow its manner & spirit but fails and reads therefore like
imitation of the great poet. We have to ask ourselves whether this
is the work of an imitator or of the original poet in his uninspired
moments. Are there besides the mass of inferior or obviously in-
terpolated work which can be easily swept aside, three distinct &
recognisable styles or four or only two? In the ultimate decision
of this question inconsistencies of detail & treatment will be of
great consequence. But in the meantime I find nothing to prevent
me from considering the work of the first poet, undoubtedly the
greatest of the four, if four there are, as the original epic.
It may, indeed, be objected that style is no safe test, for it is one which depends upon the personal preferences & ability of the critic. In an English literary periodical it was recently observed that a certain Oxford professor who had studied Stevenson like a classic, attempted to apportion to Stevenson & Lloyd Osbourne their respective work in the Wrecker, but his apportionment turned out [to] be hopelessly erroneous. To this the obvious answer is that the Wrecker is a prose work and not poetry. There was no prose style ever written that a skilful hand could not reproduce as accurately as a practised forger reproduces a signature. But poetry, at any rate original poetry of the first class is a different matter. The personality and style of a true poet are unmistakeable to a competent mind, for though imitation, echo & parody are certainly possible, it would be as easy to reproduce the personal note in the style as for the painter to put into his portrait the living soul of its original. The successful discrimination between original and copy depends then upon the competence of the critic, his fineness of literary feeling, his sensitiveness to style. On such points the dictum of a foreign critic is seldom of any value; one would not ask a mere labourer to pronounce on the soundness of a great engineering work, but still less would one ask a mathematician unacquainted with mechanics. To a Hindu mind well equipped for the task there ought to be no insuperable difficulty in disengaging the style of a marked poetic personality from a mass of totally different work. The verdict of great artistic critics on the genuineness of a professed Old Master may not be infallible, but if formed on a patient study of the technique & spirit of the work, it has at least considerable chances of being correct. But the technique & spirit of poetry are far less easy to catch by an imitator than those of great painting, the charm [of] words being more elusive & unanalysable than that of line & colour.

In unravelling the Mahabharata especially the peculiar & inimitable nature of the style of Vyasa immensely lightens the difficulties of criticism. Had his been poetry of which the predominant grace was mannerism, it would have been imitable with some closeness; or even had it been a rich & salient style
like Shakespeare’s, Kalidasa’s or Valmekie’s, certain externals of it might be reproduced by a skilled hand and the task of discernment rendered highly delicate and perilous. Yet even in such styles to the finest minds the presence or absence of an unanalysable personality within the manner of expression would be always perceptible. The second layer of the Mahabharata is distinctly Ramayanistic in style, yet it would be a gross criticism that could confuse it with Valmekie’s own work; the difference as is always the case in imitations of great poetry, is as palpable as the similarity.¹ Some familiar examples may be taken from English literature. Crude as is the composition & treatment of the three parts [of] King Henry VI, its style unformed & everywhere full of echoes, yet when we get such lines as

```
Thrice is he armed that hath his quarrel just
And he but naked though locked up in steel
Whose conscience with injustice is corrupted,
```

we cannot but feel that we are listening to the same poetic voice as in Richard III

```
shadows tonight
Have struck more terror to the soul of Richard
Than can the substance of ten thousand soldiers
Armed in proof and led by shallow Richmond.
```

or in Julius Caesar

```
The evil that men do lives after them;
The good is oft interrèd with their bones.
```

or in the much later & richer vein of Antony & Cleopatra

```
I am dying, Egypt, dying; only
I here importune death awhile, until
Of many thousand kisses the poor last
I lay upon thy lips.
```

---

¹ Here an incomplete sentence is written between the lines in the manuscript: This unanalysable quantity is as sure
I have purposely selected passages of perfect simplicity and straightforwardness, because they appear to be the most imitable part of Shakespeare’s work & are really the least imitable. Always one hears the same voice, the same personal note of style sounding through these very various passages, and one feels that there is in all the intimate & unmistakeable personality of Shakespeare. We turn next & take two passages from Marlowe, a poet whose influence counted for much in the making of Shakespeare, one from Faustus

Was this the face that launched a thousand ships  
And burnt the topless towers of Ilium?

and another from Edward II

I am that cedar, shake me not too much;  
And you the eagles; soar ye ne’er so high,  
I have the jesses that will pull you down;  
And Aeque tandem shall that canker cry  
Unto the proudest peer in Brittany.

The choice of words, the texture of style has a certain similarity, the run of the sentences differs little if at all; but what fine literary sense does not feel that here is another poetical atmosphere and the ring of a different voice? And yet to put a precise name on the difference would not be easy. The personal difference becomes still more marked if we take a passage from Milton in which the nameable merits are precisely the same, a simplicity in strength of diction, thought & the run of the verse “What though the field be lost”. And when we pass farther down in the stream of literature & read “Thy thunder, conscious of the new command” we feel that the poet has nourished his genius on the greatness of Milton till his own soft & luxurious style rises into epic vigour; yet we feel too that the lines are only Miltonic, they are not Milton.

2 Paradise Lost 1.105. This sentence and the next were written in the margins of the manuscript. Sri Aurobindo apparently intended to cite longer passages. — Ed.
3 Keats, Hyperion 1.60. — Ed.
Now there are certain great poetical styles which are of a kind apart; they are so extraordinarily bare and restrained that the untutored mind often wonders what difficulty there can be in writing poetry like that; yet when the attempt is made, it is found that so far as manner goes it is easier to write somewhat like Shakespeare or Homer or Valmekie than to write like these. Just because the style is so bare, has no seizureable mannerism, no striking & imitable peculiarities, the failure of the imitation appears complete & unsoftened; for in such poets there is but one thing to be caught, the unanalyzable note, the personal greatness which like everything that comes straight from God it is impossible to locate or limit and precisely the one that most eludes the grasp. This poetry it is always possible to distinguish with some approach to certainty from imitative or spurious work. Very fortunately the style of Vyasa is exactly such a manner of poetry. Granted therefore adhikara in the critic, that is to say a natural gift of fine literary sensitiveness & the careful cultivation of that gift until it has become as sure a lactometer as the palate of the swan which rejects the water mingled with milk & takes the milk alone, we have in the peculiar characteristics of this poetry a test of unquestionable soundness & efficacy.

But there is another objection of yet more weight & requiring as full an answer. This method of argument from style seems after all as a priori & Teutonic as any other; for there is no logical reason why the mass of writing in this peculiar style should be judged to be the original epic and not any of the three others or even part of that inferior work which was brushed aside so contemptuously. The original Mahabharata need not have been a great poem at all; it was more probably an early, rude & uncouth performance. Certain considerations however may lead us to consider our choice less arbitrary than it seems. That the War Purvas contain much of the original epic may be conceded to Professor Weber; the war is the consummation of the story & without a war there could be no Mahabharata. But the war of the Mahabharata was not a petty contest between obscure barons or a brief episode in a much larger struggle or a romantic & chivalrous emprise for the rescue of a ravished or errant
On the Mahabharata

beauty. It was a great political catastrophe implying the clash of a hundred nations and far-reaching political consequences; the Hindus have always considered it as the turning point in the history of their civilisation and the beginning of a new age, and it was long used as a historical standpoint and a date to reckon from in chronology. Such an event must have had the most considerable political causes and been caused by the collision of the most powerful personalities and the most important interests. If we find no record of or allusion to these in the poem, we shall be compelled to suppose that the poet living long after the event, regarded the war as a legend or romance which would form excellent matter for an epic and treated it accordingly. But if we find a simple and unvarnished though not necessarily connected & consecutive account of the political conditions which preceded the war and of the men who made it and their motives, we may safely say that this also is an essential part of the epic. The Iliad deals only with an episode of the legendary siege of Troy, it covers an action of [ ] days in a conflict lasting ten years, & its subject is not the Trojan War but the Wrath of Achilles. Homer was under no obligation therefore to deal with the political causes that led to hostilities, even supposing he knew them. The Mahabharata stands on an entirely different footing. The war there is related from beginning to end consecutively & without break, yet it is nowhere regarded as of importance sufficient to itself but depends for its interest on causes which led up to it & the characters & clashing interests it involved. The preceding events are therefore of essential importance to the epic. Without the war, no Mahabharata, is true of this epic; but without the causes of the war, no war, is equally true. And it must be remembered that the Hindu narrative poets had no artistic predilections like that of the Greeks for beginning a story in the middle. On the contrary they always preferred to begin at the beginning.

We therefore naturally expect to find the preceding political conditions and the immediate causes of the war related in the earlier part of the epic and this is precisely what we do find. Ancient India as we know, was a sort of continent, made up of many great & civilised nations who were united very much
like the nations of modern Europe by an essential similarity of religion and culture rising above & beyond their marked racial peculiarities; like the nations of Europe also they were continually going to war with each other; & yet had relations of occasional struggle, of action & reaction, with the other peoples of Asia whom they regarded as barbarous races outside the pale of the Aryan civilisation. Like the continent of Europe, the ancient continent of India was subject to two opposing forces, one centripetal which was continually causing attempts at universal empire, another centrifugal which was continually impelling the empires once formed to break up again into their constituent parts; but both these forces were much stronger in their action than they have usually been in Europe.

The Aryan nations may be divided into three distinct groups, the Eastern of whom the Coshalas, Magadhas, Chedies, Videhas & Haihayas were the chief; the Central among whom the Kurus, Panchalas & Bhojas were the most considerable; and the Western & Southern of whom there were many, small, & rude but yet warlike & famous peoples; among these there seem to have been none that ever became of the first importance. Five distinct times had these great congeries of nations been welded into Empire, twice by the Ixvaacous under Mandhata son of Yuvanuswa and King Marutta, afterwards by the Haihaya Arjouna Cartoverya, again by the Ixvaacou Bhogiratha and finally by the Kuru Bharata. That the first Kuru empire was the latest is evident not only from the Kurus being the strongest nation of their time but from the significant fact that the Coshalas by this time had faded into utter & irretrievable insignificance. The rule of the Haihayas had resulted in one of the great catastrophes of early Hindu civilization; belonging to the eastern section of the Continent which was always apt to break away from the strict letter of Aryanism, they had brought themselves by their pride & violence into collision with the Brahmins with the result of a civil war in which their Empire was broken for ever by Parshurama, son of Jamadagni, and the chivalry of India massacred and for the time broken. The fall of the Haihayas left the Ixvaacous & the Bharata or Ilian dynasty of the Kurus the two chief powers
of the continent. Then seems to have followed the golden age of the Ixvaacous under the beneficent empire of Bhogiratha & his descendants as far down at least as Rama. Afterwards the Coshalans, having reached their highest point, must have fallen into that state of senile decay, which once it overtakes a nation, is fatal & irremediable. They were followed by the empire of the Bharatas. By the times of Santanou, Vichitravirya and Pandou this empire had long been dissolved by the centrifugal force of Aryan politics into its constituent parts, yet the Kurus were yet among the first of the nations and the Bharata Kings of the Kurus were still looked up to as the head of civilisation. But by the time of Dhritarashtra the centripetal force had again asserted itself & the idea of another great empire loomed before the imaginations of all men; a number of nations had risen to the greatest military prestige & political force, the Panchalas under Drupada & his sons, the Bhojas under Bhishmuc & his brother Acrity who is described as equalling Parshurama in military skill & courage, the Chedies under the hero & great captain Shishupala, the Magadhas, built into a strong nation by Brihodruth; even distant Bengal under the Poundrian Vasudave and distant Sindhu under [Vriddhakshatra] and his son Jayadrath began to mean something in the reckoning of forces. The Yadava nations counted as a great military force in the balance of politics owing to their abundant heroism and genius, but seem to have lacked sufficient cohesion and unity to nurse independent hopes. Strong, however, as these nations were none seemed able to dispute the prize of the coming empire with the Kurus, until under King Jarasundha the Barhodruth Magadha for a moment disturbed the political balance. The history of the first great Magadhan hope of empire and its extinction — not to be revived again until the final downfall of the Kurus — is told very briefly in the Sabhapurva of the Mahabharata. The removal of Jarasundha restored the original state of politics and it was no longer doubtful that to the Kurus alone could fall the future empire. But here a contest arose between the elder & younger branches of the Bharata house. The question being then narrowed to a personal issue, it was inevitable that it should become largely a history of
personal strife & discord; other & larger issues were involved in the dispute between the Kaurava cousins; but whatever interests, incompatibilities of temperament & differences of opinion may divide brothers, they do not engage in fratricidal conflict until they are driven to it by a long record of collision & jealousy, ever deepening personal hatreds & the worst personal injuries. We see therefore that not only the early discords, the slaying of Jarasundha & the Rajasuya sacrifice are necessary to the epic but the great gambling & the mishandling of Draupadie. It cannot, however, have been personal questions alone that affected the choice of the different nations between Duryodhana and Yudhisthere. Personal relations like the matrimonial connections of Dhritarashtra’s family with the Sindhus and Gandharas and of the Pandavas with the Matsyas, Panchalas & Yadavas doubtless counted for much, but there must have been something more; personal enmities counted for something as in the feud cherished by the Trigartas against Arjuna. The Madras disregarded matrimonial ties when they sided with Duryodhan; the Magadhas & Chedies put aside the memory of personal wrongs when they espoused the cause of Yudhisthere. I believe the explanation we must gather from the hints of the Mahabharata is this, that the nations were divided into three classes, those who desired autonomy, those who desired to break the power of the Kurus and assert their own supremacy and those who imbued with old imperialistic notions desired an united India. The first followed Duryodhana because the empire of Duryodhana could not be more than the empire of a day while that of Yudhisthere had every possibility of permanence; even Queen Gandhari, Duryodhan’s own mother, was able to hit this weak point in her son’s ambition. The Rajasuya Sacrifice had also undoubtedly identified Yudhisthere in men’s minds with the imperialistic impulse of the times. We are given some important hints in the Udyagapurva. When Vidura remonstrates with Krishna for coming to Hastinapura, he tells him it was highly imprudent for him to venture there knowing as he did that the city was full of kings all burning with enmity against him for having deprived them once of their greatness, driven by the fear of him to take refuge
with Duryodhan and all eager to war against the Pandavas.

This can have no intelligible reference except to the Rajasuya sacrifice. Although it was the armies of Yudhisthere that had traversed India then on their mission of conquest, Krishna was generally recognised as the great moving & master mind whose hands of execution the Pandavas were and without whom they would have been nothing. His personality dominated men’s imaginations for adoration or for hatred; for that many abhorred him as an astute & unscrupulous revolutionist in morals, politics & religion, we very clearly perceive. We have not only the fiery invectives of Shishupala but the reproach of Bhurisravas, the Vahlika, a man of high reputation & universally respected.

4 These lines (Udyoga Parva 92.23–26) are found at the top of the page in the manuscript. The next two Sanskrit quotations (Drona Parva 143.11–15 and Udyoga Parva 93.16) were written at the tops of the following two pages. Their place of insertion in the text was not indicated. — Ed.
Krishna himself is perfectly conscious of this; he tells Vidura that he must make efforts towards peace both to deliver his soul & to justify himself in the eyes of men.

The belief that Krishna’s policy & statesmanship was the really effective force behind Yudhishthire’s greatness, pervades the epic. But who were these nations that resented so strongly the attempt of Yudhishthire & Krishna to impose an empire on them? It is a significant fact that the Southern and Western peoples went almost solid for Duryodhana in this quarrel — Madra, the Decan, Avanti, Sindhu Sauvira, Gandhara, in one long line from southern Mysore to northern Candahar; the Aryan colonies in the yet half civilised regions of the Lower valley of the Ganges espoused the same cause. The Eastern nations, heirs of the Ixvaacou imperial idea, went equally solid for Yudhishthire. The Central peoples, repositories of the great Kuru Panchala tradition as well as the Yadavas, who were really a Central nation though they had trekked to the West, were divided. Now this distribution is exactly what we should have expected. The nations which are most averse to enter into an imperial system & cherish most their separate existence are those which are outside the centre of civilisation, hardy, warlike, only partially refined; and their aversion is still more emphatic when they have never or only for a short time been part of an empire. This is the real secret of the invincible resistance which England has opposed to all Continental schemes of empire from Philip II to Napoleon; it is the secret of her fear of Russia; it is the reason of the singular fact that only now after many centuries of great national existence has she become imbued with the imperial idea on her own account. The savage attachment to their independence of small nations like the Dutch, the Swiss, the Boers is traceable to the same cause; the fierce resistance opposed by the
greater part of Spain to Napoleon was that of a nation which once imperial & central has fallen out of the main flood of civilisation & is therefore becoming provincial & attached to its own isolation. That the nations of the East & South and the Aryan colonies in Bengal should oppose the imperialist policy of Krishna & throw in their lot with Duryodhana is therefore no more than we should expect. On the other hand nations at the very heart of civilisation, who have formed at one time or another dominant parts of an empire fall easily into imperial schemes, but personal rivalry, the desire of each to be the centre of empire, divides them and brings them into conflict not any difference of political temperament. For nations have very tenacious memories and are always attempting to renew the great ages of their past. In the Eastern peoples the imperialistic idea was very strong and having failed to assert a new empire of their own under Jarasundha, they seem to have turned with one consent to Yudhisthira as the man who could alone realise their ideal. One of Shishupal's remarks in the Rajasuya sacrifice is very significant

वर्षं न तु भयादृश्य कौन्तेयस्य महामनः ||
प्रजाच्यामिन त्रायस्य न लोभाः स मानववानाः ||
अत्यं धर्मं प्रजात्यत्वं पर्यवस्थितं विकृतितं ||
करानस्य प्रजाच्यामि सोद्यमस्माँ सनवते ||

We remember that it was an Eastern poet who had sung perhaps not many centuries before in mighty stanzas the idealisation of Imperial Government & Aryan unity and enshrined in his imperishable verse the glories of the third Coshalan Empire. The establishment of Aryan unity was in the eyes of the Eastern nations a holy work and the desire of establishing universal lordship with that view a sufficient ground for one of the most self-willed & violent princes of his time [to] put aside his personal feelings & predilections in order to farther it. Shishupāl had been one of the most considerable & ardent supporters of Jarasundha in his attempt to establish a Magadhan empire; that attempt having failed he like Jarasundha’s own son turned in
spite of his enmity with Krishna to Yudhisthira as the coming
Emperor. Even the great quarrel and the summary slaughter
of Shishupal by Krishna could not divert his nation from its
adhesion to the new Empire. The divisions of the Central nations
follow an equally intelligible line. Throughout the Mahabharata
we perceive that the great weakness of the Kurus lay in the
division of their counsels. There was a peace party among them
led by Bhishma, Drona, Kripa & Vidura, the wise & expe-
rienced statesmen who desired justice and reconciliation with
Yudhisthira and a warparty of the hotblooded younger men
led by Karna, Duhsasana & Duryodhana himself who were
confident of their power of meeting the world in arms; King
Dhritarashtra found himself hard put to it to flatter the opinions
of the elders while secretly following his own predilections &
the ambitions of the younger men. These are facts patent on the
face of the epic. But it has not been sufficiently considered what a
remarkable fact it is that men of such lofty character as Bhishma
and Drona should have acted against their sense of right and
justice and fought in what they had repeatedly condemned as
an unjust cause. If Bhishma, Drona, Kripa, Aswatthaman &
Vikarna had plainly intimated to Duryodhan that they would
support Yudhisthira with their arms or even that they would
stand aloof from the war, it is clear there would have been no
war at all. And I cannot but think that had it been a question
purely between Kuru & Kuru, this is the course they would
have adopted. But Bhishma & Drona must have perceived that
behind the Pandavas were the Panchalas & Matsyas. They must
have suspected that these nations were supporting Yudhisthira
not out of purely disinterested motives but with certain defi-
nite political objects. Neither Drupada nor Virata would have
been accepted by India as emperors in their own right, any
more than say Sindhia or Holkar would have been in the last
century. But by putting forward the just claims of a prince of
the imperial Bharata line, the descendant of Bharata Ajamede
connected with themselves by marriage, they could avoid this
difficulty and at the same time break the power of the Kurus and
replace them as the dominant partners in the new Empire. The
presence of personal interests is evident in their hot eagerness for war and their unwillingness to take any sincere steps towards a just and peaceful solution of the difficulty. Their action stands in striking contrast with the moderate, statesmanlike yet firm policy of Krishna. It can hardly be supposed that Bhishma and the Kuru statesmen of his party were autonomists; they must have been as eager for a Kuru empire as Duryodhana himself.

At any rate they eagerly welcomed the statesmanlike reasonings of Krishna when he proposed to King Dhritarashtra to unite the force of Pandava & Kaurava & build up a Kuru empire which should irresistibly dominate the world. “On yourself & myself” says Krishna “rests today the choice of peace or war & the destiny of the world; do your part in pacifying your sons, I will see to the Pandavas.”

www.holybooks.com
But the empire of Yudhisthira enforced by the arms of Mutsyia & Panchala or even by the armed threats meant to Bhishma & Kripa something very different from a Kuru Empire; it must have seemed to them to imply rather the overthrow & humiliation of the Kurus and a Panchala domination under a Bharata prince. This it concerned their patriotism and their sense of Kshatriya pride & duty to resist so long as there was blood in their veins. The inability to associate justice with their cause was a grief to them, but it could not alter their plain duty. Such as I take it is the clear political story of the Mahabharata. I have very scantily indicated some of its larger aspects only; but if my interpretation be correct, it is evident that we shall have in the disengaged Mahabharata not only a mighty epic, but a historical document of unique value.

What I wish, however, to emphasize at present is that the portions of the Mahabharata which bear the high, severe and heroic style and personality I have described, are also the portions which unfold consecutively, powerfully and without any incredible embroidery of legend this story of clashing political & personal passions & ambitions. It is therefore not a mere assumption, but a perfectly reasonable inference that these portions form the original epic. If we assume that the Ramayanistic portions of the epic or the rougher & more uncouth work precede these in antiquity, we assume that the legend was written first and history added to it afterwards; this is a sequence so contrary to all experience and to all accepted canons of criticism that it would need the most indisputable proof before it could command any credence. Where there is a plain history mixed up with legendary matter written by palpably different hands, criticism judges from all precedents that the latter must be later work embodying the additions human fancy always and most in countries where a scrupulous historic sense has not been developed weaves round a great event which has powerfully occupied the national imagination. Moreover in judging
the relative genuineness of different styles in the same work, we are bound to see the hand of the original writer in the essential parts of the story as we have it. It makes no difference to this question whether there was an original ballad epic or not, or whether it was used in the composition of the Mahabharata or not. We have a certain poem in a certain form and in resolving it to its original parts we must take it as we have it and not allow our judgment to be disturbed by visions of a poem which we have not. If the alleged ballad epic was included bodily or in part in the Mahabharata, our analysis will find it there without fail. If it was merely used as material just as Shakespeare used Plutarch or Hall & Holinshed, it is no longer germane to the matter. Now the most essential part of a story is the point from which the catastrophe started; in the Mahabharata this is the mishandling of Draupadie & the exile of the Pandavas; but this again leads us back to the Rajasuya sacrifice & the imperial Hall of the Pandavas from which the destroying envy of Duryodhan took its rise. In the Sabhapurva therefore we must seek omissis omissendis for the hand of the original poet; & the whole of the Sabhapurva with certain unimportant omissions is in that great & severe style which is the stamp of the personality of Vyasa. This once established we argue farther from the identity of style, treatment & personality between the Viratapurva & the Sabhapurva, certain passages being omitted, that this book is also the work of Vyasa. From these two large & mainly homogeneous bodies of poetical work we shall be able to form a sufficient picture of the great original poet, the drift of his thought and the methods of his building. This we shall then confirm, correct & supplement by a study of the Udyogapurva which up to the marching of the armies presents, though with more but still separable alloy breaking in, the same clear, continuous & discernible vein of pure gold running through it. Thus armed we may even rely on resolving roughly the tangle of the Adi & Vana Purvas and it is only when the war begins, that we shall have to admit doubt, faltering and guesswork; even here however we shall not be without some light even in its thickest darkness. That the poem can be disentangled, I hold then to be beyond
dispute, but it can only be done by a long and voluminous critical analysis, and even this must be supported by a detailed edition of the whole Mahabharat in which each canto & chapter shall be discussed on its own merits. At present therefore I propose to pass over the method after once indicating its general nature and present certain definite results only. I propose solely to draw a picture, in outline merely, of the sublime poetical personality which an analysis of the work reveals as the original poet, the Krishna Dwaipayana who wrote the Bharata of the 24,000 [slokas] and not the other Vyasa, if Vyasa he was, who enlarged it to something approaching its present dimensions. And let me express at once my deep admiration of the poetical powers & vast philosophic mind of this second writer; no mean poet was he who gave us the poem we know, in many respects the greatest and most interesting & formative work in the world’s literature. If I seem to speak mainly in dispraise of him, it is because I am concerned here with his defects and not with his qualities; for the subject I wish to treat is Krishna of the Island, his most important characteristics and their artistic contrast with those of our other greater, but less perfect epic poet, Valmekie.

I have said that no foreigner can for a moment be trusted to apply the literary test to a poem in our language; the extraordinary blunders of the most eminent German critics in dealing with Elizabethan plays have settled that question once for all. Educated Indians on the other hand have their own deficiencies in dealing with Vyasa; for they have [been] nourished partly on the curious and elaborate art of Kalidasa and his gorgeous pomps of vision and colour, partly on the somewhat gaudy, expensive & meretricious spirit of English poetry. Like Englishmen they are taught to profess a sort of official admiration for Shakespeare & Milton but with them as with the majority of Englishmen the poets they really steep themselves in are Shelley, Tennyson & Byron and to a less degree Keats & perhaps Spenser. Now the manner of these poets, lax, voluptuous, artificial, all outward glitter and colour, but inwardly poor of spirit and wanting in genuine mastery and the true poetical excellence is a bad school for the appreciation of such severe & perfect work as Vyasa’s.
For Vyasa is the most masculine of writers. When Coleridge spoke of the femineity of genius he had in mind certain features of temperament which whether justly or not are usually thought to count for more in the feminine mould than in the masculine, the love of ornament, emotionalism, mobile impressionability, the tyranny of imagination over the reason, excessive sensitiveness to form and outward beauty; a tendency to be dominated imaginatively by violence & the show of strength, to be prodigal of oneself, not to husband the powers, to be for showing them off, to fail in self-restraint is also feminine. All these are natural properties of the quick artistic temperament prone by throwing all itself outward to lose balance and therefore seldom perfectly sane and strong in all its parts. So much did these elements form the basis of Coleridge’s own temperament that he could not perhaps imagine a genius in which they were wanting. Yet Goethe, Dante & Sophocles show that the very highest genius can exist without them. But none of the great poets I have named is so singularly masculine, so deficient in femineity as Vyasa, none dominates so much by intellect and personality, yet satisfies so little the romantic imagination. Indeed no poet at all near the first rank has the same granite mind in which impressions are received with difficulty but once received are ineffaceable. In his austere self-restraint and economy of power he is indifferent to ornament for its own sake, to the pleasures of poetry as distinguished from its ardours, to little graces & self-indulgences of style; the substance counts for everything & the form has to limit itself to its proper work of expressing with precision & power the substance. Even his most romantic pieces have a virgin coldness & loftiness in their beauty. To intellects fed on the elaborate pomp and imagery of Kalidasa’s numbers and

5 The passage below, uncancelled in the manuscript, was abandoned by Sri Aurobindo in favour of the corresponding passage in the printed text:

Vyasa is the most masculine of writers. He has that is to say the masculine qualities, restraint, dignity, indifference to ornament, strength without ostentation, energy economised, a strong, pure and simple taste, a high & great spirit, more than any poet I know. The usual artifices of poetry, simile, metaphor, allusion, ornamental description, the decorative element of the art, he resorts to with unequalled infrequency and to a superficial or an untrained taste he appears to be even unimaginative and uninspiring.
the somewhat gaudy, expensive & meretricious spirit of English poetry, Vyasa may seem bald and unattractive. To be fed on the verse of Spenser, Shelley, Keats, Byron & Tennyson is no good preparation for the severest of classics. It is indeed, I believe, the general impression of many “educated” young Indians that the Mahabharata is a mass of old wives’ stories without a spark of poetry or imagination. But to those who have bathed even a little in the fountain-heads of poetry & can bear the keenness & purity of those mountain sources, the naked & unadorned poetry of Vyasa [is a perpetual refreshment.]

To read him is to bathe in a chill fountain in the heats of summer; they find that one has [available an unfailing source] of tonic & [refreshment] to the soul; one [comes into relation] with a [mind] whose [bare strong contact] has the [power] of infusing strength, courage and endurance. There are certain things which have this power inborn & are accordingly valued by those who have felt deeply its properties, such are the air of the mountains or the struggle to a capable mind with hardship and difficulty; the Vedanta philosophy, the ideal of the निर्जल अवस्था, the poetry of Vyasa, three closely related entities, are intellectual forces that exercise a similar effect & attraction.

The style of this powerful writer is perhaps the one example in literature of strength in its purity; a strength undefaced by violence & excess yet not weakened by flagging and negligence. It is even less propped or helped out by artifices and aids than any other poetical style. Vyasa takes little trouble with similes, metaphors, rhetorical turns, the usual paraphernalia of poetry; nor when he uses them, is he at pains to select such as shall be new & curiously beautiful; they are there to define more clearly what he has in mind, and he makes just enough of them for that purpose, never striving to convert them into a separate grace or

6 Cancelled in manuscript. Several other words, also cancelled, were written above this phrase. The last complete version may have been “is a companion that never palls.” —Ed.

7 The words between brackets are cancelled in the manuscript. There are a number of cancelled words between the lines whose connection with the text is not evident. —Ed.
a decorative element. They have force & beauty in their context but cannot be turned into elegant excerpts; in themselves they are in fact little or nothing. When Bhema is spoken of as breathing hard like a weakling borne down by a load too heavy for him, there is nothing in the simile itself. It derives its force from its aptness to the heavy burden of unaccomplished revenge which the fierce spirit of the strong man was condemned to bear. We may say the same of his epithets, that great preoccupation of romantic artists; they are such as are most natural, crisp & firm, best suited to the plain idea & only unusual when the business in hand requires an unusual thought, but never recherché or existing for their own beauty. Thus when he is describing the greatness of Krishna and hinting his claims to be considered as identical with the Godhead, he gives him the one epithet अनंतपण: immeasurable, which is strong and unusual enough to rise to the thought, but not to be a piece of literary decoration or a violence of expression. In brief, he religiously avoids overstress; his audacities of phrase are few, and they have a grace of restraint in their boldness. There is indeed a rushing vast Valmekeian style which intervenes often in the Mahabharata; but it is evidently the work of a different hand; for it belongs to a less powerful intellect, duller poetical insight and coarser taste, which has yet caught something of the surge and cry of Valmekie's Oceanic poetry. Vyasa in fact stands at the opposite pole from Valmekie. The poet of the Ramayan has a flexible & universal genius embracing the Titanic and the divine, the human and the gigantic at once or with an inspired ease of transition. But Vyasa is unmixed Olympian; he lives in a world of pure verse and diction, enjoying his own heaven of golden clearness. We have seen what are the main negative qualities of the style; pureness, strength, grandeur of intellect & personality are its positive virtues. It is the expression of a pregnant and forceful mind, in which the idea is sufficient to itself, conscious of its own intrinsic greatness; when this mind runs in the groove of narrative or emotion, the style wears an air of high and pellucid ease in the midst of which its strenuous compactness and brevity moves & lives as a saving and strengthening spirit; but when it begins to think rapidly
& profoundly as often happens in the great speeches, it is apt
to leave the hearer behind; sufficient to itself, thinking quickly,
briefly & greatly it does not care to pause on its own ideas or
explain them at length, but speaks as it thinks, in a condensed
often elliptical style, preferring to indicate rather than expatiate,
often passing over the steps by which it should arrive at the
idea and hastening to the idea itself; often also it is subtle &
multiplies many shades & ramifications of thought in a short
compass. From this arises that frequent knottiness & excessive
compression of logical sequence, that appearance of elliptical
& sometimes obscure expression, which so struck the ancient
critics in Vyasa and which they expressed in the legend that
when dictating the Mahabharata to Ganesha, the poet in order
not to be outstripped by his divine scribe — for it was Ganesha’s
stipulation that not for one moment should he be left without
matter to write — threw in frequently knotty and closeknit pas-
sages which forced the lightning-swift hand to pause & labour
slowly over its work. To a strenuous mind these passages, from
the exercise they give to the intellect, are an added charm just
as a mountainclimber takes an especial delight in steep ascents
which let him feel his ability. Of one thing, however, we may
be confident in reading Vyasa, that the expression will always
be just to the thought; he never palters with or labours to dress
up the reality within him. For the rest we must evidently trace
this peculiarity to the compact, steep & sometimes elliptical,
but always strenuous diction of the Upanishads in which the
mind of the poet was trained & his personality tempered. At the
same time like the Upanishads themselves or like the enigmatic
Aeschylus, he can be perfectly clear, precise & full whenever he
chooses; and he more often chooses than not. His expression of
thought is usually strong and abrupt; his expression of fact and
of emotion strong and precise. His verse has similar peculiarities.
It is a golden and equable stream that sometimes whirls itself
into eddies or dashes upon rocks; but it always runs in harmony
with the thought. Vyasa has not Valmekie’s movement as of the
sea, that wide and unbroken surge with its infinite variety of
waves, which enables him not only to find in the facile anustubh
metre a sufficient vehicle for his vast & ambitious work but

to maintain it through [ ] couplets without its palling or

losing its capacity of adjustment to evervarying moods & turns

of narrative. But in his narrower limits & on the level of his

lower flight Vyasa has great subtlety & finesse. Especially ad-

mirable is his use, in speeches, of broken effects such as would in

less skilful hands have become veritable discords; and again in

narrative of the simplest & barest metrical movements, as in the

opening Surga of the Sabhapurva to create certain calculated

effects. But it would be idle to pretend for him any equality

as a master of verse with Valmekie. When he has to rise from

his levels to express powerful emotions, grandiose eloquence or

swift & sweeping narrative, he cannot always effect it in the

anustubh metre; he falls back more often than not on the rolling

magnificence of the [tristubh] which best sets & ennobles his

strong-winged austerity.

Be its limits what one will, this is certain that there was

never a style & verse of such bare, direct & resistless strength

as this of Vyasa’s or one that went so straight to the heart of all

that is heroic in a man. Listen to the cry of insulted Draupadie

to her husband

उत्तिधानिन्दं कि श्रेष्ठ भीमसेन यथा मृत:।

वामृतस्य हि पारीयतन्मानार्थमाल्य जीवनि॥

“Arise, arise, O Bhemasena, wherefore sleepest thou like one

that is dead? For nought but dead is he whose wife a sinful hand

has touched and lives.”, or the reproach of Krishna to Arjoun

for his weak pity which opens the second surga of the Bha-

gavadgita. Or again hear Krishna’s description of Bhema’s rage

and solitary brooding over revenge and his taunting accusations

of cowardice: “At other times, O Bhemasena, thou praisest war,

thou art all for crushing Dhritarashtra’s heartless sons who take
delight in death; thou sleepest not at night, O conquering soldier,

but wakest lying face downwards, and ever thou utterest dread

speech of storm and wrath, breathing fire in the torment of thine

own rage; and thy mind is without rest like a smoking fire; yea,
thou liest all apart breathing heavily like a weakling distressed by his load; so that some who know not even think thee mad. For as an elephant tramples on uprooted trees and breaks them to fragments, so thou stormest along with labouring breath hurting earth with thy feet. Thou takest no delight in all the people but cursest them in thy heart, O Bhema, son of Pandou, nor in aught else hast thou any pleasure night or day; but thou sittest in secret like one weeping and sometimes of a sudden laughest aloud, yea, thou sittest for long with thy head between thy knees & thy eyes closed; and then again thou starest before thee frowning and clenching thy teeth; thy every action is one of wrath. ‘Surely as our father Sun is seen in the East when luminously he ascendeth, & surely as wide with rays he wheeleth down to his release in the West, so sure is this oath I utter and never shall be broken. With this club I will meet & slay the haughty Duryodhan’, thus touching thy club thou swearest among thy brothers. And today thou, thou!, thinkest of peace, O warrior! Ah yes, I know the hearts of those that clamour for war, alter very strangely when war showeth its face, since fear findeth out even thee, O Bhema! Ah yes, son of Pritha, thou seest adverse omens both when thou sleepest & when thou wakest, therefore thou desirest peace. Ah yes, thou feelest no more the man in thyself, but an eunuch & thy heart sinketh with alarm, therefore art thou thus overcome. Thy heart quakes, thy mind fainteth, thou art seized with a trembling in thy thighs, therefore thou desirest peace. Verily, O son of Pritha, wavering & inconstant is the heart of a mortal man, like the pods of the silk cotton driven by the swiftness of every wind. This shameful thought of thine, monstrous as a human voice in a dumb beast, makes the hearts of Pandou’s sons to sink like (shipwrecked) men that have no raft. Look on thine own deeds, O seed of Bharat, remember thy lofty birth! arise, put off thy weakness; be firm, O heart of a hero; unworthy of thee is this languor; what he cannot win by the mightiness of him, that a Kshatriya will not touch.”

This passage I have quoted at some length because it is eminently characteristic of Vyasa’s poetical method. Another poet would
have felt himself justified by the nature of the speech in using some wild and whirling words, in seeking vividness by exaggeration, at the very least in raising his voice a little. Contrast with this the perfect temperance of this passage, the confident & unemotional reliance on the weight of what is said, not on the manner of saying it. The vividness of the portraiture arises from the quiet accuracy of vision and the care in the choice of simple but effective words; not from any seeking after the salient and graphic such as gives Kalidasa his wonderful power of description; and the bitterness of the taunts arises from the quiet & searching irony with which [each] shaft is tipped and not from any force used in driving them home. Yet every line goes straight as an arrow to its mark; every word is the utterance of a strong man speaking to a strong man and gives iron to the mind. Strength is one constant term of the Vyasic style; temperance, justness of taste is the other.

Strength and a fine austerity are then the two tests which give us safe guidance through the morass of the Mahabharata; where these two exist together, we may reasonably presume some touch of Vyasa; where they do not exist or do not conjoin, we feel at once the redactor or the interpolator. I have spoken of another poet whose more turbid & vehement style breaks continually into the pure gold of Vyasa’s work. The whole temperament of this redacting poet, for he is something more than an interpolator, has its roots in Valmikie; but like most poets of a secondary and fallible genius, he exaggerates while adopting the more audacious and therefore the more perilous tendencies of his master. The love of the wonderful touched with the grotesque, the taste for the amorphous, a marked element in Valmikie’s complex temperament, is with his follower something like a malady. He grows impatient with the apparent tameness of Vyasa’s inexorable self-restraint, and restlessly throws in here couplets, there whole paragraphs of a more flamboyant vigour. Occasionally this is done with real ability & success, but as a rule they are true purple patches, daubs of paint on the stainless dignity of marble. For his rage for the wonderful is not always accompanied by the prodigious sweep of imagination which in
Valmekie successfully grasps and compels the most reluctant materials. The result is that puerilities and gross breaches of taste fall easily & hardily from his pen. Not one of these could we possibly imagine as consistent with the severe, self-possessed intellect of Vyasa. Fineness, justness, discrimination & propriety of taste are the very soul of the man.

Nowhere is his restrained & quiet art more visible than when he handles the miraculous. But since the Mahabharata is so honeycombed with the work of inept wondermongers, we are driven for an undisturbed appreciation of it to works which are no parts of the original Mahabharata and are yet by the same hand, the Nala & the Savitrie. These poems have all the peculiar qualities which we have decided to be very Vyasa, the style, the diction, the personality are identical and refer us back to him as clearly as the sunlight refers us back to the sun; and yet they have something which the Mahabharata has not. Here we have the very morning of Vyasa’s genius, when he was young and ardent; perhaps still under the immediate influence of Valmekie (one of the most pathetic touches in the Nala is borrowed straight out of the Ramayana); at any rate able without ceasing to be finely restrained to give some rein to his fancy. The Nala therefore has the delicate & unusual romantic grace of a young & severe classic who has permitted himself to go-a-maying in the fields of romance. There is a remote charm of restraint in the midst of abandon, of vigilance in the play of fancy which is passing sweet & strange. The Savitrie is a maturer & nobler work, perfect & restrained in detail, but it has still some glow of the same youth and grace over it. This then is the rare charm of these two poems that we find there the soul of the pale & marble Rishi, the austere philosopher, the great statesman, the strong and stern poet of war & empire, when it was yet in its radiant morning, far from the turmoil of courts & cities & the roar of the battlefield and had not yet scaled the mountaintops of thoughts. Young, a Brahmachari & a student, Vyasa dwelt with the green silences of earth, felt the fascination & loneliness of the forests of which his earlier poetry is full, walked by many a clear & lucid river white with
the thronging waterfowl, perhaps Payoshni, that ocean-seeking stream, or heard the thunder of multitudinous crickets in some lone tremendous forest; with Valmekie’s mighty stanzas in his mind, saw giant-haunted glooms, dells where faeries gathered, brakes where some Python from the underworld came out to bask or listened to the voices of Kinnaries on the mountaintops. In such surroundings wonders might seem natural and deities as in Arcadia might peep from under every tree. Nala’s messengers to Damayanti are a troop of goldenwinged swans that speak with a human voice; he is intercepted on his way by gods who make him their envoy to a mortal maiden; he receives from them gifts more than human; fire and water come to him at his bidding and flowers bloom in his hands; in his downfall the dice become birds which fly away with his remaining garment; when he wishes to cut in half the robe of Damayanti, a sword comes ready to his hand in the desolate cabin; he meets the Serpent-King in the ring of fire and is turned by him into the deformed charioteer, Vahuka; the tiger in the forest turns away from Damayanti without injuring her and the lustful hunter falls consumed by the power of offended chastity. The destruction of the caravan by wild elephants, the mighty driving of Nala, the counting of the leaves of the [ ], the cleaving of the Vibhitaka tree; every incident almost is full of that sense of beauty & wonder which were awakened in Vyasa by his early surroundings. We ask whether this beautiful fairy-tale is the work of that stern and high poet with whom the actualities of life were everything and the flights of fancy counted for so little. Yet if we look carefully, we shall see in the Nala abundant proof of the severe touch of Vyasa, just as in his share of the Mahabharata fleeting touches of wonder & strangeness, gone as soon as glimpsed, evidence a love of the ultranatural, severely bitted and reined in. Especially do we see the poet of the Mahabharata in the artistic vigilance which limits each supernatural incident to a few light strokes, to the exact place and no other where it is wanted & the exact amount and no more that is necessary. (It is this sparing economy of touch almost unequalled in its beauty of just rejection, which makes the poem an epic instead of a fairy
tale in verse.) There is for instance the incident of the swans; we all know to what prolixities of pathos & bathos vernacular poets like the Gujarati Premanund have enlarged this feature of the story. But Vyasa introduced it to give a certain touch of beauty & strangeness and that touch once imparted the swans disappear from the scene; for his fine taste felt that to prolong the incident by one touch more would have been to lower the poem and run the risk of raising a smile. Similarly in the Savitrie what a tremendous figure a romantic poet would have made of Death, what a passionate struggle between the human being and the master of tears and partings! But Vyasa would have none of this; he had one object, to paint the power of a woman's silent love and he rejected everything which went beyond this or which would have been merely decorative. We cannot regret his choice. There have been plenty of poets who could have given us imaginative and passionate pictures of Love struggling with Death, but there has been only one who could give us a Savitrie.

In another respect also the Nala helps us materially to appreciate Vyasa’s genius. His dealings with nature are a strong test of a poet’s quality; but in the Mahabharata proper, of all epics the most pitilessly denuded of unnecessary ornament, natural description is rare. We must therefore again turn for aid to the poems which preceded his hard and lofty maturity. Vyasa’s natural description as we find it there, corresponds to the nervous, masculine and hardstrung make of his intellect. His treatment is always puissant and direct without any single pervasive atmosphere except in sunlit landscapes, but always effectual, realizing the scene strongly or boldly by a few simple but sufficient words. There are some poets who are the children of Nature, whose imagination is made of her dews, whose blood thrills to her with the perfect impulse of spiritual kinship; Wordsworth is of these and Valmekie. Their voices in speaking of her unconsciously become rich and liquid and their words are touched with a subtle significance of thought or emotion. There are others who hold her with a strong sensuous grasp by virtue of a ripe, sometimes an overripe delight in beauty; such are Shakespeare, Keats, Kalidasa. Others again approach her
with a fine or clear intellectual sense of her charm as do some of the old classical poets. Hardly in the rank of poets are those who like Dryden & Pope use her, if at all, only to provide them with a smooth or well-turned literary expression. Vyasa belongs to none of these, and yet often touches the first three at particular points without definitely coinciding with any. He takes the kingdom of Nature by violence. Approaching her from outside his masculine genius forces its way to her secret, insists and will take no denial. Accordingly he is impressed at first contact by the harmony in the midst of variety of her external features, absorbs these into a strong and retentive imagination, meditates on them and so reads his way to the closer impression, the inner sense behind that which is external, the personal temperament of a landscape. In his record of what he has seen, this impression more often than not comes first as that which abides & prevails; sometimes it is all he cares to record; but his tendency towards perfect faithfulness to the vision within leads him, when the scene is still fresh to his eye, to record the data through which the impression was reached. We have all experienced the way in which our observation of a scene, conscious or unconscious, forms itself out of various separate & often uncoordinated impressions, which if we write a description at the time or soon after and are faithful to ourselves, find their way into the picture even at the expense of symmetry; but if we allow a long time to elapse before we recall the scene, there returns to us only a single self-consistent impression which without accurately rendering it, retains its essence and its atmosphere. Something of this sort occurs in our poet; for Vyasa is always faithful to himself. When he records the data of his impression, he does it with force and clearness, frequently with a luminous atmosphere around the object, especially with a delight in the naked beauty of the single clear word which at once communicates itself to the hearer. First come the strong and magical epithets or the brief and puissant touches by which the soul of the landscape is made visible and palpable, then the enumeration sometimes only stately, at others bathed in a clear loveliness. The fine opening of the twelfth surga of the Nala is a signal example of this method. At the
threshold we have the great & sombre line

A void tremendous forest thundering
With crickets

striking the keynote of gloom & loneliness, then the cold stately
enumeration of the forest’s animal & vegetable peoples, then
again the strong and revealing epithet in his “echoing woodlands
sound-pervaded”; then follows “river & lake and pool and many
beasts and many birds” and once more the touch of wonder &
weirdness

She many alarming shapes
of fiend and snake and giant. . . . .
. . . . . beheld;

making magical the bare following lines and especially the near-
est, “and pools & tarns &
sumsmits everywhere”, with its poetical delight in the bare beauty
of words. It is instructive to compare with this passage the
wonderful silhouette of night in Valmekie’s Book of the Child

“Motionless are all trees and shrouded the beasts & birds and
the quarters filled, O joy of Raghu, with the glooms of night;
slowly the sky parts with evening and grows full of eyes; dense
with stars & constellations it glitters with points of light; and
now yonder with cold beams rising up the moon thrusts away
the shadows from the world gladdening the hearts of living
things on earth with its luminousness. All creatures of the night are walking to and fro and spirit bands and troops of giants and the carrion-feeding jackals begin to roam."

Here every detail is carefully selected to produce a certain effect, the charm and weirdness of falling night in the forest; not a word is wasted, every epithet, every verb, every image is sought out and chosen so as to aid this effect, while the vowelation is subtly managed and assonance and the composition of sounds skilfully & unobtrusively woven so as to create a delicate, wary & listening movement as of one walking in the forests by moonlight and afraid that the leaves may speak under his footing or his breath grow loud enough to be heard by himself or by beings whose presence he does not see but fears. Of such delicately imaginative art as this Vyasa was not capable; he could not sufficiently turn his strength into sweetness. Neither had he that rare, salient and effective architecture of style which makes Kalidasa’s “night on the verge of dawn with her faint gleaming moon and a few just-decipherable stars”

Vyasa’s art, as I have said, is singularly disinterested; he does not write with a view to sublimity or with a view to beauty, but because he has certain ideas to impart, certain events to describe, certain characters to portray. He has an image of these in his mind and his business is to find an expression for it which will be scrupulously just to his conception. This is by no means so facile a task as the uninitiated might imagine; it is in fact considerably more difficult than to bathe the style in colour and grace and literary elegance, for it demands vigilant concentration, firm intellectual truthfulness and unspiring rejection, the three virtues most difficult to the gadding, inventive and self-indulgent spirit of man. The art of Vyasa is therefore a great, strenuous and difficult art; but it unfitted him, as a similar spirit, unfitted the Greeks, to voice fully the outward beauty of Nature. For to delight infinitely in Nature one must be strongly
possessed with the sense of colour and romantic beauty, and allow the fancy equal rights with the intellect.

For all his occasional strokes of fine Nature description he was not therefore quite at home with her. Conscious of his weakness Vyasa as he emancipated himself from Valmekie's influence, ceased to attempt a kind for which his genius was not the best fitted. He is far more in his element in the expression of the feelings, of the joy and sorrow that makes this life of men; his description of emotion far excels his description of things. When he says of Damayanti

In grief she wailed,
Erect upon a cliff, her body aching
With sorrow for her husband,

the clear figure of the abandoned woman lamenting on the cliff seizes indeed the imagination, but has a lesser inspiration than the single puissant & convincing epithet भू-शोकरीतान्, her whole body affected with grief for her husband. Damayanti's longer laments are also of the finest sweetness & strength; there is a rushing flow of stately and sorrowful verse, the wailing of a regal grief; then as some more exquisite pain, some more piercing gust of passion traverses the heart of the mourner, golden felicities of sorrow leap out on the imagination like lightning in their swift clear greatness.

Still more strong, simple and perfect is the grief of Damayanti when she wakes to find herself alone in that desolate cabin. The restraint of phrase is perfect, the verse is clear, equable and unadorned, yet hardly has Valmekie himself written a truer utterance of emotion than this

www.holybooks.com
“Ah my lord! Ah my king! Ah my husband! why hast thou forsaken me? Alas, I am slain, I am undone; I am afraid in the lonely forest. Surely, O King, thou wert good & truthful; how then having sworn to me so, hast thou abandoned me in my sleep & fled? Long enough hast thou carried this jest of thine, O lion of men; I am frightened, O unconquerable; show thyself, my lord & prince. I see thee! I see thee! Thou art seen, lord of the Nishadhas, covering thyself there with the bushes; why dost thou not speak to me? Cruel king! that thou dost not come to me thus terrified here & wailing and comfort me! It is not for myself I grieve nor for aught else; it is for thee I weep thinking what will become of thee left all alone. How wilt thou fare under some tree at evening hungry & thirsty & weary not beholding me, O my King?”

The whole of this passage with its first pang of terror & the exquisite anticlimax “I am slain, I am undone, I am afraid in the desert wood” passing quickly into sorrowful reproach, the despairing & pathetic attempt to delude herself by thinking the whole a practical jest, and the final outburst of that deep maternal love which is a part of every true woman’s passion, is
great in its truth & simplicity. Steep and unadorned is Vyasa’s style, but at times it has far more power to move & to reach the heart than more elaborate & ambitious poetry.

As Vyasa progressed in years, his personality developed towards intellectualism and his manner of expressing emotion became sensibly modified. In the Savitrie he first reveals his power of imparting to the reader a sense of poignant but silent feeling, feeling in the air, unexpressed or rather expressed in action, sometimes even in very silence; this power is a notable element in some of the great scenes of the Mahabharata; the silence of the Pandavas during the mishandling of Draupadie, the mighty silence of Krishna while the assembly of kings rage and roar around him and Shishupal again & again hurls forth on him his fury & contempt and the hearts of all men are troubled, the stern self-restraint of his brothers when Yudhisthere is smitten by Virata; are instances of the power I mean. In the Mahabharata proper we find few expressions of pure feeling, none at least which have the triumphant power of Damayanti’s laments in the Nala. Vyasa had by this time taken his bent; his heart and imagination had become filled with the pomp of thought and genius and the greatness of all things mighty and bold and regal; when therefore his characters feel powerful emotion, they are impelled to express it in the dialect of thought. We see the heart in their utterances but it is not the heart in its nakedness, it is not the heart of the common man; or rather it is the universal heart of man but robed in the intellectual purple. The note of Sanscrit poetry is always aristocratic; it has no answer to the democratic feeling or to the modern sentimental cult of the average man, but deals with exalted, large and aspiring natures, whose pride it is that they do not act like common men (ग्राह्यते जनः). They are the great spirits, the महाजनः, in whose footsteps the world follows. Whatever sentimental objections may be urged against this high and arrogating spirit, it cannot be doubted that a literature pervaded with the soul of hero worship and noblesse oblige and full of great examples is eminently fitted to elevate and strengthen a nation and prepare it for a great part in history. It was as Sanscrit literature ceased to be universally read and understood,
as it became more & more confined to the Brahmins that the spirit of our nation began to decline. And it is because the echoes of that literature still lasted that the nation even in its downfall has played not altogether an ignoble part, that it has never quite consented as so many formerly great nations have done to the degradation Fate seemed determined to impose on it, that it has always struggled to assert itself, to live, to be something in the world of thought and action. And with this high tendency of the literature there is no poet who is so deeply imbued as Vyasa. Even the least of his characters is an intellect and a personality and of intellect and personality their every utterance reeks, as it were, and is full. I have already quoted the cry of Draupadie to Bhema; it is a supreme utterance of insulted feeling, and yet note how it expresses itself, in the language of intellect; in a thought.

The whole personality of Draupadie breaks out in that cry, her chastity, her pride, her passionate & unforgiving temper, but it flashes out not in an expression of pure feeling, but in a fiery and pregnant apophthegm. It is this temperament, this dynamic force of intellectualism blended with heroic fire and a strong personality that gives its peculiar stamp to Vyasa’s writing and distinguishes it from that of all other epic poets. The heroic & profoundly intellectual national type of the great Bharata races, the Kurus, Bhojas and Panchalas who created the Veda & the Vedanta, find in Vyasa their fitting poetical type and exponent, just as the mild and delicately moral temper of the more eastern Coshalas has realised itself in Valmekie and through the Ramayana so largely dominated Hindu character. Steeped in the heroic ideals of the Bharata, attuned to their profound and daring thought & temperament, Vyasa has made himself the poet of the highminded Kshatriya caste, voices their resonant speech, breathes their aspiring and unconquerable spirit, mirrors their rich and varied life with a loving detail and moves through his
subject with a swift yet measured movement like the march of an army towards battle.

A comparison with Valmekie is instructive of the varying genius of these great masters. Both excel in epical rhetoric — if such a term as rhetoric can be applied to Vyasa’s direct & severe style, but Vyasa’s has the air of a more intellectual, reflective & experienced stage of poetical advance. The longer speeches in the Ramayan, those even which have most the appearance of set, argumentative oration, proceed straight from the heart; the thoughts, words, reasonings come welling up from the dominant emotion or conflicting feelings of the speaker; they palpitate and are alive with the vital force from which they have sprung. Though belonging to a more thoughtful, gentle and cultured civilisation than Homer’s they have, like his, the large utterance which is not of primitive times, but of the primal emotions. Vyasa’s have a powerful but austere force of intellectuality. In expressing character they firmly expose it rather than spring half-unconsciously from it; their bold and finely-planned consistency with the original conception reveals rather the conscientious painstaking of an inspired but reflective artist than the more primary and impetuous creative impulse. In their management of emotion itself a similar difference becomes prominent. Valmekie when giving utterance to a mood or passion simple or complex, surcharges every line, every phrase, turn of words or movement of verse with it; there are no lightning flashes but a great depth of emotion swelling steadily, inexhaustibly and increasingly in a wonder of sustained feeling, like a continually rising wave with low crests of foam. Vyasa has a high level of style with a subdued emotion behind it occasionally breaking into poignant outbursts. It is by sudden beauties that he rises above himself and not only exalts, stirs and delights as at his ordinary level, but memorably seizes the heart and imagination. This is the natural result of his peculiarly disinterested art which never seeks out anything striking for its own sake, but admits it only when it arises uncalled from the occasion.

From this difference in temper and mode of expression arises a difference in the mode also of portraying character.
Vyasa’s knowledge of character is not so intimate, emotional and sympathetic as Valmekie’s; it has more of a heroic inspiration, less of a divine sympathy. He has reached it not like Valmekie immediately through the heart and imagination, but deliberately through intellect and experience, a deep criticism and reading of men; the spirit of shaping imagination has come afterwards like a sculptor using the materials labour has provided for him. It has not been a light leading him into the secret places of the heart. Nevertheless the characterisation, however reached, is admirable and firm. It is the fruit of a lifelong experience, the knowledge of a statesman who has had much to do with the ruling of men and has been himself a considerable part in some great revolution full of astonishing incidents and extraordinary characters. With that high experience his brain and his soul are full. It has cast his imagination into colossal proportions & provided him with majestic conceptions which can dispense with all but the simplest language for expression; for they are so great that the bare precise statement of what is said and done seems enough to make language epical. His character-drawing indeed is more epic, less psychological than Valmekie’s. Truth of speech and action give us the truth of nature and it is done with strong purposeful strokes that have the power to move the heart & enlarge and ennoble the imagination which is what we mean by the epic in poetry. In Valmekie there are marvellous & revealing touches which show us the secret something in character usually beyond the expressive power either of speech or action; they are touches oftener found in the dramatic artist than the epic, and seldom fall within Vyasa’s method. It is the difference between strong and purposeful artistic synthesis and the beautiful subtle & involute symmetry of an organic existence evolved and inevitable rather than shaped or purposed.

Vyasa is therefore less broadly human than Valmekie, he is at the same time a wider & more original thinker. His supreme intellect rises everywhere out of the mass of insipid or turbulent redaction and interpolation with bare and grandiose outlines. A wide searching mind, historian, statesman, orator, a deep and keen looker into ethics and conduct, a subtle and high aiming
politician, a theologian & philosopher,—it is not for nothing that Hindu imagination makes the name of Vyasa loom so large in the history of Aryan thought and attributes to him work so important and manifold. The wideness of the man’s intellectual empire is evident throughout his work; we feel the presence of the Rishi, the original thinker who has enlarged the boundaries of ethical & religious outlook.

Modern India, since the Musulman advent, has accepted the politics of Chanakya in preference to Vyasa’s. Certainly there was little in politics concealed from that great and sinister spirit. Yet Vyasa perhaps knew its subtleties quite as well, but he had to ennoble and guide him a high ethical aim and an august imperial idea. He did not, like European imperialism, unable to rise above the idea of power, accept the Jesuitic doctrine of any means to a good end, still less justify the goodness of the end by that profession of an utterly false disinterestedness which ends in the soothing belief that plunder, arson, outrage & massacre are committed for the good of the slaughtered nation. Vyasa’s imperialism frankly accepts war & empire as the result of man’s natural lust for dominion, but demands that empire should be won by noble and civilized methods, not in the spirit of the savage, and insists once it is won not on its powers, but on its duties. Valmekie too has included politics in his wide sweep; his picture of an ideal imperialism is sound and noble and the spirit of the Coshalan Ixvaacous that monarchy must be broad-based on the people’s will and yet broader-based on justice, truth and good government, is admirably developed as an undertone of the poem. But it is an undertone only, not as in the Mahabharata its uppermost and weightiest drift. Valmekie’s approach to politics is imaginative, poetic, made from outside. He is attracted to it by the unlimited curiosity of an universal mind and still more by the appreciation of a great creative artist; only therefore when it gives opportunities for a grandiose imagination or is mingled with the motives of conduct and acts on character. He is a poet who makes occasional use of public affairs as part of his wide human subject. The reverse may with some appearance of truth be said of Vyasa that he is interested in human action
and character mainly as they move and work in relation to a large political background.

His deep preoccupation with the ethical issues of speech and action is very notable. His very subject is one of practical ethics, the establishment of a Dharmyarajya, an empire of the just, by which is meant no millennium of the saints but the practical ideal of a government with righteousness, purity and unselfish toil for the common good as its saving principles. It is true that Valmekie has a more humanely moral spirit than Vyasa, in as much as ordinary morality is most effective when steeped in emotion, proceeding from the heart & acting through the heart. Vyasa’s ethics like everything else in him takes a double stand on intellectual scrutiny and acceptance and on personal strength of character; his characters having once adopted by intellectual choice & in harmony with their temperaments a given line of conduct, throw the whole heroic force of their nature into its pursuit. He is therefore preeminently a poet of action. Krishna is his authority in all matters religious and ethical and it is noticeable that Krishna lays far more stress on action and far less on quiescence than any other Hindu philosopher. Quiescence in God is with him as with others the ultimate goal of existence; but he insists that this quiescence must be reached through action and so far as this life is concerned, must exist in action; quiescence of the soul from desires there must be but there should not be and there cannot be quiescence of the Prakriti from action.

न कर्माणामानार्मभागेष्कम्य पुरुषोऽशुष्णः।
न च सम्भवसनावेत सिद्धि समतद्भविश्वित।
न हि कार्यस्वप्नमतितरु निःस्वकर्मकृत।
कार्यवते ध्यासः कर्म सर्वः प्रकृतिज्ञेयः ॥ ५ ॥
नियमं कुरु कर्म त्वं कर्म ज्ञायं द्वाकरमः।
शरीरयावापि च तेन प्रसिद्धेकर्मं ॥

“Not by refraining from actions can a man enjoy actionlessness

8 This sentence was written at the top of the manuscript page. It seems to have been meant for insertion here. — Ed.
nor by mere renunciation does he reach his soul's perfection; for no man in the world can even for one moment remain without doing works; everyone is forced to do works, whether he will or not, by the primal qualities born of Prakriti. . . . Thou do action self-controlled (or else "thou do action ever"), for action is better than inaction; if thou actest not, even the maintenance of thy body cannot be effected."

Hence it follows that merely to renounce action and flee from the world to a hermitage is but vanity, and that those who rely on such a desertion of duty for attaining God lean on a broken reed. The professed renunciation of action is only a nominal renunciation, for they merely give up one set of actions to which they are called for another to which in a great number of cases they have no call or fitness. If they have that fitness, they may certainly attain God, but even then action is better than Sannyasa. Hence the great & pregnant paradox that in action is real actionlessness, while inaction is merely another form of action itself.

“He who quells his sense-organs of action but sits remembering in his heart the objects of sense, that man of bewildered soul is termed a hypocrite.” “Sannyasa (renunciation of works) and Yoga through action both lead to the highest good but of the two Yoga through action is better than renunciation of action. Know him to be the perpetual Sannyasi who neither loathes nor longs; for he, O great-armed, being free from the dualities is
easily released from the chain.” “He who can see inaction in action and action in inaction, he is the wise among men, he does all actions with a soul in union with God.”

From this lofty platform the great creed rises to its crowning ideas, for since we must act but neither for any human or future results of action nor for the sake of the action itself, and yet action must have some goal to which it is devoted, there is no goal left but God. We must devote then our actions to God & through that rise to complete surrender of the personality to him, whether in the idea of him manifest through Yoga or the idea of him Unmanifest through Godknowledge. “They who worship me as the imperishable, illimitable, unmanifest, controlling all the organs, oneminded to all things, they doing good to all creatures attain to me. But far greater is their pain of endeavour whose hearts cleave to the Unmanifest; for hardly can salvation in the unmanifest be attained by men that have a body. But they who reposing all actions in Me, to Me devoted contemplate and worship me in singleminded Yoga, speedily do I become their saviour from the guls of death & the world, for their hearts, O Partha, have entered into me. On Me repose thy mind, pour into Me thy reason, in Me wilt thou have then thy dwelling, doubt it not. Yet if thou canst not steadfastly repose thy mind in Me, desire, O Dhananjaya, to reach me by Yoga through askesis. If that too thou canst not, devote thyself to action for Me; since also by doing actions for My sake thou wilt attain thy soul's perfection. If even for this thou art too feeble then abiding in Yoga with me with a soul subdued abandon utterly desire for the fruits of action. For better than askesis is knowledge, and better than knowledge is concentration and better than concentration is renunciation of the fruit of deeds, for upon such renunciation followeth the soul's peace”. Such is the ladder which Vyasa has represented Krishna as building up to God with action for its firm & sole basis. If it is questioned whether the Bhagavadgita is the work of Vyasa (whether he be Krishna of the Island is another question to be settled on its own merits), I answer that there is nothing to disprove his
Notes on the Mahabharata

authorship, while on the other hand allowing for the exigencies of philosophical exposition the style is undoubtedly either his or so closely modelled on his as to defy differentiation. Moreover the whole piece is but the philosophical justification and logical enlargement of the gospel of action, preached by Krishna in the Mahabharat proper, the undoubted work of this poet. I have here no space for anything more than a quotation. Sanjaya has come to the Pandavas from Dhritarashtra and dissuaded them from battle in a speech taught him by that wily & unwise monarch; it is skilfully aimed at the most subtle weakness of the human heart, representing the abandonment of justice & their duty as a holy act of self-abnegation and its pursuit as no better than wholesale murder and parricide. It is better for the sons of Pandou to be dependents, beggars & exiles all their lives than to enjoy the earth by the slaughter of their brothers, kinsmen and spiritual guides: contemplation is purer & nobler than action & worldly desires. Although answering firmly to the envoy, the children of Pandou are in their hearts shaken; for as Krishna afterward tells Karna, when the destruction of a nation is at hand wrong comes to men’s eyes clothed in the garb of right. Sanjaya’s argument is one Christ & Buddha would have endorsed; Christ & Buddha would have laboured to confirm the Pandavas in their scruples. On Krishna rests the final word & his answer is such as to shock seriously the conventional ideas of a religious teacher to which Christianity & Buddhism have accustomed us. In a long & powerful speech he deals at great length with Sanjaya’s arguments. We must remember therefore that he is debating a given point and speaking to men who have not like Arjuna the adhikar to enter into the “highest of all mysteries”. We shall then realise the close identity between his teaching here and that of the Gita.

www.holybooks.com
The drift of Vyasa’s ethical speculation has always a definite and recognizable tendency; there is a basis of customary morality and there is a higher ethic of the soul which abolishes in its crowning phase the terms virtue and sin, because to the pure all things are pure through an august and selfless disinterestedness. This ethic takes its rise naturally from the crowning height of the Vedantic philosophy, where the soul becomes conscious of its identity with God who whether acting or actionless is untouched by either sin or virtue. But the crown of the Vedanta is only for the highest; the moral calamities that arise from the attempt of an unprepared soul to identify Self with God is sufficiently indicated in the legend of Indra and Virochana. Similarly this higher ethic is for the prepared, the initiated only, because the raw and unprepared soul will seize on the nondistinction between sin and virtue without first compassing the godlike purity without which such nondistinction is neither morally admissible nor actually conceivable. From this arises the unwillingness of Hinduism, so ignorantly attributed by Europeans to priestcraft and the Brahmin, to shout out its message to the man in the street or declare its esoteric thought to the shoeblack & the kitchenmaid. The sword of knowledge is a doubleedged weapon; in the hands of the hero it can save the world, but it must not be made a plaything for children. Krishna himself ordinarily insists on all
men following the duties & rules of conduct to which they are born and to which the cast of their temperaments predestined them. Arjouna he advises, if incapable of rising to the higher moral altitudes, to fight in a just cause because that is the duty of the caste, the class of souls to which he belongs. Throughout the Mahabharata he insists on this standpoint that every man must meet the duties to which his life calls him in a spirit of disinterestedness, — not, be it noticed, of self-abnegation, which may be as much a fanaticism and even a selfishness as the grossest egoism itself. It is because Arjouna has best fulfilled this ideal, has always lived up to the practice of his class in a spirit of disinterestedness and self-mastery that Krishna loves him above all human beings and considers him and him alone fit to receive the higher initiation.

“This is that ancient Yoga which I tell thee today; because thou art My adorer and My heart’s comrade; for this is the highest mystery of all.”

And even the man who has risen to the heights of the initiation must cleave for the good of society to the pursuits and duties of his order; for if he does not, the world which instinctively is swayed by the examples of its greatest, will follow in his footsteps; the bonds of society will then crumble asunder and chaos come again; mankind will be baulked of its destiny. Srikrishna illustrates this by his own example, the example of God in his manifest form.
“Looking also to the maintenance of order in the world thou shouldst act; for whatever the best practises, that other men practise; for the standard set by him is followed by the whole world. In all the Universe there is for Me no necessary action, for I have nothing I do not possess or wish to possess, and lo I abide always doing. For if I abide not at all doing action vigilantly, men would altogether follow in my path, O son of Pritha; these worlds would sink if I did not actions, and I should be the author of confusion (literally illegitimacy, the worst & primal confusion, for it disorders the family which is the fundamental unit of society) and the destroyer of the peoples. What the ignorant do, O Bharata, with their minds enslaved to the work, that the wise man should do with a free mind to maintain the order of the world; the wise man should not upset the mind of the ignorant who are slaves of their deeds, but should apply himself to all works doing customary things with a mind in Yoga.”

It is accordingly not by airy didactic teaching so much as in the example of Krishna — & this is the true epic method — that Vyasa develops his higher ethic which is the morality of the liberated mind. But this is too wide a subject to be dealt with in the limits I have at my command. I have dwelt on Vyasa’s ethical standpoint because it is of the utmost importance in the present day. Before the Bhagavadgita with its great epic commentary, the Mahabharata of Vyasa, had time deeply to influence the national mind, the heresy of Buddhism seized hold of us. Buddhism with its exaggerated emphasis on quiescence & the quiescent virtue of self-abnegation, its unwise creation of a separate class of
quiescents & illuminati, its sharp distinction between monks & laymen implying the infinite inferiority of the latter, its all too facile admission of men to the higher life and its relegation of worldly action to the lowest importance possible stands at the opposite pole from the gospel of Srikrishna and has had the very effect he deprecates; it has been the author of confusion and the destroyer of the peoples. Under its influence half the nation moved in the direction of spiritual passivity & negation, the other by a natural reaction plunged deep into a splendid but enervating materialism. As a result our race lost three parts of its ancient heroic manhood, its grasp on the world, its magnificently ordered polity and its noble social fabric. It is by clinging to a few spars from the wreck that we have managed to perpetuate our existence, and this we owe to the overthrow of Buddhism by Shankaracharya. But Hinduism has never been able to shake off the deep impress of the religion it vanquished; and therefore though it has managed to survive, it has not succeeded in recovering its old vitalising force. The practical disappearance of the Kshatriya caste (for those who now claim that origin seem to be with a few exceptions Vratya Kshatriyas, Kshatriyas who have fallen from the pure practice and complete temperament of their caste) has operated in the same direction. The Kshatriyas were the proper depositaries of the gospel of action; Srikrishna himself declares

इम्य विवस्यन्ते योंगे प्रोक्तवाकानहमयेयं।
विवस्यान्तवे प्राहू मूर्तिक्षाकाकंभ्रोत।
एवं परम्पराप्राप्तमेष मार्गमयं निम्नेऽ॥

“This imperishable Yoga I revealed to Vivaswan, Vivaswan declared it to Manou, Manou to Ixvaacou told it; thus did the royal sages learn this as a hereditary knowledge”,

and when in the immense lapse of time it was lost, Srikrishna again declared it to a Kshatriya. But when the Kshatriyas disappeared or became degraded, the Brahmins remained the sole interpreters of the Bhagavadgita, and they, being the highest
caste or temperament and their thoughts therefore naturally turned to knowledge and the final end of being, bearing moreover still the stamp of Buddhism in their minds, have dwelt mainly on that in the Gita which deals with the element of quiescence. They have laid stress on the goal but they have not echoed Srikrishna’s emphasis on the necessity of action as the one sure road to the goal. Time, however, in its revolution is turning back on itself and there are signs that if Hinduism is to last and we are not to plunge into the vortex of scientific atheism and the breakdown of moral ideals which is engulfing Europe, it must survive as the religion for which Vedanta, Sankhya & Yoga combined to lay the foundations, which Srikrishna announced & which Vyasa formulated. No apeings or distorted editions of Western religious modes, no Indianised Christianity, no fair rehash of that pale & consumptive shadow English Theism, will suffice to save us.

But Vyasa has not only a high political & religious thought and deepseeing ethical judgments; he deals not only with the massive aspects & worldwide issues of human conduct, but has a keen eye for the details of government and society, the ceremonies, forms & usages, the religious & social order on the due stability of which the public welfare is grounded. The principles of good government & the motives & impulses that move men to public action no less than the rise and fall of States & the clash of mighty personalities and great powers form, incidentally & epically treated, the staple of Vyasa’s epic. The poem was therefore, first & foremost, like the Iliad and Aeneid and even more than the Iliad and Aeneid, national — a poem in which the religious, social and personal temperament and ideals of the Aryan nation have found a high expression and its institutions, actions, heroes in the most critical period of its history received the judgments and criticisms of one of its greatest and soundest minds. If this had not been so we should not have had the Mahabharata in its present form. Valmekie had also dealt with a great historical period in a yet more universal spirit and with finer richness of detail but he approached it in a poetic and dramatic manner; he created rather than criticised; while Vyasa
in his manner was the critic far more than the creator. Hence later poets found it easier and more congenial to introduce their criticisms of life and thought into the Mahabharata than into the Ramayana. Vyasa’s poem has been increased to threefold its original size; the additions to Valmeki’s, few in themselves if we set apart the Uttarakanda, have been immaterial & for the most part of an accidental nature.

Gifted with such poetical powers, limited by such intellectual and emotional characteristics, endowed with such grandeur of soul and severe purity of taste, what was the special work which Vyasa did for his country and in what beyond the ordinary elements of poetical greatness lies his claim to world-wide acceptance? It has been suggested already that the Mahabharata is the great national poem of India. It is true the Ramayan also represents an Aryan civilisation idealised: Rama & Sita are more intimately characteristic types of the Hindu temperament as it finally shaped itself than are Arjouna & Draupadie; Srikrishna though his character is founded in the national type, yet rises far above it. But although Valmeki writing the poem of mankind drew his chief figures in the Hindu model and Vyasa, writing a great national epic, lifted his divine hero above the basis of national character into an universal humanity, yet the original purpose of either poem remains intact. In the Ramayan under the disguise of an Aryan golden age the wide world with all its elemental impulses and affections finds itself mirrored. The Mahabharata reflects rather a great Aryan civilization with the types, ideas, aims and passions of a heroic and pregnant period in the history of a high-hearted and deep-thoughted nation. It has, moreover, as I have attempted to indicate, a formative ethical and religious spirit which is absolutely corrective to the faults that have most marred in the past and mar to the present day the Hindu character and type of thought. And it provides us with this corrective not in the form of an alien civilisation difficult to assimilate and associated with other elements as dangerous to us as this is salutary, but in a great creative work of our own literature written by the mightiest of our sages (मुनीनामयेहे श्याम: Krishna has said), one therefore who speaks our own language,
On the Mahabharata

thinks our own thoughts and has the same national cast of mind, nature & conscience. His ideals will therefore be a corrective not only to our own faults but to the dangers of that attractive but unwholesome Asura civilisation which has invaded us, especially its morbid animalism and its neurotic tendency to abandon itself to its own desires.

But this does not say all. Vyasa too beyond the essential universality of all great poets, has his peculiar appeal to humanity in general making his poem of worldwide as well as national importance. By comparing him once again with Valmekie we shall realize more precisely in what this appeal consists. The Titanic impulse was strong in Valmekie. The very dimensions of his poetical canvas, the audacity and occasional recklessness of his conceptions, the gust with which he fills in the gigantic outlines of his Ravana are the essence of Titanism; his genius was so universal & Protean that no single element of it can be said to predominate, yet this tendency towards the enormous enters perhaps as largely into it as any other. But to the temperament of Vyasa the Titanic was alien. It is true he carves his figures so largely (for he was a sculptor in creation rather than a painter like Valmekie) that looked at separately they seem to have colossal stature but he is always at pains so to harmonise them that they shall appear measurable to us and strongly human. They are largely & boldly human, impressive & sublime, but never Titanic. He loves the earth and the heavens but he visits not Pataala nor the stupendous regions of Vrishapurvan. His Rakshasas, supposing them to be his at all, are epic giants or matter-of-fact ogres, but they do not exhale the breath of midnight and terror like Valmekie’s demons nor the spirit of worldshaking anarchy like Valmekie’s giants. This poet could never have conceived Ravana. He had neither unconscious sympathy nor a sufficient force of abhorrence to inspire him. The passions of Duryodhana though presented with great force of antipathetic insight, are human and limited. The Titanic was so foreign to Vyasa’s habit of mind that he could not grasp it sufficiently either to love or hate. His humanism shuts to him the outermost gates of that sublime and menacing region; he has not the secret of the storm
nor has his soul ridden upon the whirlwind. For his particular work this was a real advantage. Valmekie has drawn for us both the divine and anarchic in extraordinary proportions; an Akbar or a Napoleon might find his spiritual kindred in Rama or Ravana; but with more ordinary beings such figures impress the sense of the sublime principally and do not dwell with them as daily acquaintances. It was left for Vyasa to create epically the human divine and the human anarchic so as to bring idealisms of the conflicting moral types into line with the daily emotions and imaginations of men. The sharp distinction between Deva & Asura is one of the three distinct & peculiar contributions to ethical thought which India has to offer. The legend of Indra & Virochana is one of its fundamental legends. Both of them came to Vrihaspati to know from him of God; he told them to go home & look in the mirror. Virochana saw himself there & concluding that he was God, asked no farther; he gave full rein to the sense of individuality in himself which he mistook for the deity. But Indra was not satisfied: feeling that there must be some mistake he returned to Vrihaspati and received from him the true Godknowledge which taught him that he was God only because all things were God, since nothing existed but the One. If he was the one God, so was his enemy; the very feelings of separateness and enmity were no permanent reality but transient phenomena. The Asura therefore is he who is profoundly conscious of his own separate individuality & yet would impose it on the world as the sole individuality; he is thus blown along on the hurricane of his desires & ambitions until he stumbles & is broken, in the great phrase of Aeschylus, against the throne of Eternal Law. The Deva on the contrary stands firm in the luminous heaven of self-knowledge; his actions flow not inward towards himself but outwards toward the world. The distinction that India draws is not between altruism and egoism but between disinterestedness and desire. The altruist is profoundly conscious of himself and he is really ministering to himself even in his altruism; hence the hot & sickly odour of sentimentalism and the taint of the Pharisee which clings about European altruism. With the perfect Hindu the feeling of self

www.holybooks.com
has been merged in the sense of the universe; he does his duty equally whether it happens to promote the interests of others or his own; if his action seems oftener altruistic than egoistic it is because our duty oftener coincides with the interests of others than with our own. Rama’s duty as a son calls him to sacrifice himself, to leave the empire of the world and become a beggar & a hermit; he does it cheerfully and unflinchingly: but when Sita is taken from him, it is his duty as a husband to rescue her from her ravisher and as a Kshatriya to put Ravana to death if he persists in wrongdoing. This duty also he pursues with the same unflinching energy as the first. He does not shrink from the path of the right because it coincides with the path of self-interest. The Pandavas also go without a word into exile & poverty, because honour demands it of them; but their ordeal over, they will not, though ready to drive compromise to its utmost verge, consent to succumb utterly to Duryodhana, for it is their duty as Kshatriyas to protect the world from the reign of injustice, even though it is at their own expense that injustice seeks to reign. The Christian & Buddhistic doctrine of turning the other cheek to the smiter, is as dangerous as it is impracticable. The continual European see-saw between Christ on the one side and the flesh & the devil on the other with the longer trend towards the latter comes straight from a radically false moral distinction & the lip profession of an ideal which mankind has never been either able or willing to carry into practice. The disinterested & desireless pursuit of duty is a gospel worthy of the strongest manhood; that of the cheek turned to the smiter is a gospel for cowards & weaklings. Babes & sucklings may practise it because they must, but with others it is a hypocrisy.

The gospel of the नित्यानं भर्म and the great poetical creations which exemplify & set it off by contrast, this is the second aspect of Vyasa’s genius which will yet make him interesting and important to the whole world.
Vyasa; some Characteristics.¹

The Mahabharata, although neither the greatest nor the richest masterpiece of the secular literature of India, is at the same time its most considerable and important body of poetry. Being so it is the pivot on which the history of Sanscrit literature, and incidentally the history of Aryan civilisation in India, must perforce turn. To the great discredit of European scholarship the problem of this all-important work is one that remains not only unsolved, but untouched. Yet until it is solved, until the confusion of its heterogeneous materials is reduced to some sort of order, the different layers of which it consists separated, classed and attributed to their relative dates, and its relations with the Ramayan on the one hand and the Puranic and classic literature on the other fully & patiently examined, the history of our civilisation must remain in the air, a field for pedantic wranglings and worthless conjectures. The world knows something of our origins because much labour has been bestowed on the Vedas, something of our decline because post-Buddhistic literature has been much read, annotated and discussed, but of our great medial and flourishing period it knows little, and that little is neither coherent nor reliable.

All that we know of the Mahabharata at present is that it is the work of several hands and of different periods — this is literally the limit of the reliable knowledge European scholarship has so far been able to extract from it. For the rest we have to be content with arbitrary conjectures based either upon an unwarrantable application of European analogies to Indian things or random assumptions snatched from a word here or a line there, but never proceeding from that weighty, careful & unbiassed

¹ This original opening of “Notes on the Mahabharata” was left unc cancelled in the manuscript. See the Note on the Texts for an explanation of how the essay was revised.
— Ed.
study of the work canto by canto, passage by passage, line by line, which can alone bring us to any valuable conclusions. A fancy was started in Germany that the Iliad of Homer is really a pastiche or clever rifacimento of old ballads put together in the time of Pisistratus. This truly barbarous imagination with its rude ignorance of the psychological bases of all great poetry has now fallen into some discredit; it has been replaced by a more plausible attempt to discover a nucleus in the poem, an Achilleid, out of which the larger Iliad has grown. Very possibly the whole discussion will finally end in the restoration of a single Homer with a single poem subjected indeed to some inevitable interpolation and corruption, but mainly the work of one mind, a theory still held by more than one considerable scholar. In the meanwhile, however, haste has been made to apply the analogy to the Mahabharata; lynx-eyed theorists have discovered in the poem — apparently without taking the trouble to study it — an early and rude ballad epic worked up, doctored and defaced by those wicked Brahmins, who are made responsible for all the literary and other enormities which have been discovered by the bushelful, and not by European lynxes alone — in our literature and civilisation. Now whether the theory is true or not, and one sees nothing in its favour, it has at present no value at all; for it is a pure theory without any justifying facts. It is not difficult to build these intellectual cardhouses; anyone may raise them by the dozen who can find no better manner of wasting valuable time. A similar method of “arguing from Homer” is probably at the bottom of Professor Weber’s assertion that the War Purvas contain the original epic. An observant eye at once perceives that the War Purvas are far more hopelessly tangled than any that precede them except the first. It is here & here only that the keenest eye becomes confused & the most confident explorer begins to lose heart & self-reliance. But the Iliad is all battles and it therefore follows in the European mind that the original Mahabharata must have been all battles. Another method is

2 The four-page passage beginning with this sentence and ending with “moral cer-
tainty” on page 341 was incorporated by Sri Aurobindo in the rewritten version of this piece (pages 280–84). — Ed.
that of ingenious, if forced argument from stray slokas of the poem or equally stray & obscure remarks in Buddhist compilations. The curious theory of some scholars that the Pandavas were a later invention and that the original war was between the Kurus and Panchalas only and Professor Weber’s singularly positive inference from a sloka which does not at first sight bear the meaning he puts on it, that the original epic contained only 8800 lines, are ingenuities of this type. They are based on the Teutonic art of building a whole mammoth out of a single and often problematical bone, and remind one strongly of Mr. Pickwick and the historic inscription which was so rudely, if in a Pickwickian sense, challenged by the refractory [Mr. Blotton.] All these theorisings are idle enough; they are made of too airy a stuff to last. (Only a serious scrutiny of the Mahabharat made with a deep sense of critical responsibility and according to the methods of patient scientific inference, can justify on in advancing any considerable theory on this wonderful poetic structure.)

Yet to extricate the original epic from the mass of accretions is not, I believe, so difficult a task as it may at first appear. One is struck in perusing the Mahabharata by the presence of a mass of poetry which bears the style and impress of a single, strong and original, even unusual mind, differing in his manner of expression, tone of thought & stamp of personality not only from every other Sanscrit poet we know but from every other great poet known to literature. When we look more closely into the distribution of this peculiar style of writing, we come to perceive certain very suggestive & helpful facts. We realise that this impress is only found in those parts of the poem which are necessary to the due conduct of the story, seldom to be detected in the more miraculous, Puranistic or trivial episodes, but usually broken up by passages and sometimes shot through with lines of a discernibly different inspiration. Equally noteworthy is it that nowhere does this poet admit any trait, incident or speech which deviates from the strict propriety of dramatic characterisation & psychological probability. Finally Krishna’s divinity is recognized, but more often hinted at than aggressively stated. The tendency is to keep it in the background as a fact to which,
while himself crediting it, the writer does not hope for universal consent, still less is able to speak of it as of a general tenet & matter of dogmatic belief; he prefers to show Krishna rather in his human character, acting always by wise, discerning and inspired methods, but still not transgressing the limit of human possibility. All this leads one to the conclusion that in the body of poetry I have described, we have the real Bharata, an epic which tells plainly and straightforwardly of the events which led to the great war and the empire of the Bharata princes. Certainly if Prof. Weber’s venturesome assertion as to the length of the original Mahabharata be correct, this conclusion falls to the ground; for the mass of this poetry amounts to considerably over 20,000 slokas. Professor Weber’s inference, however, is worth some discussion; for the length of the original epic is a very important element in the problem. If we accept it, we must say farewell to all hopes of unravelling the tangle. His assertion is founded on a single & obscure verse in the huge prolegomena to the poem which take up the greater part of the Adi Purva, no very strong basis for so far-reaching an assumption. The sloka itself says no more than this that much of the Mahabharata was written in so difficult a style that Vyasa himself could remember only 8800 of the slokas, Suka an equal amount and Sanjaya perhaps as much, perhaps something less. There is certainly here no assertion such as Prof. Weber would have us find in it that the Mahabharata at any time amounted to no more than 8800 slokas. Even if we assume what the text does not say that Vyasa, Suka & Sanjaya knew the same 8800 slokas, we do not get to that conclusion. The point simply is that the style of the Mahabharat was too difficult for a single man to keep in memory more than a certain portion of it. This does not carry us very far. If however we are to assume that there is more in this verse than meets the eye, that it is a cryptic way of stating the length of the original poem; and I do not deny that this is possible, perhaps even probable — we should note the repetition of वेलि — अहुँ वेलि अहुँ वेलि साध्यो वेलि व न व. Following the genius of the Sanskrit language we are led to suppose the repetition was intended to recall अहुँ लेखोसहृदयाणि etc. with each name; otherwise the repetition has
no raison d’être; it is otiose & inept. But if we understand it thus, the conclusion is irresistible that each knew a different 8800, or the writer would have no object in wishing us to repeat the number three times in our mind. The length of the epic as derived from this single sloka should then be 26,400 slokas or something less, for the writer hesitates about the exact number to be attributed to Sanjaya. Another passage further on in the prolegomena agrees remarkably with this conclusion and is in itself much more explicit. It is there stated plainly enough that Vyasa first wrote the Mahabharata in 24,000 slokas and afterwards enlarged it to 100,000 for the world of men as well as a still more unconscionable number of verses for the Gandhurva and other worlds. In spite of the embroidery of fancy, of a type familiar enough to all who are acquainted with the Puranic method of recording facts, the meaning of this is unmistakeable. The original Mahabharata consisted of 24,000 slokas, but in its final form it runs to 100,000. The figures are probably loose & slovenly, for at any rate the final form of the Mahabharata is considerably under 100,000 slokas. It is possible therefore that the original epic was something over 24,000 and under 26,400 slokas, in which case the two passages would agree well enough. But it would be unsafe to found any dogmatic assertion on isolated couplets; at the most we can say that we are justified in taking the estimate as a probable and workable hypothesis and if it is found to be corroborated by other facts, we may venture to suggest its correctness as a moral certainty.

This body of poetry then, let us suppose, is the original Mahabharata. Tradition attributes it to Krishna of the Island called Vyasa who certainly lived about this time and was an editor of the Vedas; and since there is nothing in this part of the poem which makes the tradition impossible and much which favours it, we may, as a matter both of convenience and of probability, accept it at least provisionally. Whether these hypotheses can be upheld is a question for long and scrupulous consideration and analysis. In this article I wish to formulate, assuming their validity, the larger features of poetical style, the manner of thought & creation & the personal note of Vyasa.
The problem of the Mahabharata, its origin, date and composition, is one that seems likely to elude scholarship to times indefinite if not for ever. It is true that several European scholars have solved all these to their own satisfaction, but their industrious & praiseworthy efforts [incomplete]

In the following pages I have approached the eternal problem of the Mahabharata from the point of view mainly of style & literary personality, partly of substance; but in dealing with the substance I have deferred questions of philosophy, allusion & verbal evidence to which a certain school attach great importance and ignored altogether the question of minute metrical details on which they base far-reaching conclusions. It is necessary therefore out of respect for these scholars to devote some little space to an explanation of my standpoint. I contend that owing to the peculiar manner in which the Mahabharat has been composed, these minutiae of detail & word have very little value. The labour of this minute school has proved beyond dispute one thing and one only, that the Mahabharat was not only immensely enlarged, crusted with interpolations & accretions and in parts rewritten and modified, but even its oldest parts were verbally modified in the course of preservation. The extent to which this happened, has I think been grossly exaggerated, but that it did happen, one cannot but be convinced. Now if this is so, it is obvious that arguments from verbal niceties must be very dangerous. It has been sought to prove from a single word suranga, an underground tunnel, which European scholars believe to be identical with the Greek συράγα that the account in the Adi Purva of the Pandavas’ escape from the burning house of Purochana through an underground tunnel must be later than another account in the Vana Purva which represents Bhema as carrying his brothers & mother out of the flames; for the
former they say, must have been composed after the Indians had learned the Greek language & culture and the latter, it is to be assumed, before that interesting period. Now whether suranga was derived from the Greek συραγα or not, I cannot take upon me to say, but will assume on the authority of better linguists than myself that it was so though I think it is as well to be sceptical of all such Greek derivations until the connection is proved beyond doubt, for such words even when not accounted for by Sanscrit itself, may very easily be borrowed from the aboriginal languages. Bengali for instance preserves the form sudanga where the cerebral letter is Dravidian. But if so, if this word came into fashion along with Greek culture, and became the word for a tunnel, what could be more natural than that the reciter should substitute for an old and now disused word the one which was familiar to his audience? Again much has been made of the frequent occurrence of Yavana, Vahlika, Pehlava, Saka, Huna. As to Yavana its connection with ίάων does not seem to me beyond doubt. It had certainly been at one time applied to the Bactrian Greeks, but so it has been and is to the present day applied to the Persians, Afghans & other races to the northwest of India. Nor is the philological connection between ίάων and Yavana very clear to my mind. Another form Yauna seems to represent ίάων fairly well; but are we sure that Yauna and Yavana were originally identical? A mere resemblance however close is the most misleading thing in philology. Upon such resemblances Pocock made out a very strong case for his theory that the Greeks were a Hindu colony. The identity of the Sakas & Sakyas was for a long time a pet theory of European Sanscritists and on this identity was based the theory that Buddha was a Scythian reformer of Hinduism. This identity is now generally given up, yet it is quite as close as that of Yavana & Yauna and as closely in accordance with the laws of the Sanscrit language. If Yauna is the original form, why was it changed to Yavana; it is no more necessary than that mauna be changed to mavana; if Yavana be earlier & Yauna a Pracrit corruption, how are we to account for the short a & the v; there was no digamma in Greek in the time of Alexander. But since the Greeks are always called
Yavanas in Buddhist writings we will waive the demand for strict philological intelligibility and suppose that Yavana answers to Ἰάων. The question yet remains when did the Hindus become acquainted with the existence of the Greeks. Now here the first consideration is why did they call the Greeks Ionians, and not Hellenes or Macedonians? That the Persians should know the Greeks by that name is natural enough, for it was with the Ionians that they first came in contact; but it was not Ionians who invaded India under Alexander, it was not an Ionian prince who gave his daughter to Chundragupta, it was not an Ionian conqueror who crossed the Indus & besieged [ ]. Did the Macedonians on their victorious march give themselves out as Ionians? I for my part do not believe it. It is certain therefore that if the Hindus took the word Yavana from Ἰάων, it must have been through the Persians and not direct from the Greek language. But the connection of the Persians with India was as old as Darius Hystaspes who had certainly reason to know the Greeks. It is therefore impossible to say that the Indians had not heard about the Greeks as long ago as 500 B.C. Even if they had not, the mention of Yavanas & Yavan kings does not carry us very far; for it is evident that in the earlier parts of the Mahabharata they are known only as a strong barbarian power of the Northwest; there is no sign of their culture being known to the Hindus. It is therefore quite possible that the word Yavana now grown familiar may have been substituted by the later reciters for an older name no longer familiar. It is now known beyond reasonable doubt that the Mahabharata war was fought out in or about 1190 B.C.; Dhritarashtra, son of Vichitravirya, Krishna, son of Devaki & Janamejaya are mentioned in Vedic works of a very early date. There is therefore no reason to doubt that an actual historical event is recorded with whatever admixture of fiction in the Mahabharata. It is also evident that the Mahabharata, not any “Bharata” or “Bharati Katha” but the Mahabharata existed before the age of Panini, and tho’ the radical school bring down Panini [incomplete]
Notes on the Mahabharata

by Aurobind Ghose

dealing with the authenticity of each separate canto, i.e. whether it belongs or not to the original epic of 24,000 slokas on the great catastrophe of the Bharatas.

Udyogapurva.

Canto I.

1 कुरुप्रजीवः . . . स्वप्नक्षाः. This may mean in Vyasa’s elliptic manner the great Kurus (i.e. the Pandavas) & those of their side. Otherwise “The Kuru heroes of his own side” i.e. Abhimanyu’s which is awkward.

2 यद्य त्रिवेदि यथेष्ठाः स्वर्णितो यथेष्ठाः. This supplies the reason of their preeminence.

5 प्रधुमसान्नी च युधि प्रवीणी। This establishes Pradyumna & Samba as historical sons of Krishna.

6 विराटपुरैक्षVirata has therefore several sons, three at least.

7 The simile is strictly in the style of Vyasa who cares little for newness or ingenuity, so long as the image called up effects its purpose. The assonance राजः सा राजपत्रो is an epic assonance altogether uncommon in Vyasa & due evidently to the influence of Valmekie.

8 strong brief & illumining strokes of description which add to the naturalness of the scene e.g. ततः कथान्ते समवाययुक्तः while also adding a touch that reveals the inwardness of the situation कृष्णं विचिन्ताय। पुरुषप्रजीवः। तथ्यैव च परिचितयन्त। कृष्णं नृपाः समुदीक्षामण्॥

9 संपत्तिः: surely means “assembled” and nothing else. P. C. Roy in taking it as “drew their attention to” shows his usual slovenliness. Lele also errs in his translation. He interprets it
“as soon as the talk was over Krishna assembled the kings for the affairs of the Pandavas.” But the kings were already assembled & seated; not only so but they were waiting for Krishna to begin. It is absurd to suppose that as soon as Krishna began speaking they left their seats and clustered round him like a pack of schoolboys. Yet this is the only sense in which we can take Lele’s rendering. I prefer to take the obvious sense of the words. “As soon as they had reached an end of talk, those lion kings assembled by the Son of Modhou in the interests of the Pandava listened in a body to his high thoughted and fateful speech.”

सुमहोदयं having mighty consequences.

10 अथ here beside me. See verse 4. Yudhisthere is sitting just by Krishna, separated by him [from] Virata.

अभयती not given by Apte.

11 तरसः तरस् expresses any swift, violent & impetuous act; anything that has the momentum of strength & impulse or fire & energy

सत्यरथिः This is a word of doubtful import. It may [mean] “of unerring chariots” i.e. skilful fighters, or else “honourable fighters”, रथ: being used as in महारथः, अविरथः = fighter in a chariot. Cf. सत्यराक्षस. In the first case the epithet would be otiose & ornamental & an epic assonance. I cannot think however that Vyasa was capable of putting a purely decorative epic epithet in so emphatic a place. It must surely mean either 2 [i.e. “honourable fighters”] or “making truth their chariot”; रथ being used as in मनोरथ etc. The latter however is almost too much a flight of fancy for Vyasa.

12 वपोदस्य— agreeing with संस्कार: which the mind supplies from वर्णित in the last line; a verb also has to be supplied from विवेध. This is the true Vyasa style.

विवेध. विवेध to abide. This sense, though not given in Apte may be deduced from विवेध: Impersonal. It has been dwelt [incomplete]

1 Another gloss: तरसा energy, speed, violence, force. The word always gives an idea of swiftness & strength.
13 It will be seen from Krishna's attitude here as elsewhere that he was very far from being the engineer & subtle contriver of war into which later ideas have deformed him. That he came down to force on war & destroy the Kshatriya caste whether to open India to the world or for other cause, is an idea that was not present to the mind of Vyasa. Later generations writing when the pure Kshatriya caste had almost disappeared, attributed this motive for God's descent upon earth, just as a modern English Theosophist, perceiving British rule established in India, has added the corollary that he destroyed the Kshatriyas (five thousand years ago, according to her own belief) in order to make the line clear for the English. What Vyasa on the other hand makes us feel is that Krishna, though fixed to support justice at every cost, was earnestly desirous to support it by peaceful means if possible. His speech is an evident attempt to restrain the eagerness of the Mutsyas & Panchalas who were bent on war as the only means of overthrowing the Kuru domination.

14 Krishna's testimony to Yudhisthere's character is here of great importance.

अधमंयेण न च कामायेत राज्यं सृणामार्पित धर्मराजः।
धर्माभिधुक्ते तु महापरिप्रेयं सामग्रिफः कष्टिष्ठिष्यं बुध्येत्॥

That Yudhistha has deserved this character to the letter so far anyone who has followed the story will admit. If he acts in diametrical opposition to this character in any future passage we shall have some ground to pause before we admit the genuineness of the passage.

बुध्येत् उपरेत् वो देशलेप्यं न कर्मात्मकं।
श्रुतिस्य न नामपदं राजां धर्मात्मकं॥

15 Another gloss: उपरेत् desiderative of अ in the sense of “get, obtain”;

16 That is, if Duryodhana had taken the kingdom from the Pandavas in fair war by his own energy & genius (व्यक्तिज्ञान),

3 Another gloss: दुर्भिप्रेत् desiderative of अ in the sense of “get, obtain”: would aspire after
he would not have transgressed the ordinary धर्म of the Kshat-riya. In that case the Pandavas might have accepted the verdict of Fate and refrained from plunging the country in farther bloodshed.

17 This seems to point to the “Digvijayapurva”; but the reference is general & may apply to the Rajasuya generally.

प्रयोग by force, pressure; as a result of conquest in open battle.

18 बालास्मिमे An allusion to the early persecution of the Pandavas by Duryodhana. If we accept this purva in its completeness, we must accept the genuineness in the main of the early narrative of the Adi Purva in so far as it [is] covered by this sloka. Notice especially विविधे र्मायः:

तु The force is “But you know what the Dhartarastras are, their fierceness, falseness & landhunger; how even in the childhood of the Pandavas these, their banded foemen, sought to slay them by various means.”

22 तथापि = for all their good will. It is part of the inverted commas implied in शति

एव = at least.

वत्स्युयुष्म would at least do their utmost.

23 स्वभावत definitely; though they may form a shrewd guess.

24 राज्यग्रहणम् Krishna does not, at present at any rate suggest a compromise; let them first make their full claim to which they are entitled. (Notice Genitive).

प्रोहितयान This title is evidently a misnomer; there is no mention of the Purohit, far less does he set out as yet nor need we suppose he is hinted at in the description of a suitable envoy. It is doubtful whether Krishna would have singled out a Panchala Purohit as the best intermediary between the Kurus for he evidently desired to try conciliation first, before resorting to threats. The choice of the Purohita was that of King Drupada and the leaders of the Brahmavarta nations who desired to break the supremacy among them of the Kurus.
This Canto is in the very finest & most characteristic style of Vyasa; precise, simple & hardy in phrasing, with a strong, curt, decisive movement & a pregnant mode of expression, in which a kernel of thought is expressed & its corollaries suggested so as to form a thought-atmosphere around it. There is no superfluous or lost word or sentence, but each goes straight to its mark and says something which wanted to be said. The speech of Krishna is admirably characteristic of the man as we have seen him in the Sabhapurva; firm & precise in outlook and sure of its own drift, it is yet full of an admirably disinterested & statesmanlike broadmindedness.4

Canto 2.

11 [दीव्यमान:]5 प्रतिबीत्य चतुष्कोण: Can this not mean “being challenged to dice played against Saubala or in acceptance of the challenge” or must it mean “gambled & that against Saubala”?

---

4 A briefer statement is found in the other notebook used for these notes:
Every line of this Canto is characteristic of Vyasa in style, atmosphere & thought. It is also indispensable to the conduct of the epic.

5 MS दीव्यमान:
[Notes on Adi Purva, Adhyaya 1]

*Importance attached to गुर्ज्याखं:.* I. 73. (Other) poets have not
genius enough to improve on this poem just as the three other
asramas are unable to improve on the householder’s asrama.

*Application of the word “काव्यम्” to poetry.* “You have called this
a poem; a poem therefore it shall be.” How far does this bear
on the date of the Prolegomena?

*Story of Ganesha as bearing on the length of the original poem.*
Slokas 78 . . 83.

*Sense that the ethical & historical is the main drift of the poem.*
Repeated statements that the Mahabharata is a popular expo-
sition of the teaching of the Veda & Vedanta (दृष्टि).

*General (passim): Application of “Puran” & “Itihas” to Maha-
bharata. Ancient idea of the universality of the poem.*

Mahabharat — Dronapurva.

1. उदीयविशेषतः ||प्रेमी आल्प्यः:
In this adhyaya slokas 261 to 35 & half 36 & 46 belong to
the epic: the rest is introduction, framework and padding.
2. The first three verses are alternative openings. 1 belongs to
the epic.

Slokas 31. may be rejected, perhaps, as a mere repetition of
a former verse.

1 *This refers probably to the verse beginning with the words रतिलिङ्ग: भगवतिः, which is
numbered 24 or 25 in some editions.* — Ed.
Part Three

On Education

Sri Aurobindo wrote the pieces in this part at different times between 1899 and 1920. All of them except “Education” and “National Education” were published in periodicals shortly after they were written.
Address at the
Baroda College Social Gathering

IN ADDRESSING you on an occasion like the present, it is inevitable that the mind should dwell on one feature of this gathering above all others. Held as it is towards the close of the year, I am inevitably reminded that many of its prominent members are with us for the last time in their College life, and I am led to speculate with both hope and anxiety on their future careers, and this not only because several familiar faces are to disappear from us and scatter into different parts of the country and various walks of life, but also because they go out from us as our finished work, and it is by their character and life that our efforts will be judged. When I say, our efforts, I allude not merely to the professorial work of teaching, not to book-learning only, but to the entire activity of the College as a great and complex educational force, which is not solely meant to impart information, but to bring out or give opportunities for bringing out all the various intellectual and other energies which go to make up a man. And here is the side of collegiate institutions of which this Social Gathering especially reminds us, the force of the social life it provides in moulding the character and the mind. I think it will not be out of place, if in dwelling on this I revert to the great Universities of Oxford and Cambridge which are our famous exemplars, and point out a few differences between those Universities and our own and the thoughts those differences may well suggest.

I think there is no student of Oxford or Cambridge who does not look back in after days on the few years of his undergraduate life as, of all the scenes he has moved in, that which calls up the happiest memories, and it is not surprising that this should be so, when we remember what that life must have meant to him. He

Delivered in Baroda on 22 July 1899. Text published in the Baroda College Miscellany, September 1899.

www.holybooks.com
goes up from the restricted life of his home and school and finds himself in surroundings which with astonishing rapidity expand his intellect, strengthen his character, develop his social faculties, force out all his abilities and turn him in three years from a boy into a man. His mind ripens in the contact with minds which meet from all parts of the country and have been brought up in many various kinds of trainings, his unwholesome eccentricities wear away and the unsocial, egoistic elements of character are to a large extent discouraged. He moves among ancient and venerable buildings, the mere age and beauty of which are in themselves an education. He has the Union which has trained so many great orators and debaters, has been the first trial ground of so many renowned intellects. He has, too, the athletics clubs organized with a perfection unparalleled elsewhere, in which, if he has the physique and the desire for them he may find pursuits which are also in themselves an education. The result is that he who entered the University a raw student, comes out of it a man and a gentleman, accustomed to think of great affairs and fit to move in cultivated society, and he remembers his College and University with affection, and in after days if he meets with those who have studied with him he feels attracted towards them as to men with whom he has a natural brotherhood. This is the social effect I should like the Colleges and Universities of India also to exercise, to educate by social influences as well as those which are merely academical and to create the feeling among their pupils that they belong to the community, that they are children of one mother. There are many obstacles to this result in the circumstances of Indian Universities. The Colleges are not collected in one town but are scattered among many and cannot assemble within themselves so large and various a life. They are new also, the creation of not more than fifty years — and fifty years is a short period in the life of a University. But so far as circumstances allow, there is an attempt to fill up the deficiency, in your Union, your Debating Club and Reading Room, your athletic sports and Social Gathering. For the success of this attempt time is needed, but your efforts are also needed: and I ask you who are soon to go out into the world, not to forget your
College or regard it as a mere episode in your life, but rather as one to whose care you must look back and recompense it by your future life and work, and if you meet fellow-students, alumni of the same College, to meet them as friends, as brothers.

There is another point in which a wide difference exists. What makes Oxford and Cambridge not local institutions but great and historic Universities? It is the number of great and famous men, of brilliant intellects in every department which have issued from them. I should like you to think seriously of this aspect of the question also. In England the student feels a pride in his own University and College, wishes to see their traditions maintained, and tries to justify them to the world by his own success. This feeling has yet to grow up among us. And I would appeal to you — who are leaving us — to help to create it, to cherish it yourselves, to try and justify the College of its pupils. Of course, there is one preliminary method by which the students can add fame to their College. Success in examinations, though preliminary merely, and not an end in itself, is nevertheless of no small effect or importance. You all know how the recent success of an Indian student has filled the whole country with joy and enthusiasm. That success reflects fame not only on India but on his University and College, and when the name of the first Indian Senior Wrangler is mentioned, it will also be remembered that he belonged to Cambridge and to St. John’s. But examinations, however important, are only a preliminary. I lay stress upon this because there is too much of a tendency in this country to regard education as a mere episode, finished when once the degree is obtained. But the University cannot and does not pretend to complete a man’s education; it merely gives some materials to his hand or points out certain paths he may tread, and it says to him,— “Here are the materials I have given into your hands, it is for you to make of them what you can;” or — “These are the paths I have equipped you to travel; it is yours to tread them to the end, and by your success in them justify me before the world.”

I would ask you therefore to remember these things in your future life, not to drop the effects of your College training as
no longer necessary, but, to strive for eminence and greatness in
your own lines, and by the brilliance of your names add lustre to
the first nursing home of your capacities, to cherish its memory
with affection as that which equipped your intellects, trained
you into men, and strove to give you such social life as might
fit you for the world. And finally I would ask you not to sever
yourselves in after days from it, but if you are far, to welcome
its alumni when you meet them with brotherly feelings and if
you are near to keep up connection with it, not to regard the
difference of age between yourselves and its future students but
associate with them, be present at such occasions as this social
gathering and evince by your acts your gratitude for all that it
did for you in the past.
Your Highness and Gentlemen,

The subject on which I wish to address you this evening, and if you are sufficiently interested and have sufficient patience to pursue the subject farther with me, for perhaps another evening or two, is Education. Some of you may ask yourselves, why this subject rather than another? It is not a new subject but rather quite a threadbare one; you have already heard and read much about it and probably listened to much better lectures on the subject than any I can give you; it has besides been handled by a great many men in high places of authority; most of all, it has been taken up by no less a person than Lord Curzon himself and measures are to be formulated and perhaps carried into execution for the reform of what is defective in the present system. “What more do you want,” you will perhaps ask, “or why should we trouble ourselves about it? The Government of India will in its own good time reform the whole business and of course when their new system is in force the Baroda Schools and Colleges will assimilate themselves to it. Meanwhile it is quite superfluous for us to bother our heads about the matter.” Now in answer to that attitude I have to say this that the Government of India is in the first place not the fit body to formulate the necessary improvements and in the second place not the fit instrument to put them into force. It is not fit to formulate them because it cannot realise and feel as we do where the shoe pinches us and therefore in mending it [incomplete]

INTELLECTUAL

We now come to the intellectual part of education, which is certainly larger and more difficult, although not more important than physical training and edification of character. The Indian
University system has confined itself entirely to this branch and it might have been thought that this limitation & concentration of energy ought to have been attended by special efficiency & thoroughness in the single branch it had chosen. But unfortunately this is not the case. If the physical training it provides is contemptible and the moral training nil, the mental training is also meagre in quantity and worthless in quality. People commonly say that it is because the services & professions are made the object of education that this state of things exists. This I believe to be a great mistake. A degree is necessary for service and therefore people try to get a degree. Good! let it remain so. But in order for a student to get a degree let us make it absolutely necessary that he shall have a good education. If a worthless education is sufficient in order to secure his object & a good education quite unessential, it is obvious that the student will not incur great trouble and diversion of energy in order to acquire what he feels to be unnecessary. But change this state of things, make culture & true science essential and the same interested motive which now makes him content with a bad education will then compel him to strive after culture and true science. As practical men we must recognise that the pure enthusiasm of knowledge for knowledge's sake operates only on exceptional minds or in exceptional eras. In civilised countries a general desire for knowledge as a motive for education does exist but it is largely accompanied with the earthier feeling that knowledge is necessary to keep up one's position in society or to succeed in certain lucrative or respectable pursuits & professions. We in India have become so barbarous that we send our children to school with the grossest utilitarian motives unmixed with any disinterested desire for knowledge; but the education we receive is itself responsible for this. Nobody can cherish disinterested enthusiasm for a bad education; it can only be regarded as a means to some practical end. But make the education good, thorough & interesting and the love of knowledge will of itself awake in the mind and so mingle with & modify more selfish objects.

The real source of the evil we complain of is therefore something different; it is a fundamental & deplorable error by which
we in this country have confused education with the acquisition of knowledge and interpreted knowledge itself in a singularly narrow & illiberal sense. To give the student knowledge is necessary, but it is still more necessary to build up in him the power of using his knowledge. It would hardly be a good technical education for a carpenter to be taught how to fell trees so as to provide himself with wood & never to learn how to prepare tables, chairs & cabinets or even what tools were necessary for his craft. Yet this is precisely what our system of education does. It trains the memory and provides the student with a store of facts & secondhand ideas. The memory is the woodcutter’s axe and the store he acquires is the wood he has cut down in his course of tree felling. When he has done this, the University says to him “We now declare you a Bachelor of Carpentry; we have given you a good & sharp axe and a fair nucleus of wood to begin with. Go on, my son, the world is full of forests and provided the Forest Officer does not object you can cut down trees & provide yourself with wood to your heart’s content.” Now the student who goes forth thus equipped, may become a great timber-merchant but unless he is an exceptional genius he will never be even a moderate carpenter. Or to return from the simile to the fact, the graduate from our colleges may be a good clerk, a decent vakil or a tolerable medical practitioner, but unless he is an especial genius, he will never be a great administrator or a great lawyer or an eminent medical specialist. These eminences have to be filled up mainly by Europeans. If an Indian wishes to rise to them, he has to travel thousands of miles over the sea in order to breathe an atmosphere of liberal knowledge, original science and sound culture. And even then he seldom succeeds, because his lungs are too debilitated to take in a good long breath of that atmosphere.

The first fundamental mistake has been, therefore, to confine ourselves to the training of the storing faculty memory and the storage of facts and to neglect the training of the three great manipulating faculties, viz. the power of reasoning, the power of comparison and differentiation and the power of expression. These powers are present to a certain extent in all men above the
state of the savage and even in a rudimentary state in the savage himself; but they exist especially developed in the higher classes of civilised nations, wherever these higher classes have long centuries of education behind them. But, however highly developed by nature, these powers demand cultivation, they demand that bringing out of natural abilities which is the real essence of education. If not so brought out in youth, they become rusted & stopped with dirt, so that they cease to act except in a feeble, narrow & partial manner. Exceptional genius does indeed assert itself in spite of neglect and discouragement, but even genius self-developed does not often achieve as happy results and as free & large a working as the same genius properly equipped & trained. Amount of knowledge is in itself not of the first importance; but to make the best use of what we know. The easy assumption of our educationists that we have only to supply the mind with a smattering of facts in each department of knowledge & the mind can be trusted to develop itself and take its own suitable road, is contrary to science, contrary to human experience and contrary to the universal opinion of civilised countries. Indeed the history of intellectual degeneration in gifted races always begins with the arrest of these three mental powers by the excessive cultivation of mere knowledge at their expense. Much as we have lost as a nation, we have always preserved our intellectual alertness, quickness & originality; but even this last gift is threatened by our University system, & if it goes, it will be the beginning of irretrievable degradation & final extinction.

The very first step in reform must therefore be to revolutionize the whole aims & methods of our education. We must accustom teachers to devote nine-tenths of their energies to the education of the active mental faculties, while the passive retaining faculty, which we call the memory, should occupy a recognised & well-defined but subordinate place, and we must direct our school & university examinations to the testing of these active faculties & not of the memory. For this is an object which cannot be effected by the mere change or rearrangement of the curriculum. It is true that certain subjects are more apt to develop certain faculties than others; the power of accurate
reasoning is powerfully assisted by Geometry, Logic & Political Economy; one of the most important results of languages is to refine & train the power of expression, and nothing more enlarges the power of comparison & differentiation than an intelligent study of history. But no particular subject except language is essential, still less exclusively appropriated, to any given faculty. There are types of intellect, for instance, which are constitutionally incapable of dealing with geometrical problems or even with the formal machinery of Logic, and are yet profound, brilliant & correct reasoners in other intellectual spheres. There is in fact hardly any subject, the sciences of calculation excepted, which in the hands of a capable teacher, does not give room for the development of all the general faculties of the mind. The first thing needed therefore is the entire and unsparing rejection of the present methods of teaching in favour of those which are now being universally adopted in the more advanced countries of Europe.

But even in the narrower sphere of knowledge acquisition to which our system has confined itself, it has been guilty of other blunders quite as serious. Apart from pure mathematics, which stands on a footing of its own, knowledge may be divided into two great heads, the knowledge of things & the knowledge of men, i.e. to say of human thought, human actions, human nature and human creations as recorded, preserved or pictured in literature, history, philosophy & art. The latter is covered in the term humanities or humane letters, and the idea of a liberal education was formerly confined to these, though it was subsequently widened to include mathematics & has again been widened in modern times to include a modicum of science. The humanities, mathematics & science are therefore the three sisters in the family of knowledge and any self-respecting system of education must in these days provide facilities for mastery in any one of these as well as for a modicum of all. The first great error of our system comes in here. While we insist on passing our students through a rigid & cast-iron course of knowledge in everything, we give them real knowledge in nothing. [What does an average Bombay graduate who has taken English Literature for
his optional subject, know of that literature? He has read a novel of Jane Austen or the Vicar of Wakefield, a poem of Tennyson or a book of Milton, at most two plays of Shakespeare, a work of Bacon’s or Burke’s full of ideas which he is totally incompetent to digest and one or two stray books of Pope, Dryden, Spenser or other, & to crown this pretentious little heap a mass of secondhand criticism dealing with poets & writers of whom he has not studied a single line. When we remember that English is the main study of our schools & colleges, what a miserable outturn is this, what a wretched little mouse out of that mountain of drudgery from which the voice of the oppressed student is heard painfully & monotonously repeating like Valmekie under his mound the lesson with which he has been crammed. But he is far more unfortunate than Valmekie, his mar mar mar has not been converted into Ram Ram Ram; for while he thinks he has been repeating the saving word which gives intellectual salvation, it has been unknown to him converted into a death dealing word which causes intellectual sterility & impotence.]1

Mathematics for instance is a subject in which it ought not to be difficult to give thorough knowledge, for most of its paths are well beaten and being a precise & definite subject it does not in itself demand so much & such various powers of original thought & appreciation as literature & history; yet it is the invariable experience of the most brilliant mathematical students who go from Calcutta or Bombay to Cambridge that after the first year they have exhausted all they have already learned and have to enter on entirely new & unfamiliar result. It is surely a deplorable thing that it should be impossible to acquire a thorough mathematical education in India, that one should have to go thousands of miles and spend thousands of rupees in order to get it. Again if we look at Science, what is the result of the pitiful modicum of science acquired under our system? At the best it turns out good teachers who can turn others through the same mill in which they themselves have been ground. But the object of scientific instruction [incomplete]

1 Passage bracketed by Sri Aurobindo in the manuscript. — Ed.
The Brain of India
THE TIME has perhaps come for the Indian mind, long pre-occupied with political and economic issues, for a widening of its horizon. Such a widening is especially necessary for Bengal.

The Bengali has always led and still leads the higher thought of India, because he has eminently the gifts which are most needed for the new race that has to arise. He has the emotion and imagination which is open to the great inspirations, the mighty heart-stirring ideas that move humanity when a great step forward has to be taken. He has the invaluable gift of thinking with the heart. He has, too, a subtle brain which is able within certain limits to catch shades of meaning and delicacies of thought, both those the logic grasps and those which escape the mere logical intellect. Above all, he has in a greater degree than other races the yet undeveloped faculty of direct knowledge, latent in humanity and now to be evolved, which is above reason and imagination, the faculty which in Sri Ramakrishna, the supreme outcome of the race, dispensed with education and commanded any knowledge he desired easily and divinely. It is a faculty which now works irregularly in humanity, unrecognised and confused by the interference of the imagination, of the limited reason and of the old associations or saṃskāras stored in the memory of the race and the individual. It cannot be made a recognised and habitual agent except by the discipline which the ancient Indian sages formulated in the science of Yoga. But certain races have the function more evolved or more ready for evolution than the generality of mankind, and it is these that will lead in the future evolution. In addition, the race has a mighty will-power which comes from the long worship of Shakti and practice of the Tantra that has been a part of our culture for many centuries. No other people could have revolutionised its
whole national character in a few years as Bengal has done. The Bengali has always worshipped the Divine Energy in her most terrible as well as in her most beautiful aspects; whether as the Beautiful or the Terrible Mother he has never shrunk from her whether in fear or in awe. When the divine force flowed into him he has never feared to yield himself up to it and follow the infinite prompting, careless whither it led. As a reward he has become the most perfect ādāra of Shakti, the most capable and swiftly sensitive and responsive receptacle of the Infinite Will and Energy the world now holds. Recently that Will and Energy has rushed into him and has been lifting him to the level of his future mission and destiny. He has now to learn the secret of drawing the Mother of Strength into himself and holding her there in a secure possession. That is why we have pointed to a religious and a spiritual awakening as the next necessity and the next inevitable development.

But along with his great possessions the Bengali has serious deficiencies. In common with the rest of India he has a great deficiency of knowledge, the result of an education meagre in quantity and absolutely vicious in method and quality. And he is inferior to other Indian races, such as the Madrasi and Maratha, in the capacity of calm, measured and comprehensive deliberation which is usually called intellect or reasoning power, and which, though it is far from the whole of thought, is essential to the completeness of thought and action. By itself the logical or reasoning intellect creates the accurate and careful scholar, the sober critic, the rationalist and cautious politician, the conservative scientist, that great mass of human intelligence which makes for slow and careful progress. It does not create the hero and the originator, the inspired prophet, the mighty builder, the maker of nations; it does not conquer nature and destiny, lay its hand on the future, command the world. The rest of India is largely dominated by this faculty and limited by it, therefore it lags behind while Bengal rushes forward. The rest of India has feared to deliver itself to the Power that came down from above to uplift the nation; it has either denied its call or made reservations and insisted on guiding it and reining it in. A few
mighty men have stridden forward and carried their race or a part of it with them, but the whole race must be infused with the spirit before it can be fit for the work of the future.

On his side the Bengali, while in no way limiting the divine inrush or shortening the Titan stride, must learn to see the way he is going while he treads it. For want of a trained thought-power, he follows indeed the ideas that seize him, but he does not make them thoroughly his own. He thinks them out, if at all, rapidly but not comprehensively, and, in consequence, though he has applied them with great energy to the circumstances immediately around him, a new set of circumstances finds him perplexed and waiting for a lead from the few men to whom he has been accustomed to look for the source of his thought and action. This is a source of weakness. For the work of the present, and still more, for the work of the future, it is imperatively necessary to create a centre of thought and knowledge which will revolutionise the brain of the nation to as great an extent as its character and outlook has been revolutionised. A new heart was necessary for our civilisation, and, though the renovation is not complete, the work that has been done in that direction will ensure its own fulfilment. A new brain is also needed, and sufficiency of knowledge for the new brain to do its work with thoroughness.
NEW centre of thought implies a new centre of education. The system prevailing in our universities is one which ignores the psychology of man, loads the mind laboriously with numerous little packets of information carefully tied with red tape, and, by the methods used in this loading process, damages or atrophies the faculties and instruments by which man assimilates, creates and grows in intellect, manhood and energy. The new National Education, as inaugurated in Bengal, sought immensely to enlarge the field of knowledge to which the student was introduced, and in so far as it laid stress on experiment and observation, employed the natural and easy instrument of the vernacular and encouraged the play of thought on the subject of study, corrected the habit of spoiling the instruments of knowledge by the use of false methods. But many of the vicious methods and ideas employed by the old system were faithfully cherished by the new, and the domination of the Council by men wedded to the old lines was bound to spell a most unfavourable effect on the integrity of the system in its most progressive features. Another vital defect of the new education was that it increased the amount of information the student was required to absorb without strengthening the body and brain sufficiently to grapple with the increased mass of intellectual toil, and it shared with the old system the defect of ignoring the psychology of the race. The mere inclusion of the matter of Indian thought and culture in the field of knowledge does not make a system of education Indian, and the instruction given in the Bengal National College was only an improved European system, not Indian or National. Another error which has to be avoided and to which careless minds are liable, is the reactionary idea that in order to be national, education must reproduce the features of the old *tol* system of Bengal. It is not eighteenth
century India, the India which by its moral and intellectual deficiencies gave itself into the keeping of foreigners, that we have to revive, but the spirit, ideals and methods of the ancient and mightier India in a yet more effective form and with a more modern organisation.

What was the secret of that gigantic intellectuality, spirituality and superhuman moral force which we see pulsating in the Ramayana and Mahabharata, in the ancient philosophy, in the supreme poetry, art, sculpture and architecture of India? What was at the basis of the incomparable public works and engineering achievements, the opulent and exquisite industries, the great triumphs of science, scholarship, jurisprudence, logic, metaphysics, the unique social structure? What supported the heroism and self-abandonment of the Kshatriya, the Sikh and the Rajput, the unconquerable national vitality and endurance? What was it that stood behind that civilisation second to none in the massiveness of its outlines or the perfection of its details? Without a great and unique discipline involving a perfect education of soul and mind, a result so immense and persistent would have been impossible. It would be an error to look for the secret of Aryan success in the details of the instruction given in the old ashrams and universities so far as they have come down to us. We must know what was the principle and basis on which the details were founded. We shall find the secret of their success in a profound knowledge of human psychology and its subtle application to the methods of intellectual training and instruction.

At the basis of the old Aryan system was the all-important discipline of Brahmacharya. The first necessity for the building up of a great intellectual superstructure is to provide a foundation strong enough to bear it. Those systems of education which start from an insufficient knowledge of man, think they have provided a satisfactory foundation when they have supplied the student with a large or well-selected mass of information on the various subjects which comprise the best part of human culture at the time. The school gives the materials, it is for the student to use them,—this is the formula. But the error here is fundamental. Information cannot be the foundation of intelligence, it
can only be part of the material out of which the knower builds knowledge, the starting-point, the nucleus of fresh discovery and enlarged creation. An education that confines itself to imparting knowledge, is no education. The various faculties of memory, judgment, imagination, perception, reasoning, which build the edifice of thought and knowledge for the knower, must not only be equipped with their fit and sufficient tools and materials, but trained to bring fresh materials and use more skilfully those of which they are in possession. And the foundation of the structure they have to build, can only be the provision of a fund of force and energy sufficient to bear the demands of a continually growing activity of the memory, judgment and creative power. Where is that energy to be found?

The ancient Aryans knew that man was not separate from the universe, but only a homogeneous part of it, as a wave is part of the ocean. An infinite energy, Prakriti, Maya or Shakti, pervades the world, pours itself into every name and form, and the clod, the plant, the insect, the animal, the man are, in their phenomenal existence, merely more or less efficient ādhāras of this Energy. We are each of us a dynamo into which waves of that energy have been generated and stored, and are being perpetually conserved, used up and replenished. The same force which moves in the star and the planet, moves in us, and all our thought and action are merely its play and born of the complexity of its functionings. There are processes by which man can increase his capacity as an ādhāra. There are other processes by which he can clear of obstructions the channel of communication between himself and the universal energy and bring greater and greater stores of it pouring into his soul and brain and body. This continual improvement of the ādhāra and increase in quantity and complexity of action of the informing energy, is the whole aim of evolution. When that energy is the highest in kind and the fullest in amount of which the human ādhāra is capable, and the ādhāra itself is trained utterly to bear the inrush and play of the energy, then is a man siddha, the fulfilled or perfect man, his evolution is over and he has completed in the individual that utmost development which the
mass of humanity is labouring towards through the ages.

If this theory be correct, the energy at the basis of the operation of intelligence must be in ourselves and it must be capable of greater expansion and richer use to an extent practically unlimited. And this also must be a sound principle, that the more we can increase and enrich the energy, the greater will be the potential range, power and activity of the functions of our mind and the consequent vigour of our intellectuality and the greatness of our achievement. This was the first principle on which the ancient Aryans based their education and one of the chief processes which they used for the increased storage of energy, was the practice of Brahmacharya.
THE PRACTICE of Brahmacharya is the first and most necessary condition of increasing the force within and turning it to such uses as may benefit the possessor or mankind. All human energy has a physical basis. The mistake made by European materialism is to suppose the basis to be everything and confuse it with the source. The source of life and energy is not material but spiritual, but the basis, the foundation on which the life and energy stand and work, is physical. The ancient Hindus clearly recognised this distinction between kāraṇa and pratiṣṭhā, the north pole and the south pole of being. Earth or gross matter is the pratiṣṭhā, Brahman or spirit is the kāraṇa. To raise up the physical to the spiritual is Brahmacharya, for by the meeting of the two the energy which starts from one and produces the other is enhanced and fulfils itself.

This is the metaphysical theory. The application depends on a right understanding of the physical and psychological conformation of the human receptacle of energy. The fundamental physical unit is the retas, in which the tejas, the heat and light and electricity in a man, is involved and hidden. All energy is latent in the retas. This energy may be either expended physically or conserved. All passion, lust, desire wastes the energy by pouring it, either in the gross form or a sublimated subtler form, out of the body. Immorality in act throws it out in the gross form; immorality of thought in the subtle form. In either case there is waste, and unchastity is of the mind and speech as well as of the body. On the other hand, all self-control conserves the energy in the retas, and conservation always brings with it increase. But the needs of the physical body are limited and the excess of energy must create a surplus which has to turn itself to some use other than the physical. According to the ancient theory retas is jala or water, full of light and heat and electricity, in one word, of
tejas. The excess of the retas turns first into heat or tapas which stimulates the whole system, and it is for this reason that all forms of self-control and austerity are called tapas or tapasyā, because they generate the heat or stimulus which is a source of powerful action and success; secondly, it turns to tejas proper, light, the energy which is at the source of all knowledge; thirdly, it turns to vidyut or electricity, which is at the basis of all forceful action whether intellectual or physical. In the vidyut again is involved the ojas, or prāṇaśakti, the primal energy which proceeds from ether. The retas refining from jala to tapas, tejas and vidyut and from vidyut to ojas, fills the system with physical strength, energy and brain-power and in its last form of ojas rises to the brain and informs it with that primal energy which is the most refined form of matter and nearest to spirit. It is ojas that creates a spiritual force or vīrya, by which a man attains to spiritual knowledge, spiritual love and faith, spiritual strength. It follows that the more we can by Brahmacharya increase the store of tapas, tejas, vidyut and ojas, the more we shall fill ourselves with utter energy for the works of the body, heart, mind and spirit.

This view of the human soul was not the whole of the knowledge on which ancient Hinduism based its educational discipline. In addition it had the view that all knowledge is within and has to be evoked by education rather than instilled from outside. The constitution of man consists of three principles of nature sattva, rajas and tamas, the comprehensive, active and passive elements of universal action, which, in one of their thousandfold aspects, manifest as knowledge, passion and ignorance. Tamas is a constitutional dullness or passivity which obscures the knowledge within and creates ignorance, mental inertia, slowness, forgetfulness, disinclination to study, inability to grasp and distinguish. Rajas is an undisciplined activity which obscures knowledge by passion, attachment, prejudget, predilection and wrong ideas. Sattva is an illumination which reveals the hidden knowledge and brings it to the surface where the observation can grasp and the memory record it. This conception of the constitution of the knowing faculty made the removal of tamas, the disciplining of rajas and the awakening of sattva the main
On Education

problem of the teacher. He had to train the student to be receptive of illumination from within. The disciplining of rajas was effected by a strict moral discipline which induced a calm, clear, receptive state of mind free from intellectual self-will and pride and the obscuration of passion,—the famous discipline of the brāhmaśārin which was the foundation of Aryan culture and Aryan morals; and the interference of wrong ideas was sought to be removed by strict mental submission to the teacher during the receptive period, when the body of ascertained knowledge or right ideas already in man’s possession was explained to him and committed to memory. The removal of tamas was effected by the discipline of moral purity, which awakened the energy of tejas and electricity in the system and by the power of tapasyā trained it to be a reservoir of mental force and clarity. The awakening of illumination was actively effected by the triple method of repetition, meditation and discussion. Ṛṛtti or repetition was meant to fill the recording part of the mind with the śabda or word, so that the artha or meaning might of itself rise from within. Needless to say, a mechanical repetition was not likely to produce this effect. There must be that clear still receptivity and that waiting upon the word or thing with the contemplative part of the mind which is what the ancient Indians meant by dhyāna or meditation. All of us have felt, when studying a language, difficulties which seemed insoluble while grappling with a text, suddenly melt away and a clear understanding arise without assistance from book or teacher after putting away the book from our mind for a brief period. Many of us have experienced also, the strangeness of taking up a language or subject, after a brief discontinuance, to find that we understand it much better than when we took it up, know the meanings of words we had never met with before and can explain sentences which, before we discontinued the study, would have baffled our understanding. This is because the jñāta or knower within has had his attention called to the subject and has been busy in the interval drawing upon the source of knowledge within in connection with it. This experience is only possible to those whose sattwic or illuminative element has been powerfully aroused or consciously or
unconsciously trained to action by the habit of intellectual clarity and deep study. The highest reach of the sattwic development is when one can dispense often or habitually with outside aids, the teacher or the text book, grammar and dictionary and learn a subject largely or wholly from within. But this is only possible to the Yogin by a successful prosecution of the discipline of Yoga.
WE HAVE stated, as succinctly as is consistent with clearness, the main psychological principles on which the ancient Indians based their scheme of education. By the training of Brahmacharya they placed all the energy of which the system was capable and which could be spared from bodily functions, at the service of the brain. In this way they not only strengthened the medhā or grasping power, the dhī or subtlety and swiftness of thought conception, the memory and the creative intellectual force, making the triple force of memory, invention, judgment comprehensive and analytic, but they greatly enlarged the range, no less than the intensity, of the absorbing, storing and generative mental activities. Hence those astonishing feats of memory, various comprehension and versatility of creative work of which only a few extraordinary intellects have been capable in Occidental history, but which in ancient India were common and usual. Mr. Gladstone was considered to be the possessor of an astonishing memory because he could repeat the whole of Homer's Iliad, beginning from any passage suggested to him and flowing on as long as required; but to a Brahmin of the old times this would have been a proof of a capacity neither unusual nor astonishing, but rather, petty and limited. The many-sidedness of an Eratosthenes or the range of a Herbert Spencer have created in Europe admiring or astonished comment; but the universality of the ordinary curriculum in ancient India was for every student and not for the exceptional few, and it implied, not a tasting of many subjects after the modern plan, but the thorough mastery of all. The original achievement of a Kalidasa accomplishing the highest in every line of poetic creation is so incredible to the European mind that it has been sought to cleave that mighty master of harmonies into a committee of three. Yet it is paralleled by the accomplishment
in philosophy of Shankara in a short life of thirty-two years and
dwarfed by the universal mastery of all possible spiritual knowl-
edge and experience of Sri Ramakrishna in our own era. These
instances are not so common as the others, because pure creative
genius is not common; but in Europe they are, with a single
modern exception, non-existent. The highest creative intellects
in Europe have achieved sovereignty by limitation, by striving to
excel only in one field of a single intellectual province or at most
in two; when they have been versatile it has been by sacrificing
height to breadth. But in India it is the greatest who have been
the most versatile and passed from one field of achievement to
another without sacrificing an inch of their height or an iota
of their creative intensity, easily, unfalteringly, with an assured
mastery. This easy and unfailing illumination crowning the un-
failing energy created by Brahmacharya was due to the discipline
which developed sattva or inner illumination. This illumination
makes the acquisition of knowledge and all other intellectual
operations easy, spontaneous, swift, decisive and comparatively
unfatiguing to body or brain. In these two things lies the secret
of Aryan intellectual achievement. Brahmacharya and sattwic
development created the brain of India: it was perfected by Yoga.

It is a common complaint that our students are too heavily
burdened with many subjects and the studying of many books.
The complaint is utterly true and yet it is equally true that the
range of studies is pitifully narrow and the books read miserably
few. What is the reason of this paradox, the justification of these
two apparently contradictory truths? It is this, that we neglect
the basis and proceed at once to a superstructure small in bulk,
disproportionately heavy in comparison with that bulk, and
built on a foundation too weak to bear even the paltry and mea-
gre edifice of our imparted knowledge. The Indian brain is still
in potentiality what it was; but it is being damaged, stunted and
defaced. The greatness of its innate possibilities is hidden by the
greatness of its surface deterioration. The old system hampered it
with study in a foreign language which was not even imperfectly
mastered at a time when the student was called upon to learn
in that impossible medium a variety of alien and unfamiliar

www.holybooks.com
subjects. In this unnatural process it was crippled by the disuse of judgment, observation, comprehension and creation, and the exclusive reliance on the deteriorating relics of the ancient Indian memory. Finally, it was beggared and degraded by having to deal with snippets and insufficient packets of information instead of being richly stored and powerfully equipped.

The new system of National Education sought to undo the evil by employing the mother-tongue, restoring the use of the disused intellectual functions and providing for a richer and more real equipment of information, of the substance of knowledge and the materials for creation. If it could not triumphantly succeed, that was partly because it had to deal with minds already vitiated by the old system and not often with the best even of these, because its teachers had themselves seldom a perfect grasp of the requirements of the new system, and because its controllers and directors were men of the old school who clung to familiar shibboleths and disastrous delusions. But in the system itself there was a defect, which, though it would matter less in other epochs or other countries, is of primary importance in such periods of transition when bricks have to be made out of straw and the work now done will determine the future achievement of our nation. While calling itself national, it neglected the very foundation of the great achievement of our forefathers and especially the perfection of the instrument of knowledge.

It is not our contention that the actual system of ancient instruction should be restored in its outward features, — a demand often made by fervid lovers of the past. Many of them are not suited to modern requirements. But its fundamental principles are for all time and its discipline can only be replaced by the discovery of a still more effective discipline, such as European education does not offer us. The object of these articles has been to indicate the nature and psychological ideas of the old system and point out its essential relation of cause and effect to the splendid achievement of our ancestors. How its principles can be reapplied or be completed and to some extent replaced by a still deeper psychology and a still more effective discipline is a subject fit for separate treatment.
A System of National Education

Some Preliminary Ideas
Publisher’s Note
to the 1924 Edition

These essays were first published in the Karmayogin in the year 1910. They are, however, incomplete, and the subject of national education proper has not been touched except in certain allusions. It was not the author’s intention to have them reprinted in their present form, but circumstances have made necessary the bringing out of an authorised edition. As it at present stands the book consists of a number of introductory essays insisting on certain general principles of a sound system of teaching applicable for the most part to national education in any country. As such it may stand as a partial introduction to the subject of national education in India.
The Human Mind

The TRUE basis of education is the study of the human mind, infant, adolescent and adult. Any system of education founded on theories of academical perfection, which ignores the instrument of study, is more likely to hamper and impair intellectual growth than to produce a perfect and perfectly equipped mind. For the educationist has to do, not with dead material like the artist or sculptor, but with an infinitely subtle and sensitive organism. He cannot shape an educational masterpiece out of human wood or stone; he has to work in the elusive substance of mind and respect the limits imposed by the fragile human body.

There can be no doubt that the current educational system of Europe is a great advance on many of the methods of antiquity, but its defects are also palpable. It is based on an insufficient knowledge of human psychology, and it is only safeguarded in Europe from disastrous results by the refusal of the ordinary student to subject himself to the processes it involves, his habit of studying only so much as he must to avoid punishment or to pass an immediate test, his resort to active habits and vigorous physical exercise. In India the disastrous effects of the system on body, mind and character are only too apparent. The first problem in a national system of education is to give an education as comprehensive as the European and more thorough, without the evils of strain and cramming. This can only be done by studying the instruments of knowledge and finding a system of teaching which shall be natural, easy and effective. It is only by strengthening and sharpening these instruments to their utmost capacity that they can be made effective for the increased work which modern conditions require. The muscles of the mind must be thoroughly trained by simple and easy means; then, and not till then, great feats of intellectual strength can be required of them.
On Education

The first principle of true teaching is that nothing can be taught. The teacher is not an instructor or taskmaster, he is a helper and guide. His business is to suggest and not to impose. He does not actually train the pupil’s mind, he only shows him how to perfect his instruments of knowledge and helps and encourages him in the process. He does not impart knowledge to him, he shows him how to acquire knowledge for himself. He does not call forth the knowledge that is within; he only shows him where it lies and how it can be habituated to rise to the surface. The distinction that reserves this principle for the teaching of adolescent and adult minds and denies its application to the child, is a conservative and unintelligent doctrine. Child or man, boy or girl, there is only one sound principle of good teaching. Difference of age only serves to diminish or increase the amount of help and guidance necessary; it does not change its nature.

The second principle is that the mind has to be consulted in its own growth. The idea of hammering the child into the shape desired by the parent or teacher is a barbarous and ignorant superstition. It is he himself who must be induced to expand in accordance with his own nature. There can be no greater error than for the parent to arrange beforehand that his son shall develop particular qualities, capacities, ideas, virtues, or be prepared for a prearranged career. To force the nature to abandon its own dharma is to do it permanent harm, mutilate its growth and deface its perfection. It is a selfish tyranny over a human soul and a wound to the nation, which loses the benefit of the best that a man could have given it and is forced to accept instead something imperfect and artificial, second-rate, perfunctory and common. Every man has in him something divine, something his own, a chance of strength and perfection in however small a sphere, which God offers him to take or refuse. The task is to find it, develop it, use it. The chief aim of education should be to help the growing soul to draw out that in itself which is best and make it perfect for a noble use.

The third principle of education is to work from the near to the far, from that which is to that which shall be. The basis of a
man's nature is almost always, in addition to his soul's past, his heredity, his surroundings, his nationality, his country, the soil from which he draws sustenance, the air which he breathes, the sights, sounds, habits to which he is accustomed. They mould him not the less powerfully because insensibly. From that then we must begin. We must not take up the nature by the roots from the earth in which it must grow or surround the mind with images and ideas of a life which is alien to that in which it must physically move. If anything has to be brought in from outside, it must be offered, not forced on the mind. A free and natural growth is the condition of genuine development. There are souls which naturally revolt from their surroundings and seem to belong to another age and clime. Let them be free to follow their bent; but the majority languish, become empty, become artificial, if artificially moulded into an alien form. It is God's arrangement for mankind that they should belong to a particular nation, age, society, that they should be children of the past, possessors of the present, creators of the future. The past is our foundation, the present our material, the future our aim and summit. Each must have its due and natural place in a national system of education.
II

The Powers of the Mind

THE INSTRUMENT of the educationist is the mind or antahkaraṇa, which consists of four layers. The reservoir of past mental impressions, the citta or storehouse of memory, which must be distinguished from the specific act of memory, is the foundation on which all the other layers stand. All experience lies within us as passive or potential memory; active memory selects and takes what it requires from that storehouse. But the active memory is like a man searching among a great mass of locked-up material: sometimes he cannot find what he wants; often in his rapid search he stumbles across many things for which he has no immediate need; often too he blunders and thinks he has found the real thing when it is something else, irrelevant if not valueless, on which he has laid his hand. The passive memory or citta needs no training, it is automatic and naturally sufficient to its task; there is not the slightest object of knowledge coming within its field which is not secured, placed and faultlessly preserved in that admirable receptacle. It is the active memory, a higher but less perfectly developed function, which is in need of improvement.

The second layer is the mind proper or manas, the sixth sense of our Indian psychology, in which all the others are gathered up. The function of the mind is to receive the images of things translated into sight, sound, smell, taste and touch by the five senses and translate these again into thought-sensations. It receives also images of its own direct grasping and forms them into mental impressions. These sensations and impressions are the material of thought, not thought itself; but it is exceedingly important that thought should work on sufficient and perfect material. It is therefore the first business of the educationist to develop in the child the right use of the six senses, to see that they are not stunted or injured by disuse, but trained by the
child himself under the teacher’s direction to that perfect accuracy and keen subtle sensitiveness of which they are capable. In addition, whatever assistance can be gained by the organs of action, should be thoroughly employed. The hand, for instance, should be trained to reproduce what the eye sees and the mind senses. The speech should be trained to a perfect expression of the knowledge which the whole antahkarana possesses.

The third layer is the intellect or buddhi, which is the real instrument of thought and that which orders and disposes of the knowledge acquired by the other parts of the machine. For the purposes of the educationist this is infinitely the most important of the three I have named. The intellect is an organ composed of several groups of functions, divisible into two important classes, the functions and faculties of the right hand and the functions and faculties of the left hand. The faculties of the right hand are comprehensive, creative and synthetic; the faculties of the left hand critical and analytic. To the right hand belong Judgment, Imagination, Memory, Observation; to the left hand Comparison and Reasoning. The critical faculties distinguish, compare, classify, generalise, deduce, infer, conclude; they are the component parts of the logical reason. The right-hand faculties comprehend, command, judge in their own right, grasp, hold and manipulate. The right-hand mind is the master of knowledge, the left-hand its servant. The left hand touches only the body of knowledge, the right hand penetrates its soul. The left hand limits itself to ascertained truth, the right hand grasps that which is still elusive or unascertained. Both are essential to the completeness of the human reason. These important functions of the machine have all to be raised to their highest and finest working-power, if the education of the child is not to be imperfect and one-sided.

There is a fourth layer of faculty which, not as yet entirely developed in man, is attaining gradually to a wider development and more perfect evolution. The powers peculiar to this highest stratum of knowledge are chiefly known to us from the phenomena of genius, — sovereign discernment, intuitive perception of truth, plenary inspiration of speech, direct vision of knowledge
On Education

to an extent often amounting to revelation, making a man a prophet of truth. These powers are rare in their higher development, though many possess them imperfectly or by flashes. They are still greatly distrusted by the critical reason of mankind because of the admixture of error, caprice and a biased imagination which obstructs and distorts their perfect workings. Yet it is clear that humanity could not have advanced to its present stage if it had not been for the help of these faculties, and it is a question with which educationists have not yet grappled, what is to be done with this mighty and baffling element, the element of genius in the pupil. The mere instructor does his best to discourage and stifle genius, the more liberal teacher welcomes it. Faculties so important to humanity cannot be left out of our consideration. It is foolish to neglect them, it is criminal to discourage them. Their imperfect development must be perfected, the admixture of error, caprice and biased fancifulness must be carefully and wisely removed. But the teacher cannot do it; he would eradicate the good corn as well as the tares if he interfered. Here, as in all educational operations, he can only put the growing soul into the way of its own perfection.
The Moral Nature

In THE economy of man the mental nature rests upon the moral, and the education of the intellect divorced from the perfection of the moral and emotional nature is injurious to human progress. Yet, while it is easy to arrange some kind of curriculum or syllabus which will do well enough for the training of the mind, it has not yet been found possible to provide under modern conditions a suitable moral training for the school and college. The attempt to make boys moral and religious by the teaching of moral and religious text-books is a vanity and a delusion, precisely because the heart is not the mind and to instruct the mind does not necessarily improve the heart. It would be an error to say that it has no effect. It throws certain seeds of thought into the antahkaraṇa and, if these thoughts become habitual, they influence the conduct. But the danger of moral text-books is that they make the thinking of high things mechanical and artificial, and whatever is mechanical and artificial is inoperative for good.

There are three things which are of the utmost importance in dealing with a man’s moral nature, the emotions, the samskaras or formed habits and associations, and the svabhāva or nature. The only way for him to train himself morally is to habituate himself to the right emotions, the noblest associations, the best mental, emotional and physical habits and the following out in right action of the fundamental impulses of his essential nature. You can impose a certain discipline on children, dress them into a certain mould, lash them into a desired path, but unless you can get their hearts and natures on your side, the conformity to this imposed rule becomes a hypocritical and heartless, a conventional, often a cowardly compliance. This is what is done in Europe, and it leads to that remarkable phenomenon known as the sowing of wild oats as soon as the yoke of discipline
at school and at home is removed, and to the social hypocrisy which is so large a feature of European life. Only what the man admires and accepts, becomes part of himself; the rest is a mask. He conforms to the discipline of society as he conformed to the moral routine of home and school, but considers himself at liberty to guide his real life, inner and private, according to his own likings and passions. On the other hand, to neglect moral and religious education altogether is to corrupt the race. The notorious moral corruption in our young men previous to the saving touch of the Swadeshi movement was the direct result of the purely mental instruction given to them under the English system of education. The adoption of the English system under an Indian disguise in institutions like the Central Hindu College is likely to lead to the European result. That it is better than nothing, is all that can be said for it.

As in the education of the mind, so in the education of the heart, the best way is to put the child into the right road to his own perfection and encourage him to follow it, watching, suggesting, helping, but not interfering. The one excellent element in the English boarding school is that the master at his best stands there as a moral guide and example leaving the boys largely to influence and help each other in following the path silently shown to them. But the method practised is crude and marred by the excess of outer discipline, for which the pupils have no respect except that of fear, and the exiguity of the inner assistance. The little good that is done is outweighed by much evil. The old Indian system of the _guru_ commanding by his knowledge and sanctity the implicit obedience, perfect admiration, reverent emulation of the student was a far superior method of moral discipline. It is impossible to restore that ancient system; but it is not impossible to substitute the wise friend, guide and helper for the hired instructor or the benevolent policeman which is all that the European system usually makes of the pedagogue.

The first rule of moral training is to suggest and invite, not command or impose. The best method of suggestion is by personal example, daily converse and the books read from day to day. These books should contain, for the younger student,
the lofty examples of the past given, not as moral lessons, but as things of supreme human interest, and, for the elder student, the great thoughts of great souls, the passages of literature which set fire to the highest emotions and prompt the highest ideals and aspirations, the records of history and biography which exemplify the living of those great thoughts, noble emotions and aspiring ideals. This is a kind of good company, satsanga, which can seldom fail to have effect, so long as sententious sermonising is avoided, and becomes of the highest effect if the personal life of the teacher is itself moulded by the great things he places before his pupils. It cannot, however, have full force unless the young life is given an opportunity, within its limited sphere, of embodying in action the moral impulses which rise within it. The thirst of knowledge, the self-devotion, the purity, the renunciation of the Brahmin, — the courage, ardour, honour, nobility, chivalry, patriotism of the Kshatriya, — the beneficence, skill, industry, generous enterprise and large open-handedness of the Vaishya, — the self-effacement and loving service of the Shudra, — these are the qualities of the Aryan. They constitute the moral temper we desire in our young men, in the whole nation. But how can we get them if we do not give opportunities to the young to train themselves in the Aryan tradition, to form by the practice and familiarity of childhood and boyhood the stuff of which their adult lives must be made?

Every boy should, therefore, be given practical opportunity as well as intellectual encouragement to develop all that is best in his nature. If he has bad qualities, bad habits, bad saniskāras whether of mind or body, he should not be treated harshly as a delinquent, but encouraged to get rid of them by the Rajayogic method of samyama, rejection and substitution. He should be encouraged to think of them, not as sins or offences, but as symptoms of a curable disease alterable by a steady and sustained effort of the will, — falsehood being rejected whenever it rises into the mind and replaced by truth, fear by courage, selfishness by sacrifice and renunciation, malice by love. Great care will have to be taken that unformed virtues are not rejected as faults. The wildness and recklessness of many young natures
are only the overflowings of an excessive strength, greatness and nobility. They should be purified, not discouraged.

I have spoken of morality; it is necessary to speak a word of religious teaching. There is a strange idea prevalent that by merely teaching the dogmas of religion children can be made pious and moral. This is an European error, and its practice either leads to mechanical acceptance of a creed having no effect on the inner and little on the outer life, or it creates the fanatic, the pietist, the ritualist or the unctuous hypocrite. Religion has to be lived, not learned as a creed. The singular compromise made in the so-called National Education of Bengal, making the teaching of religious beliefs compulsory, but forbidding the practice of *anuṣṭhāna* or religious exercises, is a sample of the ignorant confusion which distracts men's minds on this subject. The prohibition is a sop to secularism declared or concealed. No religious teaching is of any value unless it is lived, and the use of various kinds of *sādhanā*, spiritual self-training and exercise, is the only effective preparation for religious living. The ritual of prayer, homage, ceremony is craved for by many minds as an essential preparation and, if not made an end in itself, is a great help to spiritual progress; if it is withheld, some other form of meditation, devotion or religious duty must be put in its place. Otherwise, religious teaching is of little use and would almost be better ungiven.

But whether distinct teaching in any form of religion is imparted or not, the essence of religion, to live for God, for humanity, for country, for others and for oneself in these, must be made the ideal in every school which calls itself national. It is this spirit of Hinduism pervading our schools which, far more than the teaching of Indian subjects, the use of Indian methods or formal instruction in Hindu beliefs and Hindu scriptures, should be the essence of Nationalism in our schools distinguishing them from all others.
Simultaneous and Successive Teaching

A very remarkable feature of modern training which has been subjected in India to a *reductio ad absurdum* is the practice of teaching by snippets. A subject is taught a little at a time, in conjunction with a host of others, with the result that what might be well learnt in a single year is badly learned in seven and the boy goes out ill-equipped, served with imperfect parcels of knowledge, master of none of the great departments of human knowledge. The system of education adopted by the National Council, an amphibious and twy-natured creation, attempts to heighten this practice of teaching by snippets at the bottom and the middle and suddenly change it to a grandiose specialism at the top. This is to base the triangle on its apex and hope that it will stand.

The old system was to teach one or two subjects well and thoroughly and then proceed to others, and certainly it was a more rational system than the modern. If it did not impart so much varied information, it built up a deeper, nobler and more real culture. Much of the shallowness, discursive lightness and fickle mutability of the average modern mind is due to the vicious principle of teaching by snippets. The one defect that can be alleged against the old system was that the subject earliest learned might fade from the mind of the student while he was mastering his later studies. But the excellent training given to the memory by the ancients obviated the incidence of this defect. In the future education we need not bind ourselves either by the ancient or the modern system, but select only the most perfect and rapid means of mastering knowledge.

In defence of the modern system it is alleged that the attention of children is easily tired and cannot be subjected to the strain of long application to a single subject. The frequent change of subject gives rest to the mind. The question naturally
arises, are the children of modern times then so different from the ancients, and, if so, have we not made them so by discouraging prolonged concentration? A very young child cannot, indeed, apply himself; but a very young child is unfit for school teaching of any kind. A child of seven or eight, and that is the earliest permissible age for the commencement of any regular kind of study, is capable of a good deal of concentration if he is interested. Interest is, after all, the basis of concentration. We make his lessons supremely uninteresting and repellent to the child, a harsh compulsion the basis of teaching and then complain of his restless inattention! The substitution of a natural self-education by the child for the present unnatural system will remove this objection of inability. A child, like a man, if he is interested, much prefers to get to the end of his subject rather than leave it unfinished. To lead him on step by step, interesting and absorbing him in each as it comes, until he has mastered his subject is the true art of teaching.

The first attention of the teacher must be given to the medium and the instruments, and, until these are perfected, to multiply subjects of regular instruction is to waste time and energy. When the mental instruments are sufficiently developed to acquire a language easily and swiftly, that is the time to introduce him to many languages, not when he can only partially understand what he is taught and masters it laboriously and imperfectly. Moreover, one who has mastered his own language, has one very necessary facility for mastering another. With the linguistic faculty unsatisfactorily developed in one’s own tongue, to master others is impossible. To study science with the faculties of observation, judgment, reasoning and comparison only slightly developed is to undertake a useless and thankless labour. So it is with all other subjects.

The mother-tongue is the proper medium of education and therefore the first energies of the child should be directed to the thorough mastering of the medium. Almost every child has an imagination, an instinct for words, a dramatic faculty, a wealth of idea and fancy. These should be interested in the literature and history of the nation. Instead of stupid and dry spelling and
reading books, looked on as a dreary and ungrateful task, he should be introduced by rapidly progressive stages to the most interesting parts of his own literature and the life around him and behind him, and they should be put before him in such a way as to attract and appeal to the qualities of which I have spoken. All other study at this period should be devoted to the perfection of the mental functions and the moral character. A foundation should be laid at this time for the study of history, science, philosophy, art, but not in an obtrusive and formal manner. Every child is a lover of interesting narrative, a hero-worshipper and a patriot. Appeal to these qualities in him and through them let him master without knowing it the living and human parts of his nation's history. Every child is an inquirer, an investigator, analyser, a merciless anatomist. Appeal to these qualities in him and let him acquire without knowing it the right temper and the necessary fundamental knowledge of the scientist. Every child has an insatiable intellectual curiosity and turn for metaphysical enquiry. Use it to draw him on slowly to an understanding of the world and himself. Every child has the gift of imitation and a touch of imaginative power. Use it to give him the groundwork of the faculty of the artist.

It is by allowing Nature to work that we get the benefit of the gifts she has bestowed on us. Humanity in its education of children has chosen to thwart and hamper her processes and, by so doing, has done much to thwart and hamper the rapidity of its own forward march. Happily, saner ideas are now beginning to prevail. But the way has not yet been found. The past hangs about our necks with all its prejudices and errors and will not leave us; it enters into our most radical attempts to return to the guidance of the all-wise Mother. We must have the courage to take up clearer knowledge and apply it fearlessly in the interests of posterity. Teaching by snippets must be relegated to the lumber-room of dead sorrows. The first work is to interest the child in life, work and knowledge, to develop his instruments of knowledge with the utmost thoroughness, to give him mastery of the medium he must use. Afterwards, the rapidity with which he will learn will make up for any delay in taking up
regular studies, and it will be found that, where now he learns a few things badly, then he will learn many things thoroughly well.
The Training of the Senses

There are six senses which minister to knowledge, sight, hearing, smell, touch and taste, mind, and all of these except the last look outward and gather the material of thought from outside through the physical nerves and their end-organs, eye, ear, nose, skin, palate. The perfection of the senses as ministers to thought must be one of the first cares of the teacher. The two things that are needed of the senses are accuracy and sensitiveness. We must first understand what are the obstacles to the accuracy and sensitiveness of the senses, in order that we may take the best steps to remove them. The cause of imperfection must be understood by those who desire to bring about perfection.

The senses depend for their accuracy and sensitiveness on the unobstructed activity of the nerves which are the channels of their information and the passive acceptance of the mind which is the recipient. In themselves the organs do their work perfectly. The eye gives the right form, the ear the correct sound, the palate the right taste, the skin the right touch, the nose the right smell. This can easily be understood if we study the action of the eye as a crucial example. A correct image is reproduced automatically on the retina, if there is any error in appreciating it, it is not the fault of the organ, but of something else.

The fault may be with the nerve currents. The nerves are nothing but channels, they have no power in themselves to alter the information given by the organs. But a channel may be obstructed and the obstruction may interfere either with the fullness or the accuracy of the information, not as it reaches the organ where it is necessarily and automatically perfect, but as it reaches the mind. The only exception is in case of a physical defect in the organ as an instrument. That is not a matter for the educationist, but for the physician.
If the obstruction is such as to stop the information reaching the mind at all, the result is an insufficient sensitiveness of the senses. The defects of sight, hearing, smell, touch, taste, anaesthesia in its various degrees, are curable when not the effect of physical injury or defect in the organ itself. The obstructions can be removed and the sensitiveness remedied by the purification of the nerve system. The remedy is a simple one which is now becoming more and more popular in Europe for different reasons and objects, the regulation of the breathing. This process inevitably restores the perfect and unobstructed activity of the channels and, if well and thoroughly done, leads to a high activity of the senses. The process is called in Yogic discipline nādi-śuddhi or nerve-purification.

The obstruction in the channel may be such as not absolutely to stop in however small a degree, but to distort the information. A familiar instance of this is the effect of fear or alarm on the sense action. The startled horse takes the sack on the road for a dangerous living thing, the startled man takes a rope for a snake, a waving curtain for a ghostly form. All distortions due to actions in the nervous system can be traced to some kind of emotional disturbance acting in the nerve channels. The only remedy for them is the habit of calm, the habitual steadiness of the nerves. This also can be brought about by nādi-śuddhi or nerve-purification, which quiets the system, gives a deliberate calmness to all the internal processes and prepares the purification of the mind.

If the nerve channels are quiet and clear, the only possible disturbance of the information is from or through the mind. Now the manas or sixth sense is in itself a channel like the nerves, a channel for communication with the buddhi or brain-force. Disturbance may happen either from above or from below. The information from outside is first photographed on the end organ, then reproduced at the other end of the nerve system in the citta or passive memory. All the images of sight, sound, smell, touch and taste are deposited there and the manas reports them to the buddhi. The manas is both a sense organ and a channel. As a sense organ it is as automatically perfect as the
As a sense organ the mind receives direct thought impressions from outside and from within. These impressions are in themselves perfectly correct, but in their report to the intellect they may either not reach the intellect at all or may reach it so distorted as to make a false or partially false impression. The disturbance may affect the impression which attends the information of eye, ear, nose, skin or palate, but it is very slightly powerful here. In its effect on the direct impressions of the mind, it is extremely powerful and the chief source of error. The mind takes direct impressions primarily of thought, but also of form, sound, indeed of all the things for which it usually prefers to depend on the sense organs. The full development of this sensitiveness of the mind is called in our Yogic discipline sūkṣma-dṛṣṭi or subtle reception of images. Telepathy, clairvoyance, clairaudience, presentiment, thought-reading, character-reading and many other modern discoveries are very ancient powers of the mind which have been left undeveloped, and they all belong to the manas. The development of the sixth sense has never formed part of human training. In a future age it will undoubtedly take a place in the necessary preliminary training of the human instrument. Meanwhile there is no reason why the mind should not be trained to give a correct report to the intellect so that our thought may start with absolutely correct if not with full impressions.

The first obstacle, the nervous emotional, we may suppose to be removed by the purification of the nervous system. The second obstacle is that of the emotions themselves warping the impression as it comes. Love may do this, hatred may do this, any emotion or desire according to its power and intensity may distort the impression as it travels. This difficulty can only be removed by the discipline of the emotions, the purifying of the moral habits. This is a part of moral training and its consideration may be postponed for the moment. The next difficulty is the interference of previous associations formed or ingrained in the citta or passive memory. We have a habitual way of looking
at things and the conservative inertia in our nature disposes us
to give every new experience the shape and semblance of those
to which we are accustomed. It is only more developed minds
which can receive first impressions without an unconscious bias
against the novelty of novel experience. For instance, if we get
a true impression of what is happening — and we habitually
act on such impressions true or false — if it differs from what
we are accustomed to expect, the old association meets it in
the cittā and sends a changed report to the intellect in which
either the new impression is overlaid and concealed by the old
or mingled with it. To go farther into this subject would be
to involve ourselves too deeply into the details of psychology.
This typical instance will suffice. To get rid of this obstacle is
impossible without cittāsuddhi or purification of the mental and
moral habits formed in the cittā. This is a preliminary process of
Yoga and was effected in our ancient system by various means,
but would be considered out of place in a modern system of
education.

It is clear, therefore, that unless we revert to our old Indian
system in some of its principles, we must be content to allow
this source of disturbance to remain. A really national system of
education would not allow itself to be controlled by European
ideas in this all-important matter. And there is a process so
simple and momentous that it can easily be made a part of our
system.

It consists in bringing about passivity of the restless flood
of thought sensations rising of its own momentum from the
passive memory independent of our will and control. This pas-
vivity liberates the intellect from the siege of old associations and
false impressions. It gives it power to select only what is wanted
from the storehouse of the passive memory, automatically brings
about the habit of getting right impressions and enables the
intellect to dictate to the cittā what saṃskāras or associations
shall be formed or rejected. This is the real office of the intellect,
— to discriminate, choose, select, arrange. But so long as there
is not cittāsiddhi, instead of doing this office perfectly, it itself
remains imperfect and corrupt and adds to the confusion in the
mind channel by false judgment, false imagination, false memory, false observation, false comparison, contrast and analogy, false deduction, induction and inference. The purification of the citta is essential for the liberation, purification and perfect action of the intellect.
Sense-Improvement by Practice

Another cause of the inefficiency of the senses as gatherers of knowledge, is insufficient use. We do not observe sufficiently or with sufficient attention and closeness and a sight, sound, smell, even touch or taste knocks in vain at the door for admission. This tamasic inertia of the receiving instruments is no doubt due to the inattention of the buddhi, and therefore its consideration may seem to come properly under the training of the functions of the intellect, but it is more convenient, though less psychologically correct, to notice it here. The student ought to be accustomed to catch the sights, sounds, etc., around him, distinguish them, mark their nature, properties and sources and fix them in the citta so that they may be always ready to respond when called for by the memory.

It is a fact which has been proved by minute experiments that the faculty of observation is very imperfectly developed in men, merely from want of care in the use of the senses and the memory. Give twelve men the task of recording from memory something they all saw two hours ago and the accounts will all vary from each other and from the actual occurrence. To get rid of this imperfection will go a long way towards the removal of error. It can be done by training the senses to do their work perfectly, which they will do readily enough if they know the buddhi requires it of them, and giving sufficient attention to put the facts in their right place and order in the memory.

Attention is a factor in knowledge, the importance of which has been always recognised. Attention is the first condition of right memory and of accuracy. To attend to what he is doing is the first element of discipline required of the student, and, as I have suggested, this can easily be secured if the object of attention is made interesting. This attention to a single thing is called concentration. One truth is, however, sometimes
overlooked, that concentration on several things at a time is often indispensable. When people talk of concentration, they imply centring the mind on one thing at a time; but it is quite possible to develop the power of double concentration, triple concentration, multiple concentration. When a given incident is happening, it may be made up of several simultaneous happenings or a set of simultaneous circumstances, a sight, a sound, a touch or several sights, sounds, touches occurring at the same moment or in the same short space of time. The tendency of the mind is to fasten on one and mark others vaguely, many not at all or, if compelled to attend to all, to be distracted and mark none perfectly. Yet this can be remedied and the attention equally distributed over a set of circumstances in such a way as to observe and remember each perfectly. It is merely a matter of abhyāsa or steady natural practice.

It is also very desirable that the hand should be capable of coming to the help of the eye in dealing with the multitudinous objects of its activity so as to ensure accuracy. This is of an use so obvious and imperatively needed, that it need not be dwelt on at length. The practice of imitation by the hand of the thing seen is of use both in detecting the lapses and inaccuracies of the mind in noticing the objects of sense and in registering accurately what has been seen. Imitation by the hand ensures accuracy of observation. This is one of the first uses of drawing and it is sufficient in itself to make the teaching of this subject a necessary part of the training of the organs.
The Training of the Mental Faculties

The first qualities of the mind that have to be developed are those which can be grouped under observation. We notice some things, ignore others. Even of what we notice, we observe very little. A general perception of an object is all we usually carry away from a cursory half-attentive glance. A closer attention fixes its place, form, nature as distinct from its surroundings. Full concentration of the faculty of observation gives us all the knowledge that the three chief senses can gather about the object, or if we touch or taste, we may gather all that the five senses can tell of its nature and properties. Those who make use of the sixth sense, the poet, the painter, the Yogin, can also gather much that is hidden from the ordinary observer. The scientist by investigation ascertains other facts open to a minuter observation. These are the components of the faculty of observation, and it is obvious that its basis is attention, which may be only close or close and minute. We may gather much even from a passing glance at an object, if we have the habit of concentrating the attention and the habit of sattwic receptivity. The first thing the teacher has to do is to accustom the pupil to concentrate attention.

We may take the instance of a flower. Instead of looking casually at it and getting a casual impression of scent, form and colour, he should be encouraged to know the flower — to fix in his mind the exact shade, the peculiar glow, the precise intensity of the scent, the beauty of curve and design in the form. His touch should assure itself of the texture and its peculiarities. Next, the flower should be taken to pieces and its structure examined with the same careful fulness of observation. All this should be done not as a task, but as an object of interest by skilfully arranged questions suited to the learner which will draw him on to observe and investigate one thing after the other until he has
almost unconsciously mastered the whole.

Memory and judgment are the next qualities that will be called upon, and they should be encouraged in the same unconscious way. The student should not be made to repeat the same lesson over again in order to remember it. That is a mechanical, burdensome and unintelligent way of training the memory. A similar but different flower should be put in his hands and he should be encouraged to note it with the same care, but with the avowed object of noting the similarities and differences. By this practice daily repeated the memory will naturally be trained. Not only so, but the mental centres of comparison and contrast will be developed. The learner will begin to observe as a habit the similarities of things and their differences. The teacher should take every care to encourage the perfect growth of this faculty and habit. At the same time the laws of species and genus will begin to dawn on the mind and, by a skilful following and leading of the young developing mind, the scientific habit, the scientific attitude and the fundamental facts of scientific knowledge may in a very short time be made part of its permanent equipment. The observation and comparison of flowers, leaves, plants, trees will lay the foundations of botanical knowledge without loading the mind with names and that dry set acquisition of informations which is the beginning of cramming and detested by the healthy human mind when it is fresh from nature and unspoiled by unnatural habits. In the same way by the observation of the stars, astronomy, by the observation of the earth, stones, etc., geology, by the observation of insects and animals, entomology and zoology may be founded. A little later chemistry may be started by interesting observation of experiments without any formal teaching or heaping on the mind of formulas and book knowledge. There is no scientific subject the perfect and natural mastery of which cannot be prepared in early childhood by this training of the faculties to observe, compare, remember and judge various classes of objects. It can be done easily and attended with a supreme and absorbing interest in the mind of the student. Once the taste is created, the boy can be trusted to follow it up with all the enthusiasm of youth in his leisure
hours. This will prevent the necessity at a later age of teaching him everything in class.

The judgment will naturally be trained along with the other faculties. At every step the boy will have to decide what is the right idea, measurement, appreciation of colour, sound, scent, etc., and what is the wrong. Often the judgments and distinctions made will have to be exceedingly subtle and delicate. At first many errors will be made, but the learner should be taught to trust his judgment without being attached to its results. It will be found that the judgment will soon begin to respond to the calls made on it, clear itself of all errors and begin to judge correctly and minutely. The best way is to accustom the boy to compare his judgments with those of others. When he is wrong, it should at first be pointed out to him how far he was right and why he went wrong, afterwards he should be encouraged to note these things for himself. Every time he is right, his attention should be prominently and encouragingly called to it so that he may get confidence.

While engaged in comparing and contrasting, another centre is certain to develop, the centre of analogy. The learner will inevitably draw analogies and argue from like to like. He should be encouraged to use this faculty while noticing its limitations and errors. In this way he will be trained to form the habit of correct analogy, which is an indispensable aid in the acquisition of knowledge.

The one faculty we have omitted, apart from the faculty of direct reasoning, is imagination. This is a most important and indispensable instrument. It may be divided into three functions, the forming of mental images, the power of creating thoughts, images and imitations or new combinations of existing thoughts and images, the appreciation of the soul in things, beauty, charm, greatness, hidden suggestiveness, the emotion and spiritual life that pervades the world. This is in every way as important as the training of the faculties which observe and compare outward things. But that demands a separate and fuller treatment.

The mental faculties should first be exercised on things, afterwards on words and ideas. Our dealings with language are
much too perfunctory and the absence of a fine sense for words impoverishes the intellect and limits the fineness and truth of its operation. The mind should be accustomed first to notice the word thoroughly, its form, sound, sense; then to compare the form with other similar forms in the points of similarity and difference, thus forming the foundation of the grammatical sense; then to distinguish between the fine shades of sense of similar words and the formation and rhythm of different sentences, thus forming the foundation of the literary and the syntactical faculties. All this should be done informally, drawing on the curiosity and interest, avoiding set teaching and memorising of rules. The true knowledge takes its base on things, arthas, and only when it has mastered the thing, proceeds to formalise its information.
The Training of the Logical Faculty

The training of the logical reason must necessarily follow the training of the faculties which collect the material on which the logical reason must work. Not only so but the mind must have some development of the faculty of dealing with words before it can deal successfully with ideas. The question is, once this preliminary work is done, what is the best way of teaching the boy to think correctly from premises. For the logical reason cannot proceed without premises. It either infers from facts to a conclusion, or from previously formed conclusions to a fresh one, or from one fact to another. It either induces, deduces or simply infers. I see the sun rise day after day, I conclude or induce that it rises as a law daily after a varying interval of darkness. I have already ascertained that wherever there is smoke, there is fire. I have induced that general rule from an observation of facts. I deduce that in a particular case of smoke there is a fire behind. I infer that a man must have lit it from the improbability of any other cause under the particular circumstances. I cannot deduce it because fire is not always created by human kindling; it may be volcanic or caused by a stroke of lightning or the sparks from some kind of friction in the neighbourhood.

There are three elements necessary to correct reasoning, first, the correctness of the facts or conclusions I start from, secondly, the completeness as well as accuracy of the data I start from, thirdly, the elimination of other possible or impossible conclusions from the same facts. The fallibility of the logical reason is due partly to avoidable negligence and looseness in securing these conditions, partly to the difficulty of getting all the facts correct, still more to the difficulty of getting all the facts complete, most of all, to the extreme difficulty of eliminating all possible conclusions except the one which happens to
be right. No fact is supposed to be more perfectly established than the universality of the law of gravitation as an imperative rule, yet a single new fact inconsistent with it would upset this supposed universality. And such facts exist. Nevertheless, by care and keenness the fallibility may be reduced to its minimum.

The usual practice is to train the logical reason by teaching the science of Logic. This is an instance of the prevalent error by which book knowledge of a thing is made the object of study instead of the thing itself. The experience of reasoning and its errors should be given to the mind and it should be taught to observe how these work for itself; it should proceed from the example to the rule and from the accumulating harmony of rules to the formal science of the subject, not from the formal science to the rule, and from the rule to the example.

The first step is to make the young mind interest itself in drawing inferences from the facts, tracing cause and effect. It should then be led on to notice its successes and its failures and the reason of the success and of the failure; the incorrectness of the fact started from, the haste in drawing conclusions from insufficient facts, the carelessness in accepting a conclusion which is improbable, little supported by the data or open to doubt, the indolence or prejudice which does not wish to consider other possible explanations or conclusions. In this way the mind can be trained to reason as correctly as the fallibility of human logic will allow, minimising the chances of error. The study of formal logic should be postponed to a later time when it can easily be mastered in a very brief period, since it will be only the systematising of an art perfectly well known to the student.
Message for National Education Week (1918)

NATIONAL Education is, next to Self-Government and along with it, the deepest and most immediate need of the country, and it is a matter of rejoicing for one to whom an earlier effort in that direction gave the first opportunity for identifying himself with the larger life and hope of the Nation, to see the idea, for a time submerged, moving so soon towards self-fulfilment.

Home Rule and National Education are two inseparable ideals, and none who follows the one, can fail the other, unless he is entirely wanting either in sincerity or in vision. We want not only a free India, but a great India, India taking worthily her place among the Nations and giving to the life of humanity what she alone can give. The greatest knowledge and the greatest riches man can possess are hers by inheritance; she has that for which all mankind is waiting. But she can only give it if her hands are free, her soul free, full and exalted, and her life dignified in all its parts. Home Rule, bringing with it the power of self-determination, can give the free hands, space for the soul to grow, strength for the life to raise itself again from darkness and narrow scope into light and nobility. But the full soul rich with the inheritance of the past, the widening gains of the present, and the large potentiality of her future, can come only by a system of National Education. It cannot come by any extension or imitation of the system of the existing universities with its radically false principles, its vicious and mechanical methods, its dead-alive routine tradition and its narrow and sightless spirit. Only a new spirit and a new body born from the heart of the Nation and full of the light and hope of its resurgence can create it.

We have a right to expect that the Nation will rise to the level of its opportunity and stand behind the movement as it has stood behind the movement for Home Rule. It should not
be difficult to secure its intellectual sanction or its voice for National Education, but much more than that is wanted. The support it gives must be free from all taint of lip-service, passivity and lethargic inaction, evil habits born of long political servitude and inertia, and of that which largely led to it, subjection of the life and soul to a blend of unseeing and mechanical custom. Moral sympathy is not enough; active support from every individual is needed. Workers for the cause, money and means for its sustenance, students for its schools and colleges, are what the movement needs that it may prosper. The first will surely not be wanting; the second should come, for the control of the movement has in its personnel both influence and energy, and the habit of giving as well as self-giving for a great public cause is growing more widespread in the country. If the third condition is not from the beginning sufficiently satisfied, it will be because, habituated individually always to the customary groove, we prefer the safe and prescribed path, even when it leads nowhere, to the great and effective way, and cannot see our own interest because it presents itself in a new and untried form. But this is a littleness of spirit which the Nation must shake off that it may have the courage of its destiny.

If material and prudential considerations stand in the way, then let it be seen that, even in the vocational sphere, the old system opens only the doors of a few offices and professions overcrowded with applicants, whence the majority must go back disappointed and with empty hands, or be satisfied with a dwarfed life and a sordid pittance; while the new education will open careers which will be at once ways of honourable sufficiency, dignity and affluence to the individual, and paths of service to the country. For the men who come out equipped in every way from its institutions will be those who will give that impetus to the economic life and effort of the country without which it cannot survive in the press of the world, much less attain its high legitimate position. Individual interest and National interest are the same and call in the same direction. Whether as citizen, as worker or as parent and guardian, the duty of every Indian in this matter is clear: it lies in the great and new road the pioneers
have been hewing, and not in the old stumbling cart-ruts.

This is an hour in which, for India as for all the world, its future destiny and the turn of its steps for a century are being powerfully decided, and for no ordinary century, but one which is itself a great turning-point, an immense turn-over in the inner and outer history of mankind. As we act now, so shall the reward of our karma be meted out to us, and each call of this kind at such an hour is at once an opportunity, a choice, and a test offered to the spirit of our people. Let it be said that it rose in each to the full height of its being and deserved the visible intervention of the Master of Destiny in its favour.
The whole movement of the national life of India at the present moment may be described in one phrase, — a pressure from within towards self-liberation from all unnatural conditions which obstruct or divert its free and spontaneous development. It is the movement of a stream trying to break open a natural path for its dammed-up waters. This effort takes inevitably many sides and aspects; for in politics and administration, in society, in commerce, in education, this national life finds itself bound up in forms, condemned to move in grooves which give no natural play to the new aspirations, powers and tendencies which have become its inner impelling motives. The effort to discover and organise a system of national education is part of this general effort of self-liberation, of self-finding, but perhaps the most central movement of all, in the end even the most important; for it is this which will give shape to the spirit of the nation at present in a state of rather formless flux. It is in fact no more than a chaotic press of tendencies; a national culture alone can give it form and consistency; and national education is the attempt to create and organise that culture.
A Preface on National Education

These two chapters appeared in the last two issues of the *Arya* in 1920 and 1921.
THE NECESSITY and unmixed good of universal education has become a fixed dogma to the modern intelligence, a thing held to be beyond dispute by any liberal mind or awakened national conscience, and whether the tenet be or not altogether beyond cavil, it may at any rate be presumed that it answers to a present and imperative need of the intellectual and vital effort of the race. But there is not quite so universal an agreement or common attainment to a reasoned or luminous idea on what education is or practically or ideally should be. Add to this uncertainty the demand — naturally insistent and clamorous with the awakening of the spirit of independence in a country like our own which is peculiarly circumstanced not only by the clash of the Asiatic and the European or occidental consciousness and the very different civilisations they have created and the enforced meeting of the English and the Indian mind and culture, but by a political subjection which has left the decisive shaping and supreme control of education in the hands of foreigners, — add the demand for a national type of education, and in the absence of clear ideas on the subject we are likely to enter, as we have in fact entered into an atmosphere of great and disconcerting confusion.

For if we do not know very clearly what education in general truly is or should be, we seem still less to know what we mean by national education. All that appears to be almost unanimously agreed on is that the teaching given in the existing schools and universities has been bad in kind and in addition denationalising, degrading and impoverishing to the national mind, soul and character because it is overshadowed by a foreign hand and foreign in aim, method, substance and spirit. But this purely negative agreement does not carry us very far: it does not tell us what in principle or practice we desire or ought to put in
On Education

its place. There may be much virtue in an epithet but to tag on the word “national” to a school or college or even a Council or Board of Education, to put that into the hands of an indigenous agency, mostly of men trained in the very system we are denouncing, to reproduce that condemned system with certain differences, additions, subtractions, modifications of detail and curriculum, to tack on a technical side and think we have solved the problem does not really change anything. To be satisfied with a trick of this kind is to perform a somersault round our centre of intellectual gravity, land ourselves where we were before and think we have got into quite another country, — obviously a very unsatisfactory proceeding. The institutions that go by the new name may or may not be giving a better education than the others, but in what they are more national, is not altogether clear even to the most willingly sympathetic critical intelligence.

The problem indeed is one of surpassing difficulty and it is not easy to discover from what point of thought or of practice one has to begin, on what principle to create or on what lines to map out the new building. The conditions are intricate and the thing that is to be created in a way entirely new. We cannot be satisfied with a mere resuscitation of some past principle, method and system that may have happened to prevail at one time in India, however great it was or in consonance with our past civilisation and culture. That reversion would be a sterile and impossible effort hopelessly inadequate to the pressing demands of the present and the far greater demands of our future. On the other hand to take over the English, German or American school and university or some variation on them with a gloss of Indian colour is a course attractively facile and one that saves the need of thinking and of new experiment; but in that case there is no call for this loud pother about nationalising education, all that is needed is a change of control, of the medium of instruction, of the frame and fitting of the curriculum and to some extent of the balance of subjects. I presume that it is something more profound, great and searching that we have in mind and that, whatever the difficulty of giving it shape, it is an
education proper to the Indian soul and need and temperament and culture that we are in quest of, not indeed something faithful merely to the past, but to the developing soul of India, to her future need, to the greatness of her coming self-creation, to her eternal spirit. It is this that we have to get clear in our minds and for that we must penetrate down to fundamentals and make those firm before we can greatly execute. Otherwise nothing is easier than to start off on a false but specious cry or from an unsound starting-point and travel far away from the right path on a tangent that will lead us to no goal but only to emptiness and failure.

But first let us clear out of the way or at least put in its proper place and light the preliminary disabling objection that there is and can be no meaning at all or none worth troubling about in the idea of a national education and that the very notion is the undesirable and unprofitable intrusion of a false and narrow patriotism into a field in which patriotism apart from the need of a training in good citizenship has no legitimate place. And for that one purpose no special kind or form of education is needed, since the training to good citizenship must be in all essentials the same whether in the east or the west, England or Germany or Japan or India. Mankind and its needs are the same everywhere and truth and knowledge are one and have no country; education too must be a thing universal and without nationality or borders. What, for an instance, could be meant by a national education in Science, and does it signify that we are to reject modern truth and modern method of science because they come to us from Europe and go back to the imperfect scientific knowledge of classical India, exile Galileo and Newton and all that came after and teach only what was known to Bhaskara, Aryabhatta and Varahamihira? Or how should the teaching of Sanskrit or the living indigenous tongues differ in kind and method from the teaching of Latin or the living modern tongues in Europe? Are we then to fetch back to the methods of the tols of Nadiya or to the system, if we can find out what it was, practised in ancient Takshashila or Nalanda? At most what can be demanded is a larger place for
the study of the past of our country, the replacement of English by the indigenous tongues as a medium and the relegation of the former to the position of a second language, — but it is possible to challenge the advisability even of these changes. After all we live in the twentieth century and cannot revive the India of Chandragupta or Akbar; we must keep abreast with the march of truth and knowledge, fit ourselves for existence under actual circumstances, and our education must be therefore up to date in form and substance and modern in life and spirit.

All these objections are only pertinent if directed against the travesty of the idea of national education which would make of it a means of an obscurantist retrogression to the past forms that were once a living frame of our culture but are now dead or dying things; but that is not the idea nor the endeavour. The living spirit of the demand for national education no more requires a return to the astronomy and mathematics of Bhaskara or the forms of the system of Nalanda than the living spirit of Swadeshi a return from railway and motor traction to the ancient chariot and the bullock-cart. There is no doubt plenty of retrogressive sentimentalism about and there have been some queer violations on common sense and reason and disconcerting freaks that prejudice the real issue, but these inconsequent streaks of fantasy give a false hue to the matter. It is the spirit, the living and vital issue that we have to do with, and there the question is not between modernism and antiquity, but between an imported civilisation and the greater possibilities of the Indian mind and nature, not between the present and the past, but between the present and the future. It is not a return to the fifth century but an initiation of the centuries to come, not a reversion but a break forward away from a present artificial falsity to her own greater innate potentialities that is demanded by the soul, by the Shakti of India.

The argument against national education proceeds in the first place upon the lifeless academic notion that the subject, the acquiring of this or that kind of information is the whole or the central matter. But the acquiring of various kinds of information is only one and not the chief of the means and necessities of
education: its central aim is the building of the powers of the human mind and spirit, it is the formation or, as I would prefer to view it, the evoking of knowledge and will and of the power to use knowledge, character, culture, — that at least if no more. And this distinction makes an enormous difference. It is true enough that if all we ask for is the acquisition of the information put at our disposal by science, it may be enough to take over the science of the West whether in an undigested whole or in carefully packed morsels. But the major question is not merely what science we learn, but what we shall do with our science and how too, acquiring the scientific mind and recovering the habit of scientific discovery — I leave aside the possibility of the Indian mentality working freely in its own nature discovering new methods or even giving a new turn to physical science — we shall relate it to other powers of the human mind and scientific knowledge, to other knowledge more intimate to other and not less light-giving and power-giving parts of our intelligence and nature. And there the peculiar cast of the Indian mind, its psychological tradition, its ancestral capacity, turn, knowledge bring in cultural elements of a supreme importance. A language, Sanskrit or another, should be acquired by whatever method is most natural, efficient and stimulating to the mind and we need not cling there to any past or present manner of teaching: but the vital question is how we are to learn and make use of Sanskrit and the indigenous languages so as to get to the heart and intimate sense of our own culture and establish a vivid continuity between the still living power of our past and the yet uncreated power of our future, and how we are to learn and use English or any other foreign tongue so as to know helpfully the life, ideas and culture of other countries and establish our right relations with the world around us. This is the aim and principle of a true national education, not, certainly, to ignore modern truth and knowledge, but to take our foundation on our own being, our own mind, our own spirit.

The second ground openly or tacitly taken by the hostile argument is that modern, that is to say, European civilisation is the thing that we have to acquire and fit ourselves for, so only
can we live and prosper and it is this that our education must do for us. The idea of national education challenges the sufficiency of this assumption. Europe built up her ancient culture on a foundation largely taken from the East, from Egypt, Chaldea, Phoenicia, India, but turned in a new direction and another life-idea by the native spirit and temperament, mind and social genius of Greece and Rome, lost and then recovered it, in part from the Arabs with fresh borrowings from the near East and from India and more widely by the Renaissance, but then too gave it a new turn and direction proper to the native spirit and temperament, mind and social genius of the Teutonic, and the Latin, the Celtic and Slav races. It is the civilisation so created that has long offered itself as the last and imperative word of the mind of humanity, but the nations of Asia are not bound so to accept it, and will do better, taking over in their turn whatever new knowledge or just ideas Europe has to offer, to assimilate them to their own knowledge and culture, their own native temperament and spirit, mind and social genius and out of that create the civilisation of the future. The scientific, rationalistic, industrial, pseudo-democratic civilisation of the West is now in process of dissolution and it would be a lunatic absurdity for us at this moment to build blindly on that sinking foundation. When the most advanced minds of the occident are beginning to turn in this red evening of the West for the hope of a new and more spiritual civilisation to the genius of Asia, it would be strange if we could think of nothing better than to cast away our own self and potentialities and put our trust in the dissolving and moribund past of Europe.

And, finally, the objection grounds itself on the implicit idea that the mind of man is the same everywhere and can everywhere be passed through the same machine and uniformly constructed to order. That is an old and effete superstition of the reason which it is time now to renounce. For within the universal mind and soul of humanity is the mind and soul of the individual with its infinite variation, its commonness and its uniqueness, and between them there stands an intermediate power, the mind of a nation, the soul of a people. And of all these three education
must take account if it is to be, not a machine-made fabric, but a true building or a living evocation of the powers of the mind and spirit of the human being.
These preliminary objections made to the very idea of national education and, incidentally, the misconceptions they oppose once out of the way, we have still to formulate more positively what the idea means to us, the principle and the form that national education must take in India, the thing to be achieved and the method and turn to be given to the endeavour. It is here that the real difficulty begins because we have for a long time, not only in education but in almost all things, in our whole cultural life, lost hold of the national spirit and idea and there has been as yet no effort of clear, sound and deep thinking or seeing which would enable us to recover it and therefore no clear agreement or even clear difference of opinion on essentials and accessories. At the most we have been satisfied with a strong sentiment and a general but shapeless idea and enthusiasm corresponding to the sentiment and have given to it in the form whatever haphazard application chanced to be agreeable to our intellectual associations, habits or caprices. The result has been no tangible or enduring success, but rather a maximum of confusion and failure. The first thing needed is to make clear to our own minds what the national spirit, temperament, idea, need demands of us through education and apply it in its right harmony to all the different elements of the problem. Only after that is done can we really hope with some confidence and chance of utility and success to replace the present false, empty and mechanical education by something better than a poor and futile chaos or a new mechanical falsity, by a real, living and creative upbringing of the Indian manhood of the future.

But first it is necessary to disengage from all ambiguities what we understand by a true education, its essential sense, its fundamental aim and significance. For we can then be sure of our
beginnings and proceed securely to fix the just place and whole bearing of the epithet we seek to attach to the word. I must be sure what education itself is or should be before I can be sure what a national education is or should be. Let us begin then with our initial statement, as to which I think there can be no great dispute that there are three things which have to be taken into account in a true and living education, the man, the individual in his commonness and in his uniqueness, the nation or people and universal humanity. It follows that that alone will be a true and living education which helps to bring out to full advantage, makes ready for the full purpose and scope of human life all that is in the individual man, and which at the same time helps him to enter into his right relation with the life, mind and soul of the people to which he belongs and with that great total life, mind and soul of humanity of which he himself is a unit and his people or nation a living, a separate and yet inseparable member. It is by considering the whole question in the light of this large and entire principle that we can best arrive at a clear idea of what we would have our education to be and what we shall strive to accomplish by a national education. Most is this largeness of view and foundation needed here and now in India, the whole energy of whose life purpose must be at this critical turning of her destinies directed to her one great need, to find and rebuild her true self in individual and in people and to take again, thus repossessed of her inner greatness, her due and natural portion and station in the life of the human race.

There are however very different conceptions possible of man and his life, of the nation and its life and of humanity and the life of the human race, and our idea and endeavour in education may well vary considerably according to that difference. India has always had her own peculiar conception and vision of these things and we must see whether it is not really, as it is likely to be, that which will be or ought to be at the very root of our education and the one thing that will give it its truly national character. Man has not been seen by the thought of India as a living body developed by physical Nature which has evolved certain vital propensities, an ego, a mind and a reason,
an animal of the genus homo and in our case of the species *homo indicus*, whose whole life and education must be turned towards a satisfaction of these propensities under the government of a trained mind and reason and for the best advantage of the personal and the national ego. It has not been either the turn of her mind to regard man preeminently as a reasoning animal, or let us say, widening the familiar definition, a thinking, feeling and willing natural existence, a mental son of physical Nature, and his education as a culture of the mental capacities, or to define him as a political, social and economic being and his education as a training that will fit him to be an efficient, productive and well disciplined member of the society and the State. All these are no doubt aspects of the human being and she has given them a considerable prominence subject to her larger vision, but they are outward things, parts of the instrumentation of his mind, life and action, not the whole or the real man.

India has seen always in man the individual a soul, a portion of the Divinity enwrapped in mind and body, a conscious manifestation in Nature of the universal self and spirit. Always she has distinguished and cultivated in him a mental, an intellectual, an ethical, dynamic and practical, an aesthetic and hedonistic, a vital and physical being, but all these have been seen as powers of a soul that manifests through them and grows with their growth, and yet they are not all the soul, because at the summit of its ascent it arises to something greater than them all, into a spiritual being, and it is in this that she has found the supreme manifestation of the soul of man and his ultimate divine manhood, his *paramārtha* and highest *puruṣārtha*. And similarly India has not understood by the nation or people an organised State or an armed and efficient community well prepared for the struggle of life and putting all at the service of the national ego, — that is only the disguise of iron armour which masks and encumbers the national Purusha, — but a great communal soul and life that has appeared in the whole and has manifested a nature of its own and a law of that nature, a Swabhava and Swadharma, and embodied it in its intellectual, aesthetic, ethical, dynamic, social and political forms and culture. And equally then our cultural
conception of humanity must be in accordance with her ancient vision of the universal manifesting in the human race, evolving through life and mind but with a high ultimate spiritual aim,—it must be the idea of the spirit, the soul of humanity advancing through struggle and concert towards oneness, increasing its experience and maintaining a needed diversity through the varied culture and life motives of its many peoples, searching for perfection through the development of the powers of the individual and his progress towards a diviner being and life, but feeling out too though more slowly after a similar perfectibility in the life of the race. It may be disputed whether this is a true account of the human or the national being, but if it is once admitted as a true description, then it should be clear that the only true education will be that which will be an instrument for this real working of the spirit in the mind and body of the individual and the nation. That is the principle on which we must build, that the central motive and the guiding ideal. It must be an education that for the individual will make its one central object the growth of the soul and its powers and possibilities, for the nation will keep first in view the preservation, strengthening and enrichment of the nation-soul and its dharma and raise both into powers of the life and ascending mind and soul of humanity. And at no time will it lose sight of man’s highest object, the awakening and development of his spiritual being.
Part Four

On Art

Sri Aurobindo wrote these essays in 1909–10. He published all of them except the last in the Karmayogin, a weekly newspaper of which he was the editor and principal writer.
The National Value of Art
I

THERE is a tendency in modern times to depreciate the value of the beautiful and overstress the value of the useful, a tendency curbed in Europe by the imperious insistence of an agelong tradition of culture and generous training of the aesthetic perceptions; but in India, where we have been cut off by a mercenary and soulless education from all our ancient roots of culture and tradition, it is corrected only by the stress of imagination, emotion and spiritual delicacy, submerged but not yet destroyed, in the temperament of the people. The value attached by the ancients to music, art and poetry has become almost unintelligible to an age bent on depriving life of its meaning by turning earth into a sort of glorified anthed horn or beehive and confusing the lowest, though most primary in necessity, of the means of human progress with the aim of this great evolutionary process. The first and lowest necessity of the race is that of self-preservation in the body by a sufficient supply and equable distribution of food, shelter and raiment. This is a problem which the oldest communistic human societies solved to perfection, and without communism it cannot be solved except by a convenient but inequitable arrangement which makes of the majority slaves provided with these primary wants and necessities and ministering under compulsion to a few who rise higher and satisfy larger wants. These are the wants of the vital instincts, called in our philosophy the prāṇa koṣa, which go beyond and dominate the mere animal wants, simple, coarse and undiscriminating, shared by us with the lower creation. It is these vital wants, the hunger for wealth, luxury, beautiful women, rich foods and drinks, which disturbed the first low but perfect economy of society and made the institution of private property, with its huge train of evils, inequality, injustice, violence, fraud, civil commotion and hatred, class selfishness, family selfishness and
personal selfishness, an inevitable necessity of human progress. The Mother of All works through evil as well as good, and through temporary evil she brings about a better and lasting good. These disturbances were complicated by the heightening of the primitive animal emotions into more intense and complex forms. Love, hatred, vindictiveness, anger, attachment, jealousy and the host of similar passions, — the citta or mind-stuff suffused by the vital wants of the prāṇa, that which the Europeans call the heart — ceased to be communal in their application and, as personal wants, clamoured for separate satisfaction. It is for the satisfaction of the vital and emotional needs of humanity that modern nations and societies exist, that commerce grows and Science ministers to human luxury and convenience. But for these new wants, the establishment of private property, first in the clan or family, then in the individual, the institution of slavery and other necessary devices the modern world would never have come into existence; for the satisfaction of the primary economic wants and bodily necessities would never have carried us beyond the small commune or tribe. But these primary wants and necessities have to be satisfied and satisfied universally, or society becomes diseased and states convulsed with sedition and revolution.

The old arrangement of a mass of slaves well fed and provided and a select class or classes enjoying in greater or less quantity the higher wants of humanity broke down in the mediaeval ages, because the heart began to develop too powerfully in humanity and under the influence of philosophy, ethics and religion began to spread its claim beyond the person, the class, the family, the clan to the nation and to humanity or to all creation. A temporary makeshift was invented to replace slavery, called free labour, by which men were paid and bribed to accept voluntarily the position of slaves, contenting themselves with the coarse satisfaction of the animal necessities and in return providing by their labour the higher wants of their masters now called superiors or higher classes. This also has become a solution which will no longer serve. The whole of humanity now demands not merely the satisfaction of the body, the anna,
but the satisfaction also of the prāṇa and the citta, the vital and emotional desires. Wealth, luxury, enjoyment for oneself and those dear to us, participation in the satisfaction of national wealth, pride, lordship, rivalry, war, alliance, peace, once the privilege of the few, the higher classes, of prince, burgess and noble are now claimed by all humanity. Political, social and economic liberty and equality, two things difficult to harmonise, must now be conceded to all men and harmonised as well as the present development of humanity will allow. It is this claim that arose, red with fury and blinded with blood, in the French Revolution. This is Democracy, this Socialism, this Anarchism; and, however fiercely the privileged and propertied classes may rage, curse and denounce these forerunners of Demogorgon, they can only temporarily resist. Their interests may be hoary and venerable with the sanction of the ages, but the future is mightier than the past and evolution proceeds relentlessly in its course trampling to pieces all that it no longer needs. Those who fight against her fight against the will of God, against a decree written from of old, and are already defeated and slain in the kārana jagat, the world of types and causes where Nature fixes everything before she works it out in the visible world. Nihatāḥ pūrvameva.

The mass of humanity has not risen beyond the bodily needs, the vital desires, the emotions and the current of thought-sensations created by these lower strata. This current of thought-sensations is called in Hindu philosophy the manas or mind, it is the highest to which all but a few of the animals can rise, and it is the highest function that the mass of mankind has thoroughly perfected. Beyond the manas is the buddhi, or thought proper, which, when perfected, is independent of the desires, the claims of the body and the interference of the emotions. But only a minority of men have developed this organ, much less perfected it. Only great thinkers in their hours of thought are able to use this organ independently of the lower strata, and even they are besieged by the latter in their ordinary life and their best thought suffers continually from these lower intrusions. Only developed Yogins have a viśuddha-buddhi, a thought-organ cleared of the
interference of the lower strata by cittaśuddhi or purification of the citta, the mind-stuff, from the prāṇa full of animal, vital and emotional disturbances. With most men the buddhi is full of manas and the manas of the lower strata. The majority of mankind do not think, they have only thought-sensations; a large minority think confusedly, mixing up desires, predilections, passions, prejudgments, old associations and prejudices with pure and disinterested thought. Only a few, the rare aristocrats of the earth, can really and truly think. That is now the true aristocracy, not the aristocracy of the body and birth, not the aristocracy of vital superiority, wealth, pride and luxury, not the aristocracy of higher emotions, courage, energy, successful political instinct and the habit of mastery and rule,—though these latter cannot be neglected,—but the aristocracy of knowledge, undisturbed insight and intellectual ability. It emerges, though it has not yet emerged, and in any future arrangement of human society this natural inequality will play an important part.

Above the buddhi are other faculties which are now broadly included in the term spirituality. This body of faculties is still rarer and more imperfectly developed even in the highest than the thought-organ. Most men mistake intellectuality, imaginative inspiration or emotional fervour for spirituality, but this is a much higher function, the highest of all, of which all the others are coverings and veils. Here we get to the fountain, the source to which we return, the goal of human evolution. But although spirituality has often entered into humanity in great waves, it has done so merely to create a temporary impetus and retire into the souls of a few, leaving only its coverings and shadows behind to compose and inform the thing which is usually called religion. Meanwhile the thought is the highest man has really attained and it is by the thought that the old society has been broken down. And the thought is composed of two separate sides, judgment or reason and imagination, both of which are necessary to perfect ideation. It is by science, philosophy and criticism on the one side, by art, poetry and idealism on the other that the old state of humanity has been undermined and is now collapsing, and the foundations have been laid for the
new. Of these science, philosophy and criticism have established
their use to the mass of humanity by ministering to the luxury,
comfort and convenience which all men desire and arming them
with justification in the confused struggle of passions, interests,
cravings and aspirations which are now working with solvent
and corrosive effect throughout the world. The value of the other
side, more subtle and profound, has been clouded to the mass of
men by the less visible and sensational character of its workings.
THE ACTIVITY of human thought divides itself broadly into two groups of functions, those of the right hand, contemplation, creation, imagination, the centres that see the truth, and those of the left hand, criticism, reasoning, discrimination, inquiry, the centres that judge the truth when it is seen. In education the latter are fostered by scientific and manual training, but the only quality of the right hand that this education fosters is observation. For this reason a purely scientific education tends to make thought keen and clear-sighted within certain limits, but narrow, hard and cold. Even in his own sphere the man without any training of the right hand can only progress in a settled groove; he cannot broaden the base of human culture or enlarge the bounds of science. Tennyson describes him as an eye well practised in Nature, a spirit bounded and poor, and the description is just. But a cultivated eye without a cultivated spirit makes by no means the highest type of man. It is precisely the cultivation of the spirit that is the object of what is well called a liberal education, and the pursuits best calculated to cultivate the growth of the spirit are language, literature, the Arts, music, painting, sculpture or the study of these, philosophy, religion, history, the study and understanding of man through his works and of Nature and man through the interpretative as well as through the analytic faculties. These are the pursuits which belong to the intellectual activities of the right hand, and while the importance of most of these will be acknowledged, there is a tendency to ignore Art and poetry as mere refinements, luxuries of the rich and leisurely rather than things that are necessary to the mass of men or useful to life. This is largely due to the misuse of these great instruments by the luxurious few who held the world and its good things in their hands in the intermediate period of human progress.
But the aesthetic faculties entering into the enjoyment of the world and the satisfaction of the vital instincts, the love of the beautiful in men and women, in food, in things, in articles of use and articles of pleasure, have done more than anything else to raise man from the beast, to refine and purge his passions, to ennoble his emotions and to lead him up through the heart and the imagination to the state of the intellectual man. That which has helped man upward, must be preserved in order that he may not sink below the level he has attained. For man intellectually developed, mighty in scientific knowledge and the mastery of gross and subtle nature, using the elements as his servants and the world as his footstool, but undeveloped in heart and spirit, becomes only an inferior kind of Asura using the powers of a demigod to satisfy the nature of an animal. According to dim traditions and memories of the old world, of such a nature was the civilisation of old Atlantis, submerged beneath the Ocean when its greatness and its wickedness became too heavy a load for the earth to bear, and our own legends of the Asuras represent a similar consciousness of a great but abortive development in humanity.

The first and lowest use of Art is the purely aesthetic, the second is the intellectual or educative, the third and highest the spiritual. By speaking of the aesthetic use as the lowest, we do not wish to imply that it is not of immense value to humanity, but simply to assign to it its comparative value in relation to the higher uses. The aesthetic is of immense importance and until it has done its work, mankind is not really fitted to make full use of Art on the higher planes of human development. Aristotle assigns a high value to tragedy because of its purifying force. He describes its effect as *katharsis*, a sacramental word of the Greek mysteries, which, in the secret discipline of the ancient Greek Tantrics, answered precisely to our *cittāśuddhi*, the purification of the *citta* or mass of established ideas, feelings and actional habits in a man either by *sanyama*, rejection, or by *bhoga*, satisfaction, or by both. Aristotle was speaking of the purification of feelings, passions and emotions in the heart through imaginative treatment in poetry but the truth the idea
contains is of much wider application and constitutes the justification of the aesthetic side of art. It purifies by beauty. The beautiful and the good are held by many thinkers to be the same and, though the idea may be wrongly stated, it is, when put from the right standpoint, not only a truth but the fundamental truth of existence. According to our own philosophy the whole world came out of ānanda and returns into ānanda, and the triple term in which ānanda may be stated is Joy, Love, Beauty. To see divine beauty in the whole world, man, life, nature, to love that which we have seen and to have pure unalloyed bliss in that love and that beauty is the appointed road by which mankind as a race must climb to God. That is the reaching to vidyā through avidyā, to the One Pure and Divine through the manifold manifestation of Him, of which the Upanishad repeatedly speaks. But the bliss must be pure and unalloyed, unalloyed by self-regarding emotions, unalloyed by pain and evil. The sense of good and bad, beautiful and unbeautiful, which afflicts our understanding and our senses, must be replaced by akhaṇḍa rasa, undifferentiated and unabridged delight in the delightfulness of things, before the highest can be reached. On the way to this goal full use must be made of the lower and abridged sense of beauty which seeks to replace the less beautiful by the more, the lower by the higher, the mean by the noble.

At a certain stage of human development the aesthetic sense is of infinite value in this direction. It raises and purifies conduct by instilling a distaste for the coarse desires and passions of the savage, for the rough, uncouth and excessive in action and manner, and restraining both feeling and action by a striving after the decent, the beautiful, the fit and seemly which received its highest expression in the manners of cultivated European society, the elaborate ceremonious life of the Confucian, the careful ācāra and etiquette of Hinduism. At the present stage of progress this element is losing much of its once all-important value and, when overstressed, tends to hamper a higher development by the obstruction of soulless ceremony and formalism. Its great use was to discipline the savage animal instincts of the body, the vital instincts and the lower feelings in the heart. Its disadvantage
to progress is that it tends to trammel the play both of the higher feelings of the heart and the workings of originality in thought. Born originally of a seeking after beauty, it degenerates into an attachment to form, to exterior uniformity, to precedent, to dead authority. In the future development of humanity it must be given a much lower place than in the past. Its limits must be recognised and the demands of a higher truth, sincerity and freedom of thought and feeling must be given priority. Mankind is apt to bind itself by attachment to the means of its past progress forgetful of the aim. The bondage to formulas has to be outgrown, and in this again it is the sense of a higher beauty and fitness which will be most powerful to correct the lower. The art of life must be understood in more magnificent terms and must subordinate its more formal elements to the service of the master civilisers, Love and Thought.
THE WORK of purifying conduct through outward form and habitual and seemly regulation of expression, manner and action is the lowest of the many services which the artistic sense has done to humanity, and yet how wide is the field it covers and how important and indispensable have its workings been to the progress of civilisation! A still more important and indispensable activity of the sense of beauty is the powerful help it has given to the formation of morality. We do not ordinarily recognise how largely our sense of virtue is a sense of the beautiful in conduct and our sense of sin a sense of ugliness and deformity in conduct. It may easily be recognised in the lower and more physical workings, as for instance in the shuddering recoil from cruelty, blood, torture as things intolerably hideous to sight and imagination or in the aesthetic disgust at sensual excesses and the strong sense, awakened by this disgust, of the charm of purity and the beauty of virginity. This latter feeling was extremely active in the imagination of the Greeks and other nations not noted for a high standard in conduct, and it was purely aesthetic in its roots. Pity again is largely a vital instinct in the ordinary man associated with jugupsā, the loathing for the hideousness of its opposite, ghṛṣṇā, disgust at the sordidness and brutality of cruelty, hardness and selfishness as well as at the ugliness of their actions, so that a common word for cruel in the Sanskrit language is nirghṛṣṇa, the man without disgust or loathing, and the word ghṛṣṇā approximates in use to kṛṣṇā, the lower or vital kind of pity. But even on a higher plane the sense of virtue is very largely aesthetic and, even when it emerges from the aesthetic stage, must always call the sense of the beautiful to its support if it is to be safe from the revolt against it of one of the most deep-seated of human instincts. We can see the largeness of this element if we study the
ideas of the Greeks, who never got beyond the aesthetic stage of morality. There were four gradations in Greek ethical thought, — the *euprepēs*, that which is seemly or outwardly decorous; the *dikaios*, that which is in accordance with *dikē* or *nomos*, the law, custom and standard of humanity based on the sense of fitness and on the codified or uncodified mass of precedents in which that sense has been expressed in general conduct, — in other words the just or lawful; thirdly, the *agathon*, the good, based partly on the seemly and partly on the just and lawful, and reaching towards the purely beautiful; then, final and supreme, the *kalon*, that which is purely beautiful, the supreme standard. The most remarkable part of Aristotle’s moral system is that in which he classifies the parts of conduct not according to our idea of virtue and sin, *pāpa* and *punya*, but by a purely aesthetic standard, the excess, defect and golden, in other words correct and beautiful, mean of qualities. The Greeks’ view of life was imperfect even from the standpoint of beauty, not only because the idea of beauty was not sufficiently catholic and too much attached to a fastidious purity of form and outline and restraint, but because they were deficient in love. God as beauty, Srikrishna in Brindavan, Shyamasundara, is not only Beauty, He is also Love, and without perfect love there cannot be perfect beauty, and without perfect beauty there cannot be perfect delight. The aesthetic motive in conduct limits and must be exceeded in order that humanity may rise. Therefore it was that the Greek mould had to be broken and humanity even revolted for a time against beauty. The *agathon*, the good, had to be released for a time from the bondage of the *kalon*, the aesthetic sense of beauty, just as it is now struggling to deliver itself from the bondage of the *euprepēs* and the *dikaios*, mere decorousness, mere custom, mere social law and rule. The excess of this anti-aesthetic tendency is visible in Puritanism and the baser forms of asceticism. The progress of ethics in Europe has been largely a struggle between the Greek sense of aesthetic beauty and the Christian sense of a higher good marred on the one side by formalism, on the other by an unlovely asceticism. The association of the latter with virtue has largely driven the sense of beauty to the side of vice. The good
must not be subordinated to the aesthetic sense, but it must be beautiful and delightful, or to that extent it ceases to be good. The object of existence is not the practice of virtue for its own sake but ānanda, delight, and progress consists not in rejecting beauty and delight, but in rising from the lower to the higher, the less complete to the more complete beauty and delight.

The third activity of the aesthetic faculty, higher than the two already described, the highest activity of the artistic sense before it rises to the plane of the intellect, is the direct purifying of the emotions. This is the katharsis of which Aristotle spoke. The sense of pleasure and delight in the emotional aspects of life and action, this is the poetry of life, just as the regulating and beautiful arrangement of character and action is the art of life. We have seen how the latter purifies, but the purifying force of the former is still more potent for good. Our life is largely made up of the eight rasas. The movements of the heart in its enjoyment of action, its own and that of others, may either be directed downwards, as is the case with the animals and animal men, to the mere satisfaction of the ten sense-organs and the vital desires which make instruments of the senses in the average sensual man, or they may work for the satisfaction of the heart itself in a predominatingly emotional enjoyment of life, or they may be directed upwards through the medium of the intellect, rational and intuitional, to attainment of delight through the seizing on the source of all delight, the Spirit, the satyam, sundaram, ānandam who is beyond and around, the source and the basis of all this world-wide activity, evolution and progress. When the heart works for itself, then it enjoys the poetry of life, the delight of emotions, the wonder, pathos, beauty, enjoyableness, lovableness, calm, serenity, clarity and also the grandeur, heroism, passion, fury, terror and horror of life, of man, of Nature, of the phenomenal manifestation of God. This is not the highest, but it is higher than the animal, vital and externally aesthetic developments. The large part it plays in life is obvious, but in life it is hampered by the demands of the body and the vital passions. Here comes in the first mighty utility, the triumphant activity of the most energetic forms of art and poetry.
They provide a field in which these pressing claims of the animal can be excluded and the emotions, working disinterestedly for the satisfaction of the heart and the imagination alone, can do the work of *katharsis*, emotional purification, of which Aristotle spoke. *Cittasuddhi*, the purification of the heart, is the appointed road by which man arrives at his higher fulfilment, and, if it can be shown that poetry and art are powerful agents towards that end, their supreme importance is established. They are that, and more than that. It is only one of the great uses of these things which men nowadays are inclined to regard as mere ornaments of life and therefore of secondary importance.
WE NOW come to the kernel of the subject, the place of art in the evolution of the race and its value in the education and actual life of a nation. The first question is whether the sense of the beautiful has any effect on the life of a nation. It is obvious, from what we have already written, that the manners, the social culture and the restraint in action and expression which are so large a part of national prestige and dignity and make a nation admired like the French, loved like the Irish or respected like the higher-class English, are based essentially on the sense of form and beauty, of what is correct, symmetrical, well-adjusted, fair to the eye and pleasing to the imagination. The absence of these qualities is a source of national weakness. The rudeness, coarseness and vulgar violence of the less cultured Englishman, the overbearing brusqueness and selfishness of the Prussian have greatly hampered those powerful nations in their dealings with foreigners, dependencies and even their own friends, allies, colonies. We all know what a large share the manner and ordinary conduct of the average and of the vulgar Anglo-Indian has had in bringing about the revolt of the Indian, accustomed through ages to courtesy, dignity and the amenities of an equal intercourse, against the mastery of an obviously coarse and selfish community. Now the sense of form and beauty, the correct, symmetrical, well-adjusted, fair and pleasing is an artistic sense and can best be fostered in a nation by artistic culture of the perceptions and sensibilities. It is noteworthy that the two great nations who are most hampered by the defect of these qualities in action are also the least imaginative, poetic and artistic in Europe. It is the South German who contributes the art, poetry and music of Germany, the Celt and Norman who produce great poets and a few great artists in England without altering the characteristics of the dominant
Saxon. Music is even more powerful in this direction than Art and by the perfect expression of harmony insensibly steeps the man in it. And it is noticeable that England has hardly produced a single musician worth the name. Plato in his Republic has dwelt with extraordinary emphasis on the importance of music in education; as is the music to which a people is accustomed, so, he says in effect, is the character of that people. The importance of painting and sculpture is hardly less. The mind is profoundly influenced by what it sees and, if the eye is trained from the days of childhood to the contemplation and understanding of beauty, harmony and just arrangement in line and colour, the tastes, habits and character will be insensibly trained to follow a similar law of beauty, harmony and just arrangement in the life of the adult man. This was the great importance of the universal proficiency in the arts and crafts or the appreciation of them which was prevalent in ancient Greece, in certain European ages, in Japan and in the better days of our own history. Art galleries cannot be brought into every home, but, if all the appointments of our life and furniture of our homes are things of taste and beauty, it is inevitable that the habits, thoughts and feelings of the people should be raised, ennobled, harmonised, made more sweet and dignified.

A similar result is produced on the emotions by the study of beautiful or noble art. We have spoken of the purification of the heart, the cittaśuddhi, which Aristotle assigned as the essential office of poetry, and have pointed out that it is done in poetry by the detached and disinterested enjoyment of the eight rásas or forms of emotional aestheticism which make up life, unalloyed by the disturbance of the lower self-regarding passions. Painting and sculpture work in the same direction by different means. Art sometimes uses the same means as poetry but cannot do it to the same extent because it has not the movement of poetry; it is fixed, still, it expresses only a given moment, a given point in space and cannot move freely through time and region. But it is precisely this stillness, this calm, this fixity which gives its separate value to Art. Poetry raises the emotions and gives each its separate delight. Art stills the emotions and teaches them the
delight of a restrained and limited satisfaction,—this indeed was the characteristic that the Greeks, a nation of artists far more artistic than poetic, tried to bring into their poetry. Music deepens the emotions and harmonises them with each other. Between them music, art and poetry are a perfect education for the soul; they make and keep its movements purified, self-controlled, deep and harmonious. These, therefore, are agents which cannot profitably be neglected by humanity on its onward march or degraded to the mere satisfaction of sensuous pleasure which will disintegrate rather than build the character. They are, when properly used, great educating, edifying and civilising forces.
THE VALUE of art in the training of intellectual faculty is also an important part of its utility. We have already indicated the double character of intellectual activity, divided between the imaginative, creative and sympathetic or comprehensive intellectual centres on the one side and the critical, analytic and penetrative on the other. The latter are best trained by science, criticism and observation, the former by art, poetry, music, literature and the sympathetic study of man and his creations. These make the mind quick to grasp at a glance, subtle to distinguish shades, deep to reject shallow self-sufficiency, mobile, delicate, swift, intuitive. Art assists in this training by raising images in the mind which it has to understand not by analysis, but by self-identification with other minds; it is a powerful stimulator of sympathetic insight. Art is subtle and delicate, and it makes the mind also in its movements subtle and delicate. It is suggestive, and the intellect habituated to the appreciation of art is quick to catch suggestions, mastering not only, as the scientific mind does, that which is positive and on the surface, but that which leads to ever fresh widening and subtilising of knowledge and opens a door into the deeper secrets of inner nature where the positive instruments of science cannot take the depth or measure. This supreme intellectual value of Art has never been sufficiently recognised. Men have made language, poetry, history, philosophy agents for the training of this side of intellectuality, necessary parts of a liberal education, but the immense educative force of music, painting and sculpture has not been duly recognised. They have been thought to be by-paths of the human mind, beautiful and interesting, but not necessary, therefore intended for the few. Yet the universal impulse to enjoy the beauty and attractiveness of sound, to look at and live among pictures, colours, forms ought to have warned
mankind of the superficiality and ignorance of such a view of these eternal and important occupations of human mind. The impulse, denied proper training and self-purification, has spent itself on the trivial, gaudy, sensuous, cheap or vulgar instead of helping man upward by its powerful aid in the evocation of what is best and highest in intellect as well as in character, emotion and the aesthetic enjoyment and regulation of life and manners. It is difficult to appreciate the waste and detriment involved in the low and debased level of enjoyment to which the artistic impulses are condemned in the majority of mankind.

But beyond and above this intellectual utility of Art, there is a higher use, the noblest of all, its service to the growth of spirituality in the race. European critics have dwelt on the close connection of the highest developments of art with religion, and it is undoubtedly true that in Greece, in Italy, in India, the greatest efflorescence of a national Art has been associated with the employment of the artistic genius to illustrate or adorn the thoughts and fancies or the temples and instruments of the national religion. This was not because Art is necessarily associated with the outward forms of religion, but because it was in the religion that men’s spiritual aspirations centred themselves. Spirituality is a wider thing than formal religion and it is in the service of spirituality that Art reaches its highest self-expression. Spirituality is a single word expressive of three lines of human aspiration towards divine knowledge, divine love and joy, divine strength, and that will be the highest and most perfect Art which, while satisfying the physical requirements of the aesthetic sense, the laws of formal beauty, the emotional demand of humanity, the portrayal of life and outward reality, as the best European Art satisfies these requirements, reaches beyond them and expresses inner spiritual truth, the deeper not obvious reality of things, the joy of God in the world and its beauty and desirableness and the manifestation of divine force and energy in phenomenal creation. This is what Indian Art alone attempted thoroughly and in the effort it often dispensed, either deliberately or from impatience, with the lower, yet not negligible perfections which the more material European demanded. Therefore Art has
flowed in two separate streams in Europe and Asia, so diverse that it is only now that the European aesthetic sense has so far trained itself as to begin to appreciate the artistic conventions, aims and traditions of Asia. Asia’s future development will unite these two streams in one deep and grandiose flood of artistic self-expression perfecting the aesthetic evolution of humanity.

But if Art is to reach towards the highest, the Indian tendency must dominate. The spirit is that in which all the rest of the human being reposes, towards which it returns and the final self-revelation of which is the goal of humanity. Man becomes God, and all human activity reaches its highest and noblest when it succeeds in bringing body, heart and mind into touch with spirit. Art can express eternal truth, it is not limited to the expression of form and appearance. So wonderfully has God made the world that a man using a simple combination of lines, an unpretentious harmony of colours, can raise this apparently insignificant medium to suggest absolute and profound truths with a perfection which language labours with difficulty to reach. What Nature is, what God is, what man is can be triumphantly revealed in stone or on canvas.

Behind a few figures, a few trees and rocks the supreme Intelligence, the supreme Imagination, the supreme Energy lurks, acts, feels, is, and, if the artist has the spiritual vision, he can see it and suggest perfectly the great mysterious Life in its manifestations brooding in action, active in thought, energetic in stillness, creative in repose, full of a mastering intention in that which appears blind and unconscious. The great truths of religion, science, metaphysics, life, development, become concrete, emotional, universally intelligible and convincing in the hands of the master of plastic Art, and the soul of man, in the stage when it is rising from emotion to intellect, looks, receives the suggestion and is uplifted towards a higher development, a diviner knowledge.

So it is with the divine love and joy which pulsates throughout existence and is far superior to alloyed earthly pleasure. Catholic, perfect, unmixed with repulsion, radiating through all things, the common no less than the high, the mean and shabby
no less than the lofty and splendid, the terrible and the repulsive, no less than the charming and attractive, it uplifts all, purifies all, turns all to love and delight and beauty. A little of this immortal nectar poured into a man’s heart transfigures life and action. The whole flood of it pouring in would lift mankind to God. This too Art can seize on and suggest to the human soul, aiding it in its stormy and toilsome pilgrimage. In that pilgrimage it is the divine strength that supports. Shakti, Force, pouring through the universe supports its boundless activities, the frail and tremulous life of the rose no less than the flaming motions of sun and star. To suggest the strength and virile unconquerable force of the divine Nature in man and in the outside world, its energy, its calm, its powerful inspiration, its august enthusiasm, its wildness, greatness, attractiveness, to breathe that into man’s soul and gradually mould the finite into the image of the Infinite is another spiritual utility of Art. This is its loftiest function, its fullest consummation, its most perfect privilege.
THE ENORMOUS value of Art to human evolution has been made sufficiently apparent from the analysis, incomplete in itself, which we have attempted. We have also incidentally pointed out its value as a factor in education. It is obvious that no nation can afford to neglect an element of such high importance to the culture of its people or the training of some of the higher intellectual, moral and aesthetic faculties in the young. The system of education which, instead of keeping artistic training apart as a privilege for a few specialists, frankly introduces it as a part of culture no less necessary than literature or science, will have taken a great step forward in the perfection of national education and the general diffusion of a broad-based human culture. It is not necessary that every man should be an artist. It is necessary that every man should have his artistic faculty developed, his taste trained, his sense of beauty and insight into form and colour and that which is expressed in form and colour, made habitually active, correct and sensitive. It is necessary that those who create, whether in great things or small, whether in the unusual masterpieces of art and genius or in the small common things of use that surround a man’s daily life, should be habituated to produce and the nation habituated to expect the beautiful in preference to the ugly, the noble in preference to the vulgar, the fine in preference to the crude, the harmonious in preference to the gaudy. A nation surrounded daily by the beautiful, noble, fine and harmonious becomes that which it is habituated to contemplate and realises the fullness of the expanding Spirit in itself.

In the system of National education that was inaugurated in Bengal, a beginning was made by the importance attached to drawing and clay-modelling as elements of manual training. But the absence of an artistic ideal, the misconception of the true
aim of manual training, the imperative financial needs of these struggling institutions making for a predominant commercial aim in the education given, the mastery of English ideas, English methods and English predilections in the so-called national education rendered nugatory the initial advantage. The students had faculty, but the teaching given them would waste and misuse the faculty. The nation and the individual can gain nothing by turning out figures in clay which faithfully copy the vulgarity and ugliness of English commercial production or by multiplying mere copies of men or things. A free and active imaging of form and hue within oneself, a free and self-trained hand reproducing with instinctive success not the form and measurement of things seen outside, for that is a smaller capacity easily mastered, but the inward vision of the relation and truth of things, an eye quick to note and distinguish, sensitive to design and to harmony in colour, these are the faculties that have to be evoked, and the formal and mechanical English method is useless for this purpose.

In India the revival of a truly national Art is already an accomplished fact and the masterpieces of the school can already challenge comparison with the best work of other countries. Under such circumstances it is unpardonable that the crude formal teaching of English schools and the vulgar commercial aims and methods of the West should subsist in our midst. The country has yet to evolve a system of education which shall be really national. The taint of Occidental ideals and alien and unsuitable methods has to be purged out of our minds, and nowhere more than in the teaching which should be the foundation of intellectual and aesthetic renovation. The spirit of old Indian Art must be revived, the inspiration and directness of vision which even now subsists among the possessors of the ancient traditions, the inborn skill and taste of the race, the dexterity of the Indian hand and the intuitive gaze of the Indian eye must be recovered and the whole nation lifted again to the high level of the ancient culture — and higher.
Two Pictures

The Modern Review and Prabasi are doing monthly a service to the country the importance of which cannot be exaggerated. The former review is at present the best conducted and the most full of valuable matter of any in India. But good as are the articles which fill the magazine from month to month, the whole sum of them is outweighed in value by the single page which gives us the reproduction of some work of art by a contemporary Indian painter. To the lover of beauty and the lover of his country every one of these delicately executed blocks is an event of importance in his life within. The reviews by bringing these masterpieces to the thousands who have no opportunity of seeing the originals are restoring the sense of beauty and artistic emotion inborn in our race but almost blotted out by the long reign in our lives of the influence of Anglo-Saxon vulgarity and crude tasteless commercialism. The pictures belong usually to the new school of Bengali art, the only living and original school now developing among us and the last issues have each contained a picture — especially important not only by the intrinsic excellence of the work but by the perfect emergence of that soul of India which we attempted to characterise in an article in our second issue.¹

The picture in the July number is by Mahomed Hakim Khan, a student of the Government School of Art, Calcutta, and represents Nadir Shah ordering a general massacre. It is not one of those pictures salient and imposing which leap at once at the eye and hold it. A first glance only shows three figures almost conventionally Indian in poses which also seem conventional.

But as one looks again and again the soul of the picture begins suddenly to emerge, and one realises with a start of surprise that one is in the presence of a work of genius. The reason for this lies in the extraordinary restraint and simplicity which conceals the artist's strength and subtlety. The whole spirit and conception is Indian and it would be difficult to detect in the composition a single trace of foreign influence. The grace and perfection of the design and the distinctness and vigour of form which support it are not European; it is the Saracenic sweetness and grace, the old Vedantic massiveness and power transformed by some new nameless element of harmony into something original and yet Indian. The careful and minute detail in the minutiae of the dresses, of the armour of the warrior seated on the right, of the flickering lines of the pillar on the left are inherited from an intellectual ancestry whose daily vision was accustomed to the rich decoration of Agra and Fatehpur Sikri or to the fullness and crowded detail which informed the massive work of the old Vedantic artists and builders, Hindu, Jain and Buddhist. Another peculiarity is the fixity and stillness which, in spite of the Titanic life and promise of motion in the figure of Nadir, pervade the picture. A certain stiffness of design marks much of the old Hindu art, a stiffness courted by the artists perhaps in order that no insistence of material life in the figures might distract attention from the expression of the spirit within which was their main object. By some inspiration of genius the artist has transformed this conventional stiffness into a hint of rigidity which almost suggests the lines of stone. This stillness adds immensely to the effect of the picture. The petrified inaction of the three human beings contrasted with the expression of the faces and the formidable suggestion in the pose of their sworded figures affects us like the silence of murder crouching for his leap.

The central figure of Nadir Shah dominates his surroundings. It is from this centre that the suggestion of something terrible coming out of the silent group has started. The strong, proud and regal figure is extraordinarily impressive, but it is the face and the arm that give the individuality. That bare arm and hand grasping the rigid upright scimitar are inhuman in
their savage force and brutality; it is the hand, the fingers, one might almost say the talons of the human wild beast. This arm and hand have action, murder, empire in them: the whole history of Nadir is there expressed. The grip and gesture have already commenced the coming massacre and the whole body behind consents. The face corresponds in the hard firmness and strength of the nose, the brute cruelty of the mouth almost lost in the moustache and beard. But the eyes are the master-touch in this figure. They overcome us with surprise when we look at them, for these are not the eyes of the assassin, even the assassin upon the throne. The soul that looks out of these eyes is calm, aloof and thoughtful, yet terrible. Whatever order of massacre has issued from these lips, did not go forth from an ordinary energetic man of action moved by self-interest, rage or blood-thirst. The eyes are the eyes of a Yogan but a terrible Yogan; such might be the look of some adept of the left-hand ways, some mighty Kapalik lifted above pity and shrinking as above violence and wrath. Those eyes in that face, over that body, arm, hand seem to be those of one whose spirit is not affected by the actions of the body, whose natural part and organs are full of the destroying energy of Kali while the soul, the witness within, looks on at the sanguinary drama tranquil, darkly approving but hardly interested. And then it dawns on one that this is not so much the Nadir of history; unconsciously perhaps the artist has given a quiet but effective delineation of the Scourge of God, the man who is rather a force than a human being, the Asura with a mission who has come to do God’s work of destruction and help on the evolution by carnage and ruin. The soul within is not that of a human being. Some powerful Yogan of a Lemurian race has incarnated in this body, one born when the simian might and strength of the vānara had evolved into the perfection of the human form and brain with the animal still uneliminated, who having by tapasya and knowledge separated his soul from his nature has elected this reward that after long beatitude, prāpya punyakṛtām lokān usītvā śāśvathīḥ samāḥ, he should reincarnate as a force of nature informed by a human soul and work out in a single life the savage strength of the outward self, taking upon
himself the foreordained burden of empire and massacre.

From Nadir the coming carnage has passed into the seated warrior and looks out from his eyes at the receiver of the order. The gaze is contemplative but not inward like Nadir’s, and it is human and indifferent envisaging massacre as part of the activities of the soldier with a matter-of-fact approval. The figure is almost a piece of sculpture, so perfect is the rigidity of arrested and expectant action. The straight strong sword over the shoulder has the same rigid preparedness. There is a certain defect in the unnatural pose and obese curve of the hand which is not justified by any similar detail or motive in the rest of the figure. We notice a similar motiveless strain in the position of Nadir’s left arm, though here something is perhaps added to the force of the attitude. A standing figure receives the sanguinary command. The folded hands and the scimitar suspended in front are full of the spirit of ready obedience and there is an expression of pleasure, almost amusement which makes even this commonplace face terrible, for the decree dooming thousands is taken as lightly as if it were order for nautch or banquet. The three mighty swords, by a masterly effect of balanced design, fill with death and menace the terrace on which the men are seated. Behind these formidable figures is a part of the palace gracious with the simple and magical lines of Indo-Saracenic architecture and in the distance on the right from behind a mass of heavy impenetrable green a slender tapering tower rises into the peaceful quiet of Delhi.

On another page of the same review we have a picture by one of the greatest Masters of European Art, Raphael’s “Vision of the Knight”. The picture is full of that which Greece and Italy perfected as the aim of Art, beauty and such soul-expression as heightens physical beauty. It is beauty that is expressed in the robust body and feminine face of the armed youth both full of an exquisite languor of sleep, in the sweet face, the voluptuous figure, the gracious pose of the temptress offering her delicate allurement of flowers, in the other’s grave, strong and benign countenance, the vigorous physique and open gesture of promise and aspiration extending a book and a fine slender sword, in the

delicacy of the landscape behind and the tree under which the dreamer lies. There is suggestion but it is the suggestion of more and more beauty, there is harmony and relation but it is the harmony and relation of loveliness of landscape as a background to the loveliness of the nobly-grouped figures. There is an attempt to express spiritual meanings but it is by outward symbols only and not by making the outward expression a vehicle for something that comes from within and overpowers impalpably. This is allegory, the other is the drawing and painting of the very self of things. Only in the delicate spiritual face of the Knight is there some approach to the Eastern spirit. This is one kind of art and a great art, but is the other less? Beauty for beauty’s sake can never be the spirit of art in India, beauty we must seek and always beauty, but never lose sight of the end which India holds more important, the realisation of the Self in things. Europeans create out of the imagination. India has always sought to go deeper within and create out of the Power behind imagination, by passivity and plenary inspiration, in Yoga, from samadhi.
Indian Art and an Old Classic

WE HAVE before us a new edition of Krittibas’s Ramayan, edited and published by that indefatigable literary and patriotic worker, Sj. Ramananda Chatterji. Ramananda Babu is well known to the Bengali public as a clear-minded, sober and fearless political speaker and writer; as editor of the Modern Review and the Prabasi he has raised the status and quality of Indian periodical literature to an extraordinary extent, and has recently been doing a yet more valuable and lasting service to his country by introducing the masterpieces of the new school of Art to his readers. His present venture is not in itself an ambitious one, as it purports only to provide a well-printed and beautifully illustrated edition of Krittibas for family reading. With this object the editor has taken the Battala prints of the Ramayan as his text and reproduced them with the necessary corrections and the omission of a few passages which offend modern ideas of decorum. Besides, the book is liberally illustrated with reproductions of recent pictures by artists of Bombay and Calcutta on subjects chosen from the Ramayan.

The place of Krittibas in our literature is well established. He is one of the most considerable of our old classics and one of the writers who most helped to create the Bengali language as a literary instrument. The sweetness, simplicity, lucidity, melody of the old language is present in every line that Krittibas wrote, but, in this recension at least, we miss the racy vigour and nervous vernacular force which was a gift of the early writers. Our impression is that the modern editions do not faithfully reproduce the old classic and that copyists of more learning and puristic taste than critical imagination or poetical sympathy have polished away much that was best in the Bengali Ramayan. The old copies, we believe, reveal a style much more irregular.
in diction and metre, but more full of humanity, strength and
the rough and natural touch of the soil. In no case can our
Ramayan compare with the great epic of Tulsidas, that mine of
poetry, strong and beautiful thought and description and deep
spiritual force and sweetness. But it must have been greater in
its original form than in its modern dress.

The great value of the edition lies however in the illustra-
tions. All the pictures are not excellent; indeed we must say
quite frankly that some of them are an offence to the artistic
perceptions and an affliction to the eye and the soul. Others are
masterpieces of the first rank. But in this collection of pictures,
most of them now well-known, we have a sort of handy record
of the progress of Art in India in recent times. Turning over
the pages we are struck first by the numerous reproductions of
Ravivarma’s pictures which were only recently so prominent in
Indian houses and, even now, are painfully common, and we
recall with wonder the time when we could gaze upon these
 crude failures without an immediate revolt of all that was artis-
tic within us. Could anything be more gross, earthy, un-Indian
and addressed purely to the eye than his “Descent of Ganges”,
or more vulgar and unbeautiful than the figure of Aja in the
“Death of Indumati”, or more soulless and commonplace than
the “Ahalya”, a picture on a level with the ruck of the most
ordinary European paintings for the market by obscure hands?
Some of these efforts are absolutely laughable in the crudeness of
their conception and the inefficiency of their execution; take for
instance the fight between Ravan and Jatayu. Raja Rukmangad’s
“Ekadashi” is one of the few successes, but spirited as the work
undoubtedly is, it is so wholly an imitation of European work-
manship that it establishes no claim to real artistic faculty. All
that can be said for this painter is that he turned the Indian mind
to our own mythology and history for the subject of art, and
that he manifests a certain struggling towards outward beauty
and charm which is occasionally successful in his women and
children. But he had neither the power to develop original con-
ceptions, nor the skill to reproduce finely that which he tried to
learn from Europe. He represents in Art that dark period when,
in subjection to foreign teaching and ideals, we did everything badly because we did everything slavishly. It is fortunate that the representative of this period was a man without genius: otherwise he might have done infinitely more permanent harm to our taste than he has done.

The art of Sj. M. V. Durandhar shows a great advance. The basis is European but we see something Indian and characteristic struggling to express itself in this foreign mould. Unlike Ravivarma Sj. Durandhar has always a worthy and often poetic conception, even when he fails to express it in line and colour. In the stillness and thoughtfulness of the figures in the second illustration of the book there is a hint of the divine presence which is suggested, and Indian richness, massiveness and dignity support this great suggestion. There is augustness and beauty in the picture of Rama and Sita about to enter Guhyaka’s boat. Others of his pictures are less successful. Another intermediate worker in the field who is very largely represented, is Sj. Upendra Kishore Ray. This artist has an essentially imitative genius whose proper field lies in reproduction. There are attempts here to succeed in the European style and others which seek to capture the secret of the new school, especially where it is original, strange and remote in its greatness; but these are secrets of original genius which do not yield themselves to imitation and the attempt, though it reproduces some of the mannerisms of the school, often ends merely in grotesqueness of line and conception.

We have not left ourselves the space to do justice to the really great art represented in the book, the wonderful suggestions of the landscape in Sj. Abanindranath Tagore’s “Slaying of the Enchanted Deer”, the decorative beauty of the “Last Days of Dasarath”, and the epic grandeur and grace and strange romantic mystery of “Mahadev receiving the Descent of the Ganges”. We would only suggest to the readers whose artistic perceptions are awakened but in need of training, to use the comparative method for which Sj. Ramananda Chatterji has supplied plentiful materials in this book; for instance, the three illustrations of the Kaikayi and Manthara incident which are given one after the other,—Sj. Nandalal Bose’s original and
suggestive though not entirely successful picture, Sj. Durandhar’s vigorous and character-revealing but too imitatively European work, and Sj. U. Ray’s attempt to master the new style with its striking evidence of a great reproductive faculty but small success where originality is the aim. Finally, let him look at the few examples of old art in the book, then at the work of the new school, especially the two pictures against page 22, and last at Raja Ravivarma’s failures. He will realise the strange hiatus in the history of Indian Art brought about by the enslavement of our minds to the West and recognise that the artists of the new school are merely recovering our ancestral heritage with a new development of spiritual depth, power and originality, which is prophetic of the future.
The Revival of Indian Art

THE MAIN DIFFERENCE

THE GREATNESS of Indian art is the greatness of all Indian thought and achievement. It lies in the recognition of the persistent within the transient, of the domination of matter by spirit, the subordination of the insistent appearances of Prakriti to the inner reality which, in a thousand ways, the Mighty Mother veils even while she suggests. The European artist, cabined within the narrow confines of the external, is dominated in imagination by the body of things and the claims of the phenomenon. Western painting starts from the eye or the imagination; its master word is either beauty or reality, and, according as he is the slave of his eye or the playfellow of his imagination, the painter produces a photograph or a poem. But, in painting, the European imagination seldom travels beyond an imaginative interpretation or variation of what the physical eye has seen. Imitation is the key-word of creation, according to Aristotle; Shakespeare advises the artist to hold up the mirror to Nature; and the Greek scientist and the English poet reflect accurately the mind of Europe.

But the Indian artist has been taught by his philosophy and the spiritual discipline of his forefathers that the imagination is only a channel and an instrument of some source of knowledge and inspiration that is greater and higher; by meditation or by Yoga he seeks within himself that ultimate centre of knowledge where there is direct and utter vision of the thing that lies hidden in the forms of man, animal, tree, river, mountain. It is this *samyag jñāna*, this *sākṣād darśana*, the utter, revealing and apocalyptic vision, that he seeks, and when he has found it, whether by patient receptivity or sudden inspiration, his whole aim is
to express it utterly and revealingly in line and colour. Form
is only a means of expressing the spirit, and the one thought
of the artist should be how best to render the spiritual vision.
He is not bound by the forms that compose the world of gross
matter, though he takes them as a starting-point for his formal
expression of the vision within him; if by modifying them or
departing from them he can reveal that vision more completely,
his freedom and his duty as an artist emancipate him from the
obligation of the mere recorder and copyist. The ancient Asiatic
artists were not incapable of reproducing outward Nature with
as perfect and vigorous an accuracy as the Europeans; but it was
their ordinary method deliberately to suppress all that might
hamper the expression of their spiritual vision.

Reality for its own sake, one of the most dominant notes of
Art in Europe, Indian artistic theory would not have recognised;
for we have always regarded the reality of the Europeans as an
appearance; to us the true reality is that which is hidden; oth-
erwise, there would be no need of the prophet, the philosopher,
the poet and the artist. It is they who see with the sūkṣma drṣṭi,
the inner vision, and not like the ordinary man with the eye only.
Beauty for beauty’s sake, the other great note of European Art
is recognised by us, but not in the higher work of the artist. Just
as in the first ideal, the tyranny of the eye is acknowledged, so in
the second the tyranny of the aesthetic imagination. The Indian
seeks freedom, and the condition of freedom is the search for ul-
timate Truth. But in this search the imagination is an unsafe and
capricious guide; it misinterprets as often as it interprets. The
claim of the eye to separate satisfaction can only be answered by
the response of decorative beauty; the claim of the imagination
to separate satisfaction can only receive the response of fancy
playing with scene and legend, form and colour, idea and dream,
for pure aesthetic delight; but in the interpretation of things the
eye and the imagination can assert no right to command, they
are only subordinate instruments and must keep their place.
Whenever, therefore, the Indian artist put away from him his
high spiritual aim, it was to seek decorative beauty informed by
the play of the imagination. Here he held decorative beauty to be
his paramount aim and declined to be bound by the seen and the familiar. If by other lines than the natural, by subtler or richer methods than those of outward Nature, our old masters could gain in decorative suggestion and beauty, they held themselves free to follow their inspiration. Here, too, they often deliberately changed and suppressed in order to get their desired effect. If they had been asked to deny themselves this artistic gain for the sake of satisfying the memory in the physical eye, they would have held the objector to be the bondslave of an unmeaning superstition.

We of today have been overpowered by the European tradition as interpreted by the English, the least artistic of civilised nations. We have therefore come to make on a picture the same demand as on a photograph,—the reproduction of the thing as the eye sees it, not even as the retrospective mind or the imagination sees it, exact resemblance to the beings or objects we know, or, if anything more, then a refinement on Nature in the direction of greater picturesqueness and prettiness and the satisfaction of the lower and more external sense of beauty. The conception that Art exists not to copy, but for the sake of a deeper truth and vision, and we must seek in it not the object but God in the object, not things but the soul of things, seems to have vanished for a while from the Indian consciousness.

Another obstacle to the appreciation of great art, to which even those Indians who are not dominated by European ideas are liable, is the exaggerated respect for the symbols and traditions which our art or literature has used at a certain stage of development. I am accustomed for instance to a particular way of representing Shiva or Kali and I refuse to have any other. But the artist has nothing to do with my prejudices. He has to represent the essential truth of Shiva or Kali, that which makes their Shivahood or Kalihood, and he is under no obligation to copy the vision of others. If he has seen another vision of Shiva or Kali, it is that vision to which he must be faithful. The curious discussion which arose recently as to the propriety or otherwise of representing the gods without beard or moustache, is an instance of this literalism which is a survival of the enslavement
to form and rule characteristic of the eighteenth century. The literalist cannot see that it is not the moustache or beard or the symbol which makes the godhead, but the divine greatness, immortal strength, beauty, youth, purity or peace within. It is that godhead which the artist must draw and paint, and in the forms he chooses he is bound only by the vision in dhyāna. Whether his interpretation will gain an abiding place in the thought and imagination of the race, depends on its power to awake the deeper vision in the race. All that we can demand is that it shall be a real God, a real Shiva, a real Kali, and not a freak of his imagination or an outcome of some passing samskāra of his education or artistic upbringing. He must go to the fountainhead of knowledge within himself or his claim to freedom does not stand. It has already been said that the condition of freedom is the search for truth, and the artist must not allow his imagination to take the place of the higher quality.

Indian Art demands of the artist the power of communion with the soul of things, the sense of spiritual taking precedence of the sense of material beauty, and fidelity to the deeper vision within; of the lover of art it demands the power to see the spirit in things, the openness of mind to follow a developing tradition, and the sattwic passivity, discharged of prejudgments, which opens luminously to the secret intention of the picture and is patient to wait until it attains a perfect and profound divination.
An Answer to a Critic

O

NE HAD thought that the Ravi Varma superstition in India had received its quietus. Unsupported by a single competent voice, universally condemned by critics of eminence Asiatic and European, replaced by a style of Art national, noble and suggestive, it is as hopeless to revive this grand debaser of Indian taste and artistic culture as to restore life to the slain. But even causes hopelessly lost and deserving to be lost will find their defenders and unworthy altars do not lack incense. A belated lance is lifted in the August number of the Modern Review for the fallen idol. Neither writing nor substance is of such a calibre that it would have demanded any answer if it had not found hospitality in a periodical which is now a recognised centre of culture and opinion. The writer is not richly endowed either with artistic taste, logical faculty or correct English; but he possesses in compensation a trenchant though ill-inspired manner of writing, and excels in that Rooseveltian style of argument which by its very commonness and doubtful taste imposes on minds imperfectly instructed in the subject of dispute. It may be necessary, in the present state of Art appreciation in India, to counteract the possible evil that may be done by even so insufficient an apology for the Goliath of artistic Philistinism in India.

I may perhaps be suffered to express my wonder at the ideas of manners and good breeding which this apologist thinks permissible in critical controversy. Dr. Coomaraswamy is a critic of established reputation, whose contributions to the study of Indian Art are valued in every country in Europe and Asia where the subject itself is studied. Sister Nivedita’s literary genius, exquisite sympathetic insight and fine artistic culture are acknowledged by all who have the faculty of judging both in England and India. Mr. Havell has a recognised position in the
criticism of Art. One may differ from such authorities, but one is at least bound to treat them with some show of respect. M'r Havell seems to have been protected by his recent official position from the writer's disrespect, though his authority is dismissed cavalierly enough. Against Sister Nivedita he does not vent his spleen unguardedly, though he cannot refrain from vindicating his superiority by patronisingly describing her as “the good Sister Nivedita”. But towards D's Coomaraswamy, possibly because he is an Indian like the writer himself, he seems to think himself entitled to be as offensive as he chooses. He gets rid of the Doctor's acknowledged authority by introducing him as “a Geologist”, and emphasizes the spirit of this introduction by sprinkling his pages with similar phrases, “the Geologist”, “the Doctor”. The intention seems to be to represent D's Coomaraswamy as an unknown man without credit in other countries who is trying to pass himself off as an authority in India. It is possible the disciple of Ravi Varma holds this view; if so, one can only wonder what Himalayan cave of meditation has been his cloister in the last few years of his existence! And what are we to say of this characteristic specimen of wit? “We cannot expect anything better from a Geologist, who naturally loves and is made to love everything rigid and stony.” Am I to answer him in his own style by retorting that we cannot expect anything better from a student of Ravi Varma than theatrical wit and schoolboy impertinence? I prefer to suggest to him that manners which are allowed on the platform, at the hustings and in newspaper controversy in matters of political passion and interest are not expected in the urbanity of literature, Art and good society. I have felt myself compelled to comment thus at length and severely, because it is too much a habit in our country to have resort to this kind of illegitimate controversy in matters where only superior taste, knowledge and insight should tell. I have done with this unpleasant part of my duty and proceed to the writer's arguments as distinct from his witticisms. [Incomplete]
Part Five

Conversations of the Dead

Sri Aurobindo wrote these dialogues in 1910 or shortly before. He published the first two in the Karmayogin in 1910. The other three were published in 1920–23 without his editorial supervision; they are reproduced here from his manuscripts.
I

Dinshah, Perizade

DINSHAH
Perizade, the shades of Iran were not so cool and sweet as these in our city of Mazinderan. The gardens that bloom on the banks of the river of peace are carpeted with lovelier and sweeter-scented flowers; and the birds that sing upon every tree and make the day melodious with the unearthly delight of their clamorous harmonies, are of so various a plumage and hue that one is content to satiate the eye with the softness and splendour without caring to know name and kind. Here for two thousand years we have tasted the bliss of the angels; but, I know not why, it seems to me that memories of Iran come back to my heart. The waters of the Jihun and the tents of the Tartars where the tribes of Afrasiab wander, Damascus the opulent, and our own cities, where the houses of our parents adjoined and we leaned from the balcony and talked in soft whispers, seem to me again desirable.

PERIZADE
I too would not mind returning to our old haunts. It is not that I am weary of Mazinderan, but something calls to me to have joy again that is mortal and fleeting, but not without its poignant sense of a swiftly-snatched and perfect bliss. Yet Dinshah, two thousand years have passed and shall we not consider, before we go, what has come to the places we loved? Other men, other tongues, other manners may now possess them, and we should come as strangers into a world for which we are no longer fit.

DINSHAH
I will go and see. Wait for me, Perizade.
DINSHAH
Perizade, Perizade, let us not return to earth, but remain for ever in Mazinderan. I have seen the earth and it is changed. How wise wert thou, my angel!

PERIZADE
What didst thou see or hear, beloved?

DINSHAH
I saw a world stripped of beauty. Mean and clumsy were the buildings, or pretentious and aimed at a false elegance. Miles of brick, with hardly a bit of green here and there, these are the cities. Ever a raucous roar goes up from them, the glint of furnaces and the clang of metal; a dull, vicious smoke clouds the sky; the gardens are blasted and there is no beauty in them. Men wear a hideous dress uglier than their joyless faces and awkward limbs. It is a world of barbarians; the gnomes have come up from under the earth to work in the sunlight.

PERIZADE
Dinshah, this is sorrowful news, for go we must. Do you not know that these urgings are the signal?

DINSHAH
Yes, my Perizade, but not to this hideousness did our hearts move us to resort, but to the towers and gardens of Iran.

PERIZADE
It may be, Dinshah, that we go down to make the world once more what it was, a place of beauty, song and delight. Surely, if we enter into the world you describe, we shall not be content to leave it till it is utterly changed into the likeness of our desire.
DINSHAH
I think you are right, Perizade, as you always are. Let us then arise and go.
II

Turiu, Uriu

TURIU

Goddess Leda who from heaven descendest, how beautiful are thy feet as they gild the morning. The roses of Earth are red, but the touch of vermilion with which thy feet stain the heavens, is redder,—it is the crimson of love, the glory of passion.

Goddess Leda, look down upon men with gracious eyes. The clang of war is stilled, silent the hiss of the shafts and the shields clamour no more against each other in the shock of the onset. We have hung up our swords on the walls of our mansions. The young men have returned unhurt, the girls of Asilon cry through the corn sweet and high to the hearts of their lovers.

Goddess Leda, lady of laughter, lady of bliss! in the chambers of love, in the song of the bridal, in the gardens and by the delightful streams where boy and girl look into each other’s eyes, speak low to the heart, enter in. Drive out hatred, drive out wrath. Let love embrace the world and silence the eager soul of strife with kisses.

URIU

The song of Turiu is beautiful, but the chant of Uriu is mighty. Listen to the Hymn of Tanyth.

Tanyth, terrible Mother! laced with a garland of skulls, thou that drinkest the blood of the victim upon the altar loud with the death-shriek, mighty and merciless Mother!

Tanyth, thou in the shock of the fighting, with the raucous cry that rises high and drowns the crash of the car and the roar of the battle,—blood-stained, eager and terrible, pitiless, huge and swift,—wonderful, adorable Mother!

Hear me! I who fear thee not, I who love thee, ask of thee, art thou weary, art thou satiate now with the blood of the foe and the flesh of the victims? Why has it sunk to rest, the thunder
of war in Asilon, land of the mighty?

I am not weary, I am not satiate. I charge thee, awake and give me again delight of the slaughter, trampling the face of the fallen foe as I scatter with shafts the ranks that boasted and shouted, forgetting that Uriu fought in the van of the battle.

Mother, arise! leave to Leda her gardens and delicate places, the faces lovely and smooth of Asilon’s boys and the joyous beauty of women. I am old and grey in the council and battle. She has nothing for me; what shall I do with her boon of peace and her promptings of love and beauty?

Mother, arise, Tanyth the terrible! shake the world with thy whisper, loom in the heavens, madden men’s hearts with the thirst of blood, the rapture of death and the joy of the killing. We will give thee thy choice of the captives, women and men to fall and to bleed on thy altar.

Tanyth, lady of death, queen of the battle! there is a joy in the clash of death that is more than woman’s sweet embrace, a pleasure in pain that the touch of her lips cannot give us; lovelier far is the body torn by the spears than her white limbs covered with shining gems. Tanyth’s skulls are more than the garland upon thy breasts, O Leda.

**TURIU**

It is great, Uriu, master of war and song, but mine too is beautiful. It is long since we met in the temples and marketplaces of Asilon. Ages have rolled by and the earth is changed, Prince of the Asa.

**URIU**

I have lived in the heavens of the great where we fight all day and meet to feast in the evening.

**TURIU**

And I in gardens of love and song where the sea murmurs low on flower-skirted beaches. But the time comes when I must go down and take up again the song and the sweetness in mortal places of pleasure.
URIU
I also go down, for the warrior too is needed and not only the poet and lover.

TURIU
The world is changed, Uriu, Prince of the Asa. Thou wilt not get again the joy of slaughter and pitilessness. Men have grown merciful, full of tenderness and shrinking.

URIU
I know not. What Tanyth gives me to do, that I will do. If there were no sternness, no grimness in the world that she creates, I should not be called.

TURIU
We will go down together and see what this world is in which after so many millions of years we are again wanted.
Mazzini, Cavour, Garibaldi

MAZZINI
The state of Italy now is the proof that my teaching was needed. Machiavellianism rose again in the policy of Cavour and Italy, grasping too eagerly at the speedy fruit of her efforts, fell from the clearness of the revelation that I gave her. Therefore she suffers. We must work for the fruit, but there must not be such attachment to the fruit that to hasten it the true means is sacrificed; for that leads eventually to the sacrifice of the true end.

CAVOUR
The state of Italy is the proof of the soundness of my policy. Mazzini, you speak still as the ideologist, the man of notions. The statesman recognises ideals, but he has nothing to do with notions. He strikes always at his main objective and is willing to sacrifice much in details.

MAZZINI
What you say is true, but the sacrifice has been not of details, but of the essential.

CAVOUR
Italy is one, Italy is free.

GARIBALDI
The unity was my work. I did not use Machiavellianism or rely on statecraft and kingcraft. I did not buy liberty by mutilating my country. But I called to the soul of the nation and the soul of the nation awoke and shook itself free of the great tyrants and the petty. It was on the heroism and kingliness of the Italian soul, the resurrection in Florence and Rome and Naples of the ancient

www.holybooks.com
Roman, Etruscan and Samnite that Cavour should have relied, not on the false-hearted huckster of states and principalities, Louis Napoleon.

MAZZINI
Italy is one, Italy is free, but in the body, not in the soul. Garibaldi, you gave united Italy to a man, not to the nation.

GARIBALDI
I gave it to the King and hero, Italy’s representative. I do not yet think that I did ill. The nation said, “He stands for me”, and as a democrat I bowed to the voice of the nation.

CAVOUR
It was the best-inspired action of your life. If there are problems unsolved, if there are parts of the body politic that are still ailing, that was to be expected. Only the dreamer demands a rapid convalescence from a disease so long and wasting. We did the work of the surgeon, that of the physician is being done quietly and without ostentation. There is a man in Italy, and he belongs to the house that was chosen.

MAZZINI
Italy has not fulfilled her mission; my heart is full of sorrow when I look upon her. She whom I would have educated to lead the world, is only an inferior Power leaning for support upon the selfish and unscrupulous Teuton. She who should have reorganised government and society into a fit mould for the ideas of an age of emancipation, is a laggard lingering in the steps of the Gaul and the Saxon. She who should have been the fountain of a new European culture, hardly figures among the leaders of humanity. The semi-Asiatic Muscovite is doing more for mankind than the heirs of the Roman.

CAVOUR
The statesman must have patience and work quietly towards his goal, securing each step as he goes. When the economic ills
of Italy have been removed and the Church no longer opposes progress, the ideal of Mazzini may be fulfilled. The brain and sword of Italy may yet lead and rule Europe.

MAZZINI
It is not the diplomatist and the servant of the moment who can bring about that great consummation, but the heroic soul and the mighty brain that command Time and create opportunity. I sought to cast Italy into a Roman mould. I knew that a third revelation had to be made to Europe and that Italy was the chosen channel. So I was told when I went down from this world of the Ancients to be born again into humanity, “Twice has Italy given a new civilisation to Europe, the third time she shall give it.” The voice that speaks when we are sent, does not lie.

CAVOUR
No, but the fruit does not always come at once. There is sometimes a long probation, a slow agony of purification, and the thing destined seems a dream that has come to nothing. We have to work knowing that the fruit will come, not impatient, not embittered and disappointed by its postponement. It is possible we shall be called again to bring about the consummation. We have helped Italy always; once more we shall help her.

MAZZINI
I know not, but the days grow long to me in the world of the Happy. When the call comes, I pray that it may be to conquer, not by diplomacy, but by truth and ardent courage, —

GARIBALDI
Not by bargaining, but by the sword of the hero, —

MAZZINI
Not by kingcraft, but by love for humanity and a noble wisdom.
CAVOUR
I shall be content, so that Italy conquers.

GARIBALDI
When the sword that was struck out of her hand by the Abyssinian, is lifted again, I shall be there to lift it.
IV

Shivaji, Jaysingh

JAYSINGH
Neither of us has prevailed. A third force has entered into the land and taken the fruits of your work, and as for mine, it is broken; the ideal I cherished has gone down into the dust.

SHIVAJI
For the fruit I did not work and by the failure I am not amazed nor discouraged.

JAYSINGH
Neither did I work for a reward, but to uphold the ideal of the Rajput. Unflinching courage in honourable warfare, chivalry to friend and foe, a noble loyalty to the sovereign of my choice, this seemed to me the true Indian tradition, preferable even to the unity and predominance of the Hindu races. Therefore I could not accept your overtures. But I gave you the opportunity to accept my own tradition and, when faith was not kept with either of us, I saved my honour and assisted your escape.

SHIVAJI
God extended to me His protection and moved the heart of a woman to give me love and aid. Traditions change. The ideal of the Rajput has its future, but the mould had to be broken in order that what was temporary in it might pass. Loyalty to the sovereign of my choice, that is good; but loyalty to the sovereign of my nation’s choice, that is better. The monarch is divine by the power of God expressed within him, but he has the power because he is the incarnation of the people. God in the nation is the deity of which the monarch must be the servant and the devotee. Vithoba, Virat of the Mahrattas, — Bhavani, incarnate as India, — in that strength I conquered.
JAYSINGH
Your political ideal was great, but your standard of means was abhorrent to our morality. Ruse, treachery, pillage, assassination were never excluded from your activity.

SHIVAJI
Not for myself I fought and ruled, but for God and the Maharashtra dharma, the religion of Hindu nationality which Ramdas enunciated. I offered my head to Bhavani and She bade me keep it to scheme and plot for the greatness of the nation. I gave my kingdom to Ramdas and he bade me take it back as a gift from God and the Mahrattas. I obeyed their commands. I slew when God commanded me, plundered because it was the means He pointed out to me. Treacherous I was not, but I helped my weakness in resource and numbers by ruse and stratagem, I conquered physical force by keenness of wit and brain-power. The world has accepted ruse in war and politics, and the chivalrous openness of the Rajput is not practiced either by the European or the Asiatic nations.

JAYSINGH
I hold the dharma as supreme and even the voice of God could not persuade me to abandon it.

SHIVAJI
I gave up all to Him and did not keep even the dharma. His will was my religion; for He was my captain and I his soldier. That was my loyalty, — not to Aurangzebe, not to a code of morals, but to God who sent me.

JAYSINGH
He sends us all, but for different purposes, and according to the purpose He moulds the ideal and the character. I am not grieved that the Mogul has fallen. Had he deserved to retain sovereignty, he could not have lost it; but even when he ceased to deserve, I kept my faith, my service, my loyalty. It was not for me to dispute the will of my emperor. God who appointed him might
judge him; it was not my office.

SHIVAJI
God also appoints the man who rebels and refuses to prolong unjust authority by acquiescence. He is not always on the side of power; sometimes He manifests as the deliverer.

JAYSINGH
Let Him come down Himself, then, as He promised. Then alone would rebellion be justified.

SHIVAJI
From whence will He come down who is here already in our hearts? Because I saw Him there, therefore I was strong to carry out my mission.

JAYSINGH
Where is the seal upon your work, the pledge of His authority?

SHIVAJI
I undermined an empire, and it has not been rebuilt. I created a nation, and it has not yet perished.
V

Littleton, Percival

LITTLETON
After so long a time, Percival, we meet. It is strange that our ways, upon earth associated and parallel, should in this other world be so entirely divergent.

PERCIVAL
Why is it strange to you, Littleton? The world in which we find ourselves, is made, as we have both discovered, of the stuff of our earthly dreams and the texture of our mortal character. Physically, our ways on earth were parallel. We walked together over Cumberland mountains or watched the whole sea leap and thunder Titanically against the Cornwall cliffs. You were stroke and I was cox in the same boat on the Isis. We bracketed always for College honours and took the same class in the same subject in the Tripos. Afterwards too, we entered Parliament side by side in the same party and by an august and noble silence helped to administer the affairs of our country. But what greater difference could divide men than that which existed between our bodily frames and moral constitutions? You, the tall, fair, robust descendant of the Vikings; I, dark, spare and short from the Welsh mountains. You, the hardheaded, practical, successful lawyer; I, the dilettante and connoisseur, who knew something about everything except my own affairs and could deal successfully with every business that did not concern me.

LITTLETON
Yet we clung together; our tastes often lay in the same direction; our affections were similar, and even our sins connected us.

PERCIVAL
We completed each other, I think. Our tastes were very dissim-
ilarly similar. We read the same book; but you tore the essence out of it briefly, masterfully, and then flung it aside, satisfied that you had made even the dead useful to you; I wound my way into the heart of its meaning like a serpent and lay there coiled till I had become one with it, then wound myself out again replete and affectionately reminiscent of the soul that had given me harbourage. As for our sins, let us not talk of them. We have been too tediously familiar with them after death to cherish their memory. But even there we differed. You sinned voraciously, robustly, with gusto but with very little of feeling; I stumbled in out of excess of emotion and could not recover myself because of the vibrant intensity of my memories.

LITTLETON
Let me know what worlds harboured you, since we parted.

PERCIVAL
Let me rather hear your experiences.

LITTLETON
The details fade in the retrospect and will not bear telling. Certain periods of mortal agony there were, each with its own physical surroundings, that I long to forget but cannot. Some of them recalled strangely, not in detail, but in kind, Greek Tartarus and Catholic Inferno. I was the prey of harpies, I was hunted and torn and devoured, I experienced the agonies of the men I had sent to the deliberate and brutal torture of our jails or beggared of their honour or their property. I renewed the successes of my life and sickened of their selfishness, boldness, hardness. Money became as redhot metal in my hands and luxury was a gnawing fire that embraced my body. I lingered in regions where love was not known and the souls of the inhabitants were hard and strong as bronze, dry and delightful as the Sahara. O Percival, Percival, when I go again upon earth, I shall know love and execute mercy.
PERCIVAL
Had you no hours of respite, entered no regions of happiness?

LITTLETON
That, I believe, is yet before me.

PERCIVAL
I too have had experiences similar to yours, though different in their nature and quality. I have sickened of the repeated weakness and selfishness of my life, I have experienced in my soul the sufferings of those I had injured. I can understand why the Christians believed Hell to be eternal; it was a memory in the self of the moral endlessness of those torments. But I had my release. I have lived in Elysium, I have trod the fields of asphodel. And in those happy experiences I have deepened the strength and quality of my love, intensified the swiftness of my emotions, refined and purified my taste and intellect.

LITTLETON
What is this world in which we meet?

PERCIVAL
The heaven of comrades.
Part Six

The Chandernagore Manuscript

Sri Aurobindo wrote all the pieces in this part in 1910. He did not publish any of them himself, but many were published in 1920–22 without his editorial supervision. They are reproduced here from his manuscripts.
Religion in Europe

There is no word so plastic and uncertain in its meaning as the word religion. The word is European and, therefore, it is as well to know first what the Europeans mean by it. In this matter we find them, — when they can be got to think clearly on the matter at all, which is itself unusual, — divided in opinion. Sometimes they use it as equivalent to a set of beliefs, sometimes as equivalent to morality, coupled with a belief in God, sometimes as equivalent to a set of pietistic actions and emotions. Faith, works and pious observances, these are the three recognized elements of European religion. From works, however, the ordinary work of the world is strictly excluded. Religion and daily life are, in the European opinion, two entirely different things which it is superstitious, barbarous, unenlightened and highly inconvenient to mix up together. Altruistic works are sometimes brought under religion, sometimes excluded from it. The idea of knowledge being part of religion is a conception which the European cannot receive into his intellect; religion and knowledge are to him two things absolutely and eternally unconnected, if not opposed and mutually contradictory of each other. The place of knowledge is taken by faith or belief stripped of any reason for the belief. The average Christian believes that the Bible is God's book, but ordinarily he does not consider anything in God's book binding on him in practice except to believe in God and go to Church once a week; the rest is only meant for the exceptionally pious. On the whole, therefore, to believe in God, to believe that He wrote a book, — only one book in all these ages, — and to go to Church on Sunday is the minimum of religion in Europe; on these essentials piety and morality may supervene and deepen the meaning.
Religion In India

Religion in India is a still more plastic term and may mean anything from the heights of Yoga to strangling your fellow man and relieving him of the worldly goods he may happen to be carrying with him. It would therefore take too long to enumerate everything that can be included in Indian religion. Briefly, however, it is dharma or living religiously, the whole life being governed by religion. But again what is living religiously? It means, in ordinary practice, living according to authority. The authority generally accepted is the Shastra; but when one studies the Shastra and Indian life side by side, one finds that the two have very little to do with each other; the Indian governs his life not by the Shastra but by custom and the opinion of the nearest Brahmin. In practice this resolves itself into certain observances and social customs of which he understands neither the spiritual meaning nor the practical utility. To venerate the Scriptures without knowing them and to obey custom in their place; to reverence all Brahmans whether they are venerable or despicable; to eat nothing cooked by a social inferior; to marry one’s daughter before puberty and one’s son as soon as possible after it; to keep women ignorant and domestically useful; to bathe scrupulously and go through certain fixed ablutions; to eat on the floor and not at a table; to do one’s devotions twice a day without understanding them; to observe a host of meaningless minutiae in one’s daily conduct; to keep the Hindu holidays, when an image is set up, worshipped and thrown away,—this in India is the minimum of religion. This is glorified as Hinduism and the Sanatana Dharma. If, in addition, a man has emotional or ecstatic piety, he is a Bhakta; if he can talk fluently about the Veda, Upanishads, Darshanas & Puranas, he is a Jnani. If he puts on a yellow robe and does nothing, he is a tyagi or sannyasin. The latter is liberated from the ordinary dharma, but only if he does nothing but beg and vegetate. All work must be according to custom and the Brahmin. The one superiority of average Indian religion is that it does really reverence the genuine Bhakta or Sannyasin provided he does not come with too strange a garb.
or too revolutionary an aspect. The European almost invariably sets him down as a charlatan, professional religionist, idle drone or religious maniac.

The Real Minimum

Turning away from this sorrowful debris of ancient religious forms in India and Europe, we may fix the genuine minimum of religion at this, — to know God, to love and to serve him. The Europeans think that to fear God is a noble part of religion, forgetting the dictum of the Bible that perfect love casteth out fear and that the devils also believe and tremble. Perfect knowledge, perfect service also cast out fear. One may know, love and serve God as the Master, Lover, Friend, Mother; or as the Higher Self; or as Humanity; or as the Self in all creatures. If it be objected that this gives scope to Atheism, it must be remembered that Buddha also has been termed an Atheist. The average Hindu is right in his conception of religion as dharma, to live according to holy rule; but the holy rule is not a mass of fugitive and temporary customs, but this, to live for God in oneself and others and not for oneself only, to make the whole life a sadhana the object of which is to realise the Divine in the world by work, love and knowledge.

The Maximum

There is a maximum as well as a minimum, and that is to rise beyond this life into a higher existence, not necessarily for oneself alone or in order to leave the world and vanish into the Universal, but as the highest have done, as God Himself habitually does, to bring down the bliss, illumination and greatness of that higher existence into the material world of creatures. All that rises beyond the minimum to the maximum, even though it may not attain it, is the Para Dharma; the minimum is the aparā. To be a good, unselfish and religious man is the aparā or lower dharma; to reach God revealed and bring Him down to earth where He hides Himself, is the higher. This is the Secret
Wisdom, which defeats itself if it remains for ever secret. For this the great Avatars, Teachers and Lovers come, to reveal Him in divine knowledge, to reveal Him in mighty action, to reveal Him in utter delight and love.
Passing Thoughts [2]

The Object of Government

It is the habit of men to blind themselves by customary trains of associated thought, to come to look on the means as an end and honour it with a superstitious reverence as a wonderworking fetish. Government and its great formulas, law and order, efficiency, administration, have been elevated into such a fetish. The principle of good government is not merely to keep men quiet, but to keep them satisfied. It is not its objective to have loyal servants and subjects, but to give all individuals in the nation the utmost possible facilities for becoming men and realising their manhood. The ideal of a State is not a hive of bees or a herd of cattle shepherded by strong watchdogs, but an association of freemen for mutual help and human advancement. The mere fact of a government doing what it does well and firmly, is nothing in its favour. It is more important to know what it does and where it is leading us.

The European Jail

The European jail is a luminous commentary on the humanitarian boasts of the Occident and its pious horror at Oriental barbarities. To mutilate, to impale, to torture, how shocking, how Oriental! And we are occasionally reminded that if we had independence, such punishments would again be our portion. England forgets that to half hang a man, draw out his entrails and burn them before his eyes was an English practice in the eighteenth century. France has forgotten the wheel and the galleys. But these things have gone out. What of the penal system? It strikes us as a refined and efficient organisation of the methods of savages against their enemies, savages who have indeed progressed and have learned that the torture of the soul
is a more terrible revenge than the torture of the body, to murder
the human nature a greater satisfaction than to slay the animal
frame. Ancient nations punished their enemies by death, slav-
ery, torture, humiliation and degradation. The jail system is an
organisation of these four principles. Physical death has been
reduced to a minimum; it is now only a punishment for murder
and rebellion. A century or more ago every crime, almost, was
punished with death in England. The principle was, Your life for
my shilling, your life for my handkerchief! It is now, Your life for
the life you have taken, your life for the mortal fear you put me
into of the loss of my powers, emoluments and pleasures! The
organisation of penal slavery is the first principle of the system.
I take my enemy, put him on a dog’s diet, load him with chains,
set guards to beat and kick him into obedience and diligence
and make him work for my profit for a period fixed by myself,
careless whether his nature is brutalised or his life shortened in
the process,— for he is my slave to do my will with and, if I
do not kill him for taking my shilling or my handkerchief, it is
because I am civilised and merciful, not a barbarous Oriental.
For the same reason, I do not inflict physical torture on him,
unless he is unwilling or unable to do the amount of daily work
I have fixed for him, or either deliberately or accidentally remem-
ers that he was a human being, or else behaves like the brute
I have successfully laboured to make him. Even then I torture
him according to his physical capacity and take care not to maim
or kill this serviceable animal. Degradation and humiliation are
as well organised as the slavery. It is not done once in a way,
but driven in daily, hourly, momently, in every detail of dress,
food, conduct, discipline. In every possible way I brand in upon
my victim’s soul that he is no longer such an one, no longer
possessed of the name, rights or nature of humanity, but my
slave, beast and property and the slave, beast and property of
my servants. It is my object to wipe out every trace of the human
in him and I stamp my foot daily on anything in him that may
remind him of such human qualities as modesty, culture, self-
respect, generosity, fellow-feeling. If everything else fails, I have
the exquisite rack of mental torture called solitary imprisonment
to shake his reason or destroy his manhood. And if in the end I have not succeeded, if he comes out a man and not a brute or an idiot, it is not my fault but his; I have done my best. This is the European prison system and it is inflicted on all alike with machinelike efficiency. The curious thing is that it is inflicted in part even on undertrial prisoners who may be perfectly innocent. This also is probably dictated by the finer feelings of Europe and intended mercifully to prepare their gentle and easy descent into the Inferno around them.

**European Justice**

The European Court of Justice is also a curious and instructive institution. Under a civilised disguise it is really the mediaeval ordeal by battle; only, in place of the swords or lances of military combatants, it is decided by the tongues of pleaders and the imagination of witnesses. Whoever can lie most consistently, plausibly and artistically, has the best chance of winning. In one aspect it is an exhilarating gamble, a very Monte Carlo of surprising chances. But there is skill in it, too, and it satisfies the intellect as well as the sensations. It is a sort of human game of Bridge combining luck and skill, or an intellectual gladiatorial show. The stake in big cases is a man’s property or his soul. *Vae victis!* Woe to the conquered! If it is a criminal case, the tortures of the jail are in prospect, be he innocent or be he guilty. And as he stands there,—for to add to the pleasurableness of his case the physical ache of long standing is usually added to the strain on his emotions,—he looks eagerly, not to the truth or falsehood of the evidence for or against him, but to the skill with which this counsel or the other handles the proofs or the witnesses and the impression they are making on the judge or jury. One understands, as one watches, the passion of the Roman poet’s eulogy of the defence lawyer, *praesidium maestis reis*, a bulwark to the sorrowful accused. For in this strange civilised game of pitch and toss where it is impossible to be certain about guilt or innocence, one’s sympathies naturally go to the sufferer who may be innocent and yet convicted. If one
could eliminate this element of human pity, it would be a real
intellectual pleasure to watch the queer semibarbarous battle,
appraise the methods of the chief players, admire, in whatever
climes, the elusiveness and fine casualness of Indian perjury or
the robust manly downrightness of Saxon cross-swearing. And
if one were to complain that modern civilisation eliminates from
life danger and excitement, one could well answer him, “Come
into the Courts and see!” But, after all, praise must be given
where it is due, and the English system must be lauded for not
normally exposing the accused to the torture of savage pursuit
by a prosecuting judge or the singular methods of investigation
favoured by the American police. If the dice are apt to be loaded,
it is on both sides and not on one.
Passing Thoughts [3]

Achar

Achar is a mould in which the thing itself rests and feels stable; it is not the thing itself. It is this sense of stability which is the great value of achar, it gives the thing itself the sraddha, the faith that it is meant to abide. It is a conservative force, it helps to preserve things as they are. But it is also a danger and hindrance when change becomes necessary. Conservative forces are either sattwic or tamasic. Achar with knowledge, observance full of the spirit of the thing itself, is sattwic and preserves the thing itself; achar without knowledge, looking to the letter of custom and observance, disregarding the spirit, is tamasic and destroys the thing itself. Intelligent observance and custom are always ready to change when change is needed, for they know themselves to be important but not essential. Ignorant observance and custom consider themselves the thing itself, rage against the hand that touches them and prefer to rot rather than change. Tamasic achar is a rotten mould which has often to be broken to pieces in order that the thing itself may be preserved. But if it is broken to pieces by anger and prejudice, the thing itself is likely to withdraw from us. It must be loosened and split asunder by the heat of knowledge. The present mould of Hinduism has to be broken and replaced, but by knowledge and yoga, not by the European spirit, and it is an Indian and not an English mould that must replace it.

Vichar

The need of vichar is urgent in times of transition. Revolutionary times generate two sorts of mind who are avichari, without perception and deliberation, the mind which clings fiercely to
the old because it is old and the mind which runs violently after
the new because it is new. Between them rises the self-styled
moderate man who says, Let us have something of the old and
something of the new. The moderate man is no less avichari
than the men of extremes. He swears by moderation as a for-
mula and a fetish and runs after an impossible reconciliation.
It was this kind of thought which Christ had in view when he
said, You cannot put new wine into old bottles. Vichar never
sets up a formula, never prejudges, but questions everything,
weighs everything. If a man says, Alter your notions and habits
on the lines of enlightened Europe, vichar answers, “Let me
consider that. Why should I assume Europe to be enlightened,
India barbarous? It is possible the people of Europe may be
the real barbarians, Indian knowledge the true enlightenment. I
must see.” On the other hand if a man says, “Be an Indian and
do as the Indians,” vichar replies, “I am not sure that I ought
to do as the Indians in order to be an Indian. It may be that
the present men of the country have become something Indians
were not intended to be. I must see what Indians have been
in the various epochs of our civilisation and find out what is
eternal in the civilisation and what is temporary. It may even be
that the Europeans have certain things really Indian which we
have lost.” It is good to be Indian, but to be Indian because of
knowledge, not because of prejudice. Hinduism itself is based
on vichar, vivek and jnanam deciding what achar is the best
for the preservation of human society and the fulfilment of our
individual and associated manhood.

Vivek

Indian vichar guides itself by vivek. Vichar by itself questions
and considers, weighs, examines and ponders and so arrives
at certain perceptions and conclusions by which it guides itself.
This is European vichar and its supreme example is Socrates. The
danger of vichar is that if it does not start with certain premises
and assumptions, it will end in the absolute uncertainty of the
Academic philosophers who could not even be sure whether they existed or not. On the other hand if it starts with premises and assumptions, there is a danger of the premises and assumptions being erroneous and vitiating the conclusion. For this reason modern Science insists on all the premises being thoroughly proved before the vichar commences, and its method of proof is experiment. Modern European progress is an application of this principle of experiment to politics, society and every human belief and institution. This is a rather dangerous business. In the process of experiment you may get an explosion which will blow society out of existence and bring a premature end to the experiment. Moreover, you may easily think a premise proved when it is not. Science has had to abandon notion after notion which it thought based on unshakably proven premises. Nothing was thought more certainly proved than that the process of breathing was necessary to life. But we know in India that a man can live without breathing. The principle of proof by experiment was known to the ancient Indians, but just as the Europeans, dissatisfied with vichar, progressed beyond it to vichar guided by experiment, so the Indians, dissatisfied with experiment, progressed beyond it to vichar and experiment guided by vivek, intuitive and inspired judgment gained by a previous purification of the organs of thought and knowledge. The modern Indians have lost this guide and are compelled to rely on aptavakya or authority, the recorded opinions of men who had vivek, or traditions and customs founded on an ancient enlightenment. This is unsatisfactory, because we do not know that we have the opinions correctly or completely recorded or that the traditions and customs have not been distorted by time and error. We must recover and go back to the fountainhead.

__Jnanam__

There are four operations in the Indian method of knowledge. First, the inquirer purifies his intellect by the stilling of passion, emotion, prejudgment and old sanskaras or associations.
Secondly, he subjects received knowledge to a rigid scrutiny by sceptical vichar, separating opinion from ascertained truth, mere conclusions from facts. Even the facts he takes as only provisionally true and is prepared to find his whole knowledge to be erroneous, misapplied or made up of half-truths. Thirdly, he experiments in order to get upalabdhi or personal experience. Fourthly, he again uses vichar in order to ascertain how far his experience really carries him and what he is or is not justified in concluding from it. Lastly, he turns the light of the vishuddha buddhi on the subject and by inspired discrimination arrives at jnanam. The conclusions of the vivek he does not question, because he knows by experience that it is a fine and accurate instrument. Only, he is on his guard against mistaking vichar for vivek, and is always prepared to balance and amplify his conclusions by fresh truths he had not considered and to find that there is another side to truth than the one with which he is familiar. He does not, like the European scientist, wed himself to previous generalisations and theories or consider every fresh enlargement of knowledge on new lines charlatantry and imposture.
Hathayoga

The evolution of man has been upwards from the body to the spirit, and there are three stages in his progress. He bases himself upon body, rises through soul and culminates in spirit. And to each stage of his evolution belong certain kinds of sadhana, a particular type of Yoga, a characteristic fulfilment. There was no aeon in man’s history, no kalpa, to use the Indian term, in which the Yoga was withheld from man or fulfilment denied to him. But the fulfilment corresponded to his stage of progress, and the Yoga corresponded to the fulfilment. In his earlier development he was realising himself in the body and the divinity of the body was his fulfilment. He is now realising himself in the heart and mind, and the divinity of the heart and mind will be his culmination. Eventually he will realise himself in the spirit and the divinity of his true spiritual self will round off his history.

Yoga is the realisation of one’s capacity of harmony, communion or unity with God. Whatever religious standpoint, creed or philosophy one adopt, Yoga is possible, so long as God’s existence or omnipresence is admitted, whether it be as a Personality, a Presence, a Force or a Condition of Things. The Infinite in some form or idea must be admitted. To be in tune with the Infinite, that is harmony. To be in touch with the Infinite, that is communion. To be one in kind, extent or self-realisation with the Infinite, that is unity. But fulfilment is not possible unless the So Aham, “He am I,” is recognised and practised as the ultimate truth of things. The realisation of God in self with the eye on the body is the fulfilment of the tamasic or material man. The realisation of God in self with the eye on the antahkaran or heart and mind is the fulfilment of the rajasic or psychic man. The realisation of God in self with the eye on the spirit is the fulfilment of the sattwic or spiritual man. And each fulfils himself by rising beyond himself. When the material man fulfils
the divinity of the body, he does so by rising into the psychic part and finding his strength in the ahankara or psychic principle of egoism. The psychic man fulfils the divinity of the soul by rising into the spirit and finding his strength in the superpsychic Will or Intelligent Force in things. The spiritual man fulfils the divinity of the spirit by rising beyond the human spirit, the Jivatman, and finding his strength in the Parameswara and Parabrahman, the Sa and the Tat, God revealed and unrevealed, the Universal and Supreme Spirit who supports and contains the individual. To put it in language easier but more capable of misconception, the material man realises himself by identifying God with his own ego; the psychical man by identifying God with passionless, intelligent, blissful Will in himself; the spiritual man by identifying God with the All in whom everything abides. The first is the Rakshasa or the Asura of the lower order; the second is the Deva or the Asura of the higher order; the third is the Siddha or Siddha Purusha, the perfect being.

The pure Hathayoga is the means of the fulfilment through the body. Its processes are physical, strenuous, colossal, complex, difficult. They centre in Asana, Pranayam and the purification of the body. The number of Asanas in the modern or mixed Hathayoga is limited, but even then they are numerous and painful; in the ancient or pure Hathayoga, they were innumerable and the old Hathayogins practised them all. The Asana means simply a particular position of the body and is perfect or “conquered”, in the technical language, when a man can stay in a single posture, however strained or apparently impossible, for an indefinite period without being forced by strain to remember the body. The first object of the Asana is to conquer the body,—for the body must be conquered before it can become divine,—to be able to lay any command upon it and never be commanded by it. The second object was to conquer physical nature, by developing the four physical siddhis, laghima, anima, garima, mahima. By perfect laghima man can rise into the air and tread the winds as his natural element; by perfect anima he can bring the nature of the subtle body into the gross body, which the fire will no longer burn, nor weapons wound, nor
want of air stifle, nor the waters drown; by perfect garima he
can develop an adamantine steadiness which the shock of the
avalanche cannot overbear; by perfect mahima he can, without
muscular development, outdo the feats of a Hercules. These
powers in their fullness are no longer visible in men, but in some
degree they belong to all adepts in Hathayoga. Their existence
no one can doubt who has gone deep into Yoga at all or had any
personal experience of siddhis. The third object is to develop
in the body Yogic force, which is called tapah or viryam or the fire
of Yoga. The fourth object is to become urddhwaretah, that is
to say, to draw up the whole virile force in the body into the
brain and return so much of it as is needed for the body purified
and electricised.

Pranayam is the mastery of the vital force, the mobile energy
which keeps the universe going. In the human body the most
noticeable function of the prana or vital force is the breathing,
which is in ordinary men necessary to life and motion. The
Hathayogin conquers it and renders himself independent of it.
But he does not confine his attention to this single vital opera
tion. He distinguishes five major vital forces and several minor,
to each of which he has given a name, and he learns to control
all the numerous pranic currents in which they operate. As there
are innumerable asanas, so there are a great number of different
kinds of Pranayam, and a man is not a perfect Hathayogin till he
has mastered them all. The conquest of the Prana confirms the
perfect health, vigour and vitality gained by the Asanas; it con-
fers the power of living as long as one pleases and it adds to the
four physical siddhis, the five psychical, — prakamya or absolute
keenness of the mind and senses including telepathy, clairvoy-
ance and other faculties commonly supposed to be supernormal;
vaypti or the power of receiving other men's thoughts, powers
and feelings and projecting one's own thoughts, feelings, powers
or personality into others; aiswaryam or control over events,
lordship, wealth and all objects of desire; vashita or the power
of exacting implicit and instantaneous obedience to the spo-
ken or written word; ishita, the perfect control over the powers
of nature and over things inert or unintelligent. Some of these
powers have recently been discovered in Europe as phenomena of hypnotism or will-force; but the European experiences are feeble and unscientific if compared with the achievements of the ancient Hathayogins or even with those of some of the modern. The will power developed by Pranayam is, it should be noted, psychical and not spiritual.

Besides these two great practices the Hathayogins have numerous others such as the extraordinary means by which they clean out daily all the physical impurities of the body. By these numerous and difficult physical practices they attain an extraordinary power, vitality, virility, longevity, and are also able to attain knowledge transcending the ordinary human bounds, leave the body in Samadhi and, in one word, exercise every mere power that comes by Yoga. But the practice of unmixed Hathayoga generates a colossal egoism and the Yogin seldom exceeds it. The modern Hathayoga is mixed with the Rajayoga and, therefore, neither so virile and potent nor so dangerous as the ancient. The modern Hathayogin often falls a prey to egoism but he knows he has to transcend it. The ancient embraced it as a fulfilment; only he managed and directed it by the use of the psychical will-power which he identified with the Force of Nature and the supreme Will of God.
Rajayoga

Man fulfilling himself in the body is given Hathayoga as his means. When he rises above the body, he abandons Hathayoga as a troublesome and inferior process and rises to the Rajayoga, the discipline peculiar to the aeon in which man now evolves. The first condition of success in Rajayoga is to rise superior to the dehatmak bodh, the state of perception in which the body is identified with the self. A time comes to the Rajayogin when his body seems not to belong to him or he to have any concern with it. He is not troubled by its troubles or gladdened by its pleasures; it has them to itself and very soon, because he does not give his sanction to them, they fall away from it. His own troubles and pleasures are in the heart and mind, for he is the rajasic and psychical man, not the tamasic material. It is these that he has to conquer in order that he may realise God in his heart or in his buddhi or in both. God seen in the heart, that is the quest of the Rajayogin. He may recover the perception and enjoyment of the body afterwards, but it is only to help the enjoyment of God as Love and God as Knowledge.

The processes of the Rajayoga are mental and emotional. Patanjali’s science is not the pure Rajayoga; it is mixed and allows an element of the Hatha in its initial processes. It admits the Asana, it admits the Pranayam. It is true it reduces each to one of its kind, but the method of conquest is physical and therefore not Rajayogic. It may be said that the stillness of the body is essential to concentration or to samadhi; but this is a convention of the Hathayoga. The Rajayogin concedes no such importance to the body; he knows by experience that concentration can be secured in any easy and unconstrained posture which allows one to forget the body; it is often as much helped by rhythmic motion as by stillness. Samadhi, when it comes, itself secures stillness of the body. The pure Rajayogin dispenses
therefore with the physical practice of Asana.

The real reason why Patanjali laid so much stress on Asana was that he thought Pranayam essential to samadhi and Asana essential to Pranayam. It is difficult, though not impossible, to do the practice of Pranayam according to Patanjali’s system without perfect bodily stillness. It can be done and has been done even while walking about, but this is not so easy or usual. Now Pranayam in its proper sense, the mastery of the vital force in oneself and Nature, is essential to every Rajayogin, but it can be brought about by much simpler methods. The only physical process that the Rajayogin finds helpful enough to be worth doing, is *nadi shuddhi* or purification of the nerve system by regular breathing and this can be done while lying, sitting, reading, writing, walking. This process has great virtues. It has a wonderfully calming effect on the whole mind & body, drives out every lurking disease in the system, awakens the yogic force accumulated in former lives and, even where no such latent force exists, removes the physical obstacles to the wakening of the Kundalini shakti.

But even this process is not essential. The Rajayogin knows that by tranquillising the mind he can tranquillise the body, by mastering the mind he can master both the body and the prana. This is the great secret of the Rajayoga that mind is the master of the body, creates it and conditions it, body is not the master, creator or lawgiver of the mind. It may be said that the body at least affects the mind, but this is the other discovery of the Rajayogin that the body need not in the least affect the mind unless by our consent we allow it to do so. The kumbhak or natural cessation of the breathing is essential to the deeper kinds of Samadhi, not to all; but even so he finds that by the cessation of the lawless restlessness of the mind, which we mistakenly call thought, we can easily, naturally and spontaneously bring about the cessation of the breathing, a calm, effortless and perfect kumbhak. He therefore dispenses with physical processes, easy or laborious, and goes straight to the root of the problem, the mind.

Rajayoga is of three kinds, sachesta, salpachesta and nischesta, with effort, with little effort, and without effort.
Patanjali’s, the only systematised kind, though each is quite methodical, is sachesta, involving great strain and effort throughout. We may best compare the systems by taking each of Patanjali’s steps separately and seeing how the three kinds of Rajayogins will deal with them. In the present article we shall deal with Patanjali. The first step is the preparation of the moral nature, the discipline of the heart, its perfection in the four great qualities of love, purity, courage and calm, without which siddhi in the Rajayoga is impossible. Patanjali prescribes the practice of the five yamas or regulating moral exercises, truth, justice and honesty, harmlessness, chastity and refusal of ownership, and the five niyamas or regulating moral habits, cleanliness and purity, contentment, austerity, meditation on Scripture, worship and devotion to God. In order to establish these habits and exercises and remove the impurities of the heart it is evident that Patanjali intends us to use the method of abhyasa or constant practice. Anyone who has made the attempt will realise how difficult it is to compass all these qualities and how long and tedious a discipline is required to establish them even imperfectly. Patanjali seeks to purify and quiet the life while the mind and heart are yet impure and restless, a system possible only to hermits in an asrama. For this reason the Rajayoga has fled from the homes of men and taken refuge in the forest and the cavern.

Afterwards Patanjali recommends the quieting of the body and the mastering of the Prana by Asana and Pranayam. The reason of this is clear enough. The Pranayam of the Hathayoga does not lead to purity, but to force and intensity; every quality that it finds potent in the system it raises to tenfold activity and power. Unless therefore the life and character be previously made quiet and pure, Pranayam done in one’s own strength may do immense moral, physical and mental mischief. Allowing for the overcoming of his initial difficulty and for the admission of Hatha into Rajayoga, it must be admitted that Patanjali’s system is admirably logical and reasonable in its arrangement.

Next comes the mastery of the mind, that restless, self-willed and shifting force which is so difficult to control. Again, as in
his previous steps, Patanjali relies wholly on abhyasa or practice. He arranges concentration in four stages of development, Pratyahara or the drawing inward of the senses from their objects; Dharana, or the success in this process resulting in the fixing of the mind for a moment on a single thought, feeling or object,—such as a single part of the body, the tip of the nose or the centre of the brows for preference; Dhyana or the continuation of this state for a fixed period; Samadhi or the entire withdrawing into oneself for an indefinite time. The preliminary process once successful, the rest follows with comparative ease, but the preliminary process is itself so enormously difficult that one would be amazed at Patanjali’s putting it first, if one did not perceive that he is relying on the rigorous and thorough mastery of each step before the next is attempted; he trusts to the Hathayogic kumbhak to bring about Pratyahara with comparative ease. Even as it is, most Yogins prefer to take the Dharana or concentration on a single object first, trusting to the practice of Dharana to bring about Pratyahara by a natural process. This is undoubtedly the more easy and straightforward process, though Patanjali’s is the more logical and scientific, and, if mastered, may lead to greater results.

Concentration once attained, we proceed to what Patanjali evidently considers the essence of Yoga, the coercion of all vrittis or functionings of the mental and moral qualities so as to arrive at sanyama or turning of the whole passionless intelligent Will in the spirit on whatsoever the Yogin wishes to possess, from the realisation of God to the enjoyment of mundane objects. But how is this silencing of the vrittis to be effected? for the yamas and niyamas only establish certain good habits of life, they do not thoroughly purify mind and heart. We have to do it by a process of removal by replacement, always depending on abhyasa, replacing bad vrittis by good, the many good by the few better, the few better by the one best, until we arrive at absolute sanyama. This can be done, not easily but without insuperable difficulty if the power of concentration is thoroughly attained by Patanjali’s method.

Sanyama is a mighty power. Whatever the Yogin does
sanyama upon, says Patanjali, that he masters. The knowledge of one’s past lives, of the thoughts of men, of men in this world and spirits in the other, the vision of the past and the future, the knowledge of all that is in the present, the mastery of Nature, the siddhis of the Hathayogin, the realisation of God, all power, all bliss, all knowledge is in his grasp. As to what he shall do with the power, Patanjali leaves the choice to the successful Yogin.
Historical Impressions

The French Revolution

The greatness of the French Revolution lies not in what it effected, but in what it thought and was. Its action was chiefly destructive. It prepared many things, it founded nothing. Even the constructive activity of Napoleon only built a halfway house in which the ideas of 1789 might rest until the world was fit to understand them better and really fulfil them. The ideas themselves were not new; they existed in Christianity and before Christianity they existed in Buddhism; but in 1789 they came out for the first time from the Church and the Book and sought to remodel government and society. It was an unsuccessful attempt, but even the failure changed the face of Europe. And this effect was chiefly due to the force, the enthusiasm, the sincerity with which the idea was seized upon and the thoroughness with which it was sought to be applied. The cause of the failure was the defect of knowledge, the excess of imagination. The basal ideas, the types, the things to be established were known; but there had been no experience of the ideas in practice. European society, till then, had been permeated, not with liberty, but with bondage and repression; not with equality, but with inequality and injustice; not with brotherhood, but with selfish force and violence. The world was not ready, nor is it even now ready for the fullness of the practice. It is the goal of humanity, and we are yet far off from the goal. But the time has come for an approximation being attempted. And the first necessity is the discipline of brotherhood, the organisation of brotherhood, — for without the spirit and habit of fraternity neither liberty nor equality can be maintained for more than a short season. The French were ignorant of this practical principle; they made liberty the basis, brotherhood the superstructure, founding the triangle upon its apex. For owing to the dominance of Greece & Rome in their imagination they were saturated with the idea of liberty and
only formally admitted the Christian and Asiatic principle of brotherhood. They built according to their knowledge, but the triangle has to be reversed before it can stand permanently.

The action of the French Revolution was the vehement death-dance of Kali trampling blindly, furiously on the ruins She made, mad with pity for the world and therefore utterly pitiless. She called the Yatudhani in her to her aid and summoned up the Rakshasi. The Yatudhani is the delight of destruction, the fury of slaughter, Rudra in the Universal Being, Rudra, the bhuta, the criminal, the lord of the animal in man, the lord of the demoniac, Pashupati, Pramathanatha. The Rakshasi is the unbridled, licentious self-assertion of the ego which insists on the gratification of all its instincts good and bad and furiously shatters all opposition. It was the Yatudhani and the Rakshasi who sent their hoarse cry over France, adding to the luminous mantra, Liberty, Equality, Fraternity, the stern and terrible addition “or Death.” Death to the Asura, death to all who oppose God’s evolution, that was the meaning. With these two terrible Shaktis Kali did Her work. She veiled Her divine knowledge with the darkness of wrath and passion, She drank blood as wine, naked of tradition and convention She danced over all Europe and the whole continent was filled with the warcry and the carnage and rang with the hunkara and the attahasyam. It was only when She found that She was trampling on Mahadeva, God expressed in the principle of Nationalism, that She remembered Herself, flung aside Napoleon, the mighty Rakshasa, and settled down quietly to her work of perfecting nationality as the outer shell within which brotherhood may be securely and largely organised.

The Revolution was also great in its men filling them all with its vehemence, its passion, its fierce demand on the world, its colossal impetus. Through four of them chiefly it helped itself, through Mirabeau, Danton, Robespierre and Napoleon. Mirabeau initiated, Danton inspired, Robespierre slew,
Napoleon fulfilled. The first three appeared for the moment, the
man in the multitude, did their work and departed. The pace
was swift and, if they had remained, they would have outstayed
their utility and injured the future. It is always well for the
man to go the moment his work is done and not to outstay the
Mother’s welcome. They are fortunate who get that release or
are wise enough, like Garibaldi, to take it. Not altogether happy
is their lot who, like Napoleon or Mazzini, outstay the lease of
their appointed greatness.

Mirabeau ruled the morning twilight, the *sandhya* of the
new age. Aristocratic tribune of the people, unprincipled cham-
pion of principles, lordly democrat, — a man in whom reflection
was turbulent, prudence itself bold, unflinching and reckless, the
man was the meeting-place of two ages. He had the passions of
the past, not its courtly restraint; the turbulence, genius, impetu-
osity of the future, not its steadying attachment to ideas. There
is an honour of the aristocrat which has its root in manners and
respects the sanctity of its own traditions; that is the honour of
the Conservative. There is an honour of the democrat which has
its root in ideas and respects the sanctity of its own principles;
that is the honour of the Liberal. Mirabeau had neither. He
was the pure egoist, the eternal Rakshasa. Not for the sake of
justice and liberty did he love justice and liberty but for the sake
of Mirabeau. Had his career been fortunate, the forms of the
old regime wide enough to satisfy his ambitions and passions,
the upheaval of 1789 might have found him on the other side.
But because the heart and senses of Mirabeau were unsatisfied,
the French Revolution triumphed. So it is that God prepares
the man and the moment, using good and evil with a divine
impartiality for His mighty ends. Without the man the moment
is a lost opportunity; without the moment the man is a force
inoperative. The meeting of the two changes the destinies of
nations and the poise of the world is altered by what seems to
the superficial an accident.
There are times when a single personality gathers up the temperament of an epoch or a movement and by simply existing ensures its fulfilment. It would be difficult to lay down the precise services which made the existence of Danton necessary for the success of the Revolution. There are certain things he did, and no man else could have done, which compelled destiny; there are certain things he said which made France mad with resolution and courage. These words, these doings ring through the ages. So live, so immortal are they that they seem to defy cataclysm itself and insist on surviving eternal oblivion. They are full of the omnipotence and immortality of the human soul and its lordship over fate. One feels that they will recur again in aeons unborn and worlds uncreated. The power from which they sprang, expressed itself rarely in deeds and only at supreme moments. The energy of Danton lay dormant, indolent, scattering itself in stupendous oratory, satisfied with feelings and phrases. But each time it stirred, it convulsed events and sent a shock of primal elemental force rushing through the consciousness of the French nation. While he lived, moved, spoke, felt, acted, the energy he did not himself use, communicated itself to the millions; the thoughts he did not utter, seized on minds which took them for their own; the actions he might have done better himself, were done worse by others. Danton was contented. Magnificent and ostentatious, he was singularly void of personal ambition. He was satisfied to see the Revolution triumph by his strength, but in the deeds of others. His fall removed the strength of victorious Terror from the movement within France, its impulse to destroy and conquer. For a little while the impetus gathered carried it on, then it faltered and paused. Every great flood of action needs a human soul for its centre, an embodied point of the Universal Personality from which to surge out upon others. Danton was such a point, such a centre. His daily thoughts, feelings, impulses gave an equilibrium to that rushing fury, a fixity to that pregnant chaos. He was the character of the Revolution personified,—its heart, while Robespierre was only its hand. History which, being European, lays much stress on events, a little on speech, but has never realised the importance of souls, cannot appreciate men
like Danton. Only the eye of the seer can pick them out from the mass and trace to their source those immense vibrations.

One may well speak of the genius of Mirabeau, the genius of Danton; it is superfluous to speak of the genius of Napoleon. But one cannot well speak of the genius of Robespierre. He was empty of genius; his intellect was acute and well-informed but uninspired; his personality fails to impress. What was it then that gave him his immense force and influence? It was the belief in the man, his faith. He believed in the Revolution, he believed in certain ideas, he believed in himself as their spokesman and executor; he came to believe in his mission to slay the enemies of the idea and make an end. And whatever he believed, he believed implicitly, unalteringly, invincibly and pursued it with a rigid fidelity. Mirabeau, Danton, Napoleon were all capable of permanent discouragement, could recognise that they were beaten, the hour unsuitable, fate hostile. Robespierre was not. He might recoil, he might hide his head in fear, but it was only to leap again, to save himself for the next opportunity. He had a tremendous force of sraddha. It is only such men, thoroughly conscientious and well-principled, who can slay without pity, without qualms, without resting, without turning. The Yatudhani seized on him for her purpose. The conscientious lawyer who refused a judgeship rather than sacrifice his principle by condemning a criminal to death, became the most colossal political executioner of his or any age. As we have said, if Danton was the character of the French Revolution personified when it went forth to slay, Robespierre was its hand. But, naturally, he could not recognise that limitation; he aspired to think, to construct, to rule, functions for which he was unfit. When Danton demanded that the Terror should cease and Mercy take its place, Robespierre ought to have heard in his demand the voice of the Revolution calling on him to stay his sanguinary course. But he was full of his own blind faith and would not hear. Danton died because he resisted the hand of Kali, but his mighty disembodied spirit triumphed and imposed his last thought on the country. The
Terror ceased; Mercy took its place. Robespierre, however, has his place of honour in history; he was the man of conscience and principle among the four, the man who never turned from the path of what he understood to be virtue.

Napoleon took up into himself the functions of the others. As Mirabeau initiated destruction, he initiated construction and organisation and in the same self-contradictory spirit; he was the Rakshasa, the most gigantic egoist in history, the despot of liberty, the imperial protector of equality, the unprincipled organiser of great principles. Like Danton, he shaped events for a time by his thoughts & character. While Danton lived, politics moved to a licentious democracy, war to a heroism of patriotic defence. From the time he passed, the spirit of Napoleon shaped events and politics moved to the rule first of the civil, then of the military dictator, war to the organisation of republican conquest. Like Robespierre he was the executive hand of destruction and unlike Robespierre the executive hand of construction. The fury of Kali became in him self-centred, capable, full of organised thought and activity, but nonetheless impetuous, colossal, violent, devastating.
Historical Impressions

Napoleon

The name of Napoleon has been a battle-field for the prepossessions of all sorts of critics, and, according to their predilections, idiosyncrasies and political opinions, men have loved or hated, panegyrised or decried the Corsican. To blame Napoleon is like criticising Mont Blanc or throwing mud at Kinchinjunga. This phenomenon has to be understood and known, not blamed or praised. Admire we must, but as minds, not as moralists. It has not been sufficiently perceived by his panegyrists and critics that Bonaparte was not a man at all, he was a force. Only the nature of the force has to be considered. There are some men who are self-evidently superhuman, great spirits who are only using the human body. Europe calls them supermen, we call them vibhutis. They are manifestations of Nature, of divine power presided over by a spirit commissioned for the purpose, and that spirit is an emanation from the Almighty, who accepts human strength and weakness but is not bound by them. They are above morality and ordinarily without a conscience, acting according to their own nature. For they are not men developing upwards from the animal to the divine and struggling against their lower natures, but beings already fulfilled and satisfied with themselves. Even the holiest of them have a contempt for the ordinary law and custom and break them easily and without remorse, as Christ did on more than one occasion, drinking wine, breaking the Sabbath, consorting with publicans and harlots; as Buddha did when he abandoned his self-accepted duties as a husband, a citizen and a father; as Shankara did when he broke the holy law and trampled upon custom and achār to satisfy his dead mother. In our literature they are described as Gods or Siddhas or Titans or Giants. Valmeki depicts Ravana as a ten-headed giant, but it is easy to see that this was only the vision of him in the world of imaginations, the “astral plane”, and that in the
terms of humanity he was a vibhuti or superman and one of the same order of beings as Napoleon.

The Rakshasa is the supreme and thoroughgoing individualist, who believes life to be meant for his own untrammelled self-fulfilment and self-assertion. A necessary element in humanity, he is particularly useful in revolutions. As a pure type in man he is ordinarily a thing of the past; he comes now mixed with other elements. But Napoleon was a Rakshasa of the pure type, colossal in his force and attainment. He came into the world with a tremendous appetite for power and possession and, like Ravana, he tried to swallow the whole earth in order to glut his supernatural hunger. Whatever came in his way he took as his own, ideas, men, women, fame, honours, armies, kingdoms; and he was not scrupulous as to his right of possession. His nature was his right; its need his justification. The attitude may be expressed in some such words as these, “Others may not have the right to do these things, but I am Napoleon”.

The Rakshasa is not an altruist. If by satisfying himself he can satisfy others, he is pleased, but he does not make that his motive. If he has to trample on others to satisfy himself, he does so without compunction. Is he not the strong man, the efficient ruler, the mighty one? The Rakshasa has kama, he has no prema. Napoleon knew not what love was; he had only the kindliness that goes with possession. He loved Josephine because she satisfied his nature, France because he possessed her, his mother because she was his and congenial, his soldiers because they were necessary to his glory. But the love did not go beyond his need of them. It was self-satisfaction and had no element in it of self-surrender. The Rakshasa slays all that opposes him and he is callous about the extent of the slaughter. But he is never cruel. Napoleon had no taint of Nero in him, but he flung away without a qualm whole armies as holocausts on the altar of his glory; he shot Hofer and murdered Enghien. What then is there
in the Rakshasa that makes him necessary? He is individuality, he is force, he is capacity; he is the second power of God, wrath, strength, grandeur, rushing impetuosity, overbearing courage, the avalanche, the thunderbolt; he is Balaram, he is Jehovah, he is Rudra. As such we may admire and study him.

But the vibhuti, though he takes self-gratification and enjoyment on his way, never comes for self-gratification and enjoyment. He comes for work, to help man on his way, the world in its evolution. Napoleon was one of the mightiest of vibhutis, one of the most dominant. There are some of them who hold themselves back, suppress the force in their personality in order to put it wholly into their work. Of such were Shakespeare, Washington, Victor Emmanuel. There are others like Alexander, Caesar, Napoleon, Goethe, who are as obviously superhuman in their personality as in the work they accomplish. Napoleon was the greatest in practical capacity of all moderns. In capacity, though not in character, he resembles Bhishma of the Mahabharat. He had the same sovran, irresistible, world-possessing grasp of war, politics, government, legislation, society; the same masterly handling of masses and amazing glut for details. He had the iron brain that nothing fatigues, the faultless memory that loses nothing, the clear insight that puts everything in its place with spontaneous accuracy. It was as if a man were to carry Caucasus on his shoulders and with that burden race successfully an express engine, yet note and forecast every step and never falter. To prove that anything in a human body could be capable of such work, is by itself a service to our progress for which we cannot be sufficiently grateful to Napoleon.

The work of Bonaparte was wholly admirable. It is true that he took freedom for a season from France, but France was not then fit for democratic freedom. She had to learn discipline for a while under the rule of the soldier of Revolution. He could not have done the work he did, hampered by an effervescent French
Parliament ebullient in victory, discouraged in defeat. He had to organise the French Revolution so far as earth could then bear it, and he had to do it in the short span of an ordinary lifetime. He had also to save it. The aggression of France upon Europe was necessary for self-defence, for Europe did not mean to tolerate the Revolution. She had to be taught that the Revolution meant not anarchy, but a reorganisation so much mightier than the old that a single country so reorganised could conquer united Europe. That task Napoleon did effectively. It has been said that his foreign policy failed, because he left France smaller than he found it. That is true. But it was not Napoleon’s mission to aggrandize France geographically. He did not come for France, but for humanity, and even in his failure he served God and prepared the future. The balance of Europe had to be disturbed in order to prepare new combinations and his gigantic operations disturbed it fatally. He roused the spirit of Nationalism in Italy, in Germany, in Poland, while he established the tendency towards the formation of great Empires; and it is the harmonized fulfilment of Nationalism and Empire that is the future. He compelled Europe to accept the necessity of reorganisation political and social.

The punya of overthrowing Napoleon was divided between England, Germany and Russia. He had to be overthrown, because, though he prepared the future and destroyed the past, he misused the present. To save the present from his violent hands was the work of his enemies, and this merit gave to these three countries a great immediate development and the possession of the nineteenth century. England and Germany went farthest because they acted most wholeheartedly and as nations, not as Governments. In Russia it was the Government that acted, but with the help of the people. On the other hand, the countries sympathetic to Napoleon, Italy, Ireland, Poland, or those which acted weakly or falsely, such as Spain and Austria, have declined, suffered, struggled and, even when partially successful, could not attain their fulfilment. But the punya is now exhausted.
The future with which the victorious nations made a temporary compromise, the future which Napoleon saved and protected, demands possession, and those who can reorganise themselves most swiftly and perfectly under its pressure, will inherit the twentieth century; those who deny it, will perish. The first offer is made to the nations in present possession; it is withheld for a time from the others. That is the reason why Socialism is most insistent now in England, Germany & Russia; but in all these countries it is faced by an obstinate and unprincipled opposition. The early decades of the twentieth century will select the chosen nations of the future.

There remains the question of Nationalism and Empire; it is put to all these nations, but chiefly to England. It is put to her in Ireland, in Egypt, in India. She has the best opportunity of harmonising the conflicting claims of Nationalism and Empire. In fighting against Nationalism she is fighting against her own chance of a future, and her temporary victory over Indian Nationalism is the one thing her guardian spirits have most to fear. For the recoil will be as tremendous as the recoil that overthrew Napoleon. The delusion that the despotic possession of India is indispensable to her retention of Empire, may be her undoing. It is indispensable to her, if she meditates, like Napoleon, the conquest of Asia and of the world; it is not necessary to her imperial self-fulfilment, for even without India she would possess an Empire greater than the Roman. Her true position in India is that of a trustee and temporary guardian; her only wise and righteous policy the devolution of her trust upon her ward with a view to alliance, not ownership. The opportunity of which Napoleon dreamed, a great Indian Empire, has been conceded to her and not to Napoleon. But that opportunity is a two-edged weapon which, if misused, is likely to turn upon and slay the wielder.
In the Society’s Chambers

Professor — Let me assure you, my friends, that the method of inquiry is alone responsible for all the error in the world. Mankind is in a hurry to know and prefers to catch at half-truths rather than wait for the full truth to dawn on him. Now a half-truth is a few degrees more mischievous than absolute error. It is the devil himself in the disguise of an angel.

The Practical Man — But surely, Professor, half-truths are the preparation for whole truths. And mankind must have something to go by. We are not all College Professors who can wait comfortably in our studies for Truth to call on us at her leisure. I have got to get to my place of business and, if motorcars have not been invented, I must use bike or tramcar.

Professor — There you are, my friend, in possession of a metaphor and under the delusion that you have got an argument. Half-truths are the greatest enemies of whole truths. Mankind gets besotted with the half-truth and when the whole truth happens in, it cries, “Here’s this queerlooking idiot and scoundrel who has not been properly introduced to me, wanting to turn out my half-truth whom I know and who has helped me for centuries. Out with the cuckoo! A horse-whip for the bounder!” And out goes Truth, lucky if she is only expelled, not burned, garotted, mobbed or censorshipped out of existence, and has to take her next chance five hundred years later.

Scientist — You are right, Professor. Everything should be proved, nothing admitted.

Professor — Excuse me, Scientist. Your tribe, once champions of progress, are now the stiffest and blindest opponents of new Truth going. Torquemada was a babe to you.

Scientist — Well, and what about the Mystic here, who wants to go back to Paracelsus and Santa Teresa?

Mystic — I should say rather, to keep unbroken the most im-
portant thread in the long and intricately woven cord of evolving knowledge.

Professor — My friends, I know nothing about mysticism and materialism. These are mere words to me. I know Truth only. If Truth is mystic, I cannot help it. If, on the other hand, Truth turn out to be a rank materialist, a follower of Huxley and Haeckel, who am I to insist on spiritualising her? Let us have Truth as she is and not insist on creating her in our own image.

The Practical Man — How is that to be done?

Professor — By inquiry, by dispassionate, disinterested, calm, judicious, leisurely inquiry. Let us consider everything, accept only when acceptance is thoroughly justified, reject only when we must, and for God's sake let us not rush violently and enthusiastically to premature conclusions!

The Practical Man, with levity — Why not establish a Society for the dispassionate discussion of everything discussable and the quiet questioning of everything questionable? It might be styled briefly S.D.D.D.Q.Q.Q. or, still better S.D’Q³, and, I believe, it would revolutionise knowledge.

Professor — I have always revered the Practical Man in spite of his gross and numerous limitations. Why not? Let us at least try.

Scientist, doubtfully — What would be the conditions of discussion?

Professor — Put it like this. We agree to consider no question closed, not even gravitation, nor the motion of the earth, nor the necessity and beneficence of the British Government.

All, in chorus — The Press Act, Professor, the Press Act! Section 124A! Section 121! We shall be transported, we shall get forfeited!

Professor, reluctantly, but obviously alarmed by the outcry — Well, well, we will reserve the question. There are plenty of others, there are plenty of others. To proceed. If the Mystic advances sound arguments to show that the devil habitually swallows the moon, even that we shall not lightly declare impossible. What do we know about the tastes of the devil, supposing he exists, or the eatability of the moon? I have never tasted it,
nor has the Scientist. The Mystic and the devil may have.

Scientist, uneasily — Confound it, Professor!

Professor — No, I insist. Absolute tolerance, absolute openness of mind are essential to the success of the experiment. Whoever interrupts, whoever refuses to discuss an argument, whoever contradicts or says, Absurd! whoever substitutes assertion for reasoning, whoever loses his temper or allows his voice to rise to a higher key, whoever tries to make out that he has conquered in debate because he has appealed to a polysyllable such as hallucination, coincidence, subconscious cerebration, whoever quotes an authority for his opinion, will be instantly called to order by the Chairman and, if he repeats the offence, condemned to silence for the evening.

All are silent and gaze awe-stricken at the Professor.

The Practical Man — Hang it, Professor! Where will be the fun? I quite looked forward to the Scientist throwing chemicals at the Mystic and immediately withering into something infra-human under the onslaught of the Mystic’s mohanam, stambhanam and maranam. Don’t interfere with human nature.

Professor — We will provide the fun, but let it be human, civilised fun. We must curb the excess of our original simian ancestors in our humour.

Mystic — You can’t, Professor, and we shouldn’t. It is a perpetual and valuable part of ananda, the joy of existence.

Scientist — It can’t work. We are not gods or angels.

Professor — There you go making assumptions! How do you know we are not? Let us at least make the experiment. Obviously, with only the four of us, the circle will be incomplete. We must have other human specimens. A Jurist now, a Priest, a Historian, a Sanscritist, a Doctor, an Attorney, and a few others that may occur to me. I know where all these reasoning animals are to be found. Then, a live Extremist would be an acquisition. I know one. He is amiable, pleasing and warranted not to bite, though his views are fiery and his language, when excited, apt to be sulphurous.

The Practical Man — No use for him, if we are not to question the beneficence of the British Government.
Professor — He will complete us. We must be a representative society. Besides, Extremism, I understand, has its positive aspects.

Scientist — Will it be safe?

Professor, coldly, haughtily & severely, — We are not cowards. (more mildly) I can guarantee that, though he talks sometimes like a bomb, he never made one. It is agreed, gentlemen. (rising enthusiastically) Today creates an epoch in the history of mankind; Truth lays the foundation-stone of her final temple.

Mystic — Professor, Professor, for God’s sake, let us not rush violently and enthusiastically to premature conclusions!
At the Society’s Chambers

Professor — Gentlemen, I believe we are here in full strength. It is gratifying to find so much enthusiasm still abroad for the dispassionate acquisition of knowledge. I trust it is not a short-lived fervour; I trust we shall not soon have to declare our society extinct from constitutional inability to form a quorum.

Jurist — I believe this is a society for the discussion of all things discussable and the discovery of all things discoverable. Am I right in my supposition?

Professor — Your definition is rather wide, but it may pass. What then?

Jurist — In that case I suggest that the first subject we should discuss is whether this society should come into existence at all and should not rather adjourn its birth sine die.

A silence

Professor — Gentlemen, I think we should not be damped. Even this should not damp us. I believe it is nothing worse than the Indian spirit of scepticism — not malaria, not inertia, not even spiritual cramp. Courage, let us not shirk even this dangerous inquiry.

Jurist — Let me explain. My suggestion is dictated not by the spirit of academical doubt, but by the more mundane love of safety. Have you reflected, Professor, that there are other dangers abroad besides the chance of automatic dissolution? Is it not conceivable that we may be dissolved as an association for unlawful objects or arrested as a gang of dacoits?

Professor — Good Heavens! My dear sir! And yet — I don’t know. As a member of a society pledged to regard truth from all possible directions, I cannot rule it out as an impossibility. But if we have none but unobjectionable members —

Jurist — Pardon me, Professor. How do you know who is an
unobjectionable member or who is objectionable? As a Professor you are acquainted with hundreds of students. It is possible one of them might stray in here of an evening. He might be arrested. He might turn approver. And what would his statement be? Why, that Prof. So & So was leader of a gang of political dacoits, that the Society met at such a number in Harrison Road, that they were accustomed to arrange their nefarious enterprises there under cover of intellectual conversation and that you were the receiver of the booty. And then there would be the Andamans where you would probably get more physical exercise in one week than you have done in all your life, Professor. There are other joys, Professor, the whipping triangle, handcuffs, laphsy. Is it worth while?

The Professor gazes in horrified silence at the Jurist, then with a flash of hope — He might recant.

Jurist — That is only an off chance. I would not rely on it. You see he would be laying himself open to an unanswerable accusation of perjury, while, if he persisted in his story, he would be perfectly safe.

Professor — But surely some corroboration, some documentary evidence —

Jurist — Certainly; why not? He would point out your house; it would be proved that it was your house. He would identify these rooms, it would be proved that we all met here. Then, Professor, do you never use the word kaj in your letters? Do you scrupulously avoid any reference to bibaha?

Professor — It is quite possible I may use both.

Jurist — And yet you say, where is the documentary evidence? One such letter coinciding with your absence from Calcutta! The Andamans, Professor, the Andamans!

Professor — I will scrupulously avoid both in future.

Jurist — There are other words in the Bengali language. In any case, if you escaped any special charge, you would be sure to be rearrested on the general charge of conspiracy.

Professor (exasperated) — Proofs, sir, the proofs!

Jurist — Quite easy. We shall merely have to prove association. Have you no student who may be either mixed up or liable
to be suspected of being mixed up in a dacoity or a conspiracy?

Professor — Association for a criminal object, sir!

Jurist — That could be assumed from the closeness of your intimacy. The burden of proving your association innocent would then fall upon you. I challenge you to prove your association even with me innocent. All you can prove is that your other acquaintances did not know its criminal object.

Professor — I shall keep a diary of all my words and actions.

Jurist — It could easily be shown that it was kept with an eye to this contingency. Do not do it, Professor. You might put in things unknown to you which would be damning evidence against you in the hands of a skillful lawyer. If many names of suspects occurred in it, it would be itself the basis of his case and the keystone of his theory.

The Professor collapses.

Jurist — In any case you would have a year or more in hajut. Do you know what hajut is like, Professor? There would be laphsy there too; there would be the joys of solitary confinement; you would have to sit for hours on your haunches, to which you are not accustomed; there would be parades of various kinds; warders with boots to whom you are supposed, I believe, to salaam; daily physical researches on yourself in a nude condition. To the last rapture I do not object; but you, Professor, are constitutionally modest.

A silence

Jurist — Gentlemen, allow me again. I seem to have disconcerted and appalled this nascent society. It was far from my intention. The case I have put is an extreme and highly hypothetical one. My object is to put you on your mettle and induce you to adopt all reasonable precautions.

The Practical Man — We can be careful to exclude detectives.

Jurist — My dear sir! The very way to invite suspicion. The police would first learn the existence of a society. On inquiry they would find out that special care was taken to exclude detectives. We would have only ourselves to thank for the house-search and arrests that would follow.
Professor, reviving — I would recommend paying a member of the C.I.D. to attend our meetings.

The Extremist, scornfully — Why only one, Professor? Why not the whole damned department?

Professor — My dear Biren, pray take care of your words. They are highly irregular and seditious and may bring about your forfeiture under the Press Act. No, not all. There is such a thing as moderation. Besides, your proposal is as extravagant as your expressions. Do you realise that it would amount to subsidising one third of the literate population of India?

Jurist — Such an extraordinary procedure would attract suspicion. It might be thought you were a particularly adroit, ingenious and hardened conspirator using this apparent frankness to cover up your nefarious secret operations. What are the declared objects of the Society?

Professor — Self-improvement —

Jurist — A very dangerous term. Pray drop it.

Professor — The discovery of truth —

Scientist — I object. Truth is a highly explosive substance. I am not sure that the police would not be justified in carrying it away as an incriminating document along with the Gita and Seeley’s Expansion of England.

Professor — And discussion and question on all questionable things, subjects or persons.

Extremist, unpleasantly — Take care! That is obviously an innuendo, reference, allusion or metaphor intended or calculated to bring the Government into contempt or hatred.

Professor, innocently — Good Lord, so it is! (in despair) We’ll have to give it up.

Jurist — Why not add a second object, to present and offer addresses of loyalty and depute congratulatory deputations to high officials on every occasion possible or impossible? That, I think, would cure everything.

He sits back triumphantly and invites admiration.

Applause.

Professor — A very attractive proposal. Dear me, this is very attractive.
Extremist, wrathfully — There is such a thing as truth and self-respect.

Professor, warmly — Truth? Are we not loyal? Do you dare to say we are Anarchists?

Extremist — I decline membership —

Professor — Well, Biren, well! Perhaps you had better. But you can drop in and have a cup of tea whenever we meet. What do you say? I think I too should have made my mark as a political leader!

He beams seraphically on the society, which breaks up with shouts of Rule, Britannia!
Things Seen in Symbols [1]

There are Four who are Beyond and they rule the mighty game of evolution. It is they who build the universe with their thoughts and imaginations. Vishnu or Virat put them in front each in turn, and they govern each a cycle. All the sons of immortality come forth from them and return to them, all the children of earth are their portions. One stands in front, the others incarnate to help him. They are God Himself in His fourfold manifestation. Once in each chaturyuga they come down together, — the chaturvyuha, Srikrishna, Balarama, Pradyumna, Aniruddha.

Srikrishna contains all the others and puts them out from His being. He is Ishwara, Shiva, Brahma, Vishnu. Lordship is His manifestation, Might and Wisdom are His gunas. Balarama is the second Power. Force is His manifestation; strength and wrath are His attributes. Pradyumna is the third Power. Love is His manifestation; sweetness and delight are His attributes. Aniruddha is the fourth Power. Desire is His manifestation; bodily enjoyment and worldly reason are His attributes.

Srikrishna is the Brahmin served by the Kshatriya. He has the divine knowledge and uses His might under the guidance of the Knowledge. Balarama is the Kshatriya. He allows Srikrishna in Him to guide His strength and wrath, but He does not guide them Himself, He enjoys them. He is Rudra. Pradyumna is the Vaishya. He is for dana, prema, karuna. He gives Himself to men and buys their love in exchange. He is the universal philanthropist. He is the sweet and throbbing heart in things. Aniruddha is the Sudra. He is the kamin, the bhogin, the scientist, the
user of material means, the democrat, the leveller.

The Satya is full of Srikrishna; it is the golden Age when men are full of might and wisdom. The Treta is full of Balarama; the Chakravarti Raja is the incarnation of the Treta; it is full of great wars and mighty sacrifices. The Dwapara is full of Pradyumna; He prepares in the Dwapara the love which supports men through the Kali. Aniruddha, the Sudra, reigns in the Kali; He breaks the ancient moulds, He shatters to pieces the achar; He questions everything, destroys everything, levels everything, rebuilds everything. He is a Sudra and has the passion for work and service; He puts off lordship in order to become the divine Slave of humanity.

For each of Them is not simple in Himself, but contains the other three and their attributes; only His own are usually foremost. Each is not a part but God Himself in His fullness. They are not different, but the same, Four who are One, One who is Four. That one is Srikrishna.
Things Seen in Symbols [2]

What is dhyana? Ordinarily, when a man is absorbed in thought and dead to all that is going on around him, he is supposed to be in dhyana. Or concentration of the whole thought on a single object to the exclusion of every other, is called dhyana. But neither of these ideas corresponds exactly with the whole truth; they represent only particular stages of the process of meditation. Dhyana is a wide term covering a number of processes which rise from ordinary attention to nirvikalpa samadhi.

The distinguishing feature of dhyana is that it puts out a steady force of knowledge on the object of knowledge. When this process is successful, when there is a steady demand on the object to give up its secret, it is called by Patanjali sanyama. Even when it is only partially successful, it is still dhyana.

Ordinary thought is not dhyana. Ordinary thought is simply the restlessness of the mind playing with associations, speculations, trains of reasoning. In order to have dhyana the restlessness of the mind must be utterly stilled, the intellect must become like a calm and waveless sea, not a movement, not a ripple on its surface.

The principle is that all knowledge is in oneself, in the knower. The knower is in myself; he is also in the object of knowledge, say, a stone or a tree. By dhyana the veil of ignorance, the chaos of misunderstandings which interfere between the knower in me and the knower in the tree or the stone is removed; we enter into relation with each other; we are in Yoga.
All knowledge about the stone is in the stone itself; in dhyana it comes into my mind. When it comes into my mind, the knower in me says, “It is true, the knowledge is in me also and I see it there”. Or if there is a mistake, he says, “There is a mistake, the mind is interfering; the knowledge is in me and I see it otherwise”.

The whole world is one. The knower in the stone and the knower in myself are one; I am He. It is God in me, God in the stone. The knowledge in me and the knowledge in the stone are one; I am That. It is God in me, God in the stone. The stone is an object of knowledge; I am also an object of knowledge. These two also are one, God as myself, God as the stone. God is the only object of knowledge, there is no other. God is the only knower, there is no other. God is the knowledge also. Jnata, jnanam, jneyam, they are one.

The mind creates difference. When there is disturbance on the waters, there are many waves, and each wave cries, “I am I, I am I; you are you; we are different.” When the sea sinks to rest, the waves as they go inward, no longer cry, “I am I”, but “I am He.” The still and waveless sea, that is a delightful and beautiful condition. The stormy, myriad crested Ocean, that also is a very beautiful and delightful condition. Only let the waves have the knowledge, let them say, “I am I for the sake of delight; you are you for the sake of delight. But also you are I, I am you. And both you and I are He.” That is jnanam, that is Yoga.

The still sea is a condition, and the thousand waves are a condition. He who is the sea, is more than disturbance, more than stillness. He contains All. He is All. Even the infinite sea is only one of His manifestations.
The Real Difficulty

The real difficulty is always in ourselves, not in our surroundings. There are three things necessary in order to make men invincible, Will, Disinterestedness and Faith. We may have a will to emancipate ourselves, but sufficient faith may be lacking. We may have faith in our ultimate emancipation, but the will to use the necessary means may be wanting. And even if there are will and faith, we may use them with a violent attachment to the fruit of our work or with passions of hatred, blind excitement or hasty forcefulness which may produce evil reactions. For this reason it is necessary, in a work of such magnitude, to have resort to a higher Power than that of mind and body in order to overcome unprecedented obstacles. This is the need of sadhana.

God is within us, an Omnipotent, Omnipresent, Omniscient Power; we & He are of one nature and, if we get into touch with Him and put ourselves in His hands, He will pour into us His own force and we shall realise that we too have our share of godhead, our portion of omnipotence, omnipresence and omniscience. The path is long, but self-surrender makes it short; the way is difficult, but perfect trust makes it easy.

Will is omnipotent, but it must be divine will, selfless, tranquil, at ease about results. “If you had faith even as a grain of mustard-seed,” said Jesus, “you would say to this mountain, Come, & it would come to you.” What was meant by the word Faith, was really Will accompanied with perfect sraddha. Sraddha does not reason, it knows; for it commands sight and sees what God wills, and it knows that what is God’s will, must happen. Sraddha, not blind but using sight spiritual, can become omniscient.

Will is also omnipresent. It can throw itself into all in whom it comes into contact and give them temporarily or permanently a portion of its power, its thought, its enthusiasms. The thought
of a solitary man can become, by exercise of selfless and un-
doubting Will, the thought of a nation. The will of a single hero
can breathe courage into the hearts of a million cowards.

This is the sadhana that we have to accomplish. This is the
condition of our emancipation. We have been using an imperfect
will with imperfect faith and imperfect disinterestedness. Yet
the task we have before us is not less difficult than to move a
mountain.

The force that can do it, exists. But it is hidden in a secret
chamber within us and of that chamber God holds the key. Let
us find Him and claim it.
Art

All Art is interpretation. Creation is a misnomer; nothing in this world is created, all is manifested. All exists previously in the mind of the Knower. Art may interpret that which is already manifest or was manifest at one time, or it may interpret what will be manifest hereafter. It may even be used as one of the agencies in the manifestation. A particular type of face and figure may be manifested in the work of a popular artist and in a single generation the existing type of face and figure in the country may change and mould itself to the new conception. These things are there in the type in the causal world with which our superconscious selves are perpetually in touch; they manifest in the psychical and become part of our thought. That thought we put out into the material world and there it takes shape and body, as movements, as institutions, as poetry, Art and Knowledge, as living men and women. Man creates his world because he is the psychic instrument through whom God manifests that which He had previously arranged in Himself. In this sense Art can create the past, the present and the future. It can remanifest that which was and has passed away, it can fix for us that which is, it can prophesy that which will be.

Its normal sphere, however, is interpretation of a less pregnant and forceful kind. Here too, there are three things which it can interpret in the object it selects, the causal part or thing in itself; the psychical part or its passing imaginations, phases, emotions; or the physical part, the outward appearance, incident or movement as our eyes see them. Indian Art attaches itself to the two higher interpretations, European to the two lower. They meet in the middle term of Art, the imaginative and emotional; but each brings with it the habits of vision, the conventions,
the mastering movement and tendency of the soul downward to
earth or upward to heaven, born of their main preoccupation,
so that even here, though they meet on common ground, they
remain diverse and unreconciled.

In dealing with the form the question between them is Shall
I reproduce what the eye sees or shall I reproduce what the
soul sees? The lower type of European Art is content with re-
producing what the eye sees. This it calls realism and fidelity
to Nature—narrowing Nature to the limited confines of the
materially sensible. The reproduction, of course, is not a real
reproduction, but only an approximation within the limitations
imposed by the canvas, the brush and the paintbox. It is really
as close an imitation as our instruments will allow, absolute
fidelity being rarely possible. This style of Art had perhaps its
utility, but now that we have photographs and can put colour
into the photographs, its separate field is in danger of being
taken from it.

A higher European Art takes imitation of the form as its
basis, but its nobler objective is not the imitation of form, but
the imitation of emotion. The artist tries to see and recover on
canvas not only the body, but so much of the feeling as the body
can for the moment express. This may often be a great deal. In
certain moments of powerful feeling or critical action a great
deal of our psychical selves may come out in the eyes, the face,
the gesture, the pose. This the artist imitates. He not only shows
us an object or an incident, but he fixes on the canvas a moment
in the soul-life of the object. The habitual mood also stamps
itself to a great extent on the face and certain traits of character
betray themselves in expression and feature. These too the im-
itative artist transfers to the canvas. When not exaggerated or
theatrical, this kind of art can be strong, effective and dramatic.
But it has serious limitations. So much of the inner truth as the
outward form interprets, this Art interprets. Its interpretation
The Chandernagore Manuscript

is secondhand, its vision derived and unable to go beyond its authority.

A still higher reach is attained by imaginative European Art. Imagination, according to the European idea, is creative, not interpretative. What is really meant is that the imaginative artist transfers something that belongs to himself into the object of his study, some fancy that has flashed across or some idea that has mastered his mind. Either he reads it into his subject by unconscious transference or he deliberately uses his subject as a mere excuse for putting his fancy or his idea into line and colour. The artist is interpreting himself, not his subject. This egoistic Art has often a very high value and some of the best European work has been done in this kind. More rarely his imaginative sympathy enables him to catch a glimpse of the thing itself hidden in the form. His imagination usually plays with it and prevents the vision from being true in all its parts, but he is able to do work of the highest attractiveness, vigour or artistic beauty.

In all these kinds the European binds himself by the necessity of reproducing the actual outward form imposed by material Nature. He is a bondsman to form and such do not attain to that spiritual freedom which is the first condition of the sight spiritual. When he tries to interpret the thing in itself, he degenerates usually into allegory. Recently the Impressionist school in Europe have tried to break the fetters of the form; they have insisted that what one really sees in an object is not the rounded, solid material form but something rarer and different. In reality, they are groping their way towards an attempt at seeing and interpreting something hidden in the object, something the soul sees before the eye can catch it. Ignorant of the way, they seldom rise beyond a striking and fantastic imagination, but sometimes an inspired eye catches the true vision.
The Indian begins at the other end. He sees the thing itself either by sukshmadrishti, the soul-sight, or by dhyana, a spiritual union with the object studied in which the truth it expresses dawns on the mind by the process of revelation. This he transfers to canvas by letting his inspired and informed Will guide the pencil and the brush instead of using his intellect or merely technical means to find the best way of expression. He uses technique with power, but does not rely on it chiefly. The body he paints is the one which will in every part of it express the thing itself, not the actual material body which largely conceals it. When he descends into the psychical part and seeks to express imaginations, emotions, or passing phases, he carries his method with him. Not content with expressing as much of the feeling as the actual body reveals, he sees the emotion in its fullness by dhyana or soul-sight and forces the body into a mould fit for its absolute expression. He sees the soul and paints it or he sees the heart or mind and paints it. He sees and can, if he will, paint the body merely. But usually he does not will it.
Part Seven

Epistles / Letters From Abroad

Sri Aurobindo wrote the first three of these fictional letters in Bengal in 1910. They were published in 1920–22 without his editorial supervision; they are reproduced here from his manuscripts. He wrote the last three letters in Pondicherry in 1910 or 1911 but never published them; they are reproduced here from his manuscripts.
Epistles from Abroad

I

Dearly beloved,

You, my alter ego, my second existence, now sitting comfortably at home and, doubtless, reading the romantic fictions of the Empire by the light of heavily-priced kerosine; I, who roam uncomfortably in foreign climes, sighing for the joys of the Press Act and the house-search; these faces, white and unfamiliar, that surround me; these miles of soulless brick and faultless macadam, the fitting body for a point-device and dapper civilisation which has lost sight of grandeur, beauty and nobility in life, — are we, I wonder, flitting visions of a nightmare that passes or real men and women made in God’s image? Was life always so trivial, always so vulgar, always so loveless, pale and awkward as the Europeans have made it? This well-appointed comfort oppresses me; this perfection of machinery will not allow the soul to remember that it is not itself a machine.

Is this then the end of the long march of human civilisation, this spiritual suicide, this quiet petrifaction of the soul into matter? Was the successful business-man that grand culmination of manhood toward which evolution was striving? After all, if the scientific view is correct, why not? An evolution that started with the protoplasm and flowered in the ourang-outang and the chimpanzee, may well rest satisfied with having created hat, coat and trousers, the British Aristocrat, the American capitalist and the Parisian Apache. For these, I believe, are the chief triumphs of the European enlightenment to which we bow our heads. For these Augustus created Europe, Charlemagne refounded civilisation, Louis XIV regulated society, Napoleon systematised the French Revolution. For these Goethe thought, Shakespeare imagined and created, St. Francis loved, Christ was crucified. What a
bankruptcy! What a beggary of things that were rich and noble! Europe boasts of her science and its marvels. But an Indian cannot content himself with asking like Voltaire, as the supreme question, “What have you invented?” His glance is at the soul; it is that into which he is accustomed to inquire. To the braggart intellect of Europe he is bound to reply, “I am not interested in what you know, I am interested in what you are. With all your discoveries and inventions, what have you become? Your enlightenment is great,—but what are these strange creatures that move about in the electric light you have installed and imagine that they are human?” Is it a great gain for the human intellect to have grown more acute and discerning, if the human soul dwindles?

But Science does not admit the existence of soul. The soul, it says, is only an organised republic of animalcules, and it is in the mould of that idea Europe has recast herself;—that is what the European nations are becoming, organised republics of animalcules,—very intelligent, very methodical, very wonderful talking and reasoning animalcules, but still animalcules. Not what the race set out to be, creatures made in the image of the Almighty, gods that having fallen from heaven remember and strive to recover their heritage. Man in Europe is descending steadily from the human level and approximating to the ant and the hornet. The process is not complete but it is progressing apace, and if nothing stops the debacle, we may hope to see its culmination in this twentieth century. After all our superstitions were better than this enlightenment, our social abuses less murderous to the hopes of the race than this social perfection.

It is a very pleasant inferno they have created in Europe, a hell not of torments but of pleasures, of lights and carriages, of balls and dances and suppers, of theatres and cafés and music halls, of libraries and clubs and Academies, of National Galleries and Exhibitions, of factories, shops, banks and Stock Exchanges. But it is hell all the same, not the heaven of which the saints and the poets dreamed, the new Jerusalem, the golden city. London and New York are the holy cities of the new religion, Paris its golden Paradise of Pleasure.
It is not with impunity that men decide to believe that they are animals and God does not exist. For what we believe, that we become. The animal lives by a routine arranged for him by Nature; his life is devoted to the satisfaction of his instincts bodily, vital and emotional, and he satisfies himself mechanically by a regular response to the working of those instincts. Nature has regularised everything for him and provided the machinery. Man in Europe arranges his own routine, invents his own machinery, and adds to the needs of which he is a slave, the intellectual. But there will soon be no other difference.

System, organisation, machinery have attained their perfection. Bondage has been carried to its highest expression, and from a passion for organising external liberty Europe is slaying her spiritual freedom. When the inner freedom is gone, the external liberty will follow it, and a social tyranny more terrible, inquisitorial and relentless than any that caste ever organised in India, will take its place. The process has already begun. The shell of external liberty remains, the core is already being eaten away. Because he is still free to gratify his senses and enjoy himself, the European thinks himself free. He does not know what teeth are gnawing into the heart of his liberty.

Still in his inmost self he has an uneasy consciousness of something terribly, vitally wrong, and therefore he is turning more and more to Socialism among the thinking or cultured, among the unthinking to Anarchism. The Socialist hopes, by accepting, swiftly fulfilling and thoroughly organising the inevitable tyranny of society, at least to recover leisure and create a breathing space in which to realise the dignity, beauty and repose of the god in man. The Anarchist sees in Government and Society the enemy of the race and gropes for the bomb and the revolver to recover individual liberty and destroy the tyranny of the majority. Both are guilty of the same fallacy, the mechanical fallacy. One hopes to liberate man by perfecting machinery, the other by destroying it.

And yet the true secret is ready to their hand in the formula of the great Revolution. Two ideas of that formula Europe has pursued with some eagerness, Liberty and Equality; but she has
totally rejected the third and most necessary, Brotherhood. In its place she has erected the idol of her heart, Machinery, and called it Association; for Association without Brotherhood is merely Machinery. Yet what can be more evident than that the French thinkers were perfectly guided in their selection of the three things necessary for an ideal associated happiness? It is only Love that can prevent the misuse of Liberty; it is only Brotherhood which can make Equality tolerable.

II

Friend and brother,

I am as yet among the unregenerate. Instead of my eccentric notions of life changing under the pressure of victorious European enlightenment, they seem to harden and fix their hold. Here I am in Paris, the centre of civilisation, and I am still the same darkskinned barbarian you knew. Neither the complexion of my face nor the complexion of my thoughts has improved. I still believe in God and Vedanta, in India and impossibilities. Man is still to my eyes divine and not an animal. I believe in the soul and am afflicted with the imagination that it has a past and a future, that it neither came ready made into the world out of the mother’s womb nor will disintegrate at the end whether on the pyre or in the coffin. That our first stage is an embryo and our last worms or ashes, is a creed I hold to be still unproved and unprovable. I believe that nothing in this world is made, but everything grows; that body cannot create soul and that a mass of cells is not Buddha or Napoleon. And if you ask for my ground of belief, I shall still refuse to base it on the logical reason, which can only argue and cannot see, and I shall give the answer of the visionary, the victim of hallucinations, that I have seen my soul and talked face to face with my Creator.

There are excellent logicians in Paris. One of them spoke
the other day of the power of telepathy and, while admitting it to be a fact, argued that to develop the power would be to go back to the savage; it would be a denial of Science and civilisation. The civilised man sees with his eyes, talks with his tongue; to see with the soul, mind to talk with mind is a thing weird and barbarous. That is what the logical reason is. It can support the grossest absurdity under the sun and yet satisfy its user. The savage had the power, the civilised man has renounced it as an encumbrance or a superstition; to develop the power is to go back from civilisation to the savage. The argument is undeniable. Whether it is not worth while, in this respect, to go back to the savage, is a question my logical friend refuses to discuss. To entertain it would be an insult to civilisation. Another gentleman of equal clarity poohpoohed the idea of considering the existence of God and immortality on the ground that the very motion would be retrograde. “It would be going back,” he cried, “it would be going back. We have got rid of God; we have finished with the superstition of immortality. Will you deny the progress of enlightenment? My friend, let these ghosts rest in their shadows.” And nothing would induce him to give God a chance. Darwin and Huxley and Haeckel had settled the Creator’s hash for Him; it was res judicata. It is wonderful how easily man tramples on one formula merely to bow reverently before another. Nature replaces God, Progress dethrones Immortality. Yet, in fact, these are merely different names for one thing in its varying aspects. Nature is God manifest in Matter; Progress is possible because the soul of man is immortal.

This talk wearies you. You would prefer perhaps that I should write of the municipality in Paris, the merits and defects of the sewer system, the latest plays at the theatres, a description of boulevard and café or the debates in the Chamber, or some hint as to whether I have made acquaintance with any of the French Academicians. “Plague take the fellow!” you will cry, “he is like the Englishman who marches about in the full panoply of Europe in the heats of a Calcutta summer; wherever he goes, he takes India with him.” Pardon me, my friend; that is not wholly correct. I have forgotten for the time what a detective
looks like. I no longer look round at every fifty yards to see how many policemen in plain clothes are following me. Dacoits and approvers are growing as far away from my mind as Titus Oates or Tiberius. I no longer pant to know our excellent Baikuntha Babu’s latest blank question or withdrawn resolution in Bengal’s new Parliament or what Bengal’s only Maharajadhiraj thinks about English coolies. I have left India behind; I have not brought it with me.

But in the sense you mean, I have brought India with me, that which is eternal in India. Danton, when pressed to escape from the coming doom to Switzerland, answered, “One does not carry one’s country away with one on the sole of one’s shoes.” That is the materialist’s answer, to whom the body is all. No, one cannot carry it on the shoe-soles, but one can carry it in one’s heart and one can carry it in one’s soul. When I listen to the nightingale singing on English riverbank or garden-reaches or see the Seine flowing through the modern gaiety of Paris, I can hear again the manifold noise of the birds on an Indian morning and see rather Ganges flowing grandiose and leonine to her Eastern seas. The body is bound to its surroundings, but the heart exceeds them, and I carry the love of India with me even to the coldest climes. The soul is yet more free. It will be well when every Indian, instead of taking a waxlike stamp from his foreign surroundings, is able to carry India with him wherever he goes. For that will mean that India is destined to conquer and place her stamp upon the whole world.

III

Dear Biren,

Your list of questions is rather a long one. I will answer you in the mass rather than in detail; and chiefly I will attack two fallacies with which your letter teems, if I may use such an
expression, and which lie at the root of your very disfavourable attitude. There are two Hinduisms; one which takes its stand on the kitchen and seeks its Paradise by cleaning the body; another which seeks God, not through the cooking pot and the social convention, but in the soul. The latter is also Hinduism and it is a good deal older and more enduring than the other; it is the Hinduism of Bhishma and Srikrshna, of Shankara and Chaitanya, the Hinduism which exceeds Hindusthan, was from of old and will be for ever, because it grows eternally through the aeons. Its watchword is not kriya, but karma; not shastra, but jnanam; not achar, but bhakti. Yet it accepts kriya, shastra and achar, not as ends to be followed for their own sake, but as means to perfect karma, jnanam and bhakti. Kriya in the dictionary means every practice which helps the gaining of higher knowledge such as the mastering of the breath, the repetition of the mantra, the habitual use of the Name, the daily meditation on the idea. By shastra it means the knowledge which regulates karma, which fixes the kartavyam and the akartavyam, that which should be done and that which should not, and it recognises two sources of that knowledge,—the eternal wisdom, as distinct from the temporary injunctions, in our ancient books and the book that is written by God in the human heart, the eternal and apaurusheya Veda. By achar it understands all moral discipline by which the heart is purified and made a fit vessel for divine love. There are certain kriyas, certain rules of shastra, certain details of achar, which are for all time and of perpetual application; there are others which are temporary, changing with the variation of desh, kal and patra, time, place and the needs of humanity. Among the temporary laws the cooking pot and the lustration had their place, but they are not for all, nor for ever. It was in a time of calamity, of contraction under external pressure that Hinduism fled from the inner temple and hid itself in the kitchen.

The higher and truer Hinduism is also of two kinds, sectarian and unsectarian, disruptive and synthetic, that which binds itself up in the aspect and that which seeks the All. The first is born of rajasie or tamasic attachment to an idea, an experience, an opinion or set of opinions, a temperament, an attitude, a
particular guru, a chosen Avatar. This attachment is intolerant, arrogant, proud of a little knowledge, scornful of knowledge that is not its own. It is always talking of the *kusanskars*, superstitions, of others and is blind to its own; or it says, “My guru is the only guru and all others are either charlatans or inferior,” or, “My temperament is the right temperament and those who do not follow my path are fools or pedants or insincere”; or “My Avatar is the real God Himself and all the others are only lesser revelations”; or “My ishta devata is God, the others are only His partial manifestations.” When the soul rises higher, it follows by preference its own ideas, experiences, opinions, temperament, guru, ishta, but it does not turn an ignorant and exclusive eye upon others. “There are many paths,” it cries, “and all lead equally to God. All men, even the sinner and the atheist, are my brothers in sadhana and the Beloved is drawing them each in His own way to the One without a second.” But when the full knowledge dawns, I embrace all experiences in myself, I know all ideas to be true, all opinions useful, all experiences and attitudes means and stages in the acquisition of universal experience and completeness, all gurus imperfect channels or incarnations of the one and only Teacher, all ishtas and Avatars to be God Himself.

That is what Ramakrishna taught by His life and sadhana and therefore is He the Avatar of the age, the One who prepares the future of humanity. But there is a danger of turning Him into the guru of a sect, the incarnate God of a dogmatic religion, to stultify His own life and teachings by making Him the object of a narrow attachment, an intolerant reverence, a sectarian worship. That must be avoided. It is the great curse which attends the organisation of religion. Let us have done with sects and Churches and worship God only.

The destruction of bondage, the realisation of freedom, the trampling upon our fetters, that is the first need of the future. It was to give mukti that Ramakrishna came, not to impose a new bondage. Therefore was Vivekananda His Apostle to the Gentiles, a man who in all things asserted freedom. The soul of Hinduism languishes in an unfit body. Break the mould that
the soul may live. Is it not the first teaching of Yoga to destroy the dehatmak buddhi, the blindness that identifies the soul with its temporary body? If the body were young, adaptable, fit, the liberated soul might use it, but it is decrepit, full of ill health and impurity. It must be changed, not by the spirit of Western iconoclasm which destroys the soul with the body, but by national Yoga.
Letters from Abroad

IV

Dear Biren,

The idea that the Europeans have organised enjoyment just as the Hindus have organised asceticism, is a very common superstition which I am not bound to endorse merely because it is common. Say rather that the Europeans have systematised feverishness and the Hindus universalised inertia and mendicancy. The appearances of things are not the things themselves, nor is a shadow always the proof of a substance... I admit that the Europeans have tried hard to organise enjoyment. Power, pleasure, riches, amusement are their gods and the whirl of a splendid & active life their heaven. But have they succeeded? I think that nowhere is life less truly enjoyable than in brilliant and arrogant Europe. The naked African seems to me to be happier and more genuinely luxurious than the cultured son of Japhet.1

It is this very trying hard that spoils the endeavour. What a grotesque conception indeed is this of trying hard to be joyous! Delight, joyousness, ananda either are by nature or they do not exist; to be natural, to be in harmony with the truth of things is the very secret of bliss. The garden of Eden is man’s natural abode and it is only because he wilfully chose to know evil that he was driven out of his paradise.

1 Another version of this opening:

It is not for the first time that it has been brought home to me how much more confusing are the resemblances between opposites than the subtle distinctions between close kindred. You have heard that the Europeans have organised enjoyment, you know that my religion is to enjoy God without bondage in the manifest world no less than in Himself and you wonder at my condemnation of their culture.
Dear Biren,

I suspect that it is a malady of your intellect to demand figs from thistles and cry fie upon the thistle if it merely produces thorns. After all, would it not be a monotonous world that consisted only of roses and sweetmeats, virtue and success? Thorns have their necessity, grief has its mission, and without a part of sin, suffering and struggle heaven might not be so heavenly to the blest. I am not prepared even to deny a kind of beneficence to evil; I have sufficient faith in God’s Love & Wisdom to believe that if evil [were] merely evil, it could not continue to exist.

I will tell you all the evil, — since we must use these inadequate terms, — that I think about Europe and then I will tell you what a great work I see it beating out with difficulty for man’s ultimate good. That there should be much that is wrong and perverse, that there should even be an infinite corruption, in Europe and Asia at this moment, was, if you consider it, inevitable. It is the Age of Iron, not even thinly coated with gold, only splashed here and there with a counterfeit of the nobler metal. Kali at the lowest depth of one of his plumb descents, his eyes sealed, his ears deaf, his heart of bronze, his hunger insatiable, but his nerve relaxed and impotent, stumbles on through a self-created darkness with the marshlight and the corpselight for his guides, straining out of those blind orbs after an image of Power that he cannot seize. Time was when he dreamed of love and prated of humanity, but though he still mouths the words, he has forgotten the things. He groped too after wisdom; he has grasped only Science. By that Science he has multiplied comforts till comfort itself has grown uncomfortable; he has added machinery to machinery, convenience to convenience, till life is cumbered and hampered with appliances; and to this uncomfortable luxury and encumbered efficiency he has given the name of civilisation. At present he hungers only after force and strength, but when he thinks he has laid his hands on them, it is Death instead that puts his sign on the seeker and impotence and sterility mock at
him under the mask of a material power.

For my part I see failure written large over all the splendid and ostentatious achievements of Europe. Her costliest experiments, her greatest expenditure of intellectual and moral force have led to the swiftest exhaustion of creative activity, the complete bankruptcy of moral elevation and of man’s once infinite hope. When one considers how many and swift her bankruptcies have been, the imagination is appalled by the discouraging swiftness of this motor ride to ruin. The bankruptcy of the ideas of the French Revolution, the bankruptcy of Utilitarian Liberalism, the bankruptcy of national altruism, the bankruptcy of humanitarianism, the bankruptcy of religious faith, the bankruptcy of political sincerity, the bankruptcy of true commercial honesty, the bankruptcy of the personal sense of honour, how swiftly they have all followed on each other or raced with each other for precedence and kept at least admirable pace. Only her many-sided science with its great critical and analytical power and all the contrivances that come of analysis, is still living and keeps her erect. There remains that last bankruptcy yet to come, and when that is once over, what will be left? Already I see a dry rot begun in this its most sapful and energetic part. The firm materialism which was its life and protection, is beginning also to go bankrupt, and one sees nothing but craze and fantasy ready to take its place.

No, it is not in the stress of an intolerant patriotism that I turn an eye of disparagement upon Europe. The immediate past of these Western peoples I can admire more than I admire the immediate past of our Indian nations. It is their present that shocks my aspirations for humanity. Europe is full of the noise and the apparel of life, of its luxurious trappings, of a myriad-footed material clang and tread, but of that which supports life she is growing more and more empty. When they had less information, her people had wiser and stronger souls. They had a literature, a creative intellectual force, a belief, a religion good or bad, a light that led onwards, a fixed path. Now they have only hungers, imaginations, sentiments & passions. The hungers are made to
look decent; they even disguise themselves & parade about as ideals and rights. The sentiments are deftly intellectualised, — some even care to moralise them superficially, but that is growing out of fashion. The imaginations are tricked out to look like reason and carefully placarded on the forehead, with the names of rationalism, science and enlightenment, though they are only a whirl of ephemeral theories when all is said and done. The passions are most decorously masked, well-furnished & lodged, sumptuously clothed. But a dress does not change truth and God is not deceived.

They criticise everything subtly rather than well, but can create nothing — except machines. They have organised society with astonishing success and found the very best way to spread comfort and kill their souls. Their system of government is a perpetual flux. Its past looks back to a yet corrupter aristocracy, its future sinks to anarchic dissolution, or at best rests in a tyrannical materialistic socialism which seeks to level all that is yet high to the grade of the artisan instead of making the artisan himself worthy of a throne. A thousand newspapers vulgarise knowledge, debase aesthetical appreciation, democratise success and make impossible all that was once unusual & noble. The man of letters has become a panderer to the intellectual appetites of a mob or stands aloof in the narrowness of a coterie. There is plenty of brilliance everywhere, but one searches in vain for a firm foundation, the power or the solidity of knowledge. The select seek paradox in order to distinguish themselves from the herd; a perpetual reiteration of some startling novelty can alone please the crowd. Each favourite is like an actor from whom the audience expect from day to day the usual passion or the usual

---

2 The following passage was written on a loose sheet found separately from the notebook in which Letters from Abroad was written. It is probable that Sri Aurobindo wrote this passage with the intention of working it in here:

But in this brilliance there is no permanence, in this curiosity there is no depth. Cleverness has replaced wisdom and men are more concerned to be original in minutiae than to secure their hold upon large & permanent truths. New theories chase each other across a confused & distracted field resonant with the clash of hustling & disjointed details and the mind is not allowed to rest calmly upon long investigation or confirm
farce. Paradox & novelty therefore thrive; but the select have
an easily jaded appetite, the multitude are fickle and novelties
have their hour. Therefore even the favourite palls. But these
people have a great tamasic persistence of habit and a certain
loyalty to established names; much that they read is from habit
rather than enjoyment. Otherwise there would be no stability
in this chaos of striking worthlessness and this meteor-dance
of ephemeral brilliance. The very churches & chapels are now
only the theatres of a habitual stage performance of portentous
& unnecessary dullness. With the exception of a small minority
full of a grotesque, superficial but genuine passion, nobody be-
lieves, nobody feels; opinion, convention, preference and habit
are alive and call themselves religion, but the heart that loves
God is not to be found. Only a few of the undeveloped are really
religious, the castbacks and atavists of this European evolution.

For more than half a century the whole of Europe has not
been able to produce a single poet of even secondary magni-
ficence. One no longer looks for Shakespeare or Dante to
return, but even Wordsworth or Racine have also become im-
possible. Hugo’s flawed opulence, Whitman’s formless plenty,
Tennyson’s sugared emptiness seem to have been the last poetic
speech of modern Europe. If poetical genius appears, it is at
once taken prisoner by the applauding coterie or the expectant
multitude and, where it began, there it ends, enslaved in ignoble
fetters, pirouetting perpetually for their pleasure round a single
accomplishment. Of all literary forms the novel only has still
some genius and even that is perishing of the modern curse of
overproduction.

Learning and scholarship are unendingly active over the
dead corpse of creative power as in Alexandria and with the

& purify an emerging truth. Everybody is in a hurry to generalise, to build immense
conclusions upon meagre indications. No man but thinks he can perform the miracle of
constructing the whole animal out of a single stray bone. But the result is more often a
trick of intellectual legerdemain than any miracle of constructive knowledge. We in India
think it better to rest calmly in our uncertainty than to clutch at premature conclusions
— but the West is progressive & will no longer suffer so austere an eclipse of its brilliancy.
No such rein shall be put on the galloping Pegasus of its scholastic & scientific fancy.
later Romans before the great darkness. Eccentricity and the hunting after novelty & paradox play in it over an ostentatious precision and accuracy. Yesterday’s opinion is today exploded & discarded, new fireworks of theory, generalisation and speculation take the place of the old, and to this pyrotechnic rushing in a circle they give the name of progress. The possibility of a calm insight & wisdom seems to have departed from this brilliant mob of pushing, overactive intellects. Force there is, but force doomed to a rapid dissolution, of which the signs are already not wanting.

The moral nerve is equally relaxed. Immorality which does not know how to enjoy, impotence and dullness of the capacity for enjoyment masquerading as virtue, decorum & prudery covering a cesspool, the coarseness, appetite and rapid satiety of the imperial Romans combining in various proportions or associating on various terms with the euprepeia & looseness of the Greeks. But the Pagan virility whether united to Roman coarseness or Greek brilliance is only to be seen in a few extraordinary individuals. Society is cast in the biune mould of monogamy & prostitution. You will find such a Parisian who keeps his wife and mistress & frequents his State-licenced harlots as well, shocked & pained at the idea of polygamous Indians enjoying the same rights as the virtuous sons of Europe. Some are even afraid that the resurgence of Asia may end in the lowering of Western morals. There can then be a descent from as well as to Avernus! In a word, the whole of Europe is now a magnified Alexandria, brilliant forms with a perishing soul, feverish activity in imitation of the forms of health with no capital but the energy of the sickbed. One has to concede however that it is not altogether sterile, for all Europe & America pullulate with ever multiplying machinery.
Dear Biren,

There are moments in the career of peoples, empires, continents, orders of things when the forces of life pause between a past vitality and a rapidly advancing decay, atrophy or dissolution. You have often heard me say this of our still persistent and reluctant mediaeval system in India and you have not wondered, but you are surprised when I give the same description of this vaunting and dominant Europe. Why? Because it is vaunting and dominant? I think so. There are two hypnotisms that work with an almost miraculous power upon men’s minds, the suggestion of the habitually repeated word and the suggestion of the long-established or robustly accomplished fact. Men are almost entirely led or stayed by blind hopes or blind hopelessnesses. They are ever ready to cry “As it was yesterday, as it is now, so it shall be for ever,” or to sigh “This thing is, has been, promises to be; how can I ever overcome it? In the centuries to come perhaps, but for me my limits are set and a wall has been built around me.” My friend, the thing that looks so huge, mighty and impressive from without, wears a very different appearance when you look into its secret places and sound its walls and foundations. There are certain edifices, characteristic of European modernity, which lift a tremendous height and showy mass to the sky,—therefore they are called vulgarly skyscrapers, for are they not truly abhramliha?—but some houses very showily built have an ugly habit of descending suddenly in ruin without any previous warning either to their inmates or to the envious huggers of the plain in the vicinity. Then they are said to have been jerry-built. Now, modern European civilisation is just such a jerry-built skyscraper.

You have not misapprehended my meaning, though you wonder at it. These hollow wormeaten outsides of Hinduism crumbling so sluggishly, so fatally to some sudden and astonishing dissolution, do not frighten me. Within them I find the soul of a
civilisation alive, though sleeping. I see upon it the consoling sentence of God, “Because thou hast believed in me, therefore thou shalt live and not perish.” Also, I look through the garnished outsides, gaudy, not beautiful, pretentious, not great, boastful, not secure, of this vaunting, aggressive, dominant Europe and I have seen written on the heart of its civilisation a sentence of death and mounting already from the heart to the brain an image of annihilation.

O this Europe with its noise, its childish vanity, its barbarous material pomp and show, its puérile clashing of sabres and rattling of wheels, its foam and froth of a little knowledge, its mailed fist, its heart of lead, its tremulous, crying nerves, its sinews all unstrung with a luxury and debauch it is not great enough of soul to indulge itself in with the true ancient Titanism. One notes too its fear of the darkness of death, its clinging to life, its morbid terror of pain, its braggart tongue and coward action, its insincerity, dishonesty, unfaith, its romantic altruistic dreams so soon ended and changing into a selfish and cynical proclamation of interest, power and pleasure, — one sees its increasing brain, its perishing will. It is not in noble figures that she presents herself to my imagination, this sole enlightened continent, it is not fear or respect that they awaken in my mind, these civilised superior nations. I see a little girl wearing a new frock and showing herself off to Mamma and all the world, unable to conceal her pride and delight in the thought that never was a frock so new and nice or a little girl so pretty, — never was and never will be! I think of a very small boy to whom somebody has given a very big cane — one can see him brandishing it, executing now and then an exultant wardance, tormenting, tyrannising over and plundering of their little belongings all the smaller boys he can get within his cane's reach, not displeased if they show a little fight so that he can exhibit his heroic strength of arm by punishing them. And then he adorns himself with glittering Victoria crosses and calls on all his associates to admire his gallant and daredevil courage. Sometimes [it reminds me] of an old man, a man very early old, still strong in his decrepitude, garrulous, well-informed, luxurious, arrogant, intelligent, still
busy toddling actively from place to place, looking into this, meddling in that, laying down the law dogmatically on every point under the sun, and through it all the clutch already nearing the brain, the shaking of the palsy already foreshadowed in tremulous movement and uncertain nerve. Very true, Europe, your frock is the cleanest and newest, for the present, your stick the biggest, your wardance a very frightening spectacle — frightening even to yourselves — with Krupp and Mauser and machine gun what else should it be, you are indeed for a while the robust, enlightened oldster you seem. But afterwards? Well, afterwards there will be a newer frock, a bigger stick, a wardance much more terrible and a real Titan grasping at the earth for his own instead of the sham.
Part Eight

Reviews

Sri Aurobindo wrote the first of these book-reviews in 1909 for publication in the Karmayogin. He wrote the others between 1915 and 1920 for publication in the Arya, a philosophical journal of which he was the editor and principal writer.
“Suprabhat”

THE PAPER *Suprabhat*, a Bengali monthly edited by Kumari Kumudini Mitra, daughter of Sj. Krishna Kumar Mitra, enters this month on its third year. The first issue of the new year is before us. We notice a great advance in the interest and variety of the articles, the calibre of the writers and the quality of the writing. From the literary point of view the chief ornament of the number is the brief poem *Dukhhabhisar*, by Sj. Rabindranath Tagore. It is one of those poems in which the peculiar inimitable quality of our greatest lyric poet comes out with supreme force, beauty and sweetness. Rabindra Babu has a legion of imitators and many have been very successful in catching up his less valuable mannerisms of style and verse, as is the manner of imitators all the world over. But the poignant sweetness, passion and spiritual depth and mystery of a poem like this, the haunting cadences subtle with a subtlety which is not of technique but of the soul, and the honeyladen felicity of the expression, these are the essential Rabindranath and cannot be imitated, because they are things of the spirit and one must have the same sweetness and depth of soul before one can hope to catch any of these desirable qualities. We emphasise this inimitableness because the legion of imitators we mention are doing harm to the progress of our poetry as well as to the reputation of their model and we would suggest to them to study this poem and realise the folly of their persistent attempt. One of the most remarkable peculiarities of Rabindra Babu’s genius is the happiness and originality with which he has absorbed the whole spirit of Vaishnav poetry and turned it into something essentially the same and yet new and modern. He has given the old sweet spirit of emotional and passionate religion an expression of more delicate and complex richness voiceful of subtler and more penetratingly spiritual shades of feeling than
the deep-hearted but simple early age of Bengal could know. The old Vaishnav bhāva — there is no English word for it, — was easily seizable, broad and strong. The bhāva of these poems is not translatable in any other language than that the poet has used, — a striking proof is the unsatisfactory attempt of the poet himself, recorded in another article in this issue, to explain in prose his own poem, Sonar Tari. But while the intellect tries in vain to find other intellectual symbols for the poet’s meaning, the poetry seizes on the heart and convinces the imagination. These poems are of the essence of poetry and refuse to be rendered in any prose equivalent. Poetry is created not from the intellect or the outer imagination but comes from a deeper source within to which men have no means of access except when the divine part within seizes on the brain and makes it a passive instrument for utterance the full meaning of which the brain is unable at the moment to grasp. This is the divine mania and enthusiasm which the subtle spiritual discernment of Plato discovered to be the real meaning of what we call inspiration. And of this unattainable force the best lyrics of Rabindranath are full to overflowing.

The article Shantiniketane Rabindranath by Sj. Jitendranath Banerji is another feature of great interest. The writer has a good descriptive gift and the passages which describe the Shantiniketan are admirable; but the chief interest naturally centres in the conversation with the poet which is recorded with great fullness. The private talk of a rich and gifted nature with a power of conversational expression is always suggestive and we await with interest the future issue of this article. We hope Jitendra Babu will give us a fuller view of the remarkable educational experiment which this original mind is developing in the quiet shades of Bolpur. The brief hints given of the moral training and the method of education followed point to a system far in advance of the National Council of Education which is still tyrannised over by a tradition and method not only European but unprogressively European. A brief instalment of Sj. Aurobindo Ghose’s Karakahini is also given which describes the identification parades of the Bomb Case, gives some glimpses
of the approver Noren Gossain and deals with the personal character of some of the jail officials. Nanak Charit by Sj. Krishna Kumar Mitra, the first instalment of which is given in this issue, commands interest both by its subject and the name of its writer. The two chapters given are full of interesting details of Nanak’s birth and childhood and promise an attractive biography of one of the greatest names in religious history. An article of minor importance is the continuation of Sj. Jadunath Chakrabarti’s Ekannabarti Paribar o Strishiksha, which is of considerable merit. The author has seized on two of the great advantages of the joint family system, its ideal of a wider brotherhood and unity and its ample training in morale and capacity. Dainik Bal and the poem Bodhan seem to us to be failures, but there is no other feature of this number which is without merit or interest.

We have left to the last Dr. P. C. Ray’s long article on “The Bengali Brain and its Misuse”. It is a long indictment of past and present Bengal, covering sixteen pages of the magazine. Dr. P. C. Ray is a name which is already a pride to the nation to which he belongs and his deep scientific knowledge, original research and creativeness are one of the most conspicuous instances of that strong, acute and capable Bengali intellect which he admits to be inferior to none. Any article from his pen must be of great interest and cannot be without value. But it is one of the unfortunate results of the denationalising influence of our past education that a mind like Dr. Ray’s should be without intellectual sympathy for the old national culture whose inherited tendencies his own character, life and achievements illustrate in so distinguished a manner. If it had not been for the past which Dr. P. C. Ray condemns, such noble types as the last fifty years of Bengal teems with, would not have been possible. As to the necessity of far-reaching changes in the future we do not greatly differ with the writer. The immediate past has been a period of contraction and the reservation of strength, the future will be a period of expansion and the liberation and expenditure of strength. The structure of the new age must necessarily differ from that of the old. But the spirit of the article is narrow and
intolerant. It is couched in that general spirit of self-depreciation and indiscriminate fault-finding which was a characteristic of our people when national hope and energy were at their nadir. There are all the stock denunciations with which we were familiar before the recent resurgence. Such writings void of the note of hope, encouragement and energy, will not help a nation to rise but rather depress it and push it back into the past. Moreover, Dr. Ray makes the same mistake which European writers made when they condemned the Middle Ages wholesale because they were a period of contraction and not of expansion. That mistake has now been recognised in Europe and justice has been done to that which was praiseworthy as well as to that which was bad in the “Dark Ages”. We in India are recovering from a similar error and if there are those who go to the opposite extreme and see nothing good outside the mediaeval Hindu culture and forms, the same thing happened in Europe and for the same reason, as a reaction from that very intolerance and sweeping denunciation which are the spirit of Dr. Ray’s article. It cannot last any more than it lasted in Europe. Some of the strictures we hold to be too much at secondhand; especially in his criticisms of religion the writer seems to us to be wandering outside the province in which he can speak with authority. After all one must enter into the spirit of an age and civilisation before one can profitably criticise it, otherwise we miss the meaning of history and falsify its values. Nevertheless the article is ably written and should be studied as a complete expression of the Europeanised standpoint in looking at Indian problems. As to the present, Dr. Ray lays too much stress on the survivals of the end of the nineteenth century when the national consciousness touched bottom and ignores the youthful strength and energy which is preparing the twentieth.
“Hymns to the Goddess”¹

This is one of a series of publications by Mr. Arthur Avalon consisting of texts and translations of the Tantras. The hymns collected and translated in this volume are, however, taken from other sources besides the Tantras. Many of them are from the considerable body of devotional hymns attributed by tradition to the philosopher Shankaracharya, a few from the Mahabharata and the Puranas. Most are well-known stotras addressed to the various forms and names of the female Energy, Mother of the worlds, whose worship is an important part of that many-sided and synthetic whole which we call Hinduism.

The work of translation has been admirably done. The one slight defect is the preservation untranslated of Sanskrit words other than names which might well have been rendered into English. The translation is at once faithful, simple and graceful in style and rhythm. No English version can reproduce the majesty of the Sanskrit rhythms and the colour and power of the original, but within the limits of the possible the work could hardly have been better executed.

The translation is accompanied by brief but numerous notes. Mr. Avalon has made a principle of submission to the authority of the Hindu commentators and learned men whom he has consulted or taken as his guides in the study of the Tantra. He writes, “It is necessary to study the Hindu commentators and to seek the oral aid of those who possess the traditional interpretation of the Shastra. Without this and an understanding of what Hindu worship is and means, absurd mistakes are likely to be made. I have thus, in addition to such oral aid, availed myself of the Commentaries of Nilakantha on the Mahabharata, of Gopala

¹ Translated from the Sanskrit by Arthur and Ellen Avalon (Luzac and Co., London).
Chakravarti and Nagoji Bhatta on Chandi, and of Nilakantha on the Devibhagavata. As regards the Tantra, the great Sadhana Shastra, nothing which is both of an understanding and accurate character can be achieved without a study of the original texts undertaken with the assistance of the Tantric gurus and pundits who are the authorised custodians of its traditions.” This careful scrupulousness is undoubtedly the right attitude for the work which Mr. Avalon has set himself,—to present to the English-reading public the philosophy and worship of the Tantra and the way of the Shaktras as they have been traditionally practised and understood in mediaeval and modern India. The method followed assures a sound basis free from the vagaries of learned ignorance and unfettered ingenuity which render so much of the work of European scholarship on Indian subjects fantastic, unsound and ephemeral. It cannot, we think, be the final attitude; an independent scrutiny of the ancient scriptures and forms of philosophy and religion is needed through the whole range of Indian thought and devotion both to recover their more ancient and original forms and principles often concealed by later accretions and crystallisings and to separate from them whatever is of imperishable worth and utility for the spiritual future of mankind. But meanwhile, and especially when a great and difficult subject is being for the first time brought forward in an adequate manner to general notice, the conservative method is undoubtedly the most desirable.

Commentators, however, even the most learned, are subject to error, as Mr. Avalon has had to recognise in his translation of the verse which declares that all women without exception are forms of the Great Mother. The commentator would have us believe that the phrase  

\[ \text{strīyāḥ samastāḥ sakalā jagatsu} \]

means all women who possess the sixty-four arts and are devoted to their husbands, are modest, etc. The translator rightly rejects this conventional distortion of a great and profound philosophical truth; he translates “all women without exception throughout the world”. We wonder whether the phrase does not admit of a different shade cutting deeper into the heart of things. The lines are,
Is there not a hint of a distinction between the simple bhedāḥ and sakalāḥ? “All sciences, O Goddess, are different parts of thee, all women entirely in the worlds.” The sense would then be that wherever the feminine principle is found in the living personality, we have the entire presence of the world-supporting maternal soul of the Divinity. The Devi with all her aspects, kalās, is there in the Woman; in the Woman we have to see Durga, Annapurna, Tara, the Mahavidyas, and therefore it is said in the Tantra, in the line quoted by Mr. Avalon in his preface, “Wherever one sees the feet of Woman, one should give worship in one’s soul even as to one’s guru.” Thus this thought of the Shakta side of Hinduism becomes an uncompromising declaration of the divinity of woman completing the Vedantic declaration of the concealed divinity in man which we are too apt to treat in practice as if it applied only in the masculine. We put away in silence, even when we do not actually deny it, the perfect equality in difference of the double manifestation.

There are other instances in which the translators seem to us not to have escaped the misleading wiles of the commentator. We may instance the passage in the Hymn to Mahadevi in which the Goddess is described as being “both black and grey”. “Smock-coloured” would be a closer rendering of the epithet dhūmra. We are told in the note that it means “that which is with smoke, the sacrificial rite, here the knowledge of the rites”. This is a scholastic interpretation which we cannot accept. The different hues of the Goddess are always psychologically symbolic and Mr. Avalon has himself an excellent passage to that effect in his Introduction. But, although occasionally provoking dissent, the notes are throughout interesting and instructive and often throw a new light on the implications of the text.

Mr. Avalon in his publications insists upon the greatness of the Tantra and seeks to clear away by a dispassionate statement of the real facts the cloud of misconceptions which have obscured our view of this profound and powerful system. We shall
have occasion to deal with this aspect of his work when we come to speak of the Mahanirvana Tantra. In this volume he justifies against European prejudice the attribution of the feminine form and quality to God and against modern ignorance generally the image-worship which the Tantra in common with other Hindu systems makes part of the first stage in religious progress. On both points we are in general agreement with his standpoint, though we do not hold that religious evolution must necessarily follow the line laid down by the Tantra.

Human conceptions of the Divine divide themselves first into the worship of the formed and the aspiration towards the formless, secondly, into the adoration of the Qualified and the urge of the rarest spirits towards the Unqualified, the Absolute. For all these stages the Tantric worship and discipline provides. How can the Formless invest Himself with form, asks the religious rationalist. The universe is there to reply. Hinduism worships Narayana in the stone, the tree, the animal, the human being. That which the intellectual and spiritual pride or severity of other religions scorns, it makes its pride and turns into its own form of logical severity. Stocks and stones, the quadruped and the human being, all these are equals in God, our brothers in the Divine, forms that the Omnipresent has not disdained to assume. But beyond the material forms there are others that are ideal and symbolic, but not less, if anything more real, more full of divine power than any actual physical manifestation. These are the mental images in which we worship God. The Hindu believes that to whatever form he brings his devotion, the love of God is bound to assume and vivify it, and we cannot say that the belief is irrational. For if there is a Consciousness in the universe and transcending it which answers to the yearning of all these creatures and perhaps Itself yearns towards them with the love of the Father, the Mother, the Friend, the Lover, and a love surpassing all these, then it is idle to suppose that It would assume or create for its own pleasure and glory the forms of the universe, but would disdain as an offence to Its dignity or purity those which the love of the worshipper offers to It and which after all Itself has formed in his heart or his imagination.
To these mental forms mental worship may be offered, and this is the higher way; or we may give the material foundation, the *pratisṭhā*, of a statue or pictured image to form a physical nodus for a physical act of worship.

In the formless also we worship God, in His qualities, in His Love, Power, Bliss, Wisdom, in the great cosmic Principles by which He manifests Himself to the eye of knowledge. We worship Him as the Impersonality manifested in these things or the Personality containing them. And we rise at the apex of the pinnacle into that which is not only formless, *arūpa*, but *nirguṇa*, qualityless, the indefinable, *anirdeśyam*, of the Gita. In our human ignorance, with our mental passion for degrees and distinctions, for superiorities and exclusions, we thus grade these things and say that this is superior, that is for ignorant and inferior souls. Do we know? The Theist looks down with reprobation on the form-adoring man-worshipping idolater and polytheist; the Adwaitin looks down with a calm and tolerant indulgence on the ignorance of the quality-adoring personality-bemused Theist. But it seems to us that God scorns nothing, that the Soul of all things may take as much delight in the prayer of a little child or the offering of a flower or a leaf before a pictured image as in the philosopher’s leap from the summit of thought into the indefinable and unknowable and that he does best who can rise and widen into the shoreless realisation and yet keep the heart of the little child and the capacity of the seer of forms.

At any rate, this is an attitude towards which these Hymns to the Goddess bring us very near. They are full of the glories of her form, her visible body; full of the thinker’s perception of her in all the shapes of the universe; full of the power of her psychological aspects; pervaded too by a sense behind and often expressed of her final unity and transcendence. Mr. Avalon brings this out with great force and vividness in his Introduction. But it should be manifest even to a careless reader of the Hymns. Take the following passage: —

Reverence to Her who is eternal, Raudra,
To Gauri and Dhatri, reverence and again reverence,
To Her who is moonlight and in the form of the moon,
To Her who is supreme bliss, reverence for ever.

That is from the famous hymn in the Chandi-Mahatmya, deservedly one of the best known in sacred literature; but everywhere we find the same crowding of different aspects. In a hymn of which the eleventh verse is a sensuous description of the physical goddess,—

O Gauri! with all my heart
I contemplate Thy form,
Beauteous of face,
With its weight of hanging hair,
With full breasts and rounded slender waist,
Holding in three hands a rosary, a pitcher and book
And with thy fourth hand making the jnanamudra,—

(mark how the close passes naturally into the psychological symbolism of the form), the ninth is a remarkable piece of Yogic imagery,—

O Mother! like the sleeping King of serpents
Residing in the centre of the first lotus,
Thou didst create the universe.
Thou dost ascend like a streak of lightning,
And attainest the ethereal region;—

and the opening is the highest philosophy expressed with great poetic force and interspersed with passages of the richest poetic colour—

The cause and Mother of the world,
She whose form is that of the Shabdabrahman,
And whose substance is bliss.

Thou art the primordial One,
Mother of countless creatures,
Creatrix of the bodies of the Lotus-born, Vishnu and Shiva,
Who creates, preserves and destroys the worlds. . . .
Although Thou art the primordial cause of the world,
Yet art Thou ever youthful.
Although Thou art the Daughter of the Mountain-King,
Yet art Thou full of tenderness.
Although Thou art the Mother of the Vedas,
Yet they cannot describe Thee.
Although men must meditate upon Thee,
Yet cannot their mind comprehend Thee.

This hymn is quoted as culled from a Tantric compilation, the Tantrasara. Its opening is full of the supreme meaning of the great Devi symbol, its close is an entire self-abandonment to the adoration of the body of the Mother. This catholicity is typical of the whole Tantric system, which is in its aspiration one of the greatest attempts yet made to embrace the whole of God manifested and unmanifested in the adoration, self-discipline and knowledge of a single human soul.
THE DISCOVERY of Oriental Art by the aesthetic mind of Europe is one of the most significant intellectual phenomena of the times. It is one element of a general change which has been coming more and more rapidly over the mentality of the human race and promises to culminate in the century to which we belong. This change began with the discovery of Eastern thought and the revolt of Europe against the limitations of the Graeco-Roman and the Christian ideals which had for some centuries united in an uneasy combination to give a new form to her mentality and type of life. The change, whose real nature could not be distinguished so long as the field was occupied by the battle between Science and Religion, now more and more reveals itself as an attempt of humanity to recover its lost soul. Long overlaid by the life of the intellect and the vital desires, distorted and blinded by a devout religious obscurantism the soul in humanity seems at last to be resurgent and insurgent. The desire to live, think, act, create from a greater depth in oneself, to know the Unknown, to express with sincerity all that is expressible of the Infinite, this is the trend of humanity’s future. A philosophy, a literature, an Art, a society which shall correspond to that which is deepest and highest in man and realise something more than the satisfaction of the senses, the desire of the vital parts and the expediencies and efficiencies recognised by the intellect without excluding these necessary elements, these are the things humanity is turning to seek, though in the midst of a chaotic groping, uncertainty and confusion.

At such a juncture the value of Eastern Thought and Eastern Art to the world is altogether incalculable. For their greatness

---

is that they have never yet fallen away from the ancient truth, the truth of the Soul; they have not gone out of the Father’s house to live on the husks of the sense and the life and the body; they have always seen in the mind and body only instruments for the expression of that which is deeper and greater than its instruments. Even intellect and emotion had for them only a secondary value. Not to imitate Nature but to reveal that which she has hidden, to find significative forms which shall embody for us what her too obvious and familiar symbols conceal, has been the aim of the greatest Art, the Art of prehistoric antiquity and of those countries and ages whose culture has been faithful to the original truth of the Spirit. Greek culture, on the other hand, deviated on a path which led away from this truth to the obvious and external reality of the senses. The Greeks sought to use the forms of Nature as they saw and observed them, slightly idealised, a little uplifted, with a reproduction of her best achievement and not, like modern realism, of her deformities and failures; and though they at first used this form to express an ideal, it was bound in the end to turn to the simple service of the intellect and the senses. Mediaeval Art attempted to return to a deeper motive; but great as were its achievements, they dwelt in a certain dim obscurity, an unillumined mystery which contrasts strongly with the light of deeper knowledge that informs the artistic work of the East. We have now throughout the world a search, an attempt on various lines to discover some principle of significant form in Art which shall escape from the obvious and external and combine delight with profundity, the power of a more searching knowledge with the depth of suggestion, emotion and ecstasy which are the very breath of aesthetic creation. The search has led to many extravagances and cannot be said to have been as yet successful, but it may be regarded as a sure sign and precursor of a new and greater age of human achievement.

The Oriental Art recognised in Europe has been principally that of China and Japan. It is only recently that the aesthetic mind of the West has begun to open to the greatness of Indian creation in this field or at least to those elements of it which are most characteristic and bear the stamp of the ancient spiritual
greatness. Indian Architecture has indeed been always admired, but chiefly in the productions of the Indo-Saracenic school which in spite of their extraordinary delicacy and beauty have not the old-world greatness and power of the best Hindu, Jain and Buddhist work. But Indian sculpture and painting have till recently been scouted as barbarous and inartistic, and for this reason, that they have, more than any other Oriental work, deliberately remained in the extreme of the ancient symbolic conception of the plastic Arts and therefore most entirely offended the rational and imitative eye which is Europe’s inheritance from the Hellene. It is a curious sign of the gulf between the two conceptions that an European writer will almost always fix for praise precisely on those Indian sculptures which are farthest away from the Indian tradition, — as for instance the somewhat vulgar productions of the Gandhara or bastard Graeco-Indian school or certain statues which come nearest to a faithful imitation of natural forms but are void of inspiration and profound suggestion.

Recently, however, the efforts of Mr. Havell and the work of the new school of Indian artists have brought about or at least commenced something like a revolution in the aesthetic standpoint of Western critics. Competent minds have turned their attention to Indian work and assigned it a high place in the artistic creation of the East and even the average European writer has been partly compelled to understand that Indian statuary and Indian painting have canons of their own and cannot be judged either by a Hellenistic or a realistic standard. More salutary still, the mind of the educated Indian has received a useful shock and may perhaps now be lifted out of the hideous banality of unaesthetic taste into which it had fallen. Whatever benefits the laudable and well-meaning efforts of English educationists may have bestowed on this country, it is certain that, aided by the inrush of the vulgar, the mechanical and the commonplace from the commercial West, they had succeeded in entirely vulgarising the aesthetic mind and soul of the Indian people. Its innate and instinctive artistic taste has disappeared; the eye and the aesthetic sense have not been so much corrupted as killed. What more flagrant sign of this debacle could there be
than the fact that all educated India hailed the paintings of Raja Ravi Varma, an incompetent imitation of the worst European styles, as the glory of a new dawn and that hideous and glaring reproductions of them still adorning its dwellings? A rebirth of Indian taste supporting a new Indian Art which shall inspire itself with the old spirit while seeking for fresh forms is now, however, possible and it is certainly a great desideratum for the future. For nothing can be more helpful towards the discovery of that which we are now vaguely seeking, a new Art which shall no longer labour to imitate Nature but strive rather to find fresh significant forms for the expression of the Self.

It is necessary to this end that the wealth of their ancient Art should be brought before the eyes of the people, and it is gratifying to find that an increasing amount of pioneer work is being done in this respect, although still all too scanty. The book before us, Mr. O. C. Gangoly’s *South Indian Bronzes*, must rank as one of the best of them all. Southern India, less ravaged than the North by the invader and the vandal and profiting by the historic displacement of the centre of Indian culture southward, teems with artistic treasures. Mr. Gangoly’s book gives us, in an opulent collection of nearly a hundred fine plates preceded by five chapters of letterpress, one side of the artistic work of the South, — its bronzes, chiefly representing the gods and devotees of the Shaiva religion, — for the Shaiva religion has been as productive of sublime and suggestive work in the plastic arts as has been the Vaishnava all over India of great, profound and passionate poetry. This book is a sumptuous production and almost as perfect as any work of the kind can be in the present state of our knowledge.

There are certain minor defects which we feel bound to point out to the author. The work abounds with useful quotations from unprinted Sanskrit works on the rules and conventions of the sculptural Art, works attributed to Agastya and others; but their value is somewhat lessened by the chaotic system of transliteration which Mr. Gangoly has adopted. He is writing for all India and Europe as well; why then adopt the Bengali solecism which neglects the distinction between the b and the v of
the Sanskrit alphabet or that still more ugly and irrational freak by which some in Bengal insist on substituting for the aspirate \( bh \) the English \( v \)? Even in these errors the writer is not consistent; he represents the Sanskrit \( v \) sometimes by \( b \) and sometimes by \( v \), and \( bh \) indifferently by \( v \), \( vb \) or \( bh \). Such vagaries are disconcerting and offend against the sense of order and accuracy. It is always difficult to read Sanskrit in the Roman alphabet which is entirely unsuited to that language, but this kind of system or want of system turns the difficulty almost into an impossibility. We hope that in the important works which he promises us on Pallava Sculpture and South Indian Sculptures Mr. Gangoly will remedy this imperfection of detail.

The first chapter of the letterpress deals with the legendary origins of South Indian art. It is interesting and valuable, but there are some startlingly confident statements against which our critical sense protests. For instance, “it is beyond doubt that the two divisions of the country indicated by the Vindhya ranges were occupied by people essentially different in blood and temperament.” Surely the important theories which hold the whole Indian race to be Dravidian in blood or, without assigning either an “Aryan” or “non-Aryan” origin, believe it to be homogeneous — omitting some islander types on the southern coast and the Mongoloid races of the Himalaya, — cannot be so lightly dismissed. The question is full of doubt and obscurity. The one thing that seems fairly established is that there were at least two types of culture in ancient India, the “Aryan” occupying the Punjab and Northern and Central India, Afghanistan and perhaps Persia and distinguished in its cult by the symbols of the Sun, the Fire and the Soma sacrifice, and the un-Aryan occupying the East, South and West, the nature of which it is quite impossible to restore from the scattered hints which are all we possess.

Again we are astonished to observe that Mr. Gangoly seems to accept the traditional attribution of the so-called Agastya Shastras to the Vedic Rishi of that name. The quotations from these books are in classical Sanskrit of a fairly modern type, certainly later than the pre-Christian era though Mr. Gangoly
on quite insufficient grounds puts them before Buddha. It is impossible to believe that they are the work of the Rishi, husband of Lopamudra, who composed the great body of hymns in an archaic tongue that close the first Mandala of the Rig Veda. Nor can we accept the astonishing identification of the Puranic Prajapati, Kashyapa, progenitor of creatures, with the father of the Kanada who founded the Vaisheshika philosophy. It distresses us to see Indian inquirers with their great opportunities simply following in the path of certain European scholars, accepting and adding to their unstable fantasies, their huge superstructures founded on weak and scattered evidence and their imaginative “history” of our prehistoric ages. There is better and sounder work to be done and Indians can do it admirably as Mr. Gangoly himself has shown in this book; for the rest of the work, where he has not to indulge in these obiter dicta, is admirable and flawless. There is a sobriety and reserve, a solidity of statement and a sort of sparing exhaustiveness which make it quite the best work of the kind we have yet come across. The chapters on the Shilpashastra and the review of the distribution of Shaivite and other work in Southern India are extremely interesting and well-written and the last brief chapter of criticism is perfect both in what it says and what it refrains from saying.

Mr. Gangoly's collection of plates, 94 in number, illustrates Southern work in bronze in all its range. It opens with a fine Kalasamhara and a number of Dancing Shivas, the characteristic image of the Shaivite art, and contains a great variety of figures; there are among them some beautiful images of famous Shaivite bhaktas. A few examples of Vaishnava art are also given. In a collection so ample and so representative it is obvious that there must be a good deal of work which falls considerably below the best, but the general impression is that of a mass of powerful, striking and inspired creations. And throughout there is that dominant note which distinguishes Indian art from any other whether of the Occident or of the Orient. All characteristic Oriental art indeed seeks to go beyond the emotions and the senses; a Japanese landscape of snow and hill is as much an image of the soul as a Buddha or a flame-haired spirit of the
thunderbolt. Nature will not see herself there as in a mirror, but rather herself transformed into something wonderfully not herself which is yet her own deeper reality. But still there is a difference, and it seems to lie in this that other Oriental art, even though it goes beyond the external, usually remains in the cosmic, in the limits of Prakriti, but here there is a perpetual reaching beyond into something absolute, infinite, supernatural, the very ecstasy of the Divine. Even in work not of the best finish or most living inspiration there is this touch which gives it a greatness beyond its actual achievement; rarely indeed does the statuary fall into mere technique or descend entirely into the physical and external.

It is this tendency, as the author well explains, which causes and in a sense justifies the recoil and incomprehension of the average Occidental mind; for it comes to Art with a demand for the satisfaction of the senses, the human emotions, the imagination moving among familiar things. It does not ask for a god or for a symbol of the beyond, but for a figure admirably done with scrupulous fidelity to Nature and the suggestion of some vision, imagination, feeling or idea well within the normal range of human experience. The Indian artist deliberately ignores all these demands. His technique is perfect enough; he uses sculptural line with a consummate mastery, often with an incomparable charm, grace and tenderness. The rhythm and movement of his figures have a life and power and perfection which conveys a deeper reality than the more intellectualised and less purely intuitive symmetries and groupings of the European styles. But these bodies are not, when we look close at them, bronze representations of human flesh and human life, but forms of divine life, embodiments of the gods. The human type is exceeded, and if sometimes one more subtly and psychically beautiful replaces it, at other times all mere physical beauty is contemptuously disregarded.

2 This was the traditional standpoint, the view of Art dominant at the time of writing but, though it still survives, it is no longer dominant. Art and aesthetics in Europe have swung round to an opposite extreme.
What these artists strive always to express is the soul and those pure and absolute states of the mind and heart in which the soul manifests its essential being void of all that is petty, transient, disturbed and restless. In their human figures it is almost always devotion that is manifested; for this in the Shaiva and Vaishnava religions is the pure state of the soul turned towards God. The power of the artist is extraordinary. Not only the face, the eyes, the pose but the whole body and every curve and every detail aid in the effect and seem to be concentrated into the essence of absolute adoration, submission, ecstasy, love, tenderness which is the Indian idea of bhakti. These are not figures of devotees, but of the very personality of devotion. Yet while the Indian mind is seized and penetrated to the very roots of its being by this living and embodied ecstasy, it is quite possible that the Occidental, not trained in the same spiritual culture, would miss almost entirely the meaning of the image and might only see a man praying.

The reason becomes evident when we study the images of the gods. These deities are far removed indeed from the Greek and the Christian conceptions; they do not live in the world at all, but in themselves, in the infinite. The form is, as it were, a wave in which the whole ocean of being expresses itself. The significance varies; sometimes it is unfathomable thought, sometimes the self-restraint of infinite power, sometimes the self-contained oceanic surge of divine life and energy, sometimes the absolute immortal ecstasy. But always one has to look not at the form, but through and into it to see that which has seized and informed it. The appeal of this art is in fact to the human soul for communion with the divine Soul and not merely to the understanding, the imagination and the sensuous eye. It is a sacred and hieratic art, expressive of the profound thought of Indian philosophy and the deep passion of Indian worship. It seeks to render to the soul that can feel and the eye that can see the extreme values of the suprasensuous.

And yet there is a certain difference one notes which distinguishes most of these southern bronzes from the sublime and majestic stone sculptures of the earlier periods. It is the note of
lyrism in the form, the motive of life, grace, rhythm. To use the terms of Indian philosophy, most art expresses the play of Prakriti; Buddhist art in its most characteristic creations expresses the absolute repose of the Purusha; Hindu art tends to combine the Purusha and Prakriti in one image. But in the earlier stone sculptures it is the sublime repose, tranquil power, majestic concentration of the Deity which the whole image principally represents even in poses expressive of violent movement; the movement is self-contained, subordinated to the repose. We find the same motive in some of these bronzes, notably in the wonderful majestically self-possessed thought and power of the Kalasamhara image of Shiva (Plate I); but for the most part it is life and rhythm that predominate in the form even when there is no actual suggestion of movement. This is the motive of the Nataraja, the Dancing Shiva, which seems to us to strike the dominant note of this art; the self-absorbed concentration, the motionless peace and joy are within, outside is the whole mad bliss of the cosmic movement. But even other figures that stand or sit seem often to represent only pauses of the dance; often the thought and repose are concentrated in the head and face, the body is quick with potential movement. This art seems to us to reflect in bronze the lyrical outburst of the Shaivite and Vaishnava devotional literature while the older sculpture had the inspiration of the spiritual epos of the Buddha or else reflects in stone the sublimity of the Upanishads. The aim of a renascent Indian art must be to recover the essence of these great motives and to add the freedom and variety of the soul’s self-expression in the coming age when man’s search after the Infinite need no longer be restricted to given types or led along one or two great paths, but may at last be suffered to answer with a joyous flexibility the many-sided call of the secret Mystery behind Life to its children.

3 This refers to the plate in South Indian Bronzes. — Ed
3. Kalasamhara Shiva
4. Sundaramurti, the Shaivite Saint
A REMARKABLE book with this title by the well-known writer and thinker, Mr. H. G. Wells, has recently appeared, of which only a few extracts are before us, but these are sufficient to reveal its character and thought. It is on the part of the writer, speaking not for himself personally alone but as scribe to the spirit of his generation, a definite renunciation of the gospel of an all-sufficient rationalism, a discovery of God, a profession of faith in spirituality as the one lever by which mankind can rise out of the darkness and confusion of its present state into a more perfect living. He professes his faith in the God within, the invisible King, who is the immortal part of us, in a coming kingdom of God upon earth which shall not only be a spiritual state in the individual, but the open brotherhood of a divine rule among men, and in self-identification with God, service of him, absolute surrender to him as the whole rule of life for the enlightened modern man. This is, indeed, a remarkable change of spirit and change of mental outlook and, if Mr. Wells’ claim is just that he is writing as a scribe to the spirit of his generation, it means a revolution in Europe far more important than the Russian with all its idealism and its hopes for a new and beneficent change in politics and society. It means the union of Eastern spiritual knowledge and religious faith with Western pragmatic idealism and their fusion into the basis of a new culture and, we will not say a new universal religion,—for religion must vary with the variations of human nature,—but a new practical spirituality in which all mankind can become one.

There is much in Mr. Wells’ statement of his new-born belief that is imperfect, limited and a little crude, much that is grasped with an over-hasty zeal, as was inevitable in the first light of an unripe awakening. Some of the old limitations of the rationalistic Western mind with its too external outlook upon things still cling
about his new spiritual discovery. He tells us that the kingdom of God on earth is “not a metaphor, not a mere spiritual state, not a dream, not an uncertain project, . . . it is the close and inevitable destiny of mankind.” This classing of the inner spiritual state, the kingdom of God within us, with a metaphor, a dream, an uncertain project reveals the lingering taint of an excessive pragmatism. The spiritual state is the one thing indispensable; until the mass of mankind can awaken into it, the dream of a perfect society, an open brotherhood of God’s rule, must end in failure and disappointment. The kingdom of God within is the sole possible foundation for the kingdom of God without; for it is the spirit by which man lives that conditions the outer forms of his life.

Misled by this external view of things Mr. Wells, evidently, still believes that a political and social action is sufficient to bring about the millennium. He has discovered that this action must be driven by a spiritual motive, pursued in the passion of a true religious fervour, consecrated to the indwelling God, effective only by an absolute self-surrender to the Divine. But he has a limited vision of his God and brings to it all the aggressiveness and something of the fanaticism of all such limited religious conceptions. “The new conceptions,” he writes, “do not tolerate either kings or aristocracies or democracies. Its implicit command to all its adherents is to make plain the way to the world theocracy. Its rule of life is the discovery and service of the will of God which dwells in the hearts of men and the performance of that will” in the life of the believer, the individual, and of the nation of which he is a part. “I give myself to God not only because I am so and so, but because I am mankind. . . . I become a knight in God’s service. . . . I become a responsible minister of my king. I take sides against injustice, disorder, and against all those temporal kings, emperors, princes, landlords and owners who set themselves against God’s rule and worship. Kings, owners and all who claim rule and decision in the world’s affairs, must either show themselves clearly the fellow-servants of the believer or become the object of his steadfast antagonism.”

All this is very forcibly said, but it shows that the writer
has not grasped the whole spiritual truth; he has not gone deep enough inward. As once he dreamed of a class of scientific and rational supermen establishing a perfect social rule upon earth, so now he thinks that by the action of his banded servants of the invisible King declaring political and social war upon godless Czars, Kaisers, rulers and capitalists the same end can be achieved. With them is God; in them God dwells, in the others, presumably, he does not dwell; those who have surrendered absolutely to him are the citizens of the kingdom and on them shall be peace; those who do not surrender or even fall short in their surrender, are interlopers, against them the sword. A very old kind of militant religionism in a very modern form. It ignores two ancient, two eternal spiritual truths; first, that God dwells in all and, secondly, that only by becoming conscious of the God within from within can humanity be saved. God dwells in all and not only in the believer who is conscious of him,—dwell disguised and veiled, and it is by helping others to awaken to the veiled Divine within them that we go the straight way to the founding of his kingdom on earth. True, an outward battle also has to be fought, but against forces, against institutions which stand in the way of the spreading of the light and the reign of brotherhood, not against men as unbelievers,—in a spirit of understanding, of knowledge, of firm will, but also of charity for ignorance and of love for the misled. God, says Mr. Wells, is boundless love, but this boundless love, it seems, is not infinite enough to embrace those who do not believe with you; it rejects them with a steadfast antagonism, it banishes them as “interlopers”. God’s work least of all should be pursued in a spirit of partisan and sectarian antagonism, but rather with a remembrance that the battle is only a way to peace and the peace must come by the inner submission of the opponent through his recognition of the Divine, through his awakening. It is not enough that the believer should perform God’s will and fight for the performance of that will “in the acts and order of the state and nation of which he is a part.” The nation also must be brought not only to believe, but to know, to see, to live in God, otherwise the national performance of God’s will, even
if momentarily secured, will soon degenerate into a form. It is possible that what the old religions called “the rule of the saints” may be a preliminary step to the establishment of the full kingdom of God, but that rule can only become secure by the light and fire which is in them kindling itself in the hearts of all mankind.

These defects of outlook come from a defect in the conception of the Divine. It consists of “complete Agnosticism in the matter of God the Creator and entire faith in the matter of God the Redeemer”. A distinction is made between the Veiled Being behind the universe and the living reality in our lives; the latter alone is the true God. He is a personal and intimate God. He is finite. He is a spirit, a single spirit and a single person. He has come, we know not whence, into the conflict of life. He has begun and will never end. And yet he is the immortal part and leader of mankind, our friend and brother and light of the world. And from these first principles is drawn a description of God as certain qualities, boundless love, boundless courage, boundless generosity, thought and steadfast will, and as having motives, characteristics, an aim. “This is the belief of the modern mind”, read, the modern Western mind, “with regard to God.”

We can see whence the crudities of this belief arise. The Western mind is still burdened with its scientific vision of the universe as a play of brute force, of life as a struggle, the world a material entity, and therefore of the Spirit of the world, if any there be, conceived agnostically or with a sort of materialistic Pantheism as standing for these things only, the Breath of a physical universe, a sort of mechanical, inconscient Soul of things. Out of this pure materiality mind and soul inexplicably evolve. God appears only in man and his aspiration, his longings for a higher order of things, for love, universal sympathy, immortality. This God and the mechanical inconscient Spirit of the world the Western mind finds it difficult — and no wonder — to bring under the same term. The simple harmonious truth that God is veiled in the material universe which is only the lowest term, the first appearance of the cosmic Reality, that he unveils himself partially and progressively in man and to man, and that man by
growth into self-knowledge and God-knowledge can grow into 
the whole truth of God and existence, which is one truth, — this 
seems still to be hidden from these wise men of the West. His 
partial unveiling in man seems to them a birth of the once non-
existent Divine, a coming of God into the world, one knows 
not whence; and because man appears to be finite, God whom 
they conceive of as the sum of human aspiration to good, truth, 
beauty, immortality, is also conceived of as finite. But how is 
that which has begun in Time secure against ending in Time? 
and how can a finite God be infinite love, courage, strength? 
Only that which was from ever, can be for ever, and only that 
which is infinite in being, can be infinite in force and quality. We 
have here an echo of the inconsequent Christian paradox of a 
soul born by the birth of the body, yet immortal to all eternity, 
combined with the metaphysical dogma of a God existent, not 
in being, but in becoming. There is an element of truth and value 
in this belief, but it brings disabling limitations into our inner 
realisation of God and the practice of a divine life to which it 
gives a foundation.
“Rupam”\(^1\)

The appearance of this superb quarterly admirable in its artistic get-up and its fine reproductions of Indian sculpture and painting, admirable in the accomplished excellence of its matter,—the name of the editor, Mr. O. C. Gangoly, the one man most especially fitted by his knowledge and capacity for this work, is of itself a sufficient guarantee of excellence,—is a significant indication of the progress that is being made in the revival of the aesthetic mind of India. Assailed and corrupted in a time of cultural decline and arrest of its creative and artistic faculty by an alien aesthesis and ideals antithetic to its own spirit, it is returning to a right view and understanding of its past greatness, and though much way has still to be made before there can be any universal recovery of the artistic eye and taste, the first steps have been taken with some rapidity and firmness and are all in the right direction. This new and fine effort of the Indian Society of Oriental Arts is likely to be of invaluable aid towards this reawakening; its magnificent illustrations are in themselves a revelation of the old beauty and greatness and, admirably selected and supported by illuminating articles, ought to be sufficient to open even the most blinded vision to the meaning and value of our ancient painting and sculpture.

The subjects of the four articles in this number are all of a considerable interest and touch points or raise and answer questions which have either a central importance or a vital though second-plane prominence in Indian art, and each article is a remarkably just, full, efficient and understanding interpretation of its subject. The frontispiece is a panel from a Pallava temple at

5. Princely Doorkeeper, Mahabalipuram
6. Poseidon of Artemision
Mahabalipuram intended to convey at once the essential character and appeal of Indian sculpture by an example which offers no difficulty of understanding or appreciation even to a non-Indian mind or to an uninstructed knowledge, and it is accompanied by a brief but clear and sufficient article. This example from one of the great styles and periods shows, as is justly said, and shows very perfectly, the Indian principle in the treatment of the human figure, the suppression of small particulars and trivial details in order to secure an extreme simplicity of form and contour,—the best condition for accomplishing the principal object of the Indian sculptor which was to fill the form with the utmost power of spiritual force and significance. The figure of this princely doorkeeper of the temple in its union of calm, grave, sweet and restful serenity with a latent and restrained heroic energy in its stillness, noted by the writer as the distinctive power of this creation, is indeed equal, as he suggests, in its dignity and repose to any Greek statue, but it carries in it a more profound and potent meaning; it is a perfect interpretation of the still and intense Godward feeling, seized in one deep mood, in one fixed moment of it, which was the soul of the great ages of Indian religion. There is here a perfection of form with a perfection of significance. This restraint in power, this contained fullness opening an amplitude of infinite suggestion, is not rare or exceptional, it is a frequent greatness in the art of India.

The second article on Garuda in Bengal and Java by Akshaya Kumar Maitreya, besides its interesting and discerning treatment of its subject, the inception and humanising of the Garuda figure and the artistic use of the mythus, touches an issue which has not yet, I think, received sufficient consideration, the place of the art of Gauda in the development of the spirit of Indian sculpture. The putting side by side of the two sculptures from Java and Varendra, on one side the heroic force, majesty, dignity and beauty of the ancient art in one of its finest developments, on the other the moved nobility, grace and loveliness and the fervour of spiritual emotion and tenderness of a time when the antique Aryan spirit was softening into the sweetness of the religions of bhakti, makes of itself an illuminating suggestion.
This sculpture is eloquent of that transition and the art of Gauda with its lyrical sweetness of emotion and, at its best, suggestive depths, begins the curve of the stream of spiritual feeling which came down through the Vaishnava art and poetry, found its most gracious and lucid embodiment in the poets of Bengal, has now taken, enriched by new elements, a large and living development in the lyrics of Tagore and the paintings of the Calcutta school and has yet a vital part to play in the spiritual future of India.

Another article contains a full and discriminating account, copiously illustrated by numerous figures, of the history of the Kirtimukha, a standing feature in Indian architecture, and the development of its use as a constant decorative element and in Java a prominent structural motive. The right understanding of these details is a necessary equipment for the complete comprehension of the art of India. The writer handles his subject with a consummate mastery and includes in a small compass all that is needed to give us a full idea about this “glory face”. The one thing not included in his intention is its psychological significance, a question of great interest, for it is an evolution as the writer indicates from an element common to the ancient art of Asia and there were kindred things in Greece and mediaeval Europe. It is the result, I would suggest, of an imagination or an experience that has entered into the subtle worlds and found there a side of things dangerous and distorted and terrible that have yet to be compelled by the adventure of the self-conquering spirit into an element of divine harmony and significance.

The remaining article by Mr. E. Vredenburg on the continuity of pictorial tradition in the art of India treats a question of the most central importance and brings to it a fine aesthetic instinct even more necessary than historic and archaeological accuracy of information in such a discussion, for one may have the latter and yet miss the truth for lack of a more essential equipment of the art critic. Mr. Vredenburg enters a still much-needed protest against the constant tendency to attribute a foreign origin to whatever survives of Indian creation. The instances he gives are indeed evidences of an extraordinary perversity of judgment, such as the well-known refusal to leave the credit of the Tajmahal
to India, “the numerous attempts that have been made to ascribe the Ajanta paintings to the Greeks, Persians or Chinese”, and last but not least colossally absurd, “the truly astounding statement that the Kangra paintings are of European inspiration and that they were painted for the English market”! Only yesterday while reading Mr. Jouveau-Dubreuil’s able historical monograph I found myself brought up short by the sweepingly positive but hardly judicial and certainly not judicious statement that “the Deccan like the North was inspired by the Greek and Roman arts and the marbles of Amaravati can be compared to the sculptures of Gandhara”. The plain fact is that whatever outside influences there may or may not have been in India as elsewhere, even the earliest work shows a characteristic Indian mentality and touch; and, as for Gandharan art, it has the air of an inefficient attempt of the Hellenistic mind to absorb this spirit rather than an effort of India to imitate Greece. And in any case the great characteristic work could no more have been the creation of a foreign mind or of its influence than the sculptures of Phidias can be attributed to an Assyrian, Egyptian or Chinese origin. A psychological insensibility to the spiritual significance of Indian work is probably at the root of these errors and, so long as that subsists, the most erudite knowledge will be no protection against gross misunderstandings.2

Mr. Vredenburg is chiefly concerned in this article with filling up the gap between the Ajanta frescoes and the later art of India. He is able to do this up to the eleventh or twelfth century: for the beautiful coloured reproductions of exquisite Buddhist miniatures from an illuminated manuscript of that period which are the most attractive feature of this number, evidence a complete continuity of the Ajanta style. Most striking are the two enlargements which show at once and conclusively that these miniatures are in their whole spirit, method and every

2 The attitude and regard of the cultured European mind on Indian and Eastern art has immensely changed since this was written and there has been a great progress towards sympathy and understanding and even developments due to an oriental influence. There is indeed some survival of old prejudices but this is no longer the characteristic standpoint of the aesthetic mind of Europe towards the creative achievement of India or of Asia.
characteristic reductions of the old style of mural painting. He appeals also to the typically Ajantesque character of the coloured panels of Man Singh’s palace which date from the fifteenth or sixteenth century. It will be interesting to follow the farther development of this argument in the forthcoming number.

I could wish I had space for adequate comment on the many points of stimulating interest with which this number abounds, but I have, I think, indicated enough to show that every lover of Indian art and culture ought to possess “Rupam”. He will find it one of the luxuries that are necessities.
About Astrology

THE SUBJECT of this book is one which stands nowadays put away under a sort of intellectual ban, placed on it some centuries ago by the scientific and rationalistic European mind and not yet lifted. Mr. N. P. Subramania Iyer has undertaken an astrological series which will deal with the various parts of astrology, and the present volume contains the text and translation of the *Kalaprakasika*, a treatise on the selection of the right times by astrological rule for undertaking any and every action of human life. The book is well printed and got up, the translation admirably done in a style free enough to avoid all awkwardness,—the author has a thorough control of the English tongue and an excellent style of his own,—but perfectly faithful to the matter of the text. But the most interesting part of the work for the ordinary reader is the introduction, in which he gives amidst other matter the psychological explanation of the influence of the planets and states for what they stand in relation to the Indian Vedantic philosophy of existence. I have not seen elsewhere any exposition of the subject equally original and illuminative.

Astrology is in the general mind associated with that class of subjects which goes under the name of the occult, and along with others of its class it has long been discredited by modern “enlightenment”, one does not quite know on what grounds or with what rational justification. It has its psychic and mystical side, but that is not its ordinary presentation; there it claims to be a science like any other with fixed processes and an exact and definite system of rules which ought to be perfectly capable of verification or of disproof by experiment and induction like

---

any other science. Its basis is astronomical and mathematical, its data perfectly open and positive and in no way hidden or occult, nor does it at all shrink back from the test or hide itself in secrecy and mystery. It does not indeed give ordinarily the why, but only the how of the causes and effects it professes to establish, but so it is with all other sciences; they do not give the reason of things, but only their processes. Yet astrology is supposed at some indefinite time in the march of human mind to have been exploded, — along with such things as witchcraft and demonology, not to speak of the existence of spirits and the immortality of the soul, — and there is a sort of idea that it has been disproved and therefore put aside as a superstition which no reasonable man can even look at except with a lofty disdain, much less stoop to investigate with an open mind its truth or falsity. Still the anathema of Science has not been able to destroy it; in Europe it has revived, even though its practice as a profession is punishable by the law, and in India it has always survived. It is not indeed the habit of educated Indians to profess explicitly their belief in it, they fight shy of that as a rule, but it is largely consulted by numbers of them, as also by many Europeans. This is an anomalous position which ought to be corrected. Either astrology is a true science and should be investigated, proved, improved where defective and generally rehabilitated in opinion, or else it is a pseudo-science and should be investigated and disproved so as to cut the ground away finally from all secret belief or open credulity.

As a matter of fact astrology has never been scientifically disproved, nor has any rational ground ever been advanced for treating it as a pseudo-science. It simply came to be assumed at a certain period and under certain intellectual influences that it was a childish superstition. Or if there were any grounds, then it was left aside because astrologers were charlatans, because many, perhaps most predictions went wrong, but most of all because it was thought that in the nature of things, in any rational theory of the universe the planets simply could not have any influence on our characters, lives and actions. None of these grounds are sufficient. If many astrologers are charlatans, so also
have there been many quacks in the field of medicine; at one time indeed not only did they pullulate, but the system of medicine itself seemed so defective that there were plenty of clear and enlightened minds who were inclined with Molière to denounce the whole thing as a gross pseudo-science, an elaborate and solemn system of ignorance, humbug and quackery. Supposing that view had prevailed,—it could not, merely because men are too vitally interested in healing their ailments and preserving their bodies and know no other way of doing it,—that would not have done away with the truth underlying the science.

That many predictions go wrong, proves nothing, essentially, against astrology any more than the constant failure of doctors to heal diseases proves anything essential against their science. The first reason of this failure may be that a great number of practising astrologers are either charlatans who seek to please their clients rather than predict by scientific rule,—of that kind there are perhaps many,—or else inefficient and ignorant men who practise only by rule of thumb, perfunctorily and with a main eye upon their fees. But if even capable astrologers fail often, that also only proves that either the science or their way of treating it is largely empirical or that some of its rules and theories may be errors. But every science has to pass through its empirical stage and some,—as, again, the science of medicine,—have hardly emerged from it, and every science too burdens itself in its progress with false generalisations, incorrect theories and imperfect rules which have afterwards to be discarded or amended. As the main point in medicine is whether herbs and metals and other remedies have or have not certain effects on the body and whether their workings can be substantiated by experience in a sufficient number of cases to establish a regular relation of cause and effect, so it is in astrology with the fundamental question of planetary influences upon earth and its creatures.

The *a priori* argument from the rational theory of the universe cannot stand. There is nothing essentially irrational in the idea that in this solar system, so closely linked together, there may be mutual influences of all the planets upon each other or
that the beings of a particular planet are powerfully influenced or even dominated by influences from the others. The question remains, the a priori rationality being admitted or at least not summarily dismissed, first, whether it is so in fact and, secondly, how far those influences go and of what nature they are. Astrology affirms that they not only affect our bodies, but also our psychical being. If matter and mind were entirely independent entities having no influence or determining effect upon each other, then such a result could not be; but that is not the case. According to the materialistic view of the universe which claims to be the sole rationalistic view, mind is itself an effect of matter and all its states and movements are determined by matter. There is nothing then impossible, planetary influence being once admitted, in the action of material bodies producing psychical conditions on the earth and thereby determining our psychical states and movements. In a more truly rationalistic view mind and matter are always influencing and determining each other; here too, given a universal mind and matter so acting upon individual matter and mind, the movements of the planetary system may be one or even the first nodus of their activities, and the assertions of astrology become at least primarily credible.

Further, astrology affirms that these influences determine the whole course of our lives and that the all-important element is time. That raises the major question of the influence of Time upon human beings and events; does Time determine the course of our lives and the states of our being and, if so, how far and in what way? Or to put the question more precisely, as it is raised by astrology, do or can the conditions reigning at a given critical time, in this case the moment of birth, determine our physical and psychological conditions and the whole course of our future lives, or determine them to any considerable extent? and are the relative movements and therefore the mutual positions of the sun and planets with regard to the earth and each other either the nodus or in some way the effective signs of these determinations? And, secondly, do the developing time conditions which come afterwards, by themselves or viewed in reference to the original conditions, determine from moment to moment, from time to
time the subsequent evolution of our primary physical and psychological conditions and the course of linked and successive circumstances which make up the history of our lives? and if so, again, are the relative movements and mutual positions of the sun and planets at any given time the nodus or the effective signs of this later determination also? can they therefore be taken for all practical purposes as determinants, or at any rate as sure signs by which the determinations of our life and being can be discovered? That is the question which astrology raises, and it is evidently a perfectly legitimate and rational question; nor can we on a priori grounds condemn and put away an affirmative answer, which is based upon past experience systematised into rules and theories, as a superstition or a childish folly. Granted that in things here there is a chain of cause and effect — or at least, if causality is disputed, of antecedent condition leading up to subsequent condition — and that if and so far as we know that chain, scientific prediction becomes in that proportion possible, — two propositions which, unless we deny determination altogether, it would be difficult to dispute, — there is no inherent improbability in the clue to happenings human and other on the planets being found in the motions of those planets. Astronomy is in a sense the primary physical science, for the first facts which give all the others their field are astronomical facts; it may well be that in the psycho-physical field the same rule holds and that there the first facts may be astrological.

The a priori objections disappearing, the next step is to ask ourselves whether there is a sufficient prima facie empirical case for enquiring into the actual truth of astrology. This at present depends upon the experience of isolated individuals, a very unsatisfactory basis. But if this experience could be collected, sifted and published, I believe it would be found that a formidable prima facie case exists in favour of astrology, much stronger than that which encouraged the Society for Psychical Research to carry on its work in another psycho-physical field to such important conclusions. I may state my own experience in the matter in the belief, justified by many instances, that it is only typical of the experience of hundreds of others. My first accidental contact
with an Indian astrologer was not encouraging. This gentleman was the most accomplished thought-reader I have ever seen; for he asked me to think my question without speaking it and not only successfully named the unspoken question I had fixed on, but three others which had crossed my mind, one of them only in the merest flash and without leaving any impression behind: this he pretended to do by mathematical calculation, an operation which I took leave to regard as humbug or professional parade. For when it came to his answers, I found that he was still doing thought-reading and not astrology; he simply echoed the hopes or thoughts in my mind and his predictions did not come within one hundred miles of the truth. Other practitioners I have found to belong, a few plainly to the class of mere flattering charlatans, but most to the inefficient who read by rule of thumb and have made no profound study of their science. On the other hand, with capable astrologers the results have been often of such a remarkable accuracy as to put quite aside any possibility of chance hit, mere coincidence, intelligent prevision or any of the current explanations. I may instance the father of a friend of mine, a deep student of the science but not a professional, who predicted accurately the exact year, month, day, hour and even minute of his own death. In my own case accuracy was hampered by the inability to fix the precise moment of my birth; still some of the results were extraordinary. Two may be mentioned, from one and the same astrologer, which related to my public career. One, given when I had not yet plunged into the political vortex and my then obscure personality was quite unknown to the astrologer, predicted as an inevitable certitude of the future a political struggle with powerful non-Indian adversaries during which for a time even my life would fall under the shadow of danger. The other, given at the time of my first prosecution in the Bande Mataram case, predicted three successive criminal trials in each of which the prosecution would fail. I may instance also two predictions by the book in which slokas from Sanskrit astrological writings indicating the results of certain conjunctions or planetary positions were shown to be applicable to my horoscope. One foretold specific chronic illnesses for the body.
of which there was no sign at the time, but long afterwards they put in their unexpected appearance and persisted. Another indicated very precisely that one of my future activities would be to found a new spiritual philosophy and its discipline; at that time I had no knowledge of philosophy or Yoga and no turn or inclination in my mind which could make the realisation of this prediction at all probable. These are only the most precise examples out of a number. Supposing all well-authenticated evidence of the kind to be collected, I am convinced there would be an overwhelmingly strong prima facie case and even a body of sufficiently strong empirical proof to establish at least a nucleus of truth in astrology.

That would be the first step. For if astrology is a science and is to take its proper place, the first necessity is to dissipate by an appeal to the empirical mind of the general public as well as of the sceptical thinker the great mass of unenquiring prejudice which now exists against it. To publish the text and translation of the best authorities, as Mr. Iyer is now doing, with illuminating introductions is a preliminary need in this case so that we may know what we have to go upon. The second is to mass evidence of the empirical truth of the science, giving in each case the prediction in all its details, the more detailed the better, the astrological rules on which it was based and the event, each detail of the event being compared with the corresponding detail of the prediction. Only then would there be a clear field for the consideration of the scientific and philosophical doubts, questions and problems which would still arise; but this, though the most important aspect of the matter, I must leave for future handling.

An acceptance of the truth of astrology would not necessarily carry with it a complete determinism of Fate or mechanical law of Karma. In the Indian theory at least there is room for a determination by human will and endeavour, for Fate is mainly a determination by past action and a new will and action can cancel it; only a very strong Karma is imperative and irreducible. Even that may possibly be cancelled if one can enter into the freedom of the spiritual consciousness. One instance at any rate
came to my knowledge in which the life had corresponded exactly with the pre-indications of the horoscope so long as the subject remained in the world but, as soon as he left it for a spiritual life, there was no longer any correspondence.
THE APPEARANCE of this Anglo-Sanskrit Quarterly “devoted to research work in all fields of Indian Antiquity” is a welcome sign of the recent development towards a wider culture, a more flexible and strenuous scholarship and a more original thinking which promises to lift the Indian mind out of the rut of secondhand provincialism and sterile repetition of commonplaces into which the vices of its school and university education had betrayed it and to equip it for the important contribution we may expect it to make to the world’s increasing stock of knowledge. There has been a considerable expansion in this country, both in English and the vernaculars, of that ordinary periodical literature which caters for the popular mind and supplies it with snippets of knowledge, facile information and ready but not always very valuable opinions on all sorts of subjects. But there has been hitherto little or nothing corresponding to those more serious publications common in every European country which appeal to a more limited audience but succeed in popularising within those limits a more serious and original thinking and a more thorough knowledge in each branch of human enquiry. Attempts have been made but, outside the field of religion and philosophy, they have usually foundered in their inception for want of adequate support; they have not found, as they would have found elsewhere, an interested circle of readers. Now, however, there ought to be a sufficient number of cultivated minds interested and competent in Sanskrit scholarship and the research into Indian antiquity to ensure an adequate support and an increasing usefulness for this new Quarterly.

1 An Anglo-Sanskrit Quarterly, conducted by the Sanskrit Academy of India, Bangalore, and edited by Pundit Lingesha Mahabhagawat.

We regret that this review comes out very belated as it had to be held over last month for want of space.
The second (October) number of the Quarterly is before me and its sound editing and the value and interest of its contents promise well for its future. There are especially two very solid articles, one by Mr. Tilak on “A Missing Verse in the Sankhya Karikas”, and another by Professor R. D. Ranade of the Fergusson College headed “Greek and Sanskrit: a Comparative Study”, but there is no article without its interest and value. I note that in this number all the contributors, with one exception, are either from Maharashtra or the Madras Presidency. It is to be hoped that the editor will be able to secure the cooperation of Sanskrit scholars in the north so that this Review may become an All-India organ of Indian research.

Mr. Tilak’s article shows all the thoroughness and acuteness which that great scholar brings to his work great or small whether he is seeking for the original home of the Aryans in the cryptic mass of the Rig Veda or restoring with his rare powers of deduction a lost verse in the Karikas. The point he seeks to establish, though apparently a small one, has really a considerable importance. He points out that there is a consensus of authority for the existence of 70 verses in Ishwarakrishna’s Sankhya-Karikas, but, if we exclude the last three which do not belong to the doctrinal part of the text, we have both in the Indian text and in the Chinese version only 69; at the same time he shows that both Gaudapada’s Bhashya and the commentary in the Chinese version contain a passage developing a refutation of four possible subtler causes of the world, Ishwara, Purusha, Kala and Swabhava (God, the Soul, Time and Nature) rejected by the Sankhyas, a refutation which logically ought to be but is not found in the text itself. From the passage in the Bhashya he seeks to reestablish the sense and even the language of the missing verse. It seems to me that he has established both the fact of the missing verse and its substance. But the interesting point is the reason assigned by him for the loss of the verse; it was, he thinks, no accident, but a deliberate suppression made at a time when the Sankhya philosophy was being re-explained by thinkers like Vijnanabhikshu in a Vedantic sense. If so, the point made sheds a very
interesting light on the historic course of philosophical thought in India.

The general line which that development followed arises more indirectly from an interesting and carefully reasoned article by Mr. Y. Subbarao on the question of the originality of Shankara’s philosophy. Mr. Subbarao seeks to establish his point that it was no new system of thought which Shankara created, but only the re-statement perhaps in a more developed form of a very ancient school of Vedantic interpretation. Certainly, it cannot be supposed that Shankara invented a new philosophy out of his own brain; he believed himself to be establishing against attack the real sense of the Vedantic philosophy founded on the original texts of its canon and supported by the best tradition. Nor does any greater thinker really invent a system new-born from his own intellect; what he does is to take up the material available to him in the past history of thought, to choose, select, reject, to present new lights on old ideas, to develop latent suggestions, to bring into prominence what was before less prominent or not so trenchant and definite, to give a fresh, striking and illuminating sense to old terms, to combine what was before not at all or else ill-combined; in doing so he creates; his philosophy, though not new in its materials, is new in the whole effect it produces and the more powerful light that in certain directions it conveys to the thinking mind. The question is whether Shankara’s system was not new in this sense and, though the previous material still subsisting is insufficient to decide the question, it must, I think, be answered provisionally in the affirmative. Adwaitavada undoubtedly existed before, but it was the form Shankara gave it which made it a clear, well-thought-out and powerfully trenchant philosophy and put his name at the head of Indian metaphysicians.

Mr. Subbarao admits that it is impossible to establish an exclusive Adwaitavada, much less the Mayavada, from the Veda, Upanishads, Brahma Sutras or the Gita. It is impossible not because the great thinkers who gave us these writings thought confusedly or without a clear grasp of principles, but because theirs was an entirely different method. India began with a
synthetic and intuitive manner of thinking based not upon logical distinctions and verbal oppositions, but upon the facts of spiritual experience and vision. In such synthetic and intuitive philosophies truths are arranged according to the place of each in the actual fact of things, as different laws and generalisations are arranged in Science, each positive in its own field and each having its proper relation to the others. The perfection of this method is to be found in the Upanishads and the Gita; and that is the reason why all attempts to interpret these great works by the methods of logical debate and the rigorous exclusions dear to the analytic metaphysician always fail even in the strongest hands; they raise questions about the sense of these works which cannot be conclusively solved, but must necessarily lead to eternal debate, because the method is wrong and the original work itself never intended to cause or countenance such discussions. Only a synthetic method of interpretation can explain a synthetic and intuitive philosophy.

The analytical tendency began with the gradual divisions which ended in the establishment of the six philosophical schools. Each of them claims to be justified by the Veda and from its own point of view each is quite in the right, for the primary data of each are there in the sacred writings. It is where they press to exclusive conclusions and deny and refute each other that they can no longer truly claim Vedic authority. Even the Buddhists could, if they had chosen, have based themselves on the Veda, for there are passages which, if taken by themselves, seem to deny the Atman and attribute all to Karma or to assert the Non-Existent as the source of things. The perfect resort to the analytical method came later; it was employed with great effect though often rather naively by the Buddhists, but it was Shankara who applied rigorously the analytical method of the intellectual reason in all its trenchant clearness and force to metaphysics. Hence the greatness of his position in the history of Indian thought. From his time forward Indian metaphysics was bound to the wheels of the analytical and intellectual mind. Still, it is to be noted that while the philosophers thus split the catholicity of the ancient Truth into warring schools, the general Indian mind was
always overpoweringly attracted by the synthetical tendency. The Gita seems to be in part the expression of such a synthetic reaction, the Puranas show constantly the same tendency and even into the philosophical schools it made its entry.

Prof. Ranade’s article on Greek and Sanskrit carries us into another field, that of Comparative Philology. His object is in a brief scope to establish the identical origin of Greek and Sanskrit in that which is most essential in the growth of a language, its grammatical forms and syntactical peculiarities. He has had to allow himself only a very small space for so large and important a subject, but within these narrow limits he has done his work with great thoroughness and, subject to a few minor reservations, with a minute accuracy. It is to be regretted that by printing the Greek words in their proper character instead of in Roman type Mr. Ranade has made this interesting essay unintelligible to all but a very few Indian readers. He lays down the principle that the words of each language should be printed in its own type and that anyone who wishes to study Comparative Philology must take the trouble to familiarise himself with the original alphabets. This is a counsel of perfection which is not practicable in India, nor indeed on any large scale in Europe either. If for instance a scholar were dealing with the philology of the Aryan languages and had to cite largely verbal forms both from the European tongues and from Sanskrit and its Indian descendants he would be compelled on this principle to require at least nine different types from the Press to which he entrusted his work. No Press would be able to meet the demand and very few even of his learned readers but would be baffled by the variety. Mr. Ranade himself gives us German words and a German sentence, but not in the Gothic character which alphabetical purism would demand.

There are three or four statements in the article to which objection can be taken and, since in philology even the smallest details are of importance, the learned writer will not object to my pointing them out with some emphasis; in one case at least he has fallen into a serious error by correcting which he may add an interesting and not unimportant subsection to his
array of grammatical and syntactical identities between the two languages. I do not understand in the first place what is meant by the statement that “in Greek no difference is made between the dentals and the linguals and they are fused together.” If it is meant that the Greek language possessed both dental and lingual sounds but expressed them by the same characters, I do not think this can be correct. The distribution of dentals and linguals in the various languages is one of the most curious phenomena in the history of linguistic phonetics and deserves a closer inquiry than has been accorded to it. The Latin and Celtic languages reject the lingual and use only the dental; English on the other hand prefers the linguals, though it uses occasionally the dental t, th and d, all of which it represents by th, as in with, thin, though, — a desperately clumsy device thoroughly in keeping with the chaotic wildness of English orthography. Everyone in India knows the difficulty an Englishman finds in pronouncing the Indian dentals; he turns them resolutely into linguals. On the contrary a Frenchman who has not educated himself into the right English pronunciation, will turn the English lingual into a dental; he will say feasth instead of feast, noth instead of not, and pronounce do as if it were the English though. A similar peculiarity is one of the chief features of the brogue, the Irish mispronunciation of English speech; for the natural Irish tongue cannot manage the hard lingual sound in such words as Peter and shoulder, it mollifies them into true dentals. I have noticed the same peculiarity in the pronunciation of a Spanish actress playing in English on a London stage; otherwise perfect, it produced a strange impression by its invariable transformation of the harder English into the softer Latin sound. Now Greek must certainly have belonged to the Latin-Celtic group in this phonetic peculiarity; otherwise the difference would have been too striking to escape the sensitive ear of the ancient poets and scholars. It seems to me therefore that in the comparative scheme of the two alphabets the Sanskrit linguals should be marked as absent in the Greek and, not as Mr. Ranade represents them, correspondent equally with the dentals to the Greek tau, theta, and delta.
In the comparison of the declensions Mr. Ranade asserts that Greek feminine nouns in long \( a \) like \( \text{ch}¯\text{or}¯\text{a} \) correspond in their endings to Sanskrit nouns of the type of \( \text{bh}¯\text{ary}¯\text{a} \) and Greek nouns in long \( e \) like \( \text{tim}¯\text{e} \) to Sanskrit nouns of the type of \( \text{d}¯\text{as}¯\text{i} \). Surely this is an error. The writer has fallen into it because he was looking only at the Attic dialect, but the Attic is only one variation of the Greek language and it is misleading to study it by itself. As a matter of fact, this \( a \) and this \( e \) both represent the same original sound which must have been the feminine termination in \( a \); only the Doric dialect prefers always the original \( a \), the Ionic modifies it into \( ¯e \), and the Attic standing between the Doric and the Ionic belts makes a compromise. In the Attic when this feminine \( a \) is preceded by a vowel it remains unmodified, as also usually when it is preceded by \( r \), but if it is preceded by a consonant it becomes \( ¯e \); thus \( \text{phili}¯\text{a} \), \( \text{ch}¯\text{or}¯\text{a} \), but \( \text{tim}¯\text{e} \), \( \text{k}¯\text{om}¯\text{e} \). Ionic will say \( \text{phili}¯\text{e} \) and not \( \text{phili}¯\text{a} \); Doric \( \text{tim}¯\text{a} \) and not \( \text{tim}¯\text{e} \). This is enough to negative Mr. Ranade’s identification of this Attic \( ¯e \) with the Sanskrit feminine \( ¯i \). Certainly there are cases in which Sanskrit uses this \( i \) termination where Attic has the \( ¯e \), as in \( \text{caturth}¯\text{i} \) and \( \text{tetart}¯\text{e} \); but this simply means that the Greek has rejected the Sanskrit deviation into the \( i \) form and kept to the more regular \( a \) which here too will appear in its pure form in the Doric.\(^2\)

In the comparison of tenses Mr. Ranade makes the rather curious assertion that the Sanskrit Conditional does not occur in any other language except perhaps German; but surely if the German “\( \text{wurden getodet worden sein} \)” corresponds to the Sanskrit \( \text{abhavis}¯\text{yat} \), the French conditionals e.g. \( \text{auraient été tués} \) and the English “would have been killed” ought equally to be considered as parallel syntactical constructions; they have the same sense and with a slight difference the same form as the German.

Finally, Mr. Ranade tells us that there are no such compounds in Greek as in Sanskrit and again that there are no \( \text{dvandva} \), \( \text{karmadh¯araya} \) and \( \text{bahuvrihi} \) compounds in Greek,

\(^2\) This phonetic variation is a general rule in the dialects and not confined to the feminine termination.
although there are verbs compounded with prepositions. I am at a loss to understand how so sound a scholar can have come to make a statement so contrary to all the facts. The power of the Greek language to make compounds is one of its most notable characteristics and its rich though never intemperate use is one of the great beauties of the Greek poetical style. When the Romans came into contact with Greek literature, their earlier poets tried to introduce this faculty into Latin and even Virgil describes the sea as *velivolum*, sail-flying, i.e. with sails flying over it like the wings of birds through the air, but the usage was too contrary to the Latin genius to succeed. Not only did the Greek compound prepositions with its verbs, but it compounded nouns and verbs together. Thus from *nau-archos*, ship-ruler, i.e. admiral, they made *nau-archein*, to be an admiral; nor did they hesitate before such forms as *paido-poiein*, to beget children, *paido-tribein*, to train boys, *mnēsikakein*, to remember wrongs, *neotto-tropheisthai*, to be brought up like the young of a bird. In fact with the exception of nominal *dvandvas* the Greek illustrates all the main varieties of the Sanskrit compound. For it is capable of such compounds as *pseudo-martur*, a false witness, *pseudo-christos*, a false Christ, *chauno-politēs*, a silly citizen; as *andro-phonos*, man-killing, *paido-letor*, a destroyer of one’s children, *phusi-zos*, life-producing, *koruth-aiulos*, helmet-glancing, *lao-kataratos*, cursed by the people, *thumo-leōn*, heart-lion, as *anabadēn* and *katabadēn* answering to the Sanskrit *avyayībhāva*; as *oxu-thumos*, sharp-passioned, *oxu-schoinos*, having sharp reeds, *polu-teknos*, having many children, *io-stephanos*, violet-crowned. The language indeed pullulates with compounds. It is true that they are usually composed of two members only, but compounds of three members are found, as *tris-kako-daimōn*, thrice-evil-fated and Aristophanes even perpetrates such forms as *glischr-anitlog-exepitriptos* and *sphragid-onuch-argo-komētēs*.

I have dwelt on these points because they leap to the eye in the perfection otherwise complete of an admirable essay which, I hope, is only the first sketch of a more important treatise. But with the exception of the last they are minor points and do
Especially new and interesting are the parallel between Greek and Vedic accents and the rearrangement of Greek conjugations according to the Sanskrit classification. The common origin of Greek and Sanskrit is apparent enough, but like other philologists Mr. Ranade is far too sure of the conclusion he draws from it. I believe him to be right in thinking that the Indian Aryans and the Greeks came from one stock, but when he says that this has been proved beyond dispute by the discoveries of the philologist he is going much too fast. Common origin of language or even common language does not prove common ethnic origin. The French and Spaniards are not Latins nor the Irish of Dublin and Munster Anglo-Saxons. From the possible causes of linguistic similarity which the writer has given he has omitted one, conquest and cultural pressure. According to the theory of the Italian ethnologist, Sergi, all the Mediterranean races of Northern Africa and Southern Europe belong to one “Mediterranean” stock ancient and highly civilised which was conquered by Aryan savages and this accounts for their “Aryan” languages. It is the same theory that now prevails in a different form with regard to the Aryan conquest of a highly civilised Dravidian India. Philology can bring no sufficient argument to contradict it.

Mr. Ranade deprecates the scorn of the linguistically ignorant for philology, but we must not forget that in Europe it is not the ignorant alone who feel this contempt, but the scientists, and that there is a certain justification for their contempt; this was admitted by so great a philological scholar as Renan when in the evening of his days he had to apologise for his favourite pursuits as “our petty conjectural sciences”. Philology is in fact not yet a science, but rather far too largely a structure of ingenuities and plausible conjectures. It set out with the hope of discovering the origin of language and the scientific laws of its development, but it has failed entirely; and it failed not because they are undiscoverable,—I believe the clue is there lying ready to our hands in the Sanskrit language,—but because it strayed off to the facile pursuit of obvious similarities and identities instead of delving patiently and scrupulously, as all true Science must do,
behind the outward appearances of things to get back at origins and embryonic indices. And on its scanty and uncertain data it began to build up enormous structures of theory such as the common origin of Aryan-speaking races, their original habitat, their common form of culture before separation, etc. Such facile play of an ingenious imagination is still the failing of the scholar and justifies to a certain extent the scorn of the patient, accurate and scrupulous physical scientist for the freaks and pretentions of the “philolog”.

Not altogether is it justified, for philology has made several interesting and useful discoveries, established a few minor generalisations and, above all, substituted a sounder though not yet entirely sound critical method for the fantastic licence of the old unscientific philology which, once it left the sure ground of grammar, was capable of anything and everything however absurd or impossible. But much has to be learned and a great deal more unlearned before we can measure ourselves with the physical scientist or deserve his approval. It is here that much is to be hoped from the Indian intellect which is more accustomed than the European to move with a penetrating subtlety and accuracy in the things of the mind. But to justify the hope it must first get rid on one side of its attachment to the methods of the Pundit and his subservience to traditional authority and on the other not give itself bound hand and foot to the method of the European scholar or imitate too freely that swiftly leaping ingenious mind of his which gives you in a trice a Scythian or a Persian Buddha, identifies conclusively Murghab and Maurya, Mayasura and Ahura Mazda and generally constructs with magical rapidity the wrong animal out of the wrong bone. We have to combine the laboriousness of the Pundit, the slow and patient conscientiousness of the physical scientist abhorrent of a too facile conclusion and the subtlety of the psychologist in order to deserve the same success in these other sciences and to lift them beyond the shifting field of conjecture.

Sanskrit Research gives us Sanskrit articles as well as English with the laudable object of bringing together with a view to mutual helpfulness the old and the new scholarship. Sanskrit
ought still to have a future as a language of the learned and it will not be a good day for India when the ancient tongue ceases entirely to be written or spoken. But if it is to survive, it must get rid of the curse of the heavy pedantic style contracted by it in its decline with the lumbering impossible compounds and the overweight of hair-splitting erudition. The Sanskrit articles in this number are learned and laborious, but they suffer heavily from this defect of style. If the contact established by the Sanskrit Research can teach the new scholarship the patient thoroughness of the old and the old the flexibility and penetrating critical sense of the new, it will have done to both a great and much-needed service.
“The Feast of Youth”

This is the first published book of a young poet whose name has recently and suddenly emerged under unusually favourable auspices. English poetry written by an Indian writer who uses the foreign medium as if it were his mother-tongue, with a spontaneous ease, power and beauty, the author a brother of the famous poetess Sarojini Naidu, one of a family which promises to be as remarkable as the Tagores by its possession of culture, talent and genius, challenging attention and sympathy by his combination of extreme youth and a high and early brilliance and already showing in his work, even though still immature, magnificent performance as well as a promise which makes it difficult to put any limits to the heights he may attain,—the book at once attracts interest and has come into immediate prominence amidst general appreciation and admiration. We have had already in the same field of achievement in Sarojini Naidu’s poetry qualities which make her best work exquisite, unique and unmatchable in its kind. The same qualities are not to be found in this book, but it shows other high gifts which, when brought to perfection, must find an equal pitch with a greater scope. Here perhaps are the beginnings of a supreme utterance of the Indian soul in the rhythms of the English tongue.

That is a combination which, it may be well hoped for the sake of India’s future, will not become too frequent a phenomenon. But at the present moment it serves both an artistic and a national purpose and seems to be part of the movement of destiny. In any case, whatever may be said of the made-in-India type of secondhand English verse in which men of great literary gift in southern India too often waste their talent, Mr.

1 Poems, by Harindranath Chattopadhyay, Theosophical Publishing House, Adyar, Madras.
Chattopadhyay’s production justifies itself by its beauty. This is not only genuine poetry, but the work of a young, though still unripe genius with an incalculable promise of greatness in it. As to the abundance here of all the essential materials, the instruments, the elementary powers of the poetical gift, there can be not a moment’s doubt or hesitation. Even the first few lines, though far from the best, are quite decisive. A rich and finely lavish command of language, a firm possession of his metrical instrument, an almost blinding gleam and glitter of the wealth of imagination and fancy, a stream of unfailingly poetic thought and image and a high though as yet uncertain pitch of expression, are the powers with which the young poet starts. There have been poets of a great final achievement who have begun with gifts of a less precious stuff and had by labour within themselves and a difficult alchemy to turn them into pure gold. Mr. Chattopadhyay is not of these; he is rather overburdened with the favours of the goddess, comes like some Vedic Marut with golden weapons, golden ornaments, car of gold, throwing in front of him continual lightnings of thought in the midst of a shining rain of fancies, and a greater government and a more careful and concentrated use rather than an enhancement of his powers is the one thing his poetry needs for its perfection.

The name of the volume, taken from its first poem, *The Feast of Youth*, is an appropriate description of its spirit, though one is inclined to call it rather a riot or revel than a simple feast. It is the singing of a young bacchanal of the Muse drunk with a bright and heady wine. In his first poem he promises to himself,

O! I shall draw the blue out of the skies
And offer it like wine of paradise
To drunken Youth,

and the rest is an ample fulfilment of the promise. For the thought and sentiment are an eager, fine and fiery drinking of the joy of life and being, not in the pagan or physically sensuous kind of enjoyment, but with a spiritual and singularly pure intoxication of the thought, imagination and higher sense. The spiritual joy of existence, of its primal colour and symbolic

www.holybooks.com
subtleties, its essential sense, images, suggestions, a free and intense voluptuousness of light is the note. Occasionally there is the attempt to bring in an incidental tone of sorrow, but attacked by the glowing atmosphere of exultation, overcome and rendered unreal by the surrounding light and bliss, it fails to convince. Expression matches substance; there is here no holding back, no reticence, no idea of self-restraint, but rather a reckless ecstasy and outpouring. Suggestion chases suggestion, fancy runs after or starts away from fancy with no very exacting sequence; the exhilaration of self-utterance dominates. One is a little dazzled at first and has to accustom the eyes to the glitter, before one can turn to the heart of the meaning: excess, profusion, an unwearied lavishing of treasures creates the charm of the manner as well as its limitations, but this is often an excellent sign in a young poet, for it promises much richness in the hour of maturity; and here it is almost always, — not quite always, for there are lapses, — a fine, though not yet a sovereign excess, which continually attracts and stimulates the imagination, if it does not always quite take it captive.

There is here perhaps a side effect of one remarkable peculiarity of Mr. Chattopadhyay’s poetical mentality. There is a background in it of Hindu Vedantic thought and feeling which comes out especially in “Fire”, “Dusk”, “Messages” and other poems, but will be found repeatedly elsewhere and runs through the whole as a sort of undercurrent; but the mould of the thought, the colour and tissue of the feeling betray a Moslem, a Persian, a Sufi influence. This source of inspiration appears in the title of some of the poems, and it has helped perhaps the tendency to lavishness. Sanskrit poetry, even when it clothes itself in the regal gold and purple of Kalidasa, or flows in the luscious warmth and colour of Jayadeva, keeps still a certain background of massive restraint, embanks itself in a certain firm solidity; the later poetry of the regional languages, though it has not that quality, is oftenest sparing at heart, does not give itself up to a curious opulence. But the Moslem mind has the tendency of mosaic and arabesque, loves the glow of many colours, the careful jewellery of image and phrase; its
The thought-substance, the governing inspiration of this poetry is such as might well spring from a fusion of the Vedantic and the Sufi mentality. It is the utterance of a mystical joy in God and Nature, sometimes of the direct God-union,—but this is not quite so successful,—more characteristically of God through Nature. Yet this is not usually the physical Nature that we feel with the outward bodily sense; it is a mystic life of light and ecstasy behind her, hidden in sun and moon and star, morning and noon and dusk and night, sea and sky and earth. It is to bring this remoter splendid vision near to us that image is strained and crowded, symbol multiplied. We get this mystic sense and aspiration in the poem, “Fire”, in an image of love,—

I am athirst for one glimpse of your beautiful face, O Love! Veiled in the mystical silence of stars and the purple of skies.

The closing lines of the “Hour of Rest” express it more barely,—I quote them only for their directness, though the expression stumbles and even lapses badly in the last two lines,—
There is a sweetness in the world
That I have sometimes felt,
And oft in fragrant petals curl'd
His fragrance I have smelt . . .
And in sad notes of birds, unfurl'd
The kindness He hath dealt!

It is more beautifully and mystically brought out in another poem, “Worship”, —

Like a rich song you chant your red-fire sunrise,
Deep in my dreams, and forge your white-flame moon . . .
You hide the crimson secret of your sunset,
And the pure, golden message of your noon.

Your fashion cool-grey clouds within my body,
And weave your rain into a diamond mesh.
The Universal Beauty dances, dances
A glimmering peacock in my flowering flesh!

Spring lives as a symbol of inner experience, universal spring, —

The Spring-hues deepen into human Bliss!
The heart of God and man in scent are blended . . .
The sky meets earth and heaven in one transparent kiss.

Simple, moving, melodious and direct is its utterance in “Messages”, with one image at least which deepens into intimate revelation, —

In my slumber and my waking
I can hear His sobbing flute . . .
Thro’ the springtime and the autumn
Shaping every flower and fruit . . .
And His gleaming laughter colours
Orange hills and purple streams,
He is throbbing in the crystal,
Magic centre of my dreams . . .
Silver stars are visible twinkles
Of His clear, transparent touch . . .

www.holybooks.com
He is moving every moment
To the world He loves so much!

In the sea

God churns thy waters into silvern foam
And breathes His music into every shell.

Noon is the Master’s “mystic dog with paws of fire” and “Behind the clouds some hidden Flutist plays His flute.” These are some of the more overt and express phrasings of the predominant idea, exquisite in harmony, lovely and subtly penetrating in their thought. Elsewhere it is simply Nature and the bliss, light and wonder behind her that are expressed, the rest is concealed, yet suggested in the light. But there is always the same principle of a bright mystic vision and the transmutation of natural things into symbol values of the universal light, joy and beauty.

This poetry is an utterance of an ancient mystic experience with a new tone and burden of its own. Its very character brings in a certain limitation, it is empty of the touch of normal human life; our passion is absent, the warm blood of our emotion does not run through the veins of this Muse to flush her cheek with earthly colour. There is indeed a spiritual passion, a spiritual, not a physical sensuousness. Light and ecstasy there is, not the flame of earth’s desire. Heaven takes up the symbols of the earth-life, but there is not the bringing of the Divine into the normal hues of our sight and our feeling which is the aim of Vaishnava poetry. Crystal is a favourite epithet of the poet, and there is here something crystalline, a rainbow prism of colours in the whiteness of shining stalactites. There is at first even some impression of a bright and fiery coldness of purity, as of a virgin rarity of the atmosphere of some high dawn, or as if that had happened which is imaged in “Dusk”,

Ah God! my heart is turning crystalline
Seeing Thee play at crystal stars above!

or as if the poet had indeed, as he writes elsewhere, “put out the lamp of his love and desire, for their light is not real”, and
replaced them by the miraculous fire of this shining ideal. In the Sonnets, however, in some other poems and in the poet’s later work there is the beginning of a greater warmth and a nearer sweetness.

The genius, power, newness of this poetry is evident. If certain reserves have to be made, it is because of a frequent immaturity in the touch which at times makes itself too sharply felt and is seldom altogether absent. I do not refer to the occasional lapses and carelessnesses of which I have noted one example,—for these are not very numerous, and the flagrant subjection of the expression to the necessity of the rhyme occurs only in that one passage,—but to the fact that the poet is still too much possessed by his gifts rather than their possessor, too easily carried away by the delight of brilliant expression and image to steep his word always in the deeper founts of his inspiration. The poetic expression is always brilliant, but never for long together quite sure,—lines of most perfect beauty too often alternate with others which are by no means so good. The image-maker’s faculty is used with a radiant splendour and lavishness, but without discrimination; what begins as imaginative vision frequently thins away into a bright play of fancy, and there are lines which come dangerously near to prettiness and conceit. Especially there is not yet that sufficient incubation of the inspiration and the artistic sense which turns a poem into a perfectly satisfying artistic whole; even in the Sonnets, beautiful enough in themselves, there is an insufficient force of structure. The totality of effect in most of these poems is a diffusion, a streaming on from one idea and image to another, not a well-completed shapeliness. The rhythmic turn is always good, often beautiful and admirable, but the subtlest secrets of sound have not yet been firmly discovered, they are only as it were glimpsed and caught in passing.

These limitations however matter very little as they are natural in a first and early work and do not count in comparison with the riches disclosed. Moreover there is quite enough to show that they are likely to be rapidly outgrown. Young as he is, the poet has already almost all the secrets, and has only to use them more
firmly and constantly. Already — in most of the poems, but I may instance “Memory”, “My Unlaunched Boat”, the three Sonnets and some of the Songs of Sunlight, — there is the frequency of a full and ripe expression and movement, sometimes varying from a mellow clarity to a concentrated force, —

daylight dies
   In silence on the bosom of the darkening skies . . .
   And with him, every note
   Is crushed to silent sorrow in the song-bird’s throat, —
sometimes in a soft, clear and magical beauty, —

   The Spring hath come and gone with all her coloured hours.
   The earth beneath her tread
   Laughed suddenly a peal of blue and green and red . . .
   And for her tender beauty wove a flowery bed . . .
   She gathered all her touch-born blossoms from bright
   bowers . . .

   And fled with all the laughter of earth’s flowers,
sometimes in a delicate brightness and richness, constantly in a daring yet perfectly successful turn, suggestion or subtle correspondence of image. There is often an extraordinary and original felicity in the turning of the physical image to bring out some deep and penetrating psychological or psychical suggestion.

   Since the appearance of this book Mr. Chattopadhyay has given to the public one or two separate poems of a still greater beauty which show a very swift development of his powers; he is already overcoming, almost though not yet quite entirely, the touch of unripeness which was apparent in his earlier poems. Sureness of expression, a thought in full possession of itself and using in admirable concordance its imaginative aids and means, subtler turns of melody and harmony, especially an approach to firmer structural power are now strongly visible and promise the doubling of the ecstatic poet with an impeccable artist. There is also a greater warmth and nearness, a riper stress, a deeper musing. We may well hope to find in him a supreme singer of the vision of God in Nature and Life, and the meeting of the
divine and the human which must be at first the most vivifying and liberating part of India’s message to a humanity that is now touched everywhere by a growing will for the spiritualising of the earth-existence.
“Shama’a”

I WAS unable to greet duly the first appearance of this new magazine of art, literature and philosophy edited by Miss Mrinalini Chattopadhyay; I take the opportunity of the second number to repair the omission I had then unwillingly to make. The appearance of this quarterly is one of the signs as yet too few, but still carrying a sure promise, of a progressive reawakening of the higher thinking and aesthetic mentality in India after a temporary effacement in which the Eastern mind was attempting to assimilate in the wrong way elementary or second-rate occidental ideas. In that misguided endeavour it became on the intellectual and practical side ineffectively utilitarian and on the aesthetic content with the cheap, ugly and vulgar. The things of the West it assimilated were just the things the West had either left behind it or was already finishing and preparing to cast away. “Shama’a”, like “Rupam”, though less sumptuously appareled, is distinguished by its admirable get-up and printing and is an evidence of the recovery of a conscience in the matter of form, a thing once universal in India but dead or dormant since the Western invasion. The plan of the review is designed to meet a very real need of the moment and the future; for its purpose is to bring together in its pages the mind of the Indian renaissance and the most recent developments of European culture. In India we as yet know next to nothing of what the most advanced minds of Europe are thinking and creating in the literary, artistic and philosophic field,—for that matter most of us, preoccupied with politics and domestic life, have a very inadequate information of what we ourselves are doing in these matters. It is to be hoped that this magazine will be an effective agent in curing these deficiencies. It has begun well: the editor, Miss Chattopadhyay, has the needed gift of attracting contributions of the right kind and there is in “Shama’a” as a
result of her skill a pervading and harmonising atmosphere of
great distinction and fineness.

The frontispiece of this number is a portrait by a modern
English artist, J. D. Fergusson, and an article on his work by
Charles Marriot is the most interesting of the contributions.
It sets out to discover on the basis of the real as opposed to
the accidental differences between the Western and the Eastern
methods of painting the inner meaning of their divergence. The
attempt to create an illusion of reality to the eye, to copy Nature,
which was so long a considerable part of the occidental theory
is regarded as a passing phase for which the introduction of oil
paint gave the occasion, an accidental and not at all an essential
difference: European art at the beginning was free from it and
is now rejecting this defect or this limitation. Nor are other
details of method, such as the use of cast shadows as opposed
to a reliance on outline, the real difference. None of these things
involve necessarily an illusion of reality, and even where that
inartistic fiction does not intervene, as in the Italian fresco and
tempera painting and in oil painting that reduces shadow to
a minimum and relies on outline, the fundamental difference
between the East and the West remains constant and unalter-
able. The fundamental difference is that the Eastern artist paints
in two and the European in three dimensions. Eastern painting
suggests depth only by successive planes of distance; the Western
artist uses perspective, and while the use of perspective to create
an optical illusion is an error, its emphasis on depth as a mental
conception extends the opportunities of expressing truth. It is in
any case in the use of the third dimension that there comes in
the true and essential difference.

The writer then attempts to link up this divergence with the
concepts of the two continents with regard to life. He hazards the
suggestion that the separate planes of a Chinese landscape cor-
respond to “the doctrine of successive incarnations, of separate
planes of existence, each the opportunity for its own virtues”,
and the occidental artist’s “active exploration and exploitation
of the ground between the planes of distance” corresponds to the
West’s view of this life as a continual discipline, the sole opportu-
nity for salvation, a battle to be won now and here, and of “mate-
rial facts . . . not as evils in themselves and . . . opportunities
for asceticism and renunciation, but as tests of the spirit, good or
bad according as they are used rightly or wrongly”, — an active
exploration as opposed to a passive acceptance. I find it impossi-
ble to accept this ingenious idea: it strikes me as a little fanciful
in itself, but in any case it is based on a misunderstanding of
the Eastern mind. The usual Western error is made of confusing
one strong tendency of Eastern philosophy for the whole of its
thinking and a view of reincarnation is attributed to the East
that is not its real view. The successive rebirths are not to the
Eastern mind separate planes of existence, each independently
the opportunity of its own virtues, but a closely connected se-
quence and the action of each life determines the frame and basic
opportunities of the following birth. It is a rhythm of progression
in which the present is not cut out from but one with the past
and future. Life and action are here too and not only in the West
tests of the spirit, good or bad according as they are used rightly
or wrongly, and it is and must be always this present life that is of
immediate and immense importance, though it is not and cannot
in reason be final or irreparable: for salvation may be won now,
but if there is failure, the soul has still its future chances. As a
matter of historical fact the great periods of Eastern art were
not periods of a passive acceptance of life. In India, the cradle
of these philosophies, they coincided with an active exploration
of the material universe through physical science and a strong
insistence on life, on its government, on the exploration of its
every detail, on the call of even its most sensuous and physical
attractions. The literature and art of India are not at all a dream
of renunciation and the passive acceptance of things, but actively
concerned with life, though not as exteriorly as the art of the
West or with the same terrestrial limitation of the view. It is there
that we have to seek for the root of the divergence, not so much
in the intellectual idea as in a much subtler spiritual difference.

The difference is that the Western artist, — the Western mind
generally, — is led to insist on the physical as the first fact and
the determinant, as it is indeed in vital truth and practice, and
he has got hold of that side of the truth and in relation to it sees all the rest. He not only stands firmly on the earth, but he has his head in the terrestrial atmosphere and looks up from it to higher planes. The Eastern has his foot on earth, but his head is in the psychical and spiritual realms and it is their atmosphere that affects his vision of the earth. He regards the material as the first fact only in appearance and not in reality: matter is to him real only as a mould and opportunity of spiritual being and the psychical region is an intermediary through which he can go back from the physical to the spiritual truth. This it is that conditions his whole artistic method and makes him succeed best in proportion as he brings the spiritual and psychical truth to illuminate and modify the material form. If he were to take to oil painting and the third dimension, I imagine that he would still before long break out of the physical limitations and try to make the use of the third a bridge to a fourth and psychical or to a fifth and spiritual dimension. That in fact seems to be very much what the latest Western art itself is trying to do. But it does not seem to me in some of its first efforts to have got very high beyond the earth attraction. The cubist and the futurist idea have the appearance of leaving the physical view only to wander astray among what one is tempted to call in theosophic language astral suggestions, a geometry or a movement vision of the world just above or behind ours. It is just so, one imagines, that a mind moving in those near supramaterial regions would distortedly half see physical persons and things. Mr. Fergusson’s portrait is of another kind, but while perfectly though not terrestrially rational in its rhythm, seems to be inspired from a superior sphere of the same regions. It is a powerful work and there is a strong psychical truth of a kind, but the spirit, the suggestions, the forms are neither of heaven nor of earth. The impression given is the materialisation of a strong and vivid astral dream. The difference between this and the psychic manner of the East will at once appear to anyone who turns to the much less powerful but gracious and subtle Indian painting in the first number.

Another article of some interest on “Art and History” by John M. Thorburn gives us much writing in an attractive style.

(as reproduced in Shama’a)
and some suggestive ideas, but there is a soft mistiness about both as yet too common in attempts at intuitive thinking and writing which makes it a little difficult to disentangle the ideas and get at their relation and sequence. The thought turns around rather than deals with national temperament and its shaping influence in art and there is a comparison in this respect between the French and the English temperament on one side and the German or the Russian on the other. But the attempt does not get deep. The line taken is that the distinguishing characteristic of the French and English mind are the critical faculty, humour, a sense for character and for the common as well as the uncommon, for detail as well as principle, a power of social adaptation or readaptation, the instinct in the English to carry on, in the French to change and reconstruct, and all these are connected together and are the fruit of Graeco-Roman civilisation. The writer thinks that the Graeco-Roman tradition and its true development in the modern world is the only saving ethical and political ideal, at least for Europe, — a salutary saving clause. At the same time he has found his highest artistic satisfaction in German music and rates the relative power of Russian literature and possibly the music above the recent artistic work of Europe, and he is perplexed by the coexistence of this superiority with Russia's social instability and with Germany's lack of literary humour and of the sense for character. And, though this reserve is not expressly made, Germany cannot be taxed with lack of the social constructive faculty, seeing that it was the German who in far back times developed the feudal system and has more recently perfected the modern industrial order. And yet Germany is distinctly outside the Graeco-Roman tradition. He discovers that Germany lacks the reflective critical faculty, that there is "something in the German artistic and philosophical temperament that is at variance with social good", "strangely hostile to the ethical and artistic ideal of Greece or the administrative and harmonising genius of Rome". Germany is entirely instinctive, at the mercy of her temperament, unable to liberate herself from it, instinctive in her music, her philosophy too an instinctive movement, reflection never able to get outside itself or even to
feel the need to do so. As for Russia, hers is the kind of art that is an expression of the division and breaches of human society rather than of its wholeness or its peace, an art born of Nature’s error and not like the French and English of her truth. It seems however that the art born of Nature’s error, of her suffering and ill health is more wonderful and alluring than the art born of her ordered ways. After all is said, the truth of Nature is only a partial and defective truth and her error only a partial error: there is no necessary harmony at least in the finite between what we value as goodness and what we value as beauty. And the solution of all the contradiction is to be sought in the experience of the “effort of the finite spirit to come to a fuller consciousness of itself or . . . of a universe that only uses that spirit as an instrument towards its own self-knowledge, self-perfection or self-interpretation”. The conclusion is unexceptionable, but the line of thought leading to it stumbles needlessly in pursuit of a false clue.

The article is interesting chiefly as an indication of the perplexity of a certain type of European mind hesitating and held back in the grasp of the old that is dying and yet feeling the call of things that draw towards the future. The superstition of the perfect excellence of the Graeco-Roman tradition as rendered by England and France — more strictly the Latinised or semi-Latinised mind and the Renaissance tradition — survives: but as a matter of fact that tradition or what remains of it is a dead shell. The Time-Spirit has left it, retaining no doubt what it needs for its ulterior aims, and is passing on to far other things. In that evolution Germany and Russia among European nations have taken a leading place. Germany has failed to go the whole way, because to a strong but coarse and heavy vital force and a strict systematising scientific intellect she could not successfully bring in the saving power of intuition. Her music indeed was very great and revolutionised the artistic mind of Europe, not because it was instinctive, but because it was intuitive, — because it brought in a profound intuitive feeling and vision to uplift through the conquered difficulties of a complex harmony a large and powerful intelligence. Her philosophy was at first a very
great but too dryly intellectual statement of truths that get their living meaning only in the intuitive experience, but afterwards in Schopenhauer and Nietzsche as in Wagner it developed the intuitive vision and led to a deep change in European thinking. But the life of Germany remained still unaffected by her higher mind, well-organised, systematic but vitally and aesthetically crude, and she has failed to respond to the deepest forces of the future. The stream has turned aside to Russia, Russia deeply intuitive in her emotional and psychic being, moved through her sensibilities and aiding by a sensitive fineness there a yet imperfect but rapidly evolving intuitivity of the intelligence. It is clear enough that the labour of the soul and mind of Russia has not arrived at victory and harmony, but her malady is the malady and suffering of a great gestation, and her social instability the condition of an effort towards the principle of a greater order than the self-satisfied imperfection of the Graeco-Roman tradition or of the modern social principle. The martyrdom of Russia might from this point of view be regarded as a vicarious sacrifice for the sin of obstinacy in imperfection, the sin of self-retardation of the entire race. It is at any rate by some large and harmonising view of this kind and not by any paradox of superior values of good and truth resulting in inferior values of beauty and negative values of no good and no truth flowering in superior values of beauty that we are likely best to understand both the effort of the finite spirit and the effort of the universe through it towards its own self-perception and self-interpretation.

The only other article of any length is a second instalment of Babu Bhagavan Das’s “Krishna, a Study in the theory of Avataras”, which contains much interesting matter and especially some very striking citations from that profound and beautiful work, the Bhagawat Purana: but the renderings given are rather modernising paraphrases than translations. There is a brief essay or rather the record of a reflection by Mr. Cousins on “Symbol and Metaphor in Art”, quite the best thing in thought and style in the number: a translation by Mr. V. V. S. Aiyar of some verses of Tiruvalluvar done with grace and a fluid warmth and colour — perhaps too much fluidity and grace to
render rightly the terse and pregnant force that is supposed, and surely with justice, to be the essential quality of the poetic style of the Kurral: a dialogue in poetic prose, “The Vision”, by Harindranath Chattopadhyay, in which we get imagination, beauty and colour of phrase and a moving sentiment,—but not yet, I think, all the originality and sureness of touch of the poet when he uses his own already mastered instrument,—and another prose poem by V. Chakkarai inspired by Rabindranath and executed with a sufficient grace. All these together make up an admirable number.

The closing portion of the magazine is devoted to notes and criticisms. Several closely printed pages are given to a critical review of Professor S. Radhakrishnan’s work on the Philosophy of Rabindranath Tagore by Mr. J. B. Raju. The criticism gives unhappily, in spite of its interest, an impression of ability very badly used, for it is throughout what a criticism of this kind should not be, censorious, hostile, bitterly incisive and sometimes almost brutal in the inimical tone of its phrases. A philosophic discussion should surely be conducted in a graver and more impersonal tone. In addition there is a criticism by dissection so discursively and incoherently minute that it is impossible to form a coherent idea of the thought the work animadverted upon actually does develop. I have not read the book in question, but Professor Radhakrishnan is well known as a perfectly competent philosophic critic and thinker and it is impossible to believe that anything he has written is, as this criticism constantly suggests, a mere mass of imbecile inconsequence. I gather that his offence is to have done exactly what he should have done, that is, to represent the thought of Tagore,—who is a poet and not a metaphysical dialectician but an intuitive seer,—as an intuitive whole: the dry-as-dust intellectual formalism of analysis demanded of him by his critic would have been in such a subject grotesquely out of place. A still greater offence is that he has endorsed the poet’s exaltation of the claims of intuition as superior, at least in a certain field, to those of the intellect. Mr. Raju seems to think that this claim consecrates “a mistaken and obsolete psychology”, the infatuation of “a
certain glamour, which in the popular imagination still hangs round the ancient words, mysticism and intuition.” Mistaken, if you choose to think so; but obsolete? What then are we to make of Bergson’s intuition, James’ cosmic consciousness, Eucken’s superconscient, the remarkable trend towards mysticism of recent scientists, mathematicians, thinkers, the still more remarkable speculations of contemporary Russian philosophers? These men at least are not irresponsible poets or incompetent dupes of the imagination, but psychologists of the first rank and the most original contemporary thinkers in the philosophic field. Mr. Raju’s defence of the claims of the reason is well enough written, but it is founded on contentions that once were commonplaces but are now very disputable assertions. Indeed, if the most recent thought has any value, he is himself open to the retort of his own remark that he is the victim of a mistaken and obsolete psychology. Mr. Raju may be right, the modern psychologists and philosophers may be wrong, but the time has passed when the claims of intuition could be dismissed with this high, disdainful lightness. The subject, however, is too large to be touched at all within my present limits: I hope to return to it hereafter.

The review contains some poetry but, Mr. R. C. Bonnerji’s gracious and cultured verses apart, all is of the aggressively modern type. There are a number of poems taken or quoted from the American journal Poetry that are one and all of the same stereotyped kind of free verse. Eleanor Hammond’s “Transition” turns upon a pretty emotion and Evelyn Scott’s “Fear” on an idea with fine possibilities, but as usual in this kind the style has no trace of any poetic turn or power but only a tamely excited and childishly direct primitive sincerity and the rhythm is more aggressively prosaic than any honest prose rhythm could manage to be. C. L.’s “All was His!” is good in thought and conscientious in style but the rhythm is hopelessly stumbling and lame: but then perhaps it is written on some new metrical principle,— one never knows in these days. The noteworthy poem of the number is Henry Ruffy’s “London Nocturne”, placed, I presume as a study in significant contrasts, opposite
Mukul Dey’s drawing of Tagore. It is an admirable specimen of the now dominant vitalistic or “life” school of modern poetry. Personally, this school does not appeal to me. Its method seems to be to throw quite ordinary and obvious things violently at our eyes and their sense effects and suggestions at our midribs and to underline the effects sometimes by an arresting baldness and poverty of presentation and sometimes on the contrary by a sensational exaggeration of image or phrase. Thus the poet tells us in one luminous line that

A policeman’s clumsy tread goes slowly by,
and in another makes us hear
Another policeman trying doors this way,
a “car of Juggernaut”

Tuff-tuffing, clattering, clashing, chaos-crowned,
a muddled clatter, voices confused, a shrieking whistle, solemn clock strokes “muttering ere they die”, that

Fade like a halo or a dying sigh,
another motor humming “a bee refrain”, with its snorting, trumping, disdainful speed horn

Striking the silence like a flash of flame,
a luckless harlot, a heavy horse hoof, the clank clank of a cab, silent wheels, jingling harness, and this succession of sounds leads up to the vision of a sly slinking white-face dawn, wan, thin and “sickly ill”, a slight-formed sylph

Drawing her veil to show a death-pale form.
A feverishly acute impression of a London night is forced on the sense soul in me, but this poetry does not get beyond or give anything more: the poet’s policemen and tuff-tuffing clattering crowned chaos of a motor car carry no meaning to me beyond the dreary fact of their existence and the suggestion of a sick melancholy of insomnia. But it seems to me that poetry ought to
get beyond and should give something more. I do not deny the possibility of a kind of power in this style and am not blind to the aim at a strong identifying vision through something intuitive in the sense, a felt exactness of outward things, but an inartistic and often unpoetic method cannot be saved by a good intention. Still this is the kind of writing that holds the present in England and America and it demands its place in the purpose of the magazine. I hope however that we shall get often a relief in strains that go beyond the present to a greater poetic future,—let us say, like the exquisite rhythm and perfect form of beauty of Harindranath’s poem in the first number.

All criticism of thought or personal preference apart, almost everything in this number is good in matter and interesting in its own kind. “Shama’a” already stands first among Indian magazines in the English tongue for sustained literary quality and distinction of tone and interest.
Part Nine

Bankim–Tilak–Dayananda

Sri Aurobindo wrote the pieces in this part at various times between 1907 and 1920; he published five of them in periodicals and one as the introduction to a book.
Rishi Bankim Chandra

THERE are many who, lamenting the by-gone glories of this great and ancient nation, speak as if the Rishis of old, the inspired creators of thought and civilisation, were a miracle of our heroic age, not to be repeated among degenerate men and in our distressful present. This is an error and thrice an error. Ours is the eternal land, the eternal people, the eternal religion, whose strength, greatness, holiness may be overclouded but never, even for a moment, utterly cease. The hero, the Rishi, the saint, are the natural fruits of our Indian soil; and there has been no age in which they have not been born. Among the Rishis of the later age we have at last realised that we must include the name of the man who gave us the reviving mantra which is creating a new India, the mantra Bande Mataram.

The Rishi is different from the saint. His life may not have been distinguished by superior holiness nor his character by an ideal beauty. He is not great by what he was himself but by what he has expressed. A great and vivifying message had to be given to a nation or to humanity; and God has chosen this mouth on which to shape the words of the message. A momentous vision had to be revealed; and it is his eyes which the Almighty first unseals. The message which he has received, the vision which has been vouchsafed to him, he declares to the world with all the strength that is in him, and in one supreme moment of inspiration expresses it in words which have merely to be uttered to stir men’s inmost natures, clarify their minds, seize their hearts and impel them to things which would have been impossible to them in their ordinary moments. Those words are the mantra which he was born to reveal and of that mantra he is the seer.

What is it for which we worship the name of Bankim today? what was his message to us or what the vision which he saw and has helped us to see? He was a great poet, a master of
beautiful language and a creator of fair and gracious dream-figures in the world of imagination; but it is not as a poet, stylist or novelist that Bengal does honour to him today. It is probable that the literary critic of the future will reckon Kapalkundala, Bishabriksha and Krishnakanter Will as his artistic masterpieces, and speak with qualified praise of Devi Chaudhurani, Ananda Math, Krishnacharit or Dharmatattwa. Yet it is the Bankim of these latter works and not the Bankim of the great creative masterpieces who will rank among the Makers of Modern India. The earlier Bankim was only a poet and stylist — the later Bankim was a seer and nation-builder.

But even as a poet and stylist Bankim did a work of supreme national importance, not for the whole of India, or only indirectly for the whole of India, but for Bengal which was destined to lead India and be in the vanguard of national development. No nation can grow without finding a fit and satisfying medium of expression for the new self into which it is developing — without a language which shall give permanent shape to its thoughts and feelings and carry every new impulse swiftly and triumphantly into the consciousness of all. It was Bankim’s first great service to India that he gave the race which stood in its vanguard such a perfect and satisfying medium. He was blamed for corrupting the purity of the Bengali tongue; but the pure Bengali of the old poets could have expressed nothing but a conservative and unprogressing Bengal. The race was expanding and changing, and it needed a means of expression capable of change and expansion. He was blamed also for replacing the high literary Bengali of the Pundits by a mixed popular tongue which was neither the learned language nor good vernacular. But the Bengali of the Pundits would have crushed the growing richness, variety and versatility of the Bengali genius under its stiff inflexible ponderousness. We needed a tongue for other purposes than dignified treatises and erudite lucubrations. We needed a language which should combine the strength, dignity or soft beauty of Sanskrit with the verve and vigour of the vernacular, capable at one end of the utmost vernacular raciness and at the other of the most sonorous gravity. Bankim divined
Rishi Bankim Chandra

our need and was inspired to meet it, — he gave us a means by which the soul of Bengal could express itself to itself.

As he had divined the linguistic need of his country’s future, so he divined also its political need. He, first of our great publicists, understood the hollowness and inutility of the method of political agitation which prevailed in his time and exposed it with merciless satire in his Lokarabasya and Kamalakanter Daptar. But he was not satisfied merely with destructive criticism, — he had a positive vision of what was needed for the salvation of the country. He saw that the force from above must be met by a mightier reacting force from below, — the strength of repression by an insurgent national strength. He bade us leave the canine method of agitation for the leonine. The Mother of his vision held trenchant steel in her twice seventy million hands and not the bowl of the mendicant. It was the gospel of fearless strength and force which he preached under a veil and in images in Ananda Math and Debi Chaudhurani. And he had an inspired unerring vision of the moral strength which must be at the back of the outer force. He perceived that the first element of the moral strength must be tyaga, complete self-sacrifice for the country and complete self-devotion to the work of liberation. His workers and fighters for the motherland are political byrages who have no other thought than their duty to her and have put all else behind them as less dear and less precious and only to be resumed when their work for her is done. Whoever loves self or wife or child or goods more than his country is a poor and imperfect patriot; not by him shall the great work be accomplished. Again, he perceived that the second element of the moral strength needed must be self-discipline and organisation. This truth he expressed in the elaborate training of Debi Chaudhurani for her work, in the strict rules of the Association of the “Ananda Math” and in the pictures of perfect organisation which those books contain. Lastly, he perceived that the third element of moral strength must be the infusion of religious feeling into patriotic work. The religion of patriotism, — this is the master idea of Bankim’s writings. It is already foreshadowed in Debi Chaudhurani. In Dharmatattwa the idea and
in *Krishnacharit* the picture of a perfect and many-sided Karma Yoga is sketched; the crown of which shall be work for one's country and one's kind. In *Ananda Math* this idea is the keynote of the whole book and receives its perfect lyrical expression in the great song which has become the national anthem of United India. This is the second great service of Bankim to his country that he pointed out to it the way of salvation and gave it the religion of patriotism. Of the new spirit which is leading the nation to resurgence and independence, he is the inspirer and political guru.

The third and supreme service of Bankim to his nation was that he gave us the vision of our Mother. The bare intellectual idea of the Motherland is not in itself a great driving force; the mere recognition of the desirability of freedom is not an inspiring motive. There are few Indians at present, whether loyalist, moderate or nationalist in their political views, who do not recognise that the country has claims on them or that freedom in the abstract is a desirable thing. But most of us, when it is a question between the claims of the country and other claims, do not in practice prefer the service of the country; and while many may have the wish to see freedom accomplished, few have the will to accomplish it. There are other things which we hold dearer and which we fear to see imperilled either in the struggle for freedom or by its accomplishment. It is not till the Motherland reveals herself to the eye of the mind as something more than a stretch of earth or a mass of individuals, it is not till she takes shape as a great Divine and Maternal Power in a form of beauty that can dominate the mind and seize the heart that these petty fears and hopes vanish in the all-absorbing passion for the Mother and her service, and the patriotism that works miracles and saves a doomed nation is born. To some men it is given to have that vision and reveal it to others. It was thirty-two years ago that Bankim wrote his great song and few listened; but in a sudden moment of awakening from long delusions the people of Bengal looked round for the truth and in a fated moment somebody sang *Bande Mataram*. The mantra had been given and in a single day a whole people had been converted to the...
religion of patriotism. The Mother had revealed herself. Once that vision has come to a people, there can be no rest, no peace, no farther slumber till the temple has been made ready, the image installed and the sacrifice offered. A great nation which has had that vision can never again bend its neck in subjection to the yoke of a conqueror.
Neither Mr. Tilak nor his speeches really require any presentation or foreword. His speeches are, like the featureless Brahman, self-luminous. Straightforward, lucid, never turning aside from the point which they mean to hammer in or wrapping it up in ornamental verbiage, they read like a series of self-evident propositions. And Mr. Tilak himself, his career, his place in Indian politics are also a self-evident proposition, a hard fact baffling and dismaying in the last degree to those to whom his name has been anathema and his increasing pre-eminence figured as a portent of evil. The condition of things in India being given, the one possible aim for political effort resulting and the sole means and spirit by which it could be brought about, this man had to come and, once in the field, had to come to the front. He could not but stand in the end where he stands today, as one of the two or three leaders of the Indian people who are in their eyes the incarnations of the national endeavour and the God-given captains of the national aspiration. His life, his character, his work and endurance, his acceptance by the heart and the mind of the people are a stronger argument than all the reasonings in his speeches, powerful as these are, for Swaraj, Self-government, Home Rule, by whatever name we may call the sole possible present aim of our effort, the freedom of the life of India, its self-determination by the people of India. Arguments and speeches do not win liberty for a nation; but where there is a will in the nation to be free and a man to embody that will in every action of his life and to devote his days to its realisation in the face of every difficulty and every suffering, and where the will of the nation has once said, “This man and his life mean what I have in my heart and in my purpose,” that is a sure signpost of the future which no one has any excuse for mistaking.
That indomitable will, that unwavering devotion have been the whole meaning of Mr. Tilak's life; they are the reason of his immense hold on the people. For he does not owe his pre-eminent position to any of the causes which have usually made for political leading in India, wealth and great social position, professional success, recognition by Government, a power of fervid oratory or of fluent and taking speech; for he had none of these things to help him. He owes it to himself alone and to the thing his life has meant and because he has meant it with his whole mind and his whole soul. He has kept back nothing for himself or for other aims, but has given all himself to his country.

Yet is Mr. Tilak a man of various and no ordinary gifts, and in several lines of life he might have achieved present distinction or a pre-eminent and enduring fame. Though he has never practised, he has a close knowledge of law and an acute legal mind which, had he cared in the least degree for wealth and worldly position, would have brought him to the front at the bar. He is a great Sanskrit scholar, a powerful writer and a strong, subtle and lucid thinker. He might have filled a large place in the field of contemporary Asiatic scholarship. Even as it is, his *Orion* and his *Arctic Home* have acquired at once a world-wide recognition and left as strong a mark as can at all be imprinted on the ever-shifting sands of oriental research. His work on the Gita, no mere commentary, but an original criticism and presentation of ethical truth, is a monumental work, the first prose writing of the front rank in weight and importance in the Marathi language, and likely to become a classic. This one book sufficiently proves that had he devoted his energies in this direction, he might easily have filled a large place in the history of Marathi literature and in the history of ethical thought, so subtle and comprehensive is its thinking, so great the perfection and satisfying force of its style. But it was psychologically impossible for Mr. Tilak to devote his energies in any great degree to another action than the one life-mission for which the Master of his works had chosen him. His powerful literary gift has been given up to a journalistic work, ephemeral as even the best journalistic work
must be, but consistently brilliant, vigorous, politically educative through decades, to an extent seldom matched and certainly never surpassed. His scholastic labour has been done almost by way of recreation. Nor can anything be more significant than the fact that the works which have brought him a fame other than that of the politician and patriot, were done in periods of compulsory cessation from his life-work,—planned and partly, if not wholly, executed during the imprisonments which could alone enforce leisure upon this unresting worker for his country. Even these by-products of his genius have some reference to the one passion of his life, the renewal, if not the surpassing of the past greatness of the nation by the greatness of its future. His Vedic researches seek to fix its prehistoric point of departure; the Gita-rahasya takes the scripture which is perhaps the strongest and most comprehensive production of Indian spirituality and justifies to that spirituality, by its own authoritative ancient message, the sense of the importance of life, of action, of human existence, of man's labour for mankind which is indispensable to the idealism of the modern spirit.

The landmarks of Mr. Tilak's life are landmarks also in the history of his province and his country. His first great step associated him in a pioneer work whose motive was to educate the people for a new life under the new conditions,—on the one side a purely educational movement of which the fruit was the Ferguson College, fitly founding the reawakening of the country by an effort of which co-operation in self-sacrifice was the moving spirit, on the other the initiation of the Kesari newspaper, which since then has figured increasingly as the characteristic and powerful expression of the political mind of Maharashtra. Mr. Tilak's career has counted three periods each of which had an imprisonment for its culminating point. His first imprisonment in the Kolhapur case belongs to this first stage of self-development and development of the Maratha country for new ideas and activities and for the national future.

The second period brought in a wider conception and a profounder effort. For now it was to reawaken not only the political mind, but the soul of the people by linking its future to
its past; it worked by a more strenuous and popular propaganda which reached its height in the organisation of the Shivaji and the Ganapati festivals. His separation from the social reform leader, Agarkar, had opened the way for the peculiar role which he has played as a trusted and accredited leader of conservative and religious India in the paths of democratic politics. It was this position which enabled him to effect the union of the new political spirit with the tradition and sentiment of the historic past and of both with the ineradicable religious temperament of the people, of which these festivals were the symbol. The Congress movement was for a long time purely occidental in its mind, character and methods, confined to the English-educated few, founded on the political rights and interests of the people read in the light of English history and European ideals, but with no roots either in the past of the country or in the inner spirit of the nation. Mr. Tilak was the first political leader to break through the routine of its somewhat academical methods, to bridge the gulf between the present and the past and to restore continuity to the political life of the nation. He developed a language and a spirit and he used methods which Indianised the movement and brought into it the masses. To his work of this period we owe that really living, strong and spontaneously organised movement in Maharashtra, which has shown its energy and sincerity in more than one crisis and struggle. This divination of the mind and spirit of his people and its needs and this power to seize on the right way to call it forth prove strikingly the political genius of Mr. Tilak; they made him the one man predestined to lead them in this trying and difficult period when all has to be discovered and all has to be reconstructed. What was done then by Mr. Tilak in Maharashtra, has been initiated for all India by the Swadeshi movement. To bring in the mass of the people, to found the greatness of the future on the greatness of the past, to infuse Indian politics with Indian religious fervour and spirituality are the indispensable conditions for a great and powerful political awakening in India. Others, writers, thinkers, spiritual leaders, had seen this truth. Mr. Tilak was the first to bring it into the actual field of practical politics. This second period of his labour
for his country culminated in a longer and harsher imprisonment which was, as it were, the second seal of the divine hand upon his work; for there can be no diviner seal than suffering for a cause.

A third period, that of the Swadeshi movement, brought Mr. Tilak forward prominently as an All-India leader; it gave him at last the wider field, the greater driving power, the larger leverage he needed to bring his life-work rapidly to a head, and not only in Maharashtra but throughout the country. The incidents of that period are too fresh in memory to need recalling. From the inception of the Boycott to the Surat catastrophe and his last and longest imprisonment, which was its sequel, the name and work of Mr. Tilak are a part of Indian history. These three imprisonments, each showing more clearly the moral stuff and quality of the man under the test and the revealing glare of suffering, have been the three seals of his career. The first found him one of a small knot of pioneer workers; it marked him out to be the strong and inflexible leader of a strong and sturdy people. The second found him already the inspiring power of a great reawakening of the Maratha spirit; it left him an uncrowned king in the Deccan and gave him that high reputation throughout India which was the foundation-stone of his present commanding influence. The last found him the leader of an All-India party, the foremost exponent and head of a thoroughgoing Nationalism; it sent him back to be one of the two or three foremost men of India adored and followed by the whole nation. He now stands in the last period of his lifelong toil for his country. It is one in which for the first time some ray of immediate hope, some prospect of near success shines upon a cause which at one time seemed destined to a long frustration and fulfilment only perhaps after a century of labour, struggle and suffering.

The qualities which have supported him and given him his hard-earned success, have been comparatively rare in Indian politics. The first is his entirely representative character as a born leader for the sub-nation to which he belongs. India is a unity full of diversities and its strength as well as its weakness is rooted in those diversities: the vigour of its national life can exist only
by the vigour of its regional life. Therefore in politics as in everything else a leader, to have a firm basis for his life-work, must build it upon a living work and influence in his own sub-race or province. No man was more fitted to do this than Mr. Tilak. He is the very type and incarnation of the Maratha character, the Maratha qualities, the Maratha spirit, but with the unified solidity in the character, the touch of genius in the qualities, the vital force in the spirit which make a great personality readily the representative man of his people. The Maratha race, as their soil and their history have made them, are a rugged, strong and sturdy people, democratic in their every fibre, keenly intelligent and practical to the very marrow, following in ideas, even in poetry, philosophy and religion the drive towards life and action, capable of great fervour, feeling and enthusiasm, like all Indian peoples, but not emotional idealists, having in their thought and speech always a turn for strength, sense, accuracy, lucidity and vigour, in learning and scholarship patient, industrious, careful, thorough and penetrating, in life simple, hardy and frugal, in their temperament courageous, pugnacious, full of spirit, yet with a tact in dealing with hard facts and circumventing obstacles, shrewd yet aggressive diplomatists, born politicians, born fighters. All this Mr. Tilak is with a singular and eminent completeness, and all on a large scale, adding to it all a lucid simplicity of genius, a secret intensity, an inner strength of will, a single-mindedness in aim of quite extraordinary force, which remind one of the brightness, sharpness and perfect temper of a fine sword hidden in a sober scabbard. As he emerged on the political field, his people saw more and more clearly in him their representative man, themselves in large, the genius of their type. They felt him to be of one spirit and make with the great men who had made their past history, almost believed him to be a reincarnation of one of them returned to carry out his old work in a new form and under new conditions. They beheld in him the spirit of Maharashtra once again embodied in a great individual. He occupies a position in his province which has no parallel in the rest of India.

On the wider national field also Mr. Tilak has rare qualities
which fit him for the hour and the work. He is in no sense what his enemies have called him, a demagogue: he has not the loose suppleness, the oratorical fervour, the facile appeal to the passions which demagogy requires; his speeches are too much made up of hard and straight thinking, he is too much a man of serious and practical action. None more careless of mere effervescence, emotional applause, popular gush, public ovations. He tolerates them since popular enthusiasm will express itself in that way; but he has always been a little impatient of them as dissipative of serious strength and will and a waste of time and energy which might better have been solidified and devoted to effective work. But he is entirely a democratic politician, of a type not very common among our leaders, one who can both awaken the spirit of the mass and respond to their spirit, able to lead them, but also able to see where he must follow the lead of their predominant sense and will and feelings. He moves among his followers as one of them in a perfect equality, simple and familiar in his dealings with them by the very force of his temperament and character, open, plain and direct and, though capable of great reserve in his speech, yet, wherever necessary, admitting them into his plans and ideas as one taking counsel of them, taking their sense even while enforcing as much as possible his own view of policy and action with all the great strength of quiet will at his command. He has that closeness of spirit to the mass of men, that unpretentious openness of intercourse with them, that faculty of plain and direct speech which interprets their feelings and shows them how to think out what they feel, which are pre-eminently the democratic qualities. For this reason he has always been able to unite all classes of men behind him, to be the leader not only of the educated, but of the people, the merchant, the trader, the villager, the peasant. All Maharashtra understands him when he speaks or writes; all Maharashtra is ready to follow him when he acts. Into his wider field in the troubled Swadeshi times he carried the same qualities and the same power of democratic leadership.

It is equally a mistake to think of Mr. Tilak as by nature a revolutionary leader; that is not his character or his political
Bal Gangadhar Tilak

temperament. The Indian peoples generally, with the possible exception of emotional and idealistic Bengal, have nothing or very little of the revolutionary temper; they can be goaded to revolution, like any and every people on the face of the earth, but they have no natural disposition towards it. They are capable of large ideals and fervent enthusiasms, sensitive in feeling and liable to gusts of passionate revolt which are easily appeased by even an appearance of concession; but naturally they are conservative in temperament and deliberate in action. Mr. Tilak, though a strong-willed man and a fighter by nature, has this much of the ordinary Indian temperament, that with a large mind open to progressive ideas he unites a conservative temperament strongly in touch with the sense of his people. In a free India he would probably have figured as an advanced Liberal statesman eager for national progress and greatness, but as careful of every step as firm and decided in it and always seeking to carry the conservative instinct of the nation with him in every change. He is besides a born Parliamentarian, a leader for the assembly, though always in touch with the people outside as the constant source of the mandate and the final referee in differences. He loves a clear and fixed procedure which he can abide by and use, even while making the most of its details, — of which the theory and practice would be always at his finger-ends, — to secure a practical advantage in the struggle of parties. He always set a high value on the Congress for this reason; he saw in it a centralising body, an instrument and a first, though yet shapeless essay at a popular assembly. Many after Surat spoke of him as the deliberate breaker of the Congress, but to no one was the catastrophe so great a blow as to Mr. Tilak. He did not love the do-nothingness of that assembly, but he valued it both as a great national fact and for its unrealised possibilities and hoped to make of it a central organisation for practical work. To destroy an existing and useful institution was alien to his way of seeing and would not have entered into his ideas or his wishes.

Moreover, though he has ideals, he is not an idealist by character. Once the ideal fixed, all the rest is for him practical work, the facing of hard facts, though also the overcoming of
them when they stand in the way of the goal, the use of strong and effective means with the utmost care and prudence consistent with the primary need of as rapid an effectivity as will and earnest action can bring about. Though he can be obstinate and iron-willed when his mind is made up as to the necessity of a course of action or the indispensable recognition of a principle, he is always ready for a compromise which will allow of getting real work done, and will take willingly half a loaf rather than no bread, though always with a full intention of getting the whole loaf in good time. But he will not accept chaff or plaster in place of good bread. Nor does he like to go too far ahead of possibilities, and indeed has often shown in this respect a caution highly disconcerting to the more impatient of his followers. But neither would he mistake, like the born Moderate, the minimum effort and the minimum immediate aim for the utmost possibility of the moment. Such a man is no natural revolutionist, but a constitutionalist by temper, though always in such times necessarily the leader of an advanced party or section. A clear constitution he could use, amend and enlarge, would have suited him much better than to break existing institutions and get a clear field for innovations which is the natural delight of the revolutionary temperament.

This character of Mr. Tilak’s mind explains his attitude in social reform. He is no dogmatic reactionary. The Maratha people are incapable of either the unreasoning or too reasoning rigid conservatism or of the fiery iconoclasm which can exist side by side, — they are often only two sides of the same temper of mind, — in other parts of India. It is attached to its social institutions like all peoples who live close to the soil, but it has always shown a readiness to adapt, loosen and accommodate them in practice to the pressure of actual needs. Mr. Tilak shares this general temperament and attitude of his people. But there have also been other reasons which a strong political sense has dictated; and first, the clear perception that the political movement could not afford to cut itself off from the great mass of the nation or split itself up into warring factions by a premature association of the social reform question with politics. The proper time for
Bal Gangadhar Tilak

that, a politician would naturally feel, is when the country has a free assembly of its own which can consult the needs or carry out the mandates of the people. Moreover, he has felt strongly that political emancipation was the one pressing need for the people of India and that all else not directly connected with it must take a second place; that has been the principle of his own life and he has held that it should be the principle of the national life at the present hour. Let us have first liberty and the organised control of the life of the nation, afterwards we can see how we should use it in social matters; meanwhile let us move on without noise and strife, only so far as actual need and advisability demand and the sense of the people is ready to advance. This attitude may be right or wrong; but, Mr. Tilak being what he is and the nation being what it is, he could take no other.

If, then, Mr. Tilak has throughout his life been an exponent of the idea of radical change in politics and during the Swadeshi agitation the head of a party which could be called extremist, it is due to that clear practical sense, essential in a leader of political action, which seizes at once on the main necessity and goes straight without hesitating or deviation to the indispensable means. There are always two classes of political mind: one is preoccupied with details for their own sake, revels in the petty points of the moment and puts away into the background the great principles and the great necessities, the other sees rather these first and always and details only in relation to them. The one type moves in a routine circle which may or may not have an issue; it cannot see the forest for the trees and it is only by an accident that it stumbles, if at all, on the way out. The other type takes a mountain-top view of the goal and all the directions and keeps that in its mental compass through all the deflections, retardations and tortuosities which the character of the intervening country may compel it to accept; but these it abridges as much as possible. The former class arrogate the name of statesman in their own day; it is to the latter that posterity concedes it and sees in them the true leaders of great movements. Mr. Tilak, like all men of pre-eminent political genius, belongs to this second and greater order of mind.
Moreover in India, owing to the divorce of political activity from the actual government and administration of the affairs of the country, an academical turn of thought is too common in our dealings with politics. But Mr. Tilak has never been an academical politician, a “student of politics” meddling with action; his turn has always been to see actualities and move forward in their light. It was impossible for him to view the facts and needs of current Indian politics of the nineteenth century in the pure serene or the dim religious light of the Witenagemot and the Magna Charta and the constitutional history of England during the past seven centuries, or to accept the academic sophism of a gradual preparation for liberty, or merely to discuss isolated or omnibus grievances and strive to enlighten the darkness of the official mind by luminous speeches and resolutions, as was the general practice of Congress politics till 1905. A national agitation in the country which would make the Congress movement a living and acting force was always his ideal, and what the Congress would not do, he, when still an isolated leader of a handful of enthusiasts in a corner of the country, set out to do in his own strength and for his own hand. He saw from the first that for a people circumstanced like ours there could be only one political question and one aim, not the gradual improvement of the present administration into something in the end fundamentally the opposite of itself, but the early substitution of Indian and national for English and bureaucratic control in the affairs of India. A subject nation does not prepare itself by gradual progress for liberty; it opens by liberty its way to rapid progress. The only progress that has to be made in the preparation for liberty, is progress in the awakening of the national spirit and in the creation of the will to be free and the will to adopt the necessary means and bear the necessary sacrifices for liberty. It is these clear perceptions that have regulated his political career.

Therefore the whole of the first part of his political life was devoted to a vigorous and living propaganda for the reawakening and solidifying of the national life of Maharashtra. Therefore, too, when the Swadeshi agitation gave the first opportunity of a large movement in the same sense throughout India, he
seized on it with avidity, while his past work in Maharashtra, his position as the leader of a small advanced section in the old Congress politics and his character, sacrifices and sufferings at once fixed the choice of the New Party on him as their predestined leader. The same master-idea made him seize on the four main points which the Bengal agitation had thrown into some beginning of practical form, Swaraj, Swadeshi, National Education and Boycott, and formulate them into a definite programme, which he succeeded in introducing among the resolutions of the Congress at the Calcutta session, — much to the detriment of the uniformity of sage and dignified impotence which had characterised the august, useful and calmly leisurely proceedings of that temperate national body. We all know the convulsion that followed the injection of this foreign matter; but we must see why Mr. Tilak insisted on administering annually so potent a remedy. The four resolutions were for him the first step towards shaking the Congress out of its torpid tortoise-like gait and turning it into a living and acting body.

Swaraj, complete and early self-government in whatever form, had the merit in his eyes of making definite and near to the national vision the one thing needful, the one aim that mattered, the one essential change that includes all the others. No nation can develop a living enthusiasm or accept great action and great sacrifices for a goal that is lost to its eye in the mist of far-off centuries; it must see it near and distinct before it, magnified by a present hope, looming largely and actualised as a living aim whose early realisation only depends on a great, sustained and sincere effort. National education meant for him the training of the young generation in the new national spirit to be the architects of liberty, if that was delayed, the citizens of a free India which had rediscovered itself, if the preliminary conditions were rapidly fulfilled. Swadeshi meant an actualising of the national self-consciousness and the national will and the readiness to sacrifice which would fix them in the daily mind and daily life of the people. In Boycott, which was only a popular name for passive resistance, he saw the means to give to the struggle between the two ideas in conflict, bureaucratic control
and national control, a vigorous shape and body and to the popular side a weapon and an effective form of action. Himself a man of organisation and action, he knew well that by action most, and not by thought and speech alone, can the will of a people be vivified, trained and made solid and enduring. To get a sustained authority from the Congress for a sustained effort in these four directions seemed to him of capital importance; this was the reason for his inflexible insistence on their unchanged inclusion when the programme seemed to him to be in danger.

Yet also, because he is a practical politician and a man of action, he has always, so long as the essentials were safe, been ready to admit any change in name or form or any modification of programme or action dictated by the necessities of the time. Thus during the movement of 1905–1910 the Swadeshi leader and the Swadeshi party insisted on agitation in India and discouraged reliance on agitation in England, because the awaking and fixing of a self-reliant national spirit and will in India was the one work for the hour and in England no party or body of opinion existed which would listen to the national claim, nor could exist,—as anybody with the least knowledge of English politics could have told,—until that claim had been unmistakably and insistently made and was clearly supported by the fixed will of the nation. The Home Rule leader and the Home Rule party of today, which is only the “New Party” reborn with a new name, form and following, insist on the contrary on vigorous and speedy agitation in England, because the claim and the will have both been partially, but not sufficiently recognised, and because a great and growing British party now exists which is ready to make the Indian ideal part of its own programme. So, too, they insisted then on Swaraj and rejected with contempt all petty botching with the administration, because so alone could the real issue be made a living thing to the nation; now they accept readily enough a fairly advanced but still half-and-half scheme, but always with the proviso that the popular principle receives substantial embodiment and the full ideal is included as an early goal and not put off to a far-distant future. The leader of men in war or politics will always distrust petty and episodical
gains which, while giving false hopes, are merely nominal and put off or even endanger the real issue, but will always seize on any advantage which brings decisive victory definitely nearer. It is only the pure idealist,—but let us remember that he too has his great and indispensable uses,—who insists always on either all or nothing. Not revolutionary methods or revolutionary idealism, but the clear sight and the direct propaganda and action of the patriotic political leader insisting on the one thing needful and the straight way to drive at it, have been the sense of Mr. Tilak’s political career.

The speeches in this book belong both to the Swadeshi and the Home Rule periods, but mostly to the latter. They show Mr. Tilak’s mind and policy and voice with great force that will and political thought now dominant in the country which he has so prominently helped to create. Mr. Tilak has none of the gifts of the orator which many lesser men have possessed, but his force of thought and personality make him in his own way a powerful speaker. He is at his best in his own Marathi tongue rather than in English; for there he finds always the apt and telling phrase, the striking application, the vigorous figure which go straight home to the popular mind. But there is essentially the same power in both. His words have the directness and force,—no force can be greater,—of a sincere and powerful mind always going immediately to the aim in view, the point before it, expressing it with a bare, concentrated economy of phrase and the insistence of the hammer full on the head of the nail which drives it in with a few blows. But the speeches have to be read with his life, his character, his life-long aims as their surrounding atmosphere. That is why I have dwelt on their main points;—not that all I have said is not well known, but the repetition of known facts has its use when they are important and highly significant.

Two facts of his life and character have to be insisted on as of special importance to the country because they give a great example of two things in which its political life was long deficient and is even now not sufficient. First, the inflexible will of the patriot and man of sincere heart and thorough action
which has been the very grain of his character: for aspirations, emotion, enthusiasm are nothing without this; will alone creates and prevails. And wish and will are not the same thing, but divided by a great gulf: the one, which is all most of us get to, is a puny, tepid and inefficient thing and, even when most enthusiastic, easily discouraged and turned from its object; the other can be a giant to accomplish and endure. Secondly, the readiness to sacrifice and face suffering, not needlessly or with a useless bravado, but with a firm courage when it comes, to bear it and to outlive, returning to work with one’s scars as if nothing had happened. No prominent man in India has suffered more for his country; none has taken his sacrifices and sufferings more quietly and as a matter of course.

The first part of Mr. Tilak’s life-work is accomplished. Two great opportunities have hastened its success, of which he has taken full advantage. The lavalike flood of the Swadeshi movement fertilised the soil and did for the country in six years the work of six ordinary decades; it fixed the goal of freedom in the mind of the people. The sudden irruption of Mrs. Besant into the field with her unequalled gift,—born of her untiring energy, her flaming enthusiasm, her magnificent and magnetic personality, her spiritual force,—for bringing an ideal into the stage of actuality with one rapid whirl and rush, has been the second factor. Indeed the presence of three such personalities as Mr. Tilak, Mrs. Besant and Mr. Gandhi at the head and in the heart of the present movement, should itself be a sure guarantee of success. The nation has accepted the near fulfilment of his great aim as its own political aim, the one object of its endeavour, its immediate ideal. The Government of India and the British nation have accepted complete self-government as their final goal in Indian administration; a powerful party in England, the party which seems to command the future, has pronounced for its more speedy and total accomplishment. A handful of dissentients there may be in the country who still see only petty gains in the present and the rest in the dim vista of the centuries, but with this insignificant exception, all the Indian provinces and communities have spoken with one voice. Mr. Tilak’s principles
of work have been accepted; the ideas which he had so much
trouble to enforce have become the commonplaces and truisms
of our political thought. The only question that remains is the
rapidity of a now inevitable evolution. That is the hope for
which Mr. Tilak still stands, a leader of all India. Only when it
is accomplished, will his life-work be done; not till then can he
rest while he lives, even though age grows on him and infirmities
gather, — for his spirit will always remain fresh and vigorous,—
any more than a river can rest before the power of its waters has
found their goal and discharged them into the sea. But whether
that end, — the end of a first stage of our new national life, the
beginning of a greater India reborn for self-fulfilment and the
service of humanity, — come tomorrow or after a little delay,
its accomplishment is now safe, and Mr. Tilak’s name stands
already for history as a nation-builder, one of the half-dozen
greatest political personalities, memorable figures, representa-
tive men of the nation in this most critical period of India’s
destinies, a name to be remembered gratefully so long as the
country has pride in its past and hope for its future.
A Great Mind, a Great Will

A GREAT mind, a great will, a great and pre-eminent leader of men has passed away from the field of his achievement and labour. To the mind of his country Lokamanya Tilak was much more, for he had become to it a considerable part of itself, the embodiment of its past effort, and the head of its present will and struggle for a free and greater life. His achievement and personality have put him amidst the first rank of historic and significant figures. He was one who built much rapidly out of little beginnings, a creator of great things out of an unworked material. The creations he left behind him were a new and strong and self-reliant national spirit, the reawakened political mind and life of a people, a will to freedom and action, a great national purpose. He brought to his work extraordinary qualities, a calm, silent, unflinching courage, an unwavering purpose, a flexible mind, a forward-casting vision of possibilities, an eye for the occasion, a sense of actuality, a fine capacity of democratic leadership, a diplomacy that never lost sight of its aim and pressed towards it even in the most pliant turns of its movement, and guiding all, a single-minded patriotism that cared for power and influence only as a means of service to the Motherland and a lever for the work of her liberation. He sacrificed much for her and suffered for her repeatedly and made no ostentation of his suffering and sacrifice. His life was a constant offering at her altar and his death has come in the midst of an unceasing service and labour.

The passing of this great personality creates a large and immediate void that will be felt acutely for a time, but it is the virtue of his own work that this vacancy must very soon be filled by new men and new forces. The spirit he created in the country is of that sincere, real and fruitful kind that cannot consent to cease or to fail, but must always throw up minds and
capacities that will embody its purpose. It will raise up others of his mould, if not of his stature, to meet its needs, its demands, its call for ability and courage. He himself has only passed behind the veil, for death, and not life, is the illusion. The strong spirit that dwelt within him ranges now freed from our human and physical limitations, and can still shed upon us, on those now at work, and those who are coming, a more subtle, ample and irresistible influence; and even if this were not so, an effective part of him is still with us. His will is left behind in many to make more powerful and free from hesitations the national will he did so much to create, the growing will, whose strength and single wholeness are the chief conditions of the success of the national effort. His courage is left behind in numbers to fuse itself into and uplift and fortify the courage of his people; his sacrifice and strength in suffering are left with us to enlarge themselves, more even than in his lifetime, and to heighten the fine and steeled temper our people need for the difficult share that still lies before their endeavour. These things are his legacy to his country, and it is in proportion as each man rises to the height of what they signify that his life will be justified and assured of its recompense.

Methods and policies may change but the spirit of what Lokamanya Tilak was and did remains and will continue to be needed, a constant power in others for the achievement of his own life’s grand and single purpose. A great worker and creator is not to be judged only by the work he himself did, but also by the greater work he made possible. The achievement of the departed leader has brought the nation to a certain point. Its power to go forward from and beyond that point, to face new circumstances, to rise to the more strenuous and momentous demand of its future will be the greatest and surest sign of the soundness of his labour. That test is being applied to the national movement at the very moment of his departure.

The death of Lokamanya Tilak comes upon us at a time when the country is passing through most troubled and poignant hours. It occurs at a critical period, it coincides even with a crucial moment when questions are being put to the nation by
the Master of Destiny, on the answer to which depends the whole spirit, virtue and meaning of its future. In each event that confronts us there is a divine significance, and the passing away at such a time of such a man, on whose thought and decision thousands hung, should make more profoundly felt by the people, by every man in the nation, the great, the almost religious responsibility that lies upon him personally.

At this juncture it is not for me to prejudge the issue; each must meet it according to his light and conscience. This at least can be demanded of every man who would be worthy of India and of her great departed son that he shall put away from him in the decision of the things to be done in the future, all weakness of will, all defect of courage, all unwillingness for sacrifice. Let each strive to see with that selfless impersonality taught by one of our greatest scriptures which can alone enable us to identify ourselves both with the Divine Will and with the soul of our Mother. Two things India demands for her future, the freedom of soul, life and action needed for the work she has to do for mankind; and the understanding by her children of that work and of her own true spirit that the future India may be indeed India. The first seems still the main sense and need of the present moment, but the second is also involved in it — a yet greater issue. On the spirit of our decisions now and in the next few years depends the truth, vitality and greatness of our future national existence. It is the beginning of a great self-determination not only in the external but in the spiritual. These two thoughts should govern our action. Only so can the work done by Lokamanya Tilak find its true continuation and issue.
Dayananda
The Man and His Work

Among the great company of remarkable figures that will appear to the eye of posterity at the head of the Indian Renascence, one stands out by himself with peculiar and solitary distinctness, one unique in his type as he is unique in his work. It is as if one were to walk for a long time amid a range of hills rising to a greater or lesser altitude, but all with sweeping contours, green-clad, flattering the eye even in their most bold and striking elevation. But amidst them all, one hill stands apart, piled up in sheer strength, a mass of bare and puissant granite, with verdure on its summit, a solitary pine jutting out into the blue, a great cascade of pure, vigorous and fertilising water gushing out from its strength as a very fountain of life and health to the valley. Such is the impression created on my mind by Dayananda.

It was Kathiawar that gave birth to this puissant renovator and new-creator. And something of the very soul and temperament of that peculiar land entered into his spirit, something of Girnar and the rocks and hills, something of the voice and puissance of the sea that flings itself upon those coasts, something of that humanity which seems to be made of the virgin and unspoilt stuff of Nature, fair and robust in body, instinct with a fresh and primal vigour, crude in the crude, but in a developed nature capable of becoming a great force of genial creation.

When I seek to give an account to myself of my sentiment and put into precise form the impression I have received, I find myself starting from two great salient characteristics of this man’s life and work which mark him off from his contemporaries and compatriots. Other great Indians have helped to make India of today by a self-pouring into the psychological material
of the race, a spiritual infusion of themselves into the fluent and indeterminate mass which will one day settle into consistency and appear as a great formal birth of Nature. They have entered in as a sort of leaven, a power of unformed stir and ferment out of which forms must result. One remembers them as great souls and great influences who live on in the soul of India. They are in us and we would not be what we are without them. But of no precise form can we say that this was what the man meant, still less that this form was the very body of that spirit.

The example of Mahadev Govind Ranade presents itself to my mind as the very type of this peculiar action so necessary to a period of large and complex formation. If a foreigner were to ask us what this Mahratta economist, reformer, patriot precisely did that we give him so high a place in our memory, we should find it a little difficult to answer. We should have to point to those activities of a mass of men in which his soul and thought were present as a formless former of things, to the great figures of present-day Indian life who received the breath of his spirit. And in the end we should have to reply by a counter question, “What would Maharashtra of today have been without Mahadev Govind Ranade and what would India of today be without Maharashtra?” But even with those who were less amorphous and diffusive in their pressure on men and things, even with workers of a more distinct energy and action, I arrive fundamentally at the same impression. Vivekananda was a soul of puissance if ever there was one, a very lion among men, but the definite work he has left behind is quite incommensurate with our impression of his creative might and energy. We perceive his influence still working giganticly, we know not well how, we know not well where, in something that is not yet formed, something leonine, grand, intuitive, upheaving that has entered the soul of India and we say, “Behold, Vivekananda still lives in the soul of his Mother and in the souls of her children.” So it is with all. Not only are the men greater than their definite works, but their influence is so wide and formless that it has little relation to any formal work that they have left behind them.

Very different was the manner of working of Dayananda.
Here was one who did not infuse himself informally into the indeterminate soul of things, but stamped his figure indelibly as in bronze on men and things. Here was one whose formal works are the very children of his spiritual body, children fair and robust and full of vitality, the image of their creator. Here was one who knew definitely and clearly the work he was sent to do, chose his materials, determined his conditions with a sovereign clairvoyance of the spirit and executed his conception with the puissant mastery of the born worker. As I regard the figure of this formidable artisan in God’s workshop, images crowd on me which are all of battle and work and conquest and triumphant labour. Here, I say to myself, was a very soldier of Light, a warrior in God’s world, a sculptor of men and institutions, a bold and rugged victor of the difficulties which matter presents to spirit. And the whole sums itself up to me in a powerful impression of spiritual practicality. The combination of these two words, usually so divorced from each other in our conceptions, seems to me the very definition of Dayananda.

Even if we leave out of account the actual nature of the work he did, the mere fact that he did it in this spirit and to this effect would give him a unique place among our great founders. He brings back an old Aryan element into the national character. This element gives us the second of the differentiae I observe and it is the secret of the first. We others live in a stream of influences; we allow them to pour through us and mould us; there is something shaped and out of it a modicum of work results; the rest is spilt out again in a stream of influence. We are indeterminate in our lines, we accommodate ourselves to circumstance and environment. Even when we would fain be militant and intransigent, we are really fluid and opportunist. Dayananda seized on all that entered into him, held it in himself, masterfully shaped it there into the form that he saw to be right and threw it out again into the forms that he saw to be right. That which strikes us in him as militant and aggressive, was a part of his strength of self-definition.

He was not only plastic to the great hand of Nature, but asserted his own right and power to use Life and Nature as
plastic material. We can imagine his soul crying still to us with our insufficient spring of manhood and action, “Be not content, O Indian, only to be infinitely and grow vaguely, but see what God intends thee to be, determine in the light of His inspiration to what thou shalt grow. Seeing, hew that out of thyself, hew that out of Life. Be a thinker, but be also a doer; be a soul, but be also a man; be a servant of God, but be also a master of Nature!” For this was what he himself was; a man with God in his soul, vision in his eyes and power in his hands to hew out of life an image according to his vision. Hew is the right word. Granite himself, he smote out a shape of things with great blows as in granite.

In Dayananda’s life we see always the puissant jet of this spiritual practicality. A spontaneous power and decisiveness is stamped everywhere on his work. And to begin with, what a master-glance of practical intuition was this to go back trenchantly to the very root of Indian life and culture, to derive from the flower of its first birth the seed for a radical new birth! And what an act of grandiose intellectual courage to lay hold upon this scripture defaced by ignorant comment and oblivion of its spirit, degraded by misunderstanding to the level of an ancient document of barbarism, and to perceive in it its real worth as a scripture which conceals in itself the deep and energetic spirit of the forefathers who made this country and nation,—a scripture of divine knowledge, divine worship, divine action. I know not whether Dayananda’s powerful and original commentary will be widely accepted as the definite word on the Veda. I think myself some delicate work is still called for to bring out other aspects of this profound and astonishing Revelation. But this matters little. The essential is that he seized justly on the Veda as India’s Rock of Ages and had the daring conception to build on what his penetrating glance perceived in it a whole education of youth, a whole manhood and a whole nation-hood. Rammohan Roy, that other great soul and puissant worker who laid his hand on Bengal and shook her—to what mighty issues—out of her long, indolent sleep by her rivers and rice-fields—Rammohan Roy stopped short at the Upanishads. Dayananda
looked beyond and perceived that our true original seed was the Veda. He had the national instinct and he was able to make it luminous, — an intuition in place of an instinct. Therefore the works that derive from him, however they depart from received traditions, must needs be profoundly national.

To be national is not to stand still. Rather, to seize on a vital thing out of the past and throw it into the stream of modern life, is really the most powerful means of renovation and new-creation. Dayananda’s work brings back such a principle and spirit of the past to vivify a modern mould. And observe that in the work as in the life it is the past caught in the first jet of its virgin vigour, pure from its sources, near to its root principle and therefore to something eternal and always renewable.

And in the work as in the man we find that faculty of spontaneous definite labour and vigorous formation which proceeds from an inner principle of perfect clearness, truth and sincerity. To be clear in one’s own mind, entirely true and plain with one’s self and with others, wholly honest with the conditions and materials of one’s labour, is a rare gift in our crooked, complex and faltering humanity. It is the spirit of the Aryan worker and a sure secret of vigorous success. For always Nature recognises a clear, honest and recognisable knock at her doors and gives the result with an answering scrupulosity and diligence. And it is good that the spirit of the Master should leave its trace in his followers, that somewhere in India there should be a body of whom it can be said that when a work is seen to be necessary and right, the men will be forthcoming, the means forthcoming and that work will surely be done.

Truth seems a simple thing and is yet most difficult. Truth was the master-word of the Vedic teaching, truth in the soul, truth in vision, truth in the intention, truth in the act. Practical truth, ārjava, an inner candour and a strong sincerity, clearness and open honour in the word and deed, was the temperament of the old Aryan morals. It is the secret of a pure unspoilt energy, the sign that a man has not travelled far from Nature. It is the bar dexter of the son of Heaven, Divasputra. This was the stamp that Dayananda left behind him and it should be the mark and effigy
of himself by which the parentage of his work can be recognised. May his spirit act in India pure, unspoilt, unmodified and help to give us back that of which our life stands especially in need, pure energy, high clearness, the penetrating eye, the masterful hand, the noble and dominant sincerity.
Dayananda and the Veda

DAYANANDA accepted the Veda as his rock of firm foundation, he took it for his guiding view of life, his rule of inner existence and his inspiration for external work, but he regarded it as even more, the word of eternal Truth on which man’s knowledge of God and his relations with the Divine Being and with his fellows can be rightly and securely founded. This everlasting rock of the Veda, many assert, has no existence, there is nothing there but the commonest mud and sand; it is only a hymnal of primitive barbarians, only a rude worship of personified natural phenomena, or even less than that, a liturgy of ceremonial sacrifice, half religion, half magic, by which superstitious animal men of yore hoped to get themselves gold and food and cattle, slaughter pitilessly their enemies, protect themselves from disease, calamity and demoniac influences and enjoy the coarse pleasures of a material Paradise. To that we must add a third view, the orthodox, or at least that which arises from Sayana’s commentary; this view admits, practically, the ignobler interpretation of the substance of Veda and yet — or is it therefore? — exalts this primitive farrago as a holy Scripture and a Book of Sacred Works.

Now this matter is no mere scholastic question, but has a living importance, not only for a just estimate of Dayananda’s work but for our consciousness of our past and for the determination of the influences that shall mould our future. A nation grows into what it shall be by the force of that which it was in the past and is in the present, and in this growth there come periods of conscious and subconscious stock-taking when the national soul selects, modifies, rejects, keeps out of all that it had or is acquiring whatever it needs as substance and capital for its growth and action in the future: in such a period of stock-taking we are still and Dayananda was one of its great and
formative spirits. But among all the materials of our past the Veda is the most venerable and has been directly and indirectly the most potent. Even when its sense was no longer understood, even when its traditions were lost behind Pauranic forms, it was still held in honour, though without knowledge, as authoritative revelation and inspired Book of Knowledge, the source of all sanctions and standard of all truth.

But there has always been this double and incompatible tradition about the Veda that it is a book of ritual and mythology and that it is a book of divine knowledge. The Brahmanas seized on the one tradition, the Upanishads on the other. Later, the learned took the hymns for a book essentially of ritual and works, they went elsewhere for pure knowledge; but the instinct of the race bowed down before it with an obstinate inarticulate memory of a loftier tradition. And when in our age the Veda was brought out of its obscure security behind the purdah of a reverential neglect, the same phenomenon reappears. While Western scholarship extending the hints of Sayana seemed to have classed it for ever as a ritual liturgy to Nature-Gods, the genius of the race looking through the eyes of Dayananda pierced behind the error of many centuries and received again the intuition of a timeless revelation and a divine truth given to humanity. In any case, we have to make one choice or another. We can no longer securely enshrine the Veda wrapped up in the folds of an ignorant reverence or guarded by a pious self-deceit. Either the Veda is what Sayana says it is, and then we have to leave it behind for ever as the document of a mythology and ritual which have no longer any living truth or force for thinking minds, or it is what the European scholars say it is, and then we have to put it away among the relics of the past as an antique record of semi-barbarous worship; or else it is indeed Veda, a book of divine knowledge, and then it becomes of supreme importance to us to know and to hear its message.

It is objected to the sense Dayananda gave to the Veda that it is no true sense but an arbitrary fabrication of imaginative learning and ingenuity, to his method that it is fantastic and unacceptable to the critical reason, to his teaching of a revealed
Scripture that the very idea is a rejected superstition impossible for any enlightened mind to admit or to announce sincerely. I will not now examine the solidity of Dayananda’s interpretation of Vedic texts, nor anticipate the verdict of the future on his commentary, nor discuss his theory of revelation. I shall only state the broad principles underlying his thought about the Veda as they present themselves to me. For in the action and thought of a great soul or a great personality the vital thing to my mind is not the form he gave to it, but in his action the helpful power he put forth and in his thought the helpful truth he has added or, it may be, restored to the yet all too scanty stock of our human acquisition and divine potentiality.

To start with the negation of his work by his critics, in whose mouth does it lie to accuse Dayananda’s dealings with the Veda of a fantastic or arbitrary ingenuity? Not in the mouth of those who accept Sayana’s traditional interpretation. For if ever there was a monument of arbitrarily erudite ingenuity, of great learning divorced, as great learning too often is, from sound judgment and sure taste and a faithful critical and comparative observation, from direct seeing and often even from plainest common sense or of a constant fitting of the text into the Procrustean bed of preconceived theory, it is surely this commentary, otherwise so imposing, so useful as first crude material, so erudite and laborious, left to us by the Acharya Sayana. Nor does the reproach lie in the mouth of those who take as final the recent labours of European scholarship. For if ever there was a toil of interpretation in which the loosest rein has been given to an ingenious speculation, in which doubtful indications have been snatched at as certain proofs, in which the boldest conclusions have been insisted upon with the scantiest justification, the most enormous difficulties ignored and preconceived prejudice maintained in face of the clear and often admitted suggestions of the text, it is surely this labour, so eminently respectable otherwise for its industry, good will and power of research, performed through a long century by European Vedic scholarship.

What is the main positive issue in this matter? An interpretation of Veda must stand or fall by its central conception
of the Vedic religion and the amount of support given to it by the intrinsic evidence of the Veda itself. Here Dayananda's view is quite clear, its foundation inexpugnable. The Vedic hymns are chanted to the One Deity under many names, names which are used and even designed to express His qualities and powers. Was this conception of Dayananda's an arbitrary conceit fetched out of his own too ingenious imagination? Not at all; it is the explicit statement of the Veda itself: “One existent, sages” — not the ignorant, mind you, but the seers, the men of knowledge, — “speak of in many ways, as Indra, as Yama, as Matariswan, as Agni.” The Vedic Rishis ought surely to have known something about their own religion, more, let us hope, than Roth or Max Muller, and this is what they knew.

We are aware how modern scholars twist away from the evidence. This hymn, they say, was a late production, this loftier idea which it expresses with so clear a force rose up somehow in the later Aryan mind or was borrowed by those ignorant fire-worshippers, sun-worshippers, sky-worshippers from their cultured and philosophic Dravidian enemies. But throughout the Veda we have confirmatory hymns and expressions: Agni or Indra or another is expressly hymned as one with all the other gods. Agni contains all other divine powers within himself, the Maruts are described as all the gods, one deity is addressed by the names of others as well as his own, or, most commonly, he is given as Lord and King of the universe attributes only appropriate to the Supreme Deity. Ah, but that cannot mean, ought not to mean, must not mean, the worship of the One; let us invent a new word, call it henotheism and suppose that the Rishis did not really believe Indra or Agni to be the Supreme Deity but treated any god or every god as such for the nonce, perhaps that he might feel the more flattered and lend a more gracious ear for so hyperbolic a compliment! But why should not the foundation of Vedic thought be natural monotheism rather than this new-fangled monstrosity of henotheism? Well, because primitive barbarians could not possibly have risen to such high conceptions and, if you allow them to have so risen, you imperil our theory of the evolutionary stages of human
development and you destroy our whole idea about the sense of the Vedic hymns and their place in the history of mankind. Truth must hide herself, common sense disappear from the field so that a theory may flourish! I ask, in this point, and it is the fundamental point, who deals most straightforwardly with the text, Dayananda or the Western scholars?

But if this fundamental point of Dayananda’s is granted, if the character given by the Vedic Rishis themselves to their gods is admitted, we are bound, whenever the hymns speak of Agni or another, to see behind that name present always to the thought of the Rishi the one Supreme Deity or else one of His powers with its attendant qualities or workings. Immediately the whole character of the Veda is fixed in the sense Dayananda gave to it; the merely ritual, mythological, polytheistic interpretation of Sayana collapses, the merely meteorological and naturalistic European interpretation collapses. We have instead a real Scripture, one of the world’s sacred books and the divine word of a lofty and noble religion.

All the rest of Dayananda’s theory arises logically out of this fundamental conception. If the names of the godheads express qualities of the one Godhead and it is these which the Rishis adored and towards which they directed their aspiration, then there must inevitably be in the Veda a large part of psychology of the Divine Nature, psychology of the relations of man with God and a constant indication of the law governing man’s Godward conduct. Dayananda asserts the presence of such an ethical element, he finds in the Veda the law of life given by God to the human being. And if the Vedic godheads express the powers of a supreme Deity who is Creator, Ruler and Father of the universe, then there must inevitably be in the Veda a large part of cosmology, the law of creation and of cosmos. Dayananda asserts the presence of such a cosmic element, he finds in the Veda the secrets of creation and law of Nature by which the Omniscient governs the world.

Neither Western scholarship nor ritualistic learning has succeeded in eliminating the psychological and ethical value of the hymns, but they have both tended in different degrees to
minimise it. Western scholars minimise because they feel uneasy whenever ideas that are not primitive seem to insist on their presence in these primeval utterances; they do not hesitate openly to abandon in certain passages interpretations which they adopt in others and which are admittedly necessitated by their own philological and critical reasoning because, if admitted always, they would often involve deep and subtle psychological conceptions which cannot have occurred to primitive minds! Sayana minimises because his theory of Vedic discipline was not ethical righteousness with a moral and spiritual result but mechanical performance of ritual with a material reward. But, in spite of these efforts of suppression, the lofty ideas of the Veda still reveal themselves in strange contrast to its alleged burden of fantastic naturalism or dull ritualism. The Vedic godheads are constantly hymned as Masters of Wisdom, Power, Purity, purifiers, healers of grief and evil, destroyers of sin and falsehood, warriors for the truth; constantly the Rishis pray to them for healing and purification, to be made seers of knowledge, possessors of the truth, to be upheld in the divine law, to be assisted and armed with strength, manhood and energy. Dayananda has brought this idea of the divine right and truth into the Veda; the Veda is as much and more a book of divine Law as Hebrew Bible or Zoroastrian Avesta.

The cosmic element is not less conspicuous in the Veda; the Rishis speak always of the worlds, the firm laws that govern them, the divine workings in the cosmos. But Dayananda goes farther; he affirms that the truths of modern physical science are discoverable in the hymns. Here we have the sole point of fundamental principle about which there can be any justifiable misgivings. I confess my incompetence to advance any settled opinion in the matter. But this much needs to be said that his idea is increasingly supported by the recent trend of our knowledge about the ancient world. The ancient civilisations did possess secrets of science some of which modern knowledge has recovered, extended and made more rich and precise but others are even now not recovered. There is then nothing fantastic in Dayananda’s idea that Veda contains truth of science as well as
truth of religion. I will even add my own conviction that Veda contains other truths of a science the modern world does not at all possess, and in that case Dayananda has rather understated than overstated the depth and range of the Vedic wisdom.

Objection has also been made to the philological and etymological method by which he arrived at his results, especially in his dealings with the names of the godheads. But this objection, I feel certain, is an error due to our introduction of modern ideas about language into our study of this ancient tongue. We moderns use words as counters without any memory or appreciation of their original sense; when we speak we think of the object spoken of, not at all of the expressive word which is to us a dead and brute thing, mere coin of verbal currency with no value of its own. In early language the word was on the contrary a living thing with essential powers of signification; its root meanings were remembered because they were still in use, its wealth of force was vividly present to the mind of the speaker. We say “wolf” and think only of the animal, any other sound would have served our purpose as well, given the convention of its usage; the ancients said “tearer” and had that significance present to them. We say “agni” and think of fire, the word is of no other use to us; to the ancients “agni” means other things besides and only because of one or more of its root meanings was applied to the physical object fire. Our words are carefully limited to one or two senses, theirs were capable of a great number and it was quite easy for them, if they so chose, to use a word like Agni, Varuna or Vayu as a sound-index of a great number of connected and complex ideas, a key-word. It cannot be doubted that the Vedic Rishis did take advantage of this greater potentiality of their language, — note their dealings with such words as gau and candra. The Nirukta bears evidence to this capacity and in the Brahmanas and Upanishads we find the memory of this free and symbolic use of words still subsisting.

Certainly, Dayananda had not the advantage that a comparative study of languages gives to the European scholar. There are defects in the ancient Nirukta which the new learning, though itself sadly defective, still helps us to fill in and in future we shall
have to use both sources of light for the elucidation of Veda. Still this only affects matters of detail and does not touch the fundamental principles of Dayananda’s interpretation. Interpretation in detail is a work of intelligence and scholarship and in matters of intelligent opinion and scholarship men seem likely to differ to the end of the chapter, but in all the basic principles, in those great and fundamental decisions where the eye of intuition has to aid the workings of the intellect, Dayananda stands justified by the substance of Veda itself, by logic and reason and by our growing knowledge of the past of mankind. The Veda does hymn the one Deity of many names and powers; it does celebrate the divine Law and man’s aspiration to fulfil it; it does purport to give us the law of the cosmos.

On the question of revelation I have left myself no space to write. Suffice it to say that here too Dayananda was perfectly logical and it is quite grotesque to charge him with insincerity because he held to and proclaimed the doctrine. There are always three fundamental entities which we have to admit and whose relations we have to know if we would understand existence at all, God, Nature and the Soul. If, as Dayananda held on strong enough grounds, the Veda reveals to us God, reveals to us the law of Nature, reveals to us the relations of the Soul to God and Nature, what is it but a revelation of divine Truth? And if, as Dayananda held, it reveals them to us with a perfect truth, flawlessly, he might well hold it for an infallible Scripture. The rest is a question of the method of revelation, of the divine dealings with our race, of man’s psychology and possibilities. Modern thought, affirming Nature and Law but denying God, denied also the possibility of revelation; but so also has it denied many things which a more modern thought is very busy reaffirming. We cannot demand of a great mind that it shall make itself a slave to vulgarly received opinion or the transient dogmas of the hour; the very essence of its greatness is this, that it looks beyond, that it sees deeper.

In the matter of Vedic interpretation I am convinced that whatever may be the final complete interpretation, Dayananda will be honoured as the first discoverer of the right clues. Amidst
the chaos and obscurity of old ignorance and age-long misunderstanding his was the eye of direct vision that pierced to the truth and fastened on that which was essential. He has found the keys of the doors that time had closed and rent asunder the seals of the imprisoned fountains.
ROMESH Chandra Dutt is dead. After a long life of the most manifold and untiring energy, famous, honoured, advanced in years, with a name known in England as well as in India, the man always successful, always favoured of Fortune, always striving to deserve her by skill and diligence, type of a race that passes, of a generation that to younger minds is fast losing the appearance of reality and possibility, has passed away at the height and summit of his career before his great capacities could justify themselves to the full in his new station, but also before the defects of his type could be thoroughly subjected to the severe ordeal of the times that have come upon us. The landmarks of the past fall one by one and none rise in their place. The few great survivors here and there become more and more dignified monuments of the last century and less and less creators of the living present. New ideals, new problems, new men, almost a new race wholly different in mind, character, temperament, feeling, rise swiftly and wait till they can open the gates of the future and occupy the field of action.

The official, the liberal Congress politician, the well-read litterateur, the Oriental scholar, the journalist proficient in English and fluent of Western ideas, the professional man successful and sleek, these were the foremost men of the old generation, those who were in the eyes of all śreṣṭha, the best, in whose footsteps, therefore, all strove to follow and on whose pattern all formed themselves. An active, self-confident, voiceful generation making up by these qualities for the lack of height, depth and breadth in their culture and atoning for the unoriginal imitativeness to which they were doomed by the fidelity in detail and framework of the imitation! In all but one of these lines of activity Romesh Dutt had achieved a high distinction among the men of his own generation, and we doubt whether another man could be
pointed out among them so many-sided, so full of strength and hope and energy, so confident, so uniformly successful. Nature was liberal to him of her gifts, Fortune of her favours. A splendid physique, robust and massive, equipped him to bear the strain of an unceasing activity: a nature buoyant, sanguine, strong, as healthy as his frame, armed him against the shocks of life and commanded success by insisting upon it; an egoism natural to such a robust vitality seized on all things as its provender and enabled its possessor thoroughly to enjoy the good things of life which it successfully demanded; a great tact and savoir faire steered him clear of unnecessary friction and avoidable difficulties; an unrivalled quickness of grasp, absorption and assimilation, more facile than subtle or deep, helped him to make his own all that he heard or read; a rapid though not ingenious brain showed him how to use his material with the best effect and most practical utility; and a facile pen and speech which never paused for a thought or a word, could always be trusted to clothe what he wished to convey in a form respectable and effective and so well put as to conceal the absence of native literary faculty and intellectual distinction. These were Nature's presents to him at his birth. Fortune placed him in a wealthy, well-read and well-known family, gave him the best advantages of education the times could afford, sent him to England and opened the doors of the Civil Service, the pinnacle of the young Indian's aspiration in his days, and crowned him with the highest prizes that that highest of careers could yield to a man of his hue and blood. It is characteristic of his career that he should have died as Prime Minister of the Indian State which has been most successful in reproducing and improving upon the Anglo-Indian model of administration.

There were limits, as we have hinted, to the liberality of Nature. Of all the great Bengalis of his time Romesh Dutt was perhaps the least original. His administrative faculties were of the second order, not of the first; though he stood for a time foremost among the most active of Congress politicians and controversialists, he was neither a Ranade nor a Surendranath, had neither the gift of the organiser and political thinker nor
the gift of the orator; he had literary talent of an imitative kind but no literary genius; he wrote well on scholastic subjects and translated pleasantly and effectively, but was no great Sanskrit scholar: he cannot rank with Ranade or even with Gokhale as an economist, and yet his are the most politically effective contributions to economic literature in India that recent years have produced. It must be admitted that his activity and dexterity of work were far in excess of his literary ability or scholastic conscientiousness. It is doubtful, therefore, whether any of his voluminous works in many kinds will be remembered, with the possible though not very certain exception of his Bengali historical novels in which he touched his creative highwater mark. His translation of the Rigveda by its ease and crispness blinds the uninitiated reader to the fact that it may be a very pretty translation but it is not the Veda. His history of ancient Indian civilisation is a masterly compilation, void of original research, which is rapidly growing antiquated. In fact, the one art he possessed in the highest degree and in which alone it can be said that he did not only well but best, was the art of the journalist and pamphleteer. Originality and deep thought are not required of a journalist, nor delicacy, nor subtlety; his success would be limited rather than assisted by such qualities. To seize victoriously on the available materials, catch in them what will be interesting and effective and put it brightly and clearly, this is the dharma of the journalist, and, if we add the power of making the most of a case and enforcing a given view with irresistible energy, dexterity and apparent unanswerableness, we shall have added all that is necessary to turn the journalist into the pamphleteer. No man of our time has had these gifts to the same extent as Romesh Dutt. The best things he ever did were, in our view, his letters to Lord Curzon and his Economic History. The former fixed public opinion in India irretrievably and nobody cared even to consider Lord Curzon's answer. “That settles it” was the general feeling every ordinary reader contracted for good after reading this brilliant and telling indictment. Without the Economic History and its damming story of England’s commercial and fiscal dealings with India we doubt whether the public mind would
have been ready for the Boycott. In this one instance it may be said of him that he not only wrote history but created it. But all his works, with the exception of the historical novels, were rather pieces of successful journalism than literature. Still, even where it was most defective, his work was always useful to the world. For instance, his Ramayana and Mahabharata, though they are poor and commonplace poetry and do unpardonable violence to the spirit of the original, yet familiarised the average reader in England with the stories of the epics and thus made the way easy for future interpreters of the East to the West. In brief, this may be said in unstinted praise of Romesh Dutt, that he was a gigantic worker and did an immense amount of pioneer spadework by which the future will benefit.

We have dwelt on this interesting and vigorous personality as one of the most typical of the men that pass, much more typical than greater or more original contemporaries. The work they did is over and the qualities with which they were equipped for that work will no longer sufficiently serve our purpose. An education at once more subtle and more massive, a greater originality, force and range of intellectual activity, an insatiable thirst for knowledge, the glut of a giant for work and action, mighty qualities of soul, a superhuman courage, self-abnegation and power to embrace and practise almost impossible ideals, these are the virtues and gifts India demands from the greatest among her sons in the future so that they may be sufficient to her work and her destinies. But such gifts as Romesh Dutt possessed are not to be despised. Especially did his untiring capacity for work and his joyous vitality and indestructible buoyancy make him a towering reproach to the indolent, listless, sneering and anaemic generation that intervened between him and the recent renascence.
Appendix One

Baroda Speeches and Reports

Sri Aurobindo wrote the pieces in this part between 1901 and 1905, while serving in the Princely State of Baroda. The speeches were intended for delivery by Sayajirao Gaekwar, the Maharaja of Baroda. One of them later was published in a collection of the Maharaja’s speeches.
Speeches Written for the Maharaja of Baroda

1901–1902
Medical Department

INTRODUCTORY

One of the peculiarities of administration in India is the extent to which the provision of medical aid for the people rests on the shoulders of the Government. In a healthy community the sphere of Government action outside certain recognised spheres tends always to contract; in one which is feeble or unsound it tends always to expand. Judged from this standpoint there are few if any countries which show such a miserable lack of robustness as India. Normally Government action is limited to the management of only such affairs as cannot be conducted by local or private enterprise either at all or with sufficient efficiency and organised power. Foreign affairs and the maintenance of national defence, legislation & the administration of justice and maintenance of order and the imposition and raising of the revenues necessary for public administration comprised under the old theory of politics the main sphere of Government. In our own times all matters of public or national concern are held to be a fit province for Government action; but chiefly in the way of assistance, general regulation or the maintenance of a certain standard of efficiency or public morality. Government for instance assists national trade and industry by a bureau of statistics and information, protects it by tariffs, regulates it by seeing fair-play in essential matters between employers and employed or by enactments regulating navigation. Similarly it may exercise a watch and light general control over all forms of local self-government. In one sphere especially State action is being everywhere more and more imperatively called for in all civilized nations; it has become an axiom of modern politics that the provision of universal education is the duty of the State. Yet
even here the necessity is rather a result of the circumstances of modern national life than a permanent principle. The action of certain nations driven by their comparative weakness to find a counteracting force to the superior individual energy of other nations in the universal education of the community by the State and the success [with] which they have used this lever to raise themselves to preeminence in commerce and politics has made it an essential condition of self-preservation to all civilized countries. Without universal education a nation nowadays is self-condemned to stagnation and decay. But it is conceivable that when all the great nations stand on an equal level in this respect, the grip of the State on education may again relax and the duty of Education will again gradually devolve on local and private effort, the State confining itself to its fundamental duty in all matters of public concern, assistance, general regulation and the maintenance of a high standard. Even now a large element of private and voluntary enterprise is a healthy element in the provision of education, as necessary for variety, life and progress as State control for generality and a high standard of efficiency.

There are at least two departments of medical activity in which the State may claim a predominating voice, Sanitation and Medical Education. But the peculiar circumstances of this country have enforced it to take up a third burden which in wealthier, better-educated or more advantageously circumstanced countries is undertaken by individual enterprise and private charity, the provision of medical assistance. The utmost that could usually be expected of the Government in this line, would be the establishment of State Hospitals in large towns where there existed a large and congested mass of poverty. But in India the State provides not only these but covers the land with skilled medical help and dispensaries, bringing assistance to the doors of the people gratis or at a nominal price. The reason of this state of things does not lie altogether in the poverty or helplessness of the people.

Previous to the British rule medicine was practised in India as in Europe by a class of skilled physicians using their knowledge as a means of independent livelihood. The princes and
nobles of the land might maintain a family Hakim or Vaidya, but there was no idea and probably no great necessity of providing State or charitable help in any systematic shape to the mass of the population. The fees of the local physicians were not beyond the means of an ordinary income, and the great mass of the people living healthy open air lives and observing rules of life which the experience of generations had established as suitable to the climate, enjoyed greater immunity than in these days from ordinary diseases and trusted with more justification to the vigour of their natural constitutions for recovery when attacked. The great epidemics which sanitation and prophylactic measures combat with so large a measure of success, were regarded, in India as in mediaeval Europe, as divine visitations borne with terror perhaps, but without any idea of organised resistance.

With the British rule came a marked change. There was in this country an ancient and indigenous system of medicine, which had shared the fate of the other Hindu arts and sciences both in the comparatively high degree of scientific knowledge and intelligent practice it had reached in astonishingly early times and in the premature blight which had subsequently come over it. In surgery, in pharmacy and in sanitation its knowledge was sound and masterly; it conducted successfully surgical operations which would have been far beyond contemporary science in Europe; it had amassed a pharmacopoeia from indigenous drugs, which, however imperfect, was possessed of considerable merit and efficacy; and its rules of sanitation were exhaustive, sound and in consonance with the scientific opinion of today. Its theory of the human body was, it is true, rather in agreement with ancient opinion than the more enlightened modern ideas, but its practical science was superior to its theory. Upon this promising science as upon almost everything else in India there fell a curse of stationariness and decay. Its practice became mechanical; its science fell into desuetude; the old authorities couched in the learned tongue came to be repeated by rote; its pharmacopoeia was administered without intelligence or original research and analysis and therefore with only a fitful
efficacy; surgical knowledge ceased to exist except in a rudimentary form, and sanitary rules once invested with a religious sanction came to be flagrantly violated in the daily practice of the people. Mahomedan medicine, a mediaeval science based on the Greek, did not tend to correct this state of things; it only added another imperfect system to the existing one. To a country thus circumstanced Western civilisation came with a medical science which, recovered from its old stagnation, was making immense strides, with a vastly superior pharmacy, an ever bolder & more subtle surgery and organised & living grasp of sanitation.

When the British Government finally established itself throughout the country, its enlightened and benevolent instincts left only one course open to it. The epidemics which yearly devastated filthy & insanitary towns and villages, must be in some measure combated. A population scattered through the country in innumerable small villages without any means of adequate medical assistance, must be familiarised with the more advanced science of the West. But there was no body of men in the country itself who could replace as an independent profession the old Vaidyas, Kavirajes and Hakims by the application of the new science, nor could the Government wait for the necessarily far-off time when such a class, in sufficiently large proportions, could be elaborated. The necessary consequence was the development of the Indian Medical Service, one of the most beneficent institutions of the British rule; and with this development came, as an obvious corollary, the establishment of Government dispensaries all over the country. One of the latest minor developments in this line, the action by which small quantities of quinine are sold at the Government Post Offices as a remedy for malarious fever, is a characteristic instance alike of the curiously paternal nature of the British rule and of the unique state of things prevailing in this country. Of this state of things great poverty is a necessary feature, otherwise Government assistance might be gradually replaced by the class of professional men with diplomas from the Indian Universities who are now to be met with in increasing numbers in every considerable town. But such men have small chance of success
in the rural districts among a population too poor to pay for efficient medical assistance. The great bulk of the population must for long depend upon the gratuitous assistance which the Government has placed at their doors.

In Baroda the old system prevailed almost until the year of my accession. At that time the only public provision of medical aid on modern lines was one hospital at Baroda under the Residency surgeon, two small military hospitals in Kathiawar and three dispensaries in various parts of the State. At the same time a number of Vaiis and Hakims, about 25 in all, were maintained by the State for the benefit of the Troops, the prisoners in the jail and the State officials. These had their charges in a manner farmed out to them, for they were expected in lieu of a regular remuneration to provide drugs and other medical necessaries from their own resources. One State Hakim drew the immense salary of Rs 6000 a month; the others, though not so fortunate, had certain advantages within their grasp. These physicians were attached to different Departments and in some cases the same man held charges in two, three or more departments, thus drawing a multifold salary and farming out each branch of his work to someone else at perhaps a third of the stipend attached to it. These easy & profitable posts descended in practice from father to son, and often had privileges attached to them of considerable pecuniary value. The medical expenditure on their salaries amounted to about £ 20,000 and the privileges to at least 10,000 more. In 1876–77 this system was swept away, the whole staff being pensioned off for an aggregate sum of Rs 545 per month and a regular Medical Department instituted. Dr. Cody, a medical officer of the British service, was appointed Chief Medical Officer and 4 hospitals and 9 dispensaries were opened in Baroda, Nowasari, Sidhpur, Kadi, Pattan and other important places in the territory. These were added to in successive years and in 1880–81 there existed 11 hospitals, 23 dispensaries and one Veterinary Hospital. A Vaccination Department had been organised under the supervision of the Residency Surgeon several years before and this under the new regime was greatly strengthened; 3 Inspectors, 31 vaccinators, 6
probationers & 34 peons formed the staff. The strength of the regular Department numbered beside the Chief Medical Officer, 10 Medical Officers, 46 Hospital Assistants and 34 medical pupils; the Veterinary Hospital was in the charge of a Surgeon and one veterinary pupil; a midwife was also maintained by the State for the city of Baroda. During the five years from 1875–1880 Rs 858,550-5-6 had been expended by the State on its medical Department.

The work done up to this date could only suffice for the most urgent and immediate needs of the principal towns of the Raj. The twenty years from 1880 to 1900 have accordingly been devoted not only to expansion on the lines already laid down, but to the inception of larger work in the sphere of Sanitation and the introduction of improved methods and organisation in the Department. Of the 35 institutions already existing, several have been discontinued owing to the cessation of the special need for which they were created; for instance the military dispensaries at Deesa and Manekwada came to a natural end with the cessation of the contingents there stationed. On the other hand 24 new institutions have been established, 20 dispensaries, 2 veterinary dispensaries, one Lunatic and one Leper Asylum; raising the total number to 54. Most of the towns of the Raj which are at all considerable have therefore been provided with these facilities for medical assistance.

It has not been found necessary to increase the number of the Hospitals, the provision already made being sufficient for the present and liberal in proportion to the extent and needs of the territory. In the city of Baroda itself there are as many as three. The oldest, once known as the State Hospital, dates back to the times of the Maharaja Ganpatrao and was from its inception till 1881 under the supervision of the Residency Surgeon. So long as there was a lack of qualified medical talent in the country, such an arrangement was no doubt advisable and necessary, but by this time the conditions which necessitated it had ceased to operate, and after assuming powers I appointed

1 *There is a question mark against this sentence in the manuscript. — Ed.*
Dr. R. H. Nanavati to be in charge of the Hospital; it has since been under the management of different State Medical officers. The housing and accommodation had ceased to be sufficient for what was intended to be the first Hospital in the State; accordingly in 1882–83 the old building was pulled down and a new one erected in its place, the Hospital being temporarily transferred elsewhere. The new building is a fine red brick building just outside the city, graceful in architecture and sufficient in accommodation. It is now called the Countess of Dufferin Hospital as a compliment to a lady whose name will always be remembered in India in association with high benevolence, active sympathy with suffering and an earnest desire to ameliorate the condition of Indian women. Another & smaller building was added to the Hospital in 1898–9 for the accommodation of women of respectable families and styled the Victoria Jubilee Ward and a final addition for the use of patients from the army, called the Sayajirao Military Ward, completed the building as it now stands. The hospital is well equipped with instruments and appliances; in 1893–94 Rs 5000 worth of instruments were ordered out from England and in 1900 after visiting the Paris Exhibition I sent many of the latest scientific appliances from Europe to be kept for use in this Hospital. Besides the Medical Officer in charge who daily visits the Hospital and the Hospital Assistants working under him, there is a House Surgeon in constant attendance upon the sick and, since 1899 a Lady Doctor with a nurse to assist her is in charge of the Victoria Jubilee Ward. A Lady Doctor was first appointed in 1893 at the Jumnaibai Hospital to attend to female outpatients; but the appointment has, I believe, benefited the public of the city more widely than the sphere of her purely official duties would indicate; as many families are glad to secure skilled female assistance for their ladies when it is available. There is a greater field in India than in other countries for the services of female physicians and nurses, but the supply is insignificant. The abundant provision of trained nurses is a great element in the comfort and efficiency of hospitals in Europe. The State has made some attempt to supply the need of nurses for women in sickness by
sending four female students to the Cama Hospital in Bombay to learn midwifery and nursing; two of these returned after passing their final examination in 1887–8 and were appointed to the State Hospital and the Jumnabai Hospital. The other two also were entertained in the State service in the next year. A regular midwife has also been maintained whose duty it is to attend cases of childbirth in the city.

Of the other hospitals in Baroda, the Jumnabai Hospital named after H. H. the Maharani Jumnabai is confined to out cases; it was originally a dispensary afterwards turned into a Hospital, by attaching a girls’ school building in the vicinity as a ward. For in-cases the accommodation in the Dufferin Hospital is sufficient and the site healthier, accordingly since 1899 the admission of inpatients into the Jumnabai Hospital has been discontinued. The Sayajirao Military Hospital was, as its name implies, meant not for the use of the general public but for the Army, of which by far the larger part is stationed at the capital; originally built to accommodate 40 people, it was increased as necessity arose by two farther wards. In 1899 it was amalgamated with the State Hospital by the addition of the Sayaji Military Ward to that building and placed under the same supervision.

In spite of the superior development and scientific accuracy of Western medicine, a great portion of the people of this country still cling to their belief in the old systems, and it has been thought advisable to make a certain concession to their preferences. Two Hakims have been appointed by the State to treat cases at the Hospitals in which patients might express a greater confidence in the Mahomedan system of treatment and the State Balvaid was attached to the Countess of Dufferin Hospital in 1899–1900 for the benefit of those who preferred the Ayurvedic treatment.

The city of Baroda has therefore been amply supplied with medical facilities; nor have the districts been neglected. There are Hospitals in the chief town of each Division, the large division of Kadi having two to its share; besides this several of the district dispensaries are in all essential respects hospitals, admitting
indoor patients as well as dispensing medical aid to out-patients and being placed under the supervision of an Assistant Civil Surgeon, notably Mehsana, Petlad, Dabhoi and Visnagar. There are also Assistant Civil Surgeons at Sidhpur, Anusuya and Dwarka. This large development of medical aid in the districts has taken place mainly since 1887. The regular strength of the Medical Establishment numbered in 1899 21 medical officers, 62 Hospital Assistants and 75 medical pupils, besides the Hakims, Balvaid, midwife and nurses already mentioned.
The Revival of Industry in India

GENTLEMEN,—IF I hesitated to accept your invitation to preside at the opening of this Exhibition, the importance of the occasion must be my excuse. You called me to step into the breach, to face publicly the most tremendous question of our times and to give you my solution of a problem on which no two people agree, except that it is urgent.

But I do not think that we realise how urgent it is. Famine, increasing poverty, widespread disease, all these bring home to us the fact that there is some radical weakness in our system and that something must be done to remedy it. But there is another and a larger aspect of the matter and that is that this economic problem is our last ordeal as a people. It is our last chance. Fail there and what can the future bring us? We can only grow poorer and weaker, more dependent on foreign help; we must watch our industrial freedom fall into extinction and drag out a miserable existence as the hewers of wood and drawers of water to any foreign power which happens to be our master. Solve that problem and you have a great future before you, the future of a great people, worthy of your ancestors and of your old position among the nations.

Two years ago I stood looking at the wonders of that great Exhibition at Paris which summed up in so striking a manner the progress of a century in civilisation, industry and commerce. If I were asked what struck me most in that noble and artistic effort of a great nation, I should answer: the magnificent proportions and excellent management of the undertaking, so vast in conception and admirable in execution; the efficiency of the orderly and illuminating arrangement and careful accuracy of detail; and after that, the extraordinary ingenuity displayed in the educational section in methods and appliances; and not only the ingenuity but the thoroughness of these methods, especially
in the exhibits of Germany and America. But besides these two special exhibits, that which struck me most profoundly was the enormous difference between India and Europe to-day. Those vast halls crowded with shining steel work, the fruits of the combined industry and genius of a dozen nations; the amazing richness of texture and delicacy of design in the products of those machines; the vigorous life and aspiration which glowed in the Art, as well as the clear precision of the knowledge reflected in the Science; all this impressed me more than I can say.

But beyond all this triumph of Man over Nature and her powers, one fact struck me with a curious emphasis — the enormous gulf which separates the European and the native of India in their ideas of comfort. There rose up before me the interior of a typical Indian home, and as I contrasted it with the truly surprising inventions around me, all devoted to that one object, refinement, our much-boasted simplicity seemed bare and meagre beyond description. I contrasted those empty rooms — without even a chair or a table — with the luxury, the conveniences, which are the necessaries of a European cottage. My mind went back to the bazaar in my own city of Baroda, the craftsmen working at their old isolated trades with the methods which have sufficed them for centuries without a change, the low irregular houses, the dreamy life drifting between them, and then contrasted it all with this keen and merciless tide which was sweeping and eddying around me, drawing its needs from a thousand machines like these and gathering its comforts from the four quarters of the globe. And with the contrast I had a vivid sense of the enormous gulf which we have to bridge over before India can be said to be on the same plane as the European nations.

And yet, I thought, there is a change coming over India. The appearance of our houses is being altered by the revolution which is being made in their furniture. It is slow, for there are many who deplore it and speak of it in tones of regret as a process of denationalisation and a fall from simplicity to a burdensome and costly luxury. But the change is rather in the direction in which the money is spent. Our fathers made up by opulence
of material for the poverty of convenience. The futility of such regrets is shown by the fact that most of these eulogists of the past show in their own houses, even if only in a slight degree, the effects of the tendency which they deplore. I do not mean that we should dispense with simplicity; but let it be a wise moderation in the midst of plenty, not the fatalistic acceptance of poverty as a virtue in itself. And there can be no doubt that this tendency, which is now in its initial stage, will grow in strength with the course of years, until with the necessary differences due to climate and other environments it brings us approximately near to the Western mode of living.

But this mode is a rich and costly mode; to maintain it requires easy circumstances and a large diffusion of wealth. A poor country cannot meet its demands. A country without flourishing manufactures must always be a poor country. The future, therefore, imperatively claims this from us, that we shall cease to be a purely agricultural country and vindicate for ourselves some place at least among commercial and manufacturing nations. Otherwise we shall only establish for ourselves the unhappiness of unsatisfied cravings and the benumbing effects of an ideal to which we can make no approach. The cravings must be there, they are inevitable and essential to progress. To attempt to discourage them for political reasons or from social or religious conservatism is unjust and unwise and must eventually prove futile. The true policy is to provide that the cravings shall find means of encouragement. In other words we have to encourage and assist the commercial development of the country and so put it on the only possible road to progress, opulence, and prosperity.

There is a theory which affects to regard the races inhabiting the tropical and subtropical regions of the earth as disinherited by some mysterious law of Nature from all hope of originality, enterprise and leadership. These things belong to the temperate regions; the tropics are to be for ever no more than the field for the energies of the superior races, to whom alone belong empire, civilisation, trade and manufacture. We are to be restricted to a humble subordination, a servile imitation, and to the production of raw materials for their markets. At first sight there seems to
be some justification for this theory in existing facts. Our trade is in European hands, our industries are for the most part not our own, our railways are built, owned and managed, by European energy and capital. The Government is European and it is from Europe that we imitate all that we call civilisation. Our immobile and disorganised society compares ill with the enlightened energy and cohesion of Europe; even at our best we seem to be only the hands that execute, not the head that originates.

Yet even if we accept this picture of ourselves without the necessary modifications, we need not accept this interpretation of inherent inferiority. For my part I demur to any such hasty generalisation: yet however much of it be true be sure that there is no law of Nature which can prevent you from changing it. To suppose that any nation can be shut out from the operation of the law of Evolution is utterly unscientific, and, in the light of history, absurd.

 Granted that originality among us is low, that enterprise is deficient, and that leadership has passed out of our hands; is there in the first place no qualification to the entire truth of the assertion? And in the second, is this state of things due to immutable causes and therefore of old existence, or is it the result of recent and removable tendencies? It is true that such originality and power as we still possess has hitherto busied itself mostly in other paths than those of industry and the sciences which help industry. It has worked chiefly on the lines of Religion and Philosophy which have always been the characteristic bent of the national mind, continuing through Rammohan Ray, Dayananda Saraswati and Keshavchandra Sen, the long and unbroken line of great religious teachers from Gautama to Chaitanya and Kabir. It is true that teachings of fatalism and inactive detachment have depressed the vitality of the people. Yet there is no reason to believe that this depression and this limitation are not removable and are constitutional.

But it is not only in Religion that we were great. We had amongst us brave soldiers like Shivaji, Hyderali, Mahadji Scindia and Ranjitsingh. Can we not again claim to have had an important share in the establishment of that mighty structure — the
Indian Empire — erected indeed by the clear-sighted energy and practical genius of England, but on the foundations of Indian patience, Indian blood and Indian capital?

It is not an insignificant symptom that, considering how recent and meagre is scientific education in India, we should be able to show at least some names that are familiar to European scientists, not to speak of others enjoying a deserved reputation among ourselves. Small as these things may seem, they are yet enough to overthrow the theory of constitutional incapacity. And if we consider classes rather than individuals, can it be denied that the Parsis are an enterprising and industrially capable race? Or can it be doubted that the community which could produce a leader in industry and philanthropy like Mr Tata, will, as circumstances improve, take a leading place in the commercial world? Or can enterprise and commercial capacity be denied to classes like the Bhatias, Khojas and the merchants of Sindh? When we have individuals and classes like these in our midst we may well enquire why it is that we stand so poorly in industry and commerce, without fearing that the answer, however ungratifying to our feelings, will lead us to despair.

But if this theory of the inferiority of the tropical races be untrue; if we find that in the past we had great men whose influence is with us even to-day; we must look for some other cause for the difference, and ask what it is that India has not to-day but which she had in that older stage of her history and which Europe has at the present day. We have not far to seek. It is obvious that it is the clear and practical examination of Life and Nature which men call Science, and its application to the needs of Life which men call Industry, in which we are deficient and in which Europe excels. And if we question the past we learn that this is exactly what has not come down to us through the ages along with our Religion and Philosophy.

Our early history is scanty and, in many respects, uncertain, but no uncertainty, no scantiness can do away with the fact that this was once a great commercial people. We see a very wealthy nation with organised guilds of artisans, a flourishing inland commerce, a large export and import trade. We hear of busy
and flourishing ports through which the manufactures of India flowed out to Europe, to Arabia and Persia, and from which, in those early times, we sent out our delicate cotton textures, our chintz and muslin, our silk cloth and silk thread, a fine quality of steel; indigo, sugar, spices and drugs; diamonds, ivory and gold. In return we received brass, tin and lead, coral, glass, antimony; woollen cloth and wines from Italy, and also specie and bullion.

All through the Middle Ages, our manufactures and industries were at a very high level. Every traveller attests the existence of large and flourishing towns (a sure index of industrial prosperity), and praises the skill and ingenuity of our workmen. It was on the Eastern trade that Venice built her greatness, for then we were indeed the “Gorgeous East”. Notice, that it is especially in the manufactures which required delicate work, originality of design, or instinctive taste that our products were famous; our carving, our inlaid work and our gossamer cloth.

Coming now to the earlier part of the last century, what do we find? The carrying trade had passed from the Arabs to the East India Company and with it, too, the control of nearly all our exports, especially those in indigo, iron and steel, and the newly imported industries in tobacco, tea and coffee. But there was still a large body of trade in Indian hands; even then our manufactures held their own and were far superior to those of Europe; even then there were thousands of skilled artisans; and we supplied our own wants and exported enormous quantities of goods to other countries. Where, then, has all this trade gone and what has caused our decline?

The most obvious answer is, as I have said, the difference between Europe and India in industrial methods and appliances. But this is not quite sufficient to explain it. A deeper examination of the facts at our disposal shows that the life had almost left Indian industry before Europe had brought her machines to any remarkable development, and long before those wonderful changes which the application of chemistry and electricity have more recently wrought in industry. Nor can we ascribe it to a superiority which England possessed in industrial and technical education, for at that time there was no such training and
England has never relied on it for commercial capacity. If we go a little deeper into the matter we find that there is a further reason which does not depend on the natural working of economic laws but which is political in its nature, the result of the acquisition of political power by the East India Company and the absorption of India into the growing British Empire.

As Mr Dutt shows in his able *Economic History of British India*, this political change had the gravest effect on our economic life. In the first place we had the economic policy of the East India Company which, so far as its export trade was concerned, accepted manufactures indeed, but paid an equal, if not greater, attention to raw materials. Even our internal trade was taken from us by the policy of the East India Company; there were heavy transit duties on all inland commerce and there were commercial Residents in every part of the Company’s possessions, who managed to control the work of the local artisans, and so thoroughly that outside their factories all manufacture came to an end.

On this came the protective policy of the British Government, which, despite the powerful interests of the East India Company, crushed Indian manufactures by prohibitive duties. Then came the application of steam to manufacture. It is scarcely to be wondered at, if with all this against us at home and abroad, our manufactures declined and with the great advance in the improvement in machinery and the initiation of a Free Trade policy, this decline was hastened into ruin.

Moreover, a country not exporting manufactures is necessarily stagnant, and commercial progress and self-adaptability cease. Once the manufacturing superiority of India had been transferred to England, it was impossible for the weaker country to recover its position without some measure of protection. Not only was the struggle in itself unequal but the spectacle of a mighty commerce, overshadowing and dominating ours, flooding our markets and taking away our produce for its own factories, induced a profound dejection, hopelessness and inertia among our people. Unable to react against that dominating force we came to believe that the inability was constitutional and
inherent in ourselves; there is a tendency in fact to hypnotise
ourselves into apathy by continual repetition of the formula
that Indians, as a race, are lacking in enterprise, deficient in
business faculties, barren in organising power. If, therefore, I
have dwelt upon our old manufactures and commerce and the
way in which they were crushed, it is not with the unprofitable
object of airing an old grievance, but in order to point out that
there is no reason for this discouraging view of ourselves. We
were a trading and manufacturing country from ancient times
down to the present century, and if our manufactures have fallen
into decay, our commerce languished, it was under a burden
which would have crushed the most flourishing industry of the
most energetic people.

Our weakness lies in this that we have for many years
lain prostrate under a fictitious sense of our own helplessness
and made no adequate attempt to react against our circum-
stances. We have succumbed where we should have exhausted
every possibility of resistance and remedy. We have allowed the
home-keeping propensities and the out-of-date semi-religious
prejudices, which have gathered round the institution of caste,
to prevent us from choosing the line of activity most conso-
nant with our abilities, or from seeking in other lands for fresh
markets and the knowledge of new industries.

The restriction against foreign travel is one of the most
serious obstacles in the way of commercial success and must
be utterly swept away, if we are not to go on stagnating. It is
a pity that communities like the Bhatias should be restrained
by an out-worn prejudice from going abroad and furthering
that task of development for which they are so admirably fitted.
The endeavours hitherto made have been, with few exceptions,
sporadic, half-hearted and prematurely abandoned; and the sup-
port given to them by the public has been scanty, wanting in
confidence and in personal and active interest. It is this state of
things which must cease before we can hope to revive our own
manufactures, to establish firmly and extend those which exist,
and to set on foot any new industries which our needs demand,
and for which the conditions offer sufficient opportunity. Then
India may again be what she was in the past and what she is so admirably fitted by nature to be, a self-sufficing country; famous for artistic and useful industries. To raise her again to this should be the ideal of every patriotic citizen. But in order that the ideal may be realised we need, first: knowledge of our possibilities, of the means and facilities necessary to success, and of the lines on which activity would be best repaid; and secondly: belief in ourselves and in each other so that our knowledge may not fail for want of co-operation.

If we get these, if we realise the progress of Science and mechanical invention and resolutely part with old and antiquated methods of work, if we liberate ourselves from hampering customs and superstitions, none of which are an essential part of our religion; if, instead of being dazed in imagination by the progress of Europe, we learn to examine it intelligently, and meet it with our own progress, there will be no reason for us to despair; but if we fail in this we must not hope to occupy a place in the civilised and progressive world.

To speak with any fullness on this subject is not possible within the short limit of time at my disposal. I shall, therefore, pass lightly over a few salient points; for, the lines of activity open to us and calling for our energies are unlimited in their extent, variety and promise. This country is not poor in its resources, but may rather be said to be blessed by Nature in many respects; its mineral wealth is anything but contemptible; its soil produces valuable and useful products in great variety and abundance; the provision of water power is also unstinted. We have an excess of cheap labour and we have hereditary artisans who are quick in hand and eye, and who only need to be properly trained to make them the equals, if not the superiors, of their rivals. If there are certain serious disadvantages and defects in its mineral wealth such as the inferiority of its coal supplies, and in its vegetable products, such as the greater coarseness of its cotton and the difficulty of growing the finest silk, yet so great is the advance Science has made that we need not despair of meeting some of these difficulties at least in part. Nor is there any imperative necessity that we should always vie with other countries in
producing the very best. If we utilise to the best advantage what
Nature has given us and advance in such manufactures as the
country is fitted for, we shall have done no inconsiderable task.
What is required is greater knowledge, a more earnest endeavour
of the Government towards improvement and the provision of
facilities, and more serious activity on the part of the people
to take advantage of such facilities as already exist. We need
improvement in agriculture, and facilities in industries; for in a
country like India, which produces or can produce the bulk of its
own raw material, the agricultural question cannot be separated
from the industrial.

Improvement in agriculture is necessary to secure an in-
creased quantity and improved quality of the produce of our
fields. What Science can do for agriculture, the development of
the beet-sugar industry and the improvement of cotton clearly
show; and as sugar and cotton are two of the most important of
our products and especially of our export trade, I wish to call
your attention to what has been done by our rivals.

Beet-sugar cultivation has been gradually developed by care-
ful selection of the best roots and the application of agricultural
chemistry, until the percentage of saccharine has been doubled
and trebled. Here is the remedy for Indian sugar. We must not
be ashamed to borrow our rivals’ tactics, but strive hard to get
for example for our cane sugar the very best canes and take
care to use nothing but the very best methods of cultivation and
manufacture.

The same is true of cotton. It is certain that the competition
which Indian cotton has to meet will be much intensified in the
near future; and our only hope of meeting it successfully is to
improve our indigenous varieties up to a point at which they can
hold their own. I believe that we can do this, but it demands the
most patient researches and above all that, when the best variety
has been discovered, the cultivator will really grow it.

Science is our great hope, but there is one great obstacle to be
overcome before Science can help us, and that is the ignorance
and apathy which is the general condition of the agricultural
classes at present.
The failure of the old arts and crafts, and especially that of arms, has thrown vast numbers back on the soil, and these classes are neither intelligent nor progressive. Many old professions are dying out and while those, who should have followed them, go back to the land, many of these professions are not such as to provide any hereditary capacity for agriculture. It is not to be wondered at, therefore, if our Indian cultivators, despite their traditional skill, are neither enterprising nor capable of undertaking improvements which demand considerable energy and foresight. Their methods, despite Dr Voelcker’s high encomiums, are backward, their resources are very limited, and their implements, though they may be those best suited to their narrow means and small holdings, are old and economically wasteful. But their most serious drawback is their helplessness. There is a general complaint that the soil is deteriorating, but that they can do nothing to remedy it; and in times of scarcity and famine they seem incapable of doing anything to help themselves. This is a most serious question and one which demands all our attention.

In the first place this deterioration of the soil is a very real danger. Do you know that the average product per acre has in some parts of the country diminished by 50 per cent. since the middle of the seventeenth century, when the Ain-i-Akbari was compiled? Is it any wonder that the peasant grows poorer, or that his resources diminish?

Our remedies must fall under two heads: (1) the improvement of methods, implements and general conditions; and (2) education.

In the first place attempts to introduce new implements have nearly all failed. Iron flails and threshing machines have been tried at one time or another, but the ryot will have none of them. At the same time this does not mean that the old implements are the best that the wit of man can devise, or that we are to suppose that past failure is conclusive.

Another matter to which Government has given some attention has been cattle-breeding. The results so far have not been encouraging, though there are Government farms at Hissar and
at Bhatgaum in Khandesh, and another called the Amrit Mahal, maintained by the Mysore Government, from which are derived certain superior breeds of cattle to be found in the Madras Presidency.

Until we can get the co-operation of the people the results must be disappointing. Nevertheless, I think that there is a great deal of good work to be done on these lines and I am of opinion that besides improving the breed of cattle much might be done in the way of encouraging the ryots to breed other stock, such as horses, mules, etc. It is a thousand pities that our Indian breeds of horses should be dying out and that there seems to be no sensible effort made to keep them alive. Perhaps the chief reason that Government breeding farms have failed is that they are too elaborate for the people in their present condition. I believe that much might be done by reviving the old custom of keeping sacred bulls in every village and taking care that the bulls supplied were the best that could be procured. Much might be done if the cultivator could be persuaded to breed only from the best animals.

Instead of helping ourselves we always depend upon Government; here is an instance where people can, with advantage, help themselves. To it I would add the planting of trees, which are of economic value, around the cultivators’ fields and the encouragement of the fibrous plants which are now articles of commerce. There is further the question of good drainage to relieve the bad effects of irrigation. A serious endeavour should be made to help the ryot to sow only the best seed and to pay some attention to the best rotation of crops.

In a country like India, where the introduction of improved implements is so limited in its possibilities, and where everything depends upon the timeliness and sufficiency of the annual rains, it is irrigation that must necessarily take the largest place in all plans of agricultural improvement. This importance of irrigation has been recognised by the successive rulers of this country from the times of the ancient Hindu kings. From the days of Asoka, and before him, the digging of wells and tanks had been the subject of royal edicts and one of the first religious duties of
princes, zemindars and wealthy philanthropists. The number of small tanks in ruins that one finds in the districts, the multitude of old wells that still exist round about Muslim capitals; above all, the immense system of artificial reservoirs in the Madras Presidency, bear testimony to the steady persistence of this old tradition of administrative benevolence. In the Southern Presidency there are over 6000 tanks mainly of native origin, the magnitude of which will be best remembered when it is understood that the embankments measure over 30,000 miles with 300,000 separate masonry works, and that these tanks irrigate over 34 lakhs of acres, an area almost equal to that irrigated by the entire system of the major and minor works of the Madras Presidency. These works were getting out of repair in the troublous times of the eighteenth century, when general disorder and mal-administration, the usual concomitants of any violent change in the form of Government, prevailed in our country. When they occupied the country the British, with their characteristic administrative energy, not only put them in order but in many cases improved and enlarged them. They have brought, or kept under irrigation, an area of little less than 20,000,000 acres at the cost of forty-two crores of rupees; and the work has been done with so much judgment and success that the works yield a profit of nearly 7 per cent. and the produce raised equals 98 per cent. of the total capital outlay. Not content with this they are now undertaking to prepare and gradually execute a scheme of protective works which, when complete, should do much to insure the country against famine. The work in irrigation will always be one of the most splendid and irreproachable chapters in the history of British Rule.

The proposed extension of irrigation works would also offer to the capitalists of the country a very eligible field for the investment of their surplus savings. If the people only co-operate they would find irrigation projects a very profitable channel for investment; and if they fail to take advantage of the favourable opportunity, one need not be surprised if European capital is extensively employed in their development as has been done in the case of railways in India. I trust the Government on its part
will also offer more than usual inducements to attract private Indian capital in these profitable undertakings.

Besides great irrigation works there is another way in which much might be done to protect the country against the effects of drought, that is, by encouraging the digging of wells. This is a method well adapted for States which have no facilities for works on a grand scale. In my own territories I have found that the advance of taccavi, for this purpose, was a measure which the cultivator could understand, and, under the guidance of experienced officers, one which worked well. At the same time large irrigation works have been commenced in various parts of the territory, and a survey is being made for the repair of old tanks and the utilisation of favourable spots for the storage of water.

But it must not be forgotten that irrigation will not end all our troubles. Indeed, unless it is accompanied by a considerable measure of intelligence and foresight, it brings others in its train, such as the debilitation of the soil. The remedy for this is, of course, the use of artificial manures which will restore to the soil some of the qualities that are removed from it by over-irrigation. Here we are at once faced by our usual want of foresight and ignorance of which I have already spoken. In face of the deterioration of the soil, which I have mentioned as a widespread evil, widely acknowledged, it is inconceivable to me that we should seek to encourage the export of cotton-seeds on which so much of the efficiency of the simple manure, which we use here, in Gujarat, depends. Yet the value of this export has risen in one year from five to twenty lakhs of rupees, and it is certain that at this rate the cattle will have to go without it, and that their manure will become practically valueless. An artificial manure is, therefore, a crying necessity.

Another point is the growth of deep-rooted grasses which can resist drought and so prevent the terrible mortality of cattle which was so painfully marked in the late famine. We must follow the example of Australia in this matter and find indigenous deep-rooted grasses which we can plant systematically on waste land, and then, when we are cursed with another season
of drought, we shall have something to meet it with.

Before we can hope that the ryot will try to employ measures which demand a high level of intelligence and scientific knowledge, we must awaken his curiosity and enlist his sympathy, which can only be done by a good system of general education. Without it our best endeavours are bound to fail. Government has established Agricultural Colleges and model farms in different parts of the country, but agriculture has been but little improved in consequence. Partly, I think, this is due to the vastness of the area and to the great variety of local conditions, for each district has its own difficulties to meet and overcome. But the main reason for the failure is, I believe, the indifference and apathy of the people themselves. Another reason is the fact that these measures have come from outside and not from the people. However imperfect our education may be it is equally lamentable that it has so far affected no more than 5 per cent. of the population of the country. Before any noticeable change can take place, there must be a general feeling among the people that improvement must be made and a desire to take advantage of the efforts of Government to help them. At present, they are more inclined to laugh at our attempts to aid them than to help us by their advice and by showing us where their real difficulties lie. Their criticism, as a rule, is more destructive than educative.

I have found it possible to do something to improve the more backward classes of cultivators by sending more intelligent ryots to show them better methods of cultivation; and the school for the Dhankas at Songadh has been more or less successful. These measures only serve to raise the internal level of the lower agriculture up to the highest of our present system, while the problem is to raise the general level. Perhaps something might be done by agricultural associations which studied local requirements and popularised such improvements as admitted of practical application. But I believe the only change which would do much would be to induce a more intelligent and enterprising class to engage in agriculture.

Over and above all this it is very important that our agriculturists should have cottage industries or some work on which
they can usefully engage themselves and the members of their family during the slack season of agriculture. Such would be for the men, wood-carving and the making of toys; and for the women, needle work and embroidery.

I do not think we should stop short at improving our raw materials; I believe we might do much in the way of working them up. The annual review of the Trade of India published by the Statistical Department of the Government of India teaches us some wholesome lessons, which it would be always useful to remember. They show the large number of objects for which we are at present dependent on foreign factories, but for which we have plenty of raw material at hand, and which, if we only avail ourselves of the latest scientific methods, we can ourselves manufacture. Our endeavour should be to reduce this dependence upon foreign industries, and, where the necessary facilities do not exist for such manufactures at home, we should so improve the quality of our raw material as to enable it to hold its own in the foreign market to which it is sent. The wheat, for instance, which we export at present is used for the manufacture of bread in Europe, but it is scarcely fit to be turned to the many other uses to which it can be put unless it is much improved in quality. The same remarks apply to many of the most ordinary articles of daily use, such as paper, oils, leather, etc. The instance of leather is peculiarly noteworthy. We export the hides and the materials for tanning them, but that is not all. There is a cheaper and more efficient process of cleaning the hides in use in Europe, and the hides are exported to Europe to be cleaned there. Is it impossible for India to tan her own hides, in her own factories, with her own tanning materials? Another point which seems inconceivable when the need for artificial manure is remembered, and that is, that we export bones in large quantities to be turned into bone-manure for the beet-fields of our rivals, and so for their sugar, which we so largely import.

Glass again is an article of which we import a large quantity every year, but which we might manufacture for ourselves. Last year we imported glass of the value of over ninety lakhs of rupees. In 1887 I made some enquiries into the matter and found
that there were raw materials in plenty for the manufacture not only of rough glass, but of glass of the finest quality. I was advised that it would not pay to establish a factory, but the reasons against success were not insuperable. I also made some enquiries into the possibility of manufacturing paper in Gujarat and discovered that there were abundant raw materials of an excellent quality to be obtained here, and that this too was quite feasible.

We have already some glass-blowing factories at Kapadwanj and in the Panjab; paper mills in Bombay, Poona and Bengal; leather tanneries in Madras, Cawnpore and Bombay. It would be interesting to study the quantity and quality of these home products and to compare them with the articles imported from abroad. We may thereby learn the difference and know how to remove their short-comings and extend their sale. Experience is the only path to knowledge, comparison perfects it. Knowledge is the dominant factor in the spirit of the age and the basis of all reform. I would suggest that, of the many manufactures which might be successful in India, it would be advisable to begin with those in which there is a steady local demand, such as soap, candles, glass, furniture, pen-nibs, carpets, etc., and afterwards extend the field of our operations so as to include other and more elaborate articles.

To enable us to take up these manufactures we need a system of industrial education, and for this we have to rely very largely on the assistance of Government. But we must remember that our position is not quite that of any European country in this respect, and that our best model would probably be Japan. Now, Japan, when she aimed at general, and particularly at industrial, progress, adopted three main lines on which her education was to run. These were, first to send a number of her young men abroad, and especially to Germany, for education; secondly to establish great colleges in Japan itself, the staff of which was at first composed of Europeans; and thirdly to employ the services of Europeans, in the initial stages of her manufactures, under whom her people were gradually trained in efficiency.

Now I should like first to call attention to the last of these,
because I think that here we have the solution of a difficulty which has been met with in the case of some industries which have recently been started. I have heard complaints that the quality of the goods turned out was not satisfactory, and from what I heard, it seemed to me that perhaps the failure was due to the incompetence of the directors, or to some culpable laxness in their management, or to our having commenced the enterprise on too impracticable or ambitious a scale, or to our having lost sight of some essential conditions of success at the outset. Some industries may require European skill and supervision to pilot them through their initial stages, and a hasty attempt to dispense with it may lead to disappointing results. But there is another aspect to this apparent incompetence; we have to learn trustworthiness, a capacity for obedience, the art of management, accuracy, punctuality, method and the sense of justice, and the only school which will teach us these is a position in which they are called out by use. To return to the first of the three points: it is obviously impossible to send any very large proportion of our Indian youths abroad, though I think more might be done in this direction. I would appeal to Government and to our philanthropists to see if they cannot help us.

That which will help us most is a largely extended system of technical and general education, such as that on which Germany has built her commercial greatness. It is of course impossible to imitate the German system exactly. But it is not impossible to provide ourselves with a system which will meet our requirements. Though private individuals may do something in the matter, a satisfactory solution of the whole question must depend upon the sympathy and generosity of the Government. I believe that Government could not give a greater boon than such an education, and I think I am voicing the feelings of the educated classes at large, when I say that we are confident that we have not long to wait to see our rulers grapple with this problem, with their usual energy and decision. Meanwhile we must start our factories as best we can, and do the best with our present circumstances. I do not overlook the fact that the odds against us are heavy and that our infant industries have to
struggle from the start in an open market with long-established competitors.

I am not afraid of being thought a heretic with regard to economics, if I say that I think we need Protection to enable our industries to reach their growth. The economic history of Germany and America shows that there is a stage in the growth of a nation when Protection is necessary. The laws of Political Economy are not inexorable and must bend to the exigencies of time and place. Theories and doctrines, however plausible, cannot take precedence of plain and practical truths. It is true that Free Trade enables a country to procure at cheaper rates those articles that can be manufactured more conveniently in foreign lands, but this cheapness is dearly bought by the loss of industrial status, and the reduction of a whole people to a helpless proletariat. National defence against alien industrial inroads is more important than the cheapness of a few articles.

Protection, therefore, if only for a short time, is what we need for our nascent manufactures; for some time must elapse before more perfect methods are naturalised in India and the standard of Indian workmanship attains the excellence of Europe. A high wall of tariffs has secured to American manufactures the home market as an undisputed field for their own development; and India, maimed, and helpless as she has been, may expect that relief from her beneficent Government. Government, like the climate and geographical conditions of a country, has a peculiar force of its own and must leave an indelible impress on the mould of the destinies of nations. It may as powerfully hamper, as promote, the moral and material development of the people entrusted to its care. If the Government were supported by a more informed and intelligent public opinion and if the people, awakened to a sense of national life, were allowed and induced to take a livelier interest in their own concerns and if they worked in unison, they would conduce to mutual strength. Government is a matter of common-sense and compromise, and its aim should be to secure the legitimate interests of the people governed.

But at the same time I would warn you against some false
methods of encouraging industry, such as the movement to use no cloth not produced in the country. The idea is quite unsound so far as any economic results go; and the true remedy for any old industry which needs support is to study the market, find out what is wanted and improve the finish of the work and the design until an increasing demand shows that the right direction has been found. This applies particularly to the artistic trades, such as wood-carving and metal-work for which the country has been so famous and which it would be a pity to allow to die altogether. Among other means of improvement, the education of women in decorative art would bring a fresh economic force into play; and as I ascertained by enquiries in London, made from a desire to find lucrative home industries for our women, and especially for widows, would prove extremely profitable, if the right steps were taken. Tapestry, for instance, is a great women’s industry in Switzerland; lacework, cretonne and embroidered cushions could all very well be done by women. Needlework is even now done in Gujarat homes, and if the designs and colourings are improved it might be turned into an active industry, supplying our own wants, and possibly outside demands. Carpet-weaving also, which is now done in several of our jails, might be turned in the same way into a profitable home industry. The main thing is to study the market and not to pursue our own hobbies. It would be necessary to have agents in Europe, who would study European wants, consult professional men and get designs which could be executed in India. Something of the sort is, I believe, done in the School of Arts in Madras. My enquiries in Paris convinced me that in the hands of capable persons this method would be both practicable and profitable.

I would, however, direct your attention more to the establishment of the larger industries involving an extensive use of machinery, for it is upon this that our economic future and any increase of our wealth depends. Before we have a large demand at home for the arts we must produce the wealth to support them, and we shall never have that wealth until we have an economic system on a much broader basis than our present limited industry. With a little energy and the assistance of Government
we can broaden this basis, and then we may look forward to a new lease of life for Indian art and Indian literature and for those industries which depend on leisure and wealth.

I should like now to say a few words on the subject of the assistance which a Government can give in developing the resources of its territories. I have indicated a few ways in which I think Government can help economic development in the direction of education. To these I would add improvements in the means of communication and the establishment of banks and other co-operative institutions. It can also encourage merchants and manufacturers by advances of capital and by granting other facilities.

Native States in India, seriously handicapped as they are by their limited means and scope and the want of trained men, though they cannot emulate their great exemplar, the British Government, seem to limit themselves, as yet, too much to the routine of administration, and might do more for the material and commercial development of the country. Granted freedom of action, and with proper endeavour, I am inclined to think that many States in Central India, Rajputana and elsewhere would be able to get even more treasure out of the bowels of the earth than Mysore and Hyderabad at present obtain. But Government help has its limits.

My experience teaches me that it is very difficult for Government to provide industries for its people in the absence of a real business spirit amongst the people themselves. It is very difficult for so impersonal an entity as Government to get capable managers or to supervise its enterprises properly. I have tried various measures in my own State, but I am sorry to say that the results are disappointing. A sugar mill, a cotton mill and an ice factory were tried, but were not a success. A State fund for the advance of capital and other assistance to manufacturers also failed. I found that the managers were not sufficiently interested in the scheme and not impartial in the working of it. I am convinced, however, that the fault lay not with the industries themselves but in the fact that they were State enterprises.

I have also made an experiment in technical education.
I founded an institution called the Kala-Bhavan with depart-
ments in dyeing and weaving, carpentry and mechanical engi-
neering, and with the object of diffusing technical education I
had branches of it set up in various parts of the Raj. The response
among the people was so faint that after a time the institution
had to be contracted within narrower limits. Until the means of
the people and the material wealth of the country expand, there
can be but little demand for the work which such institutes turn
out. So far, the Kala-Bhavan has done but little beyond providing
skilled dyers for Bombay mills; and until the people co-operate
more earnestly its utility will not be recognised. Once more it
is the prevailing ignorance which hampers every movement to
help the people. They are sunk in a fatalistic apathy and do not
care to learn how to help themselves.

I have omitted to refer to the many endeavours made by
other Indian States in the same direction, not because they are
not worth mentioning. The wonderful Cauvery electric power
scheme and the irrigation projects of the Mysore and Jaipur
States, as well as the fine Technical School at Jaipur, are indis-
putably entitled to a high rank in the record of such laudable
work. I have to pass them over for want of time and adequate
information of all their details.

It is the general lack of education and intelligence which
hampers us at every turn and has been our ruin. Once we can
make education general we may hope for increased dexterity, an
increased power of concentration, increased trustworthiness and
quickness to discover new processes. We need these qualities in
every class of Indian society. Education in England has diffused
a spirit of self-reliance and a capacity for initiative; education in
Germany aims at thorough knowledge, methodical application
and exact learning; but education in India has hitherto aimed
only at providing a certain amount of food for thought without
ever touching the mental capacity or character.

I do not think that the plea that our industries are poor
for want of capital is one that can be sustained. We have more
capital than we imagine to develop our resources if we would
only use it. But we lack the active foresight always seeking the
best investments. We prefer to hoard our savings in our women’s ornaments, or to invest it in Government securities at low rates of interest, when we might be using it in ways which would be profitable to the country at large, as well as to ourselves, such as agricultural improvements, insurance of agricultural stock and the establishment of factories. And that is especially true of some Indian States which invest their surplus capital in Government securities, instead of using it in the development of the resources of their own territories.

This is not, however, our only fault. There is another fault which is nearly as fatal to any system of industry, and that is our lack of confidence in ourselves and in one another. Without self-confidence you can never do anything; you will never found an industry or build up a trade, for you have nothing to carry you through the first anxious years when the only dividend is hope, and the best assets are unflurtering courage and faith in oneself. And without confidence in one another you will never have a credit system, and without a credit system no modern commerce can exist. It is this want of co-operation, this mutual distrust which paralyses Indian industry, ruins the statesman, and discredits the individual even in his own household. I believe that this trait of our character, though in some cases arising from our obvious defects and instances of actual misconduct among ourselves, is mainly due to the fact that the nation has long been split up into incoherent units, but also to the ignorance and restricted vision which result from our own exclusiveness. We have denied ourselves the illuminating experience of foreign travel and are too prone to imagine that weaknesses are confined to India. Failures and defalcations are as common in Europe as among ourselves; and yet we allow ourselves to be too easily discouraged by such incidents. Hence arises the habit of censorious judgment, a disposition to put the worst construction on the conduct of our friends and relatives, without trying to find the truth, which destroys all trust and tolerance. Our view of the conduct of friends, of the policies of administrations, of the success and integrity of commercial undertakings, are all vitiated by a readiness to believe the worst. It is only when we learn to
suspend judgment and know the man and the motive before we criticise, that we shall be able to repose trust where trust is due. We must stiffen our character and educate ourselves up to a higher moral standard.

We despair too easily. Let us remember that we must expect failures at first; but that it is those who learn from failure that succeed. Moreover, as any one may learn from a survey of the present state of industry, there is evidence that some do succeed. We have not, of course, made the most of our opportunities, but it is worth while remembering that something has been done because it shows us what it is possible to do, and encourages us to do it. If any one wishes to know, in more detail, what has been done and what might be done, he could not do better than consult Mr Ranade’s excellent book on the subject.

And now let me say a word about this Exhibition and its aims. I take it that an Exhibition is intended to draw together the scattered threads of industrial activity, so that the members of any trade may learn not only what is the latest development in their own trade, but also what other trades are doing, and what in the other trades is likely to help them. Then it is hoped that the spectacle of advance and improvement will arouse emulation and suggest new ideas and also draw industries together. But are the conditions in India such that we may hope for this? I fear not; I fear that the ryot will not yet come to learn from us and that there will be few craftsmen who will go away with new ideas and the memory of new processes. Nevertheless, we should not despair.

It should be remembered that a similar difficulty was experienced in England in connection with the Workmen’s Institutes which sprang up all over the country in response to Dr George Birkbeck’s suggestions. The object was to provide the mechanic with lectures on his own trade; but the attempt at first largely failed from the incapacity of the working man to learn anything from the lectures. Lectures and exhibitions bear fruit only when the people have received sufficient general education to make them mentally receptive and deft in adaptation and invention. When that goal is reached, such exhibitions may most usefully
be turned into local museums, and if possible a syllabus of instruction attached to the exhibits. On the other hand, there is yet another function which exhibitions perform and which is equally useful, and that is their influence as general education among the classes whose intelligence is already aroused, and who go away with a new sense of what there is to learn. Life is not yet all machinery which it takes an expert to understand, and there are many new ideas which the collection of the most recent efforts in Art and Science in one place can inspire, and especially is this true if there is the comparison of the old with the new.

But before any of these undertakings and enterprises, which I have mentioned, can succeed, India must be thoroughly awakened. Understand what this means. It means action. There is no reality in our social reform, our political progress, our industrial revival, because, as you know, there is scarcely one of us who dares to act even in his own household.

You complain of an over-centralised Government, of the evils of heavy custom charges, of inland excise duties on cotton, of the treatment given to your emigrants, and the want of a legitimate share by the people in their own Government. There may be much in your complaints, but until you realise that the ultimate remedy lies in your own hands and that you have to carry it out by yourselves, no external reform can help you.

That awakening, that realisation is your share of the work, you who know something of Western thought and Western methods, and who imitate much from the West. But to the bulk of the population it does not apply so simply. The masses of India are lost in a hopeless ignorance, and that is why they are so intensely conservative and lacking in confidence and initiative. We cling to old customs because we do not know that they are not essential to our religion, and we dare not adopt new ideas or establish new industries because we do not know how to set about it. But there is another side to this ignorance and that is that we let our old customs hamper us and blind us in the present, because we do not understand the past.

Remember two inevitable tendencies in history: one, that no system, however perfect, however glorious, however far-
reaching, can go on for 2000 years (or 200 for that matter) without enormous changes being made in it simply by time; the other, that the religious, the political and mental conditions of a nation are indissolubly connected and interwoven, so that you cannot alter a single feature in one of them without changing all three. Now apply these principles to the past.

From 500 A.D. we find a steady decline in the political and mental condition of the country down to the two centuries of darkness from which we emerged into the periods of the Rajputs and the Muslim conquest. Follow the fortunes of India down the next eight centuries and note the steady decline in Hindu power, both political and mental, till we come to the time when Europeans obtained a firm footing in India and conquered the country with very slender means, meeting and solving each problem as it arose. For 1400 years the record is one of steady decline in political and mental nationality. How then can religion have fared, and especially all those social institutions which depend on religion? Surely it is clear that just as our trade and our political power collapsed before the attacks made upon them because they were inefficient, the other features of our system cannot have escaped degradation and that in clinging to them blindly we are clinging to the very tendencies, the very forces that have dragged us down. The fact that we cling so tightly to them has ruined both them and us. Consider the effects of cumulative physical heredity on the capacity of any caste when the action, for which that caste and its institutions were designed, is taken out of its power.

Here then is the problem: to carry out a great change in this respect, to realise our ignorance and to make up our minds to face the question, how and what to change boldly and altogether. We have changed before when it has suited our convenience, adopting details from the Muslims when it fell in with our wishes, and many of us, even our conservatives, are European in their tastes at times. It is obvious that much of our religion and many of our social institutions of to-day have nothing in them except perhaps a faint shadow of their old vigour and glory on which our old greatness was founded.
India needs a great national movement in which each man will work for the nation and not for himself or for his caste, a movement carried out on common-sense lines. It does not mean that we are to adopt a brand-new system from Europe, but it does mean that we must borrow a little common-sense in our solutions of the problems of life.

We must resolutely see what we need, and if we find a plain and satisfactory solution adopt it whether we have traditional authority for it or not. Turn to the past and see what made India great, and if you find anything in our present customs which does not square with what you find there, make up your minds to get rid of it boldly, without thinking that it will ruin you to do so. Study the past till you know what knowledge you can get from it which you can use in the present and add to it what the West can teach us, especially in the application of Science to the needs of life.

You, Gentlemen, are the leaders of India, and if you fail, she fails. Let each of you make up his mind that he will live by what his reason tells him is right, no matter whether it be opposed or approved by any sage, custom or tradition. Think, and then act at once. Enough time has been wasted in waiting for time to solve our problems. Wait no longer but strike and strike home.

We have our “ancient régime” of custom and prejudice to overcome: let us meet them by a new Liberty, Equality and Fraternity; a Liberty of action, Equality of opportunity and the Fraternity of a great national ideal. Then you may hope to see India a nation again, with a national art and a national literature and a flourishing commerce, and then, but not till then, may you demand a national government.

I should like to pay a personal tribute to the organisers of this Exhibition, for the trouble and energy they have expended in making this collection of Indian arts and industry so fine and representative a collection; and to the local authorities and their able head, Mr Lely, the popular Commissioner, whose name will ever be a household word in Gujarat for his unfailing kindness in famine and plenty, who has taken so encouraging an interest in this Exhibition.
Surely it is a good omen for the success of our industrial revival that this Exhibition takes place in Ahmedabad, a town long famous for its enterprise and energy, which already possesses factories and industrial connections of importance with the industrial world. If only we had a few more Ahmedabads, India would not have long to wait for a real revival of her commerce.

And last of all, I have to pray for the long life, happiness and prosperity of His Gracious Majesty the King-Emperor, whose accession we are about to celebrate in so splendid a manner and whose reign will, we trust, inaugurate a new period of strong and prosperous national life for India, which will make her the brightest jewel in that Imperial Diadem.
Report on Trade in the Baroda State

1902
GENERAL SUGGESTIONS.

1. Trade throughout the Raj is in a state of depression and decline. The great industries that once flourished, such as weaving, dyeing, sharafi &c. are entirely broken and though a number of small retail trades have sprung up, the balance is greatly on the side of decline. The main causes of this condition of things are

   I European competition and that of such towns as Ahmedabad, Poona &c.
   II The Introduction of machinery.
   III The abandonment of ancestral professions.
   IV The continual drain of money from the State effected by
      (1) Immense purchases from Europe, Bombay &c.,
      (2) Employment of officials from outside the Raj,
      (3) Preference of foreign to local contractors,
   and other similar causes.

2. To combat these evils there are certain general measures which are essential, as without them local industry must continue to be handicapped and consequently continue to decline.

3. Wherever such goods are produced locally as for their combined excellence and cheapness may properly be used by the Government, these should be preferred in State purchases to all others. The transference of Government custom from good local manufactures where such exist is especially undesirable and ought to be avoided. Where better work begins to be
produced outside, the local artisans ought with proper encourage-
ment from the Revenue authorities to be able to make up the
deficiency. But such improvement is impossible if Government
instantly withdraws its custom.

4. The State should make inquiries on a large scale for
Improvement of local
production.

(a) means of improving local production to the European
standard;
(b) means of improving country hand-machines.

Weaving, for instance, was once a great and famous industry
in every division of the Raj. A Committee should be appointed
to find out in each place where the most excellent hand-woven
cloths used to be made, the real causes of decline and to discover
and apply measures by which they may compete successfully
with European cloths. This would not be so difficult a matter
as it appears at least with regard to several woven and dyed
cloths. These are inferior to European in appearance and fine-
ness but superior in strength and durability. It ought not to be
impossible to supply the missing qualities. Much may be done
by experiments under sub-head (b), and such are very necessary
as European machinery is too costly to be introduced on the
scale required. Similarly with regard to dyeing attempts should
be made to discover pucca country dyes and improve such as
are already in use.

5. Besides this the State should push forward the same object
by
Means of encouraging
industrial expansion.

(a) help and inducements.
(b) patronage.
(c) spread of knowledge.
6. The help may come in the shape of tasalmat. This should especially be given where enterprising traders have started work of an European quality and need help to bring the enterprise to perfection. But for the objects of the Government to succeed, it is necessary that tasalmat should not be given in the present haphazard fashion, but after careful inquiry and stringent tests and with due and constant supervision.

7. Help may also be given in the shape of machinery, which should be given at cost price to workers in articles which can be produced more cheaply here than abroad. These workers should receive grants on condition of using the machinery. There are instances in which deshi artisans have succeeded in reproducing English machinery, after one or two mistakes, at a much cheaper rate than the English.

8. Often only polish is required, or better implements, to bring country goods up to the proper standard. In these cases Government might give the workers specimens and patterns of English work as there are in many places artisans skilful enough to reproduce work they have once examined, and should help them in procuring the necessary tools.

9. Those who first manufacture locally from material which is at present exported raw should have their work made easy for them in the matter of taxes &c., and clever artisans settling from outside should have building timber &c., cheap or gratis.

10. Inducement should be held out to

(a) those who bring up country goods to the European Standard;
(b) those who bring such improved commodities into the market.

www.holybooks.com
This inducement should take the shape of grants (buck-sheesh, inams) or of a poshak given in durbar.

11. The State should patronize all country commodities thus improved to an European standard in preference to European commodities, as also new industries, that is to say, manufactures made from material now exported in a raw state.

Lists should be prepared from each khata of the articles in use there and over against each item, details should be entered as to whether, how far, and where they are prepared in the State, along with the price, quality and other necessary particulars. With these lists as a basis, there should be a stringent rule enforced on all departments that wherever country goods equal or even a little inferior to European can be had, European goods should be eschewed in their favour.

Artisans who can work up to the European level, besides receiving costly Inams, should be favoured with the State custom, half the price being advanced as tasalmat.

12. In order to spread knowledge the State should adopt the following methods.

(a) A monthly technical magazine should be issued, containing among other things reliable accounts of the raw material of each mahal and the capabilities of that material.

(b) A pamphlet in very simple Guzerati should be circulated containing every information useful to those who may think of establishing factories, viz. the necessary cost, the nature, use and procurability of the necessary machinery etc.

This will encourage the manufacture of raw material which is at present exported and brought back as manufacture to be sold at heavy prices. There are many who would undertake such enterprises if they only had the information described.
(c) Public lectures by competent people. 
(d) Industrial exhibitions.

An exhibition of specimens of the best European work should be held in different places, having regard to the articles that are there produced, and the artisans should be allowed to take the specimens home with a view to reproduction.

In addition a triennial exhibition should be held in each great Kasba, a grant of Rs. 1500 to 3000 per division being sanctioned for the purpose, where the work of different localities, etc., may be collected.

13. The abandonment of ancestral trades is mainly due to the attractions of service and the failure of the old trades owing to the inferiority of the work. The only remedy is technical education. In the schools only two or three hours should be reserved to general education, the rest being devoted to technical. Each pupil should be instructed in his own craft, and after that instruction is complete, he may be directed to extend his attention to other trades. A rule should be enforced to the effect that work turned out by artisans so instructed should be utilized by the State departments in preference to any other. Pecuniary and other encouragement should be held out wherever necessary. This instruction should be made compulsory in the Kasbas as also in the case of Dheds and other low castes for whom education is specially provided by the Government.

14. With regard to contracts the following rules should be made and strictly enforced.

Contracts.

I Izara tenures should as far as possible be held by permanent residents of the Raj.
II Contracts should be similarly given to permanent residents if they can do the work well and cheaply; otherwise they should be given by preference to outsiders who have become resident in the Raj.
III A committee of officials and respectable non-officials
(sowkars etc.) should be appointed to supervise contracts.

IV Annual patraks should be drawn up and circulated among thousands showing,
(a) what articles are to be supplied from each Prant;
(b) in what lines contractors are needed;
(c) what knowledge and fitness they must possess;
(d) where the required articles can be had cheap and good.

V Whatever goods can be had at convenient rates within the Raj should be procured there and not from outside.

VI Officers who do not observe these rules, and favour their own men should be degraded to a lower post.

15. The main hindrances to expansion of trade are

Obstacles to expansion.
(a) the want of technical education;
(b) burdensome and unequal duties;
(c) difficulty of procuring capital;
(d) insufficient means of communication.

16. Technical and agricultural education are both imperatively required; in many talukas it is impossible to make even a beginning without it and in none is it possible to make any great advance or to compete with even moderate success against foreign manufactures.

17. A technical school should be established in each division and over and above this in each Kasba where a sufficient number of boys can attend. The Kasba schools should teach

(a) manufactures which are in great demand but have to be brought from outside;
(b) trades in which the supply of workers falls below the demand.
Some boys from each division should be taught at the Kalabhavan at State expense and Kalabhavan students who start factories should be helped by Government loans. From each mahal some boys should be taught at Government expense at Baroda or the Victoria Technical Institute, the money being recovered by instalments from their monthly earnings.

18. Students should also be sent to foreign parts for technical instruction; but their line should be rigidly fixed from the beginning and they should first receive what book knowledge and practical knowledge is possible and then, if necessary, be sent to a foreign workshop to complete their instruction. It is equally useless to send raw and uninstructed youths and to send students to acquire theoretical knowledge merely. They should be sent only for work in which factories are likely to be opened and for knowledge about the discovery and working of metals.

19. Except in backward parts and among very ignorant people, the subjects of the Raj almost everywhere express their willingness to send their children to Europe or elsewhere for technical and agricultural instruction. Parents are often unwilling to send boys to the Kalabhavan because they have no clear idea what will be taught to them. The Revenue officials ought to be able easily to remove this difficulty.

20. The question of duties is a difficult one; complaints come from every Prant and from every mahal and from officials and non-officials alike. The Commission is only able to say that the whole question of duties should be overhauled and rearranged in a sense favourable to trade. Beyond this need of a general enquiry a few circumstances and suggestions may be touched upon.

21. The Commission makes the following recommendations.

Duties

Necessary measures with regard to taxation.
(a) Where opening industries are hampered or ruined by duties, the Revenue officers should be expected to report the fact.

(b) Throughout the State anomalous cesses are levied, although the reasons originally alleged for levying them no longer exist or although there are very few houses left of the castes on which the cess was laid. These should be abolished.

(c) Heavy duties should be imposed on the import of such goods as are already made within the Raj, and duties on the import of raw materials which are manufactured in the Raj and exported should be entirely removed.

(d) Duties should not be levied twice on the same article i.e. on goods passing through Savli to Baroda once at Savli and again at Baroda.

(e) Municipal taxes should only be levied on articles used in the town and not on goods which enter it only to be again exported. Where possible duties should be abolished and a light cess placed in their stead on the cultivators.

(f) In many places there are duties in Gaekwari villages which in neighbouring foreign villages do not exist or only in a lighter form. It would be well if an understanding could be arrived at between this State and the British and other Governments. Until then such duties should be abolished or reduced to the level of the corresponding foreign duties.

22. The difficulty of procuring capital for industrial enterprise or agricultural improvement is reported from every taluka and it is a fact that to supply this want is the first desideratum without which nothing can be done. The only remedy is to establish Government banks in each mahal. Where possible, it should be a joint concern in which the capitalists of the mahal should be induced to take shares, the Government taking the rest. The existing banks should deal on a far larger scale. The Baroda
bank should keep deposits and lend money to any one at low rates (proper security being taken), the rate of interest given on the former being a little higher than that taken for the latter.

23. In every division and every mahal the means of communication are deplorably insufficient: a great number of railways, roads, bridges &c., will have to be constructed in order to open out the country; moreover no care is taken to keep the roads already constructed in repair; everywhere they are allowed to fall into bad condition. For this work of opening out the country District Boards should be set on foot with the Vahivatdar as chairman, and the Municipal, Forest and other officers and leading men as members. The Boards would borrow money at reasonable rates, the sanction of the works to be undertaken would rest with the Government and the debt could be paid off from the proceeds of tolls or cesses. A rough list of works required or suggested is included under each Division.

24. Some measures should be taken to encourage indigenous medicine. The following are suggested.

Indigenous Medicine.

(1) A list of herbs growing in Songhad Vyara should be prepared.

(2) A skilful Hakim or Vaid should be kept in each hospital in the big towns with some patients always under his treatment and the results registered under the supervision of the Civil Surgeon.

(3) In some small villages the whole medical work should be intrusted to such Hakims or Vaids.

(4) Two or three matriculated students should be taught at State expense both Native and English Medicine and put in charge of hospitals or dispensaries or set to make researches into the powers of herbs and publish books on the subject.
25. A trade in the horn, bone, skin, hair and fat of animals might be established in every taluka. At present a vast amount of these are allowed to go unused. In every division a place should be appointed for throwing dead cattle, and a contract should be given for taking out the hide and bone etc. Traders should be encouraged to open factories in which these articles will be immediately useful. The proceeds of the contract should be devoted, after burying the corpses, to the improvement of breed.

Agriculture.

26. The main features of agricultural decline are,
Causes of agricultural depression.

(a) deterioration of the soil;
(b) deterioration of cattle;
(c) ignorance of the best methods;
(d) difficulty of procuring capital.

27. The deterioration of the quality of the soil is very marked and arises from the vighoti assessment. The circumstances of the vighoti tenure have several very undesirable results.
In the first place they lead to continuous cultivation of the soil, the land never being left fallow, as assessment has to be paid whether the land is cultivated or not. The soil must obviously lose its productive power under such circumstances. It would be better for the State not to exact assessment from lands left fallow.

In the second place they lead to extensive cultivation, no provision being left for pasture.

Thirdly they lead to more land being undertaken by the cultivator than he can properly cultivate. Its full value is therefore not realized from the soil; less labour and less manuring results in a poorer out-turn over a larger area.
Fourthly they lead to the soil being taken up by Brahmins, Vaniyas and others ignorant of agriculture, the real agriculturists remaining as labourers without any interest in the soil.

A smaller area carefully cultivated by cultivators with an interest in the soil, sufficient land being left for pasture, would be far better than the present condition of large cultivated areas with a poor out-turn, deteriorating soil and deteriorating cattle.

27. With regard to the deterioration of the soil a committee of expert and practical men should be appointed to inquire

(a) what is the extent of the deterioration;
(b) what are the elements of fertility which have been lost;
(c) what are the materials (manure etc.) by which the lost elements can be recovered;
(d) which of these are the cheapest and most plentiful;
(e) as to divisions of soil what materials are required for each and in what amounts;
(f) in what tappas to introduce them;
(g) by what means to impart the knowledge of them to the kheduts;
(h) in what way to make their use compulsory on the cultivators.

The committee should be empowered to make the necessary experiments and after a year’s experience make a report.

28. The most obvious means of enriching the soil are irrigation and manuring. Wherever there are no talavs, wells, nekers or rivers, Government should sink one pucca well for every 100 bighas; the expenses could be recovered in nine or ten years, an addition being made to the assessment of the fields for that purpose. The same measure should be taken wherever asked for by poverty-stricken cultivators. The preservation of the wells should rest with the cultivators.

---

1 *This number is repeated in the original report.* — Ed.
Abyssinian and Artesian wells should be constructed. When cultivators dig wells and make the land bagayat they should be excused bagayat assessment for ten years as otherwise they will have to pay both assessment and the interest of Government money.

29. An universal complaint comes from every taluka against the working of the tagavi rules; it is stated that these are not carried out either liberally or expeditiously; that tagavi is given to new immigrants from outside who decamp with the money while the subjects of the Raj can with difficulty obtain it; that people are shy of taking tagavi because if they cannot pay punctually owing to a bad season or other accident, they are at once posted as defaulters and their credit ruined &c. The Commission can only recommend that a reliable inquiry should be made in the matter.

30. It appears that in several Talukas the people are not allowed to collect manure and in others the material for manure is destroyed under official orders. This is a needless waste, as no harm is likely to result from the collection of manure in the open air of the villages. A place should be fixed on the village padar, as also a place for bestowing the village refuse which should be distributed to the people cheap for manuring. In Amreli the burning of cow-dung should be stopped and the people allowed to take fuel from the Gir. The cultivators should also be persuaded to use bone-manure against which they have some objection but which owing to the plentiftness of bone can be brought into use with great advantage. Finally a heavy duty should be fixed on the export of certain plants that are commonly useful for manure.

31. From every division and every Taluka there is reported deterioration in the quality of the cattle, diminution in their numbers and consequent increase in their cost. The following are some of the causes.
(a) Failure of pasture owing to the cultivation of uncultivated and auction of Kharaba land. Consequent to this result of the vighoti system, hardly any land is left for the cattle and what there is, is of the very poorest quality so that the cattle can get little nourishment from it. The cultivators are too poor to provide good and sufficient fodder. Some measure must immediately be taken for this; a proper share of the land in each village (one fourth would not be too liberal an allowance) should be left for pasture. Goats should not be allowed to graze in gochar.

(b) Want of good bulls and male buffaloes. The Government should keep cattle for breeding in each village on the responsibility of the Patel and the cultivators should take turns to provide fodder. In Kamrej it is the custom to allow bulls marked as belonging to the village to graze anywhere; under this system there would be no expense of keep to the Government. Where bid is kept for grazing good cattle should be kept for breeding purposes and sold cheap to the cultivators.

(c) Cowslaughter. A duty should be imposed on cattle taken to the slaughter houses or to foreign parts.

(d) The shingoti duty upon bullocks and other cattle in Amreli should be reduced.

(e) Neglect, driving of sick oxen, over-driving, over-loading, ignorant methods of pasturing, use of the same cattle for agricultural labour and for conveyance owing to the enforcement of veth. Rules should be issued to put a stop to all this.

(f) Cattle have to be imported. These are brought on credit involving risk, delay in payment and law suits, considerations which increase the cost. An arbitration court should be established for such cases.

(g) Buffaloes are not used for agriculture in many talukas and the males are allowed to die instead of being reared. Revenue officials should be directed to instruct the people in this matter and a yearly patrak should
be submitted showing the extent to which the use of buffaloes in agriculture increases.

32. The increasing scarcity and cost of cattle has resulted in an increasing dearness of ghee which calls imperatively for the establishment of farms for milk-giving cows in Songhad, the Gir and other such places.

33. Along with deterioration there is a great increase of cattle diseases; for this there is no sufficient provision. There should be veterinary surgeons for each Prant: several boys should be taught for two or three years how to treat cattle diseases and one such qualified student appointed in each Taluka. A light fee might be levied for this expense.

Otherwise the most effective remedy for each of the chief cattle diseases should be ascertained and distributed with a printed list to each village. To very poor cultivators or owners of cattle they should be given free. Ordinary diseases should be treated on the spot and gratis.

34. Agricultural instruction should be imparted by the following methods: —

(a) Agricultural schools or classes teaching the children of cultivators free and other classes for a light fee. Scholarships should be given and some of the students employed.

(b) Public lectures by competent persons.

(c) Publication of Agricultural pamphlets, books or a magazine.

(d) Skilled cultivators should be sent to Europe along with English-knowing students to learn. They should take implements with them to compare with the European. It is useless to send students alone.

Those who thus study the subject should be intrusted
with agricultural improvement and rewarded for any notable success.

(e) Agricultural Exhibitions.

(f) Model Farms.

35. If model farms have not had any notable success in the State it is because they have not been carried out under the right conditions. The following methods should be adopted.

(a) Cultivators knowing local and foreign methods should be appointed to teach.

(b) The method of comparative experiments should be adopted to show the cultivators
   I the superiority of improved methods and manures;
   II the effect of nekers and wells;
   III the difference between well-fed cattle and cattle nurtured by themselves and between their milk, butter and ghee.

(c) The profit of cultivating by steam-ploughs should be shown to the zamindars and the use of European machinery to the students.

(d) The conditions under which coffee, tea, cinnamon, cloves etc., are grown should be taught to the cultivators.

(e) Model farms should be opened under varying climatic conditions.

(f) A model Farm should be opened with specimens of all the chief crops of the world.

(g) An annual or biennial agricultural exhibition of the crops thus produced should be held.

(b) The expenses of all such experiments should be published in so lucid a manner that all may understand.

36. Means of procuring capital easily and at easy rates, are, as has been said, the first condition of improvement. In the poorer talukas the oppression of the sowcars is very great, sometimes as in
740 Baroda Speeches and Reports

Mahuva driving the people over the border. Other talukas are greatly indebted, the sowcars force the people to mortgage their fields and houses and these are put to auction at the first failure to pay. A rule should be made that the sowcars must receive their dues by instalments.

37. Complaints of lands being too heavily assessed come from different quarters. It cannot be said how far these are true, but it is certain that the limitation of the settlement to 15 years leaves the cultivators little power to make improvements. The collection of the assessment at an unfavourable time and its enforcement in bad years has been prejudicial to agriculture; in Mehsana especially these hardships have led a great number of people to abandon agriculture. Leniency should be shown in bad years, and collection should only be made when the crops are ready.

38. Agricultural expansion depends partly on the cultivation of uncultivated land and partly on the growth of new crops. Where the kheduts are unable owing to their poverty to bring uncultivated soil into a fit state for cultivation, the State should first get it turned and then let it out.

39. In pushing on the introduction of new crops the following considerations must be kept in view.

(1) The crops which are cheapest in sowing, are most profitable.
(2) Those crops should by preference be introduced which have to be bought dear from outside.
(3) A new crop should not be introduced near a place where it is already largely grown.
(4) No new crop should be so introduced as to drive out of production any crop which is already largely and profitably grown or the loss of which would have to be made up by purchases at a high price from outside.
To settle this point a good cultivator should be got to sow both old and new in his land. The loss and profit of both should be carefully compared and the results published among the cultivators. Those who are exceptionally successful in introducing new crops, should receive grants.

40. As in many places there is a want of vegetables, an attempt should be made to introduce the growth of potatoes in each division, the State selling the seed. The introduction of Italian potatoes and bhoomug might be successfully carried out, but the experiment is too costly for any one except the Sarkar, unless special facilities in the nature of patents, &c. are given.

GENERAL.

41. A special officer should be appointed to watch over agricultural improvement, as the continual change of officers is a great obstacle to success.

42. Subas, Naib Subas and Vahivatdars should be asked to send in with their collections an account of the state of the people, and also of any rules &c., which weigh heavily on trade and agriculture, together with the reasons.

43. Copies of the Commission’s Report should be printed and circulated broadcast throughout the talukas.

Note. — The Commission has a suggestion that for articles over which Government has to spend thousands and lakhs of Rupees, it should start State factories; and as these must be conducted on business principles and not by official rules, a special Department should be created for them.

Resolving a Problem of Seniority in the High School

College Office
Baroda 3rd May 05.

Mr. Nag was appointed in the Baroda High School by His Highness the Maharaja Sahib but being on leave has not yet joined his appointment. I believe that His Highness the Maharaja Sahib while reserving to himself the full right to make appointments on other weighty grounds, is always willing to give the utmost consideration to the claims of seniority of old and deserving servants. Moreover the position and prospects of Mr. Nag if he is to enter the Educational Service permanently need clearer definition.

In forwarding this application, I therefore, take the opportunity to state fully my opinion on the matter.

The course suggested by the teachers to meet the difficulties of the case is of course quite impracticable. Mr. Nag is a graduate of the Cambridge University and has spent many years in Europe at great expense in order to acquire higher qualifications and a wider culture and experience, and to expect that he would be willing or ought to be asked to serve on Rs 65 in the last place of a Bombay graduate in this Department and with the prospects of a teacher of the second grade in the High School is to lose all sense of proportion. The precedent of Mr. Manishanker Bhat does not apply to such a case. Mr. Nag has accepted Rs 150 the lowest pay at present possible to a man of his qualifications with corresponding prospects and it is not possible to cut him down now from Rs 150 to Rs 65 with practically no prospects at all.

1 A printed representation by the graduate teachers in the second grade of the Baroda High School, requesting “that the claims of senior men may not be passed over while making appointments in the higher grade”. — Ed.
Even apart from this the expedient of turning part of the regular salary into personal pay is one which in my opinion ought not to be too freely used, as it tends to turn transference from one Department to another into an unmerited punishment.

On the other hand there are strong grounds for the rest of the representation; the work of the High School staff has been admirable and judged by examination results compares well with any other school in the Bombay Presidency, while the prospects are very poor and limited, and the introduction of a well paid outsider stops promotion far more effectually than can be the case in larger and more highly paid Departments.

Under these circumstances I suggest as the course which will as far as possible meet both sides of the question that Mr. Nag may be employed in the High School in a special grade like the Head Master and Mr. Dorabji Patel, and the rise in grade opened up by the appointment of Mr. Chunilal may be granted to Mr. Naravane although he will continue to work in the sixth standard. This would introduce the least disturbance in the chances of the High School staff and at the same time make it more convenient for His Highness to utilise Mr. Nag’s services in any way in future either in this Department or elsewhere without any disturbance to the regular grades of the English Schools.

On a Proposed Examination for Teachers

College Office,
Baroda, 9th August 1905.

To

The Minister of Education
BARODA.

Sir,

With reference to your letter No. 2047 dated the 28th May 1905 I have the honour to forward herewith my opinion regarding the rules for the Secondary Teachers’ Certificate Examinations which it is intended to be introduced in our Raj.

I have the honour to be
Sir
Your Most Obedient Servant
AAG
Ag. Principal, Baroda College.

OPINION.

I have gone very carefully through the scheme of the proposed examination for teachers and beg to give expression to the following opinions, which have been formed after very long and careful consideration.

2. I do not quite see the object of introducing this severe and stringent examination into our State. Our schools are working quite well enough on the whole for the purposes of education
as given in this country. I do not myself think very highly either of the principles or methods or results of that education but, being subject to the Bombay University, we have to take things as they are and cannot attempt anything ideal. Whatever defects still exist are inseparable from the low pay and qualifications required in the lower rank of teachers. In certain respects they may be modified by a mild test; but the sort of examination here proposed is such as might be prescribed in an European country where the science and art of education are really advanced. Here it is likely to degenerate into a formality harassing to the teachers but useless to the State. We simply have not got sufficient foothold from which to make a leap like this. Undoubtedly the teachers will cram up the subjects learning by rote as is the habit in this country and a percentage of them will pass, but there it will end; a few of the brighter and smarter young men may understand and make the attempt to apply the principles they learn, but that will be all. If the University with its new constitution succeeds in giving a better basis for culture, then after a few years we might see what can be done; or we may watch the results of our training College and gradually apply an adequate test.

3. If it is thought necessary to have a departmental examination now I should suggest the following alterations.

Rule 8. Whatever examination is held, should be formal and conducted by more than one person. This rule, making the promotion or dismissal of State servants depend on an informal oral examination by the Minister of Education, seems [to] me contrary to the principles which should govern these tests. The test under such circumstances might very easily be applied with great haste, injustice or partiality. The fact that the present Minister of Education is above suspicion in these respects does not guarantee the future. The opinion of a Committee of 3 members would alone ensure a reasonable security to the teachers. I would suggest that at least one of them should be a Professor of the College.
Rule 9. 50 per cent is too high a percentage in a test of this kind. 33 per cent, the University standard, should be adopted, especially if removal is to be the penalty of failure.

Rule 10. This rule is Draconically harsh. Removal ought on no account to be made the penalty of a Departmental Examination; the ordinary principle that the passing of the Examination will count in promotion is quite sufficient.

4. As to the subjects of the examination, I would make it a far slighter affair than this up-to-date American machine would be.

Junior Examination.

Part II. Instead of this elaborate affair, it will be enough to see whether the teacher can make the boys understand the lesson, explain a subject correctly and command their attention. That is as much as we can ask of our teachers at present. Only head (c) should be rather carefully attended to especially with regard to the English Language. Head (d) should be dropped altogether; discipline especially is a matter for the Head Master to testify; it is impossible for the examiners to test it, since the boys would be on their best behaviour on such an occasion,— unless they were like English boys and the teacher unpopular, when they would be on their worst.

Senior Examination.

Part I. Let (3) Psychology be dropped and if (2) must be kept, let it be as simple an affair as possible—a fair general knowledge of the main developments and their principles being alone required.

Part II. The same remarks apply as to the Junior Examination, in the case of graduates the same care about language is not necessary; it is the undergraduates who are occasionally deficient, at least in English.
I am not in favour of introducing the Honours Course just now. Let our Training College succeed first, and the general practical capacity of our teachers be set on a sure basis. We may go in for educational luxuries afterwards.

ARAVIND A. GHOSE
Ag. Principal, Baroda College
On a Head Assistant for the High School

Concise History

The Baroda High School has for some time been increasing in numbers, until now it has reached the very large number of 750. It is high time therefore that in view of this immense increase, which renders the discipline of the School unmanageable by a single man, however active or able, some better arrangement should be made for the proper management of the School. A Head Master has to attend not only to the scholastic efficiency but to discipline and, so far as is possible under the conditions of Indian School life, to the life of the boys outside school-hours, especially to the physical education. The first object is fulfilled well enough under present circumstances, the second with but moderate success, the third hardly at all. The scholastic efficiency of the School is on the whole admirable and the present Head Master and his staff deserve every credit for it. There are certain inconveniences resulting from the large number of classes which have to be maintained but at present these can be met.

Mr. G. M. Hasabnis wishes that an additional Teacher should be appointed, as he finds great difficulty in arranging for the classes when several teachers happen to be ill or on leave at one time. The undersigned acknowledges the difficulty but he is inclined to think it has been more acutely felt this year owing to exceptional circumstances and would like to wait for some time and see whether it is so or not, before making any proposal.
3  The discipline of the School is maintained as well as possible under the circumstances, but marked signs are not wanting that the task has become too much for any single man to cope with. The circumstances which have brought about this state of things are as follows: —

(1) The very large increase in the number of students from 400 when Mr. Hasabnis took charge to 750 now.

(2) The consequent increase in the number of classes for each standard; formerly no standard had more than two divisions; now each standard has five classes with three very large Matriculation Classes.

(3) The increase of the Drawing, Writing, Gymnasium and second language classes.

(4) The addition of new buildings for the accommodation of the increased number.

(5) The office work has much increased.

(6) The teaching work of certain classes takes up much of the Head Master’s time and the area over which the classes are spread is large; merely going round for inspection, surprise visits and general supervision takes up a great deal of his time.

(7) The work of new admissions every fortnight is heavy; then the various examinations are a great tax on the Head Master’s energy.

4  To see to the proper efficiency and progress of the physical education is under the circumstances a task beyond his energies; yet this is a side of Education the importance of which is being more and more recognised. The High School has much way to make up in this respect.
On a Head Assistant for the High School

5 The one fully effective remedy would be to increase the High School staff by the appointment of an Assistant Head Master. This would relieve the Head Master of much of his teaching work and give him both leisure and efficient assistance in the two other matters. This would not be an excessive allowance for so large a school. In the Elphinstone High School which is smaller in size two Head Assistants are, I believe, allowed.

6 Having consideration however to the many calls on the State and the financial position, I am content to make a very modest proposal, viz. that one of the Matriculation Class Teachers’ posts, the maximum salary of which is Rs 125/- should be converted into a post of Head Assistant, salary rising from Rs 160/- to Rs 200/- in 8 years. The duties of the incumbent will be, in addition to his teaching work, to help the Head Master in maintaining the discipline of the School and give special attention to promoting the physical side etc. This appointment will not disturb matters in any way and will probably not really add to the expense of the School, as the slight excess will soon be made up by the increasing number of students. In any case the arrangement seems to the undersigned imperatively necessary.

7 Should the proposal be sanctioned, I propose for the post Mr. Dorabji M. Patel, Head Master Amreli High School (whose present salary is Rs 150/-) who adds conspicuous ability and intelligence to his long and meritorious service and is likely to carry weight with both teachers and students.

Points for decision

(1) Whether it is necessary to convert one of the Matriculation Class Teachers’ posts, the maximum salary of which is Rs 125/- into Head Assistant’s post — salary
Rs 160/- to Rs 200/- for the efficient management and discipline of the Baroda High School?
(2) If so, should M't D. M. Patel be appointed to that post?

**Opinion**

(1) Yes.    (2) Yes.

Appendix Two

Premises of Astrology

Sri Aurobindo wrote these notes around 1910. They were not intended for publication.
Chapter I

Elements

Astrology depends on three things, the position of the planets in the heavens and with regard to each other, the condition of the planets at the natal hour or at the moment of enquiry, and the general character or tout ensemble of the horoscope. Any error or deficiency with regard to any of these three elements separately or with regard to their mutual relations will affect the work of the astrologer and vitiate its correctness or its completeness. To cast a horoscope completely is one of the most difficult operations known to Science. The astrologer is born, not made. It is as impossible to manufacture a perfect astrologer by education as to manufacture a poet. Hence the disrepute into which the profession of astrology too lightly and numerously followed has fallen in the Kaliyuga. In addition nine tenths of the true science are lost and the little that remains, is replete with errors. Astrologers make lucky hits or stumble on the truth, but it is only a rare genius here & there who can predict correctly and even he is never safe against error. For even when his intuition divines correctly, his authorities mislead him.

The position of the planets in the heavens is determined by the sign of the zodiac through which they are passing, their relation to the ascendant sign, their precise position in the sign reckoned by degrees and minutes; their relative position to each other by the distance of their signs from each other.

The condition of the planets is determined by the sign they are in according to which they are either elevated, fallen, ascending or descending, or possibly at home; by the direction of their motion at the time, forward or backward; by the quality of their motion, swift, slow or normal; by their mutual relations of friendship, enmity or neutrality, — conjunction, aspect, opposition or distance; by their nearness to the sun, setting or rising, divergent or convergent; by their location in a sign — friendly,
neutral or hostile, fixed or moving, male or female, fiery, watery, aery, earthy or ethereal; by their relations with gentle, fierce or inconstant planets.

The character of the horoscope is determined by the number of elevated, fallen, ascending, descending or entrenched, progressive or retrograde, rapid, sluggish or moderate, well housed or ill housed, setting, rising, convergent or divergent planets; by the number & nature of the planetary relations, conjunctions, aspects, oppositions, by the character of the ascendant, its lord and its tenants, combinations, distributions. All these circumstances have to be considered in order to determine whether the horoscope is great, mediocre or petty, favourable or malign, strong or weak. The results have to be judged according to the character. The same details in a great horoscope will mean something very different from what they would mean in one that is petty or malign or even merely strong. Moreover even if all the positions are the same, yet the infinitesimal shifting of a planet or a change in its character will often mean the difference between life and death, success or failure. This is the reason why twins sometimes have different destinies, one dying, another living, or pursue an identical course up to a certain point, then diverge. One hears astrologers say when the minute of birth is approximately stated, That is good enough. It is the speech of incompetence or ignorance. The first necessity is to determine the exact minute or second of birth. All the general results may be potentially true, yet owing to some accident depending on a few seconds’ difference, none of them may have the occasion to come to pass. But if the exact details are obtainable, there is no chance of that comparatively rare, but nevertheless well-instanced fortuity.
Chapter II

The Signs

The signs of the Zodiac are twelve in number, beginning from the Ram, in which the Sun reaches its elevation, and arching back to it. They are, in order, the Ram, the Bull, the Twins, the Crab, the Lion, the Girl, the Balance, the Scorpion, the Archer or Bow, the Crocodile, the Jar and the Fish. The sixth sign is usually called the Virgin in Europe, but the word gives an idea of purity which is not the character of the sign and is therefore inappropriate. Each sign has a devata, a god or spiritual being in charge of it. He is not its master, but its protector and the protector of all who are born in the sign. Indra (Zeus, Odin) protects the Ram, Agni (Moloch, Thor) the Bull, the Aswins (Castor & Pollux) the Twins, Upendra (Baal) the Crab, Varuna (Poseidon) the Lion, Aditi, called also Savitri or Sita (Astarte, Aphrodite) the Girl, Yama (Hades) the Balance, Aryama (Ares) the Scorpion, Mitra or Bhava (Apollo Phoebus) the Archer, Saraswati called also Ganga (Nais) the Crocodile, Parjanya (Apis) the Jar, Nara (Nereus) the Fish. All these gods have their own character and tend to imprint it on their protégé. Or it would be truer to say, that men of particular characters tend to take birth under the protection of a congenial deity. Other gods stand behind the planets and the twelve houses & they also influence the temperament of the subject.

There are only two female signs, the Girl and the Crocodile; but the Twins, the Crab, the Balance, the Archer & the Fish are male with feminine tendencies. The rest are male.

There are three watery signs, the Crocodile, the Jar and the Fish; three fiery, the Bull, the Lion and the Scorpion; three earthy, the Twins, the Crab and the Girl; three aerial, the Ram, the Balance and the Archer. The only ethereal sign is the Ram, and it is ethereal only when either the Sun or Jupiter occupy it.

Each alternate sign beginning from the Ram is moving; each
alternate sign beginning from the Bull is fixed.

The names of the signs have nothing to do with their character in any of these kinds, but are determined by the spiritual “totem”, that is, the nervous type of the souls born in the signs. Those who are born in the Ram are brave, but mild and humane; in the Bull irascible, bold but not ferocious; in the Twins gentle, polite & worldly; in the Crab, timid or anxious to please, but formidable when angry, awkward but persevering and successful; in the Lion, royal, bold and splendid; in the Girl, amorous, charming and aesthetic; in the Balance just, mercantile, able; in the Scorpion, fierce, quarrelsome and impetuous; in the Archer, swift, brilliant and effective; in the Crocodile saturnine, brooding and dangerous; in the Jar thrifty, cautious and secretive; in the Fish restless, light and inconstant. It is not always the sign of birth, however, that is most powerful in fixing the temperament, it is sometimes the sign in which the sun or the moon or else the lord of the horoscope is situated; and none of these signs can be neglected. If they are all taken into consideration according to their respective force in the horoscope, a correct idea of the character may be formed; but even then the position and mutual relations of their lords must be taken into the account. This is the reason why men born under the same sign vary so much in character.

I must, however, guard against the idea that the signs and planets determine a man’s character or fate. They do not, they only indicate it, because the celestial & astral influences are the sensational or nervous force in Nature which become the instruments of our karma. That is why the European mystics gave the name of astral plane to the plane of sensational or nervous existence and astral fluid to the magnetic power or current of nervous, vital force in a man. It is this same vital force which pours upon us from all parts of the solar system and of this physical universe. But man is mightier than his sensations or vitality, or the sensational & vital forces of the universe. Our fate & our temperament have been built by our own wills and our own wills can alter them.
Chapter III

The Planets

The word planets as applied to the celestial instruments of our Fate in the modern astrology, is something of a misnomer. It is more accurate of the planets of the mental world than of the material solar system; for in the spherical system of the sukshma jagat, even the sun and the moon are planets, each circling in its own sphere round the central, fixed, but revolving earth. But a better term is the Indian word graha, those that have a hold on the earth. There are seven old planets, the Sun, Moon, Mars, Mercury, Jupiter, Venus, Saturn, and two others in process of creation, Rahou & Ketou. In addition there are two dead planets corresponding to Uranus & Herschel and two others not yet discovered. These are called aprakshita graha, unrevealed or unmanifest planets. The last four have no appreciable results except in certain physical and mental details. They may slightly affect the minute circumstances of an event, not its broad outlines. They may give certain kinks, in thought, character & physique, but do not seriously modify them. They are known but ignored by Indian astrology.

Different names are given to the planets by the Indian astronomers and for astrological purposes they are much more appropriate. Mars is Mangal, the auspicious, euphemistically so termed because of his great malignancy; Mercury is Budha, the clever, intellectual god, son of the Moon and Tara wife of Brihaspati; Jupiter is Brihaspati, Prime Minister of Indra, spiritual and political adviser of the Gods; Venus is Sukra, who occupies the same position to the Titans; Saturn is the malevolent Shani, child of the Sun. Rahou & Ketou are Titans of our mythology.

Each of these gods has his own character. Surya the Sun, is strong, splendid, bold, regal, warlike, victorious and energetic; Chandra, the Moon, is inconstant, amorous, charming, imaginative, poetical, artistic; Mangal is a politician, a soldier, crafty and
rusé, unscrupulous, unmerciful, tyrannical; Budha is speculative, scientific, skilful, mercantile, eloquent, clever at all intellectual pursuits; Brihaspati is religious, learned, a philosopher, a Yogi, master of occult sciences, wise, statesmanlike, fortunate, successful, invincible, noble in mind and disposition; Shukra is self-willed, lustful, a master of statecraft, a poet, thinker, philosopher; Shani is cruel, vindictive, gloomy, immoral, criminal, unruly, destructive. Rahou is violent, headstrong, frank, furious and rapacious. Ketou is secret, meditative, unsocial, a silent doer of strong and selfish actions. Each planet has a powerful influence on the man if it shares in the governance of the horoscope.

The Sun, Mangal, Saturn, Rahou & Ketou are fierce planets; Brihaspati & Shukra gentle and kindly; the Moon and Budha are one or the other according to circumstances and company, they are mildly severe and hostile or tepidly kindly. The others are stronger planets. Nevertheless the favour of the Moon or Budha, when they are wholly friendly, is a mighty influence.

The Sun is master of one sign, the Lion; the Moon master of one sign, the Crab; all the others except Rahou and Ketou are masters of two signs each, Mangal of the Ram and the Scorpion, Mercury of the Twins and the Girl, Brihaspati of the Archer & the Fish; Shukra of the Bull and the Balance; Shani of the Crocodile & the Jar. These are their homes and, when they are entrenched in them, they are exceedingly powerful and auspicious. Rahou & Ketou are still wanderers, homeless.

But they are still more powerful and auspicious when elevated. The Sun is elevated in the Ram, dejected in the Balance; the Moon elevated in the [ ], dejected in the [ ]; Mars elevated in the Jar, dejected in the Crab; Mercury elevated in the Balance, dejected in the Ram; Brihaspati elevated in the Crab, dejected in the Jar; Shukra elevated in the Twins, dejected in the Archer; Shani elevated in the Girl, dejected in the Fish; Rahou elevated in the Bull, dejected in the Scorpion; Ketou elevated in the Scorpion, dejected in the Bull. When dejected the planet is weak to help, but strongly maleficient. Moving from elevation to dejection, a planet is descendent, from dejection to elevation,
ascendant. A descendent planet tends towards weakness, an ascendant to strength, but it is better on the whole to have a planet just descendent than a planet only just ascendant. A good conjunction, helpful influence or favourable situation will go far to neutralise evil tendencies, and vice versa.

When setting in the rays of the sun or in opposition to the Sun, a planet tends to weakness, but not to maleficence. When it is convergent, coming from opposition to set, it grows in heat of force and is only eclipsed for the short period of its set, emerging full of energy. In its divergence it loses the energy. It never, however, forfeits by relation to the sun its other sources of strength.

Forward motion brings the fortune, devious motion delays, backward motion brings opposite results. According as the motion is swift, slow or normal, will be the pace of the good or evil fortune.

Beyond this the planets have certain mutual relations. A planet is in conjunction with another when in the same sign; in opposition when farthest away from it; in aspect when at a certain distance. Brihaspati when looking at a planet in the fifth or ninth house from it, starting from its own position, Mangal when looking at a planet in the fourth or eighth, Shani when looking at a planet in the third or tenth is said to have a full sight or aspect. All have otherwise full aspect when in opposition, three-quarters aspect on the third and tenth houses, half aspect on the fifth and ninth, quarter aspect on the fourth and eighth, no aspect, that is, absence of any relation, on the second, sixth and eleventh.

Each planet has natural friends, enemies or neutrals. The Sun is friends with all planets except Rahou & Ketou, who are enemies and Budha who is neutral. The Moon is friends with all planets except Rahou, Ketou & Brihaspati who are enemies. Mangal has as friends the Sun, Brihaspati, Rahou, Ketou and Shani, as enemies the Moon & Mercury, as a neutral Shukra. Budha has as friends the Sun, Moon, Brihaspati, Rahou, Ketou and Shukra, as enemies Mangal and Shani. Brihaspati has as friends the Sun, Mangal, Budha, Rahou & Ketou, as enemies the
Moon and Shukra, as a neutral Shani. Shukra has as friends the Sun, Moon, Budha, Shani, Rahou & Ketou, as enemy Brihaspati, as a neutral Mangal. Shani has as friends the Sun, Moon and Budha, as enemies Mangal, & Brihaspati, as neutrals Rahou, Ketou & Shukra. Rahou & Ketou have common enemies, the Sun & Moon, friends in each other, Brihaspati, Shukra and Shani, neutrals in Budha & Mangal.

These relations are fixed by the past of the devatas. But they have also occasional relations. A planet in conjunction with another or harbouring it in its house or harboured by it becomes its friend. There is no occasional neutrality; moreover it shares its host’s or its partner’s friendships and enmities, not its neutralities. It may have at the same time a natural friendship and an occasional enmity to another. In that case it does not become neutral, but is sometimes friendly, sometimes inimical. The natural is the stronger feeling.

There are finally certain gods who stand behind these planets. Behind the Sun & Moon is Vishnu, behind Mangal and Shani Rudra, behind Shukra, Rahou & Ketou is Kali, behind Budha Lakshmi, and behind Brihaspati Durga. Vishnu gives royalty & victory, Rudra force and fortune, Kali subversive genius & destructive energy, Lakshmi wealth & ease, Durga wisdom, protection and glory.
Note on the Texts

EARLY CULTURAL WRITINGS consists of essays on literature, education and art, as well as dialogues, biographical and historical sketches, and other short prose pieces. Most were written between 1890 and 1910, a few between 1910 and 1920. A little more than half the pieces (comprising about three-fifths of the bulk) were published during Sri Aurobindo’s lifetime; the rest of the pieces have been transcribed from his manuscripts.

The contents of the volume are arranged by topic in nine parts. Two appendixes, consisting mostly of material not written for publication, come at the end.

PART ONE: THE HARMONY OF VIRTUE
(CAMBRIDGE 1890–1892)

Sri Aurobindo wrote all these pieces while an undergraduate at King’s College, Cambridge, between 1890 and 1892. He did not publish any of them during his lifetime.

The Sole Motive of Man’s Existence. 1891. Editorial title. The piece obviously is incomplete. Sri Aurobindo left alternatives to several passages. These are reproduced in the Reference Volume.

The Harmony of Virtue. Dated “May 1892” towards the middle of the manuscript. The entire piece was probably written during 1892, Sri Aurobindo’s second and last year at Cambridge. He was referring to The Harmony of Virtue when he wrote late in his life: “It is true that under his [Plato’s] impress I rashly started writing at the age of 18 [more likely 19] an explanation of the cosmos on the foundation of the principle of Beauty and Harmony, but I never got beyond the first three or four chapters.” The name of the principal character, “Keshav Ganesh Desai”, recalls that of Keshav Ganesh Deshpande, one of Sri Aurobindo’s friends at Cambridge and subsequently in India. Sri
Aurobindo left alternatives to several passages in Book One. These are reproduced in the Reference Volume.

**Beauty in the Real.** 1892. Written after *The Harmony of Virtue*, in narrative rather than dialogue form.

**Stray Thoughts.** 1892. Editorial title. These “thoughts” are jottings from the notebook that Sri Aurobindo used at Cambridge for writing *The Harmony of Virtue* and other pieces.

**PART TWO: ON LITERATURE (BARODA 1893–1906)**

**Bankim Chandra Chatterji**

This series of essays was published in seven instalments in as many issues of the *Indu Prakash*, a weekly Marathi–English newspaper of Bombay: 16 July 1894, 23 July 1894, 30 July 1894, 6 August 1894, 13 August 1894, 20 August 1894, 27 August 1894. The pieces were not signed: the phrase “By a Bengali” was printed above the texts and the word “Zero” at the end in place of a signature.

In 1950, when the series was rediscovered and shown to Sri Aurobindo, he wrote:

> I have not intended to republish these articles as they were written when I had just recently come from England and they contain some very raw matter such as the remarks about Indian art which I no longer hold.

He added that it might be necessary for him “to revise and possibly to omit or alter some passages” before publication. He did not find time for this revision, and when the essays were published as a book in 1954, the *Indu Prakash* text was reproduced as it stood. The same text is reproduced here.

**On Poetry and Literature**

Sri Aurobindo wrote these pieces on literary subjects between 1898 and 1906 (or somewhat later). He did not publish any of them during his lifetime.

**Poetry.** Circa 1898–1901. Editorial title. This piece was written in the
Characteristics of Augustan Poetry. In the manuscript, “First Lecture” is written above the title. This piece and the following one were written by Sri Aurobindo while he was working as a professor of English literature at Baroda College between 1898 and 1901. The authors and periods covered by the two lectures were those assigned by the Bombay University for the “voluntary” section of the English B.A. examination in 1898 and 1899. Sri Aurobindo wrote additional passages for this lecture on blank pages of the manuscript. These passages have been printed as footnotes. A long passage that seems to expand ideas presented in the third paragraph of the lecture is published separately under the title “Poetry” (see above).

Sketch of the Progress of Poetry from Thomson to Wordsworth. See the note to the previous piece for dating information. Additional passages are treated as in that piece.

Appendix: Test Questions. Sri Aurobindo evidently wrote these questions to prepare his students for the university examination.

Marginalia on Madhusudan Dutt’s Virangana Kavya. Circa 1894 – 1900. Editorial title. These two pieces were written by Sri Aurobindo in his copy of the Bengali poet Michael Madhusudan Dutt’s Virangana Kavya (Calcutta: Vidyaratan Press, 1885). The first was written above the text of Epistle One, the second above the title of Epistle Two. The line of Sanskrit is from the Bhagavad Gita (2.16) and may be translated as follows: “that which is not, cannot come into existence; that which is, cannot go out of existence”.

Originality in National Literatures. Circa 1906 – 8. Editorial title. This piece, unlike the others in this section, may have been written by Sri Aurobindo after his departure from Baroda in March 1906.

The Poetry of Kalidasa

Sri Aurobindo wrote the material published in this section between 1898 and 1903. All but one of the pieces were meant for inclusion in a planned book-length study, the contents of which he sketched out in “A Proposed Work on Kalidasa” (see below). He used four notebooks for writing the material that was to make up this book, apparently working on two or more pieces concurrently. On the first page of
one of the notebooks he wrote the title “The Poetry of Kalidasa”; the editors have used this as the title of the section. Sri Aurobindo brought only two of the pieces to a satisfactory conclusion. One of them, “The Age of Kalidasa”, was revised and published in The Indian Review (Madras) in 1902. The other, “The Seasons”, was revised and published in Sri Aurobindo’s own weekly review, the Karmayogin, in 1909. The other pieces were left in varying states of completeness in the manuscript notebooks. In reproducing them here, the editors have followed the order of “A Proposed Work”. Certain passages that could not be included in the final texts have been published in an appendix at the end of the section.

The Malavas. Circa 1900–1903. Title taken from Chapter II of “A Proposed Work”.
The Age of Kalidasa. Circa 1898–1902. See Chapter II of “A Proposed Work”. This piece was published in The Indian Review of Madras in July 1902, and reprinted as a booklet by Tagore & Co., Madras, around 1921. Sri Aurobindo revised the text and republished it along with Kalidasa’s Seasons in a booklet entitled Kalidasa in 1929.
The Historical Method. Circa 1900–1903. Manuscript title: “Kalidasa — the historical method”; corresponds to a phrase in Chapter II of “A Proposed Work”. Sri Aurobindo broke off work on this piece abruptly; he did not put a full stop after the last word written.
The Seasons. Circa 1900–1903. Manuscript title: “The Seasons”; corresponds to Chapter III of “A Proposed Work”. Sri Aurobindo published this essay in his weekly journal, the Karmayogin, in three instalments in July and August 1909. It was reprinted as a booklet entitled Kalidasa’s Seasons by Tagore & Co., Madras, around 1921. The text was revised by Sri Aurobindo and published along with “The Age of Kalidasa” in Kalidasa in 1929.
Hindu Drama. Circa 1901–3; manuscript revised, probably after 1910. Title taken from Chapter VI of “A Proposed Work”. There are two separately written drafts dealing with this subject among Sri Aurobindo’s manuscripts. The one printed first here seems to have been intended to be the opening of the piece. Sri Aurobindo broke off work on this draft abruptly.

Vikramorvasie: The Characters. Circa 1898 – 1901. Editorial title, suggested by the title of Chapter IX of “A Proposed Work”: “The Characters”. Sri Aurobindo wrote separate passages (some of them incomplete) on the characters of the play without indicating exactly how he intended to put the passages together. The editors have followed manuscript evidence, the flow of the argument and common sense in assembling the present text. White spaces indicate that the passages above and below are not physically continuous in the manuscript.

The Spirit of the Times. Circa 1898 – 1901. Editorial title. It is possible that this piece was intended for use in “Hindu civilisation in the time of Kalidasa”, Chapters XVI – XVII of “A Proposed Work”. This essay was written by Sri Aurobindo on a sheet of letter paper headed “THE COLLEGE./BARODA.”. He served as professor of English of Baroda College between 1898 and 1901. The essay was one of many documents seized by the police when Sri Aurobindo was arrested in May 1908. It was not rediscovered and recognised as his until 1997.

On Translating Kalidasa. Circa 1903. Editorial title. This piece does not form part of “A Proposed Work”. It apparently was intended to accompany Sri Aurobindo’s translation of Kalidasa’s Cloud Messenger (Meghadūta), which has been lost. The bulk of the text consists of passages written in a single notebook. The editors have arranged these passages according to the flow of the argument. White spaces indicate that the passages above and below are not physically continuous in the manuscript. The passage published at the end containing examples from Shakespeare was written separately in another notebook. For the most part the editors have followed Sri Aurobindo’s idiosyncratic transliterations of Sanskrit words in this as in other pieces. When, however, Sri Aurobindo quotes entire lines or passages of Kalidasa’s poetry or comments on words from such lines, the editors have made use of the standard international system of transliteration.

Appendix: Alternative and Unused Passages and Fragments. Sri Aurobindo wrote the first of these passages in isolation around 1900. He wrote the others as parts of three of the chapters described above. The editors have not incorporated these passages in the final texts of
the chapters in question either because Sri Aurobindo himself excluded them from the revised version of the piece, or because he wrote another passage that covers the same ground and the editors have chosen to use that passage in the text.

On the Mahabharata

Sri Aurobindo wrote these essays and notes on the Mahabharata around 1902. He did not publish any of them during his lifetime.

Notes on the Mahabharata. Circa 1902. Sri Aurobindo wrote this essay shortly after September 1901, when the “recent article” mentioned in the first paragraph, Velandai Gopala Aiyer’s “The Date of the Mahabharata War”, was published in *The Indian Review* of Madras. The text of Sri Aurobindo’s essay consists of: (1) an elaborate title page with “proposita”; (2) an introductory passage headed “Vyasa; some Characteristics”; (3) a longer passage mostly on the same subject beginning “Vyasa is the most masculine of writers”; (4) a long passage beginning “It was hinted in a recent article in the Indian Review”, dealing, among other things, with the political story of the Mahabharata; and (5) a short incomplete passage headed “Mahabharata”, concerned mainly with linguistic matters. Passages (1) to (4) were written in that order in one notebook; passage (5) was written independently in another notebook around the same time. (Note that in passage (5) Sri Aurobindo wrote that the date given by Aiyer in the *The Indian Review* was “known beyond reasonable doubt”, indicating that this passage, like passages (1) to (4), was written after September 1901.) It is clear from indications in the manuscript that (4) was intended to replace (2) as the opening of the essay. Most of (2) was to be incorporated in (4), which was to be followed by (3). The present text of the essay has been printed in accordance with these guidelines. Since some interesting paragraphs of (2) were not marked for inclusion in the recast essay, all of (2) has been reproduced after the main text (4 and 3). The independent piece (5) has been placed at the end, while the title page (1) remains at the beginning.

Sri Aurobindo never prepared this material for publication; this explains its unfinished appearance. There are signs that he looked at...
it again around 1909, but he never gave it a thorough revision. In
1932 the manuscript was uncovered by his secretary Nolini Kanta
Gupta, who wrote to Sri Aurobindo of his intention to copy it out. Sri
Aurobindo replied on 23 April 1932: “Is this essay still in existence; if
so, you can rescue it and I will see what can be done with it.” Nolini
made a transcript, but Sri Aurobindo did not work on it then or later.
Notes on the Mahabharata [Detailed]. Circa 1902. Around the time
that Sri Aurobindo worked on the above essay he made a set of detailed
but not altogether systematic notes on the first adhyāya and one verse
of the second adhyāya of the Udyoga Parva, as well as some stray
notes on the Adi Parva. He gave the notes on the Udyoga Parva the
same title that he used for the above essay: “Notes on the Mahabharata”.
Some years later he wrote some isolated notes on the Drona
Parva.

PART THREE: ON EDUCATION (1899–1920)

Sri Aurobindo wrote these pieces during three different periods:
1899–1904, in Baroda; 1909–10, in Calcutta; circa 1916–20, in
Pondicherry. All but two of the pieces were published shortly after
they were written.

Address at the Baroda College Social Gathering. Editorial title. Sri
Aurobindo delivered this talk to those attending the annual social
gathering of Baroda College on 22 July 1899. At that time he was
working as professor of English at Baroda College. The talk was pub-
lished in The Baroda College Miscellany, vol. 5, no. 2 (September
1899) under the title The Address Delivered by Professor Ghose at the
College Social Gathering, and reprinted in The Life of Sri Aurobindo
by A. B. Purani (1958 and subsequently).

Education. This piece consists of two separate fragmentary passages
written in notebooks used also for Notes on the Mahabharata (see
above). The passages thus were probably written around 1902. Be-
tween 1901 and 1904 Sri Aurobindo worked in a secretarial capac-
ity for the Maharaja of Baroda, and was sometimes asked to write
speeches for him (see note to Appendix One, below). As the present
piece is addressed to the Maharaja (“your Highness”), it cannot have
been intended for delivery by him. It may have been meant for delivery by an officer of the State or by Sri Aurobindo himself.

The Brain of India. This series of essays was published in the *Karma-yogin* in four instalments between 9 October and 13 November 1909. It seems to have been, at least in part, a reply to “The Bengali Brain and its Misuse”, an essay by Dr. P. C. Ray that is mentioned by Sri Aurobindo in his review of *Suprabhat* (see page 567). The essays were republished as a booklet in 1921, 1923, 1944, 1948 and subsequently.

A System of National Education: Some Preliminary Ideas. This series of essays was published in the *Karma-yogin* in eight instalments between 12 February and 2 April 1910. Sri Aurobindo left Calcutta for Chandernagore in the middle of February 1910, at which time he broke off his connection with the journal (see the note to Part Six for details). He evidently left the manuscript of *A System of National Education* behind, and eight chapters of the work were published in the *Karma-yogin* by his associate Sister Nivedita (Margaret Noble), whom he had asked to look after the journal in his absence. The eighth chapter was published in the journal’s last issue. Other chapters, if they were written, have been lost. The eight essays were published as a booklet in 1921 by Tagore & Co., Madras. This apparently was a pirated edition; in 1924 the “only authorised edition” was published by the Arya Publishing House, Calcutta. In this edition, Sri Aurobindo added the subtitle “Some Introductory Essays” as well as the publisher’s note that is reproduced here on page 381. The book was reprinted by the same publisher in 1944, 1948 and 1953, and by the Sri Aurobindo Ashram in 1970. In 1948 the subtitle was changed to “Some Preliminary Ideas”.

Message for National Education Week (1918). Editorial title. Sri Aurobindo wrote this message at the request of Annie Besant, a leader of the Home Rule movement and the editor of *New India*, a newspaper of Madras. It was published in *New India* on 8 April 1918, under the heading: “MESSAGES FROM SONS OF THE MOTHERLAND TO THEIR BROTHERS”. Sri Aurobindo’s was the longest of nine messages contributed by India’s “leading patriots”.

A Preface on National Education. These two essays were published in the *Arya*, a philosophical journal edited by Sri Aurobindo between
1914 and 21, in its last two issues, November/December 1920 and January 1921. Other instalments evidently were planned, but were never written.

PART FOUR: ON ART (1909 – 1910)

Sri Aurobindo wrote these pieces in 1909 and 1910 and published all but one of them in his journal, the Karmayogin.

The National Value of Art. This series of essays was published in the Karmayogin in six instalments between 20 November and 25 December 1909. The essays were republished as a booklet in 1922, 1936 (revised), 1946 and subsequently.

Two Pictures. This essay was published in the Karmayogin on 17 July 1909.

Indian Art and an Old Classic. This essay was published in the Karmayogin on 2 October 1909.

The Revival of Indian Art. This essay was published in the Karmayogin on 16 October 1909.

An Answer to a Critic. Editorial title. This incomplete essay was written shortly after August 1910, when the article it refers to, “Comment and Criticism. The Indian Fine Arts Critics”, was published in The Modern Review of Calcutta (vol. 8, no. 2, pp. 207 – 13). The author of this article, identified by The Modern Review as “A student of Mr. Ravi Varma, the famous Indian Artist”, made disparaging remarks about such critics as Ananda K. Coomaraswamy and Sister Nivedita.

PART FIVE: CONVERSATIONS OF THE DEAD (1910)

The first two of these dialogues were published in the Karmayogin, appearing in the last issues known to have been edited by Sri Aurobindo. (Two other dialogues published in later issues of the Karmayogin under the heading “Conversations of the Dead” were written by Sister Nivedita.) Drafts of the last three pieces form part of the Chandernagore Manuscript (see the note to Part Six). There are also typed versions of all five dialogues.

Dinshah, Perizade. Published in the Karmayogin on 12 February 1910.
Turiau, Uriu. Published in the *Karmayogin* on 19 February 1910.

Mazzini, Cavour, Garibaldi. Chandernagore Manuscript, gathering I, pp. 5–6. The typed copy, which is subsequent to the manuscript, has been used as the text. A defective version of this piece was published in *The Standard Bearer* on 7 November 1920, and subsequently in *The Harmony of Virtue* (1972).

Shivaji, Jaysingh. Chandernagore Manuscript, II: 6–7. The typed copy, which is subsequent to the manuscript, has been used as the text. A defective version of this piece was published in *The Standard Bearer* on 26 December 1920, and subsequently in *The Harmony of Virtue* (1972).

Littleton, Percival. Chandernagore Manuscript, III: 6–7. The typed copy, which is subsequent to the manuscript, has been used as the text. A defective version of this piece (Sri Aurobindo once referred to it as “much mangled by mistakes”) was published in *The Standard Bearer* on 29 May 1923, and subsequently in *The Harmony of Virtue* (1972).

**PART SIX: THE CHANDERNAGORE MANUSCRIPT (1910)**

The pieces that make up this section form the bulk of a 51-page handwritten manuscript originally consisting of three gatherings of foolscap paper numbered by Sri Aurobindo I: 1–16, II: 1–17 and III: 1–18. Each of the gatherings appears to be matter for one issue of a journal. Each begins with an essay entitled “Passing Thoughts” and contains an instalment of “Conversations of the Dead”, an instalment of “Epistles from Abroad”, one or more essays, including those entitled “Historical Impressions”, one or more other pieces, including those entitled “In/At the Society’s Chambers”, and a blank-verse poem. Several facts suggest that the journal these pieces were intended for was the *Karmayogin*. “Passing Thoughts” was the heading of the *Karmayogin*’s opening column of opinion in the issues of 12 and 19 February 1910. After being warned that he was about to be arrested for sedition, Sri Aurobindo departed from Calcutta for Chandernagore sometime towards the end of February 1910, and remained there incognito for about six weeks before voyaging to Pondicherry. Several sheets of the 51-page manuscript bear notations in another hand indicating that it was sent from somewhere to Calcutta and then returned. In addition,
all of Sri Aurobindo’s signatures on the manuscript were cut out or obliterated, a necessary precaution if it was in transit at a time when Sri Aurobindo was wanted by the police. Finally, a number of pieces that had been copied out from the manuscript were published in The Standard Bearer, a journal brought out from Chandernagore, in the 1920s. On the basis of this evidence, it would be natural to assume that Sri Aurobindo wrote the manuscript while in Chandernagore in February and March 1910 with the intention of having the pieces published in the Karmayogin, that the manuscript was sent from Chandernagore to Calcutta but returned without being published, and that some pieces were copied out from it in Chandernagore at that time and later published in The Standard Bearer. Against all this, however, stands a statement made by Sri Aurobindo in 1944 that his “active connection with the two newspapers [the Karmayogin and the Dharma] ceased” from the moment of his departure for Chandernagore (On Himself [1972], p. 57). Taken by itself, this statement would seem to rule out the possibility that Sri Aurobindo wrote the manuscript in Chandernagore for use in the Karmayogin. It is possible that he wrote the manuscript in Calcutta before his departure for Chandernagore, took it with him and sent it back from there to Calcutta. But it is also possible, and perhaps more likely, that he wrote the manuscript during his stay in Chandernagore and subsequently forgot about it, as he forgot about several other of his early writings.

To enable the reader to visualise the original structure of the 51-page Chandernagore Manuscript [CMS], the gathering and pages of the pieces are given.

Passing Thoughts [1]: Religion in Europe; Religion in India; The Real Minimum; The Maximum. 1910. CMS I: 1–2. A defective version of parts of this piece was published in The Standard Bearer on 13 March 1922 under the title “Hints and Clues”.

was published under the title “Academic Thoughts” in *The Standard Bearer* on 2 January 1921, and subsequently in *The Harmony of Virtue* (1972).

**Passing Thoughts [3]: Achar; Vichar; Vivek; Jnanam.** 1910. CMS III: 1–2. A defective version of this piece was published in *The Standard Bearer* on 26 September 1920, and subsequently in *The Harmony of Virtue*.

**Hathayoga.** 1910. CMS II: 3–5. A defective version of this piece was published in *The Standard Bearer* on 12 December 1920, and subsequently in *The Harmony of Virtue*.

**Rajayoga.** 1910. CMS III: 3–5. A defective version of this piece was published in *The Standard Bearer* on 19 December 1920, and subsequently in *The Harmony of Virtue*.

**Historical Impressions: The French Revolution.** 1910. CMS I: 7–10. A defective version of this piece was published in *The Standard Bearer* on 28 November and 5 December 1920, and subsequently in *The Hour of God and Other Writings* (1972).

**Historical Impressions: Napoleon.** 1910. CMS III: 8–11. A defective version of this piece was published in *The Standard Bearer* on 21 December 1920, and subsequently in *The Hour of God and Other Writings*.

**In the Society’s Chambers.** 1910. CMS I: 13–14. A defective version of this piece was published in *The Standard Bearer* on 24 July 1922, and subsequently in *The Harmony of Virtue*.

**At the Society’s Chambers.** 1910. CMS II: 13–15. A defective version of this piece was published in *The Standard Bearer* on 31 July 1922, and subsequently in *The Harmony of Virtue*.

**Things Seen in Symbols [1].** 1910. CMS II: 16. A defective version of this piece was published in *The Standard Bearer* on 28 November 1920, and subsequently in *The Harmony of Virtue*.

**Things Seen in Symbols [2].** 1910. CMS III: 16. A defective version of this piece was published in *The Standard Bearer* on 29 August 1920, and subsequently in *The Harmony of Virtue*.

**The Real Difficulty.** 1910. CMS II: 8. A defective version of this piece was published in *The Standard Bearer* on 15 August 1920, and subsequently in *The Hour of God and Other Writings*.

**Art.** 1910. CMS III: 12–13. A defective version of this piece was pub-
lished in *The Standard Bearer* on 27 March 1921, and subsequently in *The Harmony of Virtue*.

**PART SEVEN: EPISTLES/LETTERS FROM ABROAD (C. 1910–1912)**

The first three of these fictional letters form part of the Chandernagore Manuscript (see Part Six). The other three, entitled “Letters” and not “Epistles”, were written in Pondicherry a year or so later. Sri Aurobindo numbered the first two of the Letters “IV” and “V”, in sequence to the three Epistles. The final number, VI, has been given by the editors.

**Epistles from Abroad I–III.** 1910. CMS I: 11–12, II: 11–12, III: 14–15. Defective versions of these three pieces were published in *The Standard Bearer* on 20 March 1922, 3 April 1922 and 10 October 1920. All three were subsequently published in *The Harmony of Virtue*.

**Letters from Abroad IV–VI.** Circa 1911. These three pieces were not published during Sri Aurobindo’s lifetime. In establishing the texts of Letter V and Letter VI, the editors have followed an early version of the pieces, but have inserted the author’s revised versions of certain passages in the appropriate places. A white space indicates that the passages above and below are not physically continuous in the manuscript. Another version of the opening of Letter IV and an additional passage of Letter V have been printed as footnotes.

**PART EIGHT: REVIEWS (1909–1920)**

Sri Aurobindo published the first of these reviews in the *Karmayogin* in 1909 and the others in the *Arya* between 1915 and 1920. The first five of the *Arya* reviews are printed here in the order in which they appeared when published in the book *Views and Reviews* in 1941. Sri Aurobindo revised these five to some extent before this publication.

“**Suprabhat**”. Published in the *Karmayogin* on 14 August 1909 under the title “Suprabhat: A Review”.

“**Hymns to the Goddess**”. Published in the *Arya* in May 1915 and in *Views and Reviews* since 1941. The following note in the *Arya* concerning the “series of publications” mentioned in the first sentence
was deleted from the first edition: “We propose to deal hereafter with the most important of these publications, the translation of the Mahanirvana Tantra.”

“South Indian Bronzes”. Published in the Arya in October 1915 and in Views and Reviews since 1941.

“God, the Invisible King”. Published in the Arya in July 1917 and in Views and Reviews since 1941.

“Rupam”. Published in the Arya in April 1920 and in Views and Reviews since 1941. The footnote on page 593 was added by Sri Aurobindo when an extract from this review was included in the compilation Lights on Life-Problems (Second Series), published in 1951.

About Astrology. Published in the Arya in November 1917 and in Views and Reviews since 1941.

“Sanskrit Research”. Published in the Arya in March 1916.

“The Feast of Youth”. Published in the Arya in November 1918.

“Shama’a”. Published in the Arya in September 1920.

PART NINE: BANKIM — TILAK — DAYANANDA (1907 – 1920)

The articles making up this section, all of them biographical sketches or obituary notices, were published in various journals between 1907 and 1920. In 1940 five of them, “Rishi Bankim Chandra”, “Bal Gangadhar Tilak”, the two pieces on Dayananda, and “The Men that Pass”, were published in that order in a booklet entitled Bankim — Tilak — Dayananda, which was reprinted in 1947 and subsequently. (Also included in the booklet was Sri Aurobindo’s translation of Bankim Chandra’s hymn “Bande Mataram”.)

Rishi Bankim Chandra. First published in the Bande Mataram on 16 April 1907, this article was reproduced in a booklet entitled Rishi Bankim Chandra in 1923, and subsequently in Bankim — Tilak — Dayananda.

Bal Gangadhar Tilak. This article was first published as an introduction to Bal Gangadhar Tilak: His Writings and Speeches (Ganesh and Co.: Madras, 1918), and subsequently included in Bankim — Tilak — Dayananda.
A Great Mind, a Great Will. This obituary notice was written at the request of Bipin Chandra Pal, editor of the newspaper *The Independent*, in which it was published on 5 August 1920. (Tilak died on 1 August of that year.) The piece was not included in editions of *Bankim — Tilak — Dayananda* published during Sri Aurobindo’s lifetime, perhaps because the text was not available when the book was put together in 1940. The present text has been compared with the text published in *The Independent* as well as with a draft found among Sri Aurobindo’s manuscripts.

Dayananda: The Man and His Work. This piece was first published in *The Vedic Magazine*, Lahore, in 1915. It or the next piece or both were subsequently included in at least five pamphlets between 1921 and 1939. Both articles were included in *Bankim — Tilak — Dayananda* in 1940 and subsequently.

Dayananda and the Veda. This article was first published in *The Vedic Magazine* in 1916. See the note to the previous item for reprints.

The Men that Pass. This obituary article on Romesh Chandra Dutt was published in the *Karmayogin* on 4 December 1909, and included in *Bankim — Tilak — Dayananda* in 1940 and subsequently. In the 1940 edition it was originally to be placed after the article on Bankim Chandra. Asked “why Romesh Dutt should come after Bankim”, Sri Aurobindo replied, ironically, “I don’t know. I don’t know why he should be there at all.” Later, when correcting the proofs, he indicated that the Dutt piece should come at the end of the book.

APPENDIX ONE: SPEECHES AND REPORTS  
(BARODA 1901–1905)

Sri Aurobindo wrote the documents reproduced in this section while working as an administrative officer and professor in the erstwhile Princely State of Baroda. Then known as Arvind or Aravind or Aurobind Ghose, Sri Aurobindo began work in the state in February 1893, just after his return from England, and continued until February 1906, when he left to join the Swadeshi Movement in Bengal. During the first part of this thirteen-year period he was employed as a trainee in various administrative departments. From 1897 to 1901 he worked as a professor of English and of French in the Baroda College. There
followed a period of three years, 1901–4, when he served in a secretarial capacity under Sayajirao Gaekwar, the Maharaja of Baroda. (In many of the documents the Maharaja is referred to as “the Gaekwar”.) Finally, in 1905 and 1906, he returned to the College as vice-principal and professor. The documents reproduced in this Appendix are a selection from those that still exist, which are themselves perhaps only a fraction of the written work he produced while employed in Baroda. A selection from the letters he wrote at this time is included in On Himself.

Speeches Written for the Maharaja of Baroda (1901–1902)

Between 1901 and 1904, Sri Aurobindo was sometimes asked to write speeches for the Maharaja of Baroda. The first piece reproduced here is a draft from one of Sri Aurobindo’s notebooks for a speech that does not seem to have been delivered by the Maharaja. The second piece is a speech actually delivered by the Maharaja that is known to have been written by Sri Aurobindo.

Medical Department. Circa 1901. This piece, written by Sri Aurobindo in one of his own notebooks, clearly was intended to be a speech (or possibly a written report) presented by the Maharaja of Baroda. (“The year of my accession” [p. 689] refers to the year the Maharaja assumed the throne, 1881.) The Maharaja did give a speech entitled “Medicine and Health of the Community in India” on 29 March 1901, but this does not bear any resemblance to Medical Department. It is possible that Sri Aurobindo’s draft was rejected in favour of another’s.

The Revival of Industry in India. This speech was delivered by the Maharaja of Baroda on 15 December 1902, at the opening of the Industrial Exhibition held in Ahmedabad in conjunction with the 1902 session of the Indian National Congress. It certainly was written by Sri Aurobindo. He identified it as his composition in 1940, when one of his disciples commented: “a speech he [the Maharaja] made at the Industrial Exhibition was marvellous”. After ascertaining that it was the Ahmedabad exhibition that was meant, Sri Aurobindo drew a chorus of laughter by remarking, “That was the speech I prepared for him.” (Talk of 12 December 1940, published in Nirodbaran, Talks
Report on Trade in the Baroda State (1902)

Editorial title. These “General Suggestions” form the first part of a 72-page report on trade in the state of Baroda that was printed in 1902. Although unsigned, the report almost certainly was the work of Sri Aurobindo (see references below). He seems to have compiled the report from data contained in a four-volume manuscript report written in Gujarati or Marathi, the languages of the Baroda State. In summarising this material, he used his own language and enough of his own thought for the portion reproduced here to be considered his own work. The second part, dealing with “Local Suggestions” at three times the length of the first part, is not reproduced.

Three contemporary documents mention Sri Aurobindo (Arvind Ghose) as the author of what is called variously a “printed report”, an “English book in short” and “Mr. Ghose’s compilation”. All three apparently refer to the report reproduced here. The documents, all in the “Arvind Ghose collection” (AGC) of the Central Record Office, Baroda, are (1) letter Manubhai to Dewan 23 June 1902 (AGC file 5, pp. 141–42); (2) Huzur Mulki Department, General Branch File No. 214/F. N. 29 (AGC file 17, which also contains the copy of the report used as our text); (3) Huzur Mulki Department R. No. 111.

Opinions Written as Acting Principal, Baroda College (1905)

Resolving a Problem of Seniority in the High School. 3 May 1905. This opinion was written by Sri Aurobindo as acting principal of Baroda College in response to a representation of certain teachers in the Baroda High School (which was administered by the College) setting forth their objections to a proposal to give a new, highly qualified teacher a post that would normally have gone to one of them.

On a Proposed Examination for Teachers. 9 August 1905. Sri Aurobindo wrote this opinion in regard to a proposal to introduce an
examination for secondary school teachers while he was acting as principal of Baroda College.

**On a Head Assistant for the High School.** 13 September 1905. Another opinion on the running of the High School written by Sri Aurobindo while acting as principal of the College. (At this moment he was also temporarily acting as Minister of Education.)

**APPENDIX TWO: PREMISES OF ASTROLOGY (C. 1910)**

These notes, found in a notebook used by Sri Aurobindo around 1910, seem to have been written more as an *aide mémoire* than as an original contribution to the study of astrology. After the three complete chapters, Sri Aurobindo wrote the title of a fourth, “The Hours”, but did not continue. The title of the second chapter, “The Signs”, is editorial.

**PRINTING HISTORY**

A little more than half the pieces in the present volume were published in one form or another during Sri Aurobindo's lifetime. The following pieces first appeared in periodicals or, in one case, a book: *Bankim Chandra Chatterji*, “The Age of Kalidasa”, “The Seasons”, “Address at the Baroda College Social Gathering”, *The Brain of India, A System of National Education, A Preface on National Education, The National Value of Art*, “Two Pictures”, “Indian Art and an Old Classic”, “The Revival of Indian Art”, “Dinshah, Perizade”, “Turin, Uriu”, all the contents of the Chandernagore Manuscript, all the reviews making up Part Eight, and all the contents of Part Nine. See the above notes for details.

Several of these pieces were subsequently reprinted in the form of books during Sri Aurobindo's lifetime. The two essays on Kalidasa were printed as two separate booklets by Tagore & Co., Madras, around 1921. In 1929, they were published together under the title *Kalidasa* by the Arya Sahitya Bhawan, Calcutta. Sri Aurobindo saw the proofs and made some revisions. The book was reprinted by the Sri Aurobindo Ashram in 1950 and subsequently. In 1954 the Ashram brought out a posthumous collection of some of the unpublished writings on Kalidasa under the title *Kalidasa: Second Series. The Brain*
of India was published by the Prabartak Publishing House, Chandernagore, in 1921 and 1923, by the Arya Publishing House, Calcutta, in 1944 and 1948, and by the Sri Aurobindo Ashram in 1955 and subsequently. A System of National Education was published by Tagore & Co., Madras, in 1921, by the Arya Publishing House in 1924, 1944, 1948 and 1953, and by the Sri Aurobindo Ashram in 1970. The National Value of Art was published by the Prabartak Publishing House in 1922, by the Arya Publishing House in 1936 and 1946, and by the Sri Aurobindo Ashram in 1953 and subsequently. The second to sixth reviews in Part Eight were included in Views and Reviews, published by the Sri Aurobindo Library, Madras, in 1941. Sri Aurobindo saw the proofs of this book and made some revisions. It was reprinted in 1946 by the same publishers. Subsequent editions were published by the Sri Aurobindo Ashram. The contents of Part Nine were published under the title Bankim — Tilak — Dayananda by the Arya Publishing House in 1940 and 1947, and by the Sri Aurobindo Ashram in 1955 and subsequently. Sri Aurobindo saw the proofs of the 1940 edition and made some revisions.

Bankim Chandra Chatterji was first published in book-form by the Sri Aurobindo Ashram in 1954. Some of the material on the Mahabharata was first published in book-form in Vyasa and Valmiki by the Sri Aurobindo Ashram in 1956 and 1964. In 1989 all the material on the Mahabharata, augmented and reorganised, was published in volume 13 of Sri Aurobindo: Archives and Research. In 1991 and 1996 these texts were republished, in a slightly reorganised form, under the title On the Mahabharata by the Sri Aurobindo Ashram.

The speech “The Revival of Industry in India” was first published in Speeches & Addresses of His Highness Sayaji Rao III, Maharaja of Baroda, Volume One (Cambridge, 1927).

With a few exceptions, the material making up this volume was reproduced in 1971–73 in three volumes of the Sri Aurobindo Birth Centenary Library: Volume 3, The Harmony of Virtue: Early Cultural Writings, Volume 17, The Hour of God and Other Writings, and Volume 27, Supplement. The exceptions, most of which appear here for the first time in a book, are: “The Sole Motive of Man’s Existence”, some of the “Stray Thoughts”, all the contents of the “On Poetry and Literature” section of Part Two, “The Spirit of the
Collected Poems

Sri Aurobindo

www.holybooks.com
Publisher’s Note

Collected Poems comprises all of Sri Aurobindo’s poetical works with the exception of (1) the epic Savitri, (2) poetic dramas, (3) most translations into verse of poetry in Sanskrit, Bengali and other languages, and (4) original poetry in Bengali and Sanskrit. Savitri is published as volumes 33 and 34 of THE COMPLETE WORKS OF SRI AUROBINDO; the poetic dramas are included in volumes 3 and 4, Collected Plays and Stories; the poetic translations are included in volume 5, Translations; and the original poetry in Sanskrit and Bengali is published in volume 9, Writings in Bengali and Sanskrit.

The present volume includes all short and narrative poems in English that Sri Aurobindo published during his lifetime. It also includes all complete poems found among his manuscripts after his passing, as well as incomplete poetry that the editors thought worthy of inclusion.

The poems have been arranged in seven overlapping chronological parts, which are subdivided into sections representing different genres and states of completeness. Poems published in small books during Sri Aurobindo’s lifetime have, for the most part, been kept together as published.

Sri Aurobindo worked on the poems in this volume over the course of seven decades. The first one was published in 1883, when he was ten. A number were composed or revised more than sixty years later, during the late 1940s.

Part One

England and Baroda

1883–1898
Poem Published in 1883
Light

From the quickened womb of the primal gloom,
   The sun rolled, black and bare,
Till I wove him a vest for his Ethiop breast,
   Of the threads of my golden hair;
And when the broad tent of the firmament
   Arose on its airy spars,
I pencilled the hue of its matchless blue,
   And spangled it around with stars.

I painted the flowers of the Eden bowers,
   And their leaves of living green,
And mine were the dyes in the sinless eyes
   Of Eden’s Virgin queen;
And when the fiend’s art in the truthful heart
   Had fastened its mortal spell,
In the silvery sphere of the first-born tear
   To the trembling earth I fell.

When the waves that burst o’er a world accurst
   Their work of wrath had sped,
And the Ark’s lone few, tried and true,
   Came forth among the dead,
With the wondrous gleams of the bridal beams,
   I bade their terrors cease,
As I wrote on the roll of the storm’s dark scroll
   God’s covenant of peace.

Like a pall at rest on the senseless breast,
   Night’s funeral shadow slept —
Where shepherd swains on Bethlehem’s plains,
   Their lonely vigils kept,
When I flashed on their sight, the heralds bright,
   Of Heaven’s redeeming plan,
As they chanted the morn, the Saviour born —
   Joy, joy, to the outcast man!
Equal favour I show to the lofty and low,
   On the just and the unjust I descend:
E’en the blind, whose vain spheres, roll in darkness and
   tears,
   Feel my smile — the blest smile of a friend.
Nay, the flower of the waste by my love is embraced,
   As the rose in the garden of kings:
At the chrysalis bier of the morn I appear,
   And lo! the gay butterfly wings.

The desolate morn, like the mourner forlorn,
   Conceals all the pride of her charms,
Till I bid the bright hours, chase the night from her flowers,
   And lead the young day to her arms.
And when the gay rover seeks Eve for her lover,
   And sinks to her balmy repose,
I wrap the soft rest by the zephyr-fanned west,
   In curtains of amber and rose.

From my sentinel steep by the night-brooded deep
   I gaze with unslumbering eye,
When the cynosure star of the mariner
   Is blotted out from the sky:
And guided by me through the merciless sea,
   Though sped by the hurricane’s wings,
His companionless, dark, lone, weltering bark,
   To the haven home safely he brings.

I waken the flowers in the dew-spangled bowers,
   The birds in their chambers of green,
And mountain and plain glow with beauty again,
   As they bask in their matinal sheen.
O, if such the glad worth of my presence on earth,
   Though fitful and fleeting the while,
What glories must rest on the home of the blessed,
   Ever bright with the Deity’s smile.
Songs to Myrtilla
Songs to Myrtilla

GLAUCUS
Sweet is the night, sweet and cool
As to parched lips a running pool;
Sweet when the flowers have fallen asleep
And only moonlit rivulets creep
Like glow-worms in the dim and whispering wood,
To commune with the quiet heart and solitude.
When earth is full of whispers, when
No daily voice is heard of men,
But higher audience brings
The footsteps of invisible things,
When o’er the glimmering tree-tops bowed
The night is leaning on a luminous cloud,
And always a melodious breeze
Sings secret in the weird and charmèd trees,
Pleasant ’tis then heart-overawed to lie
Alone with that clear moonlight and that listening sky.

AETHON
But day is sweeter; morning bright
Has put the stars out ere the light,
And from their dewy cushions rise
Sweet flowers half-opening their eyes.
O pleasant then to feel as if new-born
The sweet, unripe and virgin air, the air of morn.
And pleasant are her melodies,
Rustle of winds, rustle of trees,
Birds’ voices in the eaves,
Birds’ voices in the green melodious leaves;
The herdsman’s flute among his flocks,
Sweet water hurrying from reluctant rocks,
And all sweet hours and all sweet showers
And all sweet sounds that please the noonday flowers.
Morning has pleasure, noon has golden peace
And afternoon repose and eve the heart’s increase.

All things are subject to sweet pleasure,
But three things keep her richest measure,
The breeze that visits heaven
And knows the planets seven,
The green spring with its flowery truth
Creative and the luminous heart of youth.
To all fair flowers and vernal
The wind makes melody diurnal.
On Ocean all night long
He rests, a voice of song.
The blue sea dances like a girl
With sapphire and with pearl
Crowning her locks. Sunshine and dew
Each morn delicious life renew.
The year is but a masque of flowers,
Of light and song and honied showers.
In the soft springtide comes the bird
Of heaven whose speech is one sweet word,
One word of sweet and magic power to bring
Green branches back and ruddy lights of spring.
Summer has pleasant comrades, happy meetings
Of lily and rose and from the trees divinest greetings.

GLAUCUS
For who in April shall remember
The certain end of drear November?
No flowers then live, no flowers
Make sweet those wretched hours;
From dead or grieving branches spun
Unwilling leaves lapse wearily one by one;
The heart is then in pain
With the unhappy sound of rain.
No secret boughs prolong
A green retreat of song;  
Summer is dead and rich repose  
And springtide and the rose,  
And woods and all sweet things make moan;  
The weeping earth is turned to stone.  
The lovers of her former face,  
Shapes of beauty, melody, grace,  
Where are they? Butterfly and bird  
No more are seen, no songs are heard.  
They see her beauty spent, her splendours done;  
They seek a younger earth, a surer sun.  
When youth has quenched its soft and magic light,  
Delightful things remain but dead is their delight.

AETHON

Ah! for a little hour put by  
Dim Hades and his pageantry.  
Forget the future, leave the past,  
The little hour thy life shall last.  
Learn rather from the violet's days  
Soft-blooming in retired ways  
Or dewy bell, the maid undrest  
With creamy childhood in her breast,  
Fierce foxglove and the briony  
And sapphire thyme, the work-room of the bee.  
Behold in emerald fire  
The spotted lizard crawl  
Upon the sun-kissed wall  
And coil in tangled brake  
The green and sliding snake  
Under the red-rose-briar.  
Nay, hither see  
Lured by thy rose of lips the bee  
To woo thy petals open, O sweet,  
His flowery murmur here repeat,  
Forsaking all the joys of thyme.
Stain not thy perfumed prime
With care for autumn's pale decay,
But live like these thy sunny day.
So when thy tender bloom must fall,
Then shalt thou be as one who tasted all
Life's honey and must now depart
A broken prodigal from pleasure's mart,
A leaf with whom each golden sunbeam sinned,
A dewy leaf and kissed by every wandering wind.

GLAUCUS

How various are thy children, Earth!
Behold the rose her lovely birth,
What fires from the bud proceed,
As if the vernal air did bleed.
Breezes and sunbeams, bees and dews
Her lords and lovers she indues,
And these her crimson pleasures prove;
Her life is but a bath of love;
The wide world perfumes when she sighs
And, burning all the winds, of love she dies.
The lily liveth pure,
Yet has she lovers, friends,
And each her bliss intends;
The bees besides her treasure
Besiege of pollened pleasure,
Nor long her gates endure.
The snowdrop cold
Has vowed the saintly state to hold
And far from green spring’s amorous guilds
Her snowy hermitage she builds.
Cowslip attends her vernal duty
And stops the heart with beauty.
The crocus asks no vernal thing,
But all the lovely lights of spring
Are with rich honeysuckle boon

www.holybooks.com
And praise her through one summer moon.
Thus the sweet children of the earth
Fulfil their natural selves and various birth.
For one is proud and one sweet months approve
Diana’s saint, but most are bondmaidens of Love.

Love’s feet were on the sea
When he dawned on me.
His wings were purple-grained and slow;
His voice was very sweet and very low;
His rose-lit cheeks, his eyes’ pale bloom
Were sorrow’s anteroom;
His wings did cause melodious moan;
His mouth was like a rose o’erblown;
The cypress-garland of renown
Did make his shadowy crown.
Fair as the spring he gave
And sadder than a winter’s wave
And sweet as sunless asphodel,
My shining lily, Florimel,
My heart’s enhaloed moon,
My winter’s warmth, my summer’s shady boon.

AETHON
Not from the mighty sea
Love visited me.
I found as in a jewelled box
Love, rose-red, sleeping with imprisoned locks;
And I have ever known him wild
And merry as a child,
As roses red, as roses sweet,
The west wind in his feet,
Tulip-girdled, kind and bold,
With heartsease in his curls of gold,
Since in the silver mist
Bright Cymothea’s lips I kissed,
Whose laughter dances like a gleam
Of sunlight on a hidden stream
That through a wooded way
Runs suddenly into the perfect day.
But what were Cymothea, placed
Where like a silver star Myrtilla blooms?
Such light as cressets cast
In long and sun-lit rooms.
Thy presence is to her
As oak to juniper,
Thy beauty as the gorgeous rose
To privet by the lane that blows,
Gold-crownèd blooms to mere fresh grass,
Eternal ivy to brief blooms that pass.

GLAUCUS
But Florimel beside thee, sweet,
Pales like a candle in the brilliant noon.
Snowdrops are thy feet,
Thy waist a crescent moon,
And like a silver wand
Thy body slight doth stand
Or like a silver beech aspire.
Thine arms are walls for white caresses,
Thy mouth a tale of crimson kisses,
Thine eyes two amorous treasuries of fire.
To what shall poet liken thee?
Art thou a goddess of the sea
Purple-tressed and laughter-lipped
From thy choric sisters slipped
To wander on the flowery land?
Or art thou siren on the treacherous sand
Summer-voiced to charm the ear
Of the wind-vext mariner?
Ah! but what are these to thee,
Brighter gem than knows the sea,
Songs to Myrtilla

Lovelier girl than sees the stream
Naked, Naiad of a dream,
Whiter Dryad than men see
Dancing round the lone oak-tree,
Flower and most enchanting birth
Of ten ages of the earth!
The Graces in thy body move
And in thy lips the ruby hue of Love.

O Coil, Coil

O coil, honied envoy of the spring,
Cease thy too happy voice, grief’s record, cease:
For I recall that day of vernal trees,
The soft asoca’s bloom, the laden winds
And green felicity of leaves, the hush,
The sense of Nature living in the woods.
Only the river rippled, only hummed
The languid murmuring bee, far-borne and slow,
Emparadised in odours, only used
The ringdove his divine heart-moving speech;
But sweetest to my pleased and singing heart
Thy voice, O coil, in the peepel tree.

O me! for pleasure turned to bitterest tears!
O me! for the swift joy, too great to live,
That only bloomed one hour! O wondrous day,
That crowned the bliss of those delicious years.
The vernal radiance of my lover’s lips
Was shut like a red rose upon my mouth,
His voice was richer than the murmuring leaves,
His love around me than the summer air.
Five hours entangled in the coil’s cry
Lay my beloved twixt my happy breasts.
O voice of tears! O sweetness uttering death!
O lost ere yet that happy cry was still!
O tireless voice of spring! Again I lie
In odorous gloom of trees; unseen and near
The windlark gurgles in the golden leaves,
The woodworm spins in shrillness on the bough:
Thou by the waters wailing to thy love,
O chocrobacque! have comfort, since to thee
The dawn brings sweetest recompense of tears
And she thou lovest hears thy pain. But I
Am desolate in the heart of fruitful months,
Am widowed in the sight of happy things,
Uttering my moan to the unhoused winds,
O coil, coil, to the winds and thee.

Goethe

A perfect face amid barbarian faces,
A perfect voice of sweet and serious rhyme,
Traveller with calm, inimitable paces,
Critic with judgment absolute to all time,
A complete strength when men were maimed and weak,
German obscured the spirit of a Greek.

The Lost Deliverer

Pythian he came; repressed beneath his heel
The hydra of the world with bruisèd head.
Vainly, since Fate's immeasurable wheel
Could parley with a straw. A weakling sped
The bullet when to custom's usual night
We fell because a woman's faith was light.
Songs to Myrtilla

Charles Stewart Parnell

1891

O pale and guiding light, now star unsphered,
Deliverer lately hailed, since by our lords
Most feared, most hated, hated because feared,
Who smot’st them with an edge surpassing swords!
Thou too wert then a child of tragic earth,
Since vainly filled thy luminous doom of birth.

Hic Jacet

Glasnevin Cemetery

Patriots, behold your guerdon. This man found
Erin, his mother, bleeding, chastised, bound,
Naked to imputation, poor, denied,
While alien masters held her house of pride.
And now behold her! Terrible and fair
With the eternal ivy in her hair,
Armed with the clamorous thunder, how she stands
Like Pallas’ self, the Gorgon in her hands.
True that her puissance will be easily past,
The vision ended; she herself has cast
Her fate behind her: yet the work not vain
Since that which once has been may be again,
And she this image yet recover, fired
With godlike workings, brain and hands inspired,
So stand, the blush of battle on her cheek,
Voice made armipotent, deeds that loudly speak,
Like some dread Sphinx, half patent to the eye,
Half veiled in formidable secrecy.
And he who raised her from her forlorn life
Loosening the fountains of that mighty strife,
Where sits he? On what high foreshadowing throne
Guarded by grateful hearts? Beneath this stone
He lies: this guerdon only Ireland gave,
A broken heart and an unhonoured grave.

Lines on Ireland

1896

After six hundred years did Fate intend
Her perfect perseverance thus should end?
So many years she strove, so many years,
Enduring toil, enduring bitter tears,
She waged religious war, with sword and song
Insurgent against Fate and numbers, strong
To inflict as to sustain; her weak estate
Could not conceal the goddess in her gait;
Goddess her mood. Therefore that light was she
In whom races of weaker destiny
Their beauteous image of rebellion saw;
Treason could not unnerve, violence o’erawe —
A mirror to enslaved nations, never
O’ercome, though in the field defeated ever.
O mutability of human merit!
How changed, how fallen from her ancient spirit!
She that was Ireland, Ireland now no more,
In beggar’s weeds behold at England’s door
Neglected sues or at the best returned
With hollow promise, happy if not spurned
Perforce, she that had yesterday disdained
Less than her mighty purpose to have gained.
Had few short change of seasons puissance then,
O nurse and mother of heroic men,
Thy genius to outwear, thy strength well-placed
And old traditionary courage, waste
Thy vehement nature? Nay, not time, but thou
These ancient praises strov'st to disavow.
For 'tis not foreign force, nor weight of wars,
Nor treason, nor surprise, nor opposite stars,
Not all these have enslaved nor can, whate'er
Vulgar opinion bruit, nor years impair,
Ruin discourage, nor disease abate
A nation. Men are fathers of their fate;
They dig the prison, they the crown command.
Yet thine own self a little understand,
Unhappy country, and be wise at length.
An outward weakness doing deeds of strength
Amazed the nations, but a power within
Directed, like effective spirit unseen
Behind the mask of trivial forms, a source
And fund of tranquil and collected force.
This was the sense that made thee royal, blessed
With sanction from on high and that impressed
Which could thyself transfigure and infuse
Thine action with such pride as kings do use.
But thou to thine own self disloyal, hast
Renounced the help divine turning thy past
To idle legends and fierce tales of blood,
Mere violent wrath with no proposed good.
Therefore effective wisdom, skill to bend
All human things to one predestined end
Renounce thee. Honest purpose, labour true,
These dwell not with the self-appointed crew
Who, having conquered by death's aid, abuse
The public ear, — for seldom men refuse
Credence, when mediocrity multiplied
Equals itself with genius — fools! whose pride
Absurd the gods permit a little space
To please their souls with laughter, then replace
In the loud limbo of futilities.
How fallen art thou being ruled by these!
Ignoble hearts, courageous to effect
Their country’s ruin; such the heavens reject
For their high agencies and leave exempt
Of force, mere mouths and vessels of contempt.
They of thy famous past and nature real
Uncareful, have denied thy rich ideal
For private gains, the burden would not brook
Of that sustaining genius, when it took
A form of visible power, since it demanded
All meaner passions for its sake disbanded.
As once against the loud Euphratic host
The lax Ionians of the Asian coast
Drew out their numbers, but not long enduring
Rigorous hard-hearted toil to the alluring
Cool shadow of the olives green withdrew;
Freedom’s preparators though well they knew
Labour exact, discipline, pains well nerved
In the severe unpitying sun, yet swerved
From their ordeal; Ireland so deceiving
The world’s great hope, her temples large relieving
Of the too heavy laurel, rather chose
Misery, civil battle, triumphant foes
Than rational order and divine control.
Therefore her brighter fate and nobler soul
Glasnevin with that hardly-honoured bier
Received. But the immortal mind austere,
By man rejected, of eternal praise
Has won its meed and sits with heavenly bays,
Not variable breath of favour, crowned
On high. And grieves it not, spirit renowned,
Mortal ingratitude though now forgiven,
Grieves it not, even on the hills of heaven,
After so many mighty toils, defeats
So many, cold repulse and vernal heats
Of hope, iron endurance throned apart
In lonely strength within thy godlike heart,
Obloquy faced, health lost, the goal nigh won,
To see at last thy strenuous work undone?
So falls it ever when a race condemned
To strict and lasting bondage, have contemned
Their great deliverer, self and ease preferring
To labour’s crown, by their own vileness erring.
Thus the uncounselfed Israelites of old,
Binding their mightiest, for their own ease sold,
Who else had won them glorious liberty
To his Philistian foes, as thine did thee.
Thou likewise, had thy puissant soul endured
Within its ruined house to stay immured,
With parallel disaster and o’erthrow
Hadst daunted and their conjured strength laid low.
But time was adverse. Thus too Heracles
In exile closed by the Olynthian seas,
Not seeing Thebes nor Dirce any more,
His friendless eyelids on an alien shore.
Yet not unbidden of heaven the men renowned
Have laboured, though no fruit apparent crowned
Nor praise contemporary touched with leaf
Of civic favour, who for joy or grief
To throned injustice never bowed the head.
They triumph from the houses of the dead.
Thou too, high spirit, mighty genius, glass
Of patriots, into others’ deeds shalt pass
With force and tranquil fortitude thy dower,
An inspiration and a fount of power.
Nor to thy country only nor thy day
Art thou a name and a possession, stay
Of loftiest natures, but where’er and when
In time’s full ripeness and the date of men
Alien oppression maddened has the wise,—
For ever thus preparing Nemesis
In ruling nations unjust power has borne
Insolence, injustice, madness, outrage, scorn,
Its natural children, then, by high disdain
And brave example pushed to meet their pain,
The pupils of thy greatness shall appear,
Souls regal to the mould divine most near,
And reign, or rise on throne-intending wings,
Making thee father to a line of kings.

On a Satyr and Sleeping Love

Me whom the purple mead that Bromius owns
And girdles rent of amorous girls did please,
Now the inspired and curious hand decrees
That waked quick life in these quiescent stones,
To yield thee water pure. Thou lest the sleep
Yon perilous boy unchain, more softly creep.

PLATO

A Rose of Women

Now lilies blow upon the windy height,
Now flowers the pansy kissed by tender rain,
Narcissus builds his house of self-delight
And Love’s own fairest flower blooms again;
Vainly your gems, O meadows, you recall;
One simple girl breathes sweeter than you all.

MELEAGER

Saraswati with the Lotus

(Bankim Chandra Chatterji. Obiit 1894)

Thy tears fall fast, O mother, on its bloom,
O white-armed mother, like honey fall thy tears;
Yet even their sweetness can no more relume
The golden light, the fragrance heaven rears,
The fragrance and the light for ever shed
Upon his lips immortal who is dead.

www.holybooks.com
Night by the Sea

Love, a moment drop thy hands;
Night within my soul expands.
Veil thy beauties milk-rose-fair
In that dark and showering hair.
Coral kisses ravish not
When the soul is tinged with thought;
Burning looks are then forbid.
Let each shyly-parted lid
Hover like a settling dove
O’er those deep-blue wells of Love.
Darkness brightens; silvering flee
Pomps of foam the driven sea.

In this garden’s dim repose
Lighted with the burning rose,
Soft narcissi’s golden camp
Glimmering or with rosier lamp
Censered honeysuckle guessed
By the fragrance of her breast,—
Here where summer’s hands have crowned
Silence in the fields of sound,
Here felicity should be.
Hearken, Edith, to the sea.

What a voice of grief intrudes
On these happy solitudes!
To the wind that with him dwells
Ocean, old historian, tells
All the dreadful heart of tears
Hidden in the pleasant years.
Summer’s children, what do ye
By the stern and cheerless sea?

Not we first nor we alone
Heard the mighty Ocean moan
By this treasure-house of flowers
In the sweet ambiguous hours.
Many a girl's lips ruby-red
With their vernal honey fed
Happy mouths, and soft cheeks flushed
With Love's rosy sunlight blushed.
Ruddy lips of many a boy
Blithe discovered hills of joy
Ruby-guided through a kiss
To the sweet highways of bliss.
Here they saw the evening still
Coming slowly from the hill
And the patient stars arise
To their outposts in the skies;
Heard the ocean shoreward urge
The speed and thunder of his surge,
Singing heard as though a bee
Noontide waters on the sea.

These no longer. For our rose
In her place they wreathed once, blows,
And thy glorious garland, sweet,
Kissed not once those wandering feet.
All the lights of spring are ended,
To the wintry haven wended.
Beauty's boons and nectarous leisure,
Lips, the honeycombs of pleasure,
Cheeks enrosed, Love's natal soil,
Breasts, the ardent conqueror's spoil,
Spring rejects; a lovelier child
His brittle fancies has beguiled.
O her name that to repeat
Than the Dorian muse more sweet
Could the white hand more relume
Writing and refresh the bloom
Of lips that used such syllables then,
Dies unloved by later men.
Are we more than summer flowers?
Shall a longer date be ours,
Rose and springtime, youth and we
By the everlasting sea?

Are they blown as legends tell
In the smoke and gurge of hell?
Writhe they in relucuent gyres
O'er a circle sad of fires?
In what lightless groves must they
Or unmurmuring alleys stray?
Fields no sunlight visits, streams
Where no happy lotus gleams?
Yet, where'er their steps below,
Memories sweet for comrades go.
Lethe's waters had their will,
But the soul remembers still.
Beauty pays her boon of breath
To thy narrow credit, Death,
Leaving a brief perfume; we
Perish also by the sea.

We shall lose, ah me! too soon
Lose the clear and silent moon,
The serenities of night
And the deeper evening light.
We shall know not when the morn
In the widening East is born,
Never feel the west-wind stir,
Spring's delightful messenger,
Never under branches lain
Dally with the sweet-lipped rain,
Watch the moments of the tree,
Nor know the sounds that tread the sea.

With thy kisses chase this gloom: —
Thoughts, the children of the tomb.
Kiss me, Edith. Soon the night
Comes and hides the happy light.
Nature’s vernal darlings dead
From new founts of life are fed.
Dawn relumes the immortal skies.
Ah! what boon for earth-closed eyes?
Love’s sweet debts are standing, sweet;
Honied payment to complete
Haste — a million is to pay —
Lest too soon the allotted day
End and we oblivious keep
Darkness and eternal sleep.
See! the moon from heaven falls.
In thy bosom’s snow-white walls
Softly and supremely housed
Shut my heart up; keep it closed
Like a rose of Indian grain,
Like that rose against the rain,
Closed to all that life applauds,
Nature’s perishable gauds,
And the airs that burdened be
With such thoughts as shake the sea.

The Lover’s Complaint

O plaintive, murmuring reed, begin thy strain;
   Unloose that heavenly tongue,
   Interpreter divine of pain;
Utter thy voice, the sister of my song.
Thee in the silver waters growing,
Arcadian Pan, strange whispers blowing
Into thy delicate stops, did teach
A language lovelier than speech.
O plaintive, murmuring reed, begin thy strain;
    O plaintive, murmuring reed.
Nisa to Mopsus is decreed,
The moonwhite Nisa to a swarthy swain.
What love-gift now shall Hope not bring?
Election dwells no more with beauty’s king.
The wild weed now has wed the rose,
Now ivy on the bramble grows;
Too happy lover, fill the lamp of bliss!
Too happy lover, drunk with Nisa’s kiss!
For thee pale Cynthia leaves her golden car,
For thee from Tempe stoops the white and evening star.

O plaintive, murmuring reed, renew thy strain;
    O solace anguish yet again.
    I thought Love soft as velvet sleep,
    Sweeter than dews nocturnal breezes weep,
    Cool as water in a murmuring pass
    And shy as violets in the vernal grass,
    But hard as Nisa’s heart is he
    And salt as the unharvestable sea.

O plaintive, murmuring reed, renew thy strain.
    One morn she came; her mouth
    Breathing the odours of the south,
    With happy eyes and heaving bosom fain.
    She asked for fruit long-stored in autumn’s hold.
    These gave I; from the branch dislodged I threw
    Sweet-hearted apples in their age of gold
    And pears divine for taste and hue.
    And one I saw, should all the rest excel;
    But error led my plucking hand astray
    And with a sudden sweet dismay
    My heart into her apron fell.

O plaintive, murmuring reed, renew thy strain.
    My bleeding heart awhile
She kept and bloomed upon its pain,
Then slighted as a broken thing and vile.
Now Mopsus in his unblest arms,
Mopsus enfolded her heavenlier charms,
Mopsus to whom the Muse averse
Refused her gracious secrets to rehearse.

O plaintive, murmuring reed, breathe yet thy strain.
Ye glades, your bliss I grudge you not,
Nor would I that my grief profane
Your sacred summer with intruding thought.
Yet since I will no more behold
Your glorious beauty stained with gold
From shadows of her hair, nor by some well
Made naked of their sylvan dress
The breasts, the limbs I never shall possess,
Therefore, O mother Arethuse, farewell.

For me no place abides
By the green verge of thy belovèd tides.
To Lethe let my footsteps go
And wailing waters in the realms below,
Where happier song is none than moaning pain
Nor any lovelier Syrinx than the weed.
Child of the lisping waters, hush thy strain,
O murmuring, plaintive reed.

Love in Sorrow

Do you remember, Love, that sunset pale
When from near meadows sad with mist the breeze
Sighed like a feverous soul and with soft wail
The ghostly river sobbed among the trees?
I think that Nature heard our misery
Weep to itself and wept for sympathy.
For we were strangers then; we knew not Fate
In ambush by the solitary stream
Nor did our sorrows hope to find a mate,
Much less of love or friendship dared we dream.
Rather we thought that loneliness and we
Were wed in marble perpetuity.

For there was none who loved me, no, not one.
Alas, what was there that a man should love?
For I was misery's last and frailest son
And even my mother bade me homeless rove.
And I had wronged my youth and nobler powers
By weak attempts, small failures, wasted hours.

Therefore I laid my cheek on the chill grass
And murmured, “I am overborne with grief
And joy to richer natures hopes to pass.
Oh me! my life is like an aspen leaf
That shakes but will not fall. My thoughts are blind
And life so bitter that death seems almost kind.

“How am I weary of the days’ increase,
Of the moon’s brightness and the splendid stars,
The sun that dies not. I would be at peace,
Nor blind my soul with images, nor force
My lips to mirth whose later taste is death,
Nor with vain utterance load my weary breath.”

Thus murmured I aloud nor deemed I spoke
To human ears, but you were hidden, sweet,
Behind the willows when my plaining broke
Upon your lonely muse. Ah kindly feet
That brushed the grass in tender haste to bind
Another’s wounds, you were less wise than kind.

You said, “My brother, lift your forlorn eyes;
I am your sister more than you unblest.”
I looked upon your face, the book of sighs
   And index to incurable unrest.
I rose and kissed you, sweet. Your lips were warm
   And drew my heart out like a witch’s charm.

We parted where the sacred spires arose
   In silent power above the silent street.
I saw you mid the rose-trees, O white rose,
   Linger a moment, then the dusk defeat
My eyes, and, listening, heard your footsteps fade
On the sad leaves of the autumnal glade.

And were you happy, sweet? In me I know —
   For either in my blood the autumn sang
His own pale requiem or that new sweet glow
   Failed in the light of bitter knowledge — rang
A voice that said, “Behold the loves too pure
   To live, the joy that never shall endure.”

This too I know, nor is my hope so bright
   But that it sees its autumn cold and sere
Attending with a pale and solemn light
   Beyond the gardens of the vernal year.
Yet will I not my weary heart constrain
But take you, sweet, and sweet surcease from pain.

The Island Grave

Ocean is there and evening; the slow moan
   Of the blue waves that like a shaken robe
Two heard together once, one hears alone.

Now gliding white and hushed towards our globe
Keen January with cold eyes and clear
   And snowdrops pendent in each frosty lobe
Ushers the firstborn of the radiant year.
   Haply his feet that grind the breaking mould,
May brush the dead grass on thy secret bier,

   Haply his joyless fingers wan and cold
Caress the ruined masses of thy hair,
   Pale child of winter, dead ere youth was old.

Art thou so desolate in that bitter air
   That even his breath feels warm upon thy face?
Ah till the daffodil is born, forbear,

   And I will meet thee in that lonely place.
Then the grey dawn shall end my hateful days
   And death admit me to the silent ways.

Estelle

   Why do thy lucid eyes survey,
Estelle, their sisters in the milky way?
   The blue heavens cannot see
Thy beauty nor the planets praise.
Blindly they walk their old accustomed ways.
   Turn hither for felicity.
My body’s earth thy vernal power declares,
   My spirit is a heaven of thousand stars,
And all these lights are thine and open doors on thee.
Radha’s Complaint in Absence

*(Imitated from the Bengali of Chundidas)*

O heart, my heart, a heavy pain is thine!
What land is that where none doth know
Love’s cruel name nor any word of sin?
My heart, there let us go.

Friend of my soul, who then has called love sweet?
Laughing I called from heavenly spheres
The sweet love close; he came with flying feet
And turned my life to tears.

What highborn girl, exiling virgin pride,
Has wooed love to her with a laugh?
His fires shall burn her as in harvest-tide
The mowers burn the chaff.

O heart, my heart, merry thy sweet youth ran
In fields where no love was; thy breath
Is anguish, since his cruel reign began.
What other cure but death?

Radha’s Appeal

*(Imitated from the Bengali of Chundidas)*

O love, what more shall I, shall Radha speak,
Since mortal words are weak?
In life, in death,
In being and in breath
No other lord but thee can Radha seek.
Songs to Myrtilla

About thy feet the mighty net is wound
    Wherein my soul they bound;
    Myself resigned
    To servitude my mind;
My heart than thine no sweeter slavery found.

I, Radha, thought; through the three worlds my gaze
    I sent in wild amaze;
    I was alone.
None called me “Radha!”, none;
I saw no hand to clasp, no friendly face.

I sought my father’s house; my father’s sight
    Was empty of delight;
    No tender friend
    Her loving voice would lend;
My cry came back unanswered from the night.

Therefore to this sweet sanctuary I brought
    My chilled and shuddering thought.
    Ah, suffer, sweet,
    To thy most faultless feet
That I should cling unchid; ah, spurn me not!

Spurn me not, dear, from thy beloved breast,
    A woman weak, unblest.
    Thus let me cling,
    Thus, thus about my king
And thus remain caressing and caressed.

I, Radha, thought; without my life’s sweet lord,
    — Strike now thy mightiest chord —
    I had no power
    To live one simple hour;
His absence slew my soul as with a sword.
If one brief moment steal thee from mine eyes,
My heart within me dies.
As girls who keep
The treasures of the deep,
I string thee round my neck and on my bosom prize.

Bankim Chandra Chatterji

How hast thou lost, O month of honey and flowers,
The voice that was thy soul! Creative showers,
The cuckoo’s daylong cry and moan of bees,
Zephyrs and streams and softly-blossoming trees
And murmuring laughter and heart-easing tears
And tender thoughts and great and the compeers
Of lily and jasmine and melodious birds,
All these thy children into lovely words
He changed at will and made soul-moving books
From hearts of men and women’s honied looks.
O master of delicious words! the bloom
Of chompuk and the breath of king-perfume
Have made each musical sentence with the noise
Of women’s ornaments and sweet household joys
And laughter tender as the voice of leaves
Playing with vernal winds. The eye receives
That reads these lines an image of delight,
A world with shapes of spring and summer, noon and night;
All nature in a page, no pleasing show
But men more real than the friends we know.
O plains, O hills, O rivers of sweet Bengal,
O land of love and flowers, the spring-bird’s call
And southern wind are sweet among your trees:
Your poet’s words are sweeter far than these.
Your heart was this man’s heart. Subtly he knew
The beauty and divinity in you.
His nature kingly was and as a god
In large serenity and light he trod
His daily way, yet beauty, like soft flowers
Wreathing a hero's sword, ruled all his hours.
Thus moving in these iron times and drear,
Barren of bliss and robbed of golden cheer,
He sowed the desert with ruddy-hearted rose,
The sweetest voice that ever spoke in prose.

Madhusudan Dutt

Poet, who first with skill inspired did teach
Greatness to our divine Bengali speech,—
Divine, but rather with delightful moan
Spring's golden mother makes when twin-alone
She lies with golden Love and heaven's birds
Call hymeneal with enchanting words
Over their passionate faces, rather these
Than with the calm and grandiose melodies
(Such calm as consciousness of godhead owns)
The high gods speak upon their ivory thrones
Sitting in council high,— till taught by thee
Fragrance and noise of the world-shaking sea.
Thus do they praise thee who amazed espy
Thy winged epic and hear the arrows cry
And journeyings of alarmed gods; and due
The praise, since with great verse and numbers new
Thou mad'st her godlike who was only fair.
And yet my heart more perfectly ensnare
Thy soft impassioned flutes and more thy Muse
To wander in the honied months doth choose
Than courts of kings, with Sita in the grove
Of happy blossoms, (O musical voice of love
Murmuring sweet words with sweeter sobs between!)
With Shoorpa in the Vindhyan forests green
Laying her wonderful heart upon the sod
Made holy by the well-loved feet that trod
Its vocal shades; and more unearthly bright
Thy jewelled songs made of relucent light
Wherein the birds of spring and summer and all flowers
And murmuring waters flow, her widowed hours
Making melodious who divinely loved.
No human hands such notes ambrosial moved;
These accents are not of the imperfect earth;
Rather the god was voiceful in their birth,
The god himself of the enchanting flute,
The god himself took up thy pen and wrote.

To the Cuckoo

Sounds of the wakening world, the year’s increase,
Passage of wind and all his dewy powers
With breath and laughter of new-bathèd flowers
And that deep light of heaven above the trees
Awake mid leaves that muse in golden peace
Sweet noise of birds, but most in heavenly showers
The cuckoo’s voice pervades the lucid hours,
Is priest and summoner of these melodies.
The spent and weary streams refresh their youth
At that creative rain and barren groves
Regain their face of flowers; in thee the ruth
Of Nature wakening her dead children moves.
But chiefly to renew thou hast the art
Fresh childhood in the obscurèd human heart.
Envoi

Ite hinc, Camenae, vos quoque ite jam, sane
Dulces Camenae, nam fatebimur verum
Dulces fuistis, et tamen meas chartas
Revisitote sed pudenter et raro.

Pale poems, weak and few, who vainly use
Your wings towards the unattainable spheres,
Offspring of the divine Hellenic Muse,
Poor maimèd children born of six disastrous years!

Not as your mother’s is your wounded grace,
Since not to me with equal love returned
The hope which drew me to that serene face
Wherein no unreposeful light of effort burned.

Depart and live for seasons many or few
If live you may, but stay not here to pain
My heart with hopeless passion and renew
Visions of beauty that my lips shall ne’er attain.

For in Sicilian olive-groves no more
Or seldom must my footprints now be seen,
Nor tread Athenian lanes, nor yet explore
Parnassus or thy voiceful shores, O Hippocrene.

Me from her lotus heaven Saraswati
Has called to regions of eternal snow
And Ganges pacing to the southern sea,
Ganges upon whose shores the flowers of Eden blow.
Poems from Manuscripts
Circa 1891–1898
To a Hero-Worshipper

I

My life is then a wasted ereme,
   My song but idle wind
Because you merely find
In all this woven wealth of rhyme
Harsh figures with harsh music wound,
The uncouth voice of gorgeous birds,
A ruby carcanet of sound,
   A cloud of lovely words?

I am, you say, no magic rod,
   No cry oracular,
   No swart and ominous star,
No Sinai thunder voicing God.
I have no burden to my song,
No smouldering word instinct with fire,
No spell to chase triumphant wrong,
   No spirit-sweet desire.

Mine is not Byron’s lightning spear,
   Nor Wordsworth’s lucid strain
   Nor Shelley’s lyric pain,
Nor Keats’, the poet without peer.
I by the Indian waters vast
Did glimpse the magic of the past,
And on the oaten pipe I play
Warped echoes of an earlier day.

II

My friend, when first my spirit woke,
   I trod the scented maze
Of Fancy’s myriad ways,
I studied Nature like a book
Men rack for meanings: yet I find
No rubric in the scarlet rose,
No moral in the murmuring wind,
    No message in the snows.

For me the daisy shines a star,
   The crocus flames a spire,
  A horn of golden fire,
Narcissus glows a silver bar:
Cowslips, the golden breath of God,
I deem the poet’s heritage,
And lilies silvering the sod
    Breathe fragrance from his page.

No herald of the sun am I
   But in a moonlit vale
  A russet nightingale
Who pours sweet song, he knows not why,
Who pours like wine a gurgling note
Paining with sound his swarthy throat,
Who pours sweet song he reck not why
Nor hushes ever lest he die.

Phaethon

Ye weeping poplars by the shelvy slope
From murmurous lawns downdropping to the stream
On whom the dusk air like a sombre dream
Broods and a twilight ignorant of hope,
Say what compulsion drear has bid you seam
Your mossy sides with drop on eloquent drop
That in warm rillets from your eyes elope?
Poems from Manuscripts

Is it for the too patient, sure decay
Pale-gilded Autumn, aesthete of the years,
A gorgeous death, a fading glory wears
That thus along its tufted, downy way
Creeps slothfully this ooze of amber tears,
And thus with tearful gusts your branches sway
Sighing a requiem to your emerald day?

The Just Man

Where is the man whom hope nor fear can move?
   Him the wise Gods approve.
The man divine of motive pure and steadfast will
   Unbent to ill,
   Whose way is plain nor swerves for power or gold
   The high, straight path to hold: —
   Him only wise the wise Gods deem, him pure of lust;
      Him only just.
   Tho’ men give rubies, tho’ they bring a prize
      Sweeter than Helen’s eyes —
   Yea, costlier things than these things were, they shall not win
      That man to sin.
   Tho’ the strong lords of earth his doom desire,
      He shall not heed their ire,
   Nor shall the numerous commons’ stormy voice compel
      His heart nor quell.
   Tho’ Ocean all her purple pride unroll,
      It stirs, not shakes his soul.
   He sees the billows lift their cowled heads on high
      With undimmed eye.
Pure fields he sees and groves of calm delight;
   He turns into the night.
Hell is before; the swords await him; friends betray;
   He holds his way.

He shall not fear tho’ heaven in lightnings fall
   Nor thunder’s furious call,
Nor earthquake nor the sea: tho’ fire, tho’ flood assail,
   He shall not quail.

Tho’ God tear out the heavens like a page
   And break the hills for rage,
Blot out the sun from being and all the great stars quench,
   He will not blench.
Incomplete Poems from Manuscripts
Circa 1891–1892
Thou bright choregus

Thou bright choregus of the heavenly dance
Who with thy lively beauty wouldst endear
The alien stars and turnst thy paler glance
To us thy dominating sphere

Why didst thou with Erinna impart thy mind,
The faithful copyist of this cruelty,
Who to usurpers pays allegiance kind
Passing the true pretender by?

Like a white statue

Like a white statue made of lilies
Her eyes were hidden jewels beneath scabbards of black silk: her shoulders moonlit mountain-slopes when they are coated with new-fallen snow: her breasts two white apples odorous with the sweet fragrance of girlhood, her body a heap of silk in a queen’s closet, her legs were marble pillars very clear-cut, her face ivory flushed by the dawn.

He frowned on her like a dark cloud instinct with rain over a tall white ship at sea.
The full orb of her loveliness revealed as when the fleecy gown is stripped from the shoulders of the moon and she stands naked in heaven.
The moon of the three worlds.
Her gait was the swan’s in stateliness, the other’s wild and jocund as the sea-fowl, her hair windtost, her eyes sparkling like bubbles in a wine-cup, her face slim and very girlish.
The Vigil of Thaliard

Where Time a sleeping dervish is
Or printed legend of Romance
Mid lilies and mid gold roses
    Of mediaeval France,
Where Life, a faithful servitor
    Mid alien faces cast,
Still wears in memory of her
    The trappings of the Past,
Sweet Lily’s child, that golden grape
    Girl prince of Avelion,
Thaliard by early-plucking hap
    Star-reaching Mador’s son,
Kept vigil by the impious pool
Beyond the misty moaning sea
To win from warlock’s weird misrule
    His soul’s sweet liberty.

For if throughout the monstrous night
Unblest by ave or by creed
By witchèd water Christian wight
    Do finger bead by bead
His scarlet rosary of sins
    And leave his soul ajar,
What hour the sleepy Evening pins
    Her bodice with a star,
Until, the pitchy veil withdrawn
    That swathes the looming dune,
The crowing trumpeter of dawn
    Blows addio to the moon,
The awful record of his soul
Shall by God’s finger blotted be,
And o’er his drownèd past shall roll
    Forgiveness like a sea.
The warden of the starry waste
Who walks with orange-coloured lamp
And weird eyes nursing fire, paced
      Night's silver-tented camp.
The rose-lipped golden-footed day,
      A flower by maiden culled,
Beneath star-blossomed arras lay
      In Evening's bosom lulled.
The water seemed a damson crust
      With golden sugar poured,
Or mirror caked with purple dust
      In lady's closet stored.
The hour like a weary snake
Coiled slowly gliding serpentine
Or drowsy nun perforce awake
      To pace a pillared shrine.
The roses shuddered in their sleep,
The lilies drooped their silver fires,
The reeds upon the humming steep
      Bow'd low their tapering spires;
For tho' no sob pulsed in the air,
      No agony of wind,
Down Heaven's moonlight-painted stair
      Trod angels who had sinned.
Fireflies drizzled in the dark
      Like drops of burning rain,
The glow-worm was a crawling spark,
      The pool a purple stain,
The stars were grains of blazing sand,
A haunted soul the shadowy lea,
In forest-featured Broceliande
      Beyond the echoing sea.
Sir Thaliard by the phantom edge
Heard rustling feet behind the trees
And the weird water lapped the sedge
      With wistful symphonies:
Sometimes a thrill of voices broke
   In runic tongues of old,
Sometimes pale fingers seemed to stroke
   His curls of crisping gold:
Thin laughter sobbed he knew not where
   Till God’s own candles paled,
Or else out in the moonless air
   A goblin infant wailed.
Now in the moon’s enchanted wake
   Wild shadows ran a giant race,
And now the golden glassing lake
   Was blotted with a face.

But when the naked moon rose clear
   Above the ruins of the day,
Childe Thaliard saw a glinting spear
   Across the milky way.
And when the white moon’s sliding feet
   One rank of stars had passed,
Upon him smote the windy beat
   And terror of a blast.
The tempest rippled thro’ the leaves,
   New wine of evening sucked,
And at the water-lily sheaves
   With nervous fingers plucked.
And in its wind-white arms it bore
   A diademed and sceptred thing,
The semblance of a man, that wore
   The glory of a king.

An argent cincture studded thick
   With opal and the blushing stone
Fine wrought of texture Arabic
   About his middle shone:
And in its buckled girth did sit,
   A fierce and cloudy star,
Of temper fine as poet’s wit
   The Orient scimitar.
Morocco gave his wrathful dart,  
    The spring of widowed tears,  
Tempered in Afric’s sultry heart  
    Or famous far Algiers.  
His barb was hued like cedar’s core  
In Aramean mountains born,  
Wild as the sea on storm-vexed shore  
    And fronted as the morn.  

Upon his kingly head the crown  
Was eloquent of Iran’s gold  
Dropping fine threads of glory down  
Upon the turban’s fold.  
His eyes were drops of smelted ore  
    That in a foundry chase:  
His lips a cruel promise wore,  
    A marble pride his face.  
As shows thro’ gold caparison  
    Laburnum dusky-stemmed,  
Thro’ silks in Persian harem spun  
    His gorgeous body gleamed.  
Or as a lithe and tropic snake  
    That from some fine mosaic glares,  
Or spotted panther by a lake  
    Beneath the Indian stars.  

This Orient vision burning-bright  
Snapped close his bridle silver-lined  
Between the moonlight and the night,  
    The water and the wind.  
His cry sang like a stormy shower  
Upon a thundering sea:  
“O Thaliard, Thaliard, Britain’s flower,  
    Wilt break a lance with me?  
The golden scythe of Mahomet  
    Gleams crescent on my shield:  
My harvest upon thine is set,  
    A cross in argent field.
Prince-errant, prop of battle styled
And flawless glass of chivalry,
O Thaliard, Thaliard, golden childe,
Wilt break a lance with me?"

As trailing thunder dies in heaven
Thro’ silence trailed his latest word,
And fire like the bearded levin
Beneath his eyelids stirred.
Childe Thaliard saw the burning stars
Vermilion grown like blood,
Thrice drew the serpent cross of Mars,
Thrice clamoured where he stood.
But Thaliard saw a milkwhite star
Grow large against the moon,
Quelled by whose candid flames, afar
Mars’ ruby paled in a swoon.
“Not here” he faltered like the wind,
“Not here, where murmurs poison sleep,
When haunted memories grown half blind
Their ghastly vigils keep.

“Not here, when drifts past happy shores
From mortal vision far withdrawn
With lustrous sails and dipping oars
The hull that brings the dawn,
Seek me, but in the cloudy time
When ruin blazons forth
In sanguine hues the vaporous clime
And champaigns of the north.”
As wine that from the bubbling lips
Of some fine beaker falls,
This honeyed utterance largely slips
Like murmurs in vast halls.
The wimpled moon bent down her ear,
And in the granaries of light
The seedling splendours thrilled to hear,
And all the east grew bright.
The phantom like a burning page
Was furrowed with the ploughs of wrath,
And thro’ his wintry orbs white rage
Rolled like the dead sea-froth.
His lance poised slanting like a ray
Of ominous sunlight fell.
Astarte in the milky way
Saw death half-risen from hell:
And soon the cold hooves of his horse
On shivering lilies trod,
Till, yellow anguish borrowing force,
Childe Thaliard cried on God.
The phantom, withering thro’ the bars
Of Being like transitory sound,
Left but the murmur of the stars,
Left but the hush profound.
And now the naked wanton moon
Shed languorous glances on the lake
Whose ripples sobbing from their swoon
Grew golden for her sake:
The amorous stars were faint with love;
Earth’s awning seemed so light
That Hesper like a flying dove
Would tremble into sight.
When Thaliard saw in drooping skies
Large drops of beauty burn,
A white-winged chorus did arise,
The prayers that purely yearn.
But Thaliard saw the curling deep
With foamy moon-tints blaze and break,
Till the slack spirit longed to steep
Rich fancies in the lake.
The penitent chorus of his prayers
Were mingled with voluptuous speech
Of daedal images and airs
Luxurious wrapping each:
A blue papyrus-leaf designed
    With fretted curls of fire,
A purple page with coronet lined
    Or labyrinthine spire:
The fiery-coloured bee of night
    With folded purple wing,
Or solitary chrysolite
    Shut in an emerald ring:
The vellum binding of a book,
A scented volume spiced with Ind,
A magic purse by Genie shook
    To loose a murmuring wind.

And in the bridal pomp of hell
Walked Beauty hand-in-hand with sin,
And Thought, the glorious infidel,
    A helmed Paladin;
When shutting under cloudy bars
    Astarte’s radiant eye,
God sowed with multitudinous stars
    His peacock in the sky.
The diamonds perished from the deep,
    The moon-tints from the edge,
The wrinkled water smoothed in sleep
    His locks of ruffled sedge.
Imagination, like a sponge
Wrung very pure of beauty, wept,
As from his pores with a tired plunge
    His flakes of fancy leaped.

But hark! a wailing anguish woke
The silence with a fiery sting:
The foaming gulfs of clamour broke
    Around a fallen king:
A distant moan of battle high
    Above a phantom land,
And heron-weird a woman’s cry
    Went shrilling down the strand.
While terror with a vulture’s force
   Was plucking at his throat;
He heard the shrill hooves of a horse
   Prick echoes less remote.
And like old accents Night may lend
On lips long hushed in endless sleep,
The voice of a familiar friend
   Came shuddering from the deep.

“Thaliard, awake; the smiling morn
Forgets the cloud of yesterday:
The sceptre from thy house is torn,
   Thy glory washed away.
Amid the reeling battle trod,
   As a poppy in the mill,
With white face lifted up to God,
   Thy sire lies very still.
Pendragon’s spear has stung him dead,
   He sleeps among the slain;
The glorious princes heap his bed,
   Like lilies in a plain.
Thy brothers Galert and Gyneth
Like toppling mountains whelmed I saw
Beneath the shadowy winds of death
   In the rushing tide of war.

“Thy sister, fawn-eyed Guendolen,
Haled captive from thy tottering hall,
Lies helpless in the dragon’s den
   Luxurious Gawain’s thrall.
His kisses tremble on her mouth
   Like moonbeams on a rose,
For she is water to his drouth,
   He sunlight to her snows:
Her flowering body to his love
   A pleasance-garden sweet;
Her spirit, meeker than a dove,
   Fawns blindly at his feet.
And with the pelting words of shame,
Like delicate pigments bleared by storm,
The gorgeous colouring of thy name
Is losing gloss and form.

“The night-wind in thy yawning dome
Has made her nest alive with song,
The humming wasps of Aeolus roam
Low-flying in a throng:
The thunder like a flying stork
Clangs hoarsely but aloof,
And lightning with his vermil fork
Has written on thy roof.
The lion lodges in thy gate,
The were-wolf is thy guest,
The night-owl, like a sombre fate,
Wails weirdly without rest.
Thy deeds are grown a haunting rhyme,
A fragment breaking from the past,
An atom, which the meteor, Time,
In his fiery flight has cast.”

With sobs of shuddering agony bled
The silence as with stinging whips,
But Thaliard felt slim fingers laid
Upon his writhen lips.
The soul’s redoubts flung each to each
A ringing challenge round,
To clench the ruby gates of speech
On the corridors of sound.
In dancing dithyrambs thro’ each vein
A dizzy echo sang,
While on the anvil of his brain
The steely syllables rang:
And from the avenues of the heart
Thro’ which the river of being pours,
The torpid life with a sudden start
Recoiled upon its doors.
The voice was now a violin
Shrill-winding, now a startled bat,
And now as linnet's warble thin,
   Now wailful as a gnat,
But gathered volume as of yore
   Until with refluent tide,
Like Ocean ebbing from her shore
   The murmur ebbed and died.
Like beauty losing maidenhood
   Astarte debonnair
Undid the crocus-coloured snood
   That bound her glimmering hair.
And up the ladder of the moon,
As white smoke curls upon a glass,
He saw with flakes of glory strewn
   A radiant figure pass.
Astarte from her cloudy chair
Paced with her troop of star-sweet girls;
Unfilleted, her glorious hair
   Hung loose in cowslip curls.
And like the flower-song of a bee
   On April's daffodil skirt,
A whisper from the smiling sea
   In her crocus gown did flirt.
The waters quivering to her wiles
   Among the rushes whipped,
As thro' the net-work of her smiles
   Her visible murmur slipped.
But when they wooed her to repeat
Her primrose painted pilgrimage,
She dipped the white palms of her feet
   In beds of bubbling sedge.
Again the stealthy minutes crept
On tiptoe to the breathless hour
And loud suspense her riot kept
   Till budding doom should flower.
The yellow moon, whom Heaven once more
From silver cowl did shake,
With golden letters scribbled o'er
The purple-written lake.
But when to Heaven's polished breast
Her rounded amulet clung
Below in the blue palimpsest
A slit, a chasm sprung.
A meteor from the purple brink,
A vivid star no eye may lose,
A pictured bowl of nectarous drink,
An apparition rose.

Her body lapped in cloth of gold
A wave disguised in moonlight seemed,
Whose every curve and curious fold
With opal facets gleamed.
Her nestling mass of rounded curls
Were soft as velvet cloths,
Once fingered by Arabian girls
Or piled in Syrian booths.
She was an ebon-framèd lyre
Where wind-waked murmurs dance,
A tinted statue of Desire
In studios of Romance.
Her glowing cheeks just ripe with youth,
The purple passion of her eyes,
Half seemed a splendid mock at truth,
A brilliant mesh of lies.

Below with balmy sobs that drank
The must of life thro' thirsty lips,
Her painèd bosom heaved and sank
Like Ocean-cradled ships.
And as bee-blossoms sapphire-looped,
The humming waves that kiss,
Her creamy forehead almost drooped
Burthened with too much bliss.
The artist Grace who limned her fair
   With moist and liberal brush,
Painted a glory in her hair
   And mixed a gorgeous blush
To tint her cheeks with flowery bloom,
To touch her lips with scarlet fire,—
   An empire’s beauty in small room,
   A vision of desire.

A fairy witch by painful charms
Had burgeoned this refulgent flower,
Embraced by wild and wanton arms
   In weird and midnight hour.
She on the amber milk of bees
   By magic mother nursed,
In laurel-sheltered libraries
   Cons rudiments accurst,
The most familiar things of hell,
   The mightiest names inherits,
And learns what iron syllable
   Compels reluctant spirits.
A perilous thorn on fire with bloom,
A poppied spell, an empress snake,
She rose, the alchemist of doom,
   The Lady of the Lake.

Urvasie
CANTO I

Pururavus from Titan conflict ceased
Turned worldwards, through illimitable space
Had travelled like a star 'twixt earth and heaven
Slowly and brightly. Late our mortal air
He breathed; for downward now the hooves divine
Trampling out fire with sound before them went,
And the great earth rushed up towards him, green.
With the first line of dawn he touched the peaks,
Nor paused upon those savage heights, but reached
Inferior summits subject to the rain,
And rested. Looking northwards thence he saw
The giant snows upclimbing to the sky,
And felt the mighty silence. In his ear
The noise of a retreating battle was,
Wide crash of wheels and hard impetuous blare
Of trumpets and the sullen march of hosts.
Therefore with joy he drank into his soul
The virgin silence inaccessible
Of mountains and divined his mother's breasts.
But as he listened to the hush, a thought
Came to him from the spring and he turned round
And gazed into the quiet maiden East,
Watching that birth of day, as if a line
Of some great poem out of dimness grew,
Slowly unfolding into perfect speech.
The grey lucidity and pearliness
Bloomed more and more, and over earth chaste again
The freshness of the primal dawn returned,
Life coming with a virginal sharp strength,
Renewed as from the streams of Paradise.
Nearer it drew now to him and he saw
Out of the widening glory move a face
Of dawn, a body fresh from mystery,
Enveloped with a prophecy of light
More rich than perfect splendours. It was she,
The golden virgin, Usha, mother of life,
Yet virgin. In a silence sweet she came,
Unveiled, soft-smiling, like a bride, rose-cheeked,
Her bosom full of flowers, the morning wind
Stirring her hair and all about her gold.
Nor sole she came. Behind her faces laughed
Delicious, girls of heaven whose beauties ease
The labour of the battle-weary Gods;
They in the golden dawn of things sprang gold,
From youth of the immortal Ocean born,
They youthful and immortal, and the waves
Were in their feet and in their voices fresh
As foam, and Ocean in their souls was love.
Laughing they ran among the clouds, their hair
And raiment all a tempest in the breeze.
The sky grew glorious with them and their feet
A restless loveliness and glad eyes full
Of morning and divine faces bent back
For the imperious kisses of the wind.
So danced they numberless as dew-drops gleam,
Ménaca, Misracayshie, Mullica,
Rumbha, Nelabha, Shela, Nolinie,
Lolita, Lavonya and Tilottama, —
Many delightful names; among them she.
And seeing her Pururavus the king
Shuddered as of felicity afraid,
And all the wide heart of Pururavus
Moved like the sea — when with a coming wind
Great Ocean lifts in far expectancy
Waiting to feel the shock, so was he moved
By expectation of her face. For this
Was secret in its own divinity
Like a high sun of splendour, or half seen
All troubled with her hair. Yet Paradise
Breathed from her limbs and tresses wonderful,
With odours and with dreams. Then for a space
Voiceless the great king stood and, troubled, watched
Urvasie

That lovely advent, laughter and delight
Gaining upon the world. At last he sighed
And the vague passion broke from him in speech
Heard by the solitude. “O thou strong god,
Who art thou graspest me with hands of fire,
Making my soul all colour? Surely I thought
The hills would move and the eternal stars
Deviate from their rounds immutable,
Never Pururavus; yet lo! I fall.
My soul whirls alien and I hear amazed
The galloping of uncontrollable steeds.
Men said of me: ‘The King Pururavus
Grows more than man; he lifts to azure heaven
In vast equality his spirit sublime.’
Why sink I now towards attractive earth?
And thou, who art thou, mystery! golden wonder!
Moving enchantress! Wast thou not a part
Of soft auspicious evenings I have loved?
Have I not seen thy beauty on the clouds?
In moonlight and in starlight and in fire?
Some flower whose brightness was a trouble? a face
Whose memory like a picture lived with me?
A thought I had, but lost? O was thy voice
A vernal repetition in some grove,
Telling of lilies clustered o’er with bees
And quiet waters open to the moon?
Surely in some past life I loved thy name,
And syllable by syllable now strive
Its sweetness to recall. It seems the grace
Of visible things, of hushed and lonely snows
And burning great inexorable noons,
And towns and valleys and the mountain winds.
All beauty of earthliness is in thee, all
Luxurious experience of the soul.
O comest thou because I left thy charm
Aiming at purity, O comest thou,
Goddess, to avenge thyself with beauty? Come!
Unveil thyself from light! limit thyself,
O infinite grace, that I may find, may clasp.
For surely in my heart I know thou bearest
A name that naturally weds with mine,
And I perceive our union magically
Inevitable as a perfect verse
Of Veda. Set thy feet upon my heart,
O Goddess! woman, to my bosom move!
I am Pururavus, O Urvasie.”
As when a man to the grey face of dawn
Awaking from an unremembered dream,
Repines at life awhile andbuffets back
The wave of old familiar thoughts, and hating
His usual happiness and usual cares
Strives to recall a dream’s felicity; —
Long strives in vain and rolls his painful thought
Through many alien ways, when sudden comes
A flash, another, and the vision burns
Like lightning in the brain, so leaped that name
Into the musing of the troubled king.
Joyous he cried aloud and lashed his steeds:
They, rearing, leaped from Himalaya high
And trampled with their hooves the southern wind.

But now a cry broke from the lovely crowd
Of fear and tremulous astonishment;
And they huddled together like doves dismayed
Who see the inevitable talons near
And rush of cruel wings. ’Twas not from him,
For him they saw not yet, but from the north
A fear was on them, and Pururavus
Heard a low roar as of a distant cloud.
He turned half-wrathful. In the far northwest
Heaven stood thick, concentrated in gloom,
 Darkness in darkness hidden; for the cloud
Rose firmament on sullen firmament,
As if all brightness to entomb. Across
Great thundrous whispers rolled, and lightning quivered
From edge to edge, a savage pallor. Down
The south wind dropped appalled. Then for a while
Stood pregnant with the thunderbolt and wearing
Rain like a colour, the monumental cloud
Sublime and voiceless. Long the heart was stilled
And the ear waited listening. Suddenly
From motionless battalions as outride
A speed disperse of horsemen, from that mass
Of livid menace went a frail light cloud
Rushing through heaven, and behind it streamed
The downpour all in wet and greenish lines.
Swift rushed the splendid anarchy admired,
And reached, and broke, and with a roar of rain
And tumult on the wings of wind and clasp
Of the o'erwhelmed horizons and with bursts
Of thunder breaking all the body with sound
And lightning 'twixt the eyes intolerable,
Like heaven's vast eagle all that blackness swept
Down over the inferior snowless heights
And swallowed up the dawn. Pururavus,
Lost in the streaming tumult, stood amazed:
But as he watched, he was aware of locks
Flying and a wild face and terrible
And fierce familiar eyes. Again he looked
And knew him in a hundred battles crossed,
The giant Cayshie. It seemed but yesterday
That over the waves of fight their angry eyes
Had met. He in the dim disguise of rain,
All swift with storm, came passionate and huge,
Filling the regions with himself. Immense
He stooped upon the brides of heaven. They
Like flowers in a gust scattered and blown
Fled every way; but he upon that beauty
Magical sprang and seized and lifted up,
As the storm lifts a lily, and arrow-like
Up towards the snow-bound heights in rising cloud
Rushed with the goddess to the trembling East.
But with more formidable speed and fast
Storming through heaven King Pururavus
Hurled after him. The giant turned and knew
The sound of those victorious wheels and light
In a man’s face more dangerous to evil
Than all the shining Gods. He stood, he raised
One dreadful arm that stretched across the heavens,
And shook his baffling lance on high. But vast,
But magnified by speed came threatening on
With echoing hooves and battle in its wheels
The chariot of the King Pururavus
Bearing a formidable charioteer,
Pururavus. The fiend paused, he rolled his eyes
Full of defiance, passion and despair
Upon the swooning goddess in his arms
And that avenger. Violence and fear
Poised him a moment on a wave of fate
This way to death cadent, that way to shame.
Then groaning in his great tumultuous breast
He dropped upon the snow heaven’s ravished flower
And fled, a blackness in the East. New sky
Replenished from the sullen cloud dawned out;
The great pure azure rose in sunlight wide.
Nor King Pururavus pursued but checked
His rushing chariot on the quiet snow
And sprang towards her and knelt down and trembled.
Perfect she lay amid her tresses wide,
Like a mishandled lily luminous,
As she had fallen. From the lucid robe
One shoulder gleamed and golden breast left bare,
Divinely lifting, one gold arm was flung,
A warm rich splendour exquisitely outlined
Against the dazzling whiteness, and her face
Was as a fallen moon among the snows.
And King Pururavus, beholding, glowed
Through all his limbs and maddened with a love
He feared and cherished. Overawed and hushed,  
Hardly even breathing, long he knelt, a greatness  
Made stone with sudden dread and passion. Love  
With fiery attempt plucked him all down to her,  
But fear forbade his lips the perfect curls.  
At length he raised her still un kissed and laid  
In his bright chariot, next himself ascended  
And resting on one arm with fearful joy  
Her drooping head, with the other ruled the car; —  
With one arm ruled, but his eyes were for her  
Studying her fallen lids and to heart-beats  
Guessing the sweetness of the soul concealed.  
And soon she moved. Those wonderful wide orbs  
Dawned into his, quietly, as if in muse.  
A lovely slow surprise crept into them  
Afterwards; last, something far lovelier,  
Which was herself, and was delight, and love.  
As when a child falls asleep un awares  
At a closed window on a stormy day,  
Looking into the weary rain, and long  
Sleeps, and wakes quietly into a life  
Of ancient moonlight, first the thoughtfulness  
Of that felicitous world to which the soul  
Is visitor in sleep, keeps her sublime  
Discurtained eyes; human dismay comes next,  
Slowly; last, sudden, they brighten and grow wide  
With recognition of an altered world,  
Delighted: so woke Urvasie to love.

But, hardly now that luminous inner dawn  
Bridged joy between their eyes, laughter broke in  
And the returning world; for Ménaca,  
Standing a lily in the snows, laughed back  
Those irresistible wheels and spoke like song; —  
She tremulous and glad from bygone fear;  
But all those flowerlike came, increasing light,  
Their bosoms quick and panting, bright, like waves
That under sunshine lift remembering storm.
And before all Ménaca tremulously
Smiling: “Whither, O King Pururavus,
Bear'st thou thy victory? Wilt thou set her
A golden triumph in thy halls? But she
Is other than thy marble caryatids
And austere doors, purity colourless.
Read not too much thy glory in her eyes.
Will not that hueless inner stream yet serve
Where thou wast wont to know thy perfect deeds?
But give her back, give us our sister back,
And in return take all thyself with thee.”
So with flushed cheeks and smiling Ménaca.
And great Pururavus set down the nymph
In her bright sister's arms and stood awhile
Stormily calm in vast incertitude,
Quivering. Then divine Tilôttama:
“O King, O mortal mightier than the Gods!
For Gods change not their strength, but are of old
And as of old, and man, though less than these,
May yet proceed to greater, self-evolved.
Man, by experience of passion purged,
His myriad faculty perfecting, widens
His nature as it rises till it grows
With God conterminous. For one who tames
His hot tremulousness of soul unblest
And feels around him like an atmosphere
A quiet perfectness of joy and peace,
He, like the sunflower sole of all the year,
Images the divine to which he tends:
So thou, sole among men. And thou today
Hast a high deed perfected, saved from death
The great Gods of the solar world the first,
And saved with them the stars; but her today
Without whom all that world would grow to shade
Or grow to fire, but each way cease to live.
And thou shalt gather strange rewards, O King,
Hurt thyself with good, and lose thy life
To have the life of all the solar world,
Draw infinite gain out of more infinite loss,
And, for the lowest, endless fame. Today
Retire nor pluck the slowly-ripening fates;
Since who anticipates the patient Gods,
Finds his crown ashes and his empire grief.
So choose blind Titans in their violent souls
Unseeing, forfeiting the beautiful world
For momentary splendours.” She was silent,
And he replied no word, but gathering
His reins swept from the golden group. His car
Through those mute Himalayan doors of earth
And all that silent life before our life
Solitary and great and merciless,
Went groaning down the wind. He, the sole living,
Over the dead deep-plunging precipices
Passed bright and small in a wide dazzling world
Illimitable, where eye flags and ear
Listening feels inhuman loneliness.
He tended towards Gungotri’s solemn peaks
And savage glaciers and the caverns pure
Whence Ganges leaps, our mother, virgin-cold.
But ere he plunged into the human vales
And kindlier grandeurs, King Pururavus
Looked back upon a gust of his great heart,
And saw her. On a separate peak, divine,
In blowing raiment and a glory of hair
She stood and watched him go with serious eyes
And a soft wonder in them and a light.
One hand was in her streaming folds, one shaded
Her eyes as if the vision that she saw
Were brighter even than deathless eyes endure.
Over her shoulder pressed a laughing crowd
Of luminous faces. And Pururavus
Staggered as smitten, and shaking wide his reins
Rushed like a star into the infinite air;
So curving downwards on precipitate wheels,
His spirit all a storm, came with the wind
Far-sounding into Ila’s peaceful town.
CANTO II

But from the dawn and mountains Urvasie
Went marvelling and glad, not as of old
A careless beam; for an august constraint,
Unfelt before, ruled her extravagant grace
And wayward beauty; and familiar things
Grew strange to her, and to her eyes came mists
Of mortal vision. Love was with her there,
But not of Paradise nor that great guest
Perpetual who makes his golden couch
Between the Opsara’s ever-heaving breasts.
For this was rapturous, troubled, self-absorbed,
A gracious human presence which she loved,
And wondered at, and hid deep in her heart.
And whether in the immortal’s dance she moved,
A billow, or her fingers like sunbeams
Brightened the harps of heaven, or going out
With the white dawn to bathe in Swerga’s streams,
Or in the woods of Eden wandering,
Or happy sitting under peaceful boughs
In a great golden evening, all she did,
Celestial occupations, all she thought
And all she was, though still the same, had changed.
There was a happy trouble in her ways
And movements; her felicitous lashes drooped
As with a burden; all her daily acts
Were like a statue’s imitating life,
Not single-hearted like the sovran Gods.
Now as the days of heaven went by in quiet
And there was peaceful summer ’mid the Gods,
In Swerga song increased and dances swayed
In multitudinous beauty, jasmine-crowned;
And often in high Indra’s hall the spirits
Immortal met to watch the shows divine
Of action and celestial theatre.
For not of earth alone are delicate arts
And noble imitations, but in heaven
Have their rich prototypes. So on that day
Before a divine audience there was staged
The Choice of Luxmie. Urvasie enacted
The goddess, Ocean's child, and Ménaca
Was Varunie, and other girls of heaven
Assembled the august desiring Gods.
Full strangely sweet those delicate mimics were;
Moonbeam faces imitated the strength
And silence of great spirits battle-worn,
And little hands the awful muniments
Of empire grasped and powers that shake the world.
Then with a golden wave of arm sublime
Ménaca towards the warlike consistory,
Under half-drooping lashes indicating
Where calm eternal Vishnu like a cloud
Sat discus-armed, said to her sister bright:
“Daughter of Ocean, sister, for whom heaven
Is passionate, thou hast reviewed the powers
Eternal and their dreadful beauty scanned,
And heard their blissful names. Say, unafraid
Before these listening faces, whom thou lovest
Above all Gods and more than earth and more
Than joy of Swerga's streams?” And Urvasie,
Musing with wide unseeing eyes, replied
In a far voice: “The King Pururavus.”
Then, as a wind among the leaves, there swept
A gust of laughter through the assembled Gods,
A happy summer sound. But not in mirth
Bharuth, the mighty dramatist of heaven,
Passionate to see his smooth work marred and spell
Broken of scenic fancies finely-touched:
“Since thou hast brought the breath of mortal air
Into the pure solemnities of heaven,
And since thou givest up to other ends
Than the one need for which God made thee form,
Urvasie

Thy being and hast here transferred from earth
Human failure from the divided soul,
Marring my great creation, Urvasie,
I curse thee to possess thy heart’s desire.
Exiled from Swerga’s streams and golden groves
Thou, by terrestrial Ganges or on sad
Majestic mountains or in troubled towns,
Enjoy thy love, but hope not here to breathe
Felicity in regions built for peace
Of who, erect in their own nature, keep
Living by fated toils the glorious world.”
He ceased and there was silence of the Gods.
Then Indra answered, smiling, though ill-pleased:
“Bharuth, not well nor by the fates allowed
To exile without limit from the skies
Who of the skies is part. Her wilt thou banish
From the felicity of grove and stream,
Making our Eden empty of her smiles?
But what felicity in stream or grove
And she not secret there? And hast thou taxed
Her passion, yet in passion wouldst deface
The beautiful world because thy work is vain?”
Bharuth replied, the high poet severe:
“Irrevocable is the doom pronounced
Once by my lips. Fates too are born of song.
But if of limit thou speakest and the term
By nature fixed to the divorce of her
From the felicity in which she moves,
Nature that fixed the limit, still effects
Inevitably its fated ends. For Fate,
The dim great presence, is but nature made
Irrevocable in its fruits. Let her
To the pure banks of sacred Ganges wend.
There she may keep her exile, from of old
Intended for perfection of the earth
Through her sweet change. Heaven too shall flash and grow
Fairer with her returning feet though changed, —
Though changed, yet lovelier from beneficence.
For she will come soft with maternal cheeks
And flushed from nuptial arms and human-blest
With touches of the warm delightful earth.”
He said and Urvasie from the dumb place
And thoughtful presence of the Gods departed
Into the breezy noon of Swerga. Under
Green well-known boughs laden with nameless fruit
And over blissful swards and perfect flowers
And through the wandering alleys she arrived
To heavenly Ganges where it streams o’er stones;
There from the banks of summer downward stepped,
One little golden hand gathering her dress
Above her naked knees, and, lovely, passed
Through the divine pellucid river on
To Swerga’s portals, pausing on the slope
Which goes toward the world. There she looked down
With yearning eyes far into endless space.
Behind her stood the green felicitous peaks
And trembling tops of woods and pulse of blue
With those calm cloudless summits quivering.
All heaven was behind her, but she sent
No look to those eternal seats of joy.
She down the sunbeams gazed where mountains rose
In snow, the bleak and mighty hills of earth,
And virgin forests vast, great infant streams
And cities young in the heroic dawn
Of history and insurgent human art
Titanic on the old stupendous hills,
Towards these she gazed down under eyelids glad.
And to her gazing came Tilottama,
Bright out of heaven, and clasped her quiet hand
And murmured softly, “Sister, let us go.”
Then they went down into the waiting world,
The golden women, and through gorges mute
Past Budricayshwur in the silent snow
Came silent to Pururavus Urvase.
Urvasie

For not in Ilian streets Pururavus
Sojourned, nor in the happy throng of men,
But with the infinite and the lonely hills.
For he grew weary of walls and luminous carved
Imperial pillars bearing up huge weight
Of architectural stone, and the long street,
And thoughtful temple wide, and sharp cymbals
Protecting the august pure place with sound;
The battled tramp of men, sessions of kings,
The lightning from sharp weapons, jubilant crash
Of chariots, and the Veda’s mighty chant;
The bright booths of the merchants, the loud looms
And the smith’s hammer clanging music out,
And stalwart men driving the patient plow
Indomitable in fierce breath of noon.
Of these he now grew weary and the blaze
Of kingship, its immense and iron toils,
With one hand shielding in the people’s ease,
With one hand smiting back the tireless foe,
And difficulty of equal justice cold,
And kind beneficent works harmonious kept
With terrible control; the father’s face,
The man’s heart, the steeled intellect of power
Insolubly one; and after sleepless nights
Labouring greatly for a great reward,
Frequent failure and vigorous success,
And sweet reward of voices filial grown.
These that were once his life, he loved no more.
They held not his desire nor were alive,
But pale magnificent ghosts out of the past
With sad obsession closing him from warm
Life and the future in far sunlight gold.
For in his heart and in his musing eyes
There was a light on the cold snows, a blush
Upon the virgin quiet of the East
And storm and slowly-lifting lids. Therefore
He left the city Ilian and plains
Whence with a mighty motion eastward flows
Ganges, heroical and young, a swift
Mother of strenuous nations, nor yet reaches
Her musing age in ardent deep Bengal.
He journeyed to the cold north and the hills
Austere, past Budricayshwur ever north,
Till, in the sixth month of his pilgrimage
Uneasy, to a silent place he came
Within a heaped enormous region piled
With prone far-drifting hills, huge peaks o'erwhelmed
Under the vast illimitable snows, —
Snow on ravine, and snow on cliff, and snow
Sweeping in strenuous outlines to heaven,
With distant gleaming vales and turbulent rocks,
Giant precipices black-hewn and bold
Daring the universal whiteness; last,
A mystic gorge into some secret world.

He in that region waste and wonderful
Sojourned, and morning-star and evening-star
Shone over him and faded, and immense
Darkness wrapped the hushed mountain solitudes
And moonlight's brilliant muse and the cold stars
And day upon the summits brightening.
But ere day grew the hero nympholept
Climbed the immortal summits towards the dawn
And came with falling evening down and lay
Watching the marvellous sky, but called not sleep
That beat her gentle wings over his eyes,
Nor food he needed who was grown a god.
And in the seventh month of his waiting long
Summit or cliff he climbed no more, but added
To the surrounding hush sat motionless,
Gazing towards the dim unfathomed gorge.
Six days he sat and on the seventh they came
Through the dumb gorge, a breath of heaven, a stir,
Then Eden's girls stepping with moonbeam feet
Over the barren rocks and dazzling snows,
That grew less dazzling, their tresses half unbound
And delicate raiment girdled enchantingly.
Silent the perfect presences of heaven
Came towards him and stood a little away,
Like flowers waiting for a sunbeam. He
Stirred not, but without voice, in vision merged,
Sat, as one sleeping momentarily expects
The end of a dear dream he sees, and knows
It is a dream, and quietly resigned
Waits for the fragile bliss to break or fade.
Then nearer drew divine Tilottama
And stood before his silence statuesque,
Holding her sister’s hand; for she hung back,
Not as an earthly maiden, cheeks suffused,
Lids drooping, but as men from patience called
Before supreme felicity hang back,
A little awed, a little doubtful, fearing
To enter radiant Paradise, so bright
It seems; thus she and quailed before her bliss.
But her sister, extending one bright arm:
“Pururavus, thou hast conquered and I bring
No dream into thy life, but Urvasie.”
And at that name the strong Pururavus
Rose swaying to his feet like one struck blind;
Or when a great thought flashes through his brain,
A poet starts up and almost cries aloud
As at a voice, — so he arose and heard.
And slowly said divine Tilottama:
“Yet, son of Ila, one is man and other
The Opsaras of heaven, daughters of the sea,
Unlimited in being, Ocean-like.
They not to one lord yield nor in one face
Limit the universe, but like sweet air,
Water unowned and beautiful common light
In unrestrained surrender remain pure.
In patient paths of Nature upon earth
And over all the toiling stars we fill
With sacred passion large high-venturing spirits
And visit them with bliss; so are they moved
To immense creative anguish, glad if through
Heart-breaking toil once in bare seasons dawn
Our golden breasts between their hands or rush
Our passionate presence on them like a wave.
In heaven bright-limbed with bodily embrace
We clasp the Gods, and clasp the souls of men,
And know with winds and flowers liberty.
But what hast thou with us or winds or flowers?
O thou who wast so white, wilt thou not keep
Thy pure and lonely eminence and move
For ever towards morning like a star?
Or as thy earthly Ganges rolling down
Between the homes and passionate deeds of men,
And bearing many boats and white with oars,
From all that life quite separate, only lives
Towards Ocean, so thou doest human work,
Making a mighty nation, doing high
And necessary deeds, but, all untouched
By action, livest in thy soul apart
And to the immortal zenith climbest pure.”
But he, blind as from dazzling dreams, said low:
“One I thought spoke far-off of purity
And whiteness and the human soul in God.
These things were with me once, but now I see
The Spring a golden child and shaken fields.
All beautiful things draw near and come to me.
I dream upon a woman’s glorious breasts,
And watch the dew-drop and am glad with birds,
And love the perfect coilings of the snake,
And cry with fire in the burning trees,
And am a wave towards desired shores.
I move to these and move towards her bosom
And mystic eyes where all these are one dream.
And what shall God profit me or his glory,
Who love one small face more than all his worlds?"
He woke with his own voice. His words that first
Dreamed like a languid wave, sudden were foam;
And he beheld her standing and his look
Grew strong; he yearned towards her like a wave,
And she received him in her eyes as earth
Receives the rain. Then bright Tilottama
Cried in a shining glory over them:
“O happy lover and O fortunate loved,
Who make love heavenlier by loss! Ah yet,
The Gods give no irrecoverable gifts,
Nor unconditioned, O Pururavus,
Is highest bliss even to most favoured men.
And thy deep joy must tremble o’er her with soul
On guard, all overshadowed by a fear.
For one year thou shalt know her on the peaks,
In solitary vastnesses of hills
And regions snow-besieged; and for one year
In the green forests populous and free
Life in sunlight and by delightful streams
Thou shalt enjoy her; and for one year where
The busy tramp of men goes ceaseless by,
Subduing her to lovely human cares:
And so long after as one law observed
Save her to thee, O King; for never man
With Opsara may dwell and both be known:
Either a rapture she invisible
Or he a mystic body and mystic soul.
Reveal not then thy being naked to hers,
O virgin Ila’s son, nor suffer ever
Light round thy body naked to her eyes,
Lest day dawn not on thy felicity,
Sole among men.” She left them, shining up
Into the sunlight, and was lost in noon.
And King Pururavus stood for a space,
Like the entrancéd calm before great winds
And thunder. Then through all his limbs there flashed
Youth and the beauty and the warmth of earth  
And joy of her left lonely to his will.  
He moved, he came towards her. She, a leaf  
Before a gust among the nearing trees,  
Cowered. But, all a sea of mighty joy  
Rushing and swallowing up the golden sand,  
With a great cry and glad Pururavus  
Seized her and caught her to his bosom thrilled,  
Clinging and shuddering. All her wonderful hair  
Loosened and the wind seized and bore it streaming  
Over the shoulder of Pururavus  
And on his cheek a softness. She, o’erborne,  
Panting, with inarticulate murmurs lay,  
Like a slim tree half seen through driving hail,  
Her naked arms clasping his neck, her cheek  
And golden throat averted, and wide trouble  
In her large eyes bewildered with their bliss.  
Amid her wind-blown hair their faces met.  
With her sweet limbs all his, feeling her breasts  
Tumultuous up against his beating heart,  
He kissed the glorious mouth of heaven’s desire.  
So clung they as two shipwrecked in a surge.  
Then strong Pururavus, with godlike eyes  
Mastering hers, cried tremulous: “O beloved,  
O miser of thy rich and happy voice,  
One word, one word to tell me that thou lovest.”  
And Urvasie, all broken on his bosom,  
Her godhead in his passion lost, moaned out  
From her imprisoned breasts, “My lord, my love!”
So was a goddess won to mortal arms;  
And for twelve months he held her on the peaks,  
In solitary vastnesses of hills  
And regions snow-besieged. There in dim gorge  
And tenebrous ravine and on wide snows  
Clothed with deserted space, o’er precipices  
With the far eagles wheeling under them,  
Or where large glaciers watch, or under cliffs  
O’er-murmured by the streaming waterfalls,  
And later in the pleasant lower hills,  
He of her beauty world-desired took joy:  
And all earth’s silent sublime spaces passed  
Into his blood and grew a part of thought.  
Twelve months in the green forests populous,  
Life in sunlight and by delightful streams  
He increased rapture. The green tremulous groves,  
And solitary rivers white with birds,  
And watered hollow’s gleam, and sunny boughs  
Gorgeous with peacocks or illumining  
Bright bosom of doves, in forests’ musing day  
Or the great night with roar of many beasts, —  
All these were Eden round the glorious pair.  
And in their third flower-haunted spring of love  
A child was born from golden Urvasie.  
But when the goddess from maternal pangs  
Woke to the child’s sweet face and strange tumult  
Of new delight and felt the little hands  
Erring about her breasts, passionate she cried:  “How long shall we in woods, Pururavus,  
Waste the glad days of cheerful human life?  
What pleasure is in soulless woods and waves?  
But I would go into the homes of men,  
Hear the great sound of cities, watch the eager  
Faces tending to hall and mart, and talk
With the bright girls of earth, and kiss the eyes
Of little children, feel smooth floors of stone
Under my feet and the restraint of walls,
And eat earth’s food from vessels made and drink
Earth’s water cool from jars, and know all joy
And labour of that blithe and busy world.”
She said, and he with a slight happy smile
Consented. So to sacred Ganges they
Came and the virgin’s city liian.
But when they neared the mighty destined walls,
His virgin-mother from her temple pure
Saw him, and a wild blare of conchs arose.
Rejoicing to the lion-gates they streamed,
The people of Pururavus, a glad
Throng indistinguishable, traders and priests,
Merchants of many gains and craftsmen fine
Oblivious of their daily toils; the carver
Flinging his tool away and hammerless
The giant smith laughing through his vast beard.
And little children ran, all over flowers,
And girls like dawn with a delightful noise
Of anklets, matrons and old men divine,
And half a godhead with great glances came
The large-eyed poets of the Vedic chant;
Before them, all that multitude divided
Honouring them. In gleaming armour came,
And bearing dreadful bows, with sound of swords,
High lords of sacrifice and aged chiefs
War-weary and great heroes with mighty tread.
All these to a high noise of trumpets came.
They with a wide sound going up to heaven
Welcomed their king, and a soft shower of blooms
Fell on him as from warlike fields returned.
Much all they marvelled at his heavenly bride
And worshipped her, half-awed. And young girls came,
Daughters of warriors, to great houses wed,
Sweet faces of delightful laughter, came
And took into their glad embrace and kissed,
Enamoured of her smiling mouth, and praised
Aloud her beauty. With flowers then they bound
Her soft immortal wrists, and through the gates,
Labouring in vain to bend great bows, waving
Far-glancing steel, and up the bridal streets
Captive the girlish phalanx, bright with swords,
After the old heroic fashion led.
They amid trumpets and the vast acclaim
Of a glad people brought the child of Gods
To her terrestrial home; through the strong doors
They lifted, and upon an earthly floor,
Loosening, let from the gleaming limbs slide down
Her heavenly vesture; next they brought and flung
About her sweet insufferable grace
Mortal habiliments, a clinging robe.
Over her hair the wifely veil was drawn.
Thus was the love of all the world confined
To one man’s home. And O too fortunate
Mortal, who could with those auguster joys
Mingle our little happy human pains,
Subduing a fair goddess from her skies
To gentle ordinary things, sweet service
And household tasks making her beautiful,
And trivial daily words, and kisses kind,
And all the meaning dear of wife and home!
Human with earth dwelt golden Urvasie,
And bore to King Pururavus a race
Of glorious children, each a shining god.
She loved that great and simple life of old,
Its marble outlines, strong joys and clear air
Around the soul, loved and made roseate.
The sacred city felt a finer life
Within it; burning inspirations breathed
From hallowed poets; and architects to grace
And fancy their immense conceptions toned;
Numberless heroes emulously drove forth
And in strong joyous battle rolling back
The dark barbarian borders, flashed through fields,
Brilliant, and sages in their souls saw God.
And from the city of Pururavus
High influences went; Indus and Ganges
And all the golden intermediate lands
Grew with them and a perfect impulse felt.
Seven years the earth rejoiced in Urvasie.

But in their fortunate heavens the high Gods
Dwelt infelicitous, losing the old
Rapture inexplicable and thrill beneath
Their ancient calm. Therefore not long enduring,
They in colossal council marble, said
To that bright sister whom she had loved best,
“Ménaca!” crying “how long shall one man
Divide from heaven its most perfect bliss?
Go down and bring her back, our bright one back,
And we shall love again our luminous halls.”
She heard and went, with her ethereal robe
Murmuring about her, to the gates divine,
And looked into the world, and saw the far
Titanic Ilian city like a stone
Sunlit upon the small and distant earth.
Down from heaven’s peaks the daughter of the sea
Went flashing and upon a breathless eve
Came to the city of Pururavus,
Air blazing far behind her till she paused.
She over the palace of Pururavus
Stood in shadow. Within the lights yet were;
Still sat the princes and young poets sang
On harps heroical of Urvasie
And strong Pururavus, of Urvasie
The light and lovely spirit golden-limbed,
Son of a virgin strong Pururavus.
“O earth made heaven to Pururavus!
O heaven left earth without sweet Urvasie!
“Rejoice possessing, O Pururavus!  
Be glad who art possessed, O Urvasie!  
“Behold the parents of the sacrifice!  
When they have met, then they together rush  
And in their arms the beautiful fire is born.  
“Behold the children of the earth and sky!  
When they met, then they loved, O then they clasped,  
And from their clasp a lovely presence grew.  
“A holy virgin’s son we hear of thee  
Without a father born, Pururavus,  
Without a mother lovely Urvasie.  
“Hast thou not brought the sacrifice from heaven,  
The unquenched, unkindled fire, Pururavus?  
Hast thou not brought delightful Urvasie?  
“The fires of sacrifice mount ever up:  
To their lost heavens they naturally aspire.  
Their tops are weighted with a human prayer.  
“The soul of love mounts also towards the sky;  
Thence came the spark but hardly shall return;  
Its wings are weighted with too fierce a fire.  
“Rejoice in the warm earth, O lovely pair,  
The green strong earth that gave Pururavus.  
“Rejoice in the blithe earth, O lovely pair,  
The happy earth all flushed with Urvasie.  
“As lightning takes the heart with pleasant dread,  
So love is of the strong Pururavus.  
“As breathes sweet fragrance from the flower oppressed,  
So love from thy bruised bosom, Urvasie.”  

So sang they and the heart rejoiced. Then rose  
The princes and went down the long white street,  
Each to his home. Soon every sound had faded;  
Heaven and a few bright stars possessed the world.  
But in a silent place dim with the west  
On that last night of the sweet passionate earth,  
The goddess with the mortal hero lay.  
For over them victorious Love still showered  
His arrows marble-dinting, not flower-tipped
As our brief fading fires, — naked and large
As heaven the monumental loves of old.
On their rich bed they lay, and the two rams
That once the subtle bright Gundhurvas gave
To Urvasie, were near; they were ever
With her and cherished; hardly even she loved
The tender faces of her children more
Than these choice from flocks heavenly: only these
Remained to her of unforgotten skies.
So lay they under those fierce shafts of Love,
And in the arms of strong Pururavus
Once more were those beloved limbs embraced,
Once more, if never once again on earth.
Before he slept, the lord of Urvasie
Clasped her to him and wooed from her tired lips
One kiss, nor in its passion felt farewell.
But the night darkened over the vague town,
And clouds came gradual up, and through the clouds
In thunderless great flashes stealing came
The subtle-souled Gundhurvas from the peaks
Of distant Paradise. Thunder rolled out,
And through the walls, in a fierce rush of light,
Entered the thieves of heaven and stole the rams,
And fled with the same lightning. Shuddering
The exile of the skies awoke and knew
Her loss, and with a lamentable cry
Turned to her lord. “Arise, Pururavus!”
She wept, “they take from me my snow-white joys.”
And starting from his sleep Pururavus,
In that waking when memory is far
And nature of a man unquestioned rules,
Heard of oppression and a space forgot
Fate and his weak tenure of mighty bliss,
Restored to the great nature of a king.
Wrathful he leaped up and on one swift stride
Reached to his bow. Before ’twas grasped he shuddered,
His soul all smitten with a rushing fear.
Alarmed he turned towards her. Suddenly wide
The whole room stood in splendour manifest,
All lightning, and heroically vast,
In gesture kingly like a statue stayed,
Rose glorious, all a grace of naked limbs,
The hero beautiful, Pururavus,
In that fierce light. Intenser than by day
He for one brilliant moment clear beheld
All the familiar place, the fretted huge
Images on the columns, the high-reared
Walls massively erect and silent floor,
And on the floor the gracious fallen dress
That never should embrace her perfect form,
Lying a glimmer, and each noble curve
Of the strong couch, and delicately distinct
The golden body and the flower-like face:
Beside her with a lovely smile that other,
One small hand pressing back the shining curls
Blown with her speed over her. Then all faded.
Thunder crashed through the heavens jubilant.
For a long while he stood with beating heart
Half-conscious of its loss, and as if waiting
Another flash, into the dimness gazed
For those loved outlines that were far away.
Then with a quiet smile he went and placed
Where she had lain such a short while ago
Both hands, expecting her sweet breasts, but found
Her place all empty to him. Silently
He lay down whispering to his own heart:
“She has arisen and her shining dress
Put round her and gone into the cool alcove
To fetch sweet water for the heavenly rams,
And she will stay awhile perhaps to look
And muse upon the night, and then come back,
And give them drink, and silently lie down
Beside me. I shall see her when it dawns.”
And so he slept. But the grey dawn came in
And raised his lashes. He stretched out his arms
To find her. Then he knew he was alone.

Even so he would not dwell with his despair.
“She is but gone,” he said, “for a little gone
Into the infinite silences afar
To see her golden sisters and revisit
The streams she knew and those unearthly skies.
But she will soon come back,—even if her heart
Would let her linger, mine would draw her back;—
Come soon and talk to me of all she left,
And clasp her children, and resume sweet goings
And happy daily tasks and rooms she loved.”

So, steadfast, he continued kingly toils
Among a people greatly-destined, giving
In sacred sessions and assemblies calm
Counsels far-seeing, magnanimous decrees
Bronze against Time, and from the judgment seat
Unblamed sentence or reconcilement large.
And perfect trinity of holy fires
He kindled for desirable rain, and went
To concourse of strong men or pleasant crowds,
Or triumphed in great games armipotent.
Yet behind all his moments there was void.
And as when one puts from him desperately
The thought of an inevitable fate,
Blinding himself with present pleasures, often
At a slight sound, a knocking at the door,
A chance word terrible, or even uncalled
His heart grows sick with sudden fear, and ghastly
The face of that dread future through the window
Looks at him; mute he sits then shuddering:
So to Pururavus in session holy,
Or warlike concourse, or alone, speaking,
Or sitting, often a swift dreadful fear
Made his life naked like a lightning flash;
Then his whole being shook and his strong frame,
As with a fever, and his eyes gazed blind;
Soon with great breaths he repossessed his soul.
Long he endured thus, but when shocks of fear
And brilliant passage of remorseless suns
And wakeful nights wrestling with memory
Invisibly had worn his heart, he then
Going as one desperate, void of thought or aim,
Into that silent place dim with the west,
Saw there her dress empty of her, and bed
Forlorn, and the cold floor where she had lain
At noon and made life sweet to him with her voice.
Sometimes as in an upland reservoir
Built by the hands of early Aryan kings,
Its banks in secret fretted long go down,
Suddenly down with resonant collapse,
Then with a formidable sound the flood
Descends, heard over all the echoing hills,
And marble cities are o’erwhelmed; so sank
The courage of the strong Pururavus,
By memory and anguish overcome
And thoughts of bliss intolerable. Tears
Came from him; the unvanquished hero lay
With outstretched arms and wept. Henceforth his life
Was with that room. If he appeared in high
Session, warlike concourse or pleasant crowd,
Men looked on him as on the silent dead.
Nor did he linger, but from little stay
Would silently return and in hushed rooms
Watch with the little relics left of her,
Things he had hardly borne to see before,
Now clasped them often, often kissed, sometimes
Spoke to them as to sweet and living friends,
And often over his sleeping children hung.
Nor did he count the days, nor weep again,
But looked into the dawn with tearless eyes.
And all the people mourned for their great king,
Silently watching him, and many murmured:
“This is not he, the King Pururavus,
Hero august, who his impetuous soul
Ruled like a calm and skilful charioteer,
And was the virgin Ila’s son, our king.
Would that the enemy’s war-cry now might rush
Against our gates and all the air be sound.
Surely he would arise and lift his bow,
And his swift chariot hurling through the gates
Advance upon them like a sea, and triumph,
And be himself among the rushing wheels.”
So they would murmur grieving. But the king
When the bright months brought round a lustier earth,
Felt over his numbed soul some touch of flowers,
And rose a little from his grief, and lifted
His eyes against the stars. Then he said low:
“I was not wont so quickly to despair.
O hast thou left me and art lost in light,
Cruel, between the shining hemispheres?
Yet even there I will pursue my joy.
Though all the great immortals jealously
Encompass round with shields thy golden limbs,
I may clash through them yet, or my strong patience
Will pluck my love down from her distant stars.
Still am I Ila’s son, Pururavus,
That passionless pure strength though lost, though fallen
From the armed splendid soul which once I was.”
So saying he to the hall of session strode,
Mightily like a king, a marble place
With wide Titanic arches imminent,
And from the brooding pillars seized a shell
And blew upon it. Like a storm the sound
Through Pratisthana’s streets was blown. Forth came
From lintel proud and happy threshold low
The people pouring out. Majestic chiefs
And strong war-leaders and old famous men
And mighty poets first; behind them streamed
The Ilian people like driving rain, and filled
With faces the immeasurable hall.
And over them the beautiful great king
Rose bright; anticipations wonderful
Of immortality flashed through his eyes
And round his brow’s august circumference.
“My people whom I made, I go from you;
And what shall I say to you, Ilian people,
Who know my glory and know my grief? Now I
Endure no more the desolate wide rooms
And gardens empty of her. I will depart
And find her under imperishable trees
Or secret beside streams. But since I go
And leave my work behind and a young nation
With destiny like an uncertain dawn
Over it — Ayus her son, I give you. He
By beauty and strength incomparable shall rule.
Lo, I have planted earth with deeds and made
The widest heavens my monument, have brought
From Paradise the sempiternal fire
And warred in heaven among the warring Gods.
O people, you have shared my famous actions
Done in a few great years of earthly life,
The battles I fought, edifications vast,
And perfect institutes that I have framed.
High things we have done together, O my people.
But now I go to claim back from the Gods
Her they have taken from me, my dear reward.”
He spoke and all the nation listened, dumb.
Then was brought forth the bud of Urvasie,
With Vedic verse intoned and Ganges pure
Was crowned a king, and empire on his curls
Established. But Pururavus went forth,
Through ranks of silent people and gleaming arms,
With the last cloud of sunset up the fields
And darkening meadows, And from Ila’s rock,
And from the temple of Ila virginal,
A rushing splendour wonderfully arose
And shone all round the great departing king. 
He in that light turned and saw under him 
The mighty city, luminous and vast, 
Colossally up-piled towards the heavens, 
Temple and street and palace, and the sea 
Of sorrowing faces and sad grieving eyes; 
A moment saw, and disappeared from light 
Into forest. Then a loud wail arose 
From Pratisthana, as if barbarous hordes 
Were in the streets and all its temples huge 
Rising towards heaven in disastrous fire, 
But he unlistening into darkness went.
CANTO IV

Through darkness and immense dim night he went
Mid phantom outlines of approaching trees,
And all the day in green leaves, till he came
To peopled forests and sweet clamorous streams
And marvellous shining meadows where he lived
With Urvasie his love in seasons old.
These like domestic faces waiting were.
He knew each wind-blown tree, each different field;
And could distinguish all the sounding rivers
Each by its own voice and peculiar flow.
Here were the happy shades where they had lain
Inarmed and murmuring, here half-lustrous groves
Still voiceful with a sacred sound at noon,
And these the rivers from her beauty bright.
There straying in field and forest he to each
Familiar spot so full of her would speak,
Pausing by banks and memorable trees.
“O sacred fig-tree, under thee she paused
Musing amid her tresses, and her eyes
Were sweet and grave. And, O delicious shade,
Thou hast experienced brightness from her feet,
O cool and dark green shelterer, perfect place!
And lo! the boughs all ruinous towards earth
With blossoms. Here she lay, her arms thrown back,
Smiling up to me, and the flowers rained
Upon her lips and eyes and bosom bare.
And here a secret opening where she stood
Waiting in narrow twilight; round her all
Was green and secret with a mystic, dewy
Half invitation into emerald worlds.
O river, from thee she moved towards the glade
Breathing and wet and fresh as if a flower
All bare from rain. And thou, great holy glade,
Sawest her face maternal o’er her child.”
Then ceasing he would wait and listen, half
Expecting her. But all was silent; only
Perhaps a bird darted bright-winged away,
Or a grey snake slipped through the brilliant leaves.
Thus wandering, thus in every mindful place
Renewing old forgotten scenes that rose,
Gleam after gleam, upon his mind, as stars
Return at night; thus drawing from his heart
Where they lay covered, old sweet incidents
To live before his eyes; thus calling back
Uncertain moods, brief moments of her face,
And transient postures strangely beautiful,
Pleasures, and little happy mists of tears
Heart-freeing, he, materializing dreams,
Upon her very body almost seized.
Always a sense of imperfection slipped
Between him and that passionate success.
Therefore he murmured at last unsatisfied:
“She is not here; though every mystic glade
And sunbright pasture breathe alone of her
And quiver as with her presence, I find not
Her very limbs, her very face; yet dreamed
That here infallibly I should restrain
Her fugitive feet or hold her by the robe.
O once she was the luminous soul of these,
And in her body lived the summer and spring
And seed and blossoming, ripening and fall,
Hiding of Beauty in the wood and glen,
And flashing out into the sunlit fields
All flowers and laughter. All the happy moods
And all the beautiful amorous ways of earth
She was; but they now seem only her dress
Left by her. Therefore, O ye seaward rivers,
O forests, since ye have deceived my hope,
I go from you to dazzling cruel ravines
And find her on inclement mountains pure.”

Then northward blown upon a storm of hope
The hero self-discrowned, Pururavus,
Went swiftly up the burning plains and through
The portals of the old Saivaalic hills
To the inferior heights, nor lingered long,
Though pulsing with fierce memories, though thrilled
With shocks of a great passion touching earth;
But plunged o’er difficult gorge and prone ravine
And rivers thundering between dim walls,
Driven by immense desire, until he came
To dreadful silence of the peaks and trod
Regions as vast and lonely as his love.
Then with a confident sublime appeal
He to the listening summits stretched his hands:
“O desolate strong Himalaya, great
Thy peaks alone with heaven and dreadful hush
In which the Soul of all the world is felt
Meditating creation! Thou, O mountain,
My bridal chamber wast. On thee we lay
With summits towards the moon or with near stars
Watching us in some wild inhuman vale,
Thy silence over us like a coverlid
Or a far avalanche for bridal song.
Lo, she is fled into your silences!
I come to you, O mountains, with a heart
Desolate like you, like you snow-swept, and stretch
Towards your solemn summits kindred hands.
Give back to me, O mountains, give her back.”
He ceased and Himalaya bent towards him, white.
The mountains seemed to recognize a soul
Immense as they, reaching as they to heaven
And capable of infinite solitude.
Long he, in meditation deep immersed,
Strove to dissolve his soul among the hills
Into the thought of Urvasie. The snow
Stole down from heaven and touched his cheek and hair,
The storm-blast from the peaks leaped down and smote
But woke him not, and the white drops in vain
Froze in his locks or crusted all his garb.  
For he lived only with his passionate heart.  
But as the months with slow unnoticed tread  
Passed o’er the hills nor brought sweet change of spring  
Nor autumn wet with dew, a voice at last  
Moved from far heavens, other than our sky.  
And he arose as one impelled and came  
Past the supreme great ridges northward, came  
Into the wonderful land far up the world  
Dim-looming, where the Northern Kurus dwell,  
The ancients of the world, invisible,  
Among forgotten mists. Through mists he moved  
Feeling a sense of unseen cities, hearing  
No sound, nor seeing face, but conscious ever  
Of an immense traditionary life  
Throbbing round him and dreams historical.  
For as he went, old kingly memories surged,  
And with vast forward faces driving came  
Origins and stabilities and empires,  
Huge passionate creations, impulses  
National realizing themselves in stone.  
Lastly with rolling of the mists afar  
He saw beneath him the primeval rocks  
Plunge down into the valley, and upsoar  
To light wide thoughtful domes and measureless  
Ramparts, and mid them in a glory walk  
The ancients of the world with eyes august.  
Next towards the sun he looked and saw enthroned  
Upon the summit one whose regal hair  
Crowned her, and purple in waves down to her feet  
Flowed, Indira, the goddess, Ocean’s child,  
Giver of empire who all beauty keeps  
Between her hands, all glory, all wealth, all power.  
Severe and beautiful she leaned her face.  
“What passion, Ilian Pururavus,  
Has led thee here to my great capital  
And ancient men in the forgotten mists,
The fathers of the Aryan race? Of glory
Enamoured hast thou come, or for thy people
Empire soliciting? But other beauty
Is on thy brow and light no longer mine.
Yet not for self wast thou of virgin born,
Perfect, and the aerial paths of gods
Permitted to thy steps; nor for themselves,
But to the voice of Vedic litanies,
Sacredly placed are the dread crowns of Kings
For bright felicities and cruel toils.
And thou, O Ilian Pururavus,
For passion dost thou leave thy strenuous grandeurs,
A nation’s destinies, and hast not feared
The sad inferior Ganges lapsing down
With mournful rumour through the shades of Hell?”
Then with calm eyes the hero Ilian:
“O Goddess, patroness of Aryasthan,
Lover of banyan and of lotus, I
Not from the fear of Hell or hope of Heaven
Do good or ill. Reigning I reigned o’er self,
And with a kingly soul did kingly deeds.
Now driven by a termless wide desire
I wander over snow and countries vague.”
And like a viol Luxmie answered him:
“Sprung of the moon, thy grandsire’s fault in thee
Yet lives; but since thy love is singly great,
Doubtless thou shalt possess thy whole desire.
Yet hast thou maimed the future and discrowned
The Aryan people; for though Ila’s sons,
In Hustina, the city of elephants,
And Indraprutha, future towns, shall rule
Drawing my peoples to one sceptre, at last
Their power by excess of beauty falls; —
Thy sin, Pururavus — of beauty and love:
And this the land divine to impure grasp
Yields of barbarians from the outer shores.”
She ceased and the oblivious mists rolled down.
But the strong hero uncrowned, Pururavus,
Eastward, all dreaming with his great desire,
Wandered as when a man in sleep arises,
And goes into the night, and under stars
Through the black spaces moves, nor knows his feet
Nor where they guide him, but dread unseen power
Walks by him and leads his unerring steps
To some weird forest or gaunt mountain-side;
There he awakes, a horror in his soul,
And shudders alien amid places strange.
So wandered, driven by an unknown power,
Pururavus. Over hushed dreadful hills
And snows more breathless to the quiet banks
Of a wide lake mid rocks and bending woods
He came, and saw calm mountains over it,
And knew in his awed heart the hill of God,
Coilas, and Mainaac with its summits gold.
Awed he in heart, yet with a quicker stride
He moved and eyes of silent joy, like one
Who coming from long travel, sees the old
Village and children’s faces at the doors.
In a wild faery place where mountain streams
Glimmer from the dim rocks and meet the lake
Amid a wrestle of tangled trees and heaped
Moss-grown disordered stones, and all the water
Is hidden with its lotuses and sways
Shimmering between leaves or strains through bloom,
She sat, the mother of the Aryans, white
With a sublime pallor beneath her hair.
Musing, with wide creative brows, she sat
In a slight lovely dress fastened with flowers,
All heaped with her large tresses. Golden swans
Preened in the waters by her dipping feet.
One hand propped her fair marble cheek, the other
The mystic lotus hardly held. Seeing her
Pururavus bent to her and adored.
And she looked up and musing towards him
Said low: “O son, I knew thy steps afar.  
Of me thou wast; for as I suffered rapture,  
Invaded by the sea of images  
Breaking upon me from all winds, and saw  
Indus and Ganges with prophetic mind,  
A virginal impulse gleamed from my bosom  
And on the earth took beauty and form. I saw  
Thee from that glory issue and rejoiced.  
But now thou comest quite discrowned. From me,  
O son, thou hadst the impulse beautiful  
That made thy soul all colour. For I strive  
Towards the insufferable heights and flash  
With haloes of that sacred light intense.  
But lo! the spring and all its flowers, and lo!  
How bright the Soma juice. What golden joys,  
What living passions, what immortal tears!  
I lift the veil that hides the Immortal — Ah!  
My lids faint. Ah! the veil was lovelier.  
My flowers wither in that height, my swan  
Spreads not his wings felicitous so far.  
O one day I shall turn from the great verse  
And marble aspiration to sing sweetly  
Of lovers and the pomps of wealth and wine  
And warm delights and warm desires and earth.  
O mine own son, Pururavus, I fall  
By thy vast failure from my dazzling skies.”  
And Ila’s son made answer, “O white-armed,  
O mother of the Aryans, of my life  
Creatress! fates colossal overrule.  
But lo! I wander like a wave, nor find  
Limit to the desire that wastes my soul.”  
Then with a sweet immortal smile the mother  
Gave to him in the hollow of her hand  
Wonderful water of the lake. He drank,  
And understood infinity, and saw  
Time like a snake coiling among the stars;  
And earth he saw, and mortal nights and days
Grew to him moments, and his limbs became
Undying and his thoughts as marble endured.
Then to the hero deified the goddess,
“O strong immortal, now pursue thy joy:
Yet first rise up the peaks of Coilas; there
The Mighty Mother sits, whose sovran voice
Shall ratify to thee thy future fair,”
Said and caressed his brow with lips divine.
And bright Pururavus rose up the hill
Towards the breathless summit. Thence, enshrined
In deep concealing glories, came a voice,
And clearer he discerned as one whose eyes,
Long cognizant of darkness, coming forth,
Grow gradually habituated to light,
The calm compassionate face, the heaven-wide brow,
And the robust great limbs that bear the world.
Prophetical and deep her voice came down:
“Thou then hast failed, bright soul; but God blames not
Nor punishes. Impartially he deals
To every strenuous spirit its chosen reward.
And since no work, however maimed, no smallest
Energy added to the mighty sum
Of action fails of its exact result,
Empire shall in thy line and forceful brain
Persist, the boundless impulse towards rule
Of grandiose souls perpetually recur,
And minds immense and personalities
With battle and with passion and with storm
Shall burn through Aryan history, the speech
Of ages. In thy line the Spirit Supreme
Shall bound existence with one human form;
In Mathura and ocean Dwarca Man
Earthly perfectibility of soul
Example: son of thy line and eulogist,
The vast clear poet of the golden verse,
Whose song shall be as wide as is the world.
But all by huge self-will or violence marred
Of passionate uncontrol; if pure, their work
By touch of later turbulent hands unsphered
Or fames by legend stained. Upon my heights
Breathing God’s air, strong as the sky and pure,
Dwell only Ixvaacou’s children; destined theirs
Heaven’s perfect praise, earth’s sole unequalled song.
But thou, O Ilia’s son, take up thy joy.
For thee in sweet Gundhurva world eternal
Rapture and clasp unloosed of Urvasie,
Till the long night when God asleep shall fall.”

Ceased the great voice and strong Pururavus
Glad of his high reward, however dearly
Purchased, purchased with infinite downfall,
With footing now divine went up the world.
Mid regions sweet and peaks of milk-white snow
And lovely corners and delicious lakes,
He saw a road all sunlight and the gates
Of the Gundhurvas’ home. O never ship
From Ocean into Ocean erring knew
Such joy through all its patient sails at sight
Of final haven near as the tried heart
Of earth’s successful son at that fair goal.
Towards the gates he hastened, and one bright
With angel face who at those portals stood
Cried down, “We wait for thee, Pururavus.”
Then to his hearing musical, the hinges
Called; he beheld the subtle faces look
Down on him and the crowd of luminous forms,
And entered to immortal sound of lyres.
Up through the streets a silver cry went on
Before him of high instruments. From all
The winds the marvellous musicians pressed
To welcome that immortal lover. One
Whose pure-limned brows aerial wore by right
Faery authority, stood from the crowd.
“O Ilia’s son, far-famed Pururavus,
Destined to joys by mortals all unhoped!
Move to thy sacred glories as a star
Into its destined place, shine over us
Here greatest as upon thy greener earth.”
They through the thrilling regions musical
Led him and marvelled at him and praised with song
His fair sublimity of form and brow
And warlike limbs and grace heroical.
He heeded not, for all his soul was straining
With expectation of a near delight.
His eyes that sought her ever, beheld a wall
Of mighty trees and, where they arched to part,
Those two of all their sisters brightest rise,
One blithe as is a happy brook, the other
With her grave smile; and each took a strong hand
In her soft clasp, and led him to a place
Distinct mid faery-leaved ethereal trees
And magic banks and sweet low curves of hills,
And over all the sunlight like a charm.
There by a sounding river downward thrown
From under low green-curtaining boughs was she.
Mute she arose and with wide quiet eyes
Came towards him. In their immortal looks
Was a deep feeling too august for joy,
The sense that all eternity must follow
One perfect moment. Then that comrade bright
With slow grave smile, “O after absence wide
Who meet and shall not sunder any more
Till slumber of the Supreme, strong be your souls
To bear unchanging rapture; strong you were
By patience to compel unwilling Gods.”
And they were left alone in that clear world.
Then all his soul towards her leaning, took
Pururavus into his clasp and felt,
Seriously glad, the golden bosom on his
Of Urvasie, his love; so pressing back
The longed-for sacred face, lingering he kissed.
Then Love in his sweet heavens was satisfied.
But far below through silent mighty space
The green and strenuous earth abandoned rolled.
Love and Death

In woodlands of the bright and early world,
When love was to himself yet new and warm
And stainless, played like morning with a flower
Ruru with his young bride Priyumvada.
Fresh-cheeked and dew-eyed white Priyumvada
Opened her budded heart of crimson bloom
To love, to Ruru; Ruru, a happy flood
Of passion round a lotus dancing thrilled,
Blinded with his soul's waves Priyumvada.
To him the earth was a bed for this sole flower,
To her all the world was filled with his embrace.
Wet with new rains the morning earth, released
From her fierce centuries and burning suns,
Lavished her breath in greenness; poignant flowers
Thronged all her eager breast, and her young arms
Cradled a childlike bounding life that played
And would not cease, nor ever weary grew
Of her bright promise; for all was joy and breeze
And perfume, colour and bloom and ardent rays
Of living, and delight desired the world.
Then Earth was quick and pregnant tamelessly;
A free and unwalled race possessed her plains
Whose hearts uncramped by bonds, whose unspoiled thoughts
At once replied to light. Poisoned the fields;
Lonely and rich the forests and the swaying
Of those unnumbered tops affected men
With thoughts to their vast music kin. Undammed
The virgin rivers moved towards the sea,
And mountains yet unseen and peoples vague
Winged young imagination like an eagle
To strange beauty remote. And Ruru felt
The sweetness of the early earth as sap
All through him, and short life an aeon made
By boundless possibility, and love,
Sweetest of all unfathomable love,
A glory untired. As a bright bird comes flying
From airy extravagance to his own home,
And breasts his mate, and feels her all his goal,
So from boon sunlight and the fresh chill wave
Which swirled and lapped between the slumbering fields,
From forest pools and wanderings mid leaves
Through emerald ever-new discoveries,
Mysterious hillsides ranged and buoyant-swift
Races with our wild brothers in the meads,
Came Ruru back to the white-bosomed girl,
Strong-winged to pleasure. She all fresh and new
Rose to him, and he plunged into her charm.
For neither to her honey and poignancy
Artlessly interchanged, nor any limit
To the sweet physical delight of her
He found. Her eyes like deep and infinite wells
Lured his attracted soul, and her touch thrilled
Not lightly, though so light; the joy prolonged
And sweetness of the lingering of her lips
Was every time a nectar of surprise
To her lover; her smooth-gleaming shoulder bared
In darkness of her hair showed jasmine-bright,
While her kissed bosom by rich tumults stirred
Was a moved sea that rocked beneath his heart.
Then when her lips had made him blind, soft siege
Of all her unseen body to his rule
Betrayed the ravishing realm of her white limbs,
An empire for the glory of a God.
He knew not whether he loved most her smile,
Her causeless tears or little angers swift,
Whether held wet against him from the bath
Among her kindred lotuses, her cheeks
Soft to his lips and dangerous happy breasts
That vanquished all his strength with their desire,
Meeting his absence with her sudden face,
Or when the leaf-hid bird at night complained
Near their wreathed arbour on the moonlit lake,
Sobbing delight out from her heart of bliss,
Or in his clasp of rapture laughing low
Of his close bosom bridal-gladd and pleased
With passion and this fiery play of love,
Or breaking off like one who thinks of grief,
Wonderful melancholy in her eyes
Grown liquid and with wayward sorrow large.
Thus he in her found a warm world of sweets,
And lived of ecstasy secure, nor deemed
Any new hour could match that early bliss.
But Love has joys for spirits born divine
More bleeding-lovely than his thornless rose.
That day he had left, while yet the east was dark,
Rising, her bosom and into the river
Swam out, exulting in the sting and swift
Sharp-edged desire around his limbs, and sprang
Wet to the bank, and streamed into the wood.
As a young horse upon the pastures glad
Feels greensward and the wind along his mane
And arches as he goes his neck, so went
In an immense delight of youth the boy
And shook his locks, joy-crested. Boundlessly
He revelled in swift air of life, a creature
Of wide and vigorous morning. Far he strayed
Tempting for flower and fruit branches in heaven,
And plucked, and flung away, and brighter chose,
Seeking comparisons for her bloom; and followed
New streams, and touched new trees, and felt slow beauty
And leafy secret change; for the damp leaves,
Grey-green at first, grew pallid with the light
And warmed with consciousness of sunshine near;
Then the whole daylight wandered in, and made
Hard tracts of splendour, and enriched all hues.
But when a happy sheltered heat he felt
And heard contented voice of living things
Harmonious with the noon, he turned and swiftly
Went homeward yearning to Priyumvada,
And near his home emerging from green leaves
He laughed towards the sun: “O father Sun,”
He cried, “how good it is to live, to love!
Surely our joy shall never end, nor we
Grow old, but like bright rivers or pure winds
Sweetly continue, or revive with flowers,
Or live at least as long as senseless trees.”
He dreamed, and said with a soft smile: “Lo, she!
And she will turn from me with angry tears
Her delicate face more beautiful than storm
Or rainy moonlight. I will follow her,
And soothe her heart with sovereign flatteries;
Or rather all tyranny exhaust and taste
The beauty of her anger like a fruit,
Vexing her soul with helplessness; then soften
Easily with quiet undenied demand
Of heart insisting upon heart; or else
Will reinvest her beauty bright with flowers,
Or with my hands her little feet persuade.
Then will her face be like a sudden dawn,
And flower compelled into reluctant smiles.”
He had not ceased when he beheld her. She,
Tearing a jasmine bloom with waiting hands,
Stood drooping, petulant, but heard at once
His footsteps and before she was aware,
A sudden smile of exquisite delight
Leaped to her mouth, and a great blush of joy
Surprised her cheeks. She for a moment stood
Beautiful with her love before she died;
And he laughed towards her. With a pitiful cry
She paled; moaning, her stricken limbs collapsed.
But petrified, in awful dumb surprise,
He gazed; then waking with a bound was by her,
All panic expectation. As he came,
He saw a brilliant flash of coils evade
The sunlight, and with hateful gorgeous hood
Darted into green safety, hissing, death.
Voiceless he sank beside her and stretched out
His arms and desperately touched her face,
As if to attract her soul to live, and sought
Beseeking with his hands her bosom. O, she
Was warm, and cruel hope pierced him; but pale
As jasmines fading on a girl’s sweet breast
Her cheek was, and forgot its perfect rose.
Her eyes that clung to sunlight yet, with pain
Were large and feebly round his neck her arms
She lifted and, desiring his pale cheek
Against her bosom, sobbed out piteously,
“Ah, love!” and stopped heart-broken; then, “O Love!
Alas the green dear home that I must leave
So early! I was so glad of love and kisses,
And thought that centuries would not exhaust
The deep embrace. And I have had so little
Of joy and the wild day and throbbing night,
Laughter, and tenderness, and strife and tears.
I have not numbered half the brilliant birds
In one green forest, nor am familiar grown
With sunrise and the progress of the eves,
Nor have with plaintive cries of birds made friends,
Cuckoo and rainlark and love-speak-to-me.
I have not learned the names of half the flowers
Around me; so few trees know me by my name;
Nor have I seen the stars so very often
That I should die. I feel a dreadful hand
Drawing me from the touch of thy warm limbs
Into some cold vague mist, and all black night
Descends towards me. I no more am thine,
But go I know not where, and see pale shapes
And gloomy countries and that terrible stream.
O Love, O Love, they take me from thee far,
And whether we shall find each other ever
In the wide dreadful territory of death,
I know not. Or thou wilt forget me quite,
And life compel thee into other arms.
Ah, come with me! I cannot bear to wander
In that cold cruel country all alone,
Helpless and terrified, or sob by streams
Denied sweet sunlight and by thee unloved.”
Slower her voice came now, and over her cheek
Death paused; then, sobbing like a little child
Too early from her bounding pleasures called,
The lovely discontented spirit stole
From her warm body white. Over her leaned
Ruru, and waited for dead lips to move.
Still in the greenwood lay Priyumvada,
And Ruru rose not from her, but with eyes
Emptied of glory hung above his dead,
Only, without a word, without a tear.
Then the crowned wives of the great forest came,
They who had fed her from maternal breasts,
And grieved over the lovely body cold,
And bore it from him; nor did he entreat
One last look nor one kiss, nor yet denied
What he had loved so well. They the dead girl
Into some distant greenness bore away.

But Ruru, while the stillness of the place
Remembered her, sat without voice. He heard
Through the great silence that was now his soul,
The forest sounds, a squirrel’s leap through leaves,
The cheeping of a bird just overhead,
A peacock with his melancholy cry
Complaining far away, and tossings dim
And slight unnoticeable stir of trees.
But all these were to him like distant things
And he alone in his heart’s void. And yet
No thought he had of her so lately lost.
Rather far pictures, trivial incidents
Of that old life before her delicate face
Had lived for him, dumbly distinct like thoughts
Of men that die, kept with long pomps his mind
Excluding the dead girl. So still he was,
The birds flashed by him with their swift small wings,
Fanning him. Then he moved, then rigorous
Memory through all his body shuddering
Awoke, and he looked up and knew the place,
And recognised greenness immutable,
And saw old trees and the same flowers still bloom.
He felt the bright indifference of earth
And all the lonely uselessness of pain.
Then lifting up the beauty of his brow
He spoke, with sorrow pale: "O grim cold Death!
But I will not like ordinary men
Satiate thee with cries, and falsely woo thee,
And make my grief thy theatre, who lie
Prostrate beneath thy thunderbolts and make
Night witness of their moans, shuddering and crying
When sudden memories pierce them like swords,
And often starting up as at a thought
Intolerable, pace a little, then
Sink down exhausted by brief agony.
O secrecy terrific, darkness vast,
At which we shudder! Somewhere, I know not where,
Somehow, I know not how, I shall confront
Thy gloom, tremendous spirit, and seize with hands
And prove what thou art and what man." He said,
And slowly to the forest wandered. There
Long months he travelled between grief and grief,
Reliving thoughts of her with every pace,
Measuring vast pain in his immortal mind.
And his heart cried in him as when a fire
Roars through wide forests and the branches cry
Burning towards heaven in torture glorious.
So burned, immense, his grief within him; he raised
His young pure face all solemnised with pain,
Voiceless. Then Fate was shaken, and the Gods
Grieved for him, of his silence grown afraid.
Therefore from peaks divine came flashing down
Immortal Agni and to the uswutth-tree
Cried in the Voice that slays the world: “O tree
That liftest thy enormous branches able
To shelter armies, more than armies now
Shelter, be famous, house a brilliant God.
For the grief grows in Ruru’s breast up-piled,
As wrestles with its anguish barricades
In silence an impending flood, and Gods
Immortal grow afraid. For earth alarmed
Shudders to bear the curse lest her young life
Pale with eclipse and all-creating love
Be to mere pain condemned. Divert the wrath
Into thy boughs, Uswuttha — thou shalt be
My throne — glorious, though in eternal pangs,
Yet worth much pain to harbour divine fire.”
So ended the young pure destroyer’s voice,
And the dumb god consented silently.
In the same noon came Ruru; his mind had paused,
Lured for a moment by soft wandering gleams
Into forgetfulness of grief; for thoughts
Gentle and near-eyed whispering memories
So sweetly came, his blind heart dreamed she lived.
Slow the uswuttha-tree bent down its leaves,
And smote his cheek, and touched his heavy hair.
And Ruru turned illumined. For a moment,
One blissful moment he had felt ’twas she.
So had she often stolen up and touched
His curls with her enamoured fingers small,
Lingering, while the wind smote him with her hair
And her quick breath came to him like spring. Then he,
Turning, as one surprised with heaven, saw
Ready to his swift passionate grasp her bosom
And body sweet expecting his embrace.
Oh, now saw her not, but the guilty tree
Shrinking; then grief back with a double crown
Arose and stained his face with agony.
Nor silence he endured, but the dumb force
Ascetic and inherited, by sires
Fierce-musing earned, from the boy’s bosom blazed.
“O uswutth-tree, wantonly who hast mocked
My anguish with the wind, but thou no more
Have joy of the cool wind nor green delight,
But live thy guilty leaves in fire, so long
As Aryan wheels by thy doomed shadow vast
Thunder to war, nor bless with cool wide waves
Lyric Saruswathi nations impure.”
He spoke, and the vast tree groaned through its leaves,
Recognising its fate; then smouldered; lines
Of living fire rushed up the girth and hissed
Serpentine in the unconsuming leaves;
Last, all Hutashan in his chariot armed
Sprang on the boughs and blazed into the sky,
And wailing all the great tormented creature
Stood wide in agony; one half was green
And earthly, the other a weird brilliance
Filled with the speed and cry of endless flame.
But he, with the fierce rushing-out of power
Shaken and that strong grasp of anguish, flung
His hands out to the sun; “Priyumvada!”
He cried, and at that well-loved sound there dawned
With overwhelming sweetness miserable
Upon his mind the old delightful times
When he had called her by her liquid name,
Where the voice loved to linger. He remembered
The chompuc bushes where she turned away
Half-angered, and his speaking of her name
Masterfully as to a lovely slave
Rebellious who has erred; at that the slow
Yielding of her small head, and after a little
Her sliding towards him and beautiful
Propitiating body as she sank down
With timid graspings deprecatingly
In prostrate warm surrender, her flushed cheeks
Upon his feet and little touches soft;
Or her long name uttered beseechingly,
And the swift leap of all her body to him,
And eyes of large repentance, and the weight
Of her wild bosom and lips unsatisfied;
Or hourly call for little trivial needs,
Or sweet unneeded wanton summoning,
Daily appeal that never staled nor lost
Its sudden music, and her lovely speed,
Sedulous occupation left, quick-breathing,
With great glad eyes and eager parted lips;
Or in deep quiet moments murmuring
That name like a religion in her ear,
And her calm look compelled to ecstasy;
Or to the river luring her, or breathed
Over her dainty slumber, or secret sweet
Bridal outpantings of her broken name.
All these as rush unintermitting waves
Upon a swimmer overborne, broke on him
Relentless, things too happy to be endured,
Till faint with the recalled felicity
Low he moaned out: “O pale Priyumvada!
O dead fair flower! yet living to my grief!
But I could only slay the innocent tree,
Powerless when power should have been. Not such
Was Bhrigu from whose sacred strength I spring,
Nor Bhrigu’s son, my father, when he blazed
Out from Puloma’s side, and burning, blind,
Fell like a tree the ravisher unjust.
But I degenerate from such sires. O Death
That showest not thy face beneath the stars,
But comest masked, and on our dear ones seizing
Fearest to wrestle equally with love!
Nor from thy gloomy house any come back
To tell thy way. But O, if any strength
In lover’s constancy to torture dwell
Earthward to force a helping god and such
Ascetic force be born of lover’s pain,
Let my dumb pangs be heard. Whoe'er thou art,
O thou bright enemy of Death, descend
And lead me to that portal dim. For I
Have burned in fires cruel as the fire
And lain upon a sharper couch than swords.”
He ceased, and heaven thrilled, and the far blue
Quivered as with invisible downward wings.

But Ruru passioned on, and came with eve
To secret grass and a green opening moist
In a cool lustre. Leaned upon a tree
That bathed in faery air and saw the sky
Through branches, and a single parrot loud
Screamed from its top, there stood a golden boy,
Half-naked, with bright limbs all beautiful —
Delicate they were, in sweetness absolute:
For every gleam and every soft strong curve
Magically compelled the eye, and smote
The heart to weakness. In his hands he swung
A bow — not such as human archers use:
For the string moved and murmured like many bees,
And nameless fragrance made the casual air
A peril. He on Ruru that fair face
Turned, and his steps with lovely gesture chained.
“Who art thou here, in forests wandering,
And thy young exquisite face is solemnised
With pain? Luxuriously the Gods have tortured
Thy heart to see such dreadful glorious beauty
Agonise in thy lips and brilliant eyes:
As tyrants in the fierceness of others' pangs
Joy and feel strong, clothing with brilliant fire,
Tyrants in Titan lands. Needs must her mouth
Have been pure honey and her bosom a charm,
Whom thou desirest seeing not the green
And common lovely sounds hast quite forgot.”
And Ruru, mastered by the God, replied:
“I know thee by thy cruel beauty bright,
Kama, who makest many worlds one fire.
Ah, wherefore wilt thou ask of her to increase
The passion and regret? Thou knowest, great love!
Thy nymph her mother, if thou truly art he
And not a dream of my disastrous soul.”
But with the thrilled eternal smile that makes
The spring, the lover of Rathi golden-limbed
Replied to Ruru, “Mortal, I am he;
I am that Madan who inform the stars
With lustre and on life’s wide canvas fill
Pictures of light and shade, of joy and tears,
Make ordinary moments wonderful
And common speech a charm: knit life to life
With interfusions of opposing souls
And sudden meetings and slow sorceries:
Wing the boy bridegroom to that panting breast,
Smite Gods with mortal faces, dreadfully
Among great beautiful kings and watched by eyes
That burn, force on the virgin’s fainting limbs
And drive her to the one face never seen,
The one breast meant eternally for her.
By me come wedded sweets, by me the wife’s
Busy delight and passionate obedience,
And loving eager service never sated,
And happy lips, and worshipping soft eyes:
And mine the husband’s hungry arms and use
Unwearying of old tender words and ways,
Joy of her hair, and silent pleasure felt
Of nearness to one dear familiar shape.
Nor only these, but many affections bright
And soft glad things cluster around my name.
I plant fraternal tender yearnings, make
The sister’s sweet attractiveness and leap
Of heart towards imperious kindred blood,
And the young mother’s passionate deep look,
Earth’s high similitude of One not earth,
Teach filial heart-beats strong. These are my gifts
For which men praise me, these my glories calm:
But fiercer shafts I can, wild storms blown down
Shaking fixed minds and melting marble natures,
Tears and dumb bitterness and pain unpitied,
Racked thirsting jealousy and kind hearts made stone:
And in undisciplined huge souls I sow
Dire vengeance and impossible cruelties,
Cold lusts that linger and fierce fickleness,
The loves close kin to hate, brute violence
And mad insatiable longings pale,
And passion blind as death and deaf as swords.
O mortal, all deep-souled desires and all
Yearnings immense are mine, so much I can.”
So as he spoke, his face grew wonderful
With vast suggestion, his human-seeming limbs
Brightened with a soft splendour: luminous hints
Of the concealed divinity transpired.
But soon with a slight discontented frown:
“So much I can, as even the great Gods learn.
Only with death I wrestle in vain, until
My passionate godhead all becomes a doubt.
Mortal, I am the light in stars, of flowers
The bloom, the nameless fragrance that pervades
Creation: but behind me, older than me,
He comes with night and cold tremendous shade.
Hard is the way to him, most hard to find,
Harder to tread, for perishable feet
Almost impossible. Yet, O fair youth,
If thou must needs go down, and thou art strong
In passion and in constancy, nor easy
The soul to slay that has survived such grief —
Steel then thyself to venture, armed by Love.
Yet listen first what heavy trade they drive
Who would win back their dead to human arms.”
So much the God; but swift, with eager eyes
And panting bosom and glorious flushed face,

www.holybooks.com
The lover: “O great Love! O beautiful Love!
But if by strength is possible, of body
Or mind, battle of spirit or moving speech,
Sweet speech that makes even cruelty grow kind,
Or yearning melody — for I have heard
That when Saruswathi in heaven her harp
Has smitten, the cruel sweetness terrible
Coils taking no denial through the soul,
And tears burst from the hearts of Gods — then I,
Making great music, or with perfect words,
Will strive, or staying him with desperate hands
Match human strength ‘gainst formidable Death.
But if with price, ah God! what easier! Tears
Dreadful, innumerable I will absolve,
Or pay with anguish through the centuries,
Soul’s agony and torture physical,
So her small hands about my face at last
I feel, close real hair sting me with life,
And palpable breathing bosom on me press.”
Then with a lenient smile the mighty God:
“O ignorant fond lover, not with tears
Shalt thou persuade immitigable Death.
He will not pity all thy pangs: nor know
His stony eyes with music to grow kind,
Nor lovely words accepts. And how wilt thou
Wrestle with that grim shadow, who canst not save
One bloom from fading? A sole thing the Gods
Demand from all men living, sacrifice:
Nor without this shall any crown be grasped.
Yet many sacrifices are there, oxen,
And prayers, and Soma wine, and pious flowers,
Blood and the fierce expense of mind, and pure
Incense of perfect actions, perfect thoughts,
Or liberality wide as the sun’s,
Or ruthless labour or disastrous tears,
Exile or death or pain more hard than death,
Absence, a desert, from the faces loved;
Even sin may be a sumptuous sacrifice
Acceptable for unholy fruits. But none
Of these the inexorable shadow asks:
Alone of gods Death loves not gifts: he visits
The pure heart as the stained. Lo, the just man
Bowed helpless over his dead, nor all his virtues
Shall quicken that cold bosom: near him the wild
Marred face and passionate and will not leave
Kissing dead lips that shall not chide him more.
Life the pale ghost requires: with half thy life
Thou mayst protract the thread too early cut
Of that delightful spirit — half sweet life.
O Ruru, lo, thy frail precarious days,
And yet how sweet they are! simply to breathe
How warm and sweet! And ordinary things
How exquisite, thou then shalt learn when lost,
How luminous the daylight was, mere sleep
How soft and friendly clasping tired limbs,
And the deliciousness of common food.
And things indifferent thou then shalt want,
Regret rejected beauty, brightnesses
Bestowed in vain. Wilt thou yield up, O lover,
Half thy sweet portion of this light and gladness,
Thy little insufficient share, and vainly
Give to another? She is not thyself:
Thou dost not feel the gladness in her bosom,
Nor with the torture of thy body will she
Throb and cry out: at most with tender looks
And pitiful attempt to feel move near thee,
And weep how far she is from what she loves.
Men live like stars that see each other in heaven,
But one knows not the pleasure and the grief
The others feel: he lonely rapture has,
Or bears his incommunicable pain.
O Ruru, there are many beautiful faces,
But one thyself. Think then how thou shalt mourn
When thou hast shortened joy and feelst at last
The shadow that thou hadst for such sweet store.”
He ceased with a strange doubtful look. But swift
Came back the lover’s voice, like passionate rain.
“O idle words! For what is mere sunlight?
Who would live on into extreme old age,
Burden the impatient world, a weary old man,
And look back on a selfish time ill-spent
Exacting out of prodigal great life
Small separate pleasures like an usurer,
And no rich sacrifice and no large act
Finding oneself in others, nor the sweet
Expense of Nature in her passionate gusts
Of love and giving, first of the soul’s needs?
Who is so coldly wise, and does not feel
How wasted were our grandiose human days
In prudent personal unshared delights?
Why dost thou mock me, friend of all the stars?
How canst thou be love’s god and know not this,
That love burns down the body’s barriers cold
And laughs at difference — playing with it merely
To make joy sweeter? O too deeply I know,
The lover is not different from the loved,
Nor is their silence dumb to each other. He
Contains her heart and feels her body in his,
He flushes with her heat, chills with her cold.
And when she dies, oh! when she dies, oh me,
The emptiness, the maim! the life no life,
The sweet and passionate oneness lost! And if
By shortening of great grief won back, O price
Easy! O glad briefness, aeons may envy!
For we shall live not fearing death, nor feel
As others yearning over the loved at night
When the lamp flickers, sudden chills of dread
Terrible; nor at short absence agonise,
Wrestling with mad imagination. Us
Serenely when the darkening shadow comes,
One common sob shall end and soul clasp soul,
Leaving the body in a long dim kiss.
Then in the joys of heaven we shall consort,
Amid the gladness often touching hands
To make bliss sure; or in the ghastly stream
If we must anguish, yet it shall not part
Our passionate limbs inextricably locked
By one strong agony, but we shall feel
Hell's pain half joy through sweet companionship.
God Love, I weary of words. O wing me rather
To her, my eloquent princess of the spring,
In whatsoever wintry shores she roam.”
He ceased with eager forward eyes; once more
A light of beauty immortal through the limbs
Gleaming of the boy-god and soft sweet face,
Glorifying him, flushed, and he replied:
“Go then, O thou dear youth, and bear this flower
In thy hand warily. For thou shalt come
To that high meeting of the Ganges pure
With vague and violent Ocean. There arise
And loudly appeal my brother, the wild sea.”
He spoke and stretched out his immortal hand,
And Ruru's met it. All his young limbs yearned
With dreadful rapture shuddering through them. He
Felt in his fingers subtle uncertain bloom,
A quivering magnificence, half fire,
Whose petals changed like flame, and from them breathed
Dangerous attraction and alarmed delight,
As at a peril near. He raised his eyes,
But the green place was empty of the God.
Only the faery tree looked up at heaven
Through branches, and with recent pleasure shook.
Then over fading earth the night was lord.

But from Shatudru and Bipasha, streams
Once holy, and loved Iravathi and swift
Clear Chandrabhaga and Bitosta’s toil
For man, went Ruru to bright sumptuous lands
By Aryan fathers not yet paced, but wild,
But virgin to our fruitful human toil,
Where Nature lay reclined in dumb delight
Alone with woodlands and the voiceless hills.
He with the widening yellow Ganges came,
Amazed, to trackless countries where few tribes,
Kirath and Poundrian, warred, worshipping trees
And the great serpent. But robust wild earth,
But forests with their splendid life of beasts
Savage mastered those strong inhabitants.
Thither came Ruru. In a thin soft eve
Ganges spread far her multitudinous waves,
A glimmering restlessness with voices large,
And from the forests of that half-seen bank
A boat came heaving over it, white-winged,
With a sole silent helmsman marble-pale.
Then Ruru by his side stepped in; they went
Down the mysterious river and beheld
The great banks widen out of sight. The world
Was water and the skies to water plunged.
All night with a dim motion gliding down
He felt the dark against his eyelids; felt,
As in a dream more real than daylight,
The helmsman with his dumb and marble face
Near him and moving wideness all around,
And that continual gliding dimly on,
As one who on a shoreless water sails
For ever to a port he shall not win.
But when the darkness paled, he heard a moan
Of mightier waves and had the wide great sense
Of ocean and the depths below our feet.
But the boat stopped; the pilot lifted on him
His marble gaze coeval with the stars.
Then in the white-winged boat the boy arose
And saw around him the vast sea all grey
And heaving in the pallid dawning light.
Loud Ruru cried across the murmur: “Hear me,
O inarticulate grey Ocean, hear.
If any cadence in thy infinite
Rumour was caught from lover’s moan, O Sea,
Open thy abysses to my mortal tread.
For I would travel to the despairing shades,
The spheres of suffering where entangled dwell
Souls unreleased and the untimely dead
Who weep remembering. Thither, O, guide me,
No despicable wayfarer, but Ruru,
But son of a great Rishi, from all men
On earth selected for peculiar pangs,
Special disaster. Lo, this petalled fire,
How freshly it blooms and lasts with my great pain!”
He held the flower out subtly glimmering.
And like a living thing the huge sea trembled,
Then rose, calling, and filled the sight with waves,
Converging all its giant crests; towards him
Innumerable waters loomed and heaven
Threatened. Horizon on horizon moved
Dreadfully swift; then with a prone wide sound
All Ocean hollowing drew him swiftly in,
Curving with monstrous menace over him.
He down the gulf where the loud waves collapsed
Descending, saw with floating hair arise
The daughters of the sea in pale green light,
A million mystic breasts suddenly bare,
And came beneath the flood and stunned beheld
A mute stupendous march of waters race
To reach some viewless pit beneath the world.
Ganges he saw, as men predestined rush
Upon a fearful doom foreseen, so run,
Alarmèd, with anguished speed, the river vast.
Veiled to his eyes the triple goddess rose.
She with a sound of waters cried to him,
A thousand voices moaning with one pain:
“Lover, who fearedst not sunlight to leave,
With me thou mayst behold that helpless spirit
Lost in the gloom, if still thy burning bosom
Have courage to endure great Nature’s night
In the dire lands where I, a goddess, mourn
Hurting my heart with my own cruelty.”
She darkened to the ominous descent,
Unwilling, and her once so human waves
Sent forth a cry not meant for living ears.
And Ruru chilled; but terrible strong love
Was like a fiery finger in his breast
Pointing him on; so he through horror went
Conducted by inexorable sound.
For monstrous voices to his ear were close,
And bodiless terrors with their dimness seized him
In an obscurity phantasmal. Thus
With agony of soul to the grey waste
He came, glad of the pain of passage over,
As men who through the storms of anguish strive
Into abiding tranquil dreariness
And draw sad breath assured; to the grey waste,
Hopeless Patala, the immutable
Country, where neither sun nor rain arrives,
Nor happy labour of the human plough
Fruitfully turns the soil, but in vague sands
And indeterminable strange rocks and caverns
That into silent blackness huge recede,
Dwell the great serpent and his hosts, writhed forms,
Sinuous, abhorred, through many horrible leagues
Coiling in a half darkness. Shapes he saw,
And heard the hiss and knew the lambent light
Loathsome, but passed compelling his strong soul.
At last through those six tired hopeless worlds,
Too hopeless far for grief, pale he arrived
Into a nether air by anguish moved,
And heard before him cries that pierced the heart,
Human, not to be borne, and issued shaken
By the great river accursed. Maddened it ran,
Anguished, importunate, and in its waves
The drifting ghosts their agony endured.
Their Ruru saw pale faces float of kings
And grandiose victors and revered high priests
And famous women. Now rose from the wave
A golden shuddering arm and now a face.
Torn piteous sides were seen and breasts that quailed.
Over them moaned the penal waters on,
And had no joy of their fierce cruelty.
Then Ruru, his young cheeks with pity wan,
Half moaned: “O miserable race of men,
With violent and passionate souls you come
Foredoomed upon the earth and live brief days
In fear and anguish, catching at stray beams
Of sunlight, little fragrances of flowers;
Then from your spacious earth in a great horror
Descend into this night, and here too soon
Must expiate your few inadequate joys.
O bargain hard! Death helps us not. He leads
Alarmed, all shivering from his chill embrace,
The naked spirit here. O my sweet flower,
Art thou too whelmed in this fierce wailing flood?
Ah me! But I will haste and deeply plunge
Into its hopeless pools and either bring
Thy old warm beauty back beneath the stars,
Or find thee out and clasp thy tortured bosom
And kiss thy sweet wrung lips and hush thy cries.
Love shall draw half thy pain into my limbs;
Then we shall triumph glad of agony.”
He ceased and one replied close by his ear:
“O thou who troublest with thy living eyes
Established death, pass on. She whom thou seest
Rolls not in the accursèd tide. For late
I saw her mid those pale inhabitants
Whom bodily anguish visits not, but thoughts
Sorrowful and dumb memories absolve,
And martyrdom of scourged hearts quivering.”
He turned and saw astride the dolorous flood
A mighty bridge paved with mosaic fire,
All restless, and a woman clothed in flame,
With hands calamitous that held a sword,
Stood of the quaking passage sentinel.
Magnificent and dire her burning face.
“Pass on,” she said once more, “O Bhrigu’s son;
The flower protects thee from my hands.” She stretched
One arm towards him and with violence
Majestic over the horrid arch compelled.
Unhurt, though shaking from her touch, alone
He stood upon an inner bank with strange
Black dreary mosses covered and perceived
A dim and level plain without one flower.
Over it paced a multitude immense
With gentle faces occupied by pain;
Strong men were there and grieving mothers, girls
With early beauty in their limbs and young
Sad children of their childlike faces robbed.
Naked they paced with falling hair and gaze
Drooping upon their bosoms, weak as flowers
That die for want of rain unmurmuring.
Always a silence was upon the place,
But Ruru came among them. Suddenly
One felt him there and looked, and as a wind
Moves over a still field of patient corn,
And the ears stir and shudder and look up
And bend innumerably flowing, so
All those dumb spirits stirred and through them passed
One shuddering motion of raised faces; then
They streamed towards him without sound and caught
With desperate hands his robe or touched his hair
Or strove to feel upon them living breath.
Pale girls and quiet children came and knelt
And with large sorrowful eyes into his looked.
Yet with their silent passion the cold hush
Moved not; but Ruru’s human heart half burst
With burden of so many sorrows; tears
Welled from him; he with anguish understood  
That terrible and wordless sympathy  
Of dead souls for the living. Then he turned  
His eyes and scanned their lovely faces strange  
For that one face and found it not. He paled,  
And spoke vain words into the listless air:  
“O spirits once joyous, miserable race,  
Happier if the old gladness were forgot!  
My soul yearns with your sorrow. Yet ah! reveal  
If dwell my love in your sad nation lost.  
Well may you know her, O wan beautiful spirits!  
But she most beautiful of all that died,  
By sweetness recognisable. Her name  
The sunshine knew.” Speaking his tears made way:  
But they with dumb lips only looked at him,  
A vague and empty mourning in their eyes.  
He murmured low: “Ah, folly! were she here,  
Would she not first have felt me, first have raised  
Her lids and run to me, leaned back her face  
Of silent sorrow on my breast and looked  
With the old altered eyes into my own  
And striven to make my anguish understand?  
Oh joy, had she been here! for though her lips  
Of their old excellent music quite were robbed,  
Yet her dumb passion would have spoken to me;  
We should have understood each other and walked  
Silently hand in hand, almost content.”  
He said and passed through those untimely dead.  
Speechless they followed him with clinging eyes.  
Then to a solemn building weird he came  
With grave colossal pillars round. One dome  
Roofed the whole brooding edifice, like cloud,  
And at the door strange shapes were pacing, armed.  
Then from their fear the sweet and mournful dead  
Drew back, returning to their wordless grief.  
But Ruru to the perilous doorway strode,  
And those disastrous shapes upon him raised
Their bows and aimed; but he held out Love’s flower,
And with stern faces checked they let him pass.
He entered and beheld a silent hall
Dim and unbounded; moving then like one
Who up a dismal stair seeks ever light,
Attained a dais brilliant doubtfully
With flaming pediment and round it coiled
Python and Naga monstrous, Joruthcaru,
Tuxuc and Vasuki himself, immense,
Magic Carcotaca all flecked with fire;
And many other prone destroying shapes
Coiled. On the wondrous dais rose a throne,
And he its pedestal whose lotus hood
With ominous beauty crowns his horrible
Sleek folds, great Mahapudma; high displayed
He bears the throne of Death. There sat supreme
With those compassionate and lethal eyes,
Who many names, who many natures holds;
Yama, the strong pure Hades sad and subtle,
Dharma, who keeps the laws of old untouched,
Critanta, who ends all things and at last
Himself shall end. On either side of him
The four-eyed dogs mysterious rested prone,
Watchful, with huge heads on their paws advanced;
And emanations of the godhead dim
Moved near him, shadowy or serpentine,
Vast Time and cold irreparable Death.
Then Ruru came and bowed before the throne;
And swaying all those figures stirred as shapes
Upon a tapestry moved by the wind,
And the sad voice was heard: “What breathing man
Bows at the throne of Hades? By what force,
Spiritual or communicated, troubles
His living beauty the dead grace of Hell?”
And one replied who seemed a neighbouring voice:
“He has the blood of Gods and Titans old.
An Apsara his mother liquid-orbed
Bore to the youthful Chyavan’s strong embrace
This passionate face of earth with Eden touched.
Chyavan was Bhrigu’s child, Puloma bore,
The Titaness, — Bhrigu, great Brahma’s son.
Love gave the flower that helps by anguish; therefore
He chilled not with the breath of Hades, nor
The cry of the infernal stream made stone.”
But at the name of Love all hell was moved.
Death’s throne half faded into twilight; hissed
The phantoms serpentine as if in pain,
And the dogs raised their dreadful heads. Then spoke
Yama: “And what needs Love in this pale realm,
The warm great Love? All worlds his breath confounds,
Mars solemn order and old steadfastness.
But not in Hell his legates come and go;
His vernal jurisdiction to bare Hell
Extends not. This last world resists his power
Youthful, anarchic. Here will he enlarge
Tumult and wanton joys?” The voice replied:
“Menaca momentary on the earth,
Heaven’s Apsara by the fleeting hours beguiled
Played in the happy hidden glens; there bowed
To yoke of swift terrestrial joys she bore,
Immortal, to that fair Gundhurva king
A mortal blossom of delight. That bloom
Young Ruru found and plucked, but her too soon
Thy fatal hooded snake on earth surprised,
And he through gloom now travels armed by Love.”
But then all Hades swaying towards him cried:
“O mortal, O misled! But sacrifice
Is stronger, nor may law of Hell or Heaven
Its fierce effectual action supersede.
Thy dead I yield. Yet thou bethink thee, mortal,
Not as a tedious evil nor to be
Lightly rejected gave the gods old age,
But tranquil, but august, but making easy
The steep ascent to God. Therefore must Time
Still batter down the glory and form of youth
And animal magnificent strong ease,
To warn the earthward man that he is spirit
Dallying with transience, nor by death he ends,
Nor to the dumb warm mother’s arms is bound,
But called unborn into the unborn skies.
For body fades with the increasing soul
And wideness of its limit grown intolerant
Replaces life’s impetuous joys by peace.
Youth, manhood, ripeness, age, four seasons
Twixt its return and pale departing life
Describes, O mortal, — youth that forward bends
Midst hopes, delights and dreamings; manhood deepens
To passions, toils and thoughts profound; but ripeness
For large reflective gathering-up of these,
As on a lonely slope whence men look back
Down towards the cities and the human fields
Where they too worked and laughed and loved; next age,
Wonderful age with those approaching skies.
That boon wilt thou renounce? Wherefore? To bring
For a few years — how miserably few! —
Her sunward who must after all return.
Ah, son of Rishis, cease. Lo, I remit
Hell’s grasp, not oft relinquished, and send back
Thy beautiful life unborrowed to the stars.
Or thou must render to the immutable
Total all thy fruit-bearing years; then she
Reblossoms.” But the Shadow antagonist:
“Let him be shown the glory he would renounce.”
And over the flaming pediment there moved,
As on a frieze a march of sculptures, carved
By Phidias for the Virgin strong and pure,
Most perfect once of all things seen in earth
Or Heaven, in Athens on the Acropolis,
But now dismembered, now disrupt! or as
In Buddhist cavern or Orissan temple,
Large aspirations architectural,
Warrior and dancing-girl, adept and king,
And conquering pomps and daily peaceful groups
Dream delicately on, softening with beauty
Great Bhuvanayshwar, the Almighty’s house,
With sculptural suggestion so were limned
Scenes future on a pediment of fire.
There Ruru saw himself divine with age,
A Rishi to whom infinity is close,
Rejoicing in some green song-haunted glade
Or boundless mountain-top where most we feel
Wideness, not by small happy things disturbed.
Around him, as around an ancient tree
Its seedlings, forms august or flame-like rose;
They grew beneath his hands and were his work;
Great kings were there whom time remembers, fertile
Deep minds and poets with their chanting lips
Whose words were seed of vast philosophies —
These worshipped; above this earth’s half-day he saw
Amazed the dawn of that mysterious Face
And all the universe in beauty merge.
Mad the boy thrilled upwards, then spent ebbed back.
Over his mind, as birds across the sky
Sweep and are gone, the vision of those fields
And drooping faces came; almost he heard
The burdened river with human anguish wail.
Then with a sudden fury gathering
His soul he hurled out of it half its life,
And fell, like lightning, prone. Triumphant rose
The Shadow chill and deepened giant night.
Only the dais flickered in the gloom,
And those snake-eyes of cruel fire subdued.
But suddenly a bloom, a fragrance. Hell
Shuddered with bliss: resentful, overborne,
The world-besetting Terror faded back
Like one grown weak by desperate victory,
And a voice cried in Ruru’s tired soul:
“Arise! the strife is over, easy now

www.holybooks.com
The horror that thou hast to face, the burden
Now shared.” And with a sudden burst like spring
Life woke in the strong lover over-tried.
He rose and left dim Death. Twelve times he crossed
Boithorini, the river dolorous,
Twelve times resisted Hell and, hurried down
Into the ominous pit where plunges black
The vast stream thundering, saw, led puissantly
From night to unimaginable night, —
As men oppressed in dreams, who cannot wake,
But measure penal visions, — punishments
Whose sight pollutes, unheard-of tortures, pangs
Monstrous, intolerable mute agonies,
Twisted unmoving attitudes of pain,
Like thoughts inhuman in statuary. A fierce
And iron voicelessness had grasped those worlds.
No horror of cries expressed their endless woe,
No saving struggle, no breathings of the soul.
And in the last hell irremediable
Where Ganges clots into that fatal pool,
Appalled he saw her; pallid, listless, bare —
O other than that earthly warmth and grace
In which the happy roses deepened and dimmed
With come-and-go of swift enamoured blood!
Dumb drooped she; round her shapes of anger armed
Stood dark like thunder-clouds. But Ruru sprang
Upon them, burning with the admitted God.
They from his touch like ineffectual fears
Vanished; then sole with her, trembling he cried
The old glad name and crying bent to her
And touched, and at the touch the silent knots
Of Hell were broken and its sombre dream
Of dreadful stately pains at once dispersed.
Then as from one whom a surpassing joy
Has conquered, all the bright surrounding world
Streams swiftly into distance, and he feels
His daily senses slipping from his grasp,
So that unbearable enormous world
Went rolling mighty shades, like the wet mist
From men on mountain-tops; and sleep outstretched
Rising its soft arms towards him and his thoughts,
As on a bed, sank to ascending void.

But when he woke, he heard the koil insist
On sweetness and the voice of happy things
Content with sunlight. The warm sense was round him
Of old essential earth, known hues and custom
Familiar tranquillising body and mind,
As in its natural wave a lotus feels.
He looked and saw all grass and dense green trees,
And sunshine and a single grasshopper
Near him repeated fierily its note.
Thrilling he felt beneath his bosom her;
Oh, warm and breathing were those rescued limbs
Against the greenness, vivid, palpable, white,
With great black hair and real and her cheek’s
Old softness and her mouth a dewy rose.
For many moments comforting his soul
With all her jasmine body sun-ensnared
He fed his longing eyes and, half in doubt,
With touches satisfied himself of her.
Hesitating he kissed her eyelids. Sighing
With a slight sob she woke and earthly large
Her eyes looked upward into his. She stretched
Her arms up, yearning, and their souls embraced;
Then twixt brief sobbing laughter and blissful tears,
Clinging with all her limbs to him, “O love,
The green green world! the warm sunlight!” and ceased,
Finding no words; but the earth breathed round them,
Glad of her children, and the koil’s voice
Persisted in the morning of the world.
A NOTE ON LOVE AND DEATH

The story of Ruru and Pramadvura — I have substituted a name more manageable to the English tongue — her death in the forest by the snake and restoration at the price of half her husband’s life is told in the Mahabharata. It is a companion legend to the story of Savitri but not being told with any poetic skill or beauty has remained generally unknown. I have attempted in this poem to bring it out of its obscurity. For full success, however, it should have had a more faithfully Hindu colouring, but it was written a score of years ago when I had not penetrated to the heart of the Indian idea and its traditions, and the shadow of the Greek underworld and Tartarus with the sentiment of life and love and death which hangs about them has got into the legendary framework of the Indian Patala and hells. The central idea of the narrative alone is in the Mahabharata; the meeting with Kama and the descent into Hell were additions necessitated by the poverty of incident in the original story.

Canto VIII  The Quest of the Snowbird
Canto IX  The Second Quest of the Sapphire Crown
Canto X  The Journey of the Green Oasis
Canto XI  The Journey of the Irremeable Ocean
Canto XII  The Journey of the Land without Pity
Epilogue  The Arabian and the Caliph
PROLOGUE

Alnuman and the Peri

In Bagdad by Euphrates, Asia’s river,
Euphrates that through deserts must deliver
The voices which of human daybreaks are
Into the dim mysterious surge afar,
The Arabian dwelt; after long travel he.
Regions deserted, wastes of silent sea,
Wide Ocean ignorant of ships and lands
Never made glad by toil of mortal hands
For he had seen, the Indian mountains bare
Save of hard snow and the unbreathed huge air
And swum through giant waters and had heard
In those unhuman forests beast and bird,
The peacock’s cry and tiger’s hoarse appeal
Calling to God for prey, marked the vast wheel
Of monstrous birds shadowing whole countries; he
From Singhal through the long infinity
Of southern floods had steered his shuddering ship
Where unknown winds their lonely tumult keep.
And he had lived with strong and pitiless men,
Nations unhumanized by joy and pain,
And he had tasted grain not sown by man
And drunk strange milk in weird Mazinderan.
Silent he was, as one whom thoughts attend,
Distant, whom stiller hearts than ours befriend.
He lived with memories only; no sweet voice
Made the mute echoes of his life rejoice;
No lovely face of children brought the dawn
Into his home; but silent, calm, withdrawn,
He watched the ways of men with godlike eyes
Released from trammelling affinities.
Yet was he young and many women strove
Vainly to win his marble mind to love.
One day when wind had fled to the cool north
And the strong earth was blind with summer, forth
The Arabian rode from great Bagdad and turned
Into the desert. All around him burned
The imprisoned spirit of fire; above his head
The sky was like a tyranny outspread,
The sun a fire in those heavens, and fire
The sands beneath; the air burning desire
And breathless, a plumb weight of flame; yet rode
The Arabian unfeeling like a god.

Three hours he rode and now no more was seen
Bagdad, the imperial city, nor aught green,
But the illimitable sands around
Extend, a silent world waiting for sound,
When in the distance he descried a grace
Of motion beautiful in that dead place.
Wondering he turned, but suddenly the horse
Pricked up his slender ears, swerved from the course
And pawing stood the unwilling air, nor heard
The guiding voice nor the familiar word.
Whinnying with wrath he smote the desert sand
And mocked the rein and raged at the command.
Then raised the man his face and saw above
No cloud with the stark face of heaven strove,
A single blaze of light from pole to pole.
Smiling the Arabian spoke unto his soul.
“Here too then are you strong, O influences
That trouble the earth and air and the strong seas!
Therefore I will not stay your gathering wings
Who watch me from the air, you living things,
But go to find whatever peril or wonder
Wait me of life above the earth or under.
Strange will it be if quiet Bagdad yield
More terror or more sweetness than in field
Has stayed me yet or in untravelled flood
Or mountain or the tiger-throated wood.”
So saying he grasped the strong and shaken mane
And set swift footing on the fiery plain.
At once the beast as if by sorcery
Strange compelled, calmed his impetuous eye;
His angry tremor ceased and bounding wrath
Following unbidden in the Arabian’s path.
But he with silent toil the sands untried
Vanquishing through that luminous world and wide
Went a slow shadow, till his feet untired
The fruit of all his labour long acquired.
Before a mile complete he was aware
Of a strange shape of beauty sitting there
On a sole boulder in the level wild,
Maiden, a marvellous bloom, a naked child;
All like a lily from her leaves escaped
The golden summer kissed her close and wrapped
In soft revealing sunshine, — a sweet bareness,
A creature made of flowers and choicest fairness;
And all her limbs were like a luminous dream,
So wonderfully white they burn and gleam,
Her shoulder ivory richly bathed in gold,
Her sides a snowy wonder to behold,
Marble made amorous; her body fair
Seemed one with the divine, translucent air,
A light within the light, a glorious treasure,
A thing to hold, to kiss, to slay with pleasure.
This girl was not alone, but with her watched
Two shapes of beauty and of terror hatched,
A strong, fierce snake, round her sweet middle twined,
A tigress at her lovely feet reclined.
Dreaming on those tremendous sands she waited
And often with that splendour miscreated
Played thoughtfully, about her wondrous knees
Binding the brilliant death or would increase
The whiteness of her limbs with its fierce hues
Or twine it in her tresses flowing loose.
Below that other restless evil played,
The fierce, sleek terror on the sands outspread.
First of the wonderful three rose with a bound
Waking the desert from its sleep with sound
The tigress, but the Arabian strode more near
As one who had forgotten how to fear
And frowning like a god with kingly look
He threatened the preparing death and shook
His javelin in the sun. Back crouched the fiend
Amazed nor could the steely light attend
Nor that unconquerable glance; yet lowered
To find her dreadful violence overpowered
By any smaller thing than death; and he
Heeded no more crouched limb nor stealthy eye.
He on that flowerlike shape a moment gazed
As one by strange felicity amazed,
Who long grown sorrow’s friend his whole life grieves,
Blest beyond expectation, scarce believes
That joy is in his heart — so gazed, so laid
At last upon the white and gleaming maid
The question of his hands. O soft and real
The nakedness he grasped, no marble ideal
Born of the blazing light and infinite air,
A breathing woman with lovely limbs and bare.
Then with a strong melodious voice he cried
And all his cheek was flushed with royal pride.
“Thou then art mine, after long labour mine,
O earthly body and O soul divine,
After long labour and thy sounding home
Hast left and caverns where thy sisters roam,
O dweller where the austral tempest raves!
O daughter of the wild and beautiful waves!
Ah breasts of beauty! Ah delicious shoulder!
Leading from bliss to bliss the hands that hold her,
At length I grasp you then and snared at length
The ivory swiftness of thy feet and strength
Of this immortal body shaped for kings,
O memory of sweet and dreadful things!
Ah welcome to the streets that human tread
Makes musical and joy of human bread
Broken between dry hands and to the sight
Of the untroubled narrow rivers, light
Of lamps and warmth of kindled fires and man.
Fairer shall be thy feet on greensward than
On ocean rocks and O! more bright thy beauty
For human passion and for womanly duty
And softer in my bosom shalt thou sleep
Than lulled by the sublime and monstrous deep.
Much have I laboured; the resplendent face
Of summer I have hated, as the days
Went by and no delightful brook was found
Sprinkling with earth’s cool love the ruthless ground,
And in my throat there was a desert’s thirst
And on my tongue a fire: I have cursed
The spring and all its flowers: the wrathful cry
Of the wild waters and their cruelty
I have endured, labouring with sail and oar
Through the mad tempest for some human shore
And fought with winds, and seen vast Hell aflame
Down in the nether flood till I became
Blind with the sight of those abysmal graves
And deaf with the eternal sound of waves
And all my heart was broken alone to be
Day after day with the unending sea.
And much on land I have laboured without moan
Or weakening tears making my heart a stone.
But thou art come and I shall hear no more
By inexorable rocks the Ocean roar,
Nor pine in dungeons far from pity or aid.
But in far other prison, seaborne maid,
Thy limbs shall minister to my delight
Even as an ordinary woman’s might.
And I shall hear thy voice around my heart
Like a cool rivulet and shall not start
To see thee ivory gleaming and all night
Shall feel thee in my arms, O darling white —
With afterjoys that spring from these; the face
Of childish loveliness shall light my days,
About my doors the feet of children tread
And little heads with jonquils garlanded,
That often to sweetness win war-hardened eyes
And hearts grown iron their soft masteries
Compel and the light touch of little hands
Bend sworded fingers to their sweet commands.
O bright felicity, labour’s dear end,
Into my arms, into my heart descend.”
So as he spoke, the silent desert air
Lived with his gladness, and the maiden there
Listened with downcast lids and a soft flush
Upon her like the coming of a blush.
But when he finished and the air was mute,
She laughed with happy lips most like a flute
Or voice of cuckoo in an Indian grove
Waking the heart to vague delightful love.
And with divine eyes gleaming where strange mirth
A smiling mischief was, the living girth
Of her delicious waist she suddenly
Unbound and by the middle lifting high
Betwixt them shook. Hissed the fierce snake and raised
Its jewelled hood for spotted radiance praised,
Its jewelled hood to the dread leap distended:
Sad limit of noble life, had that descended
Since short his breath and evil, who that pang
Experienced; but before the serpent sprang,
Wrathful, the Arabian seized the glittering neck
And twines of bronze burning with many a fleck
Of coloured fire. His angry grasp to quell
Vainly the formidable folds rebel:
Not all that gordian force and slippery strength
Of coils availed. Inanimate at length,
The immense destroyer on the Arabian’s wrist
Hung in a ruin loose; and to resist
His wrath of love none now might intervene,
Nor she deny him. Yet with tranquil mien
Smiling she sat and swept with noble gesture
Her hair back that had fallen a purple investure
Over her glowing grace. Strong arms he cast
Around her naked loveliness and fast
Showered kisses on her limbs whose marble white
Grew woman with a soft and rosy light
In each kissed place. “Deemedst thou then,” he cried,
“Bright fugitive, lovely wanderer with the tide,
By shaking death before death-practised eyes
My crown to wrest of strenuous enterprise,
Thyself, thyself and beauty? O too sweet
To touch our hard earth with thy faultless feet!
Yet on hard earth must dwell. For with the ground
Thy dreadful guardians who have fenced thee round
Are equalled, and thyself, sweet, though thou shame
The winds with swiftness or like mounting flame
Strive all thy days in my imprisoning arms,
Couldst burn thyself no exit. With alarms
Menace and shapes of death; call on the flood
For thy deliverance on these sands to intrude
And lead thee to its jealous waters rude;
But hands that have flung back the swallowing sea
Shall stay and chastise and habituate thee
To service due.” He said and with the words
The power in his soul increased, as birds
With sounds encourage love and like great waves
Exulting, rose against the breasts he craves,
So he engrossed the lovely limbs. Then grasping
Her fair soft arm in one hand, the other clasping
Her smooth desirèd thighs, from that rude seat,
The grey sun-blistered boulder most unmeet
To bear her snowwhite radiance, lifted. She
As to his horse he bore her mightily,
A little strove in his strong arms, but round
Her lithe, reluctant limbs closer he bound
His despot hands and on the saddle set
Never with such sweet rider burdened yet.
Then to his seat he sprang and musical
His cry in that vast silence, wherewithal
He urged his horse, which delicately went
Arching its neck with joy and proud content.
Great were the Arabian’s labours; many seas
He had passed and borne impossible miseries
And battled with impracticable ills
O’er uncrossed rivers and forbidden hills,
Till nature fainted. Yet too little was this
To merit all the heaven now made his.
For she, earth’s wonder hard to grasp as fire,
She whom all ocean’s secret depths admire,
Laid her delicious cheek to his and flung
Sweet, bare arms on his neck and round him clung:
Her snowy side was of his being a part;
Her naked breast burdened his throbbing heart,
And all her hair streamed over him and the whiteness
Of her was in his eyes and her soft brightness
A joy beneath his hands, to his embrace
And he was clothed with her as in a dress.
Round them the strong recovered coils were rolled
Of the great snake and with imperious fold
Compelled their limbs together, and by their side
Pacing the tigress checked her dangerous stride.
So rode they like a vision. All the time
She murmured accents as of linked rhyme
Musical, in a language like the sea,
Accents of undulating melody.
For sometimes it was like a happy noon
Murmuring with waves and sometimes like the swoon
Of calm, a silence heard, or rich by noise
Of rivers pouring with their seaward voice
And leaping laughter and sometimes was wild
And passionate as the sobbing of a child.
But often it was like the cold salt spray
On a health-reddened cheek and glad with day
And life and sad with the far-moaning call
Of wind upon the waters funeral.
Not on the lips of man might fashioned be
A language of such wild variety.
Now of that magic tongue no separate word
Was of Alnuman understood nor heard,
And yet he knew that of the caves she spoke
Where never earthly light of sunshine woke,
And of unfathomed things beneath the floods
And peopled depths and Ocean solitudes
And mighty creatures of the main and light
Of jewels making a subluminous night
Lower than even the dead may sink; and walls
Of coral and in what majestic halls
The naked seaborne sisters link their dance;
How sometimes on the shores their white limbs glance
In the mysterious moonlight; how they come
To river-banks far from their secret home;
And last she spoke of mighty Love that reaches
Resistless arms beyond the long sea-beaches
And mocks the barriers of the storm, and how
Pearls unattainable a human brow
Have decked and man, the child of misery,
Been mated with the sisters of the sea.
So on she murmured like a ceaseless song
Making the weary sands a rapture; long
The patient desert round them waits; nor soon
The sun toiled through the endless afternoon:
But they paced always like a marvellous dream,
And dreamlike in the eyes of man might seem
Such magic vision (had human eyes been found
In the sole desert void of sign or bound), —
The horse that feared its dread companion not;
The kingly man with brow of reaching thought
And danger-hardened strength; fair as the morn,
The radiant girl upon his saddle borne,
Naked, a vision not of earth; the fell
Serpent that twined about them, terrible
With burning hues; and the fierce tigress there
Following with noiseless step the godlike pair.
Nor when to Bagdad and its streets they came,
Did any eye behold. Only a name
Was in the ears of the grim warders. Straight
Like engines blind of some o’ermastering fate
They rose, the mighty bolts they drew: loud jarred
The doors unhearing with deaf iron barred
And groaned upon their road; then backward swung
Whirling and kissed again with clamorous tongue.

Nor in the streets was any step of man,
Before loud wheels no swift torchbearers ran
Setting the night on fire; bright and rare
The garlanded highshuttered windows, where
Men revelled and sound into the shadows cast:
All else was night and silence where they passed.
So is the beautiful sea stranger gone
To her new home, who now no more must run
Upon the bounding waves nor feel the sun
On wind-blown limbs, destined a mortal’s bride.
So is the strong Arabian deified
In bliss. Moreover from the wondrous night
When with those small beloved feet grew bright
His lonely house, wealth like a sea swept through
Its doors and as a dwelling of gods it grew
In beauty and in brightness. All that thrives
Costly or fragrant upon earth or lives
Of riches in the hoarding ocean lost
And all bright things with gold or gems embossed
By Indian or by Syrian art refined
And all rich cloths and silks with jewels lined
Regal Bokhara weaves or Samarcand,
Increased and gathered to Alnuman’s hand
And girls of glorious limb and feature he
Bought for his slaves, of rose and ivory,
Sweet Persians with the honey-hiding mouth
And passionate Arab girls and strong-limbed youth
Of Tartar maidens for his harem doors.
For now not vainly the fair child implores
Of Shaikh or of Emir his love for boon,
But with high marriage-rites some prosperous moon
At last has brought into the marble pride
Of that great house for envy edified.
So in Bagdad the Arabian dwelt nor seemed
Other his life than theirs who never dreamed
Beyond earth’s ken, nor made in sun and breeze
Their spirits great with shock of the strong seas,
Nor fortified their hearts with pains sublime
Nor wrestled with the bounds of space and time.
Like common men he lived to whom the ray
Of a new sun but brings another day
Unmeaning, who in their own selves confined
Know not the grandeur which the mightier mind
Inherits when it makes the destinies rude
The chisel by which its marble mass and crude
With God’s or hero’s likeness is indued.
Yet this was also rumoured that within
The sheath of that calm life he sojourned in
An edge of flaming rapture was, that things
Beyond all transitory imaginings
Came to him secret and vast pleasures more
Than frail humanity had dared to feel before.
Since too much joy man’s heart can hardly bear
And all too weak man’s narrow senses were
For raptures that eternal spirits attain
In sensuous heavens ignorant of pain.
Yet even such raptures mortal man’s could be
Wed with the child of the unbounded sea.
CANTO I

The Story of Almaimun and the Emir’s Daughter

Now in great Bagdad of the Abbasside
The wanderer rests, to peace at last allied,
Whom storm so long had tossed to storm; and grace
Of love dwelt with him and the nobleness
Of hearts made golden by felicity,
Which is earth’s preferable alchemy.
For other is from pain the metal wrought,
Anguish and wrestling in the coils of thought.
These strengthen, these the mind as marble hard
Make and as marble pure, which has not feared
To scourge itself with insight; but the stress
Of joy heightened to self-forgetfulness
Is sweeter and to sweeter uses tends.
With such felicity were crowned the friends
And lovers of Almaimun and increase
In the glad strength that grows from boundless peace.
And each as to her orb the sunflower burns
His spirit to his spirit’s image turns.
Such puissance great well-poised natures prove
To mould to their own likeness all they love.
But where is she who lit his doubtful morn,
Whose sweet imagined shape each hour new-born
Brightened but to illumine, kindled each
Stray look with godhead and her daily speech
A far ethereal music made, for whom
He sought the wild waves and the peopled gloom
Of the unseen? Must only she make moan?
She in the crowded chambers is alone
And closes eyes kept dry by anguished pride
To wake in tears that hardly will be dried.
Happy the heart and more than earthly blest
That for those hands was meant where ’tis possessed,

1 Here Sri Aurobindo altered the name “Abhuman” to “Almaimun”. — Ed.
That to no alien house at the end has come
But winging goes as to its natural home.
The evening bird with no more simple flight
Reaches its one unfailing nest at night.
The heart which Fate not always here perverse
With the one possible home out of an universe,
Makes simply happy there secure shall dwell,
Feeling that to be there is only well.
And equal happy whether queenly chair
Her portion or she kneel loose-girdled there
And serve him as a slave. Alike 'tis heaven,
Rule or obedience to the one heart given.
So did not bright Zuleikha deem when she
The temple was of his idolatry.
Impatient of divine subjection, all
Love’s wealth was to her grace imperial
Purple and diadems and earth’s noblest gift
But vantage her disdainful pride to lift.
She was an Emir’s daughter and her sire
Clothed her in jewels and sublime attire,
From silver dishes fed and emerald
And in a world of delicate air installed
So that her nature with these costly things
Being burdened raised in vain its heavenward wings.
From Koraish and the Abbasside he drew
His stern extraction. Yet what brighter grew
About his formidable name accursed
Was a white fire of riches and the thirst
Of poor men gazing with a bitter stealth
On that impossibility of wealth.
“Abdullah the Emir,” so men would say
Drawing their rags about them, “has display
Of gold and silver and the sunlight fades
At noon in his wide treasury and the shades
Of midnight are more luminous there than birth
Of day upon the ordinary earth.
He has rich garments, would the naked clothe
From Bagdad to the sea, were he not loth:
The leavings of his menials far exceed
In Khorassan the labourer’s sharpened need.
And since by thee this fair display was planned,
O God, yet from the beggar’s outstretched hand
He guards his boundless trust ignobly well,
Just Lord, display to him the fires of Hell.”
And here another pressing from his eye
His children’s pining looks, made sad reply.
“Richer his wealth than widest chambers hold,
Not in the weary heaps of ingots told
Entirely, nor the cloths Damascus yields,
Nor what the seas give up, nor what the fields.
He gathers ever with exhaustless hands:
His camels heave across the endless sands.
Through Balkh when to Caboul or Candahar
The wains go groaning or the evening star
Watches the pomp of the wide caravan
Intend to provinces Arabian,
Half is Abdullah the Emir’s: and he
Gets spices of the south and porphyry:
His are the Chinese silks, the Indian work
Saved hardly from the horsehooves of the Turk:
From Balsora the ships that o’er the bar
Reel into Ocean’s grasp, Abdullah’s are;
Yemen’s far ports are with his ventures full;
Muscat transmits him horses, arms and wool.
The desert rider hopes no richer prize
To handle than Abdullah’s merchandize;
With joy the Malayan sea-robber hails
His argosy and for his western sails
The Moorish pirates all the horizon scan
Upon the far Mediterranean.
Yet though his losses make the desert great
And Ocean a new treasury create
From his sole rapine, yet untouched endure
His riches by that vast expenditure.
He takes but to increase his piles of gold,
He gives but to recover hundredfold.
Thereby the poor increase. Wherefore I trust,
When Azrael shall smite his limbs to dust
And he upon that dolorous bridge is led
Which, lord and peasant, all must one day tread,
The bitter sword that spans the nether hell,
He may be evened with the infidel.”
And one might answer mid these wretched men
Who quiet was from constancy to pain;
“Curse him not either lest the Kazi find
And God loose not the chains that he shall bind.”
For he indeed was mighty in the town,
A man acceptable in his renown;
The mullahs to his will interpreted
Their books and the law’s lightning from his head
Glanced on the rash accuser; for his word
Was Hédoya before the Kazi heard.
But whence the fountain of his wealth might flow,
Well did the sad and toiling peasant know.
For he as governor in Khorassan
Had held the balance betwixt man and man
And justified his rule benevolent
By rape and torture for their own good meant,
The fallen rooftree and the broken door
And rents wrung from the miserable poor.
And now hemmed in with lustrous things and proud,
Each day a pomp, each night with music loud,
He blazed, however his eye a darkness cast
And pleasure by his sense external passed.
Yet joy he had over his gathered gold
And in that one sweet maiden joy untold.
Daughter of Noureddin the Barmecide
Was she who bore this brightness, but when died
Jaafar and all his house fell like a tower
Loosened in the mutation of an hour,
Abdullah found his foe an outlawed man,
Proscribed, a heretic and Persian
And slew him with the sword juridical
Between his golden house and Allah’s wall.
Uloupie
CANTO I

Under the high and gloomy eastern hills
The portals of Pataala are and there
The Bhogavathie with her sinuous waves
Rises, a river alien to the sun,
And often to its strange and gleaming sands
Uloupie came, weary of those dim shades
And great disastrous caverns neighbouring Hell,
Avid of sunlight. Through the grasses long
She glided and her fierce and gorgeous hood
Gleamed with a perilous beauty and a light
Above the green spikes of the grass; often
In the slow sinuous waters she was spied
Swimming, with mystic dusky hair and cheeks
That had no rose,—one shoulder’s dipping glow
Through water and one white breast hardly seen.
But as she swam she looked towards the west
Dreaming of daily sunlight and of flowers
That need soft rain and of the night with stars,
A friendly darkness and the season’s change
In beautiful Aryavertha far away,
The country of the Gods, and yet sometimes
Vaguely expectant to the southward gazed.

Then into heaven dim-featured twilight came
And in her city mid the eastern hills
Chitrangada awoke and saw the dawn
Presaged in bleakness. From Urjoona’s arms
Unclasping her rose-white smooth limbs, she looked
Into the opening world; but all was grey
And formless. Then into her mood there passed
The spirit of the gloomy northern hills
Burdening her breasts with terror and her heart
Was bared to insight, and new-heard a moan
Of waters and remembered pain. The sad
Prophecies of the pale astrologers
Haunted her with affliction, and she found
Pale hints of absence from the twilight drawn.
But now the hero felt his clasp a void
And on one arm half-rising searched the grey
Unlidded darkness for the face; then spoke
Slowly her name, “How has the unborn day
Called thee, belovèd, that thou standest dumb
In the grey light like one whose joy is far?
Come hither.” Silently she came and knelt
And laid her quiet cheek upon his breast.
He felt her tears, wondering; and she replied,
“Ah, dost thou love me and a moment brief
Of absence troubles even in sleep thy heart
Waking to emptiness? And yet, ah God,
How easily that void will soon be filled!
For thou wilt like a glorious burning move
Through cities and through regions like a star,
Careless in thy heroic strength o’er all
The beautiful country Aryavertha. Women
Will see thy face and strangely, swiftly drawn
Thy masculine attraction feel and bow
Over thy feet. For thou wilt come to them
A careless glory taking women’s hearts
As one breaks from a tree the wayside flowers,
And smile, securely kind, even as a god
Might draw a mortal maiden to his arms
And marry his immortal mouth to hers.
Then will thy destiny seize thee; thou wilt pass
Like some great light in heaven, leaving behind
A splendid memory of force and fire.
And thou wilt fill thy soul with battle, august
Misfortunes and tremendous harms embrace,
Experience mighty raptures and at last
Upon some world-renowned far-rumoured field
Empire for ever win or lose, nor all
The while think once of my forgotten face.”
She ceased and wept; he said, touching her hair,
“What wast thou musing, O Chitrangada,
Lonely beside the window and thine eyes
Looked out on the half-formed aspect of things
Twixt light and darkness? Do not so again.
For bleak and dreadful is the hour ere dawn
And one who gazes out then from his sweet,
Warm, happy, bounded human room, is touched
With awful memories that he cannot grasp
And mighty sorrows without form, the sense
Of an original vastness desolate,
Bleak labour and a sad unfinished world.
Dwell not with these again, but when thou wakest
And seest the unholy hour pallid gaze
Into thy room, draw closer to my bosom
Waking with kisses and with joy surround
Thy soul until God rises with the sun.
Friendly to mortals is the living sun’s
Great brilliant light; but this pale hour was made
For slowly-dying men whose lone chilled souls
Grow near to that greyness and dumb mourners
Unfrieden.” But Chitrangada replied,
“I looked into the dawn and had a dream.
Thou wast gone far from me; too well I knew
That sound of trampling horsehooves in the north
And victor rumours of thy chariot shook
The hearts of distant kings. I sat alone
At this pale window and about me saw
My city and our low familiar hills.
Yet these were but as objects painted in
Upon the eye, and round me I beheld
The gloomy northern mountains with their mists
And sorrowful embracing rains and heard
With melancholy voices rolling down
The waters of a dull, ill-omened stream
Sinuous and eddies alien to the sun.
That thou wilt pass from me I know, nor would
I stay thee, had I power: for if today
I held thy feet, yet as the seasons passed,
The impulse of thy mighty life would come
Upon thee like a wind and drive thee forth
To love and battle and disastrous deeds
And all the giant anguish that preserves
This world. Thou as resistlessly wast born
To these things as the leopard sleek to strength
And beauty and fierceness, as resistlessly
As women are to love; though well they know
Pain for the end, yet knowing still must love.
Ah swiftly pass. Why shouldst thou linger here
Vainly? How will it serve God’s purpose in thee
To tarry soothing for such brief while longer
Merely a woman’s heart; meanwhile perhaps
Lose some great moment of thy life which once
Neglected never can return.” She ceased
And strove to conquer overmastering tears.
He was silent a little, then his eyes
Strained towards the dim-seen fairness of her face,
Saying, “O little loving child, who once
Wast simply glad to love and feel my kiss!
But now thou mournest, art in one night changed.
Thou wast not wont to leave my arms ere dawn
And dream of sorrow. Rather wast thou fain
Of all my bosom and the gazing light
Hardly could force away thy obstinate clasp.
Yet now thou speakest of absence easily.
Is my love faded? Dost thou feel my arms
Looser about thee, my belovèd? Nay,
Thou knowest that not less but more I love thee
Than when to eastern Monipura far
I came, a wandering prince accompanied only
By courage and my sword and found thee here,
O sweet young sovereign, ruling with pure eyes
And little maiden hand, fragile and mild,
A strong and savage nation. At my call
Unquestioning thou camest, oh, meekly down
Leaving tremendous seat and austere powers,
Contented at my feet to dwell and feel
My kisses on thy hair, and couldst renounce
Thy glorious girdle for my simple arms.
O fair young soul, candid and meek and frank
Thy love was, opening to me fragrantly
Like flowers to the sun, wide-orbed, and yielded
Thy whole self up. Yet now thou speakest sadly
Too like a mind matured by thought and pain.”

He ceased, covering her bosom with his hands,
And she trembled, and broke out faltering.
“O endlessness of moments and the long
Rain-haunted nights when thou art far! O me
And the pale dreadful dawn when I shall wake
In the grey hour and feel myself alone
For ever! Yet O my rapture and pride! O prince,
O hero, O strong protagonist of earth!
World-conqueror! and in heaven immortal lips
Burning have kissed thy feet, but I possessed.
God knows that I have loved thee, not with grudging
Piecemeal reluctant cessions of the soul
As ordinary women love, but greatly
With one glad falling at my conqueror’s feet
All suddenly and warmly like the Spring.
Ah God, thy beauty when it dawned on me
And I obeyed thy bright attraction! felt
Thy face like the great moon that draws the tides!
Facing our armèd senate, bow in hand
Leaned on a pillar with a banner’s pomp
Seeming to mingle in thy hair thou stoodst
Expectant, careless, and thy strong gracious face
Was brilliant like a sudden god’s. And half
I rose up as one called. But even then
Through all the hushed assembly ran a murmur,
An impulse and a movement and with cries
Round thee my strong barbarian nobles pressed
Offering fierce homage. But I sat alone,
Abandoned, with a wounded sad delight,
Loving thy glory, like a young warrior conquered
In battle by the hero he admires.
Thou tookst me by the hand and ledst me down
From the high dais and the ancient throne:
Faltering I went with meek submissive eyes.”
Then strong Urjoon: “Beloved, and was this not
Dearer, a woman’s bliss in her one lord
Than ruling all those kings? Dost thou not choose
Rather thy body by my kisses wakened
Than those free virgin and unconscious limbs?
Ah wherefore shouldst thou dream of love cut short
And joy without its sequel? Rather think
That thy young passion shall to matron bloom
Live warmly enriched and beautifully changed
When thou with the hushed wonder of motherhood
Touching thy sweet young eyes holdst up to me
Returning from high battle to thine arms
A creature of our own.” And she answered
With a low sob, “Would God that it might be!
But though I loved thee I have known I was
No real part of thy great days; only
A bosom on which thou hast lain ere riding
To battle, a face which thou hast loved and passed.
Hero, take up thy bow! Warrior, arise!
Proceed with thy majestic mission. Thou
From many mighty spirits wast selected
And mayst not for a transient joy renounce
The anguish and the crown. But I shall witness
Thy far-off poms, not utterly alone;
As herdsmen pausing under quiet leaves
Watch the stupendous passage of a host,
Shrill neigh of horses, chariots swift and men
Marching, and hear great conchshells blown, and look
Into the burning eyes of kings. Some wave
Of thy vast fate perhaps shall roll thee here
Ere all is over; for the long round of things
Brings a changed soul in man to old unaltered
Places, and objects cared for once; then, then
We touching hands in the old way, yet changed,
Shall wonder in each other's eyes to find
Strange kindlings and the buried deeps of love.”

She ended and Urjoona for a moment
Beheld vast Aryavertha as if mapped
Before him, rivers, heaven-invading hills
And cities ancient as their skies; then turned
And drawing to his bosom Chitrangada
With his calm strength surrounding her replied:
“This may be; yet, O woman, O delight,
Remember to rejoice! Flowers die, beloved,
To live again; therefore hold fast to love,
Hold fast the blooming of thy life in love.
The soul's majestic progress moulding doom
Is with the frailest flower helped that blows
In frankness. Therefore is the woman's part
Nearest divine, who to one motion keeps
And like the fixed immortal planets' round
Is constant to herself in him she loves.
Nor though fate call me hence, have I in vain
Loved thee, young virgin of the hills, and snared
Thy feet with kisses; though my soul from thee
Adventure journeying like a star the void, —
As 'tis our spirit's fate ever to roam
Seeking bright portions of ourself, which found
The strong heart cherishes until his close.
Relinquish nothing grasped; who yieldeth aught
To fate or weakness, misses the great goal; —
So have I planted thee within my heart,
O tender beauty, and shall not lightly lose.
Though years divide us and the slow upgrowth
Of overlaying thoughts submerge the peace,
The sweet and mutual self — yet the old joy
Lives like Valmekie in his mound, — the sage,
Buried, forgot, but murmuring the name.
Let us not lose then, O Chitrangada,
One moment’s possibility of love
Which being squandered, we shall then regret.
Fate that united once, may when she will
Divorce, but cannot the sweet meaning spoil
Of these warm kisses.” He embraced her wholly
Confounding her with bliss; so for that time
The Shadow fled and joy forgot his close.

But one pale morn Chitrangada rose wan
And to the stable through the grey hushed place
Descending, with her little deft hands yoked
Urjoona’s coursers to the car,—persuading
Thrust in their whinnying mouths the bit, fastened
The traces, harmonised the reins, then led
Into the sad dim court trampling his steeds;
And with a strange deep look of love and hate
Caressing said, faint with her unshed tears:
“You brought him here who now shall bear away,
O horses yoked to fate. How often yet
Will you deceive us shaking wide your manes
And trampling over women’s hearts with hooves
Thunderous towards battle? Yet your breed perhaps
Shall bring him to my wrinkled age.” And now
Urjoona came: his mailed and resonant tread
Rang in her very heart, his corslet blazed
Towards the chill skies and his heroic form
Seemed to consent with the surrounding hills.
But in the marble face and eyes august
The light of his tremendous fate had dawned
Like a great sunrise. Calm her shuddering body
He took into his bosom and with no word
Under the witnessing, unmovèd heavens
Kissed her pale lips. Then to his car he rose.

And now she did not weep, but silently
Took and returned his kiss. So he went forth.
Thundering the great wheels jarred upon the stones
Of the wide court and echoes filled the air
With a triumph of warlike sound. Outside,
The city’s nobles, waiting, saw the car
Emerge, and bowed down to their king. They spoke
No word, but stood austerely watching still,
A mist over their stern and savage eyes,
His going, as men in darkness watch a light
Carried away that cheered them for an hour,
Then turned back homeward. But Chitrangada
Waited till the last thunders died away
And far off on a hill the warlike flag
Waved in the breeze and dipped below the edge;
Then to her chamber slowly went alone.
Sonnets from Manuscripts
Circa 1900–1901
O face that I have loved

O face that I have loved until no face
Beneath the quiet heavens such glory wear,
They say you are not beautiful, — no snare
Of twilight in the changing mysticness
Or deep enhaloed secrecy of hair,
Soft largeness in the eyes I dare not kiss!
Unreal all your bosom’s dreadful bliss.
Too narrow are your brows they say to bear
The temple of vast beauty in its span
Or chaste cold bosom to house fierily
Beauty that maddens all the heart of man.
I know not; this I know that utterly
My soul is by some magic curls surprised,
Some glances have my heart immortalized.

I cannot equal

I cannot equal those most absolute eyes,
Although they rule my being, with the stars,
Nor floral rich comparisons devise
To detail sweetness that your body wears.
Nor in the heavens hints of you I find,
Nor dim suggestions in this thoughtful eve;
The moonlight of your darker grace is blind.
Who can with such pale delicacies deceive
A naked burning heart? Only one place
Satisfies me of you, where the feet
That I shall never clasp, with beauty press
The barren earth in one place only sweet,
One face in the wide world alone divine,
The only one that never can be mine.
O letter dull and cold

O letter dull and cold, how can she read
Gladly these lifeless lines, no fire that prove,
When others even their passionate hearts exceed
Caressing her sweet name with words of love?
O me that I could force this barrier, turn
My heart to syllables, make all desire
One burning word, then would my letters yearn
With some reflection of that hidden fire.
Ah if I could, what then? This fiery pit
Within for human eyes was never meant.
All hearts would view with horror or with hate
A picture not of earthly lineament.
Yourself even, sweet, would start with terror back
As at the hissing of a sudden snake.

My life is wasted

My life is wasted like a lamp ablaze
Within a solitary house unused,
My life is wasted and by Love men praise
For sweet and kind. How often have I mused
What lovely thing were love and much repined
At my cold bosom moved not by that flame.
’Tis kindled; lo, my dreadful being twined
Round one whom to myself I dare not name.
I cannot quench the fire I did not light
And he that lit it will not; I cannot even
Drive out the guest I never did invite;
Although the soul he dwells with loses heaven.
I burn and know not why; I sink to hell
Fruitlessly and am forbidden to rebel.
Because thy flame is spent

Because thy flame is spent, shall mine grow less,
O bud, O wonder of the opening rose?
Why both my soul and Love it would disgrace
If I could trade in love, begin and close
My long account of passion, like a book
Of merchant’s credit given to be repaid,
Or not returned, struck off with lowering look
Like a bad debt uncritically made.
What thou couldst give, thou gav’st me, one sweet smile
Worth all the sunlight that the years contain,
One month of months when thy sweet spirit awhile
Fluttered o’er mine half-thinking to remain.
What I could give, I gave thee, to my last breath
Immortal love, immovable by death.

Thou didst mistake

Thou didst mistake, thy spirit’s infant flight
Opening its lovely wings upon the sun
Paused o’er the first strong bloom that met thy sight
Thinking perhaps it was the only one.
But all this fragrant garden was beyond.
Winds came to thee with hints of honey; day
Disclosed a brighter hope than this unsunned
Thought-sheltered heart and called thee far away.
Thou didst mistake. Must I then rage, grow ill,
With tortured vanity and think it love,
Miscall with brutal names my lady’s will
Fouling thy snowwhite image, O my dove?
Is not thy kiss enough, though only one,
For all eternity to live upon?
Rose, I have loved

Rose, I have loved thy beauty, as I love
The dress that thou hast worn, the transient grass,
O’er which thy happy careless footsteps move,
The yet-thrilled waysides that have watched thee pass.
Soul, I have loved thy sweetness as men love
The necessary air they crave to breathe,
The sunlight lavished from the skies above,
And firmness of the earth their steps beneath.
But were that beauty all, my love might cease
Like love of weaker spirits; were’t thy charm
And grace of soul, mine might with age decrease
Or find in Death a silence and a term,
But rooted in the unnameable in thee
Shall triumph and transcend eternity.

I have a hundred lives

I have a hundred lives before me yet
To grasp thee in, O spirit ethereal,
Be sure I will with heart insatiate
Pursue thee like a hunter through them all.
Thou yet shalt turn back on the eternal way
And with awakened vision watch me come
Smiling a little at errors past, and lay
Thy eager hand in mine, its proper home.
Meanwhile made happy by thy happiness
I shall approach thee in things and people dear
And in thy spirit’s motions half-possess
Loving what thou hast loved, shall feel thee near,
Until I lay my hands on thee indeed
Somewhere among the stars, as ’twas decreed.
Still there is something

Still there is something that I lack in thee
And yet must find. There is a broad abyss
Between possession and true sovereignty
Which thou must bridge with a diviner kiss.
I questioned all the beauty of other girls
Thinking thou hadst it not to give indeed.
But not Giannina’s breasts nor Pippa’s curls
Contained it; thou alone canst meet my need.
Deniest thou some secret of thy soul
To me who claim thee all? Nay, can it be
Thy bosom’s joys escape from my control?
Forbid it Heaven Hell should yawn for thee.
Deny it now! Let not sweet love begun
End in red blood and awful justice done.

I have a doubt

I have a doubt, I have a doubt which kills.
Tell me, O torturing beauty, O divine
Witchcraft, O soul escaped from heaven’s hills
Yet fed upon strange food of utter sin.
Why dost thou torture me? Hast thou no fear?
My love was ever like my hate a sword
To search the heart and kill however dear
The joy that would not own me for its lord.
Yet must I still believe that thou art true
If thou wilt say it and smile. Knowst thou not then
I have purchased with my passion all of you
And wilt thou keep one nook for other men?
Deny it now! Let not sweet love begun
End in red blood and awful justice done.
To weep because a glorious sun

To weep because a glorious sun has set
Which the next morn shall gild the east again,
To mourn that mighty strengths must yield to fate
Which by that fall a double force attain,
To shrink from pain without whose friendly strife
Joy could not be, to make a terror of death
Who smiling beckons us to farther life
And is a bridge for the persistent breath;
Despair and anguish and the tragic grief
Of dry set eyes or such disastrous tears
As rend the heart though meant for its relief
And all man’s ghastly company of fears
Are born of folly that believes this span
Of brittle life can limit immortal man.

What is this talk

What is this talk of slayer and of slain?
Swords are not sharp to slay nor floods assuage
This flaming soul. Mortality and pain
Are mere conventions of a mightier stage.
As when a hero by his doom pursued
Falls like a pillar of the huge world uptorn
Shaking the hearts of men and awe-imbued,
Silent the audience sits or weeps forlorn,
Meanwhile behind the stage the actor sighs
Deep-lunged relief, puts off what he has been
And talks with friends that waited or from the flies
 Watches the quiet of the closing scene,
Even so the unwounded spirits of the slain
Beyond our vision passing live again.
Short Poems from Manuscripts
Circa 1900–1901
The Spring Child

(On Basanti’s birthday — Jyestha 1900)

Of Spring is her name for whose bud and blooming
   We praise today the Giver,—
Of Spring and its sweetness clings about her
For her face is Spring and Spring’s without her,
   As loth to leave her.

See, it is summer; the brilliant sunlight
   Lies hard on stream and plain,
And all things wither with heats diurnal;
But she! how vanished things and vernal
   In her remain.

And almost indeed we repine and marvel
   To watch her bloom and grow;
For half we had thought our sweet bud could never
Bloom out, but must surely remain for ever
   The child we know.

But now though summer must come and autumn
   In God’s high governing
Yet I deem that her soul with soft insistence
Shall guard through all change the sweet existence
   And charm of Spring.

O dear child soul, our loved and cherished,
   For this thy days had birth,
Like some tender flower on a grey stone portal
To sweeten and flush with childhood immortal
   The ageing earth.
There are flowers in God’s garden of prouder blooming
Brilliant and bold and bright,
The tulip and rose are fierier and brighter,
But this has a softer hue, a whiter
And milder light.

Long be thy days in rain and sunshine,
Often thy spring relume,
Gladdening thy mother’s heart with thy beauty,
Flowerlike doing thy gentle duty
To be loved and bloom.

A Doubt

Many boons the new years make us
But the old world’s gifts were three,
Dove of Cypris, wine of Bacchus,
Pan’s sweet pipe in Sicily.

Love, wine, song, the core of living
Sweetest, oldest, musicalest.
If at end of forward striving
These, Life’s first, proved also best?

The Nightingale

An Impression

Hark in the trees the low-voiced nightingale
Has slain the silence with a jubilant cry;
How clear in the hushed night, yet voluble
And various as sweet water wavering by,
That murmurs in a channel small
Beneath a low grey wall,
Then sings amid the fitful rye.
O sweet grave Siren of the night,
Astarte’s eremite,
Thou feedest every leaf with solemn glee.
Lo, the night-winds sigh happier, being chid by thee.

Euphrosyne
Child of the infant years, Euphrosyne,
Bird of my boyhood, youth’s blithe deity!
If I have hymned thee not with lyric phrase,
Preferring Eros or Aglaia’s praise,
Frown not, thou lovely spirit, leave me not.
Man worships the ungrasped. His vagrant thought
Still busy with the illimitable void
Lives all the time by little things upbuoyed
Which he contemns; the wife unsung remains
Sharing his pleasures, taking half his pains
While to dream faces mounts the poet’s song.
Yet she makes not their lyric right her wrong,
Knowing her homely eyes his sorrow’s star
Smiles at the eclipsing brow untouched by care.
Content with human love lightly she yields
The immortal fancy its Elysian fields.

A Thing Seen
She in her garden, near the high grey wall,
Sleeping; a silver-bodied birch-tree tall
That held its garments o’er her wide and green,
Building a parapet of shade between,
Forbade the amorous sun to look on her.
No fold of gracious raiment was astir.
The wind walked softly; silent moved a cloud
Listening; of all the tree no leaf was loud
But guarded a divine expectant hush
Thrilled by the silence of a hidden thrush.
Epitaph

Moulded of twilight and the vesper star
Midnight in her with noon made quiet war; —
Moulded twixt life and death, Love came between;
Then the night fell; twilight faded, the star had been.

To the Modern Priam

Of Ilion’s ashes was thy sceptre made;
’Tis meet thou lose it now in Ilion’s fall.

Song

O lady Venus, shine on me,
O rose-crowned goddess from thy seas
Radiant among the Cyclades!
Rose-crowned, puissant like the sea.

And bring thy Graces three,
The swift companions of thy mirthful mind.
Bring thy sweet rogue with thee,
Thy careless archer, beautiful and blind.

A woman’s royal heart
Bid him to wound and bind her who is free;
Bind her for me!
Nor for the sweet bright crimson blood may start
In little rillets from the little heart
Spare her thy sport to be,
Goddess, she spared not me.
Epigram

If thou wouldst traverse Time with vagrant feet
   Nor make the poles thy limit fill not then
Thy wallet with the fancy’s cloying sweet
   Which is no stay to heaven-aspiring men,
But follow wisdom since alone the wise
Can walk through fire with unblinking eyes.

The Three Cries of Deiphobus

Awake, awake, O sleeping men of Troy,
That sleep and know not in the grasp of Hell
I perish in the treacherous lonely night
To foes betrayed, environed and undone.
    O Trojans, will ye sleep until the doom
Have slipped its leash and bark upon your doors?
Not long will ye, unless in Pluto’s realm,
Have slumber, since forsaken among foes
I drink the bitter cup of lonely death
Unheeded and from helping faces far.
    O Trojans, Trojans, yet again I call!
Swift help we need or Ilion’s days are done.

Perigone Prologuises

Cool may you find the youngling grass, my herd,
Cool with delicious dew, while I here dream
And listen to the sweet and garrulous bird
That matches its cool note with Thea’s stream.
Boon Zephyr now with waist ungirded runs
And you, O luminous nurslings, wider blow,
O nurslings of light rain and vernal suns,
When bounteous winds about the garden go.
Apt to my soul art thou, blithe honeyed moon,
O lovely mother of the rose-red June.
Zephyr that all things soothes, enhances all,
Dwells with thee softly, the near cuckoo drawn
To farther groves with sweet inviting call
And dewy buds upon the blossoming lawn.
But ah, today some happy soft unrest
Aspires and pants in my unquiet breast,
As if some light were from the day withdrawn,
As if the flitting Zephyr knew a lovelier word
Than it had spoken yet, and flower and bird
Kept still some grace that yet is left to bloom,
Had still a note I never yet have heard,
That, blossoming, would the wide air more illume,
That, spoken, would advance the sweet Spring’s bounds
With large serener lights and joy of exquisite sounds.

Nor have I any in whose ears to tell
This gracious grief and so by words have peace,
Save the cold hyacinth in the breezy dell
And the sweet cuckoo in the sunlit trees
Since the sharp autumn days when with increase
Of rosy-lighted cheeks attained the ground
Weary of waiting and by wasps hung round
The bough’s fair hangings and Thea fell with these,
My mother, with twelve matron summers crowned.
Four times since then the visits of green spring
Have blessed the hillsides with fresh blossoming
And four times has the winter chilled the brooks,
Since sole I dwell with my rude father cheered
By no low-worded speech or sunny looks.
Yet are we rich enough, fruitful our herd
And yields us brimming pails, and store we still
Numberless baskets with white cheese and fill
Our cave with fruits for winter, and since wide-feared
My father Sinnis, none have care our wealth to spoil.
Therefore I pass sweet days with easy toil,
Nor other care have much but milk the kine
And call them out to graze in soft sunshine
And stall them when the evening-star grows large.
All else is pleasure, budded wreaths to twine
And please my soul beside my hornèd charge
And bathe in the delicious brook that speeds,
Iris and water-lily capped and green with reeds.

Nor need we flocks for clothing nor the shears;
For when the echoes in the mountain rocks
Mimic the groaning wain that moving peers
Between thick trees or under granite blocks,
Our needs my father takes, nor any yet
Scaped him who breaks the wrestler as these twines
Of bloom I break, so he with little sweat,
And tears the women with dividing pines.
Therefore thin gleaming robes and ruddy wines
We garner, flickering swords in jewelled case
And burning jewels and the beautiful gold
Whereof bright plenty now our caverns hold
And ornaments of utter exquisiteness.
But if these brilliants of their pleasure fail,
The lily blooms from vale to scented vale
And crocus lifts in Spring its golden fire.
Our midnight hears the warbling nightingale,
The cuckoo calls as he would never tire;
Along our hills we pluck the purple grapes,
And in the night a million stars arise
To watch us with their ancient friendly eyes.
Such flowering ease I have and earth’s sweet shapes,
And riches, and the green and hivèd springs.
Ah then what longing wakes for new and lovelier things.
Since I have seen your face

Since I have seen your face at the window, sweet
Love, you have thrown a spell on my heart, on my feet.
My heart to your face, my feet to your window still
Bear me by force as if by an alien will.

O witch of beauty, O Circe with innocent eyes,
You have suddenly caught me fast in a net of sighs.
When I look at the sunlight, I see your laughing face;
When I purchase a flower, it is you in your radiant grace.

I have tried to save my soul alive from your snare,
I will strive no more; let it flutter and perish there.
I too will seize your body alive, O my dove,
And teach you all the torture and sweetness of love.

When you looked from the window out on the trampling city,
Did you think to take my heart and pay me with pity?
But you looked on one who has ever mocked at sin
And gambled with life to lose her all or win.

I will pluck you forth like a fluttering bird from her nest.
You shall lie on Love’s strong knees, in his white warm breast,
Afraid, with delighted lids that will not close.
You shall grow white one moment, the next a rose.
So that was why

So that was why I could not grasp your heart
Between my hands and feel it nestle in,
Contented. O you kept it in your breast
Most secretly, were skilful in your sin,
Farthest away, most intimately caressed.
But if I sought for it with this sharp knife
Here, here, thou harlot? What, you tremble, you shriek,
Would you be skilful still? You love your life
For his sake then? For his sake! No. I’ll wait
Till you have fathomed all my depths of hate.
Weep not, nor pray; you have tasted to the brim
The glory of my love, and laughed, oh laughed!
Now drink my hatred to the dregs, this time
You shall not easily reject the draught.
God! now I hate you whom I once so loved.
God! the abhorred whiteness of these limbs
Where I have wasted all my glorious heart
In kisses. Dreams, ah Heaven, sweet hateful dreams!
Nay, I shall live, ’tis thou that must depart.
Why, he has kissed them too. Will not this edge
Dig out his kisses from the bleeding flesh?
Call not on God, thou soul self-doomed to Hell,
Against whose blessings thou hast dared rebel.
Thou liv’st but while I hold myself in leash.
His name! Thou lovely devil, from thy breast
I’ll tear his name out. He! then now, then now
And thus and thus...
O heaven! how beautiful her murdered brow!
Will not thine eyes open and look at me with love,
Surely they hold not his vile image yet,
For Death should leave thee pure. But I forget.
He lives and God signs to me from above
Beckoning to me to strike. When it is done,
I will come back and kiss you only once.
World’s delight

World’s delight, spring’s sweetness, music’s charm
Lie within my arm.
Earth that is and heaven to come are here with me
Mastered on my knee.
Open thy red petals, shrinking rose,
And thy heart disclose.
Pant thy fragrance up to me, O my delight,
All the perfumed night.
Thou possessed and I possessing, earth
Opened for our mirth.
Flowers dropping on us from delighted trees,
Revels of the breeze,
All for me because I hold their Circe white,
Queen of their delight.
Wanton, thou shalt know at last a chain
Golden to restrain.
Not a minute of thee shall escape my kiss,
Captive made to bliss,
Not a wandering breath but love shall seize
With his ecstasies,
All thy body be a glorious happy lyre
Played on by desire
And thy soul shall be my absolute kingdom still
To misrule at will.
Wast thou hoping to escape at last?
Nay, I held thee fast.
Thou shalt know what love is, all his bliss and pain,
Fondling and disdain.
Jealousy and joy shall seize on thee by turns
Till thy whole heart burns.
I will learn now all that is to know
In this golden show.
I will gather all there are of sweets to take
In this scented brake.
All thy soul’s reserves of honied shame

www.holybooks.com
Seized as by a flame
Shall be mine and falter naked to the light
And discovered quite.
I will burn thee up as with a fire
Of unquenched desire.
I will ravage like a conqueror all thy soul
And annex the whole.
To escape from joys too fierce that burn
Thou in vain shalt turn.
Puissant Fate shall rescue not thy soul from mine
Nor decree divine
Nor shall Death release thy hunted heart from fear;
I shall still be near.
Part Three

Baroda and Bengal

Circa 1900–1909
Poems from

Ahana and Other Poems
Invitation

With wind and the weather beating round me
   Up to the hill and the moorland I go.
Who will come with me? Who will climb with me?
   Wade through the brook and tramp through the snow?

Not in the petty circle of cities
   Cramped by your doors and your walls I dwell;
Over me God is blue in the welkin,
   Against me the wind and the storm rebel.

I sport with solitude here in my regions,
   Of misadventure have made me a friend.
Who would live largely? Who would live freely?
   Here to the wind-swept uplands ascend.

I am the lord of tempest and mountain,
   I am the Spirit of freedom and pride.
Stark must he be and a kinsman to danger
   Who shares my kingdom and walks at my side.

Who

In the blue of the sky, in the green of the forest,
   Whose is the hand that has painted the glow?
When the winds were asleep in the womb of the ether,
   Who was it roused them and bade them to blow?

He is lost in the heart, in the cavern of Nature,
   He is found in the brain where He builds up the thought:
In the pattern and bloom of the flowers He is woven,
   In the luminous net of the stars He is caught.
In the strength of a man, in the beauty of woman,
   In the laugh of a boy, in the blush of a girl;
The hand that sent Jupiter spinning through heaven,
   Spends all its cunning to fashion a curl.

These are His works and His veils and His shadows;
   But where is He then? by what name is He known?
Is He Brahma or Vishnu? a man or a woman?
   Bodied or bodiless? twin or alone?

We have love for a boy who is dark and resplendent,
   A woman is lord of us, naked and fierce.
We have seen Him a-muse on the snow of the mountains,
   We have watched Him at work in the heart of the spheres.

We will tell the whole world of His ways and His cunning:
   He has rapture of torture and passion and pain;
He delights in our sorrow and drives us to weeping,
   Then lures with His joy and His beauty again.

All music is only the sound of His laughter,
   All beauty the smile of His passionate bliss;
Our lives are His heart-beats, our rapture the bridal
   Of Radha and Krishna, our love is their kiss.

He is strength that is loud in the blare of the trumpets,
   And He rides in the car and He strikes in the spears;
He slays without stint and is full of compassion;
   He wars for the world and its ultimate years.

In the sweep of the worlds, in the surge of the ages,
   Ineffable, mighty, majestic and pure,
Beyond the last pinnacle seized by the thinker
   He is throned in His seats that for ever endure.
The Master of man and his infinite Lover,
   He is close to our hearts, had we vision to see;
We are blind with our pride and the pomp of our passions,
   We are bound in our thoughts where we hold ourselves free.

It is He in the sun who is ageless and deathless,
   And into the midnight His shadow is thrown;
When darkness was blind and engulfed within darkness,
   He was seated within it immense and alone.

Miracles

Snow in June may break from Nature,
   Ice through August last,
The random rose may increase stature
   In December’s blast;

But this at least can never be,
   O thou mortal ecstasy,
That one should live, even in pain,
   Visited by thy disdain.

Reminiscence

My soul arose at dawn and, listening, heard
One voice abroad, a solitary bird,
A song not master of its note, a cry
   That persevered into eternity.
My soul leaned out into the dawn to hear
In the world’s solitude its winged compeer
And, hearkening what the Angel had to say,
Saw lustre in midnight and a secret day
Was opened to it. It beheld the stars
Born from a thought and knew how being prepares.
Then I remembered how I woke from sleep
And made the skies, built earth, formed Ocean deep.
A Vision of Science

I dreamed that in myself the world I saw,
Wherein three Angels strove for mastery. Law
Was one, clear vision and denial cold,
Yet in her limits strong, presumptuous, bold;
The second with enthusiasm bright,
Flame in her heart but round her brows the night,
Faded as this advanced. She could not bear
That searching gaze, nor the strong chilling air
These thoughts created, nourishing our parts
Of mind, but petrifying human hearts.
Science was one, the other gave her name,
Religion. But a third behind them came,
Veiled, vague, remote, and had as yet no right
Upon the world, but lived in her own light.
Wide were the victories of the Angel proud
Who conquered now and in her praise were loud
The nations. Few even yet to the other clove, —
And some were souls of night and some were souls of love.
But this was confident and throned. Her heralds ranged
Claiming that night was dead and all things changed;
For all things opened, all seemed clear, seemed bright —
Save the vast ranges that they left in night.
However, the light they shed upon the earth
Was great indeed, a firm and mighty birth.
A century’s progress lived before my eyes.
Delivered from amazement and surprise,
Man’s spirit measuring his worlds around
The laws of sight divined and laws of sound.
Light was not hidden from her searching gaze,
Nor matter could deny its myriad maze
To the cold enquiry; for the far came near,
The small loomed large, the intricate grew clear.
Measuring and probing the strong Angel strode,
Dissolving and combining, till she trod
Firmly among the stars, could weigh their forms,
Foretold the earthquakes, analysed the storms.
Doubt seemed to end and wonder’s reign was closed.
The stony pages of the earth disclosed
Their unremembered secrets. Horses of steam
Were bitted and the lightnings made a team
To draw our chariots. Heaven was scaled at last
And the loud seas subdued. Distance resigned
Its strong obstructions to the mastering mind.
So moved that spirit trampling; then it laid
Its hand at last upon itself, how this was made
Wondering, and sought to class and sought to trace
Mind by its forms, the wearer by the dress.
Then the other arose and met that spirit robust,
Who laboured; she now grew a shade who must
Fade wholly away, yet to her fellow cried,
“I pass, for thou hast laboured well and wide.
Thou thinkest term and end for thee are not;
But though thy pride is great, thou hast forgot
The Sphinx that waits for man beside the way.
All questions thou mayst answer, but one day
Her question shall await thee. That reply,
As all we must; for they who cannot, die.
She slays them and their mangled bodies lie
Upon the highways of eternity.
Therefore, if thou wouldst live, know first this thing,
Who thou art in this dungeon labouring.”
And Science confidently, “Nothing am I but earth,
Tissue and nerve and from the seed a birth,
A mould, a plasm, a gas, a little that is much.
In these grey cells that quiver to each touch
The secret lies of man; they are the thing called I.
Matter insists and matter makes reply.
Shakespeare was this; this force in Jesus yearned
And conquered by the cross; this only learned
The secret of the suns that blaze afar;
This was Napoleon’s giant mind of war.”
I heard and marvelled in myself to see
The infinite deny infinity.
Yet the weird paradox seemed justified;
Even mysticism shrank out-mystified.
But the third Angel came and touched my eyes;
I saw the mornings of the future rise,
I heard the voices of an age unborn
That comes behind us and our pallid morn,
And from the heart of an approaching light
One said to man, “Know thyself infinite,
Who shalt do mightier miracles than these,
Infinite, moving mid infinities.”
Then from our hills the ancient answer pealed,
“For Thou, O Splendour, art myself concealed,
And the grey cell contains me not, the star
I outmeasure and am older than the elements are.
Whether on earth or far beyond the sun,
I, stumbling, clouded, am the Eternal One.”

Immortal Love

If I had wooed thee for thy colour rare,
Cherished the rose in thee
Or wealth of Nature’s brilliants in thy hair,
O woman fair,
My love might cease to be.

Or, had I sought thee for thy virtuous youth
And tender yearning speech,
Thy swift compassion and deliberate truth,
O heart of ruth,
Time might pursue, might reach.
But I have loved thee for thyself indeed
   And with myself have snared;
Immortal to immortal I made speed.
   Change I exceed
   And am for Time prepared.

A Tree

A tree beside the sandy river-beach
   Holds up its topmost boughs
Like fingers towards the skies they cannot reach,
   Earth-bound, heaven-amorous.

This is the soul of man. Body and brain
Hungry for earth our heavenly flight detain.

To the Sea

O grey wild sea,
Thou hast a message, thunderer, for me.
   Their huge wide backs
Thy monstrous billows raise, abysmal cracks
   Dug deep between.
One pale boat flutters over them, hardly seen.
   I hear thy roar
Call me, “Why dost thou linger on the shore
   With fearful eyes
Watching my tops visit their foam-washed skies?
   This trivial boat
Dares my vast battering billows and can float.
   Death if it find,
Are there not many thousands left behind?
   Dare my wide roar,
Nor cling like cowards to the easy shore.
Come down and know  
What rapture lives in danger and o'erthrow."  
Yes, thou great sea,  
I am more mighty and outbillow thee.  
On thy tops I rise;  
'Tis an excuse to dally with the skies.  
I sink below  
The bottom of the clamorous world to know.  
On the safe land  
To linger is to lose what God has planned  
For man's wide soul,  
Who set eternal godhead for its goal.  

Therefore He arrayed  
Danger and difficulty like seas and made  
Pain and defeat,  
And put His giant snares around our feet.  
The cloud He informs  
With thunder and assails us with His storms,  
That man may grow  
King over pain and victor of o'erthrow  
Matching his great  
Unconquerable soul with adverse Fate.  
Take me, be  
My way to climb the heavens, thou rude great sea.  
I will seize thy mane,  
O lion, I will tame thee and disdain;  
Or else below  
Into thy salt abysmal caverns go,  
Receive thy weight  
Upon me and be stubborn as my Fate.  
I come, O Sea,  
To measure my enormous self with thee.

www.holybooks.com
Revelation

Someone leaping from the rocks
Past me ran with wind-blown locks
Like a startled bright surmise
Visible to mortal eyes, —
Just a cheek of frightened rose
That with sudden beauty glows,
Just a footstep like the wind
And a hurried glance behind,
And then nothing, — as a thought
Escapes the mind ere it is caught.
Someone of the heavenly rout
From behind the veil ran out.

Karma

(Radha’s Complaint)

Love, but my words are vain as air!
In my sweet joyous youth, a heart untried,
Thou tookest me in Love’s sudden snare,
Thou wouldst not let me in my home abide.

And now I have nought else to try,
But I will make my soul one strong desire
And into Ocean leaping die:
So shall my heart be cooled of all its fire.

Die and be born to life again
As Nanda’s son, the joy of Braja’s girls,
And I will make thee Radha then,
A laughing child’s face set with lovely curls.
Then I will love thee and then leave;
Under the codome's boughs when thou goest by
Bound to the water morn or eve,
Lean on that tree fluting melodiously.

Thou shalt hear me and fall at sight
Under my charm; my voice shall wholly move
Thy simple girl's heart to delight;
Then shalt thou know the bitterness of love.

*(From an old Bengali poem)*

Appeal

Thy youth is but a noon, of night take heed,—
A noon that is a fragment of a day,
And the swift eve all sweet things bears away,
All sweet things and all bitter, rose and weed.
For others' bliss who lives, he lives indeed.

But thou art pitiful and ruth shouldst know.
I bid thee trifle not with fatal love,
But save our pride and dear one, O my dove,
And heaven and earth and the nether world below
Shall only with thy praises peopled grow.

Life is a bliss that cannot long abide,
But while thou livest, love. For love the sky
Was founded, earth upheaved from the deep cry
Of waters, and by love is sweetly tied
The golden cordage of our youth and pride.

*(Suggested by an old Bengali poem)*
Poems from Ahana and Other Poems

A Child’s Imagination

O thou golden image,
Miniature of bliss,
Speaking sweetly, speaking meetly!
Every word deserves a kiss.

Strange, remote and splendid
Childhood’s fancy pure
Thrills to thoughts we cannot fathom,
Quick felicities obscure.

When the eyes grow solemn
Laughter fades away,
Nature of her mighty childhood
Recollects the Titan play;

Woodlands touched by sunlight
Where the elves abode,
Giant meetings, Titan greetings,
Fancies of a youthful God.

These are coming on thee
In thy secret thought;
God remembers in thy bosom
All the wonders that He wrought.

The Sea at Night

The grey sea creeps half-visible, half-hushed,
And grasps with its innumerable hands
These silent walls. I see beyond a rough
Glimmering infinity, I feel the wash
And hear the sibilation of the waves
That whisper to each other as they push
To shoreward side by side,—long lines and dim
Of movement flecked with quivering spots of foam,
The quiet welter of a shifting world.

The Vedantin’s Prayer

Spirit Supreme
Who musest in the silence of the heart,
Eternal gleam,

Thou only Art!
Ah, wherefore with this darkness am I veiled,
My sunlit part

By clouds assailed?
Why am I thus disfigured by desire,
Distracted, haled,

Scorched by the fire
Of fitful passions, from thy peace out-thrust
Into the gyre

Of every gust?
Betrayed to grief, o’ertaken with dismay,
Surprised by lust?

Let not my grey
Blood-clotted past repel thy sovereign ruth,
Nor even delay,

O lonely Truth!
Nor let the specious gods who ape Thee still
Deceive my youth.
These clamours still;  
For I would hear the eternal voice and know  
The eternal Will.

This brilliant show  
Cumbering the threshold of eternity  
Dispel, — bestow

The undimmed eye,  
The heart grown young and clear. Rebuке in me  
These hopes that cry

So deafeningly,  
Remove my sullied centuries, restore  
My purity.

O hidden door  
Of Knowledge, open! Strength, fulfil thyself!  
Love, outpour!

Rebirth

Not soon is God’s delight in us completed,  
Nor with one life we end;  
Termlessly in us are our spirits seated,  
A termless joy intend.

Our souls and heaven are of an equal stature  
And have a dateless birth;  
The unending seed, the infinite mould of Nature,  
They were not made on earth,

Nor to the earth do they bequeath their ashes,  
But in themselves they last.  
An endless future brims beneath thy lashes,  
Child of an endless past.
Old memories come to us, old dreams invade us,
Lost people we have known,
Fictions and pictures; but their frames evade us, —
They stand out bare, alone.

Yet all we dream and hope are memories treasured,
Are forecasts we misspell,
But of what life or scene he who has measured
The boundless heavens can tell.

Time is a strong convention; future and present
Were living in the past;
They are one image that our wills complaisant
Into three schemes have cast.

Our past that we forget, is with us deathless,
Our births and later end
Already accomplished. To a summit breathless
Sometimes our souls ascend,

Whence the mind comes back helped; for there emerges
The ocean vast of Time
Spread out before us with its infinite surges,
Its symphonies sublime;

And even from this veil of mind the spirit
Looks out sometimes and sees
The bygone aeons that our lives inherit,
The unborn centuries:

It sees wave-trampled realms expel the Ocean, —
From the vague depths uphurled
Where now Himāloy stands, the flood’s huge motion
Sees measuring half the world;
Or else the web behind us is unravelled
   And on its threads we gaze, —
Past motions of the stars, scenes long since travelled
   In Time's far-backward days.

The Triumph-Song of Trishuncou

I shall not die.
   Although this body, when the spirit tires
Of its cramped residence, shall feed the fires,
My house consumes, not I.

Leaving that case
   I find out ample and ethereal room.
   My spirit shall avoid the hungry tomb,
Deceiving death's embrace.

Night shall contain
   The sun in its cold depths; Time too must cease;
   The stars that labour shall have their release.
I cease not, I remain.

Ere the first seeds
   Were sown on earth, I was already old,
   And when now unborn planets shall grow cold
My history proceeds.

I am the light
   In stars, the strength of lions and the joy
   Of mornings; I am man and maid and boy,
Protean, infinite.

I am a tree
   That stands out singly from the infinite blue;
   I am the quiet falling of the dew
And am the unmeasured sea.
I hold the sky
    Together and upbear the teeming earth.
I was the eternal thinker at my birth
And shall be, though I die.

Life and Death

Life, death, — death, life; the words have led for ages
    Our thought and consciousness and firmly seemed
Two opposites; but now long-hidden pages
    Are opened, liberating truths undreamed.
Life only is, or death is life disguised, —
Life a short death until by life we are surprised.

Evening

A golden evening, when the thoughtful sun
    Rejects its usual pomp in going, trees
That bend down to their green companion
    And fruitful mother, vaguely whispering, — these
And a wide silent sea. Such hour is nearest God, —
Rich like old age when the long ways have all been trod.

Parabrahman

These wanderings of the suns, these stars at play
    In the due measure that they chose of old,
Nor only these, but all the immense array
    Of objects that long Time, far Space can hold,
Are divine moments. They are thoughts that form,
   They are vision in the Self of things august
And therefore grandly real. Rule and norm
   Are processes that they themselves adjust.

The Self of things is not their outward view,
   A Force within decides. That Force is He;
His movement is the shape of things we knew,
   Movement of Thought is Space and Time. A free

And sovereign master of His world within,
   He is not bound by what He does or makes,
He is not bound by virtue or by sin,
   Awake who sleeps and when He sleeps awakes.

He is not bound by waking or by sleep;
   He is not bound by anything at all.
Laws are that He may conquer them. To creep
   Or soar is at His will, to rise or fall.

One from of old possessed Himself above
   Who was not anyone nor had a form,
Nor yet was formless. Neither hate nor love
   Could limit His perfection, peace nor storm.

He is, we cannot say; for Nothing too
   Is His conception of Himself unguessed.
He dawns upon us and we would pursue,
   But who has found Him or what arms possessed?

He is not anything, yet all is He;
   He is not all but far exceeds that scope.
Both Time and Timelessness sink in that sea:
   Time is a wave and Space a wandering drop.
Within Himself He shadowed Being forth,
   Which is a younger birth, a veil He chose
To half-conceal Him, Knowledge, nothing worth
   Save to have glimpses of its mighty cause,

And high Delight, a spirit infinite,
   That is the fountain of this glorious world,
Delight that labours in its opposite,
   Faints in the rose and on the rack is curled.

This was the triune playground that He made
   And One there sports awhile. He plucks His flowers
And by His bees is stung; He is dismayed,
   Flees from Himself or has His sullen hours.

The Almighty One knew labour, failure, strife;
   Knowledge forgot divined itself again:
He made an eager death and called it life,
   He stung Himself with bliss and called it pain.

God

Thou who pervadest all the worlds below,
   Yet sitst above,
Master of all who work and rule and know,
   Servant of Love!

Thou who disdainest not the worm to be
   Nor even the clod,
Therefore we know by that humility
   That thou art God.
The Fear of Death

Death wanders through our lives at will, sweet Death
Is busy with each intake of our breath.
Why do you fear her? Lo, her laughing face
All rosy with the light of jocund grace!
A kind and lovely maiden culling flowers
In a sweet garden fresh with vernal showers,
This is the thing you fear, young portress bright
Who opens to our souls the worlds of light.
Is it because the twisted stem must feel
Pain when the tenderest hands its glory steal?
Is it because the flowerless stalk droops dull
And ghastly now that was so beautiful?
Or is it the opening portal’s horrid jar
That shakes you, feeble souls of courage bare?
Death is but changing of our robes to wait
In wedding garments at the Eternal’s gate.

Seasons

Day and night begin, you tell me,
   When the sun may choose to set or rise.
Well, it may be; but for me their changing
   Is determined only by her eyes.

Summer, spring, the fruitless winter
   Hinge, you say, upon the heavenly sun?
Oh, but I have known a yearlong winter!
   Spring was by her careless smiles begun.
The Rishi

King Manu in the former ages of the world, when the Arctic continent still subsisted, seeks knowledge from the Rishi of the Pole, who after long baffling him with conflicting side-lights of the knowledge, reveals to him what it chiefly concerns man to know.

MANU
Rishi who trance-held on the mountains old
Art slumbering, void
Of sense or motion, for in the spirit’s hold
Of unalloyed
Immortal bliss thou dreamst protected! Deep
Let my voice glide
Into thy dumb retreat and break thy sleep
Abysmal. Hear!
The frozen snows that heap thy giant bed
Ice-cold and clear,
The chill and desert heavens above thee spread
Vast, austere,
Are not so sharp but that thy warm limbs brook
Their bitter breath,
Are not so wide as thy immense outlook
On life and death:
Their vacancy thy silent mind and bright
Outmeasureth.
But ours are blindly active and thy light
We have forgone.

RISHI
Who art thou, warrior armèd gloriously
Like the sun?
Thy gait is as an empire and thine eye
Dominion.
MANU
King Manu, of the Aryan peoples lord,
Greets thee, Sage.

RISHI
I know thee, King, earth to whose sleepless sword
Was heritage.
The high Sun’s distant glories gave thee forth
On being’s edge:
Where the slow skies of the auroral North
Lead in the morn
And flaming dawns for ever on heaven’s verge
Wheel and turn,
Thundering remote the clamorous Arctic surge
Saw thee born.
There ’twas thy lot these later Fates to build,
This race of man
New-fashion. O watcher with the mountains wild,
The icy plain,
Thee I too, asleep, have watched, both when the Pole
Was brightening wan
And when like a wild beast the darkness stole
Prowling and slow
Alarming with its silent march the soul.
O King, I know
Thy purpose; for the vacant ages roll
Since man below
Conversed with God in friendship. Thou, reborn
For men perplexed,
Seekest in this dim aeon and forlorn
With evils vexed
The vanished light. For like this Arctic land
Death has annexed
To sleep, our being’s summits cold and grand
Where God abides,
Repel the tread of thought. I too, O King,
In winds and tides
Have sought Him, and in armies thundering,
   And where Death strides
Over whole nations. Action, thought and peace
   Were questioned, sleep,
And waking, but I had no joy of these,
   Nor ponderings deep,
And pity was not sweet enough, nor good
   My will could keep.
Often I found Him for a moment, stood
   Astonished, then
It fell from me. I could not hold the bliss,
   The force for men,
My brothers. Beauty ceased my heart to please,
   Brightness in vain
Recalled the vision of the light that glows
   Suns behind:
I hated the rich fragrance of the rose;
   Weary and blind,
I tired of the suns and stars; then came
   With broken mind
To heal me of the rash devouring flame,
   The dull disease,
And sojourned with this mountain’s summits bleak,
   These frozen seas.
King, the blind dazzling snows have made me meek,
   Cooled my unease.
Pride could not follow, nor the restless will
   Come and go;
My mind within grew holy, calm and still
   Like the snow.

MANU
O thou who wast with chariots formidable
   And with the bow!
Voiceless and white the cold unchanging hill,
Has it then
A mightier presence, deeper mysteries
   Than human men?
The warm low hum of crowds, towns, villages,
   The sun and rain,
The village maidens to the water bound,
   The happy herds,
The fluting of the shepherd lads, the sound
   Myriad of birds,
Speak these not clearer to the heart, convey
   More subtle words?
Here is but great dumb night, an awful day
   Inert and dead.

RISHI
The many’s voices fill the listening ear,
   Distract the head:
The One is silence; on the snows we hear
   Silence tread.

MANU
What hast thou garnered from the crags that lour,
   The icy field?

RISHI
O King, I spurned this body’s death; a Power
   There was, concealed,
That raised me. Rescued from the pleasant bars
   Our longings build,
My wingèd soul went up above the stars
   Questing for God.
MANU
Oh, didst thou meet Him then? in what bright field
Upon thy road?

RISHI
I asked the heavenly wanderers as they wheeled
For His abode.

MANU
Could glorious Saturn and his rings of hue
Direct thy flight?

RISHI
Sun could not tell, nor any planet knew
Its source of light,
Nor could I glean that knowledge though I paced
The world’s beyond
And into outer nothingness have gazed.
Time’s narrow sound
I crossed, the termless flood where on the Snake
One slumbers throned,
Attempted. But the ages from Him break
Blindly and Space
Forgets its origin. Then I returned
Where luminous blaze
Deathless and ageless in their ease unearned
The ethereal race.

MANU
Did the gods tell thee? Has Varuna seen
The high God’s face?
RISHI
How shall they tell of Him who marvel at sin
And smile at grief?

MANU
Did He not send His blissful Angels down
For thy relief?

RISHI
The Angels know Him not, who fear His frown,
Have fixed belief.

MANU
Is there no heaven of eternal light
Where He is found?

RISHI
The heavens of the Three have beings bright
Their portals round,
And I have journeyed to those regions blest,
Those hills renowned.
In Vishnu's house where wide Love builds his nest,
My feet have stood.

MANU
Is he not That, the blue-winged Dove of peace,
Father of Good?

RISHI
Nor Brahma, though the suns and hills and seas
Are called his brood.
MANU
Is God a dream then? are the heavenly coasts
Visions vain?

RISHI
I came to Shiva’s roof; the flitting ghosts
Compelled me in.

MANU
Is He then God whom the forsaken seek,
Things of sin?

RISHI
He sat on being’s summit grand, a peak
Immense of fire.

MANU
Knows He the secret of release from tears
And from desire?

RISHI
His voice is the last murmur silence hears,
Tranquil and dire.

MANU
The silence calls us then and shall enclose?

RISHI
Our true abode
Is here and in the pleasant house He chose
To harbour God.
Poems from Ahana and Other Poems

MANU
In vain thou hast travelled the unwonted stars
And the void hast trod!

RISHI
King, not in vain. I knew the tedious bars
That I had fled,
To be His arms whom I have sought; I saw
How earth was made
Out of His being; I perceived the Law,
The Truth, the Vast,
From which we came and which we are; I heard
The ages past
Whisper their history, and I knew the Word
That forth was cast
Into the unformed potency of things
To build the suns.
Through endless Space and on Time’s iron wings
A rhythm runs
Our lives pursue, and till the strain’s complete
That now so moans
And falters, we upon this greenness meet,
That measure tread.

MANU
Is earth His seat? this body His poor hold
Infirmly made?

RISHI
I flung off matter like a robe grown old;
Matter was dead.
MANU
Sages have told of vital force behind:
It is God then?

RISHI
The vital spirits move but as a wind
Within men.

MANU
Mind then is lord that like a sovereign sways
Delight and pain?

RISHI
Mind is His wax to write and, written, rase
Form and name.

MANU
Is Thought not He who has immortal eyes
Time cannot dim?

RISHI
Higher, O King, the still voice bade me rise
Than thought’s clear dream.
Deep in the luminous secrecy, the mute
Profound of things,
Where murmurs never sound of harp or lute
And no voice sings,
Light is not, nor our darkness, nor these bright
Thunderings,
In the deep steady voiceless core of white
And burning bliss,
The sweet vast centre and the cave divine
Called Paradise,
He dwells within us all who dwells not in
Aught that is.

**MANU**

Rishi, thy thoughts are like the blazing sun
Eye cannot face.
How shall our souls on that bright awful One
Hope even to gaze
Who lights the world from His eternity
With a few rays?

**RISHI**

Dare on thyself to look, thyself art He,
O Aryan, then.
There is no thou nor I, beasts of the field,
Nor birds, nor men,
But flickerings on a many-sided shield
Pass, or remain,
And this is winged and that with poisonous tongue
Hissing coils.
We love ourselves and hate ourselves, are wrung
With woes and toils
To slay ourselves or from ourselves to win
Shadowy spoils.
And through it all, the rumour and the din,
Voices roam,
Voices of harps, voices of rolling seas,
That rarely come
And to our inborn old affinities
Call us home.
Shadows upon the many-sided Mind
Arrive and go,
Shadows that shadows see; the vain pomps wind
Above, below,
While in their hearts the single mighty God
Whom none can know,
Guiding the mimic squadrons with His nod
    Watches it all —
Like transient shapes that sweep with half-guessed truth
    A luminous wall.

MANU
Alas! is life then vain? Our gorgeous youth
    Lithe and tall,
Our sweet fair women with their tender eyes
    Outshining stars,
The mighty meditations of the wise,
    The grandiose wars,
The blood, the fiery strife, the clenched dead hands,
    The circle sparse,
The various labour in a hundred lands,
    Are all these shows
To please some audience cold? as in a vase
    Lily and rose,
Mixed snow and crimson, for a moment blaze
    Till someone throws
The withered petals in some outer dust,
    Heeding not, —
The virtuous man made one with the unjust,
    Is this our lot?

RISHI
O King, sight is not vain, nor any sound.
    Weeds that float
Upon a puddle and the majestic round
    Of the suns
Are thoughts eternal, — what man loves to laud
    And what he shuns;
Through glorious things and base the wheel of God
    For ever runs.
O King, no thought is vain; our very dreams
    Substantial are;
The light we see in fancy, yonder gleams
In the star.

MANU
Rishi, are we both dreams and real? the near
Even as the far?

RISHI
Dreams are we not, O King, but see dreams, fear
Therefore and strive.
Like poets in a wondrous world of thought
Always we live,
Whose shapes from out ourselves to being brought
Abide and thrive.
The poet from his vast and labouring mind
Brings brilliant out
A living world; forth into space they wind,
The shining rout,
And hate and love, and laugh and weep, enjoy,
Fight and shout,
King, lord and beggar, tender girl and boy,
Foemen, friends;
So to His creatures God's poetic mind
A substance lends.
The Poet with dazzling inspiration blind,
Until it ends,
Forgets Himself and lives in what He forms;
For ever His soul
Through chaos like a wind creating storms,
Till the stars roll
Through ordered space and the green lands arise,
The snowy Pole,
Ocean and this great heaven full of eyes,
And sweet sounds heard,
Man with his wondrous soul of hate and love,
And beast and bird,—
Yes, He creates the worlds and heaven above
   With a single word;
And these things being Himself are real, yet
   Are they like dreams,
For He awakes to self He could forget
   In what He seems.
Yet, King, deem nothing vain: through many veils
   This Spirit gleams.
The dreams of God are truths and He prevails.
   Then all His time
Cherish thyself, O King, and cherish men,
   Anchored in Him.

MANU
Upon the silence of the sapphire main
   Waves that sublime
Rise at His word and when that fiat’s stilled
   Are hushed again,
So is it, Rishi, with the Spirit concealed,
   Things and men?

RISHI
Hear then the truth. Behind this visible world
   The eyes see plain,
Another stands, and in its folds are curled
   Our waking dreams.
Dream is more real, which, while here we wake,
   Unreal seems.
From that our mortal life and thoughts we take.
   Its fugitive gleams
Are here made firm and solid; there they float
   In a magic haze,
Melody swelling note on absolute note,
   A lyric maze,
Beauty on beauty heaped pell-mell to chain
   The enchanted gaze,

www.holybooks.com
Thought upon mighty thought with grandiose strain
Weaving the stars.
This is that world of dream from which our race
Came; by these bars
Of body now enchained, with laggard pace,
Borne down with cares,
A little of that rapture to express
We labour hard,
A little of that beauty, music, thought
With toil prepared;
And if a single strain is clearly caught,
Then our reward
Is great on earth, and in the world that floats
Lingering awhile
We hear the fullness and the jarring notes
Reconcile, —
Then travel forwards. So we slowly rise,
And every mile
Of our long journey mark with eager eyes;
So we progress
With gurge of revolution and recoil,
Slaughter and stress
Of anguish because without fruit we toil,
Without success;
Even as a ship upon the stormy flood
With fluttering sails
Labour towards the shore; the angry mood
Of Ocean swells,
Calms come and favouring winds, but yet afar
The harbour pales
In evening mists and Ocean threatens war:
Such is our life.
Of this be sure, the mighty game goes on,
The glorious strife,
Until the goal predestined has been won.
Not on the cliff
To be shattered has our ship set forth of old,
Nor in the surge
To founder. Therefore, King, be royal, bold,
And through the urge
Of winds, the robbant thunders and the close
Tempestuous surge
Press on for ever laughing at the blows
Of wind and wave.
The haven must be reached; we rise from pyre,
We rise from grave,
We mould our future by our past desire,
We break, we save,
We find the music that we could not find,
The thought think out
We could not then perfect, and from the mind
That brilliant rout
Of wonders marshal into living forms.
End then thy doubt;
Grieve not for wounds, nor fear the violent storms,
For grief and pain
Are errors of the clouded soul; behind
They do not stain
The living spirit who to these is blind.
Torture, disdain,
Defeat and sorrow give him strength and joy:
'Twas for delight
He sought existence, and if pains alloy,
'Tis here in night
Which we call day. The Yogin knows, O King,
Who in his might
Travels beyond the mind’s imagining,
The worlds of dream.
For even they are shadows, even they
Are not, — they seem.
Behind them is a mighty blissful day
From which they stream.
The heavens of a million creeds are these:
Peopled they teem
By creatures full of joy and radiant ease.
   There is the mint
From which we are the final issue, types
   Which here we print
In dual letters. There no torture grips,
   Joy cannot stint
Her streams, — beneath a more than mortal sun
   Through golden air
The spirits of the deathless regions run.
   But we must dare
To still the mind into a perfect sleep
   And leave this lair
Of gross material flesh which we would keep
   Always, before
The guardians of felicity will ope
   The golden door.
That is our home and that the secret hope
   Our hearts explore.
To bring those heavens down upon the earth
   We all descend,
And fragments of it in the human birth
   We can command.
Perfect millenniums are sometimes, until
   In the sweet end
All secret heaven upon earth we spill,
   Then rise above
Taking mankind with us to the abode
   Of rapturous Love,
The bright epiphany whom we name God,
   Towards whom we drove
In spite of weakness, evil, grief and pain.
   He stands behind
The worlds of Sleep; He is and shall remain
   When they grow blind
To individual joys; for even these
   Are shadows, King,
And gloriously into that lustre cease
From which they spring.
We are but sparks of that most perfect fire,
Waves of that sea:
From Him we come, to Him we go, desire
Eternally,
And so long as He wills, our separate birth
Is and shall be.
Shrink not from life, O Aryan, but with mirth
And joy receive
His good and evil, sin and virtue, till
He bids thee leave.
But while thou livest, perfectly fulfil
Thy part, conceive
Earth as thy stage, thyself the actor strong,
The drama His.
Work, but the fruits to God alone belong,
Who only is.
Work, love and know,—so shall thy spirit win
Immortal bliss.
Love men, love God. Fear not to love, O King,
Fear not to enjoy;
For Death’s a passage, grief a fancied thing
Fools to annoy.
From self escape and find in love alone
A higher joy.

**MANU**

O Rishi, I have wide dominion,
The earth obeys
And heaven opens far beyond the sun
Her golden gaze.
But Him I seek, the still and perfect One,—
The Sun, not rays.
RISHI
Seek Him upon the earth. For thee He set
In the huge press
Of many worlds to build a mighty state
For man’s success,
Who seeks his goal. Perfect thy human might,
Perfect the race.
For thou art He, O King. Only the night
Is on thy soul
By thy own will. Remove it and recover
The serene whole
Thou art indeed, then raise up man the lover
To God the goal.

In the Moonlight
If now must pause the bullocks’ jingling tune,
Here let it be beneath the dreaming trees
Supine and huge that hang upon the breeze,
Here in the wide eye of the silent moon.

How living a stillness reigns! The night’s hushed rules
All things obey but three, the slow wind’s sigh
Among the leaves, the cricket’s ceaseless cry,
The frog’s harsh discord in the ringing pools.

Yet they but seem the silence to increase
And dreadful wideness of the inhuman night.
The whole hushed world immeasurable might
Be watching round this single spot of peace.

So boundless is the darkness and so rife
With thoughts of infinite reach that it creates
A dangerous sense of space and abrogates
The wholesome littleness of human life.
The common round that each of us must tread
    Now seems a thing unreal; we forget
The heavy yoke the world on us has set,
The slave's vain labour earning tasteless bread.

Space hedges us and Time our hearts o'ertakes;
Our bounded senses and our boundless thought
Strive through the centuries and are slowly brought
Back to the source whence their divergence wakes.

The source that none have traced, since none can know
    Whether from Heaven the eternal waters well
Through Nature's matted locks, as Ganges fell,
Or from some dismal nether darkness flow.

Two genii in the dubious heart of man,
    Two great unhappy foes together bound
Wrestle and strive to win unhampered ground;
They strive for ever since the race began.

One from his body like a bridge of fire
    Mounts upward azure-winged with eager eyes;
One in his brain deep-mansioned labouring lies
And clamps to earth the spirit's high desire.

Here in this moonlight with strange visions rife
    I seem to see their vast peripheries
Without me in the sombre mighty trees,
And, hark! their silence turns the wheels of life.

These are the middle and the first. Are they
    The last too? Has the duel then no close?
Shall neither vanquish of the eternal foes,
Nor even at length this moonlight turn to day?

Our age has made an idol of the brain,
    The last adored a purer presence; yet
In Asia like a dove immaculate
He lurks deep-brooding in the hearts of men.

But Europe comes to us bright-eyed and shrill.
   “A far delusion was that mounting fire,
      An impulse baulked and an unjust desire;
   It fades as we ascend the human hill.”

She cries to us to labour in the light
   Of common things, grow beautiful and wise
   On strong material food, nor vex our eyes
   With straining after visionary delight.

Ah, beautiful and wise, but to what end?
   Europe knows not, nor any of her schools
   Who scorn the higher thought for dreams of fools;
Riches and joy and power meanwhile are gained.

Gained and then lost! For Death the heavy grip
   Shall loosen, Death shall cloud the laughing eye,
   And he who broke the nations soon shall lie
More helpless than a little child asleep.

And after? Nay, for death is end and term.
   A fiery dragon through the centuries curled,
   He feeds upon the glories of the world
And the vast mammoth dies before the worm.

Stars run their cycle and are quenched; the suns
   Born from the night are to the night returned,
   When the cold tenebrous spaces have inurned
The listless phantoms of the Shining Ones.

From two dead worlds a burning world arose
   Of which the late putrescent fruit is man;
   From chill dark space his roll of life began
And shall again in icy quiet close.
Our lives are but a transitory breath:
Mean pismires in the sad and dying age
Of a once glorious planet, on the edge
Of bitter pain we wait eternal death.

Watering the ages with our sweat and blood
We pant towards some vague ideal state
And by the effort fiercer ills create,
Working by lasting evil transient good.

Insults and servitude we bear perforce;
With profitable crimes our souls we rack,
Vexing ourselves lest earth our seed should lack
Who needs us not in her perpetual course;

Then down into the earth descend and sleep
For ever, and the lives for which we toiled
Forget us, who when they their turn have moiled,
Themselves forgotten into silence creep.

Why is it all, the labour and the din,
And wherefore do we plague our souls and vex
Our bodies or with doubts our days perplex?
Death levels soon the virtue with the sin.

If Death be end and close the useless strife,
Strive not at all, but take what ease you may
And make a golden glory of the day,
Exhaust the little honey of your life.

Fear not to take her beauty to your heart
Whom you so utterly desire; you do
No hurt to any, for the inner you
So cherished is a dream that shall depart.

The wine of life is sweet; let no man stint
His longing or refuse one passionate hope.
Why should we cabin in such infinite scope,
Restrict the issue of such golden mint?

Society forbids? It for our sakes
   Was fashioned; if it seek to fence around
   Our joys and pleasures in such narrow bound,
It gives us little for the much it takes.

Nor need we hearken to the gospel vain
   That bids men curb themselves to help mankind.
   We lose our little chance of bliss, then blind
And silent lie for ever. Whose the gain?

What helps it us if so mankind be served?
   Ourselves are blotted out from joy and light,
   Having no profit of the sunshine bright,
While others reap the fruit our toils deserved.

O this new god who has replaced the old!
   He dies today, he dies tomorrow, dies
   At last for ever, and the last sunrise
Shall have forgotten him extinct and cold.

But virtue to itself is joy enough?
   Yet if to us sin taste diviner? why
   Should we not herd in Epicurus’ sty
Whom Nature made not of a Stoic stuff?

For Nature being all, desire must reign.
   It is too sweet and strong for us to slay
   Upon a nameless altar, saying nay
To honied urgings for no purpose plain.

A strange unreal gospel Science brings,—
   Being animals to act as angels might;
   Mortals we must put forth immortal might
And flutter in the void celestial wings.
“Ephemeral creatures, for the future live,”
She bids us, “gather in for unborn men
Knowledge and joy, and forfeit, nor complain,
The present which alone is yours to give.”

Man’s immortality she first denies
And then assumes what she rejects, made blind
By sudden knowledge, the majestic Mind
Within her smiling at her sophistries.

Not so shall Truth extend her flight sublime,
Pass from the poor beginnings she has made
And with the splendour of her wings displayed
Range through the boundaries of Space and Time.

Clamp her not down to her material finds!
She shall go further. She shall not reject
The light within, nor shall the dialect
Of unprogressive pedants bar men’s minds.

We seek the Truth and will not pause nor fear.
Truth we will have and not the sophist’s pleas;
Animals, we will take our grosser ease,
Or, spirits, heaven’s celestial music hear.

The intellect is not all; a guide within
Awaits our question. He it was informed
The reason, He surpasses; and unformed
Presages of His mightiness begin.

Nor mind submerged, nor self subliminal,
But the great Force that makes the planets wheel
Through ether and the sun in flames reveal
His godhead, is in us perpetual.

That Force in us is body, that is mind,
And what is higher than the mind is He.
This was the secret Science could not see;  
Aware of death, to life her eyes were blind.

Through chemistry she seeks the source of life,  
Nor knows the mighty laws that she has found,  
Are Nature’s bye-laws merely, meant to ground  
A grandiose freedom building peace by strife.

The organ for the thing itself she takes,  
The brain for mind, the body for the soul,  
Nor has she patience to explore the whole,  
But like a child a hasty period makes.

“It is enough,” she says, “I have explored  
The whole of being; nothing now remains  
But to put details in and count my gains.”  
So she deceives herself, denies her Lord.

Therefore He manifests Himself; once more  
The wonders of the secret world within  
Wrapped yet with an uncertain mist begin  
To look from that thick curtain out; the door

Opens. Her days are numbered, and not long  
Shall she be suffered to belittle thus  
Man and restrain from his tempestuous  
Uprising that immortal spirit strong.

He rises now; for God has taken birth.  
The revolutions that pervade the world  
Are faint beginnings and the discus hurled  
Of Vishnu speeds down to enring the earth.

The old shall perish; it shall pass away,  
Expunged, annihilated, blotted out;  
And all the iron bands that ring about  
Man’s wide expansion shall at last give way.
Freedom, God, Immortality; the three
    Are one and shall be realised at length,
    Love, Wisdom, Justice, Joy and utter Strength
Gather into a pure felicity.

It comes at last, the day foreseen of old,
    What John in Patmos saw, what Shelley dreamed,
    Vision and vain imagination deemed,
The City of Delight, the Age of Gold.

The Iron Age is ended. Only now
    The last fierce spasm of the dying past
    Shall shake the nations, and when that has passed,
Earth washed of ills shall raise a fairer brow.

This is man’s progress; for the Iron Age
    Prepares the Age of Gold. What we call sin,
Is but man’s leavings as from deep within
    The Pilot guides him in his pilgrimage.

He leaves behind the ill with strife and pain,
    Because it clings and constantly returns,
    And in the fire of suffering fiercely burns
More sweetness to deserve, more strength to gain.

He rises to the good with Titan wings:
    And this the reason of his high unease,
    Because he came from the infinities
To build immortally with mortal things;

The body with increasing soul to fill,
    Extend Heaven’s claim upon the toiling earth
    And climb from death to a diviner birth
Grasped and supported by immortal Will.
Poems from Manuscripts
Circa 1900 – 1906
To the Boers

(Written during the progress of the Boer War.)

O Boers, you have dared much and much endured
For freedom, your strong simple hearts inured
To danger and privation nor so made
As by death’s daily grasp to be dismayed,
Nor numbers nor disasters in the field,
Nor to o’erwhelming multitudes to yield.
It was no secondary power you faced,
But she who has the whole wide world embraced,
England whose name is as the thunder, she
Whose navies are the despots of the sea,
Napoleon’s conqueror whose fair dreadful face
Great nations loathe and fear and choose disgrace
Rather than meet in wild and dangerous war
Victors of Waterloo and Trafalgar.
But you, a band of arm’d herdsmen small,
Feared not her strength, her pride imperial,
Nor all the union of her empire huge,
Nor all her barking cannon, her deluge
Of bullets, nor her horsehooves, nor her lance,
Her boundless wealth, her bayonets aglance.
You met her on her hills and overthrew,
You crossed her by her streams and smote and slew.
But soon in anger like the Ocean foiled
For fiercer swift invasion she recoiled
And multiplied her force until her troops
Tenfold outnumbering your warlike groups
Resurging rolled you back and seized your towns
And spread like locusts over fields and downs.
Not even then were you dismayed, not then
Would tamely yield, but with a proud disdain
Rejected proffered servitude and base.
Therefore are you participants in praise
With Armin and Viriathus; you stand
The last of Freedom's children and your land
Her latest foothold upon earth; nor can
Your rugged pastoral mood disguise the man
Identical at Salamis who waged
Unequal battle and in salt floods assuaged
The Persian's lust of rule. Miltiades
Is grown your brother; the strong Tyrolese
Hold out their hands to you across the grave.
From Rouen's burning pile one watches; brave
Hofer from sad Verona; in eastern skies
Mewar's unconquerable Rajpoots rise.
They too preferred strong liberty and rude
To a splendid ignominy of servitude.
For liberty they gave to alien hands
Their faery city and their fertile lands,
Themselves to death, their women to the flame,
And in wild woods and mountains harbouring came
Often like sudden fire upon the foe:
So for long decades fought, exile and woe
Accepting, till the equal hand of God
Restored to their hereditary abode.
You too have greatly dared, and but that Fate
For her remoter objects obdurate
Averted her unmoved and marble gaze,
No human force had power to erase
From Earth's free peoples. Not the arm'd pride
Of England but decrees supreme o'erride
This stubborn nation. Farm and smiling field
Plundered and burned no more your sustenance yield,
Your chiefs are taken one by one, your bands
Wasted with battle, your great war-weary hands
Avail no longer and your women die
In England's camps by famine miserably,
Disease and famine, hunger's squalid brood.
The smiling babes who should prolong your blood,
Pale victims flit, to death's unbottomed maw
Devoted by the conqueror’s cynic law.
And must you perish from earth’s record then,
O nation of indomitable men?
Look not towards Europe! Europe’s heart is dead.
Hard atheisms, selfish lusts instead
Usurp her bosom; not honest blood but gold
 Runs liquid in her veins: for she has sold
 Her soul to commerce, Mammon is her creed,
The ledger lined her Bible, and Christ must bleed
 In plundered nations that the modern Jew
 May prosper. This is not Europe that you knew
 When from the clash of mighty States you went
 Into harsh sultry deserts well-content.
 For all her swift and sovran moods of old
 Are changed into a reckoning spirit cold
 And a hysteric wrath that dare not strike
 The strong man armed to meet the blow. She, like
 A trembling woman who puts o’er her shift
 Hard armour, wears the sword she dare not lift,
 Covering her coward heart with splendid arms:
 Clothed as in adamant shakes with pale alarms,
 Armed as with hell-fire fronts not answering shells,
 Blusters and trembles, menaces and pales.
 Therefore her navies case in triple steel,
 Therefore her legions grow apace; her heel
 Of iron breaks the weak ones of the world,
 But not against the strong her flags unfurled
 Shall flaunt the tempest, nor her hissing flail
 Of bullets thresh familiar hills and hail
 Of shells in Ocean sibilant be drowned
 While navies rend and sink her coasts around.
 Easier the naked African to quell
 Or on the ill-armed Mongolian shot and shell
 To lavish and with coward murder chase
 Or with strong lust invade a virtuous race.
 Meanwhile her prating conferences increase
 And gild her terrors with the name of peace.
All these high nations who with paeans loud
Acclaimed your victories, the bitter crowd
And the loose tongues who spat their venom base
In England’s evil hour on England’s face
Avenging thus decades of craven fear,
Not one shall dare to speak high words with her
For your sake, none shall raise his armed hand
Against the inheritors of sea and land.
Nor shall the American’s pale feverish face
Be lifted from his heaps of gold and trays
Of silver. Deal not with such things as these,
You who are men, not gibbering shades. Increase
Strength rather, of yourselves and Heaven be sure;
Firm make your hearts, magnanimous to endure
More than loud ruin. Though at last you yield,
Yet nowise vain your firmness in the field,
Daring and all the bitter sweat of blood.
Boers, you have sown the veldt with greatness, stood
Irrigating from your own veins farmstead
And kopje and with the bodies of your dead
Manured them: women and young children gave
Their lives to help the seedtime of the brave.
Shall harvest fail you? No, the Power is just
That veils Himself behind the world, not thrust
From puissance by the maxim’s brutal roar
Nor to the shrapnel gives His sceptre o’er.
The harvest that you sowed, your sons shall reap,
Stern liberty; nor the example sleep
Imprisoned in the Afric seas, but hurled
Reverberate through the upstarting world.
And the dead nations in the East shall rise
And they that slumber in the West; with eyes
Dismayed the elder Empires overgrown
Shall feel a sudden spirit breathe, a tone
Of challenge hearkening know, at last awake,
Earth was not wide for one sole nation’s sake.
For this He fashioned you Who built the stars,
For this He sifted you with searching wars.
Upon the Frisian waters bleak and isles
Where the cold northern Ocean steel-like smiles,
Savage and wide and bare, a nation sparse
Bleak-fishing under the chill midnight stars,
From the wild piercing blast your fathers drew
The breath that loves the desert. To them grew
The Saxon dour and the hard German rude,
And of that stubborn ore unbrittle, crude,
God hammered Him a sword with giant strokes
Upon the anvil of the Ocean rocks;
His fiercest furnace piled the ore to try;
Often He tempered it, often laid by
Unknown of all to harden and anneal.
He made it not of the fine Damasc steel
Comely to see or polished dazzling bright,
A dancing splendour and a pitiless light,
Nor as in Jaipur worked with genial art,
But sheer and stark to rive the adamant heart.
With this He smote the Iberian and the Gaul;
This from his scabbard leaps whene'er o'er all
His earth of various use in various lands
One domination spreads out selfish hands.
Not for its own sake is the falchion keen,
Not for self-greatness was it forged, through skin,
Flesh, heart and bone of giant power to cleave.
Its flash is as the lightning on the eve
Of the stupendous storm that shall uproot
Some oak of empire. When Heaven grows a clot
Of darkness, then God's dagger rips the sky.
Small is the blade and narrow to the eye
The rift; but through it seas of light shall pour
And through it the world-shaking thunders roar
And from the storm the sweet fresh day have birth.
When Spain was mighty and cruel and all earth
Darkened by her huge shadow, your fathers first
Defied her puissance; — they the chains accursed
Asunder rent and braved the bigot’s flame
And braved the unvanquished terrors of her name.
Then England grew, then France arose. The one
Repulsed her from the sea’s dominion
Making the narrow floods an empire’s tomb
When the shot-ridden galleons through the gloom
Of heaven and the wrath of spuming seas
Fled through grey Ocean and the Hebrides,
God’s anger swift behind. Then was her hand
Loosened from France’s throat; the smiling land
Healed her deep wounds and from her masculine strife
Of mighty spirits forged united life
Now first; so, her high natural vigour found,
Hurled the wide-sprawling Titan to the ground.
But ’twas stern Holland shore his feet of clay
Opening to these the splendours of their day.
Next when great Louis’ grandiose mind and high
O’er vaulted all the West like God’s own sky,
Your fathers first opposed their petty strength
To his huge destinies; nor defeat, nor length
Of weary struggle could out-tire nor break
Their spirit obstinate for freedom’s sake,
When Nassau led them. He was such a man
As you love best to set in your stern van,
Wordless and lonely, stubborn as the hills,
With nature strong to brook tremendous ills
In silence, dowered with vigilant brain and nerve
That never from the goal consent to swerve
But tame down fiercest Fate as men may school
Some dangerous lion to constraining rule.
He sowed the seed; strong England reaped the fruit,
Bringing down showers with the loud cannon’s bruit.
Then did she grow indeed. Iberia proud
Being humbled she upon the Ocean loud
Her dwarfish stature launched, but now she trod
Both hemispheres, now giantlike bestrode
The Atlantic and her crest was in the skies,
Earth but a market for her merchandise.
The double Indies all their wealth disgorged
To swell her and her thunders iron-forged
Possessed the hither and the farther seas:
She strewed their waters with her enemies.
Ever she grew and as when Rome was great,
No limit seemed of her supreme estate.
Frore Canada to the Austral heats she joins
And peoples Earth from her exhaustless loins.
Asia and the equator were her spoil,
Her footstool, or a workshop for her toil.
Nor sole she walked, but Europe emulous
Where she had trampled followed orgulous
Like dwarfs behind a giant, gleaning wide
Footholds too small for her gigantic stride.
They too grow great, they too are sons of God
Who meant, they say, all earth for their abode
And increase; others the Almighty made
Their menial peoples, stamped with yellow shade
Or dark, savage of heart, of reason weak.
Nay, but their lords shall make them wise and meek!
Inferior races, let them serve and crouch
Obedient, with the kennel for their couch,
Too happy if but spared the knout and rod.
Yet shall the proud blasphemers know that God
For nobler uses to immortal man
This body’s garb designed when He began
To build the planets. His foreseeing eyes
Of ease and its corroding puissance wise,
Reserving to more memorable blows,
From you His chosen stock your sternest chose
And hardest in the grain and drove them forth
From their too populous and prosperous North
Over to torrid regions burning far
Under a fierier sun and brighter star.
There had He worked His Amazulu hordes
To His great purpose ’neath their savage lords,
Chaka the brain of war and Dingaan; — there
Your steel was once again in the red flare
Of that strong furnace tested and annealed,
And that its hard rough temper glints might yield
Of fire, into its molten ore He sank
The Celt’s swift force and genius of the Frank:
Nor in the wave-washed regions of the south
Allowed your home, but to the higher drouth
Scourged northward half the iron-minded brood
In the high hills and the veldt’s solitude
’Twixt Vaal and the Limpopo. There you stand
Fighting for liberty and fatherland,
O little people of a mighty birth,
The huge colossus who bestrides the earth.
Therefore let not defeat your hearts dismay,
For He that made you, knows His hour, — today
Or after Time grows old, the Spirit high
Prepares His mighty ends unwaveringly.
Not by the fluent tongue is Freedom earned,
Nor lightly, but when her spirit long has burned
In the strong bosom fronting giant fears
And wrestling with defeat and hostile years,
Antagonist of its opposing fate, —
Such hearts earn mighty Freedom for their mate.
Such hearts are yours and will not falter. Firm
Your destiny stands assured its strenuous term
In God’s great keeping who His deathless trust
Keeps for the race when your strong hearts are dust, —
Freedom that blooms not but upon the grave
Where they who loved her sleep, her slaughtered brave.
Vision

Who art thou that roamest
   Over mountains dim
In the haunts of evening,
   Sister of the gleam!

Whiter than the jasmines,
   Roses dream of thee;
Softly with the violets
   How thine eyes agree!

As thy raven tresses
   Night is not so black,
From thy moonbright shoulders
   Floating dimly back.

Feet upon the hilltops,
   Lilies of delight,
With their far-off radiance
   Tinge the evening bright.

In the vesper calmness
   Lightly like a dove,
With thy careless eyelids
   Confident of love,

As of old thou comest
   Down the mountains far,
Smiling from what gardens,
   Glowing from what star?

Racing from the hilltops
   Like a brilliant stream,
Burning in the valleys
   Marble-bright of limb,
Singing in the orchards
   When the shadows fall,
With thy crooning anklets
   To my heart that call,

By the darkening window
   Like a slender fire,
With the night behind thee,
    Daughter of desire!

Open wide the doorway,
   Bid my love come in
With the night behind her
   And the dawn within.

Take, O radiant fingers,
   Heart and hands of me,
Hide them in thy bosom,
     O felicity!

To the Ganges

Hearken, Ganges, hearken, thou that sweepest golden to the sea,
   Hearken, Mother, to my voice.
From the feet of Hari with thy waters pure thou leapest free,
   Waters colder-pure than ice.

On Himaloy's grandiose summits upright in his cirque of stones
   Shiva sits in breathless air,
Where the outcast seeks his refuge, where the demon army moans,
   Ganges erring through his hair.

Down the snowwhite mountains speeding, the immortal peaks and cold,
   Crowd thy waves untouched by man.
From Gungotry through the valleys next their icy tops were rolled,
   Bursting through Shividry ran.
In Benares’ stainless city by defilement undefiled
   Ghauts and temples lightly touched
With thy fingers as thou ranst, laughed low in pureness like a child
   To his mother’s bosom clutched.

Where the steps of Rama wandered, where the feet of Krishna came,
   There thou flowest, there thy hand
Clasps us, Bhagirathie, Jahnavie or Gunga, and thy name
   Holier makes the Aryans’ land.

But thou leavest Aryavurtha, but thou leapest to the seas
   In thy hundred mighty streams;
Nor in the unquiet Ocean vast thy grandiose journeyings cease,
   Mother, say thy children’s dreams.

Down thou plungest through the Ocean, far beneath its oozy bed
   In Patala’s leaden gloom
Moaning o’er her children’s pain our mother, Ganges of the dead,
   Leads our wandering spirits home.

Mighty with the mighty still thou dwelledst, goddess high and pure;
   Iron Bhishma was thy son,
Who against ten thousand rushing chariots could in war endure;
   Many heroes fled from one.

Devavrath the mighty, Bhishma with his oath of iron power,
   Smilingly who gave up full
Joy of human life and empire, that his father’s wish might flower
   And his father’s son might rule.

Who were these that thronged thereafter? wherefore came these puny hearts
   Apter for the cringing slave,
Wrangling, selfish, weak and treacherous, vendors of their nobler parts,
   Sorry food for pyre and grave?
O but these are men of mind not yet with Europe’s brutal mood alloyed,
Poets singing in their chains,
Preachers teaching manly slavery, speakers thundering in the void.
Motley wear these men of brains!

Well it is for hound and watchdog fawning at a master’s feet,
Cringing, of the whip afraid!
Well it is for linnet caged to make with song his slavery sweet.
Man for other ends was made.

Man the arrogant, the splendid, man the mighty wise and strong,
Born to rule the peopled earth,
Shall he bear the alien’s insult, shall he brook the tyrant’s wrong
Like a thing of meaner birth?

Sreepoor in the east of Chand and Kédar, bright with Mogul blood,
And the Kings of Aracan
And the Atlantic pirates helped that hue, — its ruined glory flood
Kirtinasha’s waters wan.

Buried are our cities; fallen the apexed dome, the Indian arch;
In Chitore the jackals crowd:
Krishna’s Dwarca sleeps for ever, o’er its ruined bastions march
All the Oceans thundering loud.

Still, yet still the fire of Kali on her ancient altar burns
Smouldering under smoky pall,
And the deep heart of her peoples to their Mighty Mother turns,
Listening for her Titan call.

Yet Pratapaditya’s great fierce spirit shall in might awake
In Jessore he loved and made,
Sitaram the good and mighty for his well-loved people’s sake
Leave the stillness and the shade.
And Bengal the wide and ancient where the Senas swayed of old
   Up to far Benares pure,
She shall lead the Aryan peoples to the mighty doom foretold
   And her glory shall endure.

By her heart of quick emotion, by her brain of living fire,
   By her vibrant speech and great,
She shall lead them, they shall see their destiny in her warm desire
   Opening all the doors of Fate.

By the shores of Brahmaputra or where Ganges nears the sea,
   Even now a flame is born
Which shall kindle all the South to brilliance and the North shall be
   Lighted up as with the morn.

And once more this Aryavurtha fit for heavenly feet to tread,
   Free and holy, bold and wise,
Shall lift up her face before the world and she whom men thought dead,
   Into strength immortal rise.

Not in icy lone Gungotry nor by Kashi’s holy fanes,
   Mother, hast thou power to save
Only, nor dost thou grow old near Sagar, nor our vileness stains,
   Ganges, thy celestial wave.

Dukkhineswar, Dukkhineswar, wonderful predestined pile,
   Tell it to our sons unborn,
Where the night was brooding darkest and the curse was on the soil
   Heaviest, God revealed the morn.
Suddenly out from the wonderful East

Suddenly out from the wonderful East like a woman exulting
Dawn stepped forth with a smile on her lips, and the glory of morning
Hovered over the hills; then sweet grew air with the breezes,
Sweet and keen as a wild swift virgin; the wind walked blithely,
Low was the voice of the leaves as they rustled and talked with the river,
Ganges, the sacred river. Down from the northlands crowding,
Touching the steps of the ghauts with the silver tips of their fingers
Lightly the waters ran and talked to each other of sunshine,
Lightly they laughed. But high on his stake impaled by the roadway
Hung Mandavya the mighty in marble deep meditation,
Sepulchred, dumb; on his either side were the thieves, immobile.
They were dead, made free from cruelty, ceasing from anguish,
And forgetting the thirst. But past them Ganges the mighty,
First of the streams of the earth, our Mother, remembering the ages,
Poured to the sea.

Early at dawn by her ghauts the women of Mithila gathered.
There they filled their gurgling jars, or gilding the Ganges
Bathed in her waters and laughed as they bathed there clamouring, dashing
Dew of her coolness in eyes of each other: the banks called sweetly
Mad with the musical laughter of girls and joy of their crying,
Low melodious cries. As when in a wood on the hillsides
Thousands of bulbuls flitting and calling, eating the wild plums,
Filling the ear with sweetness carry from treetop to treetop
Vermeil of crest and scarlet of tail and small brown bodies
Flitting and calling, calling and flitting, full of sweet clamour,
Full of the wine of life, even such was the sweetness and clamour,
Women bathing close by the ghauts of the radiant Ganges,
Golden-limbed or white or darker than olives when ripest,
Lovely of face or of mood, but all sweethearted and happy
Aryan women. One there seemed of another moulding
Who was aloof from the crowd and the chaos of cheerful faces.
She at one side of the stairway slowly like one half-musing
Bathed there, hiding her face in the deep cool bosom of waters,
Losing herself in Ganges, or let its pearl drops dribble
Quietly down through the mystical night of her tresses on gleaming
Shoulders, betwixt her great breasts noble as hills at noontide
Back to their hurrying home: nor heeded the laughter near her.
Only at times when the clamour grew high, she would look up smiling
Such a slow sweet serious smile as a tender mother
Watching her children at play might smile forgetting the sorrow
Down in her own still patient heart where the deep tears gathered
Swell unwept, till they turn to a sea of sorrowful pity.

On the Mountains

Immense retreats of silence and of gloom,
   Hills of a sterile grandeur, rocks that sublime
In bareness seek the blue sky's infinite room
   With their coeval snows untouched by Time!

I seek your solemn spaces! Let me at last
   Forgotten of thought through days immemorable
Voiceless and needless keep your refuge vast,
   Growing into the peace in which I dwell.

For like that Soul unmade you seem to brood
   Who sees all things emerge but none creates,
Watching the ages from His solitude,
   Lone, unconcerned, remote. You to all Fates

Offer an unchanged heart, unmoved abide,
   Wordless, acceptant, sovereignly still.
There is a soul in us as silent, wide,
   Mere, uncreative, imperturbable.
Part Four

Calcutta and Chandernagore
1907–1910
Satirical Poem Published in 1907
Reflections of Srinath Paul, Rai Bahadoor, on the Present Discontents

(The Address of a Perspiring Chairman Rendered Faithfully into the Ordinary English Vernacular.)

Councillors, friends, Rai Bahadoors and others,
Gentlemen all, my bold and moderate brothers!
This Conference’s revolutionary course
(By revolution, sirs, I mean of course
The year’s,— not anything wicked and Extremist;)
Has brought us here, and like a skilful chemist
Mixed well together our victorious batches
Bearing triumphant scars and famous scratches
Of a year’s desperate fight. Behold, the glooms
Are over! See, our conquering Suren comes!
Dream not that when I talk of scars and fighting,
I really mean King Edward to go smiting
And bundle dear Sir Andrew out of Ind.
Nothing, nothing like that is in the wind.
Ah no! what has not Britain done for us?
Were we not savage, naked, barbarous?
Has she not snatched and raised us from the mire?
Taught us to dress, eat, talk, write, sneeze, perspire,
Like Europeans, giving civilisation
To this poor ignorant degraded nation?
Was not our India full of cuts and knocks?
"Twas Britain saved us from those hideous shocks.
No matter if our poor of hunger die,
Us she gave peace and ease and property.
Were’t not for Clive, Dalhousie, Curzon, all,
You never would have heard of Srinath Paul.
But is this then good cause we should not meet,
Kiss their benevolent and booted feet,
Remonstrate mildly, praise and pray and cry,
“Have sympathy, great Minto, or we die”?
If he’ll not hear, let then our humble oration
Travel with Gokhale to the British nation.
To be industrious, prayerful, tearful, meek
Is the sole end for which we meet this week.
Yet are there men, misunderstanding whites,
Who much misconstrue these our holy rites
Deeming it a bad criminal consultation
How best to free — O horrid thought! — our nation,
And send the English packing bag and baggage,
Polo and hockey stick, each scrap of luggage.
They think we are rank and file and proletariat
Fit to be throttled with the hangman’s lariat.
Fie, sirs! that we should be confused with the mob,
We who with Viceroy and great men hobnob!
To be mistook, — Oh faugh! for the mere people,
Things that eat common food and water tipple,
Mere men, mere flesh and blood! — we, the elect,
The aristocracy of intellect
To be thus levelled with the stinking crowd!
No, sirs, I dare pronounce it very loud,
We are the sober, moderate wise men, needing
Scope only to be famed for light and leading,
Full of co-operative amorous loyalty
To Minto, Morley and Britannic Royalty.
O some there are impatient and too wild,
To that Curzonian lash unreconciled,
Repudiate with violence unchancy
Our gospel proud of futile mendicancy.
Strange that they can’t perceive the utility
And nobleness of absolute futility!
O sirs, be moderate, patient, persevering;
Shun, shun the extremists and their horrid sneering.
O sirs, from loyalty budge not an inch;
What if your masters love your throats to pinch?
It’s pure affection. Even if they kick,
Is that sufficient reason to feel sick?
No, though they thrash and cudgel, kick and beat,
Cling like the devil to their sacred feet!
Where are we? Is this the French Revolution
Infests our sacred Ind with its pollution?
Is Minto Louis? Kitchener Duke Broglie?
Away, away with revolutionary folly!
What, is this France or Russia? Are we men,
Servitude to reject and bonds disdain?
No, we are loyal, good religious dogs,
Born for delightful kicks and pleasant shogs.
It is a canine gospel that I preach.
Be dogs, be dogs, and learn to love the switch.
Whatever the result, be loyal still
To Minto, Morley and their mighty will.
Be loyal still, my prosperous countrymen,
Nor heed the moaning of the million’s pain.
For serfdom in our very bones is bred,
And our religion teaches us to dread,—
Shivaji’s creed and Pratap’s though it be,—
More than the very devil disloyalty.
O constitutionally agitate your tails
And see whether that agitation fails.
The course of true love never did run smooth!
Morley will still relent,—that gracious youth.
Beg for new Legislative Councils, sirs,
Or any blessed thing your mind prefers.
The Shah’s agreeable, why not the British?
Then there’s Mysore — Great Scott! I feel quite skittish.
Local self-government we’ll beg that’s now
A farce,—(I’m getting quite extreme, I vow!) And many other things. Prayers let us patter;
Whether we get them or not, can’t really matter.
But one thing let me tell you, countrymen,
That clubs a boon and blessing are to men,
Where white with black and black can mix with white
And share a particoloured deep delight.
Great thanks we owe then, loyalists, to “Max”,

www.holybooks.com
Who his capacious brain the first did tax.
Behold the great result! Apollo Paean!
The holy club, the Indo-European!
Approach, approach the holy precincts, come
And chat with Risley of affairs at home;
With Fraser arm-in-arm like friends we'll walk,
To Luson and to Lee familiarly talk.
Mind! trousers and a hat. They keep good whiskey
And we shall feel particularly frisky.
As for Comilla, it was sad and bad,
But Minto's sympathy o'er that fell raid
Dropped like the gentle dew from heaven to heal;
No longer for our injured kin we feel.
And now think not of politics too much.
Three days or four is quite enough for such.
Much better done to store substantial honey
Of commerce, taste the joys that roll in money.
Be rich, my friends! who cares then to be free
In hard uncomfortable liberty?
Of boycott talk but not of Swaraj, sirs,
And if of independence you'd discourse,
Let it of economic independence be.
For that the law proscribes no penalty,
Nor will your gentle hearts grow faint and sick
At shadow of the fell policeman's stick.
What folly to disturb our comfort fatty
And cudgelled be with regulation lathi?
Such the reflections, sirs — Well, let it drop.
Don’t hiss so much, dear friends! for here I stop.
Short Poems
Published in 1909 and 1910
The Mother of Dreams

Goddess, supreme Mother of Dream, by thy ivory doors when thou standest,
Who are they then that come down unto men in thy visions that troop,
group upon group, down the path of the shadows slanting?
Dream after dream, they flash and they gleam with the flame of the stars still around them;
Shadows at thy side in a darkness ride where the wild fires dance, stars
glow and glance and the random meteor glistens;
There are voices that cry to their kin who reply; voices sweet, at the heart they beat and ravish the soul as it listens.
What then are these lands and these golden sands and these seas more radiant than earth can imagine?
Who are those that pace by the purple waves that race to the cliff-bound floor of thy jasper shore under skies in which mystery muses,
Lapped in moonlight not of our night or plunged in sunshine that is not diurnal?
Who are they coming thy Oceans roaming with sails whose strands are not made by hands, an unearthly wind advances?
Why do they join in a mystic line with those on the sands linking hands in strange and stately dances?
Thou in the air, with a flame in thy hair, the whirl of thy wonders watching,
Holdest the night in thy ancient right, mother divine, hyacinthine, with a girdle of beauty defended.
Sworded with fire, attracting desire, thy tenebrous kingdom thou keepest,
Starry-sweet, with the moon at thy feet, now hidden now seen the clouds between in the gloom and the drift of thy tresses.
Only to those whom thy fancy chose, O thou heart-free, is it given to see thy witchcraft and feel thy caresses.
Open the gate where thy children wait in their world of a beauty undarkened.
High-throned on a cloud, victorious, proud I have espied Maghavan ride when the armies of wind are behind him;
Food has been given for my tasting from heaven and fruit of immortal sweetness;
I have drunk wine of the kingdoms divine and have heard the change of
music strange from a lyre which our hands cannot master;
Doors have swung wide in the chambers of pride where the Gods reside
and the Apsaras dance in their circles faster and faster.
For thou art she whom we first can see when we pass the bounds of the
mortal,
There at the gates of the heavenly states thou hast planted thy wand
enchanted over the head of the Yogin waving.
From thee are the dream and the shadows that seem and the fugitive lights
that delude us;
Thine is the shade in which visions are made; sped by thy hands from
celestial lands come the souls that rejoice for ever.
Into thy dream-worlds we pass or look in thy magic glass, then beyond
thee we climb out of Space and Time to the peak of divine endeavour.

An Image

Rushing from Troy like a cloud on the plains the Trojans thundered,
Just as a storm comes thundering, thick with the dust of kingdoms,
Edged with the devious dance of the lightning, so all Troas
Loud with the roar of the chariots, loud with the vaunt and the war-cry,
Rushed from Troywards gleaming with spears and rolled on enormous.
Joyous as ever Paris led them glancing in armour,
Brilliant with gold like a bridegroom, playing with death and the battle
Even as apart in his chamber he played with his beautiful Helen,
Touching her body rejoiced with a low and lyrical laughter,
So he laughed as he smote his foemen. Round him the arrows,
Round him the spears of the Argives sang like the voices of maidens
Trilling the anthem of bridal bliss, the chant hymeneal;
Round him the warriors fell like flowers strewn at a bridal
Red with the beauty of blood.
The Birth of Sin

Lucifer Sirioth

LUCIFER
What mighty and ineffable desire
Impels thee, Sirioth? Thy accustomed calm
Is potently subverted and the eyes
That were a god's in sweet tranquillity,
Confess a human warmth, a troubled glow.

SIRIOTH
Lucifer, son of Morning, Angel! thou
Art mightiest of the architects of fate.
To thee is given with thy magic gaze
Compelling mortals as thou leanst sublime
From heaven's lucent walls, to sway the world.
Is thy felicity of lesser date,
Prince of the patient and untiring gods,
The gods who work? Dost thou not ever feel
Angelic weariness usurp the place
Where the great flame and the august desire
Were wont to urge thee on? To me it seems
That our eternity is far too long
For service and there is a word, a thought,
More godlike.

LUCIFER
Sirioth, I will speak the word.
Is it not Power?

SIRIOTH
No, Lucifer, 'tis Love.

www.holybooks.com
LUCIFER

Love? It was love that for a trillion years
Gave me the instinct and immense demand
For service, for activity. It fades.
Another and more giant passion comes
Striding upon me. I behold the world
Immeasurably vast, I see the heavens
Full of an azure joy and majesty,
I see the teeming millions of the stars.
Sirioth, how came the Master of the world
To be the master? Did He seize control
Pushing some ancient weaker sovereign down
From sway immemorable? Did He come
By peaceful ways, permission or inheritance,
To what He is today? Or if indeed
He is for ever and for ever rules,
Are there no bounds to His immense domain,
No obscure corner of unbounded space
Forgotten by His fate, that I may seize
And make myself an empire as august,
Enjoy a like eternity of rule?

SIRIOTH

Angel, these thoughts are mighty as thyself.
But wilt thou then rebel? If He be great
To conquer and to punish, what of thee?
Eternity of dreadful poignant pain
May be thy fate and not eternal rule.

LUCIFER

Better than still to serve desirelessly,
Pursued by a compulsion dull and fierce,
Looking through all vast time for one brief hour
Of rest, of respite, but instead to find
Iron necessity and pant in vain
For space, for room, for freedom.
SIRIOTH

Thou intendest?

LUCIFER

Sirioth, I do not yet intend; I feel.

SIRIOTH

For me the sense of active force within
Set me to work, as the stars move, the sun
Resistless flames through space, the stormwind runs.
But I have felt a touch as sweet as spring,
And I have heard a music of delight
Maddening the heart with the sweet honied stabs
Of delicate intolerable joy.
Where, where is One to feel the answering bliss?
Lucifer, thou from love beganst thy toil.
What love?

LUCIFER

Desire august to help, to serve.

SIRIOTH

That is not mine. To embrace, to melt and mix
Two beings into one, to roll the spirit
Tumbling into a surge of common joy,—
’Tis this I seek.

LUCIFER

Will He permit?
SIRIOTH
A bar
I feel, a prohibition. Someone used
A word I could not grasp and called it sin.

LUCIFER
The word is new, even as these things are.

SIRIOTH
I know not who he was. He laughed and said,
“Sin, sin is born into the world, revolt
And change, in Sirioth and in Lucifer,
The evening and the morning star. Rejoice,
O world!” And I beheld as in a dream
Leaping from out thy brain and into mine
A woman beautiful, of grandiose mien,
Yet terrible, alarming and instinct
With nameless menace. And the world was full
With clashing and with cries. It seemed to me
Angels and Gods and men strove violently
To touch her robe, to occupy the place
Her beautiful and ominous feet had trod,
Crying, “Daughter of Lucifer, be ours,
O sweet, adorable and mighty Sin!”
Therefore I came to thee.

LUCIFER
Sirioth, await
Her birth, if she must be. For this I know,
Necessity rules all the infinite world,
And even He perhaps submits unknown
To a compulsion. When the time is ripe,
We will consult once more what we shall do.
Epiphany

Immortal, moveless, calm, alone, august,
A silence throned, to just and to unjust
One Lord of still unutterable love,
I saw Him, Shiva, like a brooding dove
Close-winged upon her nest. The outcasts came,
The sinners gathered to that quiet flame,
The demons by the other sterner gods
Rejected from their luminous abodes
Gathered around the Refuge of the lost
Soft-smiling on that wild and grisly host.
All who were refugeless, wretched, unloved,
The wicked and the good together moved
Naturally to Him, the shelterer sweet,
And found their heaven at their Master’s feet.
The vision changed and in its place there stood
A Terror red as lightning or as blood.
His strong right hand a javelin advanced
And as He shook it, earthquake stumbling danced
Across the hemisphere, ruin and plague
Rained out of heaven, disasters swift and vague
Neighboured, a marching multitude of ills.
His foot strode forward to oppress the hills,
And at the vision of His burning eyes
The hearts of men grew faint with dread surmise
Of sin and punishment. Their cry was loud,
“O master of the stormwind and the cloud,
Spare, Rudra, spare! Show us that other form
Auspicious, not incarnate wrath and storm.”
The God of Force, the God of Love are one;
Not least He loves whom most He smites. Alone
Who towers above fear and plays with grief,
Defeat and death, inherits full relief
From blindness and beholds the single Form,
Love masking Terror, Peace supporting Storm.
The Friend of Man helps him with life and death
Until he knows. Then, freed from mortal breath,
Grief, pain, resentment, terror pass away.
He feels the joy of the immortal play;
He has the silence and the unflinching force,
He knows the oneness and the eternal course.
He too is Rudra and thunder and the Fire,
He Shiva and the white Light no shadows tire,
The Strength that rides abroad on Time’s wide wings,
The Calm in the heart of all immortal things.

To R.

On Her Birthday

The repetition of thy gracious years
Brings back once more thy natal morn.
Upon the crest of youth thy life appears,—
A wave upborne.

Amid the hundreds thronging Ocean’s floor
A wave upon the crowded sea
With regular rhythm pushing towards the shore
Our life must be.

The power that moves it is the Ocean’s force
Invincible, eternal, free,
And by that impulse it pursues its course
Inevitably.

We, too, by the Eternal Might are led
To whatsoever goal He wills.
Our helm He grasps, our generous sail outspread
His strong breath fills.
Exulting in the grace and strength of youth  
Pursue the Ocean’s distant bound,  
Trusting the Pilot’s voice, the Master’s ruth  
That rings us round.

Rejoice and fear not for the waves that swell,  
The storms that thunder, winds that sweep;  
Always our Captain holds the rudder well,  
He does not sleep.

If in the trough of the enormous sea  
Thou canst not find the sky for spray,  
Fear never, for our Sun is there with thee  
By night and day.

Even those who sink in the victorious flood,  
Where do they sink? Into His breast.  
He who to some gives victory, joy and good,  
To some gives rest.

But thou, look to the radiant days that wait  
Beyond the driving rain and storm.  
I have seen the vision of a happier fate  
Brightening thy form.

Confident of His grace, expect His will;  
Let Him lead; though hidden be the bourne,  
See Him in all that happens; that fulfil  
For which thou wert born.
Transiit, Non Periit

(My grandfather, Rajnarain Bose, died September 1899)

Not in annihilation lost, nor given
To darkness art thou fled from us and light,
O strong and sentient spirit; no mere heaven
Of ancient joys, no silence eremite
Received thee; but the omnipresent Thought
Of which thou wast a part and earthly hour,
Took back its gift. Into that splendour caught
Thou hast not lost thy special brightness. Power
Remains with thee and the old genial force
Unseen for blinding light, not darkly lurks:
As when a sacred river in its course
Dives into ocean, there its strength abides
Not less because with vastness wed and works
Unnoticed in the grandeur of the tides.
Poems from Manuscripts
Circa 1909–1910
Perfect thy motion

Perfect thy motion ever within me,
    Master of mind.
Grey of the brain, flash of the lightning,
    Brilliant and blind,
These thou linkest, the world to mould,
Writing the thought in a scroll of gold
    Violet lined.

Tablet of brain thou hast made for thy writing,
    Master divine.
Calmly thou writest or full of thy grandeur
    Flushed as with wine.
Then with a laugh thou erasest the scroll,
Bringing another, like waves that roll
    And sink supine.
A Dialogue

ACHAB
Stamp out, stamp out the sun from the high blue
And all o’erarching firmament of heaven;
Forget the mighty ocean when it spumes
Under the thunder-deafened cliffs and soars
To crown their tops with spray, but never hope
That Baal will excuse, Baal forgive.
That’s an ambition more impossible,
A thought more rebel from the truth.

ESARHADDON
Baal!
It seems to me that thou believ’st in Baal!

ACHAB
And what dost thou believe in? The gross crowd
Believe the sun is God or else a stone.
This though I credit not, yet Baal lives.

ESARHADDON
And if he lives, then you and I are Baal,
Deserve as much the prayer and sacrifice
As he does. Nay, then, sit and tell him, “Lord,
If thou art Baal, let the fire be lit
Upon thy altar without agency,
Let men believe.” Can God do this, and if
He cannot, if he needs a flint and fuel
And human hands to light his sacred fire,
Is he not less than man? The flint and fuel
Are for our work sufficient. What is he
If not a helpless name that cannot live
Unless men’s lips repeat him?
ACHAB

And the flint,
The fuel? Who made these or formed the hands
That lit the fire? the lips that prove him nothing?
Or who gave thee thy clear and sceptic brain,
Thy statecraft and thy bold and scornful will
Despising what thou usest? Was it thou
That mad'st them?

ESARHADDON

No, my parents did. Say then
The seed is God that touched my mother's womb
And by familiar process built this house
Inhabited by Esarhaddon.

ACHAB

Who
Fashioned the seed?

ESARHADDON

It grew from other seed,
That out of earth and water, light and heat,
And ether, eldest creature of the world.
All is a force that irresistibly
Works by its nature which it cannot help,
And that is I and that the wood and flint,
That Achab, that Assyria, that the world.

ACHAB

How came the force in being?

ESARHADDON

From of old
It is.
ACHAB

Then why not call it Baal?

ESARHADDON

For me
I care not what 'tis called, Mithra or God.
You call it Baal, Perizade says
'Tis Ormuzd, Mithra and the glorious Sun.
I say 'tis force.

ACHAB

Then wherefore strive to change
Assyria's law, o'erthrow the cult of Baal?

ESARHADDON

I do not, for it crumbles of itself.
Why keep the rubbish? Priest, I need a cult
More gentle and less bloody to the State,
Not crying at each turn for human blood
Which means the loss of so much labour, gold,
Soldiers and strength. This Mithra's worship is.
Come, priest, you are incredulous yourself,
But guard your trade, so do I mine, so all.
Will it be loss to you, if it be said
Baal and Mithra, these are one, but Baal
Changes and grows more mild and merciful,
A friend to men? Or if instead of blood's
Unprofitable revenue we give
Offerings of price, and heaps of captive gold
In place of conquered victims?

ACHAB

So you urge,
The people's minds are not so mobile yet.
ESARHADDON
If you and I agree, who will refuse?
I care not, man, how it is done. Invent
Scriptures, forge ancient writings, let the wild
Mystics who slash their limbs on Baal’s hill,
Cry out the will of Baal while they slash.
You are subtle, if you choose. The head of all
Assyria’s state ecclesiastical,
Assured a twentieth of my revenues,
And right of all the offerings votaries heap
On Mithra, that’s promotion more than any
Onan can give, the sullen silent slave,
Or Ikbal Sufa with his politic brain.

ACHAB
Why that?

ESARHADDON
You think I do not know! I see
Each motion of your close conspiring brains,
Achab.

ACHAB
And if you do, why hold your hand?

ESARHADDON
That’s boldly questioned, almost honestly.
Because a State is ill preserved by blood.
The policy that sees a fissure here,
A wall in ill repair, and builds it up,
Is better than to raze the mansion down
And make it new. I know the people’s mind
Sick of a malady no leech can name;
I see a dangerous motion in the soil,
And make my old foundations sure. Achab,
You know I have a sword, and yet it sleeps;
I offer you the gem upon the hilt
And friendship. Will you take it? See, I need
A brain as clear as yours, a heart as bold.
What should I do by killing you, but lose
A statesman born?

ACHAB

You have conquered, King. I yield.

ESARHADDON

’Tis well. Here is my hand on our accord.

Baji Prabhou

Author’s Note

This poem is founded on the historical incident of the heroic self-sacrifice of Baji Prabhout Deshpande, who to cover Shivaji’s retreat, held the pass of Rangana for two hours with a small company of men against twelve thousand Moguls. Beyond the single fact of this great exploit there has been no attempt to preserve historical accuracy.
Baji Prabhou

A noon of Deccan with its tyrant glare
Oppressed the earth; the hills stood deep in haze,
And sweltering athirst the fields glared up
Longing for water in the courses parched
Of streams long dead. Nature and man alike,
Imprisoned by a bronze and brilliant sky,
Sought an escape from that wide trance of heat.
Nor only on inanimate hills and trees,
Nor on rare herdsman or the patient hind
Tilling the earth or tending sleeplessly
The well-eared grain that burden fell. It hung
Upon the Mogul horsemen as they rode
With lances at the charge, the surf of steel
About them and behind, as they recoiled
Or circled, where the footmen ran and fired,
And fired again and ran; “For now at last,”
They deemed, “the war is over, now at last
The panther of the hills is beaten back
Right to his lair, the rebel crew to death
Is hunted, and an end is made at last.”
Therefore they stayed not for the choking dust,
The slaying heat, the thirst of wounds and fight,
The stumbling stark fatigue, but onward pressed
With glowing eyes. Far otherwise the foe,
Panting and sore oppressed and racked with thirst
And blinded with the blazing earth who reeled
Backward to Raigurh, moistening with their blood
Their mother, and felt their own beloved hills
A nightmare hell of death and heat, the sky
A mute and smiling witness of their dire
Anguish, — abandoned now of God and man,
Who for their country and their race had striven, —
In vain, it seemed. At morning when the sun
Was yet below the verge, the Bhonsle sprang
At a high mountain fortress, hoping so
To clutch the whole wide land into his grasp;
But from the North and East the Moguls poured,
Swords numberless and hooves that shook the hills
And barking of a hundred guns. These bore
The hero backward. Silently with set
And quiet faces grim drew fighting back
The strong Mahrattas to their hills; only
Their rear sometimes with shouted slogan leaped
At the pursuer’s throat, or on some rise
Or covered vantage stayed the Mogul flood
A moment. Ever foremost where men fought,
Was Baji Prabhou seen, like a wild wave
Of onset or a cliff against the surge.
At last they reached a tiger-throated gorge
Upon the way to Raigurh. Narrowing there
The hills draw close, and their forbidding cliffs
Threaten the prone incline. The Bhonsle paused,
His fiery glance travelled in one swift gyre
Hill, gorge and valley and with speed returned
Mightily like an eagle on the wing
To a dark youth beside him, Malsure
The younger, with his bright and burning eyes,
Who wordless rode quivering, as on the leash;
His fierce heart hungered for the rear, where Death
Was singing mid the laughter of the swords.
“Ride, Suryaji,” the Chieftain cried, his look
Inward, intent, “and swiftly from the rear
 Summon the Prabhou.” Turning at the word
Suryaji’s hooves sped down the rock-strewn slope
Into the trenchant valley’s depth. Swiftly,
Though burdened with a nation’s fate, the ridge
They reached, where in stern silence fought and fell,
Their iron hearts broken with desperate toil,
The Southron rear, and to the Prabhou gave
The summons of the Chief: “Ride, Baji, ride,
The Bhonsle names thee, Baji.” And Baji spoke
No word, but stormed with loose and streaming rein
To the high frowning gorge and silent paused
Before the leader. “Baji, more than once
In battle thou hast stood, a living shield,
Between me and the foe. But more today,
O Baji, save than any single life,—
Thy nation’s destiny. Thou seest this gorge
Narrow and fell and gleaming like the throat
Of some huge tiger, with its rocky fangs
Agrin for food: and though the lower slope
Descends too gently, yet with roots and stones
It is hampered, and the higher prone descent
Impregnable forbids assault; too steep
The sides for any to ascend and shoot
From vantage. Here might lion-hearted men,
Though few, delay a host. Baji, I speed
To Raigurh and in two brief hours return.
Say with what force thy iron heart can hold
The passage till I come. Thou seest our strength,
How it has melted like the Afghan’s ice
Into a pool of blood.” And while he paused
Who had been chosen, spoke an iron man
With iron brows who rode behind the Chief,
Tanaji Malsure, that living sword:
“Not for this little purpose was there need
To call the Prabhou from his toil. Enough,
Give me five hundred men; I hold the pass
Till thy return.” But Shivaji kept still
His great and tranquil look upon the face
Of Baji Prabhou. Then, all black with wrath,
Wrinkling his fierce hard eyes, the Malsure:
“What ponders then the hero? Such a man
Of men, he needs not like us petty swords
A force behind him, but alone will hold
All Rajasthan and Agra and Cabool
From rise to set.” And Baji answered him:
“Tanaji Malsure, not in this living net
Of flesh and nerve, nor in the flickering mind
Is a man’s manhood seated. God within
Rules us, who in the Brahmin and the dog
Can, if He will, show equal godhead. Not
By men is mightiness achieved; Baji
Or Malsure is but a name, a robe,
And covers One alone. We but employ
Bhavani’s strength, who in an arm of flesh
Is mighty as in the thunder and the storm.
I ask for fifty swords.” And Malsure:
“Well, Baji, I will build thee such a pyre
As man had never yet, when we return;
For all the Deccan brightening shall cry out,
Baji the Prabhou burns!” And with a smile
The Prabhou answered: “Me thou shalt not burn.
For this five feet or more of bone and flesh,
Whether pure flame or jackals of the hills
Be fattened with its rags, may well concern
Others, not Baji Prabhou.” And the Chief
With a high calmness in his shining look,
“We part, O friend, but meet again we must,
When from our tasks released we both shall run
Like children to our Mother’s clasp.” He took
From his wide brow the princely turban sown
With aigrette diamond-crowned and on the head
Of Baji set the gleaming sign, then clasped
His friend and, followed by the streaming host
That gathered from the rear, to farther hills
Rode clattering. By the Mogul van approached
Baji and his Mahrattas sole remained
Watched by the mountains in the silent gorge.

Small respite had the slender band who held
Fate constant with that brittle hoop of steel;
For like the crest of an arriving wave
The Moslem van appeared, though slow and tired,
Yet resolute to break such barrier faint,
And forced themselves to run: — nor long availed;
For with a single cry the muskets spoke,
Once and again and always, as they neared,
And, like a wave arrested, for a while
The assailants paused and like a wave collapsed
Spent backward in a cloud of broken spray,
Retreating. Yielding up, the dangerous gorge
Saw only on the gnarled and stumbling rise
The dead and wounded heaped. But from the rear
The main tremendous onset of the North
Came in a dark and undulating surge
Regardless of the check, — a mingled mass,
Pathan and Mogul and the Rajput clans,
All clamorous with the brazen throats of war
And spitting smoke and fire. The bullets rang
Upon the rocks, but in their place unhurt,
Sheltered by tree and rock, the silent grim
Defenders waited, till on root and stone
The confident high-voiced triumphant surge
Began to break, to stumble, then to pause,
Confusion in its narrowed front. At once
The muskets clamoured out, the bullets sped,
Deadly though few; again and yet again,
And some of the impetuous faltered back
And some in wrath pressed on; and while they swayed
Poised between flight and onset, blast on blast
The volleyed death invisible hailed in
Upon uncertain ranks. The leaders fell,
The forward by the bullets chosen out,
Prone or supine or leaning like sick men
O’er trees and rocks, distressed the whole advance
With prohibition by the silent slain.
So the great onset failed. And now withdrawn
The generals consulted, and at last
In slow and ordered ranks the foot came on,
An iron resolution in their tread,
Hushed and deliberate. Far in the van,
Tall and large-limbed, a formidable array,
The Pathan infantry; a chosen force,
Lower in crest, strong-framed, the Rajputs marched;
The chivalry of Agra led the rear.
Then Baji first broke silence, “Lo, the surge!
That was but spray of death we first repelled.
Chosen of Shivaji, Bhavani’s swords,
For you the gods prepare. We die indeed,
But let us die with the high-voiced assent
Of Heaven to our country’s claim enforced
To freedom.” As he spoke, the Mogul lines
Entered the menacing wide-throated gorge,
Carefully walking, but not long that care
Endured, for where they entered, there they fell.
Others behind in silence stern advanced.
They came, they died; still on the previous dead
New dead fell thickening. Yet by paces slow
The lines advanced with labour infinite
And merciless expense of valiant men.
For even as the slopes were filled and held,
Still the velocity and lethal range
Increased of the Mahratta bullets; dead
Rather than living held the conquered slope,—
The living who, half-broken, paused. Abridged,
Yet wide, the interval opposed advance,
Daunting those resolute natures; eyes once bold
With gloomy hesitation reckoned up
The dread equivalent in human lives
Of cubits and of yards, and hardly hoped
One could survive the endless unacquired
Country between. But from the Southron wall
The muskets did not hesitate, but urged
Refusal stern; the bullets did not pause,
Nor calculate expense. Active they thronged
Humming like bees and stung strong lives to death
Making a holiday of carnage. Then
The heads that planned pushed swiftly to the front
The centre yet unhurt, where Rajasthan,
Playmate of death, had sent her hero sons.
They with a rapid royal reckless pace
Came striding over the perilous fire-swept ground,
Nor answered uselessly the bullets thick
Nor paused to judge, but o’er the increasing dead
Leaping and striding, shouting, sword in hand,
Rushed onward with immortal courage high
In mortal forms, and held the lower slope.
But now the higher incline, short but steep,
Baffled their speed, and as they clambered up,
Compact and fiery, like the rapid breath
Of Agra’s hot simoom, the sheeted flame
Belched bullets. Down they fell with huge collapse,
And, rolling, with their shock drove back the few
Who still attempted. Banned advance, retreat
Threatening disgrace and slaughter, for a while
Like a bound sacrifice the Rajputs stood
Diminishing each moment. Then a lord
High-crested of the Rathore clan stood out
From the perplexed assailants, with his sword
Beckoning the thousands on against the few.
And him the bullets could not touch; he stood
Defended for a moment by his lease
Not yet exhausted. And a mighty shout
Rose from behind, and in a violent flood
The Rajputs flung themselves on the incline
Like clambering lions. Many hands received
The dead as they descended, flinging back
Those mournful obstacles, and with a rush
The lead surmounted and on level ground
Stood sword in hand; yet only for a while,—
For grim and straight the slogan of the South
Leaped with the fifty swords to thrust them back,
Baji the Prabhou leading. Thrice they came,
Three times prevailed, three times the Southron charge
Repelled them; till at last the Rathore lord,
As one appointed, led the advancing death,
Nor waited to assure his desperate hold,
But hurled himself on Baji; those behind
Bore forward those in front. From right and left
Maharatta muskets rang their music out
And withered the attack that, still dissolved,
Still formed again from the insistent rear
And would not end. So was the fatal gorge
Filled with the clamour of the close-locked fight.
Sword rang on sword, the slogan shout, the cry
Of guns, the hiss of bullets filled the air,
And murderous strife heaped up the scanty space,
Rajput and strong Maharatta breathing hard
In desperate battle. But far off the hosts
Of Agra stood arrested, confident,
Waiting the end. Far otherwise it came
Than they expected. For, as in the front
The Rathore stood on the disputed verge
And ever threw fresh strength into the scale
With that inspiring gesture, Baji came
Towards him singling out the lofty crest,
The princely form: and, as the waves divide
Before a driving keel, the battle so
Before him parted, till he neared, he slew.
 Avoiding sword, avoiding lifted arm
The blade surprised the Rajput's throat, and down
As falls an upright poplar, with his hands
Outspread, dying, he clutched Maharatta ground.
Loud rose the slogan as he fell. Amazed,
The eager hosts of Agra saw reel back
The Rajput battle, desperate victory
Turned suddenly into entire defeat,
Not headlong, but with strong discouragement,
Sullen, convinced, rejecting the emprise.
As they retired, the brilliant Pathan van
Assumed the attempt. “Exhaust,” the generals cried,
“Exhaust the stubborn mountaineers; for now
Fatigued with difficult effort and success
They hardly stand, weary, unstrung, inert.
Scatter this fringe, and we march on and seize
Raigurh and Shivaji.” Meanwhile, they too
Not idle, covered by the rocks and trees,
Straining for vantage, pausing on each ledge,
Seizing each bush, each jutting promontory,
Some iron muscles, climbing, of the south
Lurked on the gorge’s gloomy walls unseen.
On came the Pathans running rapidly,
But as the nearmost left the rocky curve
Where lurked the ambush, loud from stone and tree
The silence spoke; sideways, in front, behind
Death clamoured, and tall figures strewed the ground
Like trees in a cyclone. Appalled the rest
Broke this way and broke that, and some cried, “On!”
Some shouted, “Back!” for those who led, fell fast.
So the advance dissolved, divided,—the more
In haste towards the plains, greeted with death
Even while they ran; but others forward, full
Of panic courage, drove towards the foe
They could not reach,—so hot a blast and fell
Stayed their unsteady valour, their retreat
So swift and obstinate a question galled,
Few through the hail survived. With gloom their chiefs
Beheld the rout and drawing back their hosts
In dubious council met, whether to leave
That gorge of slaughter unredeemed or yet
Demand the price of so immense a loss.

But to the Prabhou came with anxious eyes
The Captain of the band. “Baji,” he cried,
“The bullets fail; all the great store we had
Of shot and powder by unsparing use
Is spent, is ended.” And Baji Prabhou turned.
One look he cast upon the fallen men
Discernible by their attire, and saw
His ranks not greatly thinned, one look below
Upon the hundreds strewing thick the gorge,
And grimly smiled; then where the sun in fire
Descending stooped, towards the vesper verge
He gazed and cried: “Make iron of your souls.
Yet if Bhavani wills, strength and the sword
Can stay our nation’s future from o’erthrow
Till victory with Shivaji return.”
And so they waited without word or sound,
And over them the silent afternoon
Waited; the hush terrestrial was profound.
Except the mountains and the fallen men
No sight, no voice, no movement was abroad,
Only a few black-winged slow-circling birds
That wandered in the sky, only the wind
That now arose and almost noiselessly
Questioned the silence of the wooded sides,
Only the occasional groan that marked the pang
By some departing spirit on its frame
Inflicted. And from time to time the gaze
Of Baji sought the ever-sinking sun.
Men fixed their eyes on him and in his firm
Expression lived. So the slow minutes passed.
But when the sun dipped very low, a stir
Was felt far off, and all men grasped the hilt
Tighter and put a strain upon their hearts.
Resolved at last the stream of Mogul war
Came once more pouring, not the broken rout
Of Pathans, not discouraged Rajput swords,
But Agra’s chivalry glancing with gold
And scimitars inlaid and coloured robes.
Swiftly they came expecting the assault
Fire-winged of bullets and the lethal rain,
But silence met them and to their intent
So ominous it seemed, awhile they paused,
Fearing some ruse, though for much death prepared,
Yet careful of prevention. Reassured,  
Onward with a high shout they charged the slope.  
No bullet sped, no musket spoke; unhurt  
They crossed the open space, unhurt they climbed  
The rise; but even as their hands surprised  
The shrubs that fringed the vantage, swords unseen  
Hacked at their fingers, through the bushes thrust  
Lances from warriors unexposed bore through  
Their bosoms. From behind the nearest lines  
Pressed on to share their fate, and still the sea  
Of men bore onward till with violent strain  
They reached the perilous crest; there for a while  
A slaughter grim went on and all the verge  
Was heaped and walled and thickly fortified  
With splendid bodies. But as they were piled,  
The raging hosts behind tore down their dead  
And mounted, till at last the force prevailed  
Of obstinate numbers and upon a crest  
Swarming with foemen fought ’gainst desperate odds  
The Southron few. Small was the space for fight,  
And meeting strength with skill and force with soul  
The strong and agile keepers of the hills  
Prevailed against the city-dwelling hosts,  
With covert and the swiftly stabbing blades  
O’erpowering all the feints of Agra’s schools.  
So fought they for a while; then suddenly  
Upon the Prabhou all the Goddess came.  
Loud like a lion hungry on the hills  
He shouted, and his stature seemed to increase  
Striding upon the foe. Rapid his sword  
Like lightning playing with a cloud made void  
The crest before him, on his either side  
The swordsmen of the South with swift assault  
Preventing the reply, till like a bank  
Of some wild river the assault collapsed  
Over the stumbling edge and down the rise,  
And once again the desperate moment passed.
The relics of the murderous strife remained,
Corpses and jewels, broidery and gold.
But not for this would they accept defeat.
Once more they came and almost held. Then wrath
Rose in the Prabhou and he raised himself
In soul to make an end; but even then
A stillness fell upon his mood and all
That godlike impulse faded from his heart,
And passing out of him a mighty form
Stood visible, Titanic, scarlet-clad,
Dark as a thunder-cloud, with streaming hair
Obscuring heaven, and in her sovran grasp
The sword, the flower, the boon, the bleeding head,—
Bhavani. Then she vanished; the daylight
Was ordinary in a common world.
And Baji knew the goddess formidable
Who watches over India till the end.
Even then a sword found out his shoulder, sharp
A Mogul lance ran grinding through his arm.
Fiercely around him gathered in a knot
The mountaineers; but Baji, with a groan,
“Moro Deshpande, to the other side
Hasten of the black gorge and bring me word.
Rides any from the West, or canst thou hear
The Raigurh trumpets blow? I know my hour
Is ended; let me know my work is done.”
He spoke and shouted high the slogan loud.
Desperate, he laboured in his human strength
To push the Mogul from the gorge’s end
With slow compulsion. By his side fell fast
Maharatta and Mogul and on his limbs
The swords drank blood, a single redness grew
His body, yet he fought. Then at his side
Ghastly with wounds and in his fiery eyes
Death and rejoicing a dire figure stood,
Moro Deshpande. “Baji, I have seen
The Raigurh lances; Baji, I have heard
The trumpets." Conquering with his cry the din
He spoke, then dead upon a Mogul corpse
Fell prone. And Baji with a gruesome hand
Wiping the blood from his fierce staring eyes
Saw round him only fifteen men erect
Of all his fifty. But in front, behind,
On either side the Mogul held the gorge.
Groaning, once more the grim Mahratta turned
And like a bull with lowered horns that runs,
Charged the exultant foe behind. With him
The desperate survivors hacking ran,
And as a knife cuts instantly its way
Through water, so the yielding Mogul wall
Was cleft and closed behind. Eight men alone
Stood in the gorge’s narrow end, not one
Unwounded. There where hardly three abreast
Have room to stand, they faced again the foe;
And from this latest hold Baji beheld
Mounting the farther incline, rank on rank,
A mass of horsemen; galloped far in front
Some forty horse, and on a turbaned head
Bright in the glory of the sinking sun
A jewelled aigrette blazed. And Baji looked
Over the wide and yawning field of space
And seemed to see a fort upon a ridge,
Raigurh; then turned and sought again the war.
So for few minutes desperately they strove.
Man after man of the Mahrattas fell
Till only three were left. Then suddenly
Baji stood still and sank upon the ground.
Quenched was the fiery gaze, nerveless the arm:
Baji lay dead in the unconquered gorge.
But ere he fell, upon the rocks behind
The horse-hooves rang and, as the latest left
Of the half hundred died, the bullets thronged
Through the too narrow mouth and hurled those down
Who entered. Clamorous, exultant blared
The Southron trumpets, but with stricken hearts
The swords of Agra back recoiled; fatal
Upon their serried unprotected mass
In hundreds from the verge the bullets rained,
And in a quick disordered stream, appalled,
The Mogul rout began. Sure-footed, swift
The hostile strength pursued, Suryaji first
Shouting aloud and singing to the hills
A song of Ramdas as he smote and slew.
But Shivaji by Baji’s empty frame
Stood silent and his gaze was motionless
Upon the dead. Tanaji Malsure
Stood by him and observed the breathless corpse,
Then slowly said, “Thirty and three the gates
By which thou enterest heaven, thou fortunate soul,
Thou valiant heart. So when my hour arrives,
May I too clasp my death, saving the land
Or winning some great fortress for my lord.”
But Shivaji beside the dead beheld
A dim and mighty cloud that held a sword
And in its other hand, where once the head
Depended bleeding, raised the turban bright
From Baji’s brows, still glittering with its gems,
And placed it on the chief’s. But as it rose
Blood-stained with the heroic sacrifice,
Round the aigrette he saw a golden crown.
Chitrangada
Chitrangada

In Manipur upon her orient hills
Chitrangada beheld intending dawn
Gaze coldly in. She understood the call.
The silence and imperfect pallor passed
Into her heart and in herself she grew
Prescient of grey realities. Rising,
She gazed afraid into the opening world.
Then Urjoon felt his mighty clasp a void
Empty of her he loved and, through the grey
Unwilling darkness that disclosed her face,
Sought out Chitrangada. “Why dost thou stand
In the grey light, like one from joy cast down?
O thou whose bliss is sure. Leave that grey space,
Come hither.” So she came and leaning down,
With that strange sorrow in her eyes, replied:
“Great, doubtless, is thy love, thy very sleep
Impatient of this brief divorce. And yet
How easily that void will soon be filled!
For thou wilt run thy splendid fiery race
Through cities and through regions like a star.
Men’s worship, women’s hearts inevitably
Will turn to follow, as the planets move
Unbidden round the sun. Thou wilt accept them,
Careless in thy heroic strength and beauty,
And smile securely kind, even as a God
Might draw an earthly maiden to his arms
And marry his immortal mouth to hers.
Then will thy destiny seize thee, thou wilt pass
Like a great light in heaven and leave behind
Only a memory of force and fire.
No lesser occupation can for ever
Keep thee, O hero, whose terrestrial birth
Heaven fostered with her seed,—for what but this
To fill thy soul with battle, and august
Misfortunes and majestic harms embrace
And joys to thy own nature mated. Last,
Empire shall meet thee on some mighty field
Disputing thee with death. Thou art not ours
More than the wind that lingers for a while
To touch our hair, then passes to its home.”
And Urjoon silently caressing her,
“Muse not again, beloved Chitrangada,
Alone beside the window looking out
On the half-formed aspect and shape of things
Before sunlight was made. For God still keeps
Near to a paler world the hour ere dawn
And one who looks out from the happy, warm
And mortal limit of mankind that live
Enhoused, defended by companionship
With walls and limitations, is outdrawn
To dateless memories he cannot grasp
And infinite yearnings without form, until
The sense of an original vastness grows,
Empty of joyous detail, desolate,
In labour of a wide unfinished world.
Look not into that solemn silence! Rather
Protect thyself with joy, take in my arms
Refuge from the grey summons and defend
Thy soul until God rises with the sun.
Friendly to mortals is the living sun’s
Great brilliant light, friendly the cheerful noise
Of earth arising to her various tasks
And myriad hopes. But this grey hour was born
For the ascetic in his silent cave
And for the dying man whose heart released
Loosens its vibrant strings.” She answered him,
“Near to the quiet truth of things we stand
In this grey moment. Neither happy light
Nor joyful sound deceives the listening heart,
Nor Night in arms, the Mother brooding vast,
To comfort us with sleep. It helps me not
To bind thee for a moment to my joy.
The impulse of thy mighty life will come
Upon thee like a wind and drive thee forth
To toil and battle and disastrous deeds
And all the giant anguish that preserves
Our world. Thou as resistlessly wast born
To these things as the leopard’s leap to strength
And beauty and fierceness, as resistlessly
As women are to love,—even though they know
Pain for the end, yet, knowing, still must love.
Ah, quickly pass! Why shouldst thou linger here
Vainly? How will it serve God’s purpose in thee
To tarry soothing for her transient hour
Merely a woman’s heart, meanwhile perhaps
Lose some great moment of thy life which once
Neglected never can return.” She paused
And great Urjoon made answer, deeply moved:
“Has my clasp slackened or hast thou perceived
A waning passion in my kiss? Much more
My soul needs thee than on that fated day
When through Bengal of the enormous streams
With careless horsehooves hurrying to the East
I came, a wandering prince, companioned only
By courage and my sword; nor knew such flowers
Were by the wayside waiting to be plucked
As these dark tresses and sweet body small
Of white Chitrangada. Dost thou remember?
O fair young sovereign ruling with pure eyes
And little fearless hand fragile and mild
This strong and savage nation! Didst thou know?
Didst thou expect me in thy soul? Assuredly
Thy heart’s first flutterings recognised their lord.
And never with such gladness mountain queen
Exchanged tremendous seat and austere powers,
Her noble ancient right, for only leave
To lay her head upon my feet and wear
My kisses, not the crown. Content with love
All else thou gavest. Now thou speakest sadly,
Too like a mind matured by thought and pain.”
And she with passion cried: “Do I remember?
Yes, I remember. What other thing can I
Remember, till forgetfulness arrives?
O endless moments, O rain-haunted nights,
When thou art far! And O intolerable,
The grey austere uncomfortable dawn
To which I shall awake alone! And yet
This year of thee is mine until the end.
The Gods demand the rest. With all myself
I loved thee, not as other women do,
Piecemeal, reluctantly, but my whole heart
And being like a sudden spring broke forth
To flowers and greenness at my sungod's touch,
Ceding existence at thy feet. Therefore
I praise my father's wise and prescient love
That kept me from the world for thee, unsought
Amid the rugged mountains and fenced in
With barbarous inhospitable laws.
Around the dying man the torches flared
From pillar to weird pillar; and one discerned
In fitful redness on the shadowy walls
Stone visages of grim un-Aryan gods.
The marble pallor of my father’s face
Looked strange to me in that unsteady glare,
As if an alien’s; and dream-fantasies
Those figures seemed of Manipurian lords
Strange-weaponed, rude, with faces fierce and gnarled,
Like those they worship. Unafraid I stood
With grave and wide-orbed gaze contemplating
Their rugged pomp and the wild majesty
Of that last scene around my dying sire.
About me stood a circle fierce and strong,
Men high like rough gnarled trees or firm squat towers;
A human fortress in its savage strength
Enringed my future with bright jealous spears.
To them he entrusted me, calling each name,
And made their hearts my steps to mount a throne:
Each name was made a link in a great chain,
A turretted gate inwalling my rule,
Each heart a house of trust, a seal of fealty.
So were their thoughts conciliated; so
Their stern allegiance was secured. He spoke,
And, though of outward strength deprived, his voice
Rang clear yet as when over trumpets heard
It guided battle. ‘Warriors of my East,
Take now this small white-bosomed queen of yours,
Surround her with the cincture of your force
And guard her from the thieves of destiny
Who prowl around the house of human life
To impoverish the meanings of the gods.
For I am ended and the shadow falls.
She is the stem from which your kings shall grow
Perpetual. Guard her well lest Fate deceived
Permit unworthy to usurp her days
Than the unconquerable seed of gods.
Oppose, oppose all alien entry here,
Whether by force or guile the stranger comes,
To clutch Nature’s forbidden golden fruit.
Serry your bucklers close to overwhelm
The invader, seal your deaf and pitiless ears
To the guest’s appeal, the suppliant call. He sole,
Darling of Fate and Heaven, shall break through all
Despising danger’s threat and spurning death,
To grasp this prize, whether Ixvacou’s clan
Yield a new Rama or the Bhoja hear
And raven for her beauty,—Vrishny-born,
Or else some lion’s whelp of those who lair
In Hustina the proud, coveting two worlds,
Leaping from conquered earth to climb to Heaven,
Life’s pride doubling with the soul’s ethereal crown.’
He closed his eyes against the earthly air,
The last silence fell on him: he spoke no more
Save the great name until his spirit passed.
Then the grim lords forgot their savage calm.
A cry arose, ‘Our queen!’ and I was caught
From breast to breast of wild affection; all
Crowded upon me kissing feet and hands,
Recording silent oaths of love. Secure,
Alone in this wild faithful barbarous world,
I ruled by weakness over rugged hearts,
A little queen adored, — until at length
Thou cam’st. Rumour and wide-mouthed alarm
Running before thy chariot-wheels thou cam’st,
Defeat and death thy envoys and a cry:
O Manipurians, Manipurians, arm!
Some god incensed invades you, — surely a god
Incensed and fatal, for his bowstring huge
Sounds like the crack of breaking worlds and thick
His arrows as the sleet descends of doom
When the great Serpent wakes in wrath. Behind
That cry the crash of hostile advent came,
Thy chariot caked with mire and blood, its roof
Bristling and shattered from the fight, thy steeds
White with the spume of leagues, though yet they neighed
Lusting for speed and battle, and in the car
Thy grandiose form o’ertowering common mould,
While victory shone from eyes where thunder couched
Above his parent lightning. Swift to arms
My warriors sprang, dismayed but faithful, swift
Around me grew a hedge of steel. Enraged,
Thy coursers shod with wind rushed foaming on
And in with crash and rumour stormed the car
To that wide stone-paved hall; there loudly paused,
While thunderous challenge of the stamping hooves
Claimed all the place. Clanging thou leapedst down,
Urjoon, Gandiva in thy threatening grasp.
Then I beheld thy face, then rose, then stretched
My arms out, pausing not to think what god
Compelled me from my throne. But war came in
Between me and those sudden eyes. One bold
Beyond his savage peers stood questioning forth:
‘Who art thou that with challenge insolent
Intruding, from what land of deathless gods
Stormest with disallowed exulting wheels
In white Chitrangada’s domain? To death
Men hasten not so quickly, Aryan lord.’
Hero, thy look was calm, yet formidable,
Replying, by thy anger undisturbed.
‘To death I haste indeed, but not to mine.
Nor think that Doom has claimed me for her own
Because I sole confront you. For my name
Ask the pale thousands whose swift-footed fear
Hardly escaped my single onset; ask
Your famous chieftains cold on hill or moor
Upon my fatal route. Yet not for war
I sought this region nor by death equipped,
Inhospitable people who deny
The human bond, but as a man to men
Alone I came and without need of fear,
If fear indeed were mine to feel. Nor trumpets blared
My coming nor battalions steel enforced,
Who claimed but what the common bond allows.’’
Poems Written in 1910

The Rakshasas

(The Rakshasa, the violent kinetic Ego, establishes his claim to mastery of the world replacing the animal Soul,—to be followed by controlled and intellectualised but unregenerated Ego, the Asura. Each such type and level of consciousness sees the Divine in its own image and its level in Nature is sustained by a differing form of the World-Mother.)

“Glory and greatness and the joy of life, Strength, pride, victorious force, whatever man Desires, whatever the wild beast enjoys, Bodies of women and the lives of men, I claim to be my kingdom. I have force My title to substantiate, and I seek No crown unearned, no lordship undeserved. Ask what austerity Thou wilt, Maker of man, Expense of blood or labour or long years Spent in tremendous meditations, lives Upon Thy altar spent of brutes or men, Or if with gold Thy favour purchasable I may command, rich offerings to glut Thy temples and Thy priests. I have a heart, A hand for any mighty sacrifice, A fiery patience in my vehement mood; I will submit. But ask not this of me, Meek silence and a pale imprisoned soul Made colourless of its humanity; Ask not the heart that quakes, the hand that spares. What strength can give, not weakness, that demand. O Rudra, O eternal Mahádev, Thou too art fierce and mighty, wrathful, bold, Snuffing Thy winds for blood of sacrifice, And angrily Thou rul’st a prostrate world. O Rákshasa Almighty, look on me,
Rávan, the lord of all Thy Rákshasas,
Give me Thy high command to smite Thy foes;
But most I would afflict, chase and destroy
Thy devotees who traduce Thee, making Thee
A God of love, a God too sweet to rule.
I have the knowledge; what Thou art, I know,
And know myself, for Thou and I are one.”
So prayed the Lord of Lunca, and in Heaven
Sri Krishna smiled, the Friend of all mankind,
A smile of sweetness and divine delight,
And asked, “O Masters of the knowledge, Seers
Who help me by your thoughts to help mankind,
Hearken what Rávan cries against the stars,
Demanding earth for heritage. Advise,
Shall he then have it?” And a cry arose,
“He would root out the Brahmin from the earth,
Impose his dreadful Yoga on mankind,
And make the violent heart, the iron hand
Sovereign of all.” Sri Krishna made reply,
“From out Myself he went to do My will.
He has not lied, he has the knowledge. He
And I are one. How then shall I refuse?
Does it not say, the Veda that you know,
‘When one knows That, then whatso he desires,
It shall be his?’” And Atri sage replied,
“Let him then rule a season and be slain.”
And He who reigns, “Something you know, O Seers,
Not all My purpose. It is long decreed,
The Rákshasa shall rule the peopled earth.
He takes the brute into himself for man,
Yielding it offerings, while with grandiose thoughts
And violent aspirations he controls;
He purifies the demon in the race,
Slaying in wrath, not cruelty. Awhile
He puts the Vánara out of the world,
Accustoming to grandeur all mankind;
The Rakshasas

The Ifrit\(^1\) he rejects. Were he denied
His period, man could not progress. But since
He sees himself as Me, not Me in him,
And takes the life and body for the whole,
He cannot last. Therefore is Atri’s word
Accepted.” And before the Rákshasa,
Out of the terror of the sacrifice,
Naked and dark, with a blood-dripping sword
And dreadful eyes that seemed to burn the world,
Kálí the Rákhashi in flames arose.
“Demand a boon!” she cried, and all the gods
Trembled. “Give me the earth for my delight,
Her gods to be my slaves,” the Giant cried,
“Of strength and passion let me have my fill,
Of violence and pride.” “So let it be,”
She answered. “Shall it be eternal then?”
Rávan demanded and she thundered, “No!
For neither thou nor I are best nor last.
The Asúr shall rise to fill my place,
The Asura thy children shall dethrone.
An aeon thou hast taken to evolve,
An aeon thou shalt rule. But since thy wish
I have denied, ask yet another boon.”
“Let this be mine, that when at last I sink,
Nor brute nor demon, man nor Titan’s hand,
Nor any lesser creature shall o’erthrow,
But only God Himself compel my fall.”
And Kálí answered, smiling terribly,
“It is decreed,” and laughing loud she passed.
Then Rávan from his sacrifice arose.

\(^1\) The Ifrit, the Djinn, is the demoniac element in Nature.
Kama

(According to one idea Desire is the creator and sustainer of things,— Desire and Ignorance. By losing desire one passes beyond the Ignorance, as by passing beyond Ignorance one loses desire; then the created world is surpassed and the soul enters into the Divine Reality. Kama here speaks as Desire the Creator, an outgoing power from the Bliss of the Divine Reality to which, abandoning desire, one returns, ānanda brahmaṇo vidvān, possessing the bliss of the Brahman.)

O desolations vast, O seas of space
Unpeopled, realms of an unfertile light,
Grow multitudinous with living forms,
Enamoured of desire! I send My breath
Into the heart of being, and the storm
Of sweet attraction shall break up its calm
With quivering passionate intensity
And silence change to a melodious cry,
And all the world be rose. Out of My heart
Suns shall flame up into the listless void,
And the stars wheel in magic dances round
Weaving the web of mortal life. For I
Am love, am passion; I create the world.
I am the only Brahma. My desire
Takes many forms; I change and wheel and race,
And with Me runs creation. I preserve,
For I am Love. I weary of Myself,
And the world circles back into the Vast.
Delight and laughter walking hand in hand
Go with Me, and I play with grief and pain.
I am the dance of Krishna, I the dance
Of Káli. Might and majesty are Mine,
And yet I make the heart a child at play,
The soul of things a woman full of bliss.
Hunger and Thirst, arise and make the world!
Delight, go down and give it strength to live!
O Ether, change! O Breath of things, grow full
Of the perpetual whirl! Break out, O Fire,
In seas of magic colour, infinite waves
Of rainbow light! Thou, liquid element,
Be sap, be taste in all created things
To please the senses. Thou, O solid earth,
Enter into all life, support the worlds.
I send forth Joy to lure the hearts of men,
I send forth Law to harmonise and rule.
And when these things are done, when men have learned
My beauty, My desirability, My bliss,
I will conceal Myself from their desire
And make this rule of the eternal chase,
“They who abandon Me, shall to all time
Clasp and possess; they who pursue, shall lose.”

The Mahatmas

Kuthumi

(This poem is purely a play of the imagination, a poetic reconstruction of the central idea only of Mahatmahood.)

The seven mountains and the seven seas
Surround me. Over me the eightfold sun
Blazing with various colours — green and blue,
Scarlet and rose, violet and gold and white,
And the dark disk that rides in the mortal cave —
Looks down on me in flame. Below spread wide
The worlds of the immortals, tier on tier,
Like a great mountain climbing to the skies,
And on their summit Shiva dwells. Of old
My goings were familiar with the earth,
The mortals over whom I hold control
Were then my fellows. But I followed not
The usual path, the common thoughts of men.
A thirst of knowledge and a sense of power,
A passion of divine beneficence
Pursued me through a hundred lives. I rose
From birth to birth, until I reached the peak
Of human knowledge. Then in Bharat born
I, Kuthumi, the Kshatriya, the adept,
The mighty Yogin of Dwaipayán's school,
To Vyása came, the great original sage.
He looked upon me with the eye that sees
And smiled, august and awful. “Kuthumi,”
He cried, “now gather back what thou hast learned
In many lives, remember all thy past,
Cease from thy round of human births, resume
The eightfold power that makes a man as God,
Then come again and learn thy grandiose work,
For thou art of the souls to death denied.”
I went into the mountains by the sea
That thunders pitilessly from night to morn,
And sung to by that rude relentless sound,
Amid the cries of beasts, the howl of winds,
Surrounded by the gnashing demon hordes,
I did the Hathayoga in three days,
Which men with anguish through ten lives effect,—
Not that now practised by earth's feebler race,
But that which Rávan knew in Lunca, Dhruv
Fulfilled, Hiranyakashipu performed,
The Yoga of the old Lemurian Kings.
I felt the strength of Titans in my veins,
The joy of gods, the pride of Siddhas. Tall
And mighty like a striding God I came
To Vyása; but he shook his dense piled locks,
Denying me. “Thou art not pure,” he cried.
I went in anger to Himaloy's peaks,
And on the highest in the breathless snows
Sat dumb for many years. Then knowledge came
Streaming upon me and the hills around
Shook with the feet of the descending power.
I did the Rájayoga in three days,
Which men with care and accuracy minute
Ceaselessly follow for an age in vain —
Not Kali’s Rájayoga, but the means
Of perfect knowledge, purity and force
Bali the Titan learned and gave to men,
The Yoga of the old Atlantic Kings.
I came to Vyása, shining like a sun.
He smiled and said, “Now seek the world’s great Lord,
Sri Krishna, where he lives on earth concealed;
Give up to him all that thou knowst and art.
For thou art he, elect from mortal men
To guard the Knowledge, — yet an easy task
While the third Age preserves man’s godlike force, —
But when thou seest the iron Kali come,
And he from Dwarca leaves the earth, know then
The time of trial, help endangered Man,
Preserve the knowledge that preserves the world,
Until Sri Krishna utterly returns.
Then art thou from thy mighty work released
Into the worlds of bliss for endless years
To rest, until another aeon comes,
When of the seven Rishis thou art one.”
I sent my knowledge forth across the land;
It found him not in Bharat’s princely halls,
In quiet asrams, nor in temples pure,
Nor where the wealthy traffickers resort;
Brahmin nor Kshatriya body housed the Lord,
Vaishya nor Sudra nor outcaste. At length
To a bare hut on a wild mountain’s verge
Led by the star I came. A hermit mad
Of the wild Abhirs, who sat dumb or laughed,
And ran and leaped and danced upon the hills,
But told the reason of his joy to none, —
In him I saw the Lord, behind that mask
Perceived the Spirit that contains the worlds.
I fell before him, but he leaped and ran
And smote me with his foot, and out of me
All knowledge, all desire, all strength was gone
Into its Source. I sat, an infant child.
He laughed aloud and said, “Take back thy gifts,
O beggar!” and went leaping down the slope.
Then full of light and strength and bliss I soared
Beyond the spheres, above the mighty gods,
And left my human body on the snows;
And others gathered to me, more or less
In puissance, to assist, but mine the charge
By Vishnu given. I gather knowledge here,
Then to my human frame awhile descend
And walk mid men, choosing my instruments,
Testing, rejecting and confirming souls,
Vessels of the Spirit; for the golden age
In Kali comes, the iron lined with gold.
The Yoga shall be given back to men,
The sects shall cease, the grim debates die out,
And Atheism perish from the earth
Blasted with knowledge, love and brotherhood
And wisdom repossess Sri Krishna’s world.

Two Poems in
Quantitative Hexameters
Ilion
Dawn in her journey eternal compelling the labour of mortals,
Dawn the beginner of things with the night for their rest or their ending,
Pallid and bright-lipped arrived from the mists and the chill of the Euxine.
Earth in the dawn-fire delivered from starry and shadowy vastness
Woke to the wonder of life and its passion and sorrow and beauty,
All on her bosom sustaining, the patient compassionate Mother.
Out of the formless vision of Night with its look on things hidden
Given to the gaze of the azure she lay in her garment of greenness,
Wearing light on her brow. In the dawn-ray lofty and voiceless
Ida climbed with her god-haunted peaks into diamond lustres,
Ida first of the hills with the ranges silent beyond her
Watching the dawn in their giant companies, as since the ages
First began they had watched her, upbearing Time on their summits.
Troas cold on her plain awaited the boon of the sunshine.
There, like a hope through an emerald dream sole-pacing for ever,
Stealing to wideness beyond, crept Simois lame in his currents,
Guiding his argent thread mid the green of the reeds and the grasses.
Headlong, impatient of Space and its boundaries, Time and its slowness,
Xanthus clamoured aloud as he ran to the far-surging waters,
Joining his call to the many-voiced roar of the mighty Aegean,
Answering Ocean's limitless cry like a whelp to its parent.
Forests looked up through their rifts, the ravines grew aware of their
shadows.

Closer now gliding glimmered the golden feet of the goddess.
Over the hills and the headlands spreading her garment of splendour,
Fateful she came with her eyes impartial looking on all things,
Bringer to man of the day of his fortune and day of his downfall.
Full of her luminous errand, careless of eve and its weeping,
Fateful she paused unconcerned above Ilion's mysteried greatness,
Domes like shimmering tongues of the crystal flames of the morning,
Opalesque rhythm-line of tower-tops, notes of the lyre of the sungod.
High over all that a nation had built and its love and its laughter,
Lighting the last time highway and homestead, market and temple,
Looking on men who must die and women destined to sorrow,

www.holybooks.com
Looking on beauty fire must lay low and the sickle of slaughter,
Fateful she lifted the doom-scroll red with the script of the Immortals,
Deep in the invisible air that folds in the race and its morrows
Fixed it, and passed on smiling the smile of the griefless and deathless, —
Dealers of death though death they know not, who in the morning
Scatter the seed of the event for the reaping ready at nightfall.
Over the brooding of plains and the age-long trance of the summits
Out of the sun and its spaces she came, pausing tranquil and fatal,
And, at a distance followed by the golden herds of the sungod,
Carried the burden of Light and its riddle and danger to Hellas.

Even as fleets on a chariot divine through the gold streets of ether,
Swiftly when Life fleets, invisibly changing the arc of the soul-drift,
And, with the choice that has chanced or the fate man has called and now
suffers

Weighted, the moment travels driving the past towards the future,
Only its face and its feet are seen, not the burden it carries.
Weight of the event and its surface we bear, but the meaning is hidden.
Earth sees not; life’s clamour deafens the ear of the spirit:
Man knows not; least knows the messenger chosen for the summons.
Only he listens to the voice of his thoughts, his heart’s ignorant whisper,
Whistle of winds in the tree-tops of Time and the rustle of Nature.
Now too the messenger hastened driving the car of the errand:
Even while dawn was a gleam in the east, he had cried to his coursers.
Half yet awake in light’s turrets started the scouts of the morning
Hearing the jar of the wheels and the throb of the hooves’ exultation,
Hooves of the horses of Greece as they galloped to Phrygian Troya.
Proudly they trampled through Xanthus thwarting the foam of his anger,
Whinnying high as in scorn crossed Simois’ tangled currents,
Xanthus’ reed-girdled twin, the gentle and sluggard river.
One and unarmed in the car was the driver; grey was he, shrunken,
Worn with his decades. To Pergama cinctured with strength Cyclopean
Old and alone he arrived, insignificant, feeblest of mortals,
Carrying Fate in his helpless hands and the doom of an empire.
Ilion, couchant, saw him arrive from the sea and the darkness.
Heard mid the faint slow stirrings of life in the sleep of the city,
Rapid there near a running of feet, and the cry of the summons
Beat round the doors that guarded the domes of the splendour of Priam.
“Wardens charged with the night, ye who stand in Laomedon’s gateway,  
Waken the Ilian kings. Talthybius, herald of Argos,  
Parleying stands at the portals of Troy in the grey of the dawning.”  
High and insistent the call. In the dimness and hush of his chamber  
Charioted far in his dreams amid visions of glory and terror,  
Scenes of a vivider world, — though blurred and deformed in the brain-cells,  
Vague and inconsequent, there full of colour and beauty and greatness, —  
Suddenly drawn by the pull of the conscious thread of the earth-bond  
And of the needs of Time and the travail assigned in the transience  
Warned by his body, Deiphobus, reached in that splendid remoteness,  
Touched through the nerve-ways of life that branch to the brain of the  
dreamer,

Heard the terrestrial call and slumber startled receded  
Sliding like dew from the mane of a lion. Reluctant he travelled  
Back from the light of the fields beyond death, from the wonderful kingdoms  
Where he had wandered a soul among souls in the countries beyond us,  
Free from the toil and incertitude, free from the struggle and danger:  
Now, compelled, he returned from the respite given to the time-born,  
Called to the strife and the wounds of the earth and the burden of daylight.  
He from the carven couch upreared his giant stature.  
Haste-spurred he laved his eyes and regained earth’s memories, haste-spurred  
Donning apparel and armour strode through the town of his fathers,  
Watched by her gods on his way to his fate, towards Pergama’s portals.  

Nine long years had passed and the tenth now was wearily ending,  
Years of the wrath of the gods, and the leaguer still threatened the ramparts  
Since through a tranquil morn the ships came past Tenedos sailing  
And the first Argive fell slain as he leaped on the Phrygian beaches;  
Still the assailants attacked, still fought back the stubborn defenders.  
When the reward is withheld and endlessly lengthens the labour,  
Weary of fruitless toil grows the transient heart of the mortal.  
Weary of battle the invaders warring heartless and homeless  
Prayed to the gods for release and return to the land of their fathers:  
Weary of battle the Phrygians beset in their beautiful city  
Prayed to the gods for an end of the danger and mortal encounter.  
Long had the high-beached ships forgotten their measureless ocean,  
Greece seemed old and strange to her children camped on the beaches,  
Old like a life long past one remembers hardly believing
But as a dream that has happened, but as the tale of another.
Time with his tardy touch and Nature changing our substance
Slowly had dimmed the faces loved and the scenes once cherished:
Yet was the dream still dear to them longing for wife and for children,
Longing for hearth and glebe in the far-off valleys of Hellas.
Always like waves that swallow the shingles, lapsing, returning,
Tide of the battle, race of the onset relentlessly thundered
Over the Phrygian corn-fields. Trojan wrestled with Argive,
Caria, Lycia, Thrace and the war-lord mighty Achaia
Joined in the clasp of the fight. Death, panic and wounds and disaster,
Glory of conquest and glory of fall, and the empty hearth-side,
Weeping and fortitude, terror and hope and the pang of remembrance,
Anguish of hearts, the lives of the warriors, the strength of the nations
Thrown were like weights into Destiny's scales, but the balance wavered
Pressed by invisible hands. For not only the mortal fighters,
Heroes half divine whose names are like stars in remoteness,
Triumphed and failed and were winds or were weeds on the dance of the
surges,

But from the peaks of Olympus and shimmering summits of Ida
Gleaming and clanging the gods of the antique ages descended.
Hidden from human knowledge the brilliant shapes of Immortals
Mingled unseen in the mellay, or sometimes, marvellous, maskless,
Forms of undying beauty and power that made tremble the heart-strings
Parting their deathless secrecy crossed through the borders of vision,
Plain as of old to the demigods out of their glory emerging,
Heard by mortal ears and seen by the eyeballs that perish.
Mighty they came from their spaces of freedom and sorrowless splendour.
Sea-vast, trailing the azure hem of his clamorous waters,
Blue-lidded, maned with the Night, Poseidon smote for the future,
Earth-shaker who with his trident releases the coils of the Dragon,
Freeing the forces unborn that are locked in the caverns of Nature.
Calm and unmoved, upholding the Word that is Fate and the order
Fixed in the sight of a Will foreknowing and silent and changeless,
Hera sent by Zeus and Athene lifting his aegis
Guarded the hidden decree. But for Ilion, loud as the surges,
Ares impetuous called to the fire in men's hearts, and his passion
Woke in the shadowy depths the forms of the Titan and demon;
Dumb and coerced by the grip of the gods in the abyss of the being, 
Formidable, veiled they sit in the grey subconscious darkness 
Watching the sleep of the snake-haired Erinny. Miracled, haloed, 
Seer and magician and prophet who beholds what the thought cannot witness, 
Lifting the godhead within us to more than a human endeavour, 
Slayer and saviour, thinker and mystic, leaped from his sun-peaks 
Guarding in Ilion the wall of his mysteries Delphic Apollo. 
Heaven's strengths divided swayed in the whirl of the Earth-force. 
All that is born and destroyed is reborn in the sweep of the ages; 
Life like a decimal ever recurring repeats the old figure; 
Goal seems there none for the ball that is chased throughout Time by the Fate-teams; 
Evil once ended renews and no issue comes out of living: 
Only an Eye unseen can distinguish the thread of its workings. 
Such seemed the rule of the pastime of Fate on the plains of the Troad; 
All went backwards and forwards tossed in the swing of the death-game. 
Vain was the toil of the heroes, the blood of the mighty was squandered, 
Spray as of surf on the cliffs when it moans unappeased, unrequited 
Age after fruitless age. Day hunted the steps of the nightfall; 
Joy succeeded to grief; defeat only greatened the vanquished, 
Victory offered an empty delight without guerdon or profit. 
End there was none of the effort and end there was none of the failure. 
Triumph and agony changing hands in a desperate measure 
Faced and turned as a man and a maiden trampling the grasses 
Face and turn and they laugh in their joy of the dance and each other. 
These were gods and they trampled lives. But though Time is immortal, 
Mortal his works are and ways and the anguish ends like the rapture. 
Artists of Nature content with their work in the plan of the transience, 
Beautiful, deathless, august, the Olympians turned from the carnage, 
Leaving the battle already decided, leaving the heroes 
Slain in their minds, Troy burned, Greece left to her glory and downfall. 
Into their heavens they rose up mighty like eagles ascending 
Fanning the world with their wings. As the great to their luminous mansions 
Turn from the cry and the strife, forgetting the wounded and fallen, 
Calm they repose from their toil and incline to the joy of the banquet, 
Watching the feet of the wine-bearers rosily placed on the marble,
Filling their hearts with ease, so they to their sorrowless ether
Passed from the wounded earth and its air that is ploughed with men's
anguish;
Calm they reposed and their hearts inclined to the joy and the silence.
Lifted was the burden laid on our wills by their starry presence:
Man was restored to his smallness, the world to its inconscient labour.
Life felt a respite from height, the winds breathed freer delivered;
Light was released from their blaze and the earth was released from their
greatness.

But their immortal content from the struggle titanic departed.
Vacant the noise of the battle roared like the sea on the shingles;
Wearily hunted the spears their quarry; strength was disheartened;
Silence increased with the march of the months on the tents of the leaguer.
But not alone on the Achaians the steps of the moments fell heavy;
Slowly the shadow deepened on Ilion mighty and scornful:
Dragging her days went by; in the rear of the hearts of her people
Something that knew what they dared not know and the mind would not
utter,

Something that smote at her soul of defiance and beauty and laughter,
Darkened the hours. For Doom in her sombre and giant uprising
Neared, assailing the skies: the sense of her lived in all pastimes;
Time was pursued by unease and a terror woke in the midnight:
Even the ramparts felt her, stones that the gods had erected.
Now no longer she dallied and played, but bounded and hastened,
Seeing before her the end and, imagining massacre calmly,
Laughed and admired the flames and rejoiced in the cry of the captives.
Under her, dead to the watching immortals, Deiphobus hastened
Clanging in arms through the streets of the beautiful insolent city,
Brilliant, a gleaming husk but empty and left by the daemon.
Even as a star long extinguished whose light still travels the spaces,
Seen in its form by men, but itself goes phantom-like fleeting
Void and null and dark through the uncaring infinite vastness,
So now he seemed to the sight that sees all things from the Real.
Timeless its vision of Time creates the hour by things coming.
Borne on a force from the past and no more by a power for the future
Mighty and bright was his body, but shadowy the shape of his spirit
Only an eidolon seemed of the being that had lived in him, fleeting
Vague like a phantom seen by the dim Acherontian waters.
But to the guardian towers that watched over Pergama’s gateway
Out of the waking city Deiphobus swiftly arriving
Called, and swinging back the huge gates slowly, reluctant,
Flung Troy wide to the entering Argive. Ilion’s portals
Parted admitting her destiny, then with a sullen and iron
cry they closed. Mute, staring, grey like a wolf descended
Old Talthybius, propping his steps on the staff of his errand;
Feeble his body, but fierce still his glance with the fire within him;
Speechless and brooding he gazed on the hated and coveted city.
Suddenly, seeking heaven with her buildings hewn as for Titans,
Marvellous, rhythmic, a child of the gods with marble for raiment,
Smiting the vision with harmony, splendid and mighty and golden,
Ilion stood up around him entrenched in her giant defences.
Strength was uplifted on strength and grandeur supported by grandeur;
Beauty lay in her lap. Remote, hieratic and changeless,
Filled with her deeds and her dreams her gods looked out on the Argive,
Helpless and dumb with his hate as he gazed on her, they too like mortals
Knowing their centuries past, not knowing the morrow before them.
Dire were his eyes upon Troya the beautiful, his face like a doom-mask:
All Greece gazed in them, hated, admired, grew afraid, grew relentless.
But to the Greek Deiphobus cried and he turned from his passion
Fixing his ominous eyes with the god in them straight on the Trojan:
“Messenger, voice of Achaia, wherefore confronting the daybreak
Comest thou driving thy car from the sleep of the tents that besiege us?
Fateful, I deem, was the thought that, conceived in the silence of midnight,
Raised up thy aged limbs from the couch of their rest in the stillness,—
Thoughts of a mortal but forged by the Will that uses our members
And of its promptings our speech and our acts are the tools and the image.
Oft from the veil and the shadow they leap out like stars in their brightness,
Lights that we think our own, yet they are but tokens and counters,
Signs of the Forces that flow through us serving a Power that is secret.
What in the dawning bringst thou to Troya the mighty and dateless
Now in the ending of Time when the gods are weary of struggle?
Sends Agamemnon challenge or courtesy, Greek, to the Trojans?”
High like the northwind answered the voice of the doom from Achaia:
“Trojan Deiphobus, daybreak, silence of night and the evening

Ilion—Book I
Sink and arise and even the strong sun rests from his splendour.
Not for the servant is rest nor Time is his, only his death-pyre.
I have not come from the monarch of men or the armoured assembly
Held on the wind-swept marge of the thunder and laughter of ocean.
One in his singleness greater than kings and multitudes sends me.
I am a voice out of Phthia, I am the will of the Hellene.
Peace in my right I bring to you, death in my left hand. Trojan,
Proudly receive them, honour the gifts of the mighty Achilles.
Death accept, if Ate deceives you and Doom is your lover,
Peace if your fate can turn and the god in you chooses to hearken.
Full is my heart and my lips are impatient of speech undelivered.
It was not made for the streets or the market, nor to be uttered
Meanly to common ears, but where counsel and majesty harbour
Far from the crowd in the halls of the great and to wisdom and foresight
Secrecy whispers, there I will speak among Ilion’s princes.”
“Envoy,” answered the Laomedontian, “voice of Achilles,
Vain is the offer of peace that sets out with a threat for its prelude.
Yet will we hear thee. Arise who are fleetest of foot in the gateway,—
Thou, Thrasymachus, haste. Let the domes of the mansion of Ilus
Wake to the bruit of the Hellene challenge. Summon Aeneas.”
Even as the word sank back into stillness, doffing his mantle
Started to run at the bidding a swift-footed youth of the Trojans
First in the race and the battle, Thrasymachus son of Aretes.
He in the dawn disappeared into swiftness. Deiphobus slowly,
Measuring Fate with his thoughts in the troubled vasts of his spirit,
Back through the stir of the city returned to the house of his fathers,
Taming his mighty stride to the pace infirm of the Argive.

But with the god in his feet Thrasymachus rapidly running
Came to the halls in the youth of the wonderful city by Ilus
Built for the joy of the eye; for he rested from war and, triumphant,
Reigned adored by the prostrate nations. Now when all ended,
Last of its mortal possessors to walk in its flowering gardens,
Great Anchises lay in that luminous house of the ancients
Soothing his restful age, the far-warring victor Anchises,
High Bucoleon’s son and the father of Rome by a goddess;
Lonely and vagrant once in his boyhood divine upon Ida
White Aphrodite ensnared him and she loosed her ambrosial girdle
Seeking a mortal’s love. On the threshold Thrasymachus halted
Looking for servant or guard, but felt only a loneness of slumber
Drawing the soul’s sight within away from its life and things human;
Soundless, unheeding, the vacant corridors fled into darkness.
He to the shades of the house and the dreams of the echoing rafters
Trusted his high-voiced call, and from chambers still dim in their twilight
Strong Aeneas armoured and mantled, leonine striding,
Came, Anchises’ son; for the dawn had not found him reposing,
But in the night he had left his couch and the clasp of Creusa,
Rising from sleep at the call of his spirit that turned to the waters
Prompted by Fate and his mother who guided him, white Aphrodite.
Still with the impulse of speed Thrasymachus greeted Aeneas:
“Hero Aeneas, swift be thy stride to the Ilian hill-top.
Dardanid, haste! for the gods are at work; they have risen with the morning,
Each from his starry couch, and they labour. Doom, we can see it,
Glows on their anvils of destiny, clang we can hear of their hammers.
Something they forge there sitting unknown in the silence eternal,
Whether of evil or good it is they who shall choose who are masters
Calm, unopposed; they are gods and they work out their iron caprices.
Troy is their stage and Argos their background; we are their puppets.
Always our voices are prompted to speech for an end that we know not,
Always we think that we drive, but are driven. Action and impulse,
Yearning and thought are their engines, our will is their shadow and helper.
Now too, deeming he comes with a purpose framed by a mortal,
Shaft of their will they have shot from the bow of the Grecian leaguer,
Lashing themselves at his steeds, Talthybius sent by Achilles.”
“Busy the gods are always, Thrasymachus son of Aretes,
Weaving Fate on their looms, and yesterday, now and tomorrow
Are but the stands they have made with Space and Time for their timber,
Frame but the dance of their shuttle. What eye unamazed by their workings
Ever can pierce where they dwell and uncover their far-stretching purpose?
Silent they toil, they are hid in the clouds, they are wrapped with the
midnight.
Yet to Apollo I pray, the Archer friendly to mortals,
Yet to the rider on Fate I abase myself, wielder of thunder,
Evil and doom to avert from my fatherland. All night Morpheus,
He who with shadowy hands heaps error and truth upon mortals,
Stood at my pillow with images. Dreaming I erred like a phantom
Helpless in Ilion's streets with the fire and the foeman around me.
Red was the smoke as it mounted triumphant the house-top of Priam,
Clang of the arms of the Greeks was in Troya, and thwarting the clangour
Voices were crying and calling me over the violent Ocean
Borne by the winds of the West from a land where Hesperus harbours.”
Brooding they ceased, for their thoughts grew heavy upon them and
voiceless.

Then, in a farewell brief and unthought and unconscious of meaning,
Parting they turned to their tasks and their lives now close but soon severed:
Destined to perish even before his perishing nation,
Back to his watch at the gate sped Thrasymachus rapidly running;
Large of pace and swift, but with eyes absorbed and unseeing,
Driven like a car of the gods by the whip of his thoughts through the
highways,

Turned to his mighty future the hero born of a goddess.
One was he chosen to ascend into greatness through fall and disaster,
Loser of his world by the will of a heaven that seemed ruthless and adverse,
Founder of a newer and greater world by daring adventure.
Now, from the citadel's rise with the townships crowding below it
High towards a pondering of domes and the mystic Palladium climbing,
Fronted with the morning ray and joined by the winds of the ocean,
Fate-weighed up Troy's slope strode musing strong Aeneas.
Under him silent the slumbering roofs of the city of Ilus
Dreamed in the light of the dawn; above watched the citadel, sleepless
Lonely and strong like a goddess white-limbed and bright on a hill-top,
Looking far out at the sea and the foe and the prowling of danger.
Over the brow he mounted and saw the palace of Priam,
Home of the gods of the earth, Laomedon's marvellous vision
Held in the thought that accustomed his will to unearthly achievement
And in the blaze of his spirit compelling heaven with its greatness,
Dreamed by the harp of Apollo, a melody caught into marble.
Out of his mind it arose like an epic canto by canto;
Each of its halls was a strophe, its chambers lines of an epode,
Victor chant of Ilion's destiny. Absent he entered,
Voiceless with thought, the brilliant megaron crowded with paintings,
Paved with a splendour of marble, and saw Deiphobus seated,
Son of the ancient house by the opulent hearth of his fathers,
And at his side like a shadow the grey and ominous Argive.
Happy of light like a lustrous star when it welcomes the morning,
Brilliant, beautiful, glamoured with gold and a fillet of gem-fire,
Paris, plucked from the song and the lyre by the Grecian challenge,
Came with the joy in his face and his eyes that Fate could not alter.
Ever a child of the dawn at play near a turn of the sun-roads,
Facing destiny's look with the careless laugh of a comrade,
He with his vision of delight and beauty brightening the earth-field
Passed through its peril and grief on his way to the ambiguous Shadow.
Last from her chamber of sleep where she lay in the Ilian mansion
Far in the heart of the house with the deep-bosomed daughters of Priam,
Noble and tall and erect in a nimbus of youth and of glory,
Claiming the world and life as a fief of her strength and her courage,
Dawned through a doorway that opened to distant murmurs and laughter,
Capturing the eye like a smile or a sunbeam, Penthesilea.
She from the threshold cried to the herald, crossing the marble,
Regal and fleet, with her voice that was mighty and dire in its sweetness.
“What with such speed has impelled from the wind-haunted beaches of
Troas,
Herald, thy car though the sun yet hesitates under the mountains?
Comest thou humbler to Troy, Talthybius, now than thou camest
Once when the streams of my East sang low to my ear, not this Ocean
Loud, and I roamed in my mountains uncalled by the voice of Apollo?
Bringest thou dulcet-eyed peace or, sweeter to Penthesilea,
Challenge of war when the spears fall thick on the shields of the fighters,
Lightly the wheels leap onward chanting the anthem of Ares,
Death is at work in his fields and the heart is enamoured of danger?
What says Odysseus, the baffled Ithacan? what Agamemnon?
Are they then weary of war who were rapid and bold and triumphant,
Now that their gods are reluctant, now victory darts not from heaven
Down from the clouds above Ida directing the luminous legions
Armed by Fate, now Pallas forgets, now Poseidon slumbers?
Bronze were their throats to the battle like bugles blaring in chorus;
Mercy they knew not, but shouted and ravened and ran to the slaughter
Eager as hounds when they chase, till a woman met them and stayed them,
Loud my war-shout rang by Scamander. Herald of Argos,
What say the vaunters of Greece to the virgin Penthesilea?”

High was the Argive’s answer confronting the mighty in Troya. “Princes of Pergama, whelps of the lion who roar for the mellay, Suffer my speech! It shall ring like a spear on the hearts of the mighty. Blame not the herald; his voice is an impulse, an echo, a channel. Now for the timbrels of peace and now for the drums of the battle. And I have come from no cautious strength, from no half-hearted speaker, But from the Phthian. All know him! Proud is his soul as his fortunes, Swift as his sword and his spear are the speech and the wrath from his bosom. I am his envoy, herald am I of the conquering Argives. Has not one heard in the night when the breezes whisper and shudder, Dire, the voice of a lion unsatisfied, gnawed by his hunger, Seeking his prey from the gods? For he prowls through the glens of the mountains, Errs a dangerous gleam in the woodlands, fatal and silent. So for a while he endures, for a while he seeks and he suffers Patient yet in his terrible grace as assured of his banquet; But he has lacked too long and he lifts his head and to heaven Roars in his wonder, incensed, impatiently. Startled the valleys Shrink from the dreadful alarum, the cattle gallop to shelter. Arming the herdsmen cry to each other for comfort and courage.”

So Talthybius spoke, as a harper voicing his prelude Touches his strings to a varied music, seeks for a concord; Long his strain he prepares. But one broke in on the speaker, — Sweet was his voice like a harp’s though heard in the front of the onset, — One of the sons of Fate by the people loved whom he ruined, Leader in counsel and battle, the Priamid, he in his beauty Carelessly walking who scattered the seeds of Titanic disaster. “Surely thou dreamedst at night and awaking thy dreams have not left thee! Hast thou not woven thy words to intimidate children in Argos Sitting alarmed in the shadows who listen pale to their nurses? Greek, thou art standing in Ilion now and thou facest her princes. Use not thy words but thy king’s. If friendship their honey-breathed burden, Friendship we clasp from Achilles, but challenge outpace with our challenge Meeting the foe ere he moves in his will to the clash of encounter. Such is the way of the Trojans since Phryx by the Hellespont halting Seated Troy on her hill with the Ocean for comrade and sister.”
Shaking in wrath his filleted head Talthybius answered:

"Princes, ye speak their words who drive you! Thus said Achilles:

‘Rise, Talthybius, meet in her spaces the car of the morning;
Challenge her coursers divine as they bound through the plains of the Troad.

Hasten, let not the day wear gold ere thou stand in her ramparts.

Herald charged with my will to a haughty and obstinate nation,
Speak in the palace of Priam the word of the Phthian Achilles.
Freely and not as his vassal who leads, Agamemnon, the Argive,
But as a ruler in Hellas I send thee, king of my nations.

Long I have walked apart from the mellay of gods in the Troad,
Long has my listless spear leaned back on the peace of my tent-side,
Deaf to the talk of the trumpets, the whine of the chariots speeding;
Sole with my heart I have lived, unheeding the Hellene murmur,
Chid when it roared for the hunt the lion pack of the war-god,
Day after day I walked at dawn and in blush of the sunset,
Far by the call of the seas and alone with the gods and my dreaming,
Leaned to the unsatisfied chant of my heart and the rhythms of ocean,
Sung to by hopes that were sweet-lipped and vain. For Polyxena's brothers
Still are the brood of the Titan Laomedon slain in his greatness,
Engines of God unable to bear all the might that they harbour.
Awe they have chid from their hearts, nor our common humanity binds them,
Stay have they none in the gods who approve, giving calmness to mortals:
But like the Titans of old they have hugged to them grandeur and ruin.
Seek then the race self-doomed, the leaders blinded by heaven—
Not in the agora swept by the winds of debate and the shoutings
Lion-voiced, huge of the people! In Troya's high-crested mansion
Speak out my word to the hero Deiphobus, head of the mellay,
Paris the racer of doom and the stubborn strength of Aeneas.

Herald of Greece, when thy feet shall be pressed on the gold and the marble,
Rise in the Ilian megaron, curb not the cry of the challenge.
Thus shalt thou say to them striking the ground with the staff of defiance,
Fronting the tempests of war, the insensate, the gamblers with downfall.

"Princes of Troy, I have sat in your halls, I have slept in your chambers;

Not in the battle alone as a warrior glad of his foemen,
Glad of the strength that mates with his own, in peace we encountered.
Marvelling I sat in the halls of my enemies, close to the bosoms
Scarred by the dints of my sword and the eyes I had seen through the battle,
Ate rejoicing the food of the East at the tables of Priam
Served by the delicatest hands in the world, by Hecuba's daughter,
Or with our souls reconciled in some careless and rapturous midnight
Drank of the sweetness of Phrygian wine, admiring your bodies
Shaped by the gods indeed, and my spirit revolted from hatred,—
Softening it yearned in its strings to the beauty and joy of its foemen,
Yearned from the death that o'ertakes and the flame that cries and desires
Even at the end to save and even on the verge to deliver
Troy and her wonderful works and her sons and her deep-bosomed daughters.

Warned by the gods who reveal to the heart what the mind cannot hearken
Deaf with its thoughts, I offered you friendship, I offered you bridal,
Hellas for comrade, Achilles for brother, the world for enjoyment
Won by my spear. And one heard my call and one turned to my seeking.
Why is it then that the war-cry sinks not to rest by the Xanthus?
We are not voices from Argolis, Lacedaemonian tricksters,
Splendid and subtle and false; we are speakers of truth, we are Hellenes,
Men of the northland faithful in friendship and noble in anger;
Strong like our fathers of old. But you answered my truth with evasion
Hoping to seize what I will not yield and you flattered your people.
Long have I waited for wisdom to dawn on your violent natures.
Lonely I paced o'er the sands by the thousand-throated waters
Praying to Pallas the wise that the doom might turn from your mansions,
Buildings delightful, gracious as rhythms, lyrics in marble,
Works of the transient gods, and I yearned for the end of the war-din
Hoping that Death might relent to the beautiful sons of the Trojans.
Far from the cry of the spears, from the speed and the laughter of axles,
Heavy upon me like iron the intolerable yoke of inaction
Weighed like a load on a runner. The war-cry rose by Scamander;
Xanthus was crossed on a bridge of the fallen, not by Achilles.
Often I stretched out my hand to the spear, for the Trojan beaches
Rang with the voice of Deiphobus shouting and slaying the Argives;
Often my heart like an anxious mother for Greece and her children
Leaped, for the air was full of the leonine roar of Aeneas.
Always the evening fell or the gods protected the Argives.
Then by the moat of the ships, on the hither plain of the Xanthus
New was the voice that climbed through the din and sailed on the breezes,
High, insistent, clear, and it shouted an unknown war-cry
Threatening doom to the peoples. A woman had come in to aid you,
Regal and insolent, fair as the morning and fell as the northwind,
Freed from the distaff who grasps at the sword and she spurns at subjection
Breaking the rule of the gods. She is turbulent, swift in the battle.
Clanging her voice of the swan as a summons to death and disaster,
Fleet-footed, happy and pitiless, laughing she runs to the slaughter;
Strong with the gait that allures she leaps from her car to the slaying,
Dabbles in blood smooth hands like lilies. Europe astonished
Reels from her shock to the Ocean. She is the panic and mellay,
War is her paean, the chariots thunder of Penthesilea.
Doom was her coming, it seems, to the men of the West and their legions;
Ajax sleeps for ever, Meriones lies on the beaches.
One by one they are falling before you, the great in Achaia.
Ever the wounded are borne like the stream of the ants when they forage
Past my ships, and they hush their moans as they near and in silence
Gaze at the legions inactive accusing the fame of Achilles.
Still have I borne with you, waited a little, looked for a summons,
Longing for bridal torches, not flame on the Ilian housetops,
Blood in the chambers of sweetness, the golden amorous city
Swallowed by doom. Not broken I turned from the wrestle Titanic,
Hopeless, weary of toil in the ebb of my glorious spirit,
But from my stress of compassion for doom of the kindred nations,
But for her sake whom my soul desires, for the daughter of Priam.
And for Polyxena's sake I will speak to you yet as your lover
Once ere the Fury, abrupt from Erebus, deaf to your crying,
Mad with the joy of the massacre, seizes on wealth and on women
Calling to Fire as it strides and Ilion sinks into ashes.
Yield; for your doom is impatient. No longer your helpers hasten,
Legions swift to your call; the yoke of your pride and your splendour
Lies not now on the nations of earth as when Fortune desired you,
Strength was your slave and Troya the lioness hungrily roaring
Threatened the western world from her ramparts built by Apollo.
Gladly released from the thraldom they hated, the insolent shackles
Curbing their manhood the peoples arise and they pray for your ruin;
Piled are their altars with gifts; their blessings help the Achaians.
Memnon came, but he sleeps, and the faces swart of his nation
Darken no more like a cloud over thunder and surge of the onset.  
Wearily Lycia fights; far fled are the Carian levies.  
Thrace retreats to her plains preferring the whistle of stormwinds  
Or on the banks of the Strymon to wheel in her Orphean measure,  
Not in the revel of swords and fronting the spears of the Hellenes.  
Princes of Pergama, open your gates to our Peace who would enter,  
Life in her gracious clasp and forgetfulness, grave of earth's passions,  
Healer of wounds and the past. In a comity equal, Hellenic,  
Asia join with Greece, one world from the frozen rivers  
Trod by the hooves of the Scythian to farthest undulant Ganges.  
Tyndarid Helen resign, the desirable cause of your danger,  
Back to Greece that is empty long of her smile and her movements.  
Broder with riches her coming, pomp of her slaves and the waggons  
Endlessly groaning with gold that arrive with the ransom of nations.  
So shall the Fury be pacified, she who exultant from Sparta  
Breathed in the sails of the Trojan ravisher helping his oarsmen.  
So shall the gods be appeased and the thoughts of their wrath shall be cancelled,  
Justice contented trace back her steps and for brands of the burning  
Torches delightful shall break into Troy with the swords of the bridal.  
I like a bridegroom will seize on your city and clasp and defend her  
Safe from the envy of Argos, from Lacedaemonian hatred,  
Safe from the hunger of Crete and the Locrian's violent rapine.  
But if you turn from my voice and you hearken only to Ares  
Crying for battle within you deluded by Hera and Pallas,  
Swiftly the fierce death's surges shall close over Troy and her ramparts  
Built by the gods shall be stubble and earth to the tread of the Hellene.  
For to my tents I return not, I swear it by Zeus and Apollo,  
Master of Truth who sits within Delphi fathomless brooding  
Sole in the caverns of Nature and hearkens her underground murmur,  
Giving my oath to his keeping mute and stern who forgets not,  
Not from the panting of Ares' toil to repose, from the wrestle  
Locked of hope and death in the ruthless clasp of the mellay  
Leaving again the Trojan ramparts unmounted, leaving  
Greece unavenged, the Aegean a lake and Europe a province.  
Choosing from Hellas exile, from Peleus and Deidamia,  
Choosing the field for my chamber of sleep and the battle for hearthside
I shall go warring on till Asia enslaved to my footsteps
Feels the tread of the God in my sandal pressed on her bosom.
Rest shall I then when the borders of Greece are fringed with the Ganges;
Thus shall the past pay its Titan ransom and, Fate her balance
Changing, a continent ravished suffer the fortune of Helen.
This I have sworn allying my will to Zeus and Ananke.””

So was it spoken, the Phthian challenge. Silent the heroes
Looked back amazed on their past and into the night of their future.
Silent their hearts felt a grasp from gods and had hints of the heavens.
Hush was awhile in the room, as if Fate were trying her balance
Poised on the thoughts of her mortals. At length with a musical laughter
Sweet as the jangling of bells upon anklets leaping in measure
Answered aloud to the gods the virgin Penthesilea.
“Long I had heard in my distant realms of the fame of Achilles,
Ignorant still while I played with the ball and ran in the dances
Thinking not ever to war; but I dreamed of the shock of the hero.
So might a poet inland who imagines the rumour of Ocean,
Yearn with his lust for the giant upheaval, the dance as of hill-tops,
Toss of the yellow mane and the tawny march and the voices
Lionlike claiming earth as a prey for the clamorous waters.
So have I longed as I came for the cry and the speed of Achilles.
But he has lurked in his ships, he has sulked like a boy that is angry.
Glad am I now of his soul that arises hungry for battle,
Glad, whether victor I live or defeated travel the shadows.
Once shall my spear have rung on the shield of the Phthian Achilles.
Peace I desire not. I came to a haughty and resolute nation,
Honour and fame they cherish, not life by the gift of a foeman.
Sons of the ancient house on whom Ilion looks as on Titans,
Chiefs whom the world admires, do you fear then the shock of the Phthian?
Gods, it is said, have decided your doom. Are you less in your greatness?
Are you not gods to reverse their decrees or unshaken to suffer?
Memnon is dead and the Carians leave you? Lycia lingers?
But from the streams of my East I have come to you, Penthesilea.””

“Virgin of Asia,” answered Talthybius, “doom of a nation
Brought thee to Troy and her haters Olympian shielded thy coming,
Vainly who feedest men’s hearts with a hope that the gods have rejected.
Doom in thy sweet voice utters her counsels robed like a woman.”
Answered the virgin disdainfully, wroth at the words of the Argive:
“Hast thou not ended the errand they gave thee, envoy of Hellas?
Not, do I think, as our counsellor cam’st thou elected from Argos,
Nor as a lover to Troy hast thou hastened with amorous footing
Hurting thy heart with her frowardness. Hatred and rapine sent thee,
Greed of the Ilian gold and lust of the Phrygian women,
Voice of Achaian aggression! Doom am I truly; let Gnossus
Witness it, Salamis speak of my fatal arrival and Argos
Silent remember her wounds.” But the Argive answered the virgin:
“Hearken then to the words of the Hellene, Penthesilea.
‘Virgin to whom earth’s strongest are corn in the sweep of thy sickle,
Lioness vain of thy bruit who besiegest the paths of the battle!
Art thou not satiate yet? hast thou drunk then so little of slaughter?
Death has ascended thy car; he has chosen thy hand for his harvest.
But I have heard of thy pride and disdain, how thou scornest the Argives
And of thy fate thou complaineast that ever averse to thy wishes
Cloisters the Phthian and matches with weaklings Penthesilea.
“Not of the Ithacan boar nor the wild-cat littered in Locris
Nor of the sleek-coat Argive wild-bulls sates me the hunting;”
So hast thou said, “I would bury my spear in the lion of Hellas.”
Blind and infatuate, art thou not beautiful, bright as the lightning?
Were not thy limbs made cunningly linking sweetness to sweetness?
Is not thy laughter an arrow surprising hearts imprudent?
Charm is the seal of the gods upon woman. Distaff and girdle,
Work of the jar at the well and the hush of our innermost chambers,
These were appointed thee, but thou hast scorned them, O Titaness, grasping
Rather the shield and the spear. Thou, obeying thy turbulent nature,
Tramplest o’er laws that are old to the pleasure thy heart has demanded.
Rather bow to the ancient Gods who are seated and constant.
But for thyself thou passest and what hast thou gained for the aeons
Mingled with men in their works and depriving the age of thy beauty?
Fair art thou, woman, but fair with a bitter and opposite sweetness
Clanging in war when thou matchest thy voice with the shout of assemblies.
Not to this end was thy sweetness made and the joy of thy members,
Not to this rhythm Heaven tuned its pipe in thy throat of enchantment,
Armoured like men to go warring forth and with hardness and fierceness
Mix in the strife and the hate while the varied meaning of Nature

www.holybooks.com
Perishes hurt in its heart and life is emptied of music.  
Long have I marked in your world a madness. Monarchs descending  
Court the imperious mob of their slaves and their suppliant gesture  
Shameless and venal offends the majestic tradition of ages:  
Princes plead in the agora; spurred by the tongue of a coward,  
Heroes march to an impious war at a priestly bidding.  
Gold is sought by the great with the chaffering heart of the trader.  
Asia fails and the Gods are abandoning Ida for Hellas.  
Why must thou come here to perish, O noble and exquisite virgin,  
Here in a cause not thine, in a quarrel remote from thy beauty,  
Leaving a land that is lovely and far to be slain among strangers?  
Girl, to thy rivers go back and thy hills where the grapes are aspirant.  
Trust not a fate that indulges; for all things, Penthesilea,  
Break with excess and he is the wisest who walks by a measure.  
Yet, if thou wilt, thou shalt meet me today in the shock of the battle:  
There will I give thee the fame thou desirest; captive in Hellas,  
Men shall point to thee always, smiling and whispering, saying,  
“This is the woman who fought with the Greeks, overthrowing their heroes;  
This is the slayer of Ajax, this is the slave of Achilles.””  
Then with her musical laughter the fearless Penthesilea:  “Well do I hope that Achilles enslaved shall taste of that glory  
Or on the Phrygian fields lie slain by the spear of a woman.”  
But to the herald Achaian the Priamid, leader of Troya:  “Rest in the halls of thy foes and ease thy fatigue and thy winters.  
Herald, abide till the people have heard and reply to Achilles.  
Not as the kings of the West are Ilion’s princes and archons,  
Monarchs of men who drive their nations dumb to the battle.  
Not in the palace of Priam and not in the halls of the mighty  
Whispered councils prevail and the few dispose of the millions;  
But with their nation consulting, feeling the hearts of the commons  
Ilion’s princes march to the war or give peace to their foemen.  
Lightning departs from her kings and the thunder returns from her people  
Met in the ancient assembly where Ilus founded his columns  
And since her famous centuries, names that the ages remember  
Leading her, Troya proclaims her decrees to obedient nations.”  
Ceasing he cried to the thralls of his house and they tended the Argive.  
Brought to a chamber of rest in the luminous peace of the mansion,
Grey he sat and endured the food and the wine of his foemen,
Chiding his spirit that murmured within him and gazed undelighted,
Vexed with the endless pomps of Laomedon. Far from those glories
Memory winged it back to a sward half-forgotten, a village
Nestling in leaves and low hills watching it crowned with the sunset.
So for his hour he abode in earth’s palace of lordliest beauty,
But in its caverns his heart was weary and, hurt by the splendours,
Longed for Greece and the smoke-darkened roof of a cottage in Argos,
Eyes of a woman faded and children crowding the hearthside.
Joyless he rose and eastward expected the sunrise on Ida.
BOOK II

The Book of the Statesman

Now from his cycle sleepless and vast round the dance of the earth-globe
Gold Hyperion rose in the wake of the dawn like the eyeball
Flaming of God revealed by his uplifted luminous eyelid.
Troy he beheld and he viewed the transient labour of mortals.
All her marble beauty and pomp were laid bare to the heavens.
Sunlight streamed into Ilion waking the voice of her gardens,
Amorous seized on her ways, lived glad in her plains and her pastures,
Kissed her leaves into brightness of green. As a lover the last time
Yearns to the beauty desired that again shall not wake to his kisses,
So over Ilion doomed leaned the yearning immense of the sunrise.
She like a wordless marble memory dreaming for ever
Lifted the gaze of her perishable immortality sunwards.
All her human past aspired in the clearness eternal,
Temples of Phryx and Dardanus touched with the gold of the morning,
Columns triumphant of Ilus, domes of their greatness enamoured,
Stones that intended to live; and her citadel climbed up to heaven
White like the soul of the Titan Laomedon claiming his kingdoms,
Watched with alarm by the gods as he came. Her bosom maternal
Thrilled to the steps of her sons and a murmur began in her high-roads.
Life renewed its ways which death and sleep cannot alter;
Life that pursuing her boundless march to a goal which we know not,
Ever her own law obeys, not our hopes, who are slaves of her heart-beats.
Then as now men walked in the round which the gods have decreed them
Eagerly turning their eyes to the lure and the tool and the labour.
Chained is their gaze to the span in front, to the gulfs they are blinded
Meant for their steps. The seller opened his shop and the craftsman
Bent o’er his instruments handling the work he never would finish,
Busy as if their lives were for ever, today in its evening
Sure of tomorrow. The hammers clanged and the voice of the markets
Waking desired its daily rumour. Nor only the craftsman,
Only the hopes of the earth, but the hearts of her votaries kneeling
Came to her marble shrines and upraised to our helpers eternal
Missioned the prayer and the hymn or silent, subtly adoring
Ventured upwards in incense. Loud too the clash of the cymbals
Filled all the temples of Troy with the cry of our souls to the azure.
Prayers breathed in vain and a cry that fell back with Fate for its answer!
Children laughed in her doorways; joyous they played, by their mothers
Smiled on still, but their tender bodies unknowing awaited
Grecian spearpoints sharpened by Fate for their unripe bosoms,
Tasks of the slave in Greece. Like bees round their honey-filled dwellings
Murmuring swarmed to the well-heads the large-eyed daughters of Troya,
Deep-bosomed, limbed like the gods, — glad faces of old that were sentient
Rapturous flowers of the soul, bright bodies that lived under darkness
Nobly massed of their locks like day under night made resplendent,
Daughters divine of the earth in the ages when heaven was our father.
They round Troy's well-heads flowerlike satisfied morn with their beauty
Or in the river baring their knees to the embrace of the coolness
Dipped their white feet in the clutch of his streams, in the haste of Scamander,
Lingering this last time with laughter and talk of the day and the morrow
Leaned to the hurrying flood. All his swiftnesses raced down to meet them,
Crowding his channel with dancing billows and turbulent murmurs.
Xanthus primaeval met these waves of our life in its passing
Even as of old he had played with Troy's ancient fair generations
Mingling his deathless voice with the laughter and joy of their ages,
Laughter of dawns that are dead and a joy that the earth has rejected.
Still his whispering trees remembered their bygone voices.
Hast thou forgotten, O river of Troy? Still, still we can hear them
Now, if we listen long in our souls, the bygone voices.
Earth in her fibres remembers, the breezes are stored with our echoes.
Over the stone-hewn steps for their limpid orient waters
Joyous they leaned and they knew not yet of the wells of Mycenae,
Drew not yet from Eurotas the jar for an alien master,
Mixed not Peneus yet with their tears. From the clasp of the current
Now in their groups they arose and dispersed through the streets and the
byways,

Turned from the freedom of earth to the works and the joy of the hearthside,
Lightly they rose and returned through the lanes of the wind-haunted city
Swaying with rhythmical steps while the anklets jangled and murmured.
Silent temples saw them passing; you too, O houses
Built with such hopes by mortal man for his transient lodging;
Fragrant the gardens strewed on dark tresses their white-smiling jasmines
Dropped like a silent boon of purity soft from the branches:
Flowers by the wayside were budding, cries flew winged round the

tree-tops.

Bright was the glory of life in Ilion city of Priam.

   Thrice to the city the doom-blast published its solemn alarum;
   Blast of the trumpets that call to assembly clamoured through Troya
   Thrice and were still. From garden and highway, from palace and temple
   Turned like a steed to the trumpet, rejoicing in war and ambition,
   Gathered alert to the call the democracy hated of heaven.

First in their ranks upbearing their age as Atlas his heavens,
Eagle-crested, with hoary hair like the snow upon Ida,
Ilios's senators paced, Antenor and wide-browed Anchises,
Athamas famous for ships and the war of the waters, Tryas
Still whose name was remembered by Oxus the orient river,
Astochoes and Ucalegon, dateless Pallachus, Aetor,
Aspetus who of the secrets divine knew all and was silent,
Ascanus, Iliones, Alcesiphron, Orus, Aretes.

Next from the citadel came with the voice of the heralds before him
Priam and Priam's sons, Aeneas leonine striding,
Followed by the heart of a nation adoring her Penthesilea.

All that was noble in Troy attended the regal procession
Marching in front and behind and the tramp of their feet was a rhythm
Tuned to the arrogant fortunes of Ilion ruled by incarnate
Demigods, Ilus and Phryx and Dardanus, Tros of the conquests,
Tros and far-ruling Laomedon who to his soul's strong labour
Drew down the sons of the skies and was served by the ageless immortals.

Into the agora vast and aspirant besieged by its columns
Bathed and anointed they came like gods in their beauty and grandeur.

Last like the roar of the winds came trampling the surge of the people.
Clamorous led by a force obscure to its ultimate fatal
Session of wrath the violent mighty democracy hastened;
Thousands of ardent lives with the heart yet unslain in their bosoms
Lifted to heaven the voice of man and his far-spreading rumour.

Singing the young men with banners marched in their joyous processions,
Trod in martial measure or dancing with lyrical paces
Chanted the glory of Troy and the wonderful deeds of their fathers.

Into the columned assembly where Ilus had gathered his people,
Thousands on thousands the tramp and the murmur poured; in their
armoured
Glittering tribes they were ranked, an untameable high-hearted nation
Waiting the voice of its chiefs. Some gazed on the greatness of Priam
Ancient, remote from their days, the last of the gods who were passing,
Left like a soul unaccompanied in worlds where his strength shall not
conquer:

Sole like a column gigantic alone on a desolate hill-side
Older than mortals he seemed and mightier. Many in anger
Aimed their hostile looks where calm though by heaven abandoned,
Left to his soul and his lucid mind and its thoughts unavailing,
Leading the age-chilled few whom the might of their hearts had not blinded,
Famous Antenor was seated, the fallen unpopular statesman,
Wisest of speakers in Troy but rejected, stoned and dishonoured.
Silent, aloof from the people he sat, a heart full of ruins.
Low was the rumour that swelled like the hum of the bees in a meadow
When with the thirst of the honey they swarm on the thyme and the linden,
Hundreds humming and flitting till all that place is a murmur.
Then from his seat like a tower arising Priam the monarch
Slowly erect in his vast tranquillity silenced the people:
Lonely, august he stood like one whom death has forgotten,
Reared like a column of might and of silence over the assembly.
So Olympus rises alone with his snows into heaven.
Crowned were his heights by the locks that swept like the mass of the
snow-swathe

Clothing his giant shoulders; his eyes of deep meditation,
Eyes that beheld now the end and accepted it like the beginning
Gazed on the throng of the people as on a pomp that is painted:
Slowly he spoke like one who is far from the scenes where he sojourns.
“Leader of Ilion, hero Deiphobus, thou who hast summoned
Troy in her people, arise; say wherefore thou callest us. Evil
Speak thou or good, thou canst speak that only: Necessity fashions
All that the unseen eye has beheld. Speak then to the Trojans;
Say on this dawn of her making what issue of death or of triumph
Fate in her suddenness puts to the unseeing, what summons to perish
Send to this nation men who revolt and gods who are hostile.”

Rising Deiphobus spoke, in stature less than his father,
Less in his build, yet the mightiest man and tallest whom coursers
Bore or his feet to the fight since Ajax fell by the Xanthus.
“People of Ilion, long have you fought with the gods and the Argives
Slaying and slain, but the years persist and the struggle is endless.
Fainting your helpers cease from the battle, the nations forsake you.
Asia weary of strenuous greatness, ease-enamoured
Suffers the foot of the Greek to tread on the beaches of Troas.
Yet have we striven for Troy and for Asia, men who desert us.
Not for ourselves alone have we fought, for our life of a moment!
Once if the Greeks were triumphant, once if their nations were marshalled
Under some far-seeing chief, Odysseus, Peleus, Achilles,
Not on the banks of Scamander and skirts of the azure Aegean
Fainting would cease the audacious emprise, the Titanic endeavour;
Tigris would flee from their tread and Indus be drunk by their coursers.
Now in these days when each sun goes marvelling down that Troy stands yet
Suffering, smiting, alive, though doomed to all eyes that behold her,
Flinging back Death from her walls and bronze to the shock and the clamour,
Driven by a thought that has risen in the dawn from the tents on the beaches
Grey Talthybius’ chariot waits in the Ilian portals,
Voice of the Hellene demigod challenges timeless Troya.
Thus has he said to us: ‘Know you not Doom when she walks in your
heavens?
Feelst thou not then thy set, O sun who illuminedst Nature?
Stripped of helpers you stand alone against Doom and Achilles,
Left by the earth that served you, by heaven that helped you rejected:
Death insists at your gates and the flame and the sword are impatient.
None can escape the wheel of the gods and its vast revolutions!
Fate demands the joy and pride of the earth for the Argive,
Asia’s wealth for the lust of the young barbarian nations.
City divine, whose fame overroofed like heaven the nations,
Sink eclipsed in the circle vast of my radiance; Troya,
Joined to my northern realms deliver the East to the Hellene;
Ilion, to Hellas be yoked; wide Asia, fringe thou Peneus.
Lay down golden Helen, a sacrifice lovely and priceless
Cast by your weakness and fall on immense Necessity’s altar;
Yield to my longing Polyxena, Hecuba’s deep-bosomed daughter,
Her whom my heart desires. She shall leave with you peace and her healing
Joy of mornings secure and death repulsed from your hearthsides.
Yield these and live, else I leap on you, Fate in front, Hades behind me.
Bound to the gods by an oath I return not again from the battle
Till from high Ida my shadow extends to the Mede and Euphrates.
Let not your victories deceive you, steps that defeat has imagined;
Hear not the voice of your heroes; their fame is a trumpet in Hades:
Only they conquer while yet my horses champ free in their stables.
Earth cannot long resist the man whom Heaven has chosen;
Gods with him walk; his chariot is led; his arm is assisted.’
High rings the Hellene challenge, earth waits for the Ilian answer.
Always man’s Fate hangs poised on the flitting breath of a moment;
Called by some word, by some gesture it leaps, then ’tis graven, ’tis granite.
Speak! by what gesture high shall the stern gods recognise Troya?
Sons of the ancients, race of the gods, inviolate city,
Firmer my spear shall I grasp or cast from my hand and for ever?
Search in your hearts if your fathers still dwell in them, children of Teucer.”
So Deiphobus spoke and the nation heard him in silence,
Awed by the shadow vast of doom, indignant with Fortune.
    Calm from his seat Antenor arose as a wrestler arises,
    Tamer of beasts in the cage of the lions, eyeing the monsters
    Brilliant, tawny of mane, and he knows if his courage waver,
    Falter his eye or his nerve be surprised by the gods that are hostile,
    Death will leap on him there in the crowded helpless arena.
    Fearless Antenor arose, and a murmur swelled in the meeting
    Cruel and threatening, hoarse like the voice of the sea upon boulders;
    Hisses thrilled through the roar and one man cried to another,
    “Lo he will speak of peace who has swallowed the gold of Achaia!
    Surely the people of Troy are eunuchs who suffer Antenor
    Rising unharmed in the agora. Are there not stones in the city?
    Surely the steel grows dear in the land when a traitor can flourish.”
    Calm like a god or a summit Antenor stood in the uproar.
    But as he gazed on his soul came memory dimming the vision;
    For he beheld his past and the agora crowded and cheering,
    Passionate, full of delight while Antenor spoke to the people,
    Troy that he loved and his fatherland proud of her eloquent statesman.
    Tears to his eyes came thick and he gripped at the staff he was holding.
    Mounting his eyes met fully the tumult, mournful and thrilling,
Conquering men’s hearts with a note of doom in its sorrowful sweetness.

“People of Ilion, blood of my blood, O race of Antenor,
Once will I speak though you slay me; for who would shrink from
destruction

Knowing that soon of his city and nation, his house and his dear ones
All that remains will be a couch of trampled ashes? Athene,
Slain today may I join the victorious souls of our fathers,
Not for the anguish be kept and the irremediable weeping.
Loud will I speak the word that the gods have breathed in my spirit,
Strive this last time to save the death-destined. Who are these clamour
‘Hear him not, gold of the Greeks bought his words and his throat is
accursèd’?

Troy whom my counsels made great, hast thou heard this roar of their frenzy
Tearing thy ancient bosom? Is it thy voice, heaven-abandoned, my mother?
O my country, O my creatress, earth of my longings!
Earth where our fathers lie in their sacred ashes undying,
Memoried temples shelter the shrines of our gods and the altars
Pure where we worshipped, the beautiful children smile on us passing,
Women divine and the men of our nation! O land where our childhood
Played at a mother’s feet mid the trees and the hills of our country,
Hoping our manhood toiled and our youth had its seekings for godhead,—
Thou for our age keepst repose mid the love and the honour of kinsmen,
Silent our relics shall lie with the city guarding our ashes!
Earth who hast fostered our parents, earth who hast given us our offspring,
Soil that created our race where fed from the bosom of Nature
Happy our children shall dwell in the storied homes of their fathers,
Souls that our souls have stamped, sweet forms of ourselves when we perish!
Once even then have they seen thee in their hearts, or dreamed of thee ever
Who from thy spirit revolt and only thy name make an idol
Hating thy faithful sons and the cult of thy ancient ideal!
Wake, O my mother divine, remember thy gods and thy wisdom,
Silence the tongues that degrade thee, prophets profane of thy godhead.
Madmen, to think that a man who has offered his life for his country,
Served her with words and deeds and adored with victories and triumphs
Ever could think of enslaving her breast to the heel of a foeman!
Surely Antenor’s halls are empty, he begs from the stranger
Leading his sons and his children’s sons by the hand in the market
Showing his rags since his need is so bitter of gold from the Argives!
You who demand a reply when Laocoon lessens Antenor,
Hush then your feeble roar and your ear to the past and the distance
Turn. You fields that are famous for ever, reply for me calling,
Fields of the mighty mown by my sword’s edge, Chersonese conquered,
Thrace and her snows where we fought on the frozen streams and were victors
Then when they were unborn who are now your delight and your leaders.
Answer return, you columns of Ilus, here where my counsels
Made Troy mightier guiding her safe through the shocks of her foemen.
Gold! I have heaped it up high, I am rich with the spoils of your haters.
It was your fathers dead who gave me that wealth as my guerdon,
Now my reproach, your fathers who saw not the Greeks round their ramparts:
They were not cooped by an upstart race in the walls of Apollo,
Saw not Hector slain and Troilus dragged by his coursers.
Far over wrathful Jaxartes they rode; the shaken Achaian
Prostrate adored your strength who now shouts at your portals and conquers
Then when Antenor guided Troy, this old man, this traitor,
Not Laocoon, nay, not even Paris nor Hector.
But I have changed, I have grown a niggard of blood and of treasure,
Selfish, chilled as old men seem to the young and the headstrong,
Counselling safety and ease, not the ardour of noble decisions.
Come to my house and behold, my house that was filled once with voices.
Sons whom the high gods envied me crowded the halls that are silent.
Where are they now? They are dead, their voices are silent in Hades,
Fallen slaying the foe in a war between sin and the Furies.
Silent they went to the battle to die unmourned for their country,
Die as they knew in vain. Do I keep now the last ones remaining,
Sparing their blood that my house may endure? Is there any in Troya Speeds to the front of the mellay outstripping the sons of Antenor?
Let him arise and speak and proclaim it and bid me be silent.
Heavy is this war that you love on my heart and I hold you as madmen
Doomed by the gods, abandoned by Pallas, by Hera afflicted.
Who would not hate to behold his work undone by the foolish?
Who would not weep if he saw Laocoon ruining Troya,
Paris doomed in his beauty, Aeneas slain by his valour?
Still you need to be taught that the high gods see and remember,
Dream that they care not if justice be done on the earth or oppression!
Happy to live, aspire while you violate man and the immortals!
Vainly the sands of Time have been strewn with the ruins of empires,
Signs that the gods had left, but in vain. For they look for a nation,
One that can conquer itself having conquered the world, but they find none.
None has been able to hold all the gods in his bosom unslumbered,
All have grown drunken with force and have gone down to Hell and to Ate.
‘All have been thrust from their heights,’ say the fools; ‘we shall live and
for ever.

We are the people at last, the children, the favourites; all things
Only to us are permitted.’ They too descend to the silence,
Death receives their hopes and the void their stirrings of action.

“Eviller fate there is none than life too long among mortals.
I have conversed with the great who have gone, I have fought in their
war-cars;

Tros I have seen, Laomedon’s hand has dwelt on my temples.
Now I behold Laocoon, now our greatest is Paris.
First when Phryx by the Hellespont reared to the cry of the ocean
Hewing her stones as vast as his thoughts his high-seated fortress,
Planned he a lair for a beast of prey, for a pantheress dire-souled
Crouched in the hills for her bound or self-gathered against the avenger?
Dardanus shepherded Asia’s coasts and her sapphire-girt islands.
Mild was his rule like the blessing of rain upon fields in the summer.
Gladly the harried coasts reposed confessing the Phrygian,
Caria, Lycia’s kings and the Paphlagon, strength of the Mysian;
Minos’ Crete recovered the sceptre of old Rhadamanthus.
Ilus and Tros had strength in the fight like a far-striding Titan’s:
Troy triumphant following the urge of their souls to the vastness,
Helmeted, crowned like a queen of the gods with the fates for her coursers
Rode through the driving sleet of the spears to Indus and Oxus.
Then twice over she conquered the vanquished, with peace as in battle;
There where discord had clashed, sweet Peace sat girded with plenty,
There where tyranny counted her blows, came the hands of a father.
Neither had Teucer a soul like your chiefs’ who refounded this nation.
Such was the antique and noble tradition of Troy in her founders,
Builders of power that endured; but it perishes lost to their offspring,
Trampled, scorned by an arrogant age, by a violent nation.
Strong Anchises trod it down trampling victorious onwards
Stern as his sword and hard as the silent bronze of his armour.
More than another I praise the man who is mighty and steadfast,
Even as Ida the mountain I praise, a refuge for lions;
But in the council I laud him not, he who a god for his kindred,
Lives for the rest without bowels of pity or fellowship, lone-souled,
Scorning the world that he rules, who untamed by the weight of an empire
Holds allies as subjects, subjects as slaves and drives to the battle
Careless more of their wills than the courser’s yoked to his war-car.
Therefore they fought while they feared, but gladly abandon us falling.
Yet had they gathered to Teucer in the evil days of our nation.
Where are they now? Do they gather then to the dreaded Anchises?
Or has Aeneas helped with his counsels hateful to wisdom?
Hateful is this, abhorred of the gods, imagined by Ate
When against subjects murmuring discord and faction appointed
Scatter unblest gold, the heart of a people is poisoned,
Virtue pursued and baseness triumphs tongued like a harlot,
Brother against brother arrayed that the rule may endure of a stranger.
Yes, but it lasts! For its hour. The high gods watch in their silence,
Mute they endure for a while that the doom may be swifter and greater.
Hast thou then lasted, O Troy? Lo, the Greeks at thy gates and Achilles.
Dream, when Virtue departs, that Wisdom will linger, her sister!
Wisdom has turned from your hearts; shall Fortune dwell with the foolish?
Fatal oracles came to you great-tongued, vaunting of empires
Stretched from the risen sun to his rest in the occident waters,
Dreams of a city throned on the hills with her foot on the nations.
Meanwhile the sword was prepared for our breasts and the flame for our
housetops.

Wake, awake, O my people! the fire-brand mounts up your doorsteps;
Gods who deceived to slay, press swords on your children’s bosoms.
See, O ye blind, ere death in pale countries open your eyelids!
Hear, O ye deaf, the sounds in your ears and the voices of evening!
Young men who vaunt in your strength! when the voice of this aged Antenor
Governed your fathers’ youth, all the Orient was joined to our banners.
Macedon leaned to the East and her princes yearned to the victor,
Scythians worshipped in Ilion’s shrines, the Phoenician trader
Bartered her tokens, Babylon’s wise men paused at our thresholds;
Fair-haired sons of the snows came rapt towards golden Troya
Drawn by the song and the glory. Strymon sang hymns unto Ida,
Hoarse Chalcidice, dim Chersonesus married their waters
Under the o’erarching yoke of Troy twixt the term-posts of Ocean.
Meanwhile far through the world your fortunes led by my counsels
Followed their lure like women snared by a magical tempter:
High was their chant as they paced and it came from continents distant.
Turn now and hear! what voice approaches? what glitter of armies?
Loud upon Trojan beaches the tread and the murmur of Hellas!
Hark! ’tis the Achaian’s paean rings o’er the Pergaman waters!
So wake the dreams of Aeneas; reaped is Laocoon’s harvest.
Artisans new of your destiny fashioned this far-spreading downfall,
Counsellors blind who scattered your strength to the hooves of the Scythian,
Barren victories, trophies of skin-clad Illyrian pastors.
Who but the fool and improvident, who but the dreamer and madman
Leaves for the far and ungrasped earth’s close and provident labour?
Children of earth, our mother gives tokens, she lays down her signposts,
Step by step to advance on her bosom, to grow by her seasons,
Order our works by her patience and limit our thought by her spaces.
But you had chiefs who were demigods, souls of an earth-scorning stature,
Minds that saw vaster than life and strengths that God’s hour could not limit!
These men seized upon Troy as the tool of their giant visions,
Dreaming of Africa’s suns and bright Hesperian orchards,
Carthage our mart and our feet on the sunset hills of the Latins.
Ilion’s hinds in the dream ploughed Libya, sowed Italy’s cornfields,
Troy stretched to Gades; even the gods and the Fates had grown Trojan.
So are the natures of men uplifted by Heaven in its satire.
Scorning the bit of the gods, despisers of justice and measure,
Zeus is denied and adored some shadow huge of their natures
Losing the shape of man in a dream that is splendid and monstrous.
Titans, vaunting they stride and the world resounds with their footsteps;
Titans, clanging they fall and the world is full of their ruin.
Children, you dreamed with them, heard the roar of the Atlantic breakers
Welcome your keels and the Isles of the Blest grew your wonderful gardens.
Lulled in the dream, you saw not the black-drifting march of the storm-rack,
Heard not the galloping wolves of the doom and the howl of their hunger.
Greece in her peril united her jarring clans; you suffered
Patient, preparing the north, the wisdom and silence of Peleus,
Atreus’ craft and the Argives gathered to King Agamemnon.
But there were prophecies, Pythian oracles, mutterings from Delphi.
How shall they prosper who haste after auguries, oracles, whispers,
Dreams that walk in the night and voices obscure of the silence?
Touches are these from the gods that bewilder the brain to its ruin.
One sole oracle helps, still armoured in courage and prudence
Patient and heedful to toil at the work that is near in the daylight.
Leave to the night its phantoms, leave to the future its curtain!
Only today Heaven gave to mortal man for his labour.
If thou hadst bowed not thy mane, O Troy, to the child and the dreamer,
Hadst thou been faithful to Wisdom the counsellor seated and ancient,
Then would the hour not have dawned when Paris lingered in Sparta
Led by the goddess fatal and beautiful, white Aphrodite.
Man, shun the impulses dire that spring armed from thy nature’s abysms!
Dread the dusk rose of the gods, flee the honey that tempts from its petals!
Therefore the black deed was done and the hearth that welcomed was sullied.
Sin-called the Fury uplifted her tresses of gloom o’er the nations
Maddening the earth with the scream of her blood-thirst, bowlessless,
Stone-eyed,
Claiming her victims from God and bestriding the hate and the clamour.
Yet midst the stroke and the wail when men’s eyes were blind with the
Blood-mist,
Still had the high gods mercy recalling Teucer and Ilus.
Just was the heart of their anger. Discord flaming from Ida,
Hundred-voiced glared from the ships through the camp of the victor
Achaians, —
Love to that discord added her flowerlike lips of Briseis;
Faltering lids of Polyxena conquered the strength of Pelides.
Vainly the gods who pity open the gates of salvation!
Vainly the winds of their mercy breathe on our fevered existence!
Man his passions prefers to the voice that guides from the heavens.
These too were here whom Hera had chosen to ruin this nation:
Charioteers cracking the whips of their speed on the paths of destruction,
Demigods they! they have come down from Heaven glad to that labour,
Deaf is the world with the fame of their wheels as they race down to Hades.
O that alone they could reach it! O that pity could soften
Harsh Necessity's dealings, sparing our innocent children,
Saving the Trojan women and aged from bonds and the sword-edge!
These had not sinned whom you slay in your madness! Ruthless, O mortals,
Must you be then to yourselves when the gods even faltering with pity
Turn from the grief that must come and the agony vast and the weeping?
Say not the road of escape sinks too low for your arrogant treading.
Pride is not for our clay; the earth, not heaven was our mother
And we are even as the ant in our toil and the beast in our dying;
Only who cling to the hands of the gods can rise up from the earth-mire.
Children, lie prone to their scourge, that your hearts may revive in their sunshine.
This is our lot! when the anger of heaven has passed then the mortal
Raises his head; soon he heals his heart and forgets he has suffered.
Yet if resurgence from weakness and shame were withheld from the creature,
Every fall without morrow, who then would counsel submission?
But since the height of mortal fortune ascending must stumble,
Fallen, again ascend, since death like birth is our portion,
Ripening, mowed, to be sown again like corn by the farmer,
Let us be patient still with the gods accepting their purpose.
Deem not defeat I welcome. Think not to Hellas submitting
Death of proud hope I would seal. Not this have I counselled, O nation,
But to be even as your high-crested forefathers, greatest of mortals.
Troia of old enringed by the hooves of Cimmerian armies
Flamed to the heavens from her plains and her smoke-blackened citadel
sheltered
Mutely the joyless rest of her sons and the wreck of her greatness.
Courage and wisdom survived in that fall and a stern-eyed prudence
Helped her to live; disguised from her mightiness Troy crouched waiting.
Teucer descended whose genius worked at this kingdom and nation,
Patient, scrupulous, wise, like a craftsman carefully toiling
Over a helmet or over a breastplate, testing it always,
Toiled in the eye of the Masters of all and had heed of its labour.
So in the end they would not release him like souls that are common;
They out of Ida sent into Ilion Pallas Athene;
Secret she came and he went with her into the luminous silence.
Teucer's children after their sire completed his labour.
Now too, O people, front adversity self-gathered, silent.
Veil thyself, leonine mighty Ilion, hiding thy greatness!
Be as thy father Teucer; be as a cavern for lions;
Be as a Fate that crouches! Wordless and stern for your vengeance
Self-gathered work in the night and secrecy shrouding your bosoms.
Let not the dire heavens know of it; let not the foe seize a whisper!
Ripen the hour of your stroke, while your words drip sweeter than honey.
Sure am I, friends, you will turn from death at my voice, you will hear me!
Some day yet I shall gaze on the ruins of haughty Mycenae.
Is this not better than Ilion cast to the sword of her haters,
Is this not happier than Troya captured and wretchedly burning,
Time to await in his stride when the southern and northern Achaians
Gazing with dull distaste now over their severing isthmus
Hate-filled shall move to the shock by the spur of the gods in them driven,
Pelops march upon Attica, Thebes descend on the Spartan?
Then shall the hour now kept in heaven for us ripen to dawning,
Then shall Victory cry to our banners over the Ocean
Calling our sons with her voice immortal. Children of Ilus,
Then shall Troy rise in her strength and stride over Greece up to Gades.”
So Antenor spoke and the mind of the hostile assembly
Moved and swayed with his words like the waters ruled by Poseidon.
Even as the billows rebellious lashed by the whips of the tempest
Curvet and rear their crests like the hooded wrath of a serpent,
Green-eyed under their cowls sublime,—unwilling they journey,
Foam-banne red, hoarse-voiced, shepherded, forced by the wind to the
margin
Meant for their rest and can turn not at all, though they rage, on their
driver,—
Last with a sullen applause and consenting lapse into thunder,
Where they were led all the while they sink down huge and astonished,
So in their souls that withstood and obeyed and hated the yielding,
Lashed by his censure, indignant, the Trojans moved towards his purpose:
Sometimes a roar arose, then only, weakened, rarer,
Angry murmurs swelled between sullen stretches of silence;
Last, a reluctant applause broke dull from the throats of the commons.
Silent raged in their hearts Laocoon’s following daunted;
Troubled the faction of Paris turned to the face of their leader.
He as yet rose not; careless he sat in his beauty and smiling,
Gazing with brilliant eyes at the sculptured pillars of Ilus.
Doubtful, swayed by Antenor, waited in silence the nation.
BOOK III

The Book of the Assembly

But as the nation beset betwixt doom and a shameful surrender
Waited mute for a voice that could lead and a heart to encourage,
Up in the silence deep Laocoon rose up, far-heard,—
Heard by the gods in their calm and heard by men in their passion —
Cloud-haired, clad in mystic red, flamboyant, sombre,
Priam's son Laocoon, fate-darkened seer of Apollo.
As when the soul of the Ocean arises rapt in the dawning
And mid the rocks and the foam uplifting the voice of its musings
Opens the chant of its turbulent harmonies, so rose the far-borne
Voice of Laocoon soaring mid columns of Ilion's glories,
Claiming the earth and the heavens for the field of its confident rumour.
“Trojans, deny your hearts to the easeful flutings of Hades!
Live, O nation!” he thundered forth and Troy’s streets and her pillars
Sent back their fierce response. Restored to her leonine spirits
Ilion rose in her agora filling the heavens with shoutings,
Bearing a name to the throne of Zeus in her mortal defiance.
As when a sullen calm of the heavens discourages living,
Nature and man feel the pain of the lightnings repressed in their bosoms,
Dangerous and dull is the air, then suddenly strong from the anguish
Zeus of the thunders starts into glories releasing his storm-voice,
Earth exults in the kiss of the rain and the life-giving laughters,
So from the silence broke forth the thunder of Troya arising;
Fiercely she turned from prudence and wisdom and turned back to greatness
Casting her voice to the heavens from the depths of her fathomless spirit.
Raised by those clamours, triumphant once more on this scene of his

Tool of the gods, but he deemed of his strength as a leader in Nature,
Took for his own a voice that was given and dreamed that he fashioned
Fate that fashions us all, Laocoon stood mid the shouting
Leaned on the calm of an ancient pillar. In eyes self-consuming
Kindled the flame of the prophet that blinds at once and illumines;
Quivering thought-besieged lips and shaken locks of the lion,
Lifted his gaze the storm-led enthusiast. Then as the shouting
Tired of itself at last disappeared in the bosom of silence,
The Book of the Ancient By
But as the nations best external down, and a shameful slander
Deeds had made for a time that could not, for a heart to encourage,

And the words, "I shall not depart from thee, for I know thee,

Even so, my hand shall not depart from thee, yet turn not away,

For the Lord, the Lord of hosts, shall shatter the nations, save them.

A, after the spoil of the Exodus was vast in the desert,

And unto the nations, and the signs shattering the great deserts,

From the earth of the horrid adversary, to the far remote

Thus, the words were mighty, and the columns of solemn glory.

Thrice did the voice of the ancient fall from the earth, and the

The Island, Sun

I have sailed the golden ocean
And crossed the silver sea;
I have reached the turn of knowledge
To the east, I felt midnight's light.

Its fields of flaming vision,
Its mountains of flame,
Its floods of fiery rapine,
Its sea of absolute light.

Its sea of self-abandon,
Its mile of silence,
Because my soul's dominion,
Is in land of the Black.

Oh, in the Godhead silence
Abides it lived in Christ;
Life was the form of music,
Thought in Dante's spirit rhyme.

The light was still around me
When I came back to earth
Bringing its immortal knowledge
Into more ease of birth.

October 3, 1939
Once more he started erect and his voice o’er the hearts of his hearers
Swept like Ocean’s impatient cry when it calls from its surges,
Ocean loud with a thought sublime in its measureless marching,
Each man felt his heart like foam in the rushing of waters.

“Ilion is vanquished then! she abases her grandiose spirit
Mortal found in the end to the gods and the Greeks and Antenor,
And when a barbarous chieftain’s menace and insolent mercy
Bring here their pride to insult the columned spirit of Ilus,
Trojans have sat and feared! For a man has arisen and spoken,
One whom the gods in their anger have hired. Since the Argive prevailed not,
Armed with his strength and his numbers, in Troya they sought for her slayer,
Gathered their wiles in a voice and they chose a man famous and honoured,
Summoned Ate to aid and corrupted the heart of Antenor.
Flute of the breath of the Hell-witch, always he scatters among you
Doubt, affliction and weakness chilling the hearts of the fighters,
Always his voice with its cadenced and subtle possession for evil
Breaks the constant will and maims the impulse heroic.

Therefore while yet her heroes fight and her arms are unconquered,
Troy in your hearts is defeated! The souls of your Fathers have heard you
Dallying, shamefast, with vileness, lured by the call of dishonour.
Such is the power Zeus gave to the wingèd words of a mortal!
Foiled in his will, disowned by the years that stride on for ever,
Yet in the frenzy cold of his greed and his fallen ambition
Doom from heaven he calls down on his countrymen, Trojan abuses
Troy, his country, extolling her enemies, blessing her slayers.
Such are the gods Antenor has made in his heart’s own image
That if one evil man have not way for his greed and his longing
Cities are doomed and kings must be slain and a nation must perish!
But from the mind of the free and the brave I will answer thy bodings,
Gold-hungry raven of Troy who croakst from thy nest at her princes.
Only one doom irreparable treads down the soul of a nation,
Only one downfall endures; ’tis the ruin of greatness and virtue,
Mourning when Freedom departs from the life and the heart of a people,
Into her room comes creeping the mind of the slave and it poisons
Manhood and joy and the voice to lying is trained and subjection
Easy feels to the neck of man who is next to the godheads.
Not of the fire am I terrified, not of the sword and its slaying;
Vileness of men appals me, baseness I fear and its voices.
What can man suffer direr or worse than enslaved from a victor
Boons to accept, to take safety and ease from the foe and the stranger,
Fallen from the virtue stern that heaven permits to a mortal?
Death is not keener than this nor the slaughter of friends and our dear ones.
Out and alas! earth’s greatest are earth and they fail in the testing,
Conquered by sorrow and doubt, fate’s hammerers, fires of her furnace.
God in their souls they renounce and submit to their clay and its promptings.
Else could the heart of Troy have recoiled from the loom of the shadow
Cast by Achilles’ spear or shrunk at the sound of his car-wheels?
Now he has graven an oath austere in his spirit unpliant
Victor at last to constrain in his stride the walls of Apollo
Burning Troy ere he sleeps. ’Tis the vow of a high-crested nature;
Shall it break ramparted Troy? Yea, the soul of a man too is mighty
More than the stone and the mortar! Troy had a soul once, O Trojans,
Firm as her god-built ramparts. When by the spearse overtaken,
Strong Sarpedon fell and Zeus averted his visage,
Xanthus red to the sea ran sobbing with bodies of Trojans,
When in the day of the silence of heaven the far-glancing helmet
Ceased from the ways of the fight, and panic slew with Achilles
Hosts who were left unshepherded pale at the fall of their greatest,
Godlike Troy lived on. Do we speak mid a city’s ruins?
Lo! she confronts her heavens as when Tros and Laomedon ruled her.
All now is changed, these mutter and sigh to you, all now is ended;
Strength has renounced you, Fate has finished the thread of her spinning.
Hector is dead, he walks in the shadows; Troilus fights not;
Resting his curls on the asphodel he has forgotten his country:
Strong Sarpedon lies in Bellerophon’s city sleeping:
Memnon is slain and the blood of Rhesus has dried on the Troad:
All of the giant Asius sums in a handful of ashes.
Grievous are these things; our hearts still keep all the pain of them treasured,
Hard though they grow by use and iron caskets of sorrow.
Hear me yet, O fainters in wisdom snared by your pathos,
Know this iron world we live in where Hell casts its shadow.
Blood and grief are the ransom of men for the joys of their transience,
For we are mortals bound in our strength and beset in our labour.
This is our human destiny; every moment of living
Toil and loss have gained in the constant siege of our bodies.
Men must sow earth with their hearts and their tears that their country
may prosper;
Earth who bore and devours us that life may be born from our remnants.
Then shall the Sacrifice gather its fruits when the war-shout is silent,
Nor shall the blood be in vain that our mother has felt on her bosom
Nor shall the seed of the mighty fail where Death is the sower.
Still from the loins of the mother eternal are heroes engendered,
Still Deiphobus shouts in the war-front trampling the Argives,
Strong Aeneas’ far-borne voice is heard from our ramparts,
Paris’ hands are swift and his feet in the chases of Ares.
Lo, when deserted we fight by Asia’s soon-weared peoples,
Men ingrate who enjoyed the protection and loathed the protector,
Heaven has sent us replacing a continent Penthesilea!
Low has the heart of Achaia sunk since it shook at her war-cry.
Ajax has bit at the dust; it is all he shall have of the Troad;
Tall Meriones lies and measures his portion of booty.
Who is the fighter in Ilion thrills not rejoicing to hearken
Even her name on unwarlike lips, much more in the mellay
Shout of the daughter of battles, armipotent Penthesilea?
If there were none but these only, if hosts came not surging behind them,
Young men burning-eyed to outdare all the deeds of their elders,
Each in his beauty a Troilus, each in his valour a Hector,
Yet were the measures poised in the equal balance of Ares.
Who then compels you, O people unconquered, to sink down abjuring
All that was Troy? For O, if she yield, let her use not ever
One of her titles! shame not the shades of Teucer and Ilus,
Soil not Tros! Are you awed by the strength of the swift-foot Achilles?
Is it a sweeter lure in the cadenced voice of Antenor?
Or are you weary of Time and the endless roar of the battle?
Wearier still are the Greeks! their eyes look o’er the waters
Nor with the flight of their spears is the wing of their hopes towards Troya.
Dull are their hearts; they sink from the war-cry and turn from the
spear-stroke
Sullenly dragging backwards, desiring the paths of the Ocean,
Dreaming of hearths that are far and the children growing to manhood
Who are small infant faces still in the thoughts of their fathers.

www.holybooks.com
Therefore these call you to yield lest they wake and behold in the dawn-light
All Poseidon whitening lean to the west in his waters
Thick with the sails of the Greeks departing beaten to Hellas.
Who is it calls? Antenor the statesman, Antenor the patriot,
Thus who loves his country and worships the soil of his fathers!
Which of you loves like him Troya? which of the children of heroes
Yearns for the touch of a yoke on his neck and desires the aggressor?
If there be any so made by the gods in the nation of Ilus,
Leaving this city which freemen have founded, freemen have dwelt in,
Far on the beach let him make his couch in the tents of Achilles,
Not in this mighty Ilion, not with this lioness fighting,
Guarding the lair of her young and roaring back at her hunters.
We who are souls descended from Ilus and seeds of his making,
Other-hearted shall march from our gates to answer Achilles.
What! shall this ancient Ilion welcome the day of the conquered?
She who was head of the world, shall she live in the guard of the Hellene
Cherished as slavegirls are, who are taken in war, by their captors?
Europe shall walk in our streets with the pride and the gait of the victor?
Greeks shall enter our homes and prey on our mothers and daughters?
This Antenor desires and this Ucalegon favours.
Traitors! whether 'tis cowardice drives or the sceptic of virtue,
Cold-blooded age, or gold insatiably tempts from its coffers
Pleading for safety from foreign hands and the sack and the plunder.
Leave them, my brothers! spare the baffled hypocrites! Failure
Sharpest shall torture their hearts when they know that still you are Trojans.
Silence, O reason of man! for a voice from the gods has been uttered!
Dardanans, hearken the sound divine that comes to you mounting
Out of the solemn ravines from the mystic seat on the tripod!
Phoebus, the master of Truth, has promised the earth to our peoples.
Children of Zeus, rejoice! for the Olympian brows have nodded
Regal over the world. In earth's rhythm of shadow and sunlight
Storm is the dance of the locks of the God assenting to greatness,
Zeus who with secret compulsion orders the ways of our nature;
Veiled in events he lives and working disguised in the mortal
Builds our strength by pain, and an empire is born out of ruins.
Then if the tempest be loud and the thunderbolt leaping incessant
Shatters the roof, if the lintels flame at last and each cornice
Shrieks with the pain of the blast, if the very pillars totter,
Keep yet your faith in Zeus, hold fast to the word of Apollo.
Not by a little pain and not by a temperate labour
Trained is the nation chosen by Zeus for a dateless dominion.
Long must it labour rolled in the foam of the fathomless surges,
Often neighbour with death and ere Ares grow firm to its banners
Feel on the pride of its Capitol tread of the triumphing victor,
Hear the barbarian knock at its gates or the neighbouring foeman
Glad of the transient smile of his fortune suffer insulting; —
They, the nation eternal, brook their taunts who must perish!
Heaviest toils they must bear; they must wrestle with Fate and her Titans,
And when some leader returns from the battle sole of his thousands
Crushed by the hammers of God, yet never despair of their country.
Dread not the ruin, fear not the storm-blast, yield not, O Trojans.
Zeus shall rebuild. Death ends not our days, the fire shall not triumph.
Death? I have faced it. Fire? I have watched it climb in my vision
Over the timeless domes and over the rooftops of Priam;
But I have looked beyond and have seen the smile of Apollo.
After her glorious centuries, after her world-wide triumphs,
If near her ramparts outnumbered she fights, by the nations forsaken,
Lonely again on her hill, by her streams, and her meadows and beaches,
Once where she revelled, shake to the tramp of her countless invaders,
Testings are these from the god. For Fate severe like a mother
Teaches our wills by disaster and strikes down the props that would weaken,
Fate and the Thought on high that is wiser than yearnings of mortals.
Troy has arisen before, but from ashes, not shame, not surrender!
Souls that are true to themselves are immortal; the soulless for ever
Lingers helpless in Hades a shade among shades disappointed.
Now is the god in my bosom mighty compelling me, Trojans,
Now I release what my spirit has kept and it saw in its vision;
Nor will be silent for gibe of the cynic or sneer of the traitor.
Troy shall triumph! Hear, O ye peoples, the word of Apollo.
Hear it and tremble, O Greece, in thy youth and the dawn of thy future;
Rather forget while thou canst, but the gods in their hour shall remind thee.
Tremble, O nations of Asia, false to the greatness within you.
Troy shall surge back on your realms with the sword and the yoke of the victor.
Troy shall triumph! Though nations conspire and gods lead her foemen,
Fate that is born of the spirit is greater than they and will shield her.
Foemen shall help her with war; her defeats shall be victory’s moulders.
Walls that restrain shall be rent; she shall rise out of sessions unsettled.
Oceans shall be her walls at the end and the desert her limit;
Indus shall send to her envoys; her eyes shall look northward from Thule.
She shall enring all the coasts with her strength like the kingly Poseidon,
She shall o’ervault all the lands with her rule like the limitless azure.”

Ceasing from speech Laocoon, girt with the shouts of a nation,
Lapsed on his seat like one seized and abandoned and weakened; nor ended
Only in iron applause, but throughout with a stormy approval
Ares broke from the hearts of his people in ominous thunder.
Savage and dire was the sound like a wild beast’s tracked out and hunted,
Wounded, yet trusting to tear out the entrails live of its hunters,
Savage and cruel and threatening doom to the foe and opponent.
Yet when the shouting sank at last, Ucalegon rose up
Trembling with age and with wrath and in accents hurried and piping
Falterd a senile fierceness forth on the maddened assembly.
“Ah, it is even so far that you dare, O you children of Priam,
Favourites vile of a people sent mad by the gods, and thou risest,
Dark Laocoon, prating of heroes and spurning as cowards,
Smiting for traitors the aged and wise who were grey when they spawned thee!

Imp of destruction, mane of mischief! Ah, spur us with courage,
Thou who hast never prevailed against even the feeblest Achaian.
Rather twice hast thou raced in the rout to the ramparts for shelter,
Leading the panic, and shrieked as thou ranst to the foemen for mercy
Who were a mile behind thee, O matchless and wonderful racer.
Safely counsel to others the pride and the firmness of heroes.
Thou wilt not die in the battle! For even swiftest Achilles
Could not o’ertake thee, I ween, nor wind-footed Penthesilea.
Mask of a prophet, heart of a coward, tongue of a trickster,
Timeless Ilion thou alone ruinest, helped by the Furies.
I, Ucalegon, first will rend off the mask from thee, traitor.
For I believe thee suborned by the cynic wiles of Odysseus
And thou conspirest to sack this Troy with the greed of the Cretan.”
Hasting unstayed he pursued like a brook that scolds amid pebbles,
Voicing angers shrill; for the people astonished were silent.
Long he pursued not; a shouting broke from that stupor of fury,
Men sprang pale to their feet and hurled out menaces lethal;
All that assembly swayed like a forest swept by the stormwind.
Obstinate, straining his age-dimmed eyes Ucalegon, trembling
Worse yet with anger, clamoured feebly back at the people,
Whelmed in their roar. Unheard was his voice like a swimmer in surges
Lost, yet he spoke. But the anger grew in the throats of the people
Lion-voiced, hurting the heart with sound and daunting the nature,
Till from some stalwart hand a javelin whistling and vibrant
Missing the silvered head of the senator rang disappointed
Out on the distant wall of a house by the side of the market.
Not even then would the old man hush or yield to the tempest.
Wagging his hoary beard and shifting his aged eyeballs,
Tossing his hands he stood; but Antenor seized him and Aetor,
Dragged him down on his seat though he strove, and chid him and silenced,
“Cease, O friend, for the gods have won. It were easier piping
High with thy aged treble to alter the rage of the Ocean
Than to o'erbear this people stirred by Laocoon. Leave now
Effort unhelpful, wrap thy days in a mantle of silence;
Give to the gods their will and dry-eyed wait for the ending.”
So now the old men ceased from their strife with the gods and with Troya;
Cowed by the storm of the people's wrath they desisted from hoping.
But though the roar long swelled, like the sea when the winds have subsided,
One man yet rose up unafraid and beckoned for silence,
Not of the aged, but ripe in his look and ruddy of visage,
Stalwart and bluff and short-limbed, Halamus son of Antenor.
Forward he stood from the press and the people fell silent and listened,
For he was ever first in the mellay and loved by the fighters.
He with a smile began: “Come, friends, debate is soon ended
If there is right but of lungs and you argue with javelins. Wisdom
Rather pray for her aid in this dangerous hour of your fortunes.
Not to exalt Laocoon, too much praising his swiftness,
Trojans, I rise; for some are born brave with the spear in the war-car,
Others bold with the tongue, nor equal gifts unto all men
Zeus has decreed who guides his world in a round that is devious
Carried this way and that like a ship that is tossed on the waters.
Why should we rail then at one who is lame by the force of Cronion?
Not by his will is he lame; he would race, if he could, with the swiftest.
Yet is the halt man no runner, nor, friends, must you rise up and slay me,
If I should say of this priest, he is neither Sarpedon nor Hector.
Then, if my father whom once you honoured, ancient Antenor,
Hugs to him Argive gold which I see not, his son in his mansion,
Me too accusest thou, prophet Laocoon? Friends, you have watched me
Sometimes fight. Did you see with my house's allies how I gambolled,
Changed, when with sportive spear I was tickling the ribs of my Argives,
Nudges of friendly counsel inviting to entry in Troya?
Men, these are visions of lackbrains; men, these are myths of the market.
Let us have done with them, brothers and friends; hate only the Hellene.
Prophet, I bow to the oracles. Wise are the gods in their silence,
Wise when they speak; but their speech is other than ours and their wisdom
Hard for a mortal mind to hold and not madden or wander;
But for myself I see only the truth as a soldier who battles
Judging the strength of his foes and the chances of iron encounter.
Few are our armies, many the Greeks, and we waste in the combat
Bound to our numbers, — they by the ocean hemmed from their kinsmen,
We by our fortunes, waves of the gods that are harder to master,
They like a rock that is chipped, but we like a mist that disperses.
Then if Achilles, bound by an oath, bring peace to us, healing,
Bring to us respite, help, though bought at a price, yet full-measured,
Strengths of the North at our side and safety assured from the Achaian,
For he is true though a Greek, will you shun this mighty advantage?
Peace at least we shall have, though gold we lose and much glory;
Peace we will use for our strength to breathe in, our wounds to recover,
Teaching Time to prepare for happier wars in the future.
Pause ere you fling from you life; you are mortals, not gods in your glory.
Not for submission to new ally or to ancient foeman
Peace these desire; for who would exchange wide death for subjection?
Who would submit to a yoke? Or who shall rule Trojans in Troya?
Swords are there still at our sides, there are warriors’ hearts in our bosoms.
Peace your senators welcome, not servitude, breathing they ask for.
But if for war you pronounce, if a noble death you have chosen,
That I approve. What fitter end for this warlike nation,
Knowing that empires at last must sink and perish all cities,
Than to preserve to the end posterity's praise and its greatness
Ceasing in clangour of arms and a city's flames for our death-pyre?
Choose then with open eyes what the dread gods offer to Troya.
Hope not now Hector is dead and Sarpedon, Asia inconstant,
We but a handful, Troy can prevail over Greece and Achilles.
Play not with dreams in this hour, but sternly, like men and not children,
Choose with a noble and serious greatness fates fit for Troya.
Stark we will fight till buried we fall under Ilion's ruins,
Or, unappeased, we will curb our strength for the hope of the future."
Not without praise of his friends and assent of the thoughtfuller Trojans,
Halamus spoke and ceased. But now in the Ilian forum
Bright, of the sungod a ray, and even before he had spoken
Sending the joy of his brilliance into the hearts of his hearers,
Paris arose. Not applauded his rising, but each man towards him
Eagerly turned as if feeling that all before which was spoken
Were but a prelude and this was the note he has waited for always.
Sweet was his voice like a harp's, when it chants of war, and its cadence
Softened with touches of music thoughts that were hard to be suffered,
Sweet like a string that is lightly struck, but it penetrates wholly.
“Calm with the greatness you hold from your sires by the right of
your nature
I too would have you decide before Heaven in the strength of your spirits,
Not to the past and its memories moored like the thoughts of Antenor
Hating the vivid march of the present, nor towards the future
Panting through dreams like my brother Laocoon vexed by Apollo.
Dead is the past; the void has possessed it; its drama is ended,
Finished its music. The future is dim and remote from our knowledge;
Silent it lies on the knees of the gods in their luminous stillness.
But to our gaze God's light is a darkness, His plan is a chaos.
Who shall foretell the event of a battle, the fall of a footstep?
Oracles, visions and prophecies voice but the dreams of the mortal,
And 'tis our spirit within is the Pythoness tortured in Delphi.
Heavenly voices to us are a silence, those colours a whiteness.
Neither the thought of the statesman prevails nor the dream of the prophet,
Whether one cry, 'Thus devise and thy heart shall be given its wanting,'
Vainly the other, 'The heavens have spoken; hear then their message.'
Who can point out the way of the gods and the path of their travel,
Who shall impose on them bounds and an orbit? The winds have their treading,—
They can be followed and seized, not the gods when they move towards their purpose.

They are not bound by our deeds and our thinkings. Sin exalted
Seizes secure on the thrones of the world for her glorious portion,
Down to the bottomless pit the good man is thrust in his virtue.
Leave to the gods their godhead and, mortal, turn to thy labour;
Take what thou canst from the hour that is thine and be fearless in spirit;
This is the greatness of man and the joy of his stay in the sunlight.
Now whether over the waste of Poseidon the ships of the Argives
Empty and sad shall return or sacred Ilion perish,
Priam be slain and for ever cease this imperial nation,
These things the gods are strong to conceal from the hopings of mortals.
Neither Antenor knows nor Laocoon. Only of one thing
Man can be sure, the will in his heart and his strength in his purpose:
This too is Fate and this too the gods, nor the meanest in Heaven.
Paris keeps what he seized from Time and from Fate while unconquered
Life speeds warm through his veins and his heart is assured of the sunlight.
After 'tis cold, none heeds, none hinders. Not for the dead man
Earth and her wars and her cares, her joys and her gracious concessions,
Whether for ever he sleeps in the chambers of Nature unmindful
Or into wideness wakes like a dreamer called from his visions.
Ilion in flames I choose, not fallen from the heights of her spirit.
Great and free has she lived since they raised her twixt billow and mountain,
Great let her end; let her offer her freedom to fire, not the Hellene.
She was not founded by mortals; gods erected her ramparts,
Lifted her piles to the sky, a seat not for slaves but the mighty.
All men marvelled at Troy; by her deeds and her spirit they knew her
Even from afar, as the lion is known by his roar and his preying.
Sole she lived royal and fell, erect in her leonine nature.
So, O her children, still let her live unquelled in her purpose
Either to stand with your feet on the world oppressing the nations
Or in your ashes to lie and your name be forgotten for ever.
Justly your voices approve me, armipotent children of Ilus;
Straight from Zeus is our race and the Thunderer lives in our nature.
Long I have suffered this taunt that Paris was Ilion’s ruin
Born on a night of the gods and of Ate, clothed in a body.
Scornful I strode on my path secure of the light in my bosom,
Turned from the muttering voices of envy, their hates who are fallen,
Voices of hate that cling round the wheels of the triumphing victor;
Now if I speak, 'tis the strength in me answers, not to belittle,
That excusing which most I rejoice in and glory for ever,
Tyndaris’ rape whom I seized by the will of divine Aphrodite.
Mortal this error that Greece would have slumbered apart in her mountains,
Sunk, by the trumpets of Fate unaroused and the morning within her,
Only were Paris unborn and the world had not gazed upon Helen.
Fools, who say that a spark was the cause of this giant destruction!
War would have stridden on Troy though Helen were still in her Sparta
Tending an Argive loom, not the glorious prize of the Trojans,
Greece would have banded her nations though Paris had drunk not Eurotas.
Coast against coast I set not, nor Ilion opposite Argos.
Phryx accuse who upreared Troy’s domes by the azure Aegean,
Curse Poseidon who fringed with Greece the blue of his waters:
Then was this war first decreed and then Agamemnon was fashioned;
Armed he strode forth in the secret Thought that is womb of the future.
Fate and Necessity guided those vessels, captained their armies.
When they stood mailed at her gates, when they cried in the might of their union,
‘Troy, renounce thy alliances, draw back humbly from Hellas,’
Should she have hearkened persuading her strength to a shameful compliance,
Ilion queen of the world whose voice was the breath of the storm-gods?
Should she have drawn back her foot as it strode towards the hills of the Latins?
Thrace left bare to her foes, recoiled from Illyrian conquests?
If all this without battle were possible, people of Priam,
Blame then Paris, say then that Helen was cause of the struggle.
But I have sullied the hearth, I have trampled the gift and the guest-rite,
Heaven I have armed with my sin and unsealed the gaze of the Furies,
So was Troy doomed who righteous had triumphed, locked with the Argive.
Fools or hypocrites! Meanest falsehood is this among mortals,
Veils of purity weaving, names misplacing ideal
When our desires we disguise and paint the lusts of our nature.
Men, ye are men in your pride and your strength, be not sophists and tonguesters.

Lie not! prate not that nations live by righteousness, justice

Known have men what thing has screened itself mouthing these semblances. Crouching

Dire like a beast in the green of the thickets, selfishness silent

Crunches the bones of its prey while the priest and the statesman are glozing.

So are the nations soothed and deceived by the clerics of virtue,

Truly the vanquished were guilty! Else would their cities have perished,

Truly the victors were tools of the gods and their glorious servants!

Else would the war-cars have ground triumphant their bones whom they hated?

Servants of God are they verily, even as the ape and the tiger.

Does not the wild-beast too triumph enjoying the flesh of his captives?

Tell us then what was the sin of the antelope, wherefore they doomed her,

Wroth at her many crimes? Come, justify God to his creatures!

Not to her sins was she offered, not to the Furies or Justice,

But to the strength of the lion the high gods offered a victim,

Force that is God in the lion’s breast with the forest for altar.

What, in the cities stormed and sacked by Achilles in Troas

Was there no just man slain? Was Brises then a transgressor?

Hearts that were pierced in his walls, were they sinners tracked by the Furies?

No, they were pious and just and their altars burned for Apollo,

Reverent flamed up to Pallas who slew them aiding the Argives.

Or if the crime of Paris they shared and his doom has embraced them,

Whom had the island cities offended, stormed by the Locrian,

Wave-kissed homes of peace but given to the sack and the spoiler?

Was then King Atreus just and the house accursèd of Pelops,

Tantalus’ race, whose deeds men shuddering hear and are silent?

Look! they endure, their pillars are firm, they are regnant and triumph.

Or are Thyestean banquets sweet to the gods in their savour?

Only a woman’s heart is pursued in their wrath by the Furies!
No, when the wrestlers meet and embrace in the mighty arena,
Not at their sins and their virtues the high gods look in that trial;
Which is the strongest, which is the subtlest, this they consider.
Nay, there is none in the world to befriend save ourselves and our courage;
Prowess alone in the battle is virtue, skill in the fighting
Only helps, the gods aid only the strong and the valiant.
Put forth your lives in the blow, you shall beat back the banded aggressors.
Neither believe that for justice denied your subjects have left you
Nor that for justice trampled Pallas and Hera abandon.
Two are the angels of God whom men worship, strength and enjoyment.
Into this life which the sunlight bounds and the greenness has cradled,
Armed with strength we have come; as our strength is, so is our joyance.
What but for joyance is birth and what but for joyance is living?
But on this earth that is narrow, this stage that is crowded, increasing
One on another we press. There is hunger for lands and for oxen,
Horses and armour and gold desired; possession allures us
Adding always as field to field some fortunate farmer.
Hearts too and minds are our prey; we seize on men's souls and their bodies,
Slaves to our works and desires that our hearts may bask golden in leisure.
One on another we prey and one by another are mighty.
This is the world and we have not made it; if it is evil,
Blame first the gods; but for us, we must live by its laws or we perish.
Power is divine; divinest of all is power over mortals.
Power then the conqueror seeks and power the imperial nation,
Even as luminous, passionless, wonderful, high over all things
Sit in their calmness the gods and oppressing our grief-tortured nations
Stamp their wills on the world. Nor less in our death-besieged natures
Gods are and altitudes. Earth resists, but my soul in me widens
Helped by the toil behind and the agelong effort of Nature.
Even in the worm is a god and it writhes for a form and an outlet.
Workings immortal obscurely struggling, hints of a godhead
Labour to form in this clay a divinity. Hera widens,
Pallas aspires in me, Phoebus in flames goes battling and singing,
Ares and Artemis chase through the fields of my soul in their hunting.
Last in some hour of the Fates a Birth stands released and triumphant;
Poured by its deeds over earth it rejoices fulfilled in its splendour.
Conscious dimly of births unfinished hid in our being
Rest we cannot; a world cries in us for space and for fullness.
Fighting we strive by the spur of the gods who are in us and o'er us,
Stamping our image on men and events to be Zeus or be Ares.
Love and the need of mastery, joy and the longing for greatness
Rage like a fire unquenchable burning the world and creating,
Nor till humanity dies will they sink in the ashes of Nature.
All is injustice of love or all is injustice of battle.
Man over woman, woman o'er man, over lover and foeman
Wrestling we strive to expand in our souls, to be wide, to be happy.
If thou wouldest only be just, then wherefore at all shouldst thou conquer?
Not to be just, but to rule, though with kindness and high-seated mercy,
Taking the world for our own and our will from our slaves and our subjects,
Smiting the proud and sparing the suppliant, Trojans, is conquest.
Justice was base of thy government? Vainly, O statesman, thou liest.
If thou wert just, thou wouldest free thy slaves and be equal with all men.
Such were a dream of some sage at night when he muses in fancy,
Imaging freely a flawless world where none were afflicted,
No man inferior, all could sublimely equal and brothers
Live in a peace divine like the gods in their luminous regions.
This, O Antenor, were justice known but in words to us mortals.
But for the justice thou vaunttest enslaving men to thy purpose,
Setting an iron yoke, nor regarding their need and their nature,
Then to say 'I am just; I slay not, save by procedure,
Rob not save by law,' is an outrage to Zeus and his creatures.
Terms are these feigned by the intellect making a pact with our yearnings,
Lures of the sophist within us draping our passions with virtue.
When thou art weak, thou art just, when thy subjects are strong and
remember.

Therefore, O Trojans, be firm in your will and, though all men abandon,
Bow not your heads to reproach nor your hearts to the sin of repentance;
For you have done what the gods desired in your breasts and are blameless.
Proudly enjoy the earth that they gave you, enthroning their natures,
Fight with the Greeks and the world and trample down the rebellious,
What you have lost, recover, nor yield to the hurricane passing.
You cannot utterly die while the Power lives untired in your bosoms;
When 'tis withdrawn, not a moment of life can be added by virtue.
Faint not for helpers fled! Though your yoke had been mild as a father's
They would have gone as swiftly. Strength men desire in their masters; All men worship success and in failure and weakness abandon. Not for his justice they clung to Teucer, but for their safety, Seeing in Troy a head and by barbarous foemen afflicted. Faint not, O Trojans, cease not from battle, persist in your labour! Conquer the Greeks, your allies shall be yours and fresh nations your subjects.

One care only lodge in your hearts, how to fight, how to conquer. Peace has smiled out of Phthia; a hand comes outstretched from the Hellene. Who would not join with the godlike? who would not grasp at Achilles? There is a price for his gifts; it is such as Achilles should ask for, Never this nation concede. O Antenor’s golden phrases
Glorifying rest to the tired and confuting patience and courage,
Garbed with a subtlety lax and the hopes that palliate surrender!
Charmed men applaud the skilful purpose, the dexterous speaker;
This they forget that a Force decides, not the wiles of the statesman.

‘Now let us yield,’ do you say, ‘we will rise when our masters are weakened’? Nay, then, our master’s master shall find us an easy possession!
Easily nations bow to a yoke when their virtue relaxes;
Hard is the breaking fetters once worn, for the virtue has perished. Hope you when custom has shaped men into the mould of a vileness,
Hugging their chains when the weak feel easier trampled than rising
Or though they groan, yet have heart nor strength for the anguish of effort, Then to cast down whom, armed and strong, you were mastered opposing?
Easy is lapse into uttermost hell, not easy salvation.
Or have you dreamed that Achilles, this son of the gods and the ocean, Aught else can be with the strong and the bold save pursuer or master?
Know you so little the mood of the mighty? Think you the lion
Only will lick his prey, that his jaws will refrain from the banquet? Rest from thy bodings, Antenor! Not all the valour of Troya Perished with Hector, nor with Polydamas vision has left her; Troy is not eager to slay her soul on a pyre of dishonour.
Still she has children left who remember the mood of their mother.
Helen none shall take from me living, gold not a drachma
Travels from coffers of Priam to Greece. Let another and older Pay down his wealth if he will and his daughters serve Menelaus. Rather from Ilion I will go forth with my brothers and kinsmen;

www.holybooks.com
Troy I will leave and her shame and live with my heart and my honour
Refuged with lions on Ida or build in the highlands a city
Or in an isle of the seas or by dark-driven Pontic waters.
Dear are the halls of our childhood, dear are the fields of our fathers,
Yet to the soul that is free no spot on the earth is an exile.
Rather wherever sunlight is bright, flowers bloom and the rivers
Flow in their lucid streams to the Ocean, there is our country.
So will I live in my soul’s wide freedom, never in Troya
Shorn of my will and disgraced in my strength and the mock of my rivals.
First had you yielded, shame at least had not stained your surrender.
Strength indulges the weak! But what Hector has fallen refusing,
Men! what through ten loud years we denied with the spear for our answer,
That what Trojan will ever renounce, though his city should perish?
Once having fought we will fight to the end nor that end shall be evil.
Clamour the Argive spears on our walls? Are the ladders erected?
Far on the plain is their flight, on the farther side of the Xanthus.
Where are the deities hostile? Vainly the eyes of the tremblers
See them stalking vast in the ranks of the Greeks and the shoutings
Dire of Poseidon they hear and are blind with the aegis of Pallas.
Who then sustained so long this Troy, if the gods are against her?
Even the hills could not stand save upheld by their concert immortal.
Now not with Tydeus’ son, not now with Odysseus and Ajax
Trample the gods in the sound of their chariot-wheels, victory leading:
Argos falls red in her heaps to their scythes; they shelter the Trojans;
Victory unleashed follows and fawns upon Penthesilea.
Ponder no more, O Ilion, city of ancient Priam!
Rise, O beloved of the gods, and go forth in thy strength to the battle.
Not by the dreams of Laocoon strung to the faith that is febrile,
Nor with the tremblings vain and the haunted thoughts of Antenor,
But with a noble and serious strength and an obstinate valour
Suffer the shock of your foes, O nation chosen by Heaven;
Proudly determine on victory, live by disaster unshaken.
Either Fate receive like men, nay, like gods, nay, like Trojans.”
So like an army that streams and that marches, speeding and pausing,
Drawing in horn and wing or widened for scouting and forage,
Bridging the floods, avoiding the mountains, threading the valleys,
Fast with their flashing panoply clad in gold and in iron
Moved the array of his thoughts; and throughout delight and approval
Followed their march, in triumph led but like prisoners willing,
Glad and unbound to a land they desire. Triumphant he ended,
Lord of opinion, though by the aged frowned on and censured,
But to this voice of their thoughts the young men vibrated wholly.
Loud like a storm on the ocean mounted the roar of the people.
“Cease from debate,” men cried, “arise, O thou warlike Aeneas!
Speak for this nation, launch like a spear at the tents of the Hellene
Ilion’s voice of war!” Then up mid a limitless shouting
Stern and armed from his seat like a war-god helm’d Aeneas
Rose by King Priam approved in this last of Ilion’s sessions,
Holding the staff of the senate’s authority. “Silence, O commons,
Hear and assent or refuse as your right is, masters of Troya,
Ancient and sovereign people, act that your kings have determined
Sitting in council high, their reply to the strength of Achilles.
‘Son of the Aeacids, vain is thy offer; the pride of thy challenge
Rather we choose; it is nearer to Dardanus, King of the Hellenes.
Neither shall Helen be led back, the Tyndarid, weeping to Argos,
Nor down the paths of peace revisit her fathers’ Eurotas.
Death and the fire may prevail o’er us, never our wills shall surrender
Lowering Priam’s heights and darkening Ilion’s splendours.
Not of such sires were we born, but of kings and of gods, O Larissan.
Not with her gold Troy traffics for safety, but with her spear-points.
Stand with thy oath in the war-front, Achilles; call on thy helpers
Armed to descend from the calm of Olympian heights to thy succour
Hedging thy fame from defeat; for we all desire thee in battle,
Mighty to end thee or tame at last by the floods of the Xanthus.’”
So Aeneas resonant spoke, stern, fronted like Ares,
And with a voice that conquered the earth and invaded the heavens
Loud they approved their doom and fulfilled their impulse immortal.
Last Deiphobus rose in their meeting, head of their mellay:
“Proudly and well have you answered, O nation beloved of Apollo;
Fearless of death they must walk who would live and be mighty for ever.
Now, for the sun is hastening up the empyrean azure,
Hasten we also. Tasting of food round the call of your captains
Meet in your arm’d companies, chariots and hoplites and archers.
Strong be your hearts, let your courage be stern like the sun when it blazes;
Fierce will the shock be today ere he sink blood-red in the waters.”
They with a voice as of Oceans meeting rose from their session, —
Filling the streets with her tread Troy strode from her Ilian forum.
Eagerly, spurred by Ares swift in their souls to the war-cry,
All now pressed to their homes for the food of their strength in the battle.
Ilion turned her thoughts in a proud expectancy seaward
Waiting to hear the sounds that she loved and the cry of the mellay.
Now to their citadel Priam’s sons returned with their father,
Now from the gates Talthybius issued grey in his chariot;
But in the halls of Anchises Aeneas not doffing his breastpiece
Hastily ate of the corn of his country, cakes of the millet
Doubled with wild-deer’s flesh, from the quiet hands of Creusa.
She, as he ate, with her calm eyes watching him smiled on her husband:
“Ever thou hastest to battle, O warrior, ever thou fightest
Far in the front of the ranks and thou seest out Locrian Ajax,
Turnest thy ear to the roar for the dangerous shout of Tydides;
There, once heard, leaving all thou drivest, O stark in thy courage.
Yet am I blest among women who tremble not, left in thy mansion,
Quiet at old Anchises’ feet when I see thee in vision
Sole with the shafts hissing round thee and say to my quivering spirit,
‘Now he is striking at Ajax, now he has met Diomedes.’
Such are the mighty twain who are ever near to protect thee,
Phoebus, the Thunderer’s son, and thy mother, gold Aphrodite;
Such are the Fates that demand thee, O destined head of the future.
But though my thoughts for their own are not troubled, always, Aeneas,
Sore is my heart with pity for other Ilian women
Who in this battle are losing their children and well-loved husbands,
Brothers too dear, for the eyes that are wet, for the hearts that are silent.
Will not this war then end that thunders for ever round Troya?”

But to Creusa the hero answered, the son of Anchises:
“Surely the gods protect, yet is Death too always mighty.
Most in his shadowy envy he strikes at the brave and the lovely,
Grudging works to abridge their days and to widow the sunlight.
Most, disappointed, he rages against the belovèd of Heaven;
Striking their lives through their hearts he mows down their loves and their pleasures.

Truly thou sayst, thou needst not to fear for my life in the battle;
Ever for thine I fear lest he find thee out in his anger,
Missing my head in the fight, when he comes here crossed in his godhead.
Yet shall Phoebus protect and my mother, gold Aphrodite.

But to Aeneas answered the tranquil lips of Creüsa:
“So may it be that I go before thee, seeing, Aeneas,
Over my dying eyes thy lips bend down for the parting.
Blissfullest end is this for a woman here mid earth’s sorrows;
Afterwards there we hope that the hands shall join which were parted.”

So she spoke, not knowing the gods: but Aeneas departing
Clasped his father’s knees, the ancient mighty Anchises.
“Bless me, my father; I go to the battle. Strong with thy blessing
Even today may I hurl down Ajax, slay Diomedes,
And on the morrow gaze on the empty beaches of Troas.”
Troubled and joyless, nought replying to warlike Aeneas
Long Anchises sat unmoving, silent, sombre,
Gazing into his soul with eyes that were closed to the sunlight.
“Prosper, Aeneas,” slowly he answered him, “son of a goddess,
Prosper, Aeneas; and if for Troy some doom is preparing,
Only they will what Necessity fashions compelled by the Silence.
Labour and war she has given to man as the law of his transience.
Work; she shall give thee the crown of thy deeds or their ending appointed,
Whether glorious thou pass or in silent shadows forgotten.
But what thy mother commands perform ever, loading thy vessels.
Who can know what the gods have hid with the mist of our hopings?”

Then from the house of his fathers Aeneas rapidly striding
Came to the city echoing now with the wheels of the chariots,
Clanging with arms and astream with the warlike tramp of her thousands.
Fast through the press he strode and men turning knew Aeneas,
Greatened in heart and went on with loftier thoughts towards battle.
He through the noise and the crowd to Antenor’s high-built mansion
Striding came, and he turned to its courts and the bronze of its threshold
Trod which had suffered the feet of so many princes departed.
But as he crossed its brazen square from the hall there came running,
Leaping up light to his feet and laughing with sudden pleasure,
Eurus the youngest son of Polydamas. Clasping the fatal
War-hardened hand with a palm that was smooth as a maiden’s or infant’s,
“Well art thou come, Aeneas,” he said, “and good fortune has sent thee! Now I shall go to the field; thou wilt speak with my grandsire Antenor And he shall hear thee though chid by his heart reluctant. Rejoicing I shall go forth in thy car or warring by Penthesilea, Famous, give to her grasp the spear that shall smite down Achilles.” Smiling answered Aeneas, “Surely will, Eurus, thy prowess Carry thee far to the front; thou shalt fight with Epeus and slay him. Who shall say that this hand was not chosen to pierce Menelaus? But for a while with the ball should it rather strive, O hero, Till in the play and the wrestle its softness is trained for the smiting.” Eagerly Eurus answered, “But they have told me, Aeneas, This is the last of our fights; for today will Penthesilea Meet Achilles in battle and slay him ending the Argives. Then shall I never have mixed in this war that is famous for ever. What shall I say when my hairs are white like the aged Antenor’s? Men will ask, ‘And what were thy deeds in the warfare Titanic? Whom didst thou slay of the Argives, son of Polydamas, venging Bravely thy father?’ Then must I say, ‘I lurked in the city. I was too young and only ascending the Ilian ramparts Saw the return or the flight, but never the deed and the triumph.’ Friend, if you take me not forth, I shall die of grief ere the sunset.” Plucking the hand of Aeneas he drew him into the mansion Vast; and over the floor of the spacious hall they hastened Laughing, the gracious child and the mighty hero and statesman, Flower of a present stock and the burdened star of the future. Meanwhile girt by his sons and the sons of his sons in his chamber Cried to the remnants left of his blood the aged Antenor. “Hearken you who are sprung from my loins and children, their offspring! None shall again go forth to the fight who is kin to Antenor. Weighed with my curse he shall go and the spear-points athirst of the Argives Meet him wroth; he shall die in his sin and his name be forgotten. Oft have I sent forth my blood to be spilled in vain in the battle Fighting for Troy and her greatness earned by my toil and my fathers’. Now all the debt has been paid; she rejects us driven by the immortals. Much do we owe to the mother who bore us, much to our country; But at the last our life is ours and the gods’ and the future’s. Gather the gold of my house and our kin, O ye sons of Antenor.
Warned by a voice in my soul I will go forth tonight from this city
Fleeing the doom and bearing my treasures; the ships shall receive them
Gathered, new-keeled by my care and the gods', in the narrow Propontis.
Over God’s waters guided, treading the rage of Poseidon,
Bellying out with their sails let them cleave to the untravelled distance
Ocean’s crests and resign to their Fates the doomed and the evil.”

So Antenor spoke and his children heard him in silence;
Awed by his voice and the dread of his curse they obeyed, though in sorrow.
Halamus only replied to his father: “Dire are the white hairs
Reverend, loved, of a father, dreadful his curse to his children.
Yet in my heart there is one who cries, 'tis the voice of my country,
She for whose sake I would be in Tartarus tortured for ever.
Pardon me then, if thou wilt; if the gods can, then let them pardon.
For I will sleep in the dust of Troy embracing her ashes,
There where Polydamas sleeps and the many comrades I cherished.
So let me go to the darkness remembered or wholly forgotten,
Yet having fought for my country, true in my fall to my nation.”

Then in his aged wrath to Halamus answered Antenor:
“Go then and perish doomed with the doomed and the hated of heaven;
Nor shall the gods forgive thee dying nor shall thy father.”
Out from the chamber Halamus strode with grief in his bosom
Wrestling with wrath and he went to his doom nor looked back at his dear
ones.

Crossing the hall the son of Antenor and son of Anchises
Met in the paths of their fates where they knotted and crossed for the parting,
One with the curse of the gods and his sire fast wending to Hades,
Fortunate, blessed the other; yet equal their minds were and virtues.
Cypris’ son to the Antenorid: “Thee I have sought and thy brothers,
Bough of Antenor; sore is our need today of thy counsels,
Endless our want of their arms that are strong and their hearts that recoil not
Meeting myriads stark with the spear in unequal battle.”
Halamus answered him: “I will go forth to the palace of Priam,
There where Troy yet lives and far from the halls of my fathers;
There will I speak, not here. For my kin they repose in the mansion
Sitting unarmed in their halls while their brothers fall in the battle.”
Eurus eagerly answered the hero: “Me rather, therefore,
Take to the fight with you; I will make war on the Greeks for my uncles;
One for all I will fill their place in the shock with the foemen.”

But from his chamber-door Antenor heard and rebuked him:
“Scamp of my heart, thou torment! in to thy chamber and rest there,
Bound with cords lest thou cease, thou flutter-brain, scourged into quiet;
So shall thy lust of the fight be healed and our mansion grow tranquil.”
Chid by the old man Eurus slunk from the hall discontented,
Yet with a dubious smile like a moonbeam lighting his beauty.
But to Antenor the Dardanid born from the white Aphrodite:
“Late the Antenorids learn to flinch from the spears of the Argives,
Even this boy of their blood has Polydamas’ heart and his valour.
Nor should a life that was honoured and noble be stained in its ending.
Nay, then, the mood of a child would shame a grey-headed wisdom,
If for the fault of the people virtue and Troy were forgotten.
For, though the people hear us not, yet are we bound to our nation:
Over the people the gods are; over a man is his country;
This is the deity first adored by the hearths of the noble.
For by our nation’s will we are ruled in the home and the battle
And for our nation’s weal we offer our lives and our children’s.
Not by their own wills led nor their passions men rise to their manhood,
Selfishly seeking their good, but the gods’ and the State’s and the fathers’.”

Wroth Antenor replied to the warlike son of Anchises:
“Great is the soul in thee housed and stern is thy will, O Aeneas;
Onward it moves undismayed to its goal though a city be ruined.
They too guide thee who deepest see of the ageless immortals,
One with her heart and one in his spirit, Cypris and Phoebus.
Yet might a man not knowing this think as he watched thee, Aeneas,
‘Spurring Priam’s race to its fall he endangers this city,
Hoping to build a throne out of ruins sole in the Troad.’
I too have gods who warn me and lead, Athene and Hera.
Not as the ways of other mortals are theirs who are guided,
They whose eyes are the gods and they walk by a light that is secret.”

Coldly Aeneas made answer, stirred into wrath by the taunting:
“High wert thou always, nurtured in wisdom, ancient Antenor.
Walk then favoured and led, yet watch lest passion and evil
Feign auguster names and mimic the gait of the deathless.”
And with a smile on his lips but wrath in his bosom answered,
Wisest of men but with wisdom of mortals, aged Antenor:
“Led or misled we are mortals and walk by a light that is given;
Most they err who deem themselves most from error excluded.
Nor shalt thou hear in this battle the shout of the men of my lineage
Holding the Greeks as once and driving back Fate from their country.
His alone will be heard for a space while the stern gods are patient
Even now who went forth a victim self-offered to Hades,
Last whom their wills have plucked from the fated house of Antenor.”

They now with wrath in their bosoms sundered for ever and parted.
Forth from the halls of Antenor Aeneas rapidly striding
Passed once more through the city hurrying now with its car-wheels,
Filled with a mightier rumour of war and the march of its thousands,
Till at Troy’s upward curve he found the Antenorid crestward
Mounting the steep incline that climbed to the palace of Priam
White in her proud and arméd citadel. Silent, ascending
Hardly their feet had attempted the hill when behind them they hearkened
Sweet-tongued a call and the patter and hurry of light-running sandals,
Turning they beheld with a flush on his cheeks and a light on his lashes
Challenging mutely and pleading the boyish beauty of Eurus.
“Racer to mischief,” said Halamus, “couldst thou not sit in thy chamber?
Surely cords and the rod await thee, Eurus, returning.”
Answered with laughter the child, “I have broken through ranks of the
fighters,
Dived under chariot-wheels to arrive here and I return not.
I too for counsel of battle have come to the palace of Priam.”
Burdened with thought they mounted slowly the road of their fathers
Breasting the Ilian hill where Laomedon’s mansion was seated,
They from the crest down-gazing saw their country’s housetops
Under their feet and heard the murmur of Troya below them.

But in the palace of Priam coming and going of house-thralls
Filled all the corridors; smoke from the kitchens curled in its plenty
Rich with savour and breathed from the labouring lungs of Hephaestus.
Far in the halls and the chambers voices travelled and clustered,
Anklets jangling ran and sang back from doorway to doorway
Mocking with music of speed and its laughters the haste of the happy,
Sound came of arms, there was tread of the great, there were murmurs of
women, —

Voices glad of the doomed in Laomedon’s marvellous mansion.
Six were the halls of its splendour, a hundred and one were its chambers
Lifted on high upon columns that soared like the thoughts of its dwellers,
Thoughts that transcended the earth though they sank down at last into ashes;

So had Apollo dreamed to his lyre; and its tops were a grandeur
Domed, as if seeking to roof men’s lives with a hint of the heavens;
Marble his columns rose and with marble his roofs were appointed,
Conquered wealth of the world in its largeness suffered, supporting
Purities of marble, glories of gold. Nor only of matter
Blazed there the brutal pomps, but images mystic or mighty
Crowded ceiling and wall, a work that the gods even admire
Hardly believing that forms like these were imagined by mortals
Here upon earth where sight is a blur and the soul lives encumbered.
Scrolls that remembered in gems the thoughts austere of the ancients
Bordered the lines of the stone and the forms of serpent and Naiad
Ran in relief on those walls of pride in the palace of Priam
Mingled with Dryads who tempted and fled and Satyrs who followed,
Sports of the nymphs in the sea and the woods and their meetings with mortals,

Sessions and battles of Trojan demigods, deaths that were famous,
Wars and loves of men and the deeds of the golden immortals.
Pillars sculptured with gods and with giants soared up from bases
Lion-carved or were seated on bulls and bore into grandeur
Amply those halls where they soared, or in lordliness slenderly fashioned,
Dressed in flowers and reeds like virgins standing on Ida,
Guarded the screens of stone and divided alcove and chamber.
Ivory carved and brodered robes and the riches of Indus
Cherished in sandalwood triumphed and teemed in the palace of Priam;
Doors that were carven and fragrant sheltered the joys of its princes.

Here in a chamber of luminous privacy Paris was arming.
Near him moved Helen, a whiteness divine, and intent on her labour
Fastened his cuirass, bound the greaves and settled the hauberk
Thrilling his limbs with her touch that was heaven to the yearning of mortals.
She with her hands of delight caressing the senseless metal
Pressed her lips to his brilliant armour; she bowed down, she whispered:
“Cuirass, allowed by the gods, protect the beauty of Paris;
Keep for me that for which country was lost and my child and my brothers.”
Yearning she bent to his feet, to the sandal-strings of her lover;  
Then as she gazed up, changed grew her mood; for the Daemon within her  
Rose that had banded Greece and was burning Troy into ashes.  
Slowly a smile that was perfect and perilous over her beauty  
Dawned like the sunlight on Paradise; strangely she looked on her lover.  
So might a goddess have gazed as she played with the love of a mortal  
Passing an hour on the earth ere she rose up white to Olympus.  
“So art thou winner, Paris, yet and thy spirit ascendant  
Leads this Troy where thou wilt, O thou mighty one veiled in thy beauty.  
First in the dance and the revel, first in the joy of the mellay,  
Who would not leave for thy sake and repent it not country and homestead?  
Winning thou reignest still over Troy, over Fate, over Helen.  
Always so canst thou win? Has Death no claim on thy beauty,  
Fate no scourge for thy sins? How the years have passed by in a glory,  
Years of this heaven of the gods, O ravisher, since from my hearthstone  
Seizing thou borest me compelled to thy ships and my joy on the waters.  
Troy is enringed with the spears, her children fall and her glories,  
Mighty souls of heroes have gone down prone to the darkness;  
Thou and I abide! the mothers wail for our pleasure.  
Wilt thou then keep me for ever, O son of Priam, in Troya?  
Fate was my mother, they say, and Zeus for this hour begot me.  
Art thou a god too, O hero, disguised in this robe of the mortal,  
Brilliant, careless of death and of sin as if sure of thy rapture?  
What then if Fate today were to lay her hands on thee, Paris?”  
Calmly he looked on the face of which Greece was enamoured, the body  
For whose desire great Troy was a sacrifice, tranquil regarded  
Lovely and dire on the lips he loved that smile of a goddess,  
Saw the daughter of Zeus in the woman, yet was not shaken.  
“Temptress of Argos,” he answered, “thou snare for the world to be seized in,  
Thou then hop’st to escape! But the gods could not take thee, O Helen,  
How then thy will that to mine is a captive, or how, though with battle,  
He who has lost thee, unhappy, the Spartan, bright Menelaus?  
All things yield to a man and Zeus is himself his accomplice  
When like a god he wills without remorse or longing.  
Thou on this earth art mine since I claimed thee beheld, not speaking,  
But with thy lids that fell thou veiledst thy heart of compliance.  
Then in whatever beyond I shall know how to take thee, O Helen,
Even as here upon earth I knew, in heaven as in Sparta;
I on Elysian fields will enjoy thee as now in the Troad.”
Silent a moment she lingered like one who is lured by a music
Rapturous, heard by himself alone and his lover in heaven,
Then in her beauty compelling she rose up divine among women.
“Yes, it is good,” she cried, “what the gods do and actions of mortals;
Good is this play of the world; it is good, the joy and the torture.
Praised be the hour of the gods when I wedded bright Menelaus!
Praised, more praised the keels that severed the seas towards Helen
Churning the senseless waves that knew not the bliss of their burden!
Praised to the end the hour when I passed through the doors of my husband
Laughing with joy in my heart for the arms that bore and enchained me!
Never can Death undo what life has done for us, Paris.
Nor, whatsoever betide, can the hour be unlived of our rapture.
This too is good that nations should meet in the shock of the battle,
Heroes be slain and a theme be made for the songs of the poets,
Songs that shall thrill with the name of Helen, the beauty of Paris.
Well is this also that empires should fall for the eyes of a woman;
Well that for Helen Hector ended, Memnon was slaughtered,
Strong Sarpedon fell and Troilus ceased in his boyhood.
Troy for Helen burning, her glory, her empire, her riches,
This is the sign of the gods and the type of things that are mortal.
Thou who art kin to the masters of heaven, unconstrained like thy kindred
High on this ancient stage of the Troad with gods for spectators
Play till the end thy part, O thou wondrous and beautiful actor:
Fight and slay the Greeks, my countrymen; victor returning
Take for reward of the play, thy delight of Argive Helen.
Force from my bosom a hint of the joy denied to the death-claimed,
Rob in the kiss of my lips a pang from the raptures of heaven.”
Clasping him wholly her arms of desire were a girdle of madness,
Cestus divine of the dread Aphrodite. He with her kisses
Flushed like the gods with unearthly wine and rejoiced in his ruin.
Thus while they conversed now in this hour that was near to their

Last upon earth, a fleet-footed slavegirl came to the chamber:
“Paris, thy father and mother desire thee; there in the strangers’
Outer hall Aeneas and Halamus wait for thy coming.”
So with the Argive he wended to Priam's ample chamber
Far in Laomedon's house where Troy looked upwards to Ida.
Priam and Hecuba there, the ancient grey-haired rulers,
Waiting him sat in their chairs of ivory calm in their greatness;
Hid in her robes at their feet lay Cassandra crouched from her visions.
“Since, O my father,” said Paris, “thy thoughts have been with me, thy
blessing
Surely shall help me today in my strife with the strength of Achilles.
Surely the gods shall obey in the end the might of our spirits,
Pallas and Hera, flame-sandalled Artemis, Zeus and Apollo.
Ever serve the immortal brightnesses man when he stands up
Firm with his will uplifted a steadfast flame towards the heavens,
Ares works in his heart and Hephaestus burns in his labour.”
Priam replied to his son: “Forewilled by the gods, Alexander,
All things happen on earth and yet we must strive who are mortals,
Knowing all vain, yet we strive; for our nature seizing us always
Drives like the flock that is herded and urged towards shambles or pasture.
So have the high gods fashioned these tools of their action and pleasure;
Failure and grief are their engines no less than the might of the victor;
They in the blow descend and resist in the sobs of the smitten.
Such are their goads that I too must walk in the paths that are common,
Even I who know must send for thee, moved by Cassandra.
Speak, O my child, since Apollo has willed it, once, and be silent.”

But in her raiment hidden Cassandra answered her father:
“No, for my heart has changed since I cried for him, vexed by Apollo.
Why should I speak? For who will believe me in Troy? who believed me
Ever in Troy or the world? Event and disaster approve me
Only, my comrades, not men in their thoughts, not my brothers and kinsmen.
All by their hopes are gladly deceived and grow wroth with the warner,
Half-blind prophets of hope entertained by the gods in the mortal!
Wiser blind, if nothing they saw or only the darkness.
I too once hoped when Apollo pursued me with love in his temple.
Round me already there gleamed the ray of the vision prophetic,
Thrill of that rapture I felt and the joy of the god in his seeing
Nor did I know that the knowledge of mortals is bound unto blindness.
Either only they walk mid the coloured dreams of the senses
Treading the greenness of earth and deeming the touch of things real,
Or if they see, by the curse of the gods their sight into falsehood
Easily turns and leads them more stumbling astray than the sightless.
So are we either blind in a darkness or dazzled by seeing.
Thus have the gods protected their purpose and baffled the sages;
Over the face of the Truth their shield of gold is extended.
But I deemed otherwise, urged by the Dreadful One, he who sits always
Veiled in us fighting the gods whom he uses. I cried to Apollo,
‘Give me thy vision sheer, not such as thou giv’st to thy prophets,
Troubled though luminous; clear be the vision and ruthless to error,
Far-darting god who art veiled by the sun and by death thou art shielded.
Then I shall know that thou lovest.’ He gave, alarmed and reluctant,
Driven by Fate and his heart; but I mocked him, I broke from my promise,
Courage fatal helping my heart to its ruin with laughter.
Always now I remember his face that grew tranquil and ruthless,
Hear the voice divine and implacable: ‘Since thou deceivest
Even the gods and thou hast not feared to lie to Apollo,
Speak shalt thou henceforth only truth, but none shall believe thee:
Scorned in thy words, rejected yet more for their bitter fulfilment,
Scourged by the gods thou must speak though thy sick heart yearns to be silent.
For in this play thou hast dared to play with the masters of heaven,
Girl, it is thou who hast lost; thy voice is mine and thy bosom.’
Since then all I foreknow; therefore anguish is mine for my portion:
Since then all whom I love must perish slain by my loving.
Even of that I denied him, violent force shall bereave me
Grasped mid the flames of my city and shouts of her merciless victors.”
But to Cassandra answered gently the voice of her brother:
“Sister of mine, afflicted and seized by the dreadful Apollo,
All whose eyes can pierce that curtain, gaze into dimness;
This they have glimpsed and that they imagine deceived by their natures
Seeing the forms in their hearts of dreadful things and of joyous;
As in the darkness our eyes are deceived by shadows uncertain,
Such is their sight who rend the veil that the dire gods have woven.
Busy our hearts are weaving thoughts and images always:
After their kind they see what here we call truth. So thy nature
Tender and loving, plagued by this war and its fears for thy loved ones,
Sees calamity everywhere; when the event like the vision

www.holybooks.com
Seems, as in every war the beloved must fall and the cherished,
Then the heart cries, ‘It has happened as all shall happen I mourn for.’
All that was bright it misses and only seize on sorrow.
Dear, on the brightness look and if thou must prophesy, tell us
Rather of great Pelides slain by my spear in the onset.”
But with a voice of grief the sister answered her brother:
“Yes, he shall fall and his slayer too perish and Troy with his slayer.”
But in his spirit rejoicing Paris answered Cassandra:
“Let but this word come true; for the rest, the gods shall avert it.
Look once more, O Cassandra, and comfort the heart of thy mother,
See, O seer, my safe return with the spoils of Achilles.”
And with a voice of grief the sister answered her brother:
“Thou shalt return for thy hour while Troy yet stands in the sunshine.”
But in his spirit exultant Paris seizing the omen:
“Hearst thou, my father, my mother? She who still prophesied evil
Now perceives of our night this dawning. Yet is it grievous,
Since through a heart that we love must be pierced the heart of Achilles.
Fate, with this evil satisfied, turn in the end from Troya.
Bless me, my father, and thou, O Hecuba, mother long-patient,
Still forgive that thy children have fallen for Helen and Paris.”
Tenderly yearning his mother drew him towards her and murmured:
“All for thy hyacinth curls was forgiven even from childhood
And for thy sunlit looks, O wonder of charm, O Paris.
Paris, my son, though Troy must fall, thy mother forgives thee,
Blessing the gods who have lent thee to me for a while in their sunshine.
Their fate and result, but ours is the joy of our children;
Even the griefs are dear that come from their hands while they love us.
Fight and slay Achilles, the murderer dire of thy brothers;
Venging Hector return, my son, to the clasp of thy mother.”
But in his calm august to Paris Priam the monarch:
“Victor so mightest thou come, so gladden the heart of thy mother.”
Then to the aged father of Paris Helen the Argive
Bright and immortal and sad like a star that grows near to the dawning
And on its pale companions looks who now fade from its vision:
“Me too pardon and love, my parents, even Helen,
Cause of all bane and all death; but I came from the gods for this ruin
Born as a torch for the burning of empires, cursed with this beauty.
Nor have I known a father’s embrace, a mother’s caresses,
But to the distant gods I was born and nursed as an alien
Here by earth from fear, not affection, compelled by the thunders.
Two are her monstrous births, from the Furies and from the immortals;
Either touching mortality suffers and bears not the contact.
I have been both, a monster of doom and a portent of beauty.”
Slowly Priam the monarch answered to Argive Helen:
“That which thou art the gods have made thee; thou couldst not be other:
That which thou didst, the gods have done; thou couldst not prevent them.
Who here shall blame or whom shall he pardon? Should not my people
Rail at me murmuring, ‘Priam has lost what his fathers had gathered;
Cursed is this king by heaven and cursed who are born as his subjects’?
Masked the high gods act; the doer is hid by his working.
Each of us bears his punishment, fruit of a seed that’s forgotten;
Each of us curses his neighbour protecting his heart with illusions:
Therefore like children we blame each other and hate and are angry.
Take, my child, the joy of the sunshine won by thy beauty.
I who lodge on this earth as an alien bound by the body,
Wearing my sorrow even as I wear the imperial purple,
Praise yet the gods for my days that have seen thee at last in my ending.
Fitly Troy may cease having gazed on thy beauty, O Helen.”
He became silent, he ceased from words. But Paris and Helen
Lightly went and gladly; pursuing their footsteps the mother,
Mother once of Troilus, mother once of Hector,
Stood at the door with her death in her eyes, nor returned from her yearning,
But as one after a vanishing sunbeam gazes in prison,
Gazed down the corridors after him, long who had passed from her vision.

Then in the silent chamber Cassandra seized by Apollo
Staggered erect and tossing her snow-white arms of affliction
Cried to the heavens in her pain; for the fierce god tortured her bosom:
“Woe is me, woe for the guile and the bitter gift of Apollo!
Woe, thrice woe, for my birth in Troy and the lineage of Teucer!
So do you deal, O gods, with those who have served you and laboured,
Those who have borne for your sake the evil burden of greatness.
Blessed is he who holds mattock in hand or who bends o’er the furrow
Taking no thought for the good of mankind, with no yearnings for
knowledge.
Woe unto me for my wisdom which none shall value nor hearken!
Woe unto thee, O King, for thy strength which shall not deliver!
Better the eye that is sealed, more blest is the spirit that's feeble.
Vainly your hopes with iron Necessity struggle, O mortals.
Virtue shall lie in her pangs, for the gods have need of her torture;
Sin shall be scourged, though her deeds were compelled by the gods in their anger.

None shall avail in the end, the coward shall die and the hero.
Troy shall fall in her sin and her virtues shall not protect her;
Argos shall grow by her crimes till the gods shall destroy her for ever.
Now have I fruit of thy love, O Loxias, dreadful Apollo.
Woe is me, woe for the flame that approaches the house of my fathers!
Woe is me, woe for the hand of Ajax laid on my tresses!
Woe, thrice woe to him who shall ravish and him who shall cherish!
Woe for the ships that shall bound too swift o'er the azure Aegean!
Woe for thy splendid shambles of hell, O Argive Mycenae!
Woe for the evil spouse and the house accursèd of Atreus!

So with her voice of the swan she clanged out doom on the peoples,
Over the palace of Priam and over the armed nation
Marching resolved to the war in the pride of its centuries conquered,
Centuries slain by a single day of the anger of heaven.
Dim to the thoughts like a vision of Hades the luminous chamber
Grew; in his ivory chair King Priam sat like a shadow
Throned mid the ghosts of departed kings and forgotten empires.

But in his valiance careless and blithe the Priamid hastened
Seeking the pillared megaron wide where Deiphobus armoured
Waited his coming forth with the warlike chiefs of the Trojans.
Now as he passed by the halls of the women, the chambers that harboured
Daughters and wives of King Priam and wives of his sons and their

Niches of joy that were peopled with murmurs and sweet-tongued laughters,
Troubled like trees with their birds in a morning of sun and of shadow
Where in some garden of kings one walks with his heart in the sunshine,
Out from her door where she stood for him waiting Polyxena started,
Seized his hand and looked in his face and spoke to her brother.
Then not even the brilliant strength of Paris availed him;
Joyless he turned his face from her eyes of beauty and sorrow.
“So it is come, the hour that I feared, and thou goest, O Paris, 
Armed with the strength of Fate to strike at my heart in the battle; 
For he is doomed and thou and I, a victim to Hades. 
This thou preferrest and neither thy father could move nor thy mother 
 Burning with Troy in their palace, nor could thy country persuade thee, 
 Nor dost thou care for thy sister’s happiness pierced by thy arrows. 
 Will she remember it all, my sister Helen, in Argos 
 Passing tranquil days with her husband, bright Menelaus, 
 Holding her child on her knees? But we shall lie joyless in Hades.” 
 Paris replied: “O sister Polyxena, blame me not wholly. 
 We by the gods are ensnared; for the pitiless white Aphrodite 
 Doing her will with us both compels this. Helpless our hearts are 
 And when she drives perforce must love, for death or for gladness: 
 Weighed in unequal scales she deals them to one or another. 
 Happy who holding his love can go down into bottomless Hades.” 
 But to her brother replied in her anguish the daughter of Priam: 
 “Evilly deal with my days the immortals happy in heaven; 
 Yes, I accuse the gods and I curse them who heed not our sorrow. 
 This they have done with me, forcing my heart to the love of a foeman, 
 One whose terrible hands have been stained with the blood of my brothers. 
 This now they do, they have taken the two whom I love beyond heaven, 
 Brother and husband, and drive to the fight to be slain by each other. 
 Nay, go thou forth; for thou canst not help it, nor I, nor can Helen. 
 Since I must die as a pageant to satisfy Zeus and his daughter, 
 Since now my heart must be borne as a victim bleeding to please them, 
 So let it be, let me deck myself and be bright for the altar.” 
 Into her chamber she turned with her great eyes blind, unregarding; 
 He for a moment stood, then passed to the megaron slowly; 
 Dim was the light in his eyes and clouded his glorious beauty. 
 Meanwhile armed in the palace of Priam Penthesilea. 
 Near her her captains silent and mighty stood, from the Orient 
 Distant clouds of war, Surabdas and iron Surenas, 
 Pharatus planned like the hills, Somaranes, Valarus, Tauron, 
 High-crested Sumalus, Arithon, Sambus and Artavoruxes. 
 There too the princes of Phrygian Troya gathered for counsel 
 And with them Eurus came, Polydamas’ son, who most dearly 
 Loved was of all the Trojan boys by the glorious virgin.
She from her arming stayed to caress his curls and to chide him:
“Eurus, forgotten of grace, dost thou gad like a stray in the city
Eager to mix with the armoured men and the chariots gliding?
High on the roofs wouldst thou watch the swaying speck that is battle?
Better to aim with the dart or seek with thy kind the palaestra;
So wilt thou sooner be part of this greatness rather than straining
Yearn from afar to the distance that veils the deeds of the mighty.”
But with an anxious lure in his smile on her Eurus answered:
“Not that remoteness to see have I come to the palace of Priam
Leaving the house of my fathers, but for the spear and the breastpiece.
Hast thou not promised me long I shall fight in thy car with Achilles?”
Doubtful he eyed her, a lion’s cub at play in his beauty,
And mid the heroes who heard him laughter arose for a moment,
Yet with a sympathy stirred; they remembered the days of their childhood,
Thought of Troy still mighty, life in its rose-touched dawning
When they had longed for the clash of the fight and the burden of armour.
Glad, with the pride of the lioness watching her cub in the desert,—
Couchant she lies with her paws before her and joys in his gambols,
Over the prey as he frisks and is careless,—answered the virgin:
“Younger than thou in my nation have mounted the steed and the war-car.
Eurus, arm; from under my shield thou shalt gaze at the Phthian,
Reaching my shafts for the cast from the rim of my car in the battle
Handle perhaps the spear that shall smite down the Phthian Achilles.
What sayst thou, Halamus? Were not such prowess a perfect beginning
Worthy Polydamas’ son and the warlike house of Antenor?”
Halamus started and smiting his hand on the grief of his bosom,
Sombre replied and threatened with Fate the high-hearted virgin.
“Virgin armipotent, wherefore mockst thou thy friend, though unwitting?
Nay,—for the world will know at the end and my death cannot hide it,—
Slain by a father’s curse we fight who are kin to Antenor.
Take not the boy in thy car, lest the Furies, Penthesilea,
Aim through the shield and the shielder to wreak the curse of the grandsire.
They will not turn nor repent for thy strength nor his delicate beauty.”
Swiftly to Halamus answered the high-crested might of the virgin:
“Curses leave lightly the lips when the soul of a man is in anger
Even as blessings easily crowd round the head that is cherished.
Yet have I never seen that a curse has sharpened a spear-point;
Never Death drew back from the doomed by the power of a blessing. 
Valour and skill and chance are Fate and the gods and the Furies. 
Give me the boy; a hero shall come back formed from the onset.”
“Do as thou wilt,” replied Halamus; “Fate shall guard or shall end him.”
Then to the boy delighted and smiling-eyed and exultant
Cried with her voice like the call of heaven’s bugles waking the heroes,
Blown by the lips of gold-haired Valkyries, Penthesilea.
“Go, find the spear, gird the sword, don the cuirass, child of the mighty. 
Armed when thou standst on the plain of the Xanthus, field of thy fathers, 
See that thou fight on this day like the comrade of Penthesilea.
Bud of a hero, gaze unalarmed in the eyes of Achilles.”
Light as a hound released he ran to the hall of the armour
Where were the shields of the mighty, the arms of the mansion of Teucer;
There from the house-thralls he wrung the greaves and the cuirass and helmet 
Troilus wore, the wonderful boy who, ere ripened his prowess,
Conquered the Greeks and drove to the ships and fought with Achilles.
These on his boyish limbs he donned and ran back exulting
Bearing spears and a sword and rejoiced in the clank on his armour.

Meanwhile Deiphobus, head of the mellay, moved by Aeneas
Opened the doors of their warlike debate to the strength of the virgin:
“Well do I hope that our courage outwearing every opponent
Triumph shall lift to her ancient seat on the Pergaman turrets;
Clouds from Zeus come and pass; his sunshine eternal survives them.
Yet we are few in the fight and armoured nations besiege us.
Surging on Troy today a numberless foe well-captained
Hardly pushed back in shock after shock with the Myrmidon numbers
Swelled returns; they fight with a hope that broken refashion
Helpful skies and a man now leads them who conquers and slaughters,
One of the sons of the gods and armed by the gods for the struggle.
We unhelped save by Ares stern and the mystic Apollo
And but as mortals striving with stubborn mortal courage,
Hated and scorned and alone in the world, by the nations rejected,
Fight with the gods and mankind and Achilles and numbers against us
Keeping our country from death in this bitter hour of her fortunes.
Therefore have prudence and hardihood severed contending our counsels
Whether far out to fight on the seaward plain with the Argives
Or behind Xanthus the river impetuous friendly to Troya.

www.holybooks.com
This my brother approves and the son of Antenor advises,
Prudent masters of war who prepare by defence their aggression.
But for myself from rashness I seek a more far-seeing wisdom,
Not behind vain defences choosing a tardy destruction,
Rather as Zeus with his spear of the lightning and chariot of tempest
Scatters and chases the heavy mass of the clouds through the heavens,
So would I hunt the Greeks through the plains to their lair by the Ocean,
Straight at the throat of my foeman so would I leap in the battle.
Swiftly to smite at the foe is prudence for armies outnumbered.”
Then to the Dardanid answered the high-crested Penthesilea:
“There where I find my foe I will fight him, whether by Xanthus
Or at the fosse of the ships where they crouch behind bulwarks for shelter,
Or if they dare by Scamander the higher marching on Troya.”
Sternly approved her the Trojan, “So should they fight who would triumph
Meeting the foe ere he move in his will to the clash of encounter.”
But with his careless laughter the brilliant Priamid Paris:
“Joy of the battle, joy of the tempest, joy of the gamble
Mated are in thy blood, O virgin, daughter of Ares.
Thou like the deathless wouldst have us combat, us who are human?
Come, let the gods do their will with us, Ares let lead and his daughter!
Always the blood is wiser and know what is hid from the thinker.
Life and treasure and fame to cast on the wings of a moment,
Fiercer joy than this the gods have not given to mortals.”
Highly to Paris the virgin armipotent Penthesilea,
“Paris and Halamus, shafts of the war-god, fear not for Troya.
Not as a vaunt do I speak it, you gods who stern-thoughted watch us,
But in my vision of strength and the soul that is seated within me,
Not while I live and war shall the host of the Myrmidon fighters
Forcing the currents lave, as once they were wont, in Scamander
Vaunting their victor car-wheels red with the blood of the vanquished.
Then when I lie by some war-god slain on the fields of the Troad,
Fight again if you will behind high-banked fast-flowing Xanthus.”
Halamus answered her, “Never so by my will would I battle
Flinging Troy as a stake on the doubtful diceboard of Ares.
But you have willed it and so let it be; yet hearken my counsel.
Massed in the fight let us aim the storm of our spears at one greatness,
Mighty Pelides’ head who gives victory still to the Argives.
Easy the Greeks to destroy lay Achilles once slain on the Troad,
But if the Peleid lives the fire shall yet finish with Troya.
Join then Orestes’ speed to the stubborn might of Aeneas,
Paris’ fatal shafts and the missiles of Penthesilea.
Others meanwhile, a puissant screen of our bravest and strongest,
Fighting shall hold back Pylos and Argolis, Crete and the Locrian.
Thou, Deiphobus, front the bronze-clad stern Diomedes,
I with Polydamas’ spear will dare to restrain and discourage
Ajax’ feet though they yearn for pursuit and are hungry for swiftness.
Knot of retreat behind let some strong experienced captain
Stand with our younger levies guarding the fords of the Xanthus,
Fortify the wavering line and dawn as fresh strength on the wearied.
Then if the fierce gods prevail we shall perish not driven like cattle
Over the plains, but draw back sternly and slowly to Troya.”
Answered the Priamid, “Wise is thy counsel, branch of Antenor.
Chaff are the southern Achaians, only the hardihood Hellene,
Only the savage speed of the Locrian rescues their legions.
Marshal we so this field. Stand, Halamus, covering Xanthus,
Helping our need when the foe press hard on the Ilian fighters.
Paris, my brother, thou with our masses aid the Eoan.
I with Aeneas’ single spear am enough for the Argive.”
“Gladlier” Halamus cried “would I fight in the front with the Locrian!
This too let be as you will; for one is the glory and service
Fighting in front or guarding behind the fate of our country.”
So in their thoughts they ordered battle. Meanwhile Eurus
Gleaming returned and the room grew glad with the light of his armour.
Glad were its conscious walls of that vision of boyhood and valour;
Gods of the household sighed and smiled at his courage and beauty,
They who had seen so many pass over their floors and return not
Hasting to battle, the fair and the mighty, the curled and the grizzled,
All of them treading one path like the conscious masks of one pageant
Winding past through the glare of a light to the shadows beyond them.
But on her captains proudly smiling Penthesilea
Seized him and cried aloud, her wild and warlike nature
Moved by the mother’s heart that the woman loses not ever.
“Who then shall fear for the fate of Troy when such are her children?
Verily, Eurus, yearning has seized me to meet thee in battle
Rather than Locrian Ajax, rather than Phthian Achilles,
There acquiring a deathless fame I would make thee my captive,
Greedy and glad who feel as a lioness eyeing her booty.
Nay, I can never leave thee behind, my delicate Trojan,
But, when this war ends, will bear thee away to the hills of my country
And, as a robber might, with my captive glad and unwilling
Bring thee a perfect gift to my sisters Ditis and Anna.
Eurus, there in my land thou shalt look on such hills as thy vision
Gazed not on yet, with their craggy tops besieging Cronion,
Sheeted in virgin white and chilling his feet with their vastness.
Thou shalt rejoice in our wooded peaks and our fruit-bearing valleys,
Lakes of Elysium dreaming and wide and rivers of wonder.
All day long thou shalt glide between mystic woodlands in silence
Broken only by call of the birds and the plashing of waters.
There shalt thou see, O Eurus, the childhood of Penthesilea.
Thou shalt repose in my father’s house and walk in the gardens
Green where I played at the ball with my sisters, Ditis and Anna.”
Musing she ceased, but if any god had touched her with prescience
Bidding her think for the last time now of the haunts of her childhood,
Gaze in her soul with a parting love at the thought of her sisters
And of the lovely and distant land where she played through her summers,
Brief was the touch; for she changed at once and only of triumph
Dreamed and only yearned in her heart for the shock of Achilles.

So they passed from the halls of Priam fated and lofty,
Halls where the air seemed sobbing yet with the cry of Cassandra;
Clad in their brilliant armour, bright in their beauty and courage,
Sons of the passing demigods, they to their latest battle
Down the ancestral hill of the Pergamans moved to the gateway.
Loud with an endless march, with a tireless gliding to meet them,
All Troy streamed from her streets and her palaces armed for the combat.
Then to the voice of Deiphobus clanging high o’er the rumour
Wide the portals swung that shall close on a blood-red evening,
Slow, foreboding, reluctant, and through the yawn of the gateway
Drove with a cry her steeds the virgin Penthesilea
Calling aloud, “O steeds of my east, we drive to Achilles.”
Blithe in the car behind her Eurus scouted around him
Scared with his eyes lest Antenor his grandsire should rise in the gateway,
Hardly believing his fate that led him safe through the portals.
After her trampled and crashed the ranks of her orient fighters.
Paris next with his hosts came brilliant, gold on his armour,
Gold on his helm; a mighty bow hung slack on his shoulder,
Propped o’er his arm a spear, as he drove his car through the gateway.
Next Deiphobus drove and the hero strong Aeneas,
Leading their numbers on. Behind them Dus and Polites,
Helenus, Priam’s son, Thrasmachus, grizzled Aretes,
Came like the tempest his father, Adamas, son of the Northwind —
Orus old in the fight and Eumachus, kin to Aeneas,
Who was Creusa’s brother and richest of men in the Troad
After Antenor only and Priam, Ilion’s monarch.
Halimus drove and Arintheus led on his Lycian levies.
Who were the last to speed out of Troy of all those legions
Doomed to the sword? for never again from the ancient city
Foot would march or chariots crash in their pride to the Xanthus.
Aetor the old and Tryas the conqueror known by the Oxus.
They in the portals met and their ancient eyes on each other
Looked amazed, admiring on age the harness of battle.
They in the turreted head of the gateway halted and conversed.
“Twenty years have passed, O Tryas, chief of the Trojans,
Since in the battle thy car was seen and the arm of thy prowess
Age has wronged. Why now to the crowded ways of the battle
Move once more thy body infirm and thy eyes that are faded?”
And to Antenor’s brother the Teurician, “Thou too, O Aetor,
Old and weary hast sat in thy halls and desisted from battle.
Now in Troy’s portals I meet thee driving forth to the mellay.”
Aetor answered, “Which then is better, to wretchedly perish
 Crushed by the stones of my falling house or slain like a victim
Dragged through the blood of my kin on the sacred hearth of my fathers,
Or in the battle to cease mid the war-cry and hymn of the chariots
Knowing that Troy yet stands in her pride though doomed in her morrows?
So have the young men willed and the old like thee who age not,
Old are thy limbs, but thy heart is still young and hot for the war-din.”
Tryas replied, “To perish is better for man or for nation
Nobly in battle, nor end disgraced by disease or subjection.
So have I come here to offer this shoulder Laomedon leaned on,
Arms that have fought by the Oxus and conquered the Orient’s heroes
Famous in Priam’s wars, and a heart that is faithful to Troya.
These I will offer to death on his splendid altar of battle,
Tribute from Ilion. If she must fall, I shall see not her ending."
Aetor replied to Tryas, “Then let us perish together,
Joined by the love of our race who in life were divided in counsel.
All things embrace in death and the strife and the hatred are ended.”
Silent together they drove for the last time through Ilion’s portals
Out with the rest to the fight towards the sea and the spears of the Argives.
Only once, as they drove, they gazed back silent on Troya
Lifting her marble pride in the golden joy of the morning.
So through the ripening morn the army, crossing Scamander,
Filling the heavens with the dust and the war-cry, marched on the Argives.
Far in front Troy’s plain spread wide to the echoing Ocean.
Meanwhile grey from the Trojan gates Talthybius journeyed
Spurred by the secret thought of the Fates who change not nor falter.
Simois sighed round his wheels and Xanthus roared at his passing,
Troas' god like a lion wroth and afraid; to meet him
Whistling the ocean breezes came and Ida regarded.
So with his haste in the wheels the herald oceanward driving
Came through the gold of the morn, o'er the trampled green of the pastures
Back to the ships and the roar of the sea and the iron-hooped leaguer.
Wide to the left his circle he wrote where the tents of Achilles
Trooped like a flock of the sea-fowl pensive and still on the margin.
He past the outposts rapidly coursed to the fosse of the Argives.
In with a quavering cry to the encampment over the causeway
Bridging the moat of the ships Talthybius drove in his chariot
Out of the wide plains azure-roofed and the silence of Nature
Passing in to the murmur of men and the thick of the leaguer.
There to a thrall of the Hellene he cast his reins and with labour
Down from the high seat climbed of the war-car framed for the mighty.
Then betwixt tent-doors endless, vistaed streets of the canvas,
Slowly the old man toiled with his eager heart, and to meet him
Sauntering forth from his tent at the sound of the driving car-wheels
Strong Automedon came who was charioteer of Achilles.
“Early, then, he has eaten, Automedon, early reposes?”
“Early the meat was broached on the spits, Talthybius, early
High on the sands or under the tents we have eaten and rested.
None knows the hour of the hunt, red, fierce, nor the prey he shall leap on,
All are like straining hounds; for Achilles shares not his counsels,
But on the ships, in the tents the talk has run like Peneus;
These upon Troy to be loosed and the hard-fighting wolf-brood of Priam,
These hope starkly with Argos embraced to have done with the Spartan,
Ending his brilliance in blood or to sport on the sands of the margent
Playing at bowls with the heads of the Cretan and crafty Odysseus.
Welcome were either or both; we shall move in the dances of Ares,
Quicken heart-beats dulled and limbs that are numb with reposing,
War we desire and no longer this ease by the drone of the waters.”

So as they spoke, they beheld far-off the tent of Achilles
Splendid and spacious even as the hall of a high-crested chieftain,
Lofty, held by a hundred stakes to the Phrygian meadow,
Hung were its sides with memories bronze and trophies of armour,
Sword and spear and helmet and cuirass of fallen heroes
Slain by the hand of the mighty Achilles warring with Troya.
Teemed in its canvas rooms the plundered riches of Troas,
Craftsman’s work and the wood well-carved and the ivory painted,
Work of bronze and work of gold and the dreams of the artist.
And in those tents of his pride, in the dreadful guard of the Hellene,
Noble boys and daughters of high-born Phrygians captive,
Borne from the joyless ruins that now were the sites of their childhood,
Served in the land of their sires the will of the Phthian Achilles.
There on a couch reclined in his beauty mighty and golden,
Loved by the Fates and doomed by them, spear of their will against Troya,
Peleus’ hero son by the foam-white child of the waters
Dreaming reposed and his death-giving hand hung lax o’er the couch-side.
Near him dark-eyed Briseis, the fatal and beautiful captive,
Sang to the Grecian victor chants of the land of her fathers,
Sang the chant of Ilus, the tale of the glories of Troya.
Trojan boys and maidens sat near the singer and listened
Heart-delighted if with some tears; for easy are mortal
Hearts to be bent by Fate and soon we consent to our fortunes.
But in the doorway Automedon stood with the shadowy Argive
And at the ominous coming the voice of the singer faltered,
Faltering hushed like a thought melodious ceasing in heaven.

But from his couch the Peleid sprang and he cried to the herald.
“Long hast thou lingered in Ilion, envoy, mute in the chambers
Golden of Priam old, while around thee darkened the counsels
Wavering blindly and fiercely of minds that revolt from compulsion,
Natures at war with the gods and their fortunes. Fain would I fathom
What were the thoughts of Deiphobus locked in that nature of iron
Now that he stands confronting his fate in the town of his fathers.
Peace dwells not in thy aspect. Sowst thou a seed then of ruin
Cast from the inflexible heart and the faltering tongue of Aeneas,
Or with the golden laugh of the tameless bright Alexander?”

Grey Talthybius answered, “Surely their doom has embraced them
Wrapping her locks round their ears and their eyes, lest they see and escape
Kissing their tongue with her fatal lips and dictating its answers.
Dire is the hope of their chiefs and fierce is the will of their commons.
‘Son of the Aeacids, spurned is thy offer. The pride of thy challenge
Rather we choose; it is nearer to Dardanus, King of the Hellenes.
Neither shall Helen captive be dragged to the feet of her husband,
Nor down the paths of peace revisit her fathers’ Eurotas.
Death and the fire may prevail on us, never our wills shall surrender
Lowering Priam’s heights and darkening Ilion’s splendours;
Not of such sires were we born, but of kings and of gods, Larissan,
Not with her gold Troy purchases safety but with her spear-point.
Stand with thy oath in the war-front, Achilles, call on thy helpers
Armed to descend from the calm of Olympian heights to thy succour
Hedging thy fame from defeat; for we all desire thee in battle,
Mighty to end thee or tame at last by the floods of the Xanthus.’
So they reply; they are true to their death, they are constant for ruin.
Humbler answer hope not, O hero, from Penthesilea;
Insolent, warlike, regal and swift as herself is her message.
‘Sea of renown and of valour that fillest the world with thy rumour,
Speed of the battle incarnate, mortal image of Ares!
Terror and tawny delight like a lion one hunts or is hunted!
Dread of the world and my target, swift-footed glorious hero!
Thus have I imaged thee, son of Peleus, dreaming in countries
Far from thy knowledge, in mountains that never have rung to thy war-cry.  
O, I have longed for thee, warrior! Therefore today by thy message  
So was I seized with delight that my heart was hurt with its rapture,  
Knowing today I shall gaze with my eyes on that which I imaged  
Only in air of the mind or met in the paths of my dreaming.  
Thus have I praised thee first with my speech; with my spear I would answer.  
Yet for thy haughty scorn who deeming of me as some Hellene  
Or as a woman weak of these plains fit but for the distaff,  
Promisest capture in war and fame as thy slavegirl in Phthia, —  
Surely I think that death today will reply to that promise, —  
Now I will give thee my answer and warn thee ere we encounter.  
Know me queen of a race that never was conquered in battle!  
Know me armed with a spear that never has missed in the combat!  
There where my car-wheels run, good fruit gets the husbandman after.  
This thou knowest. Ajax has told thee, thy friend, in his dying.  
Has not Meriones’ spirit come in thy dreams then to warn thee?  
Didst thou not number the Argives once ere I came to the battle?  
Number them now and measure the warrior Penthesilea.  
Such am I then whom thy dreams have seen meek-browed in Larissa,  
And in the battle behind me thunder the heroes Eoan,  
Ranks whose feeblest can match with the vaunted chiefs of the Argives.  
Never yet from the shock have they fled; if they turn from the foeman,  
Always ’tis to return like death recircling on mortals.  
Yet being such, having such for my armies, this do I promise:  
I on the left of the Trojans war with my bright-armed numbers,  
Thou on the Argive right come forth, Achilles, and meet me!  
If thou canst drive us with rout into Troy, I will own thee for master,  
Do thy utmost will and make thee more glorious than gods are  
Serving thy couch in Phthia and drawing the jar from thy rivers.  
Nay, if thou hast that strength, then hunt me, O hunter, and seize me,  
If ’tis thy hope indeed that the sun can turn back from the Orient,  
But if thou canst not, death of myself or thyself thou shalt capture.’”  
Musing heard and was silent awhile the strength of Achilles,  
Musing of Fate and the wills of men and the purpose of Heaven,  
Then from his thoughts he broke and turned in his soul towards battle.  
“’Well did I know what reply would come winged from the princes of Troya.  
Prone are the hearts of heroes to wrath and to God-given blindness
When from their will they are thrust and harried by Fate and disaster:
Fierceness then is the armour of strength against grief and its yielings.
So have the gods made man for their purpose, cunningly fashioned.
Once had defiance waked from my depths a far-striding fury,
Flaming for justice and vengeance, nor had it, satisfied, rested,
Sunk to its lair, till the insulter died torn or was kneeling for pardon.
Fierce was my heart in my youth and exulted in triumph and slaughter.
Now as I grow in my spirit like to my kin the immortals,
Joy more I find in saving and cherishing than in the carnage.
Greater it seems to my mind to be king over men than their slayer,
Nobler to build and to govern than what the ages have laboured
Putting their godhead forth to create or the high gods have fashioned,
That to destroy in our wrath of a moment. Ripened, more widely
Opens my heart to the valour of man and the beauty of woman,
Works of the world and delight; the cup of my victory sweetens
Not with the joys of hate, but the human pride of the triumph.
Yet was the battle decreed for the means supreme of the mortal
Placed in a world where all things strive from the worm to the Titan.
So will I seize by the onset what peace from my soul would sequester,
So will I woo with the sword and with love the delight of my foeman,
Troy and Polyxena, beauty of Paris and glory of Priam.
This was the ancient wrestling, this was the spirit of warfare
Fit for the demigods. Soon in the city of gold and of marble,
There where Ilus sat and Tros, where Laomedon triumphed,
Peleus' house shall reign, the Hellene sit where the Trojan
Thought himself deathless. Arise, Automedon! Out to the people!
Send forth the cry through the ships and the tents of the Myrmidon nation.
Let not a man be found then lingering when o'er the causeway
Thunder my chariot-wheels, nor let any give back in the battle,
Good if he wills from me, till through the conquered gates of the foeman
Storming we herd in their remnants and press into Troy as with evening
Helios rushing sinks to the sea. But thou, Briseis,
Put by thy lyre, O girl; it shall gladden my heart in my triumph
Victor returned from Troy to listen pleased to thy singing,
Bearing a captive bound to my car-wheels Penthesilea,
Bearing my valour's reward, Polyxena, daughter of Priam,
Won in despite of her city and brothers and spears of her kindred.
So by force it is best to take one's will and be mighty."
Joyful, Automedon ran through the drowsy camp of the Hellenes
Changing the hum of the tents as he raced into shoutings of battle;
For with the giant din of a nation triumphant arising
Hellas sprang from her irksome ease and mounted her war-car;
Donning her armour bright she rejoiced in the trumpets of battle.

But to the herald grey the Peleid turned and the old man
Shuddered under his gaze and shrank from the voice of the hero:
“Thou to the tents of thy Kings, Talthybius, herald of Argos!
Stand in the Argive assembly, voice of the strength of Achilles.
Care not at all though the greatest and fiercest be wroth with thy message.
Deem not thyself, old man, as a body and flesh that is mortal,
Rather as living speech from the iron breast of the Hellene.
Thus shalt thou cry to the vanquished chiefs who fled from a woman,
Thus shalt thou speak my will to the brittle and fugitive legions:
‘Now Achilles turns towards Troya and fast-flowing Xanthus,
Now he leaps at the iron zone, the impregnable city.
Two were the forms of the Gods that o’erhung the sails of Pelides
When with a doubtful word in his soul he came wind-helped from Hellas
Cleaving the Aegean deep towards the pine-crested vision of Ida.
Two are the Fates that stride with the hero counting his exploits.
Over all earthly things the soul that is fearless is master,
Only on death he can reckon not whether it comes in the midnight
Treading the couch of Kings in their pride or speeds in the spear-shaft.
Now will I weigh down that double beam of the Olympian balance
Claiming one of the equal Fates that stand robed for the fighter,
For to my last dire wrestle I go with the Archer of heaven,
And ere the morning gleam have awakened the eagles on Ida,
Troy shall lie prone or the earth shall be empty of Phthian Achilles.
But for whatever Fate I accept from the ageless Immortals,
Whether cold Hades dim or Indus waits for my coming
Pouring down vast to the sea with the noise of his numberless waters,
I with Zeus am enough. Your mortal aid I desire not,
Rushing to Troy like the eagle of Zeus when he flies towards the thunders,—
Winged with might, the bird of the spaces, upbuoying his pinions.
Nor shall my spirit look back for the surge of your Danaan fighters,
Tramp of the Argive multitudes helping my lonely courage,
Neither the transient swell of the cry Achaian behind me
Seek, nor the far-speeding voice of Atrides guiding his legions.
Need has he none for a leader who himself is the soul of his action.
Zeus and his fate and his spear are enough for the Phthian Achilles.
Rest, O wearied hosts; my arm shall win for you Troya,
Quelled when the stern Eoans break and Penthesilea
Lies like a flower in the dust at my feet. Yet if Ares desire you,
Come then and meet him once more mid the cry and the trampling! Assemble
Round the accustomed chiefs, round the old victorious wrestlers
Weared strengths Deiphobus leaves you or sternest Aeneas.
But when my arm and my Fate have vanquished their gods and Apollo,
Brilliant with blood when we stand amid Ilion’s marble splendours,
Then let none seat deaf flame on the glory of Phrygia’s marbles
Or with his barbarous rapine shatter the chambers of sweetness
Slaying the work of the gods and the beauty the ages have lived for.
For he shall moan in the night remote from the earth and her greenness,
Spurred like a steed to its goal by my spear dug deep in his bosom;
Fast he shall fleet to the waters of wailing, the pleasureless pastures.
Touch not the city Apollo built, where Poseidon has laboured.
Seized and dishelmed and disgirdled of Apollonian ramparts,
Empty of wide-rolling wheels and the tramp of a turbulent people
Troy with her marble domes shall live for our nations in beauty
Hushed mid the trees and the corn and the pictured halls of the ancients,
Watching her image of dreams in the gliding waves of Scamander,
Sacred and still, a city of memory spared by the Grecians.’
So shalt thou warn the arrogant hearts of Achaia’s chiefstains
Lest upon Greece an evil should fall and her princes should perish.
Herald, beware how thou soften my speech in the ears of thy nation
Sparing their pride and their hearts but dooming their lives to the
death-stroke.
Even thy time-touched snows shall not shield thy days from my sword-edge.”
Wroth the old man’s heart, but he feared Achilles and slowly
Over the margin grey on the shore of the far-sounding ocean
Silent paced to the tents of the Greeks and the Argive assembly.
There on the sands while the scream of the tide as it dragged at the pebbles
Strove in vain with their droning roar, awaiting their chiefstains
Each in his tribe and his people far down the margin Aegean
Argolis’ sons and Epirote spears and the isles and the southron,  
Locris’ swarms and Messene’s pikes and the strength of the Theban,  
Hosts bright-armed, bright-eyed, bright-haired, time-hardened to Ares,  
Stretched in harsh and brilliant lines with a glitter of spear-points  
Far as the eye could toil. All Europe helmeted, armoured  
Swarmed upon Asia’s coasts disgorged from her ships in their hundreds.  
There in the wide-winged tent of the council that peered o’er the margin,  
High where the grass and the meadow-bloom failed on the sand-riifted  

Pouring his argent voice Epeus spoke to the princes,  
Rapid in battle and speech; and even as a boy in a courtyard  
Tosses his ball in the air and changes his hands for the seizing  
So he played with counsel and thought and rejoiced in his swiftness.  
But now a nearing Fate he felt and his impulse was silenced.  
Stilled were his thoughts by the message that speeds twixt our minds in  
their shadows

Dumb, unthought, unphrased, to us dark, but the caverns of Nature  
Hear its cry when God’s moment changing our fate comes visored  
Silently into our lives and the spirit too knows, for it watches.  
Quiet he fell and all men turned to the face of the herald.  
Mute and alone through the ranks of the seated and silent princes  
Old Talthybius paced, nor paused till he stood at the midmost  
Fronting that council of Kings and nearest to Locrian Ajax  
And where Sthenelus sat and where sat the great Diomedes,  
Chiefs of the South, but their love was small for the Kings of the Spartans.  
There like one close to a refuge he lifted his high-chanting accents.  
High was his voice like the wind’s when it whistles shrill o’er a forest  
Sole of all sounds at night, for the kite is at rest and the tiger  
Sleeps from the hunt returned in the deepest hush of the jungle.  
“Hearken, O Kings of the world, to the lonely will of the Phthian!  
One is the roar of the lion heard by the jungle’s hundreds,  
One is the voice of the great and the many shall hear it inclining.  
Lo, he has shaken his mane for the last great leap upon Troya  
And when the eagle’s scream shall arise in the dawn over Ida,  
Troy shall have fallen or earth shall be empty of Phthian Achilles.  
But by whatever Fate he is claimed that waits for the mortal,  
Whether the fast-closed hands above have kept for his morrows
Chill of the joyless shades or earth and her wooings of sunlight
Still shall detain his days with the doubtful meed of our virtues,
He and Zeus shall provide, not mortals. Chaff are men’s armies
Threshed by the flails of Fate; ’tis the soul of the hero that conquers.
Not on the tramp of the multitudes, not on the cry of the legions
Founds the strong man his strength but the god that he carries within him.
Zeus and his Fate and his spear are enough for the Phthian Achilles.
Prudence of men shall curb no more his god-given impulse.
He has no need of thy voice, O Atrides, guiding the legions,
He is the leader, his is the soul of magnificent emprise.
Rest, O ye sons of the Greeks, the Phthian shall conquer for Hellas!
Rest! expose not your hearts to the war-cry of Penthesilea.
Yet if the strength in you thirsts for the war-din, if Ares is hungry,
Meet him stark in the mellay urging Deiphobus’ coursers,
Guiding Aeneas’ spear; recover the souls of your fathers.
Bronze must his heart be who looks in the eyes of the implacable war-god!
But when his Fate has conquered their gods and slaughtered their heroes,
And in this marble Ilion forced to the tread of her foemen
Watched by the ancient domes you stand, by the timeless turrets,
Then let no chieftain garbed for the sacrifice lift against Troya,
Counselling of Ate, torch of the burning, hand of the plunder
Groping for gold but finding death in her opulent chambers.
For he shall moan in the night regretting the earth and her greenness,
Spurred by the spear in his arrogant breast like a steed to the gorges:
Fast he shall fleet to the flowerless meadows, the sorrowful pastures.
Touch not the city Apollo built, where Poseidon has laboured,
Slay not the work of the gods and the glory the ages have lived for.
Mute of the voice of her children, void of the roll of her war-cars
Timeless Troy leave solitary dreaming by ancient Scamander
Sacred and still, a city of memory spared by the Phthian.”
So Talthybius spoke and anger silenced the Argives.
Mute was the warlike assembly, silent Achaia’s princes.
Wrath and counsel strove in the hush for the voice of the speakers.
BOOK VI

The Book of the Chieftains

Then as from common hills great Pelion rises to heaven
So from the throng uprearing a brow that no crown could ennoble,
Male and kingly of front like a lion conscious of puissance
Rose a form august, the monarch great Agamemnon.
Wroth he rose yet throwing a rein on the voice of his passion,
Governing the beast and the demon within by the god who is mighty.
“Happy thy life and my fame that thou com’st with the aegis of heaven
Shadowing thy hoary brows, thou herald of pride and of insult.
Well is it too for his days who sent thee that other and nobler
Heaven made my heart than his who insults and a voice of the immortals
Cries to my soul forbidding its passions. O hardness of virtue,
Thus to be seized and controlled as in fetters by Zeus and Athene.
Free is the peasant to smite in the pastures the mouth that has wronged him,
Chained in his soul is Atrides. Bound by their debt to the fathers,
Curbed by the god in them painfully move the lives of the noble,
Forced to obey the eye that watches within in their bosoms.
Ever since Zeus Cronion turned in our will towards the waters,
Scourged by the heavens in my dearest, wronged by men and their clamours,
Griefs untold I have borne in Argos and Aulis and Troas,
Yoked to this sacred toil of the Greeks for their children and country,
Bound by the gods to a task that is heavy, a load that is bitter.
Seeing the faces of foes in the mask of friends I was silent.
Hateful I hold him who sworn to a cause that is holy and common
Broods upon private wrongs or serving his lonely ambition
Studies to reap his gain from the labour and woe of his fellows.
Mire is the man who hears not the gods when they cry to his bosom.
Grief and wrath I coerced nor carried my heart to its record
All that has hurt its chords and wounded the wings of my spirit.
Nobler must kings be than natures of earth on whom Zeus lays no burden.
Other is Peleus’ son than the race of his Aeacid fathers,
Nor like his sire of the wise-still heart far-sighted and patient
Bearing the awful rein of the gods, but hastes to his longings,
Dire in his wrath and pursued by the band of his giant ambitions.
Measure and virtue forsake him as Ate grows in his bosom.
Yet not for tyrant wrong nor to serve as a sword for our passions
Zeus created our strength, but that earth might have help from her children.
Not of our moulding its gifts to our soul nor were formed by our labour!
When did we make them, where were they forged, in what workshop or
furnace?

Found in what aeon of Time, that pride should bewilder the mortal?
Bowed to our will are the folk and our prowess dreadful and godlike?
Shadows are these of the gods which the deep heavens cast on our spirits.
Transient, we made not ourselves, but at birth from the first we were
fashioned

Valiant or fearful and as was our birth by the gods and their thinkings
Formed, so already enacted and fixed by their wills are our fortunes.
What were the strength of Atrides and what were the craft of Odysseus
Save for their triumphing gods? They would fail and be helpless as infants.
Stronger a woman, wiser a child were favoured by Heaven.
Ceased not Sarpedon slain who was son of Zeus and unconquered?
Not to Achilles he fell, but Fate and the gods were his slayers.
Kings, to the arrogant shaft that was launched, the unbearable insult,
Armoured wisdoms oppose, let not Ate seize on your passions.
Be not as common souls, O you who are Greece and her fortunes,
Nor of your spirits of wrath take counsel but of Athene.
Merit the burden laid by Zeus, his demand from your natures
Suffer, O hearts of his seed, O souls who are chosen and mighty,
All forgetting but Greece and her good; resolve what is noble.
I will not speak nor advise, for ’tis known we are rivals and foemen.”

Calmed by his words and his will he sat down mighty and kinglike;
But Menelaus arose, the Spartan, the husband of Helen,
Atreus’ younger son from a lesser womb, in his brilliance
Dwarfed by the other’s port, yet tall was he, gracile and splendid,
As if a panther might hunt by a lion’s side in the forest.
Smiting his thigh with his firm-clenched hand he spoke mid the Argives:
“Woe to me, shameless, born to my country a cause of affliction,
Since for my sake all wrongs must be borne and all shames be encountered;
And for my sake you have spun through the years down the grooves of
disaster

Bearing the shocks of the Trojans and ravaged by Zeus and by Hector,
Slaughtered by Rhesus and Memnon, Sarpedon and Penthesilea;
Or by the Archer pierced, the hostile dreadful Apollo,
Evilly end the days of the Greeks remote from their kindred —
Slain on an alien soil by Asian Xanthus and Ida.
Doomed to the pyre we have toiled for a woman ungracious who left us
Passing serenely my portals to joy in the chambers of Troya.
Here let it cease, O my brother! how much wilt thou bear for this graceless
Child of thy sire, cause still of thy griefs and never of blessing?
Easily Zeus afflicts who trouble their hearts for a woman;
But in our ships that sailed close-fraught with this dolorous Ate
Worse was the bane they bore which King Peleus begot on white Thetis.
Evil ever was sown by the embrace of the gods with a mortal!
Alien a portent is born and a breaker of men and their labours,
One who afflicts with his light or his force mortality’s weakness
Stripping for falsehoods their verities, shaking the walls they erected.
Hostile all things the scourge divine overbears or, if helpful,
Neither without him his fellows can prosper, nor will his spirit
Fit in the frame of things earthly but shatters their rhythm and order
Rending the measures just that the wise have decreed for our growing.
So have our mortal plannings broken on this fateful Achilles
And with our blood and our anguish Heaven has fostered his greatness.
It is enough; let the dire gods choose between Greece and their offspring.
Even as he bids us, aloof let our hosts twixt the ships and the Xanthus
Stand from the shock and the cry where Hellene meets with Eoan,
Troy and Phthia locked, Achilles and Penthesilea,
Nor any more than watchers care who line an arena;
Calm like the impartial gods, approve the bravest and swiftest.
Sole let him fight! The fates shall preserve him he vaunts of or gather,
Even as death shall gather us all for memory’s clusters,
All in their day who were great or were little, heroes or cowards.
So shall he slay or be slain, a boon to mankind and his country.
Since if he mow down this flower of bale, this sickle by Hades
Whirled if he break, — for the high gods ride on the hiss of his spear-shaft, —
Ours is the gain who shall break rejoicing through obdurate portals
Praising Pallas alone and Hera daughter of Heaven.
But if he sink in this last of his fights, as they say it is fated, —
Nor do I deem that the man has been born in Asia or Hellas
Who in the dreadful field can prevail against Penthesilea, —
If to their tents the Myrmidons fleeing cumber the meadows
Slain by a girl in her speed and leaving the corpse of their leader,
Ours is the gain, we are rid of a shame and a hate and a danger.
True is it, Troy shall exultant live on in the shadow of Ida,
Yet shall our hearts be light because earth is void of Achilles.
And for the rest of the infinite loss, what we hoped, what we suffered,
Let it all go, let the salt floods swallow it, fate and oblivion
Bury it out in the night; let us sail o’er the waves to our country
Leaving Helen in Troy since the gods are the friends of transgressors.”
So Menelaus in anger and grief miscounself the Argives.

Great Idomeneus next, the haughty king of the Cretans,
Raised his brow of pride in the lofty Argive assembly.
Tall like a pine that stands up on the slope of Thessalian mountains
Overpeering a cascade’s edge and is seen from the valleys,
Such he seemed to their eyes who remembered Greece and her waters,
Heard in their souls the torrent’s leap and the wind on the hill-tops.
“Oft have I marvelled, O Greeks, to behold in this levy of heroes
Armies so many, chieftains so warlike suffer in silence
Pride of a single man when he thunders and lightens in Troas.
Doubtless the nations that follow his cry are many and valiant,
Doubtless the winds of the north have made him a runner and spearman.
Shall not then force be the King? is not strength the seal of the Godhead?
This my soul replies, ‘Agamemnon the Atreid only
Choosing for leader and king I have come to the toil and the warfare.
Wisdom and greatness he owns and the wealth and renown of his fathers.’
But for this whelp of the northlands, nursling of rocks and the sea-cliff
Who with his bleak and rough-hewn Myrmidons hastes to the carnage,
Leader of wolves to their prey, not the king of a humanised nation,
Not to such head of the cold-drifting mist and the gloom-vigilled Chaos,
Crude to our culture and light and void of our noble fulfilsments
Minos shall bend his knee nor Crete, a barbarian’s vassal,
Stain her old glories. Oh, but he boasts of a goddess for mother
Born in the senseless seas mid the erring wastes of the Ocean,
White and swift and foam-footed, vast Oceanus’ daughter.
Gods we adore enough in the heavens, and if from us Hades
Claim one more of this breed, we can bear that excess of his glories,
Not upon earth these new-born deities huge-passioned, sateless
Who with their mouth as of Orcus and stride of the ruinous Ocean
Sole would be seen mid her sons and devour all life’s joy and its greatness.
 Millions must empty their lives that a man may o’ershadow the nations,
Numberless homes must weep, but his hunger of glory is sated!
 Troy shall descend to the shadow; gods and men have condemned her,
Weary, hating her fame. Her dreams, her grandeur, her beauty,
All her greatness and deeds that now end in miserable ashes,
Ceasing shall fade and be as a tale that was forged by the poets.
Only a name shall go down from her past and the woe of her ending
Naked to hatred and rapine and punished with rape and with slaughter.
Never again must marble pride high-domed on her hill-top
Look forth dominion and menace over the crested Aegean
Shadowing Achaia. Fire shall abolish the fame of her ramparts,
Earth her foundations forget. Shall she stand affronting the azure?
Dire in our path like a lioness once again must we meet her,
Leap and roar of her led by the spear of Achilles, not Hector?
Asia by Peleus guided shall stride on us after Antenor?
Though one should plan in the night of his thoughts where no eye can
  pursue him,
Instincts of men discover their foe and like hounds in the darkness
Bay at a danger hid. No silence of servitude trembling
Trains to bondage sons of the race of whom Aeolus father
Storm-voiced was and free, nor like other groupings of mortals
Moulded we were by Zeus, but supremely were sifted and fashioned.
Other are Danaus’ sons and other the lofty Achaians:
Chainless like Nature’s tribes in their many-voiced colonies founded
They their god-given impulse shall keep and their natures of freedom.
Only themselves shall rule them, only their equal spirits
Bowed to the voice of a law that is just, obeying their leaders,
Awed by the gods. So with order and balance and harmony noble
Life shall move golden, free in its steps and just in its measure,
Glad of a manhood complete, by excess and defect untormented.
Freedom is life to the Argive soul, to Aeolia’s peoples.
Dulled by a yoke our nations would perish, or live but as shadows,
Changed into phantoms of men with the name of a Greek for a byword.
Not like the East and her sons is our race, they who bow to a mortal.
Gods there may be in this flesh that suffers and dies; Achaia
Knows them not. Need if he feels of a world to endure and adore him, 
Hearts let him seek that are friends with the dust, overpowered by their 
heavens, 

Here in these Asian vastnesses, here where the heats and the perfumes 
Sicken the soul and the sense and a soil of indolent plenty 
Breeds like the corn in its multitudes natures accustomed to thraldom. 
Here let the northern Achilles seek for his slaves and adorers, 
Not in the sea-ringed isles and not in the mountains Achaian. 
Ten long years of the shock and the war-cry twixt rampart and ocean 
Hurting our hearts we have toiled; shall they reap not their ease in the 
vengeance?

Troas is sown with the lives of our friends and with ashes remembered; 
Shall not Meriones slain be reckoned in blood and in treasure? 
Cretan Idomeneus girt with the strength of his iron retainers 
Slaying and burning will stride through the city of music and pleasure, 
Babes of her blood borne high on the spears at the head of my column, 
Wives of her princes dragged through her streets in its pomp to their passion, 
Gold of Troy stream richly past in the gaze of Achilles. 
Then let him threaten my days, then rally the might of his triumphs, 
Yet shall a Cretan spear make search in his heart for his godhead. 
Limbs of this god can be pierced; not alone shall I fleet down to Hades.”

After him rose from the throng the Locrian, swift-footed Ajax. 
“Kings of the Greeks, throw a veil on your griefs, lay a curb on your anger. 
Moved man’s tongue in its wrath looses speech that is hard to be pardoned, 
Afterwards stilled we regret, we forgive. If all were resented, 
None could live on this earth that is thick with our stumblings. Always 
This is the burden of man that he acts from his heart and his passions, 
Stung by the goads of the gods he hews at the ties that are dearest. 
Lust was the guide they sent us, wrath was a whip for his coursers, 
Madness they made the heart’s comrade, repentance they gave for its 
scourger. 

This too our hearts demand that we bear with our friend when he chides us. 
Insult forgive from the noble embittered soul of Achilles! 
When with the scorn and the wrath of a lover our depths are tormented, 
Who shall forbid the cry and who shall measure the anguish? 
Sharper the pain that looses the taunt than theirs who endure it. 
Rage has wept in my blood as I lived through the flight o’er the pastures,

www.holybooks.com
Shame coils a snake in my back when thought whispers of Penthesilea. 
Bright shine his morns if he mows down this hell-bitch armed by the Furies!
But for this shaft of his pity it came from a lesser Pelides,
Not from the slayer of Hector, not from the doom of Sarpedon,
Memnon’s mighty o’erthrower, the blood-stained splendid Achilles.
These are the Trojan snares and the fateful smile of a woman!
This thing the soul of a man shall not bear that blood of his labour
Vainly has brought him victory leaving life to the hated;
This is a wound to our race that a Greek should whisper of mercy.
Who can pardon a foe though a god should descend to persuade him?
Justice is first of the gods, but for Pity ’twas spawned by a mortal,
Pity that only disturbs God’s measures and false and unrighteous
Holds man back from the joy he might win and troubles his bosom.
Troy has a debt to our hearts; she shall pay it all down to the obol,
Blood of the fall and anguish of flight when the heroes are slaughtered,
Days without joy while we labour and see not the eyes of our parents,
Toil of the war-cry, nights that drag past upon alien beaches,
Helen ravished, Paris triumphant, endless the items
Crowd on a wrath in the memory, kept as in bronze the credit
Stretches out long and blood-stained and savage. Most for the terror
Graved in the hearts of our fathers that still by our youth is remembered,
Hellas waiting and crouching, dreading the spear of the Trojan,
Flattering, sending gifts and pale in her mortal anguish,
Agony long of a race at the mercy of iron invaders,
This she shall pay most, the city of pride, the insolent nation,
Pay with her temples charred and her golden mansions in ruins,
Pay with the shrieks of her ravished virgins, the groans of the aged
Burned in their burning homes for our holiday. Music and dancing
Shall be in Troy of another sort than she loved in her greatness
Merry with conquered gold and insulting the world with her flutings.
All that she boasted of, statue and picture, all shall be shattered;
Out of our shame she chiselled them, rich with our blood they were coloured.
This not the gods from Olympus crowding, this not Achilles,
This not your will, O ye Greeks, shall deny to the Locrian Ajax.
Even though Pallas divine with her aegis counselling mercy
Cumbered my path, I would push her aside to leap on my victims.
Learn shall all men on that day how a warrior deals with his foemen.”
Darting flames from his eyes the barbarian sate, and there rose up
Frowning Tydeus’ son, the Tirynthian, strong Diomedes.
“Ajax Oileus, thy words are foam on the lips of a madman.
Cretan Idomeneus, silence the vaunt that thy strength can fulfil not.
Strong art thou, fearless in battle, but not by thy spear-point, O hero,
Hector fell, nor Sarpedon, nor Troilus leading the war-cry.
These were Achilles’ deeds which a god might have done out of heaven.
Him we upbraid who saved, nor would any now who revile him
Still have a living tongue for ingratitude but for the hero.
Much to the man forgive who has saved his race and his country:
Him shall the termless centuries praise when we are forgotten.
Curb then your speech, crush down in your hearts the grief and the choler;
Has not Atrides curbed who is greatest of all in our nations
Wrath in the heart and the words that are winged for our bale from our
bosoms?

For as a load to be borne were these passions given to mortals.
Honour Achilles, conquer Troy by his god-given valour.
Now of our discords and griefs debate not for joy of our foemen!
First over Priam’s corpse stand victors in Ilion’s ramparts;
Discord then let arise or concord solder our nations.”
Rugged words and few as fit for the soul that he harboured
Great Tydides spoke and ceased; and there rose up impatient
Tall from the spears of the north the hero king Prothoénor,
Prince in Cadmeian Thebes who with Leitus led on his thousands.

“Loudly thou vauntest thy freedom Ionian Minos recalling,
Lord of thy southern isles who gildst with tribute Mycenae.
We have not bowed our neck to Pelops’ line, at Argos’
Iron heel have not crouched, nor clasped like thy time-wearied nations,
Python-befriended, gripped in the coils of an iron protection,
Bondage soothed by a name and destruction masked as a helper.
We are the young and lofty and free-souled sons of the Northland.
Nobly Peleus, the Aeacid, seer of a vaster Achaia,
Pride of his strength and his deeds renouncing for joy of that vision,
Yielded his hoary right to the sapling stock of Atrides.
Noble, we gave to that nobleness freely our grandiose approval.
Not as a foe then, O King, who angered sharpens his arrows,
Fits his wrath and hate to the bow and aims at the heart-strings
But from the Truth that is seated within me compelling my accents,
Taught by my fathers stern not to lie nor to hide what I harbour,
Truth the goddess I speak, nor constrain the voice in my bosom.
Monarch, I own thee first of the Greeks save in valour and counsel,
Brave, but less than Achilles, wise, but not as Odysseus,
First still in greatness and calm and majesty. Yet, Agamemnon,
Love of thy house and thy tribe disfigures the king in thy nature;
Thou thy brother preferrest, thy friends and thy nations unjustly,
Even as a common man whose heart is untaught by Athene,
Beastlike favours his brood forgetting the law of the noble.
Therefore Ajax grew wroth and Teucer sailing abandoned
Over the angry seas this fierce-locked toil of the nations;
Therefore Achilles has turned in his soul and gazed towards the Orient.
Yet are we fixed in our truth like hills in heaven, Atrides;
Greece and her safety and good our passions strive to remember.
Not of this stamp was thy brother’s speech; such words Lacedaemon
Hearing may praise in her kings; we speak not in Thebes what is shameful.
Shamefuller thoughts have never escaped from lips that were high-born.
We will not send forth earth’s greatest to die in a friendless battle,
Nor will forsake the daughter of Zeus and white glory of Hellas,
Helen the golden-haired Tyndarid, left for the joy of our foemen,
Chained to Paris’ delight, earth’s goddess the slave of the Phrygian,
Though Menelaus the Spartan abandon his wife to the Trojans
And from the field where he lavished the unvalued blood of his people
