actors were aware. Only posterity looking back with awe on the sequel, will date the commencement of the real world-shaking earthquake from that slight ruffling of the untroubled surface of the soil. The forces that sent that slight quiver of the earth to the surface are hidden as yet from the eye of contemporary politics or only dimly guessed by a few, but within a brief period they will have declared themselves to the amazement of those who thought that they were only playing a clever tactical game with the lifeless figures of a puppet show. The grim forces that have been moving under the surface will now find the field open to them by the shattering of the keystone of the old political edifice. The efforts of the two parties to replace the Congress by new bodies of a party character are not likely to prosper, for the Moderate Convention will fade into nothingness by its inherent want of vitality, while the Congress of the Nationalists, whatever its destiny, will not be the old Congress but a new and incalculable force, the product of a revolution and perhaps its plaything. The disappearance of the old Congress announces the end of the preparatory stage of the movement, the beginning of a clash of forces whose first full shock will produce chaos. The fair hopes of an orderly and peaceful evolution of self-government, which the first energies of the new movement had fostered, are gone for ever. Revolution, bare and grim, is preparing her battle-field, mowing down the centres of order which were evolving a new cosmos and building up the materials of a gigantic downfall and a mighty new-creation. We could have wished it otherwise, but God’s will be done.

Whom to Believe?

The account of the Conference given by the Lucknow Advocate which we quote elsewhere makes curious reading. If we are to believe this apparently well-informed source, the reports of the great fight made by the Bengal Moderates are a tissue of exaggerations. There was no fight at all over the question of creed or objects, and indeed the difference of name is so trivial that the
legend of this stout fight over a shadow has little verisimilitude. About the question of the subscription to the creed the only difference between the Bengal-Punjab party and the Bombay-United Provinces party was whether it should be obligatory to sign the creed or sufficient to swear verbally to it. That the clause should be binding and express acceptance obligatory as a condition of admission to the Congress, both parties were agreed. What becomes then of the story of Surendranath’s gallant battle for the freedom of election and freedom of conscience in the Congress? It seems that the whole Committee was solid for exclusion. The other point of difference was whether there should be a new Congress called by the Convention or the adjourned Congress resummoned by Dr. Rash Behari Ghose. As this adjourned Congress would in any case be saddled with the creed and the Convention constitution, it would be in effect a new Congress. This subject of quarrel, too, like the others, turns out to be a distinction without a difference. According to the Advocate, then, Surendranath’s party and the Mehta party were in entire agreement, only the Bengal members wanted to call the same things by other names. Not a creed but a statement of objects binding on every delegate; not a written subscription but a verbal oath of allegiance; not a new Congress without the Nationalists, but the old Congress without the Nationalists. If we are to believe the Advocate, the Bengal Moderates only succeeded in showing themselves consummate hypocrites and fencers with words. If this account be a libel on them, it should, we think, be authoritatively contradicted. Otherwise the public will form their own conclusions.

By the Way

The Parable of Sati

Daksha, the great Prajapati, had a daughter, named Sati, whom he loved beyond all his children, and the Rishis wedded her to
Mahadeva, the great lord of the Universe. The choice of the Rishis was not pleasing to Daksha, because he was unable to see in Mahadeva anything but a houseless ascetic wandering with the beasts of the field and the demons of the night, a beggar's bowl in his hand, his body smeared with ashes, a tiger's skin for his only robe. His scorn increased the more he came to know of his son-in-law, a bhang-eating lazy ne'er-do-well with no ascertainable means of livelihood, no home, no property, no degree or other educational qualification, no stake in the world. He cursed the Rishis for fools and evil counsellors, visionaries who saw in this pauper with his bowl and his matted hair the Master of the World. So when he had to offer a great sacrifice, he sent invitations to all the Gods, but deliberately excluded his son-in-law. The result was disastrous. Sati, full of grief and indignation at the affront to her lord, gave up her body and disappeared from mortal ken. Then came Mahadeva in his wrath, the mighty One, the destroyer of Universes, and broke Daksha's sacrifice to pieces and shattered the hall of sacrifice and slew Daksha in his hall.

There was a Daksha too in India which was called the Indian National Congress. Like Daksha it was a great figure, a Prajapati with numerous offspring, full of dignity, sobriety, wisdom, and much esteemed by the gods. This Daksha too had a daughter whom he loved, the young Indian Nation. When the time for her marriage came, she chose for herself the bridegroom offered to her by the Rishis who declared him to be Mahadeva, the Destiny of India and her fated Lord. It was at sacred Benares that she first saw Mahadeva face to face and betrothed herself to him, but the marriage took place at Calcutta with a fourfold mantra, Swaraj, Swadeshi, Boycott, National Education, as the sacred formula of union. The marriage did not please Daksha, but the Rishis were importunate and Sati firm, so he was compelled to give way. He cursed the Rishis freely. “What manner of husband is this they have given to my Sati? A homeless beggar, wild and half crazy with the bhang he has drunk, wandering on the hills in
company with the wild beasts and the demons, without culture, enlightenment and education, rude in speech, rough in manners, ill-clad, destitute, with no past, no present and no future! Yet these fanatics call him the Master of the World, an embodiment of the Almighty, and what not!” So he hid his grief and wrath but determined to be revenged. For Mahadeva the Mighty, the Destiny of India, had long wandered in the wilderness with a beggar’s bowl in his hand, poor and destitute, an ascetic smeared with ashes and clad in a tiger’s skin, with no home in which he could lay down his head. And when he came to the marriage, it was in fearsome guise and in evil company, drunk with the bhang of a wild inspiration, shouting “Bombom Bande Mataram” at the top of his mighty voice, disreputable in appearance and unfit to associate with polite and cultured gentlemen such as Daksha had hitherto made his friends, poor, shaggy, ill-clad, with no visible means of existence and no tangible prospects in the future; and his companions were a wild company of latibearing National Volunteers and other disquieting phantasms quite out of place in Daksha’s tastefully got-up and elegant marriage pandal. How could Daksha realize that in this uncouth figure was the Destroyer and Creator of an Universe, One who held the fate of India and of the world in his hands? The Rishis only knew it and they were called visionaries and fanatics for their pains.

*  

Daksha prepared a great annual sacrifice in the year after the marriage and held it with much pomp, but he determined to exclude Mahadeva the Mighty from the sacrifice and so framed the rules of admission that the undesirable son-in-law might keep away in future. The result is known to everybody. The Destiny of India, whom Daksha tried to exclude, came in wrath and knocked at the gates of the hall of sacrifice and when Daksha’s hired men tried to beat him back, he broke into the hall and shattered the sacrifice and slew Daksha in his hall.
The story goes that Mahadeva, entreated on behalf of Daksha, restored him to life, but when the head of Daksha was sought for it could not be found, and so a goat’s head was inconti-
nently clapped on the unfortunate Prajapati’s shoulders. When
the modern Daksha died, there was a similar desire to revive him but the head could not be found. Some said it was lost, others argued in more legal language that it was *functus officio*. Ac-
cordingly these wise men found a goat’s head which they called a creed and stuck it on the shoulders of Daksha and put life into his trunk and swore that this goat-headed legless anomaly should in future be called Daksha. Unfortunately they made the whole thing more grotesque by clapping on the goat’s head the wrong way, so that its face was turned backward and, when the crippled monster tried to shove itself along, its progress was retrogression and its advance a retreat. For its eyes were turned to the past and not to the future.

Meanwhile, Mahadeva the Mighty wandered over the world carrying the dead body of Sati on his head, dancing a wild dance of ruin which shook the world to its foundations. For Sati had left her old body and men said she was dead. But she was not dead, only withdrawn from the eyes of men, and the Gods clove the body of Sati into pieces so that it was scattered all over India. Which thing is also a parable; for after the death of the Congress the unity of India, which was the daughter of the Congress, must break up into factions and groups. The Convention is already developing parties and in the wild times that are coming the Nationalists also will break up into parties, some of which will make the present designation of extremism as applied to us look an absurdity, and the political life of India will become an anarchy. But not for ever. For Sati will be born again, on the high mountains of mighty endeavour, colossal aspiration, unparalleled self-sacrifice she will be born again, in a better and more beautiful body, and by terrible *tapasya* she will meet Mahadeva once more and be wedded to him in nobler
fashion, with kinder auguries, for a happier and greater future. For this thing is written in the book of God and nothing can prevent it, that Sati shall wed Mahadeva, that the national life of India shall meet and possess its divine and mighty destiny.
Leaders and a Conscience

We find it difficult not to sympathise with one passage at least on Mr. Khare’s letter to the Dhulia Reception Committee. “Moreover,” he says, “I don’t know who the leaders are. I for instance cannot specify any such, nor can I give my conscience into the keeping of anyone.” We cannot follow Mr. Khare in his ultra-judicial ignorance of the personality of the party leaders, and it is certainly hard on Sir Pherozshah and Mr. Gokhale that a new recruit should so bluntly express his inability to specify them as leaders. But the concluding sentiment is unexceptionable and we think the Dhulia Reception Committee made a mistake in calling on the leaders to unite instead of referring, as the Pabna Conference did, to a definite authority. The time has gone by when a few leaders could play a quiet game among themselves with the destinies of the country. Mr. Khare was once taken for a Nationalist of a sort, and we are glad that he preserves in his new camp so much at least of Nationalist robustness as to keep possession of his own conscience. We Nationalists too, like Mr. Khare, decline to give our conscience into the keeping of anyone, be it a leader, or a knot of leaders, or the whole Congress itself in session assembled. For this precise reason we refuse to sign or verbally swear to any creed imposed on us from outside.

An Ostrich in Colootola

Srijut Surendranath’s organ is very anxious for union, we wish it were equally passionate for truth. The country has begun to speak out about the Convention and at Dhulia and Chittagong
references have been made to the Convention and opinions expressed for an united Congress on the old lines which are of the utmost significance. The Bengalee seems to have received precisely the same telegram as we have received from Dhulia and it marks it as sent by its own correspondent. Yet the merciless manner in which it has dealt with the telegram of its own correspondent is amusing and instructive. The speech of the Dhulia President breaks off abruptly in our contemporary's telegram with a blessing on the National Schools and all the rest of the weighty and trenchant remarks about the Convention and the Continuation Committee are boycotted. But is anything gained by burking facts or burying one's head in the sand in this ostrich fashion? It is an old Moderate habit but one which does not improve with age.

By the Way

Colootola Conjures

There are some who believe that passion and conviction are the sign of want of culture. If the language of poetry is used by a political writer, it shows lack of balance. The use of imagination, the presence of inspiration, the full expression of feeling are violent and indecorous. Whatever the depth of emotion felt, whatever the inspiring character of the vision seen, the emotion must be banished, the inspiration killed, otherwise wisdom takes flight. If our politics had been left to these gentlemen, it would have remained the decorous pastime of lawyers and sober educationists, a sort of half-forensic, half-academic debate with the bureaucracy on the merits of its rule. Sobriety, moderation, wisdom would have been satisfied and the nation killed by a surfeit of gentlemanly decorum. Unluckily for the Bengalee and its ilk, the days of “modest and sober and mostly unreadable prose”, of Colootola “common sense”, of the “healthy mind” which was too healthy to think and too sound to be sincere,
are gone. The great passions which move mankind, the rude forces which shake the world, the majestic visions which bring life to dead nations have once more become part of our national existence, and in vain Colootola waves its conjuring rod of bad logic, inconsistent sentiment and sober imbecility to quell the phantasms. They are not to be quelled.

Common Sense and Revolutions

The Bengalee is scornful of our prophetic visions. The man of common sense who cannot see what lies before his nose, naturally considers the man who can see a prophet or a visionary. Before the French Revolution many travellers visited France, but only one or two were able to see that there existed in the quiet of that country all the conditions that have in history preceded great revolutions. The men who perceived it were not prophets but merely observers, gifted with sympathy and insight. They were, in fact, men of uncommon sense. The Bengalee and its like are unable to conceive that anything great can happen in India. Formerly it believed that we should go on for several centuries prosing about our political grievances in an ineffective debating society called the National Congress. Even now it believes that the country will remain obedient to the call of what it terms sobriety, and that fate will wait upon the prudence and fears of a few respectable and wealthy gentlemen in Calcutta and Bombay. Its idea of our future is that we should become a big outlying parish of England, and of the means, that we should peddle for ever with the details of a bureaucratic administration.

Pace and Solidarity

It is impossible for such minds, — if minds they can be called, — to perceive that what is happening is the first stage of a revolution or that the condition of keeping the wilder forces of revolution in harness was the solidarity of the movement. Once that solidarity has been broken, it is the wildest and most rapid forces which will set the pace; there will be no mean resultant of all the forces
producing a swift and yet ordered advance. The solidarity of the movement depends on the existence of an united Congress in which the Moderates and Nationalists should form the brake and the motive energy respectively. But the united Congress has been suffocated with a creed at Allahabad, and with it the solidarity of the movement and the check on the fiercer forces which have recently given evidences of their existence, will disappear. That means if not “the approaching end of the world”, at least the end of that state of the Indian world in which Surendranaths can perorate, Mehtas brew mischief and Colootola daily enjoy its robust digestion of its own sober and modest prose.

The *Bengalee* pretends that the Congress, even after Allahabad, is only collapsed and not dead. Its recipe for reviving the patient is that Dr. Ghose should resummon the adjourned Congress. Great Rash Behari has only to send forth his almighty voice, accompanied by a telling literary joke and an appropriate quotation, has only to say with his inimitable gesture and facial expression, “Let there be an united Congress”, and, behold, an united Congress! And Mr. Khare’s resolution calling a new Congress does not preclude, it seems, Dr. Ghose from resummoning the adjourned Congress! This is the finished product of Colootola’s common sense and the healthy mind that flourishes only at Barrackpur.

The *Voice of Colootola* has been lashed into a rage by our article on the Wheat and the Chaff. Unable to wound itself, it engages a correspondent to do the work for it. The exposure of Moderate policy which that article made has irritated this gentleman into an outburst of spleen too bitter to be contained, and he foams at the mouth in his fury. “Why should the Nationalists arrogate the right to instruct their elders? What have they done? Who are they? We are the leaders of the people and they are only self-styled leaders. What right have they to be an independent
party? They are cowards who dare not act except behind the veil of the Moderates, and are angry because that veil is being withdrawn. Their leaders are ungrateful scoundrels to abuse the party of the barristers who saved them from jail." So the friend of Colootola.

A good deal of this epic rage would have been saved if the irate correspondent had taken the trouble to understand the article before writing about it. What we have written about the Moderates, we have written, and we do not withdraw one syllable of it. Their action at Allahabad was a betrayal of the country dictated by fear and self-interest. Among those who took part in it, there are prominent men who no more believe in Colonial self-government for India than they believe in the man in the moon. The part they played is especially reprehensible. Others are anxious to put themselves right with the bureaucratic government and hardly take the trouble to conceal their motives. The few who were sincere both in their profession of the creed and in their belief that it is necessary for the country, are too insignificant to be reckoned.

What the Bengalee’s friend in need has not understood is the latter part of the article in which we pointed out that the amateur kind of Nationalism which has hitherto been the order of the day will no longer serve. The real workers are yet to come. This part of the homily in which, by the way, the reference to the barristers occurred was addressed to our own party and if anyone has any right to take umbrage at it, it is the Nationalists, barristers or others, and not pseudo-Nationalists like our Colootola critic. The steel for the Mother’s sword of which we spoke is not the present Nationalist party as he imagines, but the rising generation of young men. They are the wheat which will remain. Of the present Nationalist party much will be winnowed away in the fiercer tests that are coming and rejected as chaff,
only a small residue remaining. We do not know whether it was want of patience or want of English which prevented our critic from seeing the drift of the article — probably a combination of these lamentable wants — but if he will take the trouble to reread it with the help of a tutor, he may even yet understand. We did not condemn pleading in Swadeshi cases or taking shares in Swadeshi concerns any more than we condemned subscribing to National School funds. We said that these were safe and petty forms of patriotism and those who could not go beyond them were not the stuff of which the future will be built. And that is, after all, only a truism. Our whole lives are what is demanded of us and not a bit of our leisure or a mite from our purse.
Nationalist Differences

A great deal of capital is being made by the Moderate Press of the difference of attitude between Bengal and Maharashtra Nationalism over the acceptance of the creed. The Mahratta Nationalists are many of them willing to sign the creed on the understanding that it is not put forward as an ultimate aim of Indian political effort. The Bengal Nationalists, with one or two exceptions, are determined to have nothing to do with the creed on any conditions, so long as it is put forward as a creed at all or as a clause of exclusion. They take this attitude, on three grounds, first, because they believe the creed to be irrational and impracticable, secondly, because it is opposed to the doctrines they have always publicly professed, and thirdly, because they consider no Congress session has the right to bind down individual delegates or future sessions to a particular statement of belief or precise definition of objects which would limit the aspirations of a people. To sign it would be against their reason, against their conscience and against their rights. The Mahrattas take a different standpoint. Mr. Tilak at the Nationalist Conference in Surat declared that absolute autonomy must be the ultimate goal of our efforts, but a partial autonomy may be a halfway house, the former being then the ideal of the party, the latter a practical and immediate aim of present-day politics. From this standpoint the original draft in Mr. Gokhale's Constitution which described Colonial self-government as an ultimate goal was objectionable, but the statement of self-government in the Empire

The exact date of the articles published here under "May 2nd" is uncertain. They appeared in the daily edition of 1 or 2 May. Both these issues have been lost. The articles were reprinted in the weekly edition of 3 May.
as an immediate goal was permissible. When the Convention was first held at Surat, many of the Nationalist delegates from Maharashtra saw no objection to signing the creed as it stood, and some of them went to the Pandal and offered to sign but were turned away. It was because the Bengal delegates refused to sign that the party as a whole did not appear at the Pandal to resume the struggle for progress. The position taken up by Mr. Tilak and the Mahrattas has not altered. They object to binding down the future by a creed, but they would not object to signing a statement putting self-government within the Empire as an immediate object if such signature be necessary for unity; they refuse however to associate themselves with any creed, clause or subscription which would have the result of excluding a large section of the Progressive party. There are and always will be minor differences of opinion among the Nationalists, but they are united on three cardinal principles: 1. That nothing short of absolute autonomy can permanently satisfy Indian aspiration; 2. That prayer, petition and protest can never be an effective method of political agitation; 3. That passive resistance and self-help can alone advance the country at the present stage.

---

Ideals Face to Face

A new ordeal always brings with it a new awakening. The ordeal of Partition brought with it a great industrial awakening with politics as its undercurrent, a sort of economico-political self-realisation. All that such an awakening could do for the political future of the country has now been done. The ordeal of the Risley Circular brought with it a great educational awakening with politics as its impulse, a sort of politico-educational self-realisation. The ordeal of the Congress split will also bring with it a fresh awakening. This time the awakening will be political with a religious undercurrent. It is time that the nation rose above Swadeshi to Swaraj. It is time that it left the path of self-realisation through disguises and side-issues and flung itself frankly and wholly into the attempt to win Swaraj. The Surat
split took place over the side-issue of the President’s election, but the Convention’s attitude has brushed away all side-issues and brought to the front the question of Swaraj. The future success of the Nationalist party depends on the boldness with which it takes up the real point at issue and affirms its beliefs. If it hedges, then the Convention will have a sort of sanction for its attitude which will give it a moral force otherwise entirely lacking to its action. The ideal of unqualified Swaraj has a charm for the national mind which is irresistible if it is put before it in the national way by minds imbued with Indian feeling and free from the gross taint of Western materialism. Swaraj as a sort of European ideal, political liberty for the sake of political self-assertion, will not awaken India. Swaraj as the fulfilment of the ancient life of India under modern conditions, the return of the Satyayuga of national greatness, the resumption by her of her great role of teacher and guide, self-liberation of the people for the final fulfilment of the Vedantic ideal in politics, this is the true Swaraj for India. Of all the proud nations of the West there is an end determined. When their limited special work for mankind is done they must decay and disappear. But the function of India is to supply the world with a perennial source of light and renovation. Whenever the first play of energy is exhausted and earth grows old and weary, full of materialism, racked with problems she cannot solve, the function of India is to restore the youth of mankind and assure it of immortality. She sends forth a light from her bosom which floods the earth and the heavens, and mankind bathes in it like St. George in the well of life and recovers strength, hope and vitality for its long pilgrimage. Such a time is now at hand. The world needs India and needs her free. The work she has to do now is to organize life in the terms of Vedanta, and that is a work she cannot do while overshadowed by a foreign power and a foreign civilisation. She cannot do it without taking the management of her own life into her own hands. She must live her own life and not the life of a part or subordinate in a foreign Empire.

All political ideals must have relation to the temperament and past history of the race. The genius of India is separate from that of any other race in the world, and perhaps there is no
race in the world whose temperament, culture and ideals are so foreign to her own as those of the practical, hard-headed, Pharisaic, shopkeeping Anglo-Saxon. The culture of the Anglo-Saxon is the very antipodes of Indian culture. The temper of the Anglo-Saxon is the very reverse of the Indian temper. His ideals are of the earth, earthy. His institutions are without warmth, sympathy, human feeling, rigid and accurate like his machinery, meant for immediate and practical gains. The reading of democracy which he has adopted and is trying to introduce first in the colonies because the mother country is still too much shackled by the past, is the most sordid possible, centred on material aims and void of generous idealism. In such a civilisation, as part of such an Empire, India can have no future. If she is to model herself on the Anglo-Saxon type she must first kill everything in her which is her own. If she is to be a province of the British Empire, part of its life, sharing its institutions, governed by its policy, the fate of Greece under Roman dominion will surely be hers. She may share the privileges and obligations of British citizenship, — though the proud Briton who excludes the Indian from his colonies and treats him as a lower creature, will perish rather than concede such an equality, — but she will lose her Indian birthright. She will have to pass a sponge over her past and obliterate it from her life, even if she preserves the empty records of it in her schools. The degradation of a great nation, by the loss of her individuality, her past and her independent future, to the position of a subordinate satellite in a foreign system, is the ideal of the Convention. It is sheer political atheism, the negation of all that we were, are and hope to be. The return of India on her eternal self, the restoration of her splendour, greatness, triumphant Asiatic supremacy is the ideal of Nationalism. Is it doubtful which ideal will be more acceptable to the nation, that which calls on it to murder its instincts, sacrifice its future and deny its past for the advantage of an inglorious security, or that which asks it to fulfil itself by the strenuous reassertion of all that is noble and puissant in the blood it draws from such an heroic ancestry as no other nation can boast?

The ideal creates the means of attaining the ideal, if it is
itself true and rooted in the destiny of the race. All that can be said for the Convention's ideal is that it saves the professor of the ideal from the wrath of the bureaucracy. Otherwise it is as grotesquely out of proportion to the strength of the people who profess it as any which the Nationalist can uphold. It has no exciting virtue of divine enthusiasm which can inspire to heroic effort and enable a fallen nation to shake off its weakness, turn cowards into heroes and selfish men into self-denying martyrs of the cause, and yet the effort it demands for realisation is as heroic as anything which the Nationalist expects from the people. The pride of race, the pride of empire, the pride of colour are the three invincible barriers which stand between it and its realisation. What force have the Conventionalists to set against these? Tears and supplications, appeals to British justice and British generosity — nothing else. They are not serious in their ideal and do not really hold it but flaunt it as a counterpoise to the Nationalist ideal so that the country may be deceived into thinking they have an aim and a policy. They have none. A false ideal is always a veil for something else, and the Convention creed is with some a veil for secret hopes of liberty which they dare not avow and with others a veil for the absence of any aim except the hope of securing a few peddling reforms in the existing system of administration.

The future is with the Nationalist ideal because there is no other. But the danger is that the false shadow of an ideal which is now being put forward as a reality will be accepted as a convenient instrument for self-protection against the anger of the bureaucracy. The temptation it holds out is one to which all new faiths are exposed, that which was the chief danger of Christianity in the days of persecution, to which, for a fleeting moment, Mahomed is said to have succumbed when harassed by the Koraish, the temptation of securing a respite from persecution by a false profession which, masking itself as a harmless piece of diplomacy, will really be a fatal stab at the very heart of the new religion. This temptation must be religiously eschewed and the true issue boldly proclaimed if Nationalism is to fulfil its divinely-appointed mission.
Part Seven

Writings from Manuscripts

1907 – 1908

The pieces in this part were written by Sri Aurobindo during the period of publication of the *Bande Mataram*, but were not published by him in the *Bande Mataram* or anywhere else. They are reproduced here from his manuscripts. The first two pieces consist of separate passages that were never linked together to make a finished article.
The Bourgeois and the Samurai

Two oriental nations have come powerfully under the influence of Western ideas and felt the impact of European civilization during the nineteenth century, India and Japan. The results have been very different. The smaller nation has become one of the mightiest Powers in the modern world, the larger in spite of far greater potential strength, a more original culture, a more ancient and splendid past and a far higher mission in the world, remains a weak, distracted, subject & famine-stricken people politically, economically, morally & intellectually dependent on the foreigner and unable to realise its great possibilities. It is commonly said that this is because Japan has assimilated Western Science and organization and even in many respects excelled its teachers; India has failed in this all-important task of assimilation. If we go a step farther back and insist on asking why this is so, we shall be told it is because Japan has “reformed” herself and got rid of ideas & institutions unsuited to modern times; while India clings obstinately to so much that is outworn and effete. Even if we waive aside the question whether the old Indian ideals are unfit to survive or whether all our institutions are really bad in themselves or unadaptable to modern conditions, still the explanation itself has to be explained. Why has Japan so admirably transformed herself? why has the attempt at transformation in India been a failure? The solution of problems of this kind has to be sought not in abstractions, not in machinery, but in men. It is the spirit in man which moulds his fate; it is the spirit of a nation which determines its history.

Describe the type of human character which prevails in a nation during a given period of its life under given conditions, and it is possible to predict in outline what the general history of
the nation must be during that period. In Japan the dominant Japanese type had been moulded by the shaping processes of an admirable culture and when the Western impact came, Japan remained faithful to her ancient spirit; she merely took over certain forms of European social & political organization necessary to complete her culture under modern conditions and poured into these forms the old potent dynamic spirit of Japan, the spirit of the Samurai. It is the Samurai type which has been dominant in that country during the nineteenth century. In India the mass of the nation has remained dormant; European culture has had upon it a powerful disintegrating and destructive influence, but has been powerless to reconstruct or revivify. But in the upper strata a new type has been evolved to serve the necessities and interests of the foreign rulers, a type which is not Indian, but foreign — and in almost all our social, political, educational, literary & religious activities the spirit of this new & foreign graft has predominated & determined the extent & quality of our progress. This type is the bourgeois. In India, the bourgeois, in Japan, the Samurai; in this single difference is comprised the whole contrasted histories of the two nations during the nineteenth century.

What is the bourgeois? For the word is unknown in India, though the thing is so prominent. The bourgeois is the average contented middle class citizen who is in all countries much the same in his fundamental character & habits of thought, in spite of pronounced racial differences in temperament & self-expression. He is a man of facile sentiments and skindeep personality; generally “enlightened” but not inconveniently illuminated. In love with his life, his ease and above all things his comforts, he prescribes the secure maintenance of these precious possessions as the first indispensable condition of all action in politics and society; whatever tends to disturb or destroy them, he condemns as foolish, harebrained, dangerous or fanatical, according to the degree of its intensity and is ready to repress by any means in his power. In the conduct of public
movements he has an exaggerated worship for external order, moderation and decorum and hates over-earnestness and over-strenuousness. Not that he objects to plenty of mild & innocuous excitement; but it must be innocuous and calculated not to have a disturbing effect on the things he most cherishes. He has ideals and likes to talk of justice, liberty, reform, enlightenment and all similar abstractions; he likes too to see them reigning and progressing around him decorously and with their proper limitations. He wishes to have them maintained, if they already exist, but in moderation and with moderation; if they do not exist, the craving for them should be, in his opinion, a lively but still well-regulated fire, not permitted to interfere with the safety, comfort and decorum of life,—the means adopted towards acquiring them should be also moderate and decorous and as far as may be safe and comfortable. An occasional sacrifice of money, leisure and other precious things for their sake, he is always ready to meet; he has a keen zest for the reputation such sacrifices bring him and still more for the comfortable sense of personal righteousness which they foster. The bourgeois is the man of good sense and enlightenment, the man of moderation, the man of peace and orderliness, the man in every way “respectable”, who is the mainstay of all well-ordered societies. As a private man he is respectable; that is to say, his character is generally good, and when his character is not, his reputation is; he is all decorous in his virtues, decent in the indulgence of his vices or at least in their concealment, often absolutely honest, almost always as honest as an enlightened self-interest will permit. His purse is well filled or at any rate not indecently empty; he is a good earner, a conscientious worker, a thoroughly safe & reliable citizen.1 But this admirable creature has his defects and limitations. For great adventures, tremendous enterprises, lofty achievements, the storm and stress of mighty & eventful periods in national activity, he is unfit. These things are for the heroes, the

1 The following sentence was written in the top margin of the manuscript. Its place of insertion was not marked, but it presumably was meant to be inserted here:

Of course there are exceptions, instances of successful & respected blackguardism, but these are the small minority.
martyrs, the criminals, the enthusiasts, the degenerates, geniuses, the men of exaggerated virtue, exaggerated ability, exaggerated ideas. He enjoys the fruit of their work when it is done, but while it is doing, he opposes and hinders more often than helps. For he looks on great ideals as dreams and on vehement enthusiasms as harebrained folly; he distrusts everything new & disturbing, everything that has not been done before or is not sanctioned by success & the accomplished fact; revolt is to him a madness & revolution a nightmare. Fiery self-annihilating enthusiasm, noble fanaticism, relentless & heroic pursuit of an object, the original brain that brings what is distant & ungrasped into the boundaries of reality, the dynamic Will and genius which makes the impossible possible; these things he understands as matters of history and honours them in the famous dead or in those who have succeeded; but in living & yet striving men they inspire him with distrust and repulsion. He will tell you that these things are not to be found in the present generation; but if confronted with the living originator, he will condemn him as a learned idiot; face to face with the living hero, he will decry him as a dangerous madman,—unless & until he sees on the head of either the crown of success & assured reputation.

He values also the things of the mind in a leisurely comfortable way as adorning and setting off his enlightened ease and competence. A little art, a little poetry, a little religion, a little scholarship, a little philosophy, all these are excellent ingredients in life, and give an air of decorous refinement to his surroundings. They must not be carried too far or interfere with the great object of life which is to earn money, clothe and feed one’s family, educate one’s sons to the high pitch of the B.A. degree or the respectable eminence of the M.A., marry one’s daughters decently, rank high in service or the professions, stand well in the eye of general opinion and live & die decorously, creditably and respectably. Anything disturbing to these high duties, anything exaggerated, intense, unusual is not palatable to the bourgeois. He shrugs his shoulders over it and brushes it aside with the one
word, “mad”, or eccentric.  

(Such is the bourgeois and it was the bourgeois of the mildest & most inefficient type who reigned in India in the nineteenth century. It was the bourgeois which University education tended, perhaps sought to evolve; it was the bourgeois which the political social conditions moulded and brought to the front. In India the bourgeois; in Japan the Samurai, that one enormous difference explains the difference in the histories of the two countries during the second half of the last century.)

It is undoubtedly this type which has dominated us in the nineteenth century. Of course the really great names, those that will live in history as creators & originators are men who went beyond this type; either they belonged to, but exceeded it or they departed from it. But the average, the determining type was the bourgeois. In Senate & Syndicate, in Legislative Council & District Board or Municipal Corporation, in Congress & Conference, in the services & professions, even in literature & scholarship, even in religion he was everywhere with his well-regulated mind, his unambitious ideals, his snug little corner of culture, his “education” and “enlightenment”, his comfortable patriotism, his comfortable enlightenment, his easy solution of the old problem how to serve both God & Mammon, yet offend neither, his self-satisfaction, his decorous honesty, his smug respectability. Society was made after his model, politics moulded in his image, education confined within his limits, literature & religion stamped with the seal of the bourgeois.

The bourgeois as a distinct & well-evolved entity is an entirely modern product in India, he is the creation of British policy, English education, Western civilization. Ancient India, mediaeval India were not a favourable soil for his growth. The spirit of ancient India was aristocratic; its thought & life moulded

2 The following sentence was written in the top margin of the manuscript. Its place of insertion was not marked:

Such a type may give stability to a society; it cannot reform or revolutionize it. Such a type may make the politics of a nation safe, decorous and reputable. It cannot make that nation great or free.

3 Sri Aurobindo placed parenthesis marks on both sides of this paragraph after writing it. He seems to have intended to move it elsewhere. – Ed.
in the cast of a high & proud nobility, an extreme & lofty strenuousness. The very best in thought, the very best in action, the very best in character, the very best in literature & art, the very best in religion and all the world well lost if only this very best might be attained, such was the spirit of ancient India. The Brahmin who devoted himself to poverty & crushed down every desire in the wholehearted pursuit of knowledge & religious self-discipline; the Kshatriya who, hurling his life joyously into the shock of chivalrous battle, held life, wife, children, possessions, ease, happiness as mere dust in the balance compared with honour & the Kshatriya dharma, the preservation of self-respect, the protection of the weak, the noble fulfilment of princely duty; the Vaishya, who toiling all his life to amass riches, poured them out as soon as amassed in self-forgetting philanthropy holding himself the mere steward & not the possessor of his wealth; the Shudra who gave himself up loyally to humble service, faithfully devoting his life to his dharma, however low, in preference to self-advancement & ambition; these were the social ideals of the age.

The imagination of the Indian tended as has been well said to the grand & enormous in thought and morals. The great formative images of legend & literature to the likeness with which his childhood was encouraged to develop & which his manhood most cherished were of an extreme & lofty type. He saw Harischundra give up all that life held precious & dear rather than that his lips should utter a lie or his plighted word be broken. He saw Prahlada buried under mountains, whelmed in the seas, tortured by the poison of a thousand venomous serpents, yet calmly true to his faith. He saw Buddha give up his royal state, wealth, luxury, wife, child & parents so that mankind might be saved. He saw Shivi hew the flesh from his own limbs to save one small dove from the pursuing falcon; Karna tear his own body with a smile for the joy of making a gift; Duryodhan refuse to yield one inch of earth without noble resistance & warlike struggle. He saw Sita face exile, hardship, privation & danger in the eagerness of wifely love & duty, Savitri rescue by her devotion her husband back from the visible grip of death. These were the classical Indian types. These were the
ideals into the mould of which the minds of men & women were trained to grow. The sense-conquering thought of the philosopher, the magnificent achievements of the hero, the stupendous renunciations of the Sannyasin, [the] unbounded liberality of the man of wealth, everything was exaggeration, extreme, filled with an epic inspiration, a world-defying enthusiasm. The bourgeois though he existed in the rough of course, as in all civilized societies he must exist, had no real chance of evolution; on such a height with so rare an atmosphere, he could not grow; where such tempests of self-devotion blew habitually, his warm comfortable personality could not expand.

The conditions of mediaeval India suited him little better, — the continual clash of arms, the unceasing stir & splendour & strenuousness of life, the fierceness of the struggle and the magnificence of the achievement, the ceaseless tearing down & building up which resulted from Mahomedan irruption and the action & reaction of foreign & indigenous forces, formed surroundings too restless & too flamboyant. Life under the Moguls was splendid, rich & luxurious, but it was not safe & comfortable. Magnificent possibilities were open to all men whatever their birth or station but magnificent abilities and an unshaken nerve & courage were needed to grasp them or to keep what had been grasped. There was no demand for the stable & easy virtues of the bourgeois. In the times of stress and anarchy which accompanied the disintegration of mediaeval India, the conditions were yet more unfavourable; character and morals shared in the general disintegration, but ability & courage were even more in demand than before and for the bourgeois there was no place vacant. (The men who figured in the revolutions in Bengal, the Deccan, the Punjab & the North were often, like their European allies & antagonists, men of evil character, self-seeking, unscrupulous & Machiavellian, but they were at least men.) It was not till mediaeval India breathed its last in the convulsions of 1857 that entirely new conditions reigned and an entirely new culture prevailed with an undisputed sway wholly favourable to the rapid development of the bourgeois type and wholly discouraging to the development of any other.
This emergence and domination of the bourgeois was a rapid transformation, not unparalleled in history, for something of the same kind seems to have happened in the provinces of the Roman Empire under the Caesars, but astonishing in a people whose past history & temperament had been so supremely unPhilistine. That a society which had only a few decades ago prostrated itself before the naked ascetic and the penniless Brahmin, should now wear the monied man and the official as the tilak on its forehead, was indeed a marvellous revolution. But given the new conditions, nothing else could have happened. British rule necessitated the growth of the bourgeois, British policy fostered it, and the plant grew so swiftly because a forcing-house had been created for his rapid cultivation and the soil was kept suitably shallow and the air made warm and humid for his needs. It was as in the ancient world when the nations accepted peace, civilisation and a common language at the cost of national decay, the death of their manhood and final extinction or agelong slavery. The Pax Britannica was his parent and an easy servitude nursed him into maturity.

For the first need of the bourgeois is a guaranteed and perfect security for his person, property and pursuits. Peace, comfort and safety are the very breath of his nostrils. But he gravitates to a peace for whose preservation he is not called on to wear armour and wield the sword, a comfort he has not to purchase by the discomfort of standing sentinel over his liberties, or a safety his own alertness and courage must protect from the resurgence of old dangers. The bourgeois in arms is not the true animal; the purity of his breed is sullied by something of the virtues and defects of the soldier. He must enjoy the fruits of peace and security he has not earned, without responsibility for their maintenance or fear of their loss. Such conditions he found in almost unparallelled perfection in British India. He was asked to stand as the head of a disarmed and dependent society, secured from external disturbance & tied down to a rigid internal tranquillity by the deprivation of all functions except those of breadwinner and taxpayer and to vouch himself to the world by a respectable but not remarkable education and achievement as
the visible proof of England’s civilising mission in India. Such conditions were to the bourgeois as the moisture & warmth of the hothouse to the orchid. He grew in them, rank & luxurious.

Then again, for his perfection and dominance, the society he lives in must honour his peculiar qualities above all others and the substantial rewards and covetable distinctions of life [be] reserved for them chiefly or for them alone. The British rule gave him this honour, showered on him these rewards & distinctions, and Indian society, more & more moulded by British ideas, followed as a society almost inevitably follows the lead of the rulers. Under the new dispensation of Providence there was no call for the high qualities of old, the Aryan or noble virtues which, whatever else failed or perished, had persisted in Indian character for thousands of years, since first the chariots rolled on the hitherside of the Indus. What need for the Rajpoot’s courage, the robust manhood, the noble pride of the Kshatriya, when heroic and unselfish England claimed the right of shedding her blood for the safety of the land? What room for the gifts of large initiative, comprehensive foresight, wise aspiration which make the statesman, when a Bentinck or a Mayo, a Dufferin or a Curzon were ready & eager to take & keep the heavy burdens of Government out of the hands of the children of the soil? The princely spirit, the eagle’s vision, the lion’s heart, these were things that might be buried away with the memories of the great Indian rulers of the past. Happy India, civilised and cared for by human seraphs from over the sea, had no farther need for them. So from sheer inanition, from want of light, room and air, the Kshatriya died out of the soil which had first produced him and the bourgeois took his place. But if room was none for the soldier & the statesman, little could be found for the Brahmin, the sage or the Sannyasin. British rule had no need for scholars, it wanted clerks; British policy welcomed the pedant but feared, even when it honoured, the thinker, for the strong mind might pierce through shows to the truth and the deep thought teach the people to embrace great ideals and live and die for them; British education flung contempt on the Sannyasin as an idler and charlatan, and pointed with admiration to the
strenuous seeker for worldly goods and success as the finest work of the creator. So Vyasa & Valmekie were forgotten for weavers of idle tales and Smiles and Sir Arthur Helps took their place as an instructor of youth, the gospel of Philistinism in its naked crudeness was beaten into the minds of our children when most malleable. Thus Ramdas was following Shivaji into the limbo of the unreturning past. And if God had not meant otherwise for our nation, the Sannyasin would have become an extinct type, Yoga been classed among dead superstitions with witchcraft & alchemy and Vedanta sent the way of Pythagoras & Plato. Nor was the old Vaishya type needed by the new dispensation. The Indian mechanician, engineer, architect, artist, craftsman got notice of dismissal; for to develop the industrial life of the country was no part of England’s business in India. As she had taken the functions of government and war into her own hands, so she would take that of production. Whatever India needed, beneficent England with her generous system of free trade would supply and the Indian might sit at ease under his palm tree or, gladly singing, till his fields, rejoicing that Heaven had sent him a ruling nation so greedy to do him good. What was wanted was not Indian artisans or Indian captains of industry, but plenty of small shopkeepers and big middlemen to help conquer & keep India as a milch cow for British trade & British capital.

Thus all the great types which are nurtured on war, politics, thought, spirituality, activity & enterprise, the outgrowths of a vigorous and healthy national existence, the high fruits of humanity who are the very energy of life to a community, were discouraged and tended to disappear and in their place there was an enormous demand for the bourgeois qualities. The safe, respectable man, satisfied with ease and not ambitions of command, content with contemporary repute and not hankering after immortality, the superficial man who unable to think profoundly could yet pose among his peers as intellectual, who getting no true culture, wore a specious appearance of education, who guiltless of a single true sacrifice for his country, yet bulked large as a patriot, found an undisputed field open to him. The rewards of life now depended on certain outward signs of merit.
The Bourgeois and the Samurai

which were purely conventional. An University degree, knowledge of English, possession of a post in Government service or a professional diploma, a Government title, European clothes or a sleek dress and appearance, a big house full of English furniture, these were the badges by which Society recognized its chosen. These signs were all purely conventional. The degree did not necessarily denote a good education nor the knowledge of English a wide culture or successful living into new ideas, nor the Government post administrative capacity, nor the diploma special fitness for the profession, nor the title any merit in the holder, nor the big house or fine dress a mastery of the art of social life, nor the English clothes, European grit, science and enterprise. They were merely counters borrowed from Europe, but universally taken, as they are not usually taken in Europe or any living nation, as a sufficient substitute for the reality. Wealth, success, and certain outward signs of a facile respectability had become to our new civilised & refined society the supreme tests of the man.

All these were conditions unusually favourable to a rank luxuriance of the bourgeois type, which thrives upon superficiality and lives by convention. The soil was suitably shallow, the atmosphere sufficiently warm & humid. The circumstances of our national life & the unique character of our education hastened & perfected the growth. Both were characterized by the false appearance of breadth covering an almost miraculous superficiality. Our old Indian life was secluded, but lofty & intense, like a pine-tree on the mountain-tops, like a tropical island in unvisited seas; our new life parted with the loftiness & intensity when it lost the isolation, but it boasted in vain of an added breadth, for it was really more provincial & narrow than the old, which had at least given room for the development of all our human faculties. The news of the world’s life poured in on us through the foreign telegrams & papers, we read English books, we talked about economics and politics, science & history, enlightenment & education, Rousseau, Mill, Bentham, Burke, and used the language of a life that was not ours, in the vain belief that so we became cosmopolitans and men of enlightenment.
Yet all the time India was as much & more outside the great life of the world than it was in the days of Mahomad Tughlak or Bahadur Shah. The number of men in educated India who had any vital conception or any real understanding & mastery of the great currents of life, thought & motive which sway the vast world outside, was always wonderfully small. It could not be otherwise; for the life of that world was not our life, nor was our life any part of the world’s, any more than the days of a prisoner in a gaol or reformatory are part of the free activity of society. The thunder of great wars, the grand collision and struggle of world-moving ideas and mighty interests, the swift & strong currents of scientific discovery and discussion, the intellectual change & stir, the huge & feverish pulsation of commercial competition from China to Peru, all this was to us as the scenes in the street to a man watching from his prison bars. We might take a deep & excited interest, we might almost persuade ourselves by the vividness of our interest that we were part of the scene, but if a voice within cried to us, “Out, out, you too into the battle & the struggle and the joy & stir of this great world’s life,” the cold iron of the window-bars and the hard stone of the prison walls stood between. The jailer might not jingle his keys obtrusively nor the warder flourish his baton, but we knew well they were there. And we really believed in the bland promise that if we conducted ourselves well, we should some day get tickets of leave. We read & thought but did not live what we read & thought. So our existence grew ever more artificial and unreal. The fighter and the thinker in us dwindled & the bourgeois flourished and grew.

Contentment with an artificial existence, the habit of playing with counters as if they were true coin of life, made the old rich flood of vitality, strong character, noble aspiration, excellent achievement run ever shallower & thinner in our veins. So we accepted and made the best of an ignoble ease.

Our education too had just the same pride in a false show of breadth and the same confined and narrow scope. In our schools & colleges we were set to remember many things, but learned nothing. We had no real mastery of English literature, though
we read Milton & Burke and quoted Byron & Shelley, nor of history though we talked about Magna Charta & Runnymede, nor of philosophy though we could mispronounce the names of most of the German philosophers, nor science though we used its name daily, nor even of our own thought & civilisation though its discussion filled columns of our periodicals. We knew little & knew it badly. And even we could not profit by the little we knew for advance, for origination; even those who struggled to a wider knowledge proved barren soil. The springs of originality were fast growing atrophied by our unnatural existence. The great men among us who strove to originate were the spiritual children of an older time who still drew sap from the roots of our ancient culture and had the energy of the Mogul times in their blood. But their success was not commensurate with their genius & with each generation these grew rarer & rarer. The sap soon began to run dry, the energy to dwindle away. Worse than the narrowness & inefficiency, was the unreality of our culture. Our brains were as full of liberty as our lives were empty of it. We read and talked so much of political rights that we never so much as realized that we had none to call our own. The very sights & sounds, the description of which formed the staple of our daily reading, were such as most of us would at no time see or hear. We learned science without observation of the objects of science, words & not the things which they symbolised, literature by rote, philosophy as a lesson to be got by heart, not as a guide to truth or a light shed on existence. We read of and believed in English economy, while we lived under Indian conditions, and worshipped the free trade which was starving us to death as a nation. We professed notions of equality, and separated ourselves from the people, of democracy, and were the servants of absolutism. We pattered off speeches & essays about social reform, yet had no idea of the nature of a society. We looked to sources of strength and inspiration we could not reach and left those untapped which were ours by possession and inheritance. We knew so little of life that we expected others who lived on our service to prepare our freedom, so little of history that we thought reform could precede liberty, so little of science that we
believed an organism could be reshaped from outside. We were ruled by shopkeepers and consented enthusiastically to think of them as angels. We affected virtues we were given no opportunity of assimilating and lost those our fathers had handed down to us. All this in perfect good faith, in the full belief that we were Europeanising ourselves, and moving rapidly toward political, social, economical, moral, intellectual progress. The consummation of our political progress was a Congress which yearly passed resolutions it had no power to put in practice, statesmen whose highest function was to ask questions which need not even be answered, councillors who would have been surprised if they had been consulted, politicians who did not even know that a Right never lives until it has a Might to support it. Socially we have initiated a feeble attempt to revivify the very basis of our society by a few petty mechanical changes instead of a spiritual renovation which could alone be equal to so high a task; economically, we attained great success in destroying our industries and enslaving ourselves to the British trader; morally, we successfully compassed the disintegration of the old moral ideas & habits and substituted for them a superficial respectability; intellectually, we prided ourselves [on] the tricking out of our minds in a few leavings, scraps and strays of European thought at the sacrifice of an immense and eternal heritage. Never was an education more remote from all that education truly denotes; instead of giving the keys to the vast mass of modern knowledge, or creating rich soil for the qualities that conquer circumstance & survive, they made the mind swallow a heterogeneous jumble of mainly useless information; trained a tame parrot to live in a cage & talk of the joys of the forest. British rule, Britain’s civilizing mission in India has been the record success in history in the hypnosis of a nation. It persuaded us to live in a death of the will & its activities, taking a series of hallucinations for real things and creating in ourselves the condition of morbid weakness the hypnotist desired, until the Master of a mightier hypnosis laid His finger on India’s eyes and cried “Awake.” Then only the spell was broken, the slumbering mind realised itself and the dead soul lived again.
But the education which was poison to all true elements of national strength and greatness, was meat & drink to the bourgeois. The bourgeois delights in convention, because truth is too hard a taskmaster and makes too severe a demand on character, energy & intellect. He craves superficiality, a shallow soil to grow in. For to attain depth requires time & energy which would have to be unprofitably diverted from his chief business of making his individual way in the world. He cannot give up his life to his country, but if she will be grateful for a few of his leisure hours, he will give in those limits ungrudging service & preen himself on his public virtues. Prodigal charity would be uncomfortable & unwise, but if he can earn applause by parting with a fraction of his superfluities, he is always ready for the sacrifice. Deep scholarship would unfit him for his part in life, but if figuring in learned societies or writing a few articles and essays, an occasional book guiltless of uncomfortable originality, or a learned compilation prepared under his superintendence and issued in his name will make him a man of letters, he will court & prize that easily-earned reputation. The effort to remould society and rebuild the nation is too huge and perilous a task for a comfortable citizen, but he is quite prepared to condemn old & inconvenient institutions & superstitions and lend his hand to a few changes which will make social life more pleasant and comfortable. Superficiality, unreality of thought & deed thus became the stamp of all our activities.

Those who say that the new spirit in India which, before nascent & concealed, started to conscious life in the Swadeshi agitation and has taken Swadeshi, Swaraj and Self-help as its motto, is nothing new but a natural development of the old, are minds blinded by the habits of thought of the past century. The new Nationalism is the very antithesis, the complete and vehement negation of the old. The old movement sought to make a wider circle of activity, freer living-room and a more comfortable and eminent position for the bourgeois, to prolong the unnatural & evil conditions of which the subject nations died under the civilizing rule of Rome and which British rule has recreated for India; the new seeks to replace the bourgeois by the Samurai
and to shatter the prison house which the nineteenth century made for our mother and build anew a palace for her glory, a garden for her pleasure, a free domain for her freedom & her pride. The old looked only to the power & interests of the educated, enlightened middle class, and shrank from the ignorant, the uneducated, the livers in the past, the outer unilluminate barbarian, drawing aside the hem of its robes lest it should touch impurity. The new overleaps every barrier; it calls to the clerk at his counter, the trader in his shop, the peasant at his plough; it summons the Brahmin from his temple and takes the hand [of] the Chandala in his degradation; it seeks out the student in his College, the schoolboy at his books, it touches the very child in its mother’s arms & the secluded zenana has thrilled to its voice; its eye searches the jungle for the Santal and travels the hills for the wild tribes of the mountains. It cares nothing for age or sex or caste or wealth or education or respectability; it mocks at the talk of a stake in the country; it spurns aside the demand for a property qualification or a certificate of literacy. It speaks to the illiterate or the man in the street in such rude vigorous language as he best understands, to youth & the enthusiast in accents of poetry, in language of fire, to the thinker in the terms of philosophy and logic, to the Hindu it repeats the name of Kali, to the Mahomedan it spurs to action for the glory of Islam. It cries to all to come forth, to help in God’s work & remake a nation, each with what his creed or his culture, his strength, his manhood or his genius can give to the new nationality. The only qualification it asks for is a body made in the womb of an Indian mother, a heart that can feel for India, a brain that can think and plan for her greatness, a tongue that can adore her name or hands that can fight in her quarrel. The old shunned sacrifice & suffering, the new rushes to embrace it. The old gave a wide berth to the jail and the rods & scourges of Power; the new walks straight to meet them. The old shuddered at the idea of revolution; the new is ready to set the whole country in turmoil for the sake of an idea. The old bent the knee to Caesar and presented him a list of grievances; the new leaves his presence or dragged back to it, stands erect and defies him in the midst of his legions.
The initial condition of recovering our liberty meant a peril and a gigantic struggle from the very possibility of which we averted our eyes in a panic of bourgeois terror. It was safer & easier to cheat ourselves into believing in a contradiction and living a lie. Yet nothing could be more fatal, more insidiously destructive to the roots of manhood. It is far better to fall and bleed for ever in a hopeless but unremitting struggle than to drink of that draught of death and lethe. A people true to itself, a race that hopes to live, will not comfort itself and sap its manhood by the opiate of empty formulas and specious falsehoods; it will prefer eternal suffering & disaster. For in truth, as our old thinkers used always to insist, the whole universe stands; truth is the root and condition of life and to believe a lie, to live in a lie, is to deliver oneself to disease and death. The belief that a subject nation can acquiesce in subjection and yet make true & vital progress, growing to strength in its chains, is a lie. The idea that mitigations of subjection constitute freedom or prepare a race for freedom or that anything but the exercise of liberty fits man for liberty, is another lie. The teaching that peace and security are more important and vital to man than liberty is a third lie. Yet all these lies and many others we believed in, hugged to our hearts and made the law of our thoughts throughout the nineteenth century. The result was stagnation, or a progress in weakness and disintegration.

The doctrine that social & commercial progress must precede or will of themselves bring about political strength & liberty, is a fourth & very dangerous lie; for a nation is no aggregate of separable functions, but a harmony of functions, of which government and political arrangement is the oldest, most central and most vital and determines the others.

Our only hope of resurgence was in some such great unsealing of the eyes to the Maya in which we existed and the discovery of some effective mantra, some strong spiritual impulse which should have the power to renovate us from within. For good or for evil the middle class now leads in India, and whatever saving impulse comes to the nation, must come from the middle class, whatever upward movement begins, it must initiate and lead.
But for that to happen the middle class must by a miracle be transfigured and lifted above itself; the natural breeding ground of the bourgeois, it must become the breeding ground of the Samurai. It must cease in fact to be a middle class and turn itself into an aristocracy, an aristocracy not of birth or landed possessions, not of intellect, not of wealth and commercial enterprise, but of character and action. India must recover her faculty for self-sacrifice, courage and high aspiration. Such a transformation is the work which has been set before itself by the new Nationalism; this is at the back of all its enthusiasm, audacity & turbulence and provides the explanation of all that has shocked and alarmed the wise men and the elders in the movement in Bengal. The new Nationalism is a creed, but it is more than a creed; it is a method, but more than a method. The new Nationalism is an attempt at a spiritual transformation of the nineteenth century Indian; it is a notice of dismissal or at least of suspension to the bourgeois and all his ideas and ways and works, a call for men who will dare & do impossibilities, the men of extremes, the men of faith, the prophets, the martyrs, the crusaders, the [...] & rebels, the desperate venturers and reckless doers, the initiators of revolutions. It is the rebirth in India of the Kshatriya, the Samurai.
The New Nationalism

What is Extremism?
The nicknames of party warfare have often passed into the accepted terminology used by serious politicians and perpetuated by history, and it is possible that the same immortality may await the designations of Moderate and Extremist by which the two parties now contending for the mind of the nation are commonly known. The forward party

The Heart of Nationalism

Nationalism; but what is Nationalism? The word has only recently begun to figure as an ordinary term of our politics and it has been brought into vogue by the new, forward or extreme party which, casting about for a convenient description of themselves, selected the name as the only one covering in a word their temper and their gospel. For there is a great deal in a name in spite of Shakespeare. A name attached to a political party or school of thought not only serves to show the temper and point of view of the giver, but it helps greatly to colour contemporary ideas about the party it seeks to exalt or disparage. The advanced men whom Anglo-Indian and Moderate unite in branding as Extremists, have always repudiated the misleading designation. At first they preferred to call themselves the New School; they now claim the style of Nationalists; a claim which has been angrily objected to on the ground that the rest of the Congress party are as good Nationalists as the forward party. This
The New Nationalism, I said in a former article, in this Review, is a negation of the old bourgeois ideals of the nineteenth century. It is an attempt to relegate the dominant bourgeois in us to his old obscurity, to transform the bourgeois into the Samurai and through him to extend the workings of the Samurai spirit to the whole nation. Or to put it more broadly, it is an attempt to create a new nation in India by reviving in spirit & action ancient Indian character, the strong, great and lofty spirit of old Aryavarta, and setting it to use and mould the methods and materials of modernity for the freedom, greatness and well-being of a historic and immortal people. This is not, I am well aware, a description under which the ordinary Congress politician will recognize what he prefers to disparage as Extremism, but it will be well understood by those who are constant readers of the Nationalist journals in Bengal, whether the Bande Mataram or New India or vernacular journals like the Yugantar, the Nabasakti or the Sandhya.¹ Whatever their differences of temper, tone or style, however the methods they recommend may differ in detail, they are united by a common faith and a common spirit; a common faith in India, not in an Anglicised and transmogrified nation unrecognizable as Indians, but in India of the immemorial past, India of the clouded but fateful present, India leonine, mighty, crowned with her imperial diadem of the future; a common spirit of enthusiasm, hope, the desire to dare and do all things so that our vision of her future may be fulfilled greatly and soon. This is the heart of Nationalism. The ordinary Congress politician’s ideas of Nationalism are associated with heated discussions in Committee and Congress, altercations at public meetings, unsparing criticisms of successful and eminent respectabilities, sedition trials, National Volunteers, East Bengal disturbances, Rawalpindi riots. To him the Nationalist is nothing more than an “Extremist”, a violent, unreasonable, uncomfortable being whom some malign power has raised up to disturb with his

¹ The following sentence was written in the top margin of the manuscript page; its place of insertion was not marked:
Nationalism existed in India before it became definite and articulate in Bengal, but it is Bengal that gave it a philosophy, a faith, a method, a mantra and a battle-cry.
Swaraj and Boycott, his lawlessness & his lathies the respectable ease and safety of Congress politics. He finds him increasing in numbers & influence with an alarming rapidity which it is convenient to deny but impossible to ignore. (It is the bourgeois view of the type destined to push him aside & supplant him and like all such views born of a panic fear & hatred, it is a caricature and not a description.) He has no clear idea of the aim and drift of Extremism. He imagines it to be our object to drive out the English and make India free by Boycott and the lathie, and, having thus erected a scarecrow to chuck stones at, he thinks himself entitled to dismiss the new party in his mind as a crowd of enthusiastic lunatics who talk nonsense and advocate impossibilities.

Nationalism cannot be so easily dismissed. A force which has shaken the whole of India, trampled the traditions of a century into a refuse of irrecoverable fragments and set the mightiest of modern Empires groping in a panic for weapons strong enough to meet a new and surprising danger, must have some secret of strength and therefore of truth in it which is worth knowing. To get at the heart of Nationalism we must first clear away some of the misconceptions with which its realities have been clouded. We must know what Nationalism is not before we ask what it is.

Extremism in the sense of unreasoning violence of spirit and the preference of desperate methods, because they are desperate, is not the heart of Nationalism. The Nationalist is no advocate of lawlessness for its own sake, on the contrary he has a deeper respect for the essence of law than anyone else, because the building up of a nation is his objective and he knows well that without a profound reverence for law national life cannot persist and attain a sound and healthy development. But he qualifies his respect for legality by the proviso that the law he is called upon to obey is the law of the nation, an outgrowth of its organic existence and part of its own accepted system of government.

---

2 Sri Aurobindo placed parenthesis marks on both sides of this sentence during revision. He apparently intended to move it elsewhere and to join the sentences before and after with a “but”. — Ed.
A law imposed from outside can command only the interested obedience of those whose chief demand from life is the safety of their persons and property or the timid obedience of those who understand the danger of breaking the law. The claim made by it is an utilitarian, not a moral claim. Farther the Nationalist never loses sight of the truth that law was made for man and not man for the law. Its chief function and reason for existence is to safeguard and foster the growth and happy flowering into strength and health of national life and a law which does not subserve this end or which opposes and contradicts this end, however rigidly it may enforce peace, order and security, forfeits its claim to respect and obedience. Nationalism refuses to accept Law as a fetish or peace and security as an aim in themselves; the only idol of its worship is Nationality and the only aim in itself it recognizes is the freedom, power and well-being of the nation. It will not prefer violent or strenuous methods simply because they are violent or strenuous, but neither will it cling to mild and peaceful methods simply because they are mild and peaceful. It asks of a method whether it is effective for its purpose, whether it is worthy of a great people struggling to be, whether it is educative of national strength and activity, and these things ascertained, it asks nothing farther. He does not love anarchy and suffering, but if anarchy and suffering are the necessary passage to the great consummation he seeks, he is ready to bear them himself, to expose others to them, till the end is reached. He will embrace suffering as a lover and clasp the hand of Anarchy like that of a trusted friend, — if so it must be; for it is not his temper to take the inevitable grudgingly or to serve or struggle with half a heart. If that is Extremism and fanaticism, he is an Extremist and a fanatic; but not for their own sake, not out of a disordered love for anarchy and turmoil, not in madness & desperation, but out of a reasoned conviction and courageous acceptance of the natural laws that demand this sacrifice in return for so great a promise. The same natural law by which a man who aspires to reach a difficult height, must clamber up the steep rocks and risk life and limb in arduous places, has decreed that men who desire to live as freemen in a free country must not refuse to be ready
to pay toll for freedom with their own blood and the blood of their children, and still more the nation which seeks to grow out of subjection into liberty, must consent first to manure the soil with the tears of its women and the bodies of its sons. The Nationalist knows what he asks from Fate and he knows the price that Fate asks from him in return. Knowing it, he is ready to drag down the nation with him into the valley of the shadow of Death, dark with night and mist and storm, sown thick and crude with perils of strange monsters and perils of morass and fire and flood, holding all danger & misery as nothing because beyond the valleys are the mountains of Beulah where the nation shall enjoy eternal life. He is ready to lead the chosen people into the desert for its long wanderings, though he knows that often in the bitterness of its sufferings it will murmur and rebel against his leadership and raise its hand to stone him to death as the author of its misery, for he knows that beyond is the promised land flowing with milk and honey which the Divine Voice has told him that those who are faithful, will reach and possess. If he embraces Anarchy, it is as the way to good government. If he does not shrink from disorder and violent struggle, it is because without that disorder there can be no security and without that struggle no peace, except the security of decay and the peace of death. If he has sometimes to disregard the law of man, it is to obey the dictates of his conscience and the law of God.
The Mother and the Nation

We have lost the faculty of religious fervour in Bengal and are trying now to recover it through the passion for the country by self-sacrifice, by labour for our fellow-countrymen, by absorption in the idea of the country. When a nation is on the verge of losing the source of its vitality, it tries to recover it by the first means which the environment offers, whether it be favourable to it or not. Bengal has always lived by its emotions; the brain of India, as it has been called, is also the heart of India. The loss of emotional power, of belief, of expansiveness of feeling would dry up the sources from which she derives her strength. The country of Nyaya is also the country of Chaitanya, who himself was born in the height of the intellectual development of Bengal as its fine flower and most perfect expression.

The land of Chaitanya is also the chosen home of the Mother and in Bengal she has set her everlasting seat. Immeasurable ages will pass, revolutions shake the land, religions come and go, but so long as the Ganges flows through the plains of the delta, so long shall the Mother sit enthroned in Bengal as sovereign and saviour. New forms she will take, new aspects of power or beauty, but the soul of her Motherhood will live unchanged and call to her sons to adore her. In the new age she has taken to herself a new form, she has come to us with a fresh face of beauty the full sweetness of which we have not yet grasped. When Bankim discovered the mantra Bande Mataram and the song wrote itself out through his pen, he felt that he had been divinely inspired, but the people heard his song and felt nothing. “Wait” said the prophet, “wait for thirty years and all India will know the value of the song I have written.” The thirty years have passed and Bengal has heard; her ears have suddenly been opened to a voice to which she had been deaf and her heart filled with a light to which she had been blind. The Mother of

www.holybooks.com
The hymn is no new goddess, but the same whom we have always worshipped; only she has put off the world-form in which she was familiar to us, she has assumed a human shape of less terrible aspect, less fierce and devastating power to attract her children back to her bosom.

What is a nation? We have studied in the schools of the West and learned to ape the thoughts and language of the West forgetting our own deeper ideas and truer speech, and to the West the nation is the country, so much land containing so many millions of men who speak one speech and live one political life owing allegiance to a single governing power of its own choosing. When the European wishes to feel a living emotion for his country, he personifies the land he lives in, tries to feel that a heart beats in the brute earth and worships a vague abstraction of his own intellect. The Indian idea of nationality ought to be truer and deeper. The philosophy of our forefathers looked through the gross body of things and discovered a subtle body within, looked through that and found yet another more deeply hidden, and within the third body discovered the Source of life and form, seated for ever, unchanging and imperishable. What is true of the individual object, is true also of the general and universal. What is true of the man, is true also of the nation. The country, the land is only the outward body of the nation, its annamaya kosh, or gross physical body; the mass of people, the life of millions who occupy and vivify the body of the nation with their presence, is the pranamaya kosh, the life-body of the nation. These two are the gross body, the physical manifestation of the Mother. Within the gross body is a subtler body, the thoughts, the literature, the philosophy, the mental and emotional activities, the sum of hopes, pleasures, aspirations, fulfilments, the civilisation and culture, which make up the sukshma sharir of the nation. This is as much a part of the Mother’s life as the outward existence which is visible to the physical eyes. This subtle life of the nation again springs from a deeper existence in the causal body of the nation, the peculiar temperament which it has developed out of its ages of experience and which makes it distinct from others. These three are the bodies of the Mother, but within them all is
the Source of her life, immortal and unchanging, of which every
nation is merely one manifestation, the universal Narayan, One
in the Many of whom we are all the children.

When, therefore, we speak of a nation, we mean the separate
life of the millions who people the country, but we mean also
a separate culture and civilisation, a peculiar national tempera-
ment which has become too deeply rooted to be altered and in all
these we discover a manifestation of God in national life which
is living, sacred and adorable. It is this which we speak of as the
Mother. The millions are born and die; we who are here today,
will not be here tomorrow, but the Mother has been living for
thousands of years and will live for yet more thousands when
we have passed away.
The Morality of Boycott

Ages ago there was a priest of Baal who thought himself commissioned by the god to kill all who did not bow the knee to him. All men, terrified by the power and ferocity of the priest, bowed down before the idol and pretended to be his servants; and the few who refused, had to take refuge in hills and deserts. At last a deliverer came and slew the priest and the world had rest. The slayer was blamed by those who placed religion in quietude and put passivity forward as the ideal ethics, but the world looked on him as an incarnation of God.

* * * *

A certain class of minds shrink from aggressiveness as if it were a sin. Their temperament forbids them to feel the delight of battle and they look on what they cannot understand as something monstrous and sinful. “Heal hate by love, drive out injustice by justice, slay sin by righteousness” is their cry. Love is a sacred name, but it is easier to speak of love than to love. The love which drives out hate, is a divine quality of which only one man in a thousand is capable. A saint full of love for all mankind possesses it, a philanthropist consumed with the desire to heal the miseries of the race possesses it, but the mass of mankind do not and cannot rise to that height. Politics is concerned with masses of mankind and not with individuals. To ask masses of mankind to act as saints, to rise to the height of divine love and practise it in relation to their adversaries or oppressors, is to ignore human nature. It is to set a premium on injustice and violence by paralysing the hand of the deliverer when raised to strike. The Gita is the best answer to those who shrink from battle as a sin and aggression as a lowering of morality.

* * * *

www.holybooks.com
A poet of sweetness and love who has done much to awaken Bengal, has written deprecating the boycott as an act of hate. The saintliness of spirit which he would see brought into politics is the reflex of his own personality colouring the political ideals of a sattwic race. But in reality the boycott is not an act of hate. It is an act of self-defence, of aggression for the sake of self-preservation. To call it an act of hate is to say that a man who is being slowly murdered, is not justified in striking out at his murderer. To tell that man that he must desist from using the first effective weapon that comes to his hand because the blow would be an act of hate, is precisely on a par with this deprecation of boycott. Doubtless the self-defender is not precisely actuated by feelings of holy sweetness towards his assailant, but to expect so much from human nature is impracticable. Certain religions demand it, but they have never been practised to the letter by their followers.

* * * *

Hinduism recognizes human nature and makes no such impossible demand. It sets one ideal for the saint, another for the man of action, a third for the trader, a fourth for the serf. To prescribe the same ideal for all is to bring about varnasankara, the confusion of duties, and destroy society and the race. If we are content to be serfs, then indeed boycott is a sin for us, not because it is a violation of love, but because it is a violation of the Sudra’s duty of obedience and contentment. Politics is the field of the Kshatriya and the morality of the Kshatriya ought to govern our political actions. To impose on politics the Brahimical duty of saintly sufferance, is to preach varnasankara.

* * * *

Love has a place in politics, but it is the love for one’s country, for one’s countrymen, for the glory, greatness and happiness of the race, the divine ananda of self-immolation for one’s fellows, the ecstasy of relieving their sufferings, the joy of seeing one’s blood flow for country and freedom, the bliss of union in death with
the fathers of the race. The feeling of almost physical delight in the touch of the mother soil, of the winds that blow from Indian seas, of the rivers that stream from Indian hills, in the sight of Indian surroundings, Indian men, Indian women, Indian children, in the hearing of Indian speech, music, poetry, in the familiar sights, sounds, habits, dress, manners of our Indian life, this is the physical root of that love. The pride in our past, the pain of our present, the passion for the future are its trunk and branches. Self-sacrifice, self-forgetfulness, great service and high endurance for the country are its fruit. And the sap which keeps it alive is the realisation of the Motherhood of God in the country, the vision of the Mother, the knowledge of the Mother, the perpetual contemplation, adoration and service of the Mother.

* * * *

Other love than this is foreign to the motives of political action. Between nation and nation there is justice, partiality, chivalry, duty but not love. All love is either individual, or for the self in the race or for the self in mankind. It may exist between individuals of different races, but the love of one race for another is a thing foreign to nature. When, therefore, the boycott as declared by the Indian race against the British is stigmatised for want of love, the charge is bad psychology as well as bad morality. It is interest warring against interest, and hatred is directed not really against the race but against the adverse interest. If the British exploitation were to cease tomorrow, the hatred against the British race would disappear in a moment. A partial adhyaropa makes the ignorant for the moment see in the exploiters and not in the exploitation the receptacle of the hostile feeling. But like all Maya it is an unreal and fleeting sentiment and is not shared by those who think. Not hatred against foreigners, but antipathy to the evils of foreign exploitation is the true root of boycott.

* * * *

If hatred is demoralising, it is also stimulating. The web of life has been made a mingled strain of good and evil and God works
His ends through the evil as well as through the good. Let us discharge our minds of hate, but let us not deprecate a great and necessary movement because in the inevitable course of human nature, it has engendered feelings of hostility and hatred. If hatred came, it was necessary that it should come as a stimulus, as a means of awakening. When tamas, inertia, torpor have benumbed a nation, the strongest forms of rajas are necessary to break the spell, and there is no form of rajas so strong as hatred. Through rajas we rise to sattwa, and for the Indian temperament, the transition does not take long. Already the element of hatred is giving place to the clear conception of love for the Mother as the spring of our political actions.

* * * *

Another question is the use of violence in the furtherance of boycott. This is, in our view, purely a matter of policy and expediency. An act of violence brings us into conflict with the law and such a conflict may be inexpedient for a race circumstanced like ours. But the moral question does not arise. The argument that to use violence is to interfere with personal liberty involves a singular misunderstanding of the very nature of politics. The whole of politics is an interference with personal liberty. Law is such an interference, Protection is such an interference, the rule which makes the will of the majority prevail is such an interference. The right to prevent such use of personal liberty as will injure the interests of the race, is the fundamental law of society. From this point of view the nation is only using its primary right when it restrains the individual from buying or selling foreign goods.

* * * *

It may be argued that peaceful compulsion is one thing and violent compulsion another. Social boycott may be justifiable, but not the burning or drowning of British goods. The latter method, we reply, is illegal and therefore may be inexpedient, but it is not morally unjustifiable. The morality of the Kshatriya justifies
violence in times of war, and boycott is a war. Nobody blames the Americans for throwing British tea into Boston harbour, nor can anybody blame similar action in India on moral grounds. It is reprehensible from the point of view of law, of social peace and order, not of political morality. It has been eschewed by us because it is unwise and carries the battle on to a ground where we are comparatively weak, from a ground where we are strong. Under other circumstances we might have followed the American precedent, and if we had done so, historians and moralists would have applauded, not censured.

* * * *

Justice and righteousness are the atmosphere of political morality, but the justice and righteousness of the fighter, not of the priest. Aggression is unjust only when unprovoked, violence unrighteous when used wantonly or for unrighteous ends. It is a barren philosophy which applies a mechanical rule to all actions, or takes a word and tries to fit all human life into it. The sword of the warrior is as necessary to the fulfilment of justice and righteousness as the holiness of the saint. Ramdas is not complete without Shivaji. To maintain justice and prevent the strong from despoiling and the weak from being oppressed is the function for which the Kshatriya was created. Therefore, says Sri Krishna in the Mahabharat, God created battle and armour, the sword, the bow and the dagger.
A Fragment

Mankind is of a less terrestrial mould than some would have him to be. He has an element of the divine which the practical politician ignores. The practical politician looks to the position at the moment and imagines that he has taken everything into consideration. He has indeed studied the surface and the immediate surroundings, but he has missed what lies beyond material vision. He has left out of account the divine, the incalculable in man, that element which upsets the calculations of the schemer and disconcerts the wisdom of the diplomat.
Appendixes

These appendixes comprise materials written by Sri Aurobindo, mostly by hand, between 1906 and 1908. The first one contains incomplete drafts of three articles, two of which were later published in the Bande Mataram. The second one contains writings and jottings related to the organisation and running of the newspaper, the third, organisational material for a proposed independent Nationalist Party, and the fourth, an interview of 1908.
APPENDIX ONE

Incomplete Drafts of Three Articles

Draft of the Conclusion of “Nagpur and Loyalist Methods”
(see pages 742–43)

[.....] whether they will or will not recognize this unconstitutional decision to transfer the place of session arrived at on an unofficial representation and while there were still citizens of Nagpur[,] members of the Reception Committee willing & able to carry out the resolution of the Calcutta Congress to hold the next session at Nagpur. If we do not, we have two courses open to us, either to separate from the dictator-ridden Congress altogether and hold a Nationalist Conference at Nagpur or to leave the Loyalists to a purely Moderate Congress at Surat and according as they act, decide our future course. In any case we think there should be a council of leading men of our party at Nagpur in December to confer on our future action, for in view of the bureaucratic campaign & the danger of a retrograde step on the part of the Congress the times are critical for the Nationalist movement and concerted action is imperative.

Draft of the Opening of “In Praise of Honest John”
(see pages 751–54)

The onslaught of the bureaucracy on the Nationalists of Bengal has to a certain extent found the

There is no more common question on men’s lips nowadays than the question which is naturally suggested by our apparent inability to answer the attacks of a bureaucracy armed with all the weapons of the law and not overscrupulous as to their use, the question “What shall we do?” The bureaucracy is determined
to crush the movement. It has no qualms, no scruples; for has not Mr. Morley, the great Radical philosopher, justified anything and everything they may do by the immortal dictum that the eternal principles which apply to Britain or Ireland or Canada need not exist in India? The analogy of the fur coat need not stop with political conduct, it may be extended to moral conduct. For

Mr. John Morley is a very great man, a very remarkable and exceptional man. I have been reading his Arbroath speech again and my admiration for him has risen to boiling point, so that I am at last obliged to let it bubble over into the columns of the Bande Mataram. Mr. Morley differs from ordinary mortals in three very important respects; first, he is a literary man; secondly, he is a philosopher, thirdly he is a politician. This would not matter much if he kept his literature, philosophy & politics apart; but he doesn’t. He is a literary philosopher or a philosophic litterateur; better than this he is a literary philosopher-politician. This is a superlative combination; God cannot better it & the devil does not want to. For if an ordinary man steals, he steals and no more bones are made about it; he gets caught and is sent to prison, or he is not and goes on his way rejoicing; in either case the matter is a simple one without any artistic possibilities; but if a literary philosopher steals, he steals on the basis of the great & eternal verities and in the choicest and most poetical English. An ordinary man may be illogical and silly and everybody realizes that he is illogical and silly. But the philosopher is logically illogical and talks nonsense according to the strictest rules of philosophical reasoning, and the literary man will be brilliantly foolish and illogically convincing. An ordinary man may turn his back on his principles and he will be called a turncoat, or break all the commandments and be punished by the law & society, unless, of course, he is a millionaire or a member of the ruling race in India — but the literary philosopher will reconcile his principles and his conduct by an appeal to a fur-coat or a syllogism from a pair of Northampton boots. He will abrogate all the ten commandments on the strength of a solar topi.
A politician again will lie and people will perceive it and take it as a matter of course; but a literary philosopher politician will easily prove to you that when he is most a liar, then he is most truthful and when he is juggling most cynically with truth & principle, then he most deserves the name of Honest John; and he will do it in such well turned periods that one must have a very bad ear for the rhythm of sentences to quarrel with his logic. Oh yes, a literary philosopher politician is the choicest work of Heaven, when he is not the most splendid instrument in the hands of the Prince of Darkness. For the Prince of Darkness is not only a gentlemen, as Shakespeare discovered, but a gentlemen of artistic perceptions who knows a fine and carefully-worked tool when he sees it and loves to handle it with the best dexterity and grace of which he is capable.

There are other reasons for which I admire Mr. John Morley. I admire him for what he has done not only for the way in which he has done it. It is true he is not so great a man as his master Gladstone, who was the biggest opportunist and most adroit political gambler democracy has till now engendered and yet persuaded the world that he was an enthusiast and a man of high religious feeling and principle. But Gladstone was a genius and his old henchman is only a man of talent. Still Mr. Morley has done the best of which he is capable and that is by no means a poor best. He has served the devil in the name of God with signal success on two occasions. The first was when he championed the cause of the financiers in Egypt, the men who gamble with the destinies of nations, who make money out of the groans of the people and coin into gold the blood of patriots and the tears of widows & when, abusing his position as an influential journalist, he lied to the British public about Arabi and urged on Gladstone to crush the movement of democratic and humanitarian Nationalism in Egypt, that movement in which all that is noble, humane and gracious in Islam sought to find fulfilment and a small field on earth for the fine flowering of a new Mahomedan civilisation. The second is now when he is trying in the sordid interests of British capital to crush the
resurgent life of India and baffle the attempt of the children of
Vedanta to recover their own country for the development of a
revivified Indian civilisation. The two foulest crimes against the
future of humanity which any statesman in recent times could
possibly have committed have been engineered under the name
and by the advocacy of Mr. John Morley. Truly, Satan knows his
own and sees to it that they do not their great work negligently.

Mr. Morley is a great bookman, a great democrat, a great ex-
ponent of principles. No man better fitted than he to prove
that when great human movements are being suppressed by the
sword and the prison, it is done in the interests of humanity; that
when a people struggling to live is trampled down by repression,
pushed back by the use of the Goorkha and the hooligan, the
warder’s lash & the whipping post into the hell of misery &
famine & starvation, of insult & ignominy & bondage from
which it dared to hope for an escape, the motive of the oppressor
finds its root in a very agony of conscientiousness, and it is with a
sobbing & bleeding heart that he presses his heel on the people’s
throat for their own good; that the ruthless exploitation and
starvation of a country by foreign leeches is one of the best
services that can be done to mankind; the international crimes
of the great captains of finance a work of civilisation and the
brutal & selfish immolation of nations to Mammon an accept-
able offering on the altar of the indwelling God in humanity.
But these things have been said & done before; they are the
usual & blasphemous cant of nineteenth-century devilworship
formulated when Commerce began to take the place once nom-
inally allowed to Christ and the ledger became Europe’s Bible.
Mr. Morley does it with more authority than others, but his
own particular original faculty lies in the direction we indicated
when we drew the distinction between the ordinary man & the
extraordinary Morley. What he has done has been, after all,
largely on the initiative of others; what he has said about it, is
his own, and nothing more his own than the admirably brilliant
& inconsequential phrases in which he has justified wickedness
to an admiring nation.
Incomplete Draft of an Unpublished Article

It is always useful to inquire into the inner psychology of common & vulgar types. Their very crudeness and coarseness is an advantage, because we see in them in the rough and laid bare to a surface analysis the secret motives which in the higher evolutions of the type are too self-conscious & self-concealing to be easily detected. It is not easy to detect at first the common Britishness, if we may be allowed the word, of two men so different, at such opposite poles of human evolution as Mr. John Morley, the litterateur, politician, philosopher & fine perfection of the most serious & sober British culture, and the vulgar Newmaniac, the loud, ranting, blustering, impudently lying Yahoo of Hare Street. And yet it is by understanding the Newmaniac that we shall best understand not only John Morley but his whole race and understand too that the policy which Morley accepted from the first to the wonder & dismay of his Indian worshippers, was the only policy he or any other Englishman could have accepted. It is the common Briton in each which forms the bond of sympathy between the Newmaniac & Mr. John Morley and makes them think so wonderfully alike. That is the only answer which we can give to the question why Englishmen professing to be just, beneficent & all that is noble & unique, have so readily accepted a mingled policy of brutal repression and false conciliation in India — because it is the nature of the beast. The Britisher may wish to be or at least to seem just, noble, generous, humane, beneficent; but what is the use? “To their nature all things at the last return, and what shall coercing it avail?”
APPENDIX TWO

Writings and Jottings Connected with the Bande Mataram
1906–1908

The pieces in this appendix deal with the formation of the Bande Mataram Printers and Publishers, Limited, or with the finances, management and production of the Bande Mataram newspaper. All but one of them are reproduced from Sri Aurobindo’s manuscripts. The exception, the first piece, is a printed version of the original prospectus of the Bande Mataram Printers and Publishers, Limited (1906), which in all likelihood was written by Sri Aurobindo and which was signed by him and eight others.

A Limited Liability Company has been formed, called the Bande Mataram Limited, which will take over the daily journal Bande Mataram and conduct it on a permanent and organized basis.

This journal was started as the exponent of a new political ideal and the mouthpiece of a growing school of thought. Established at first by individuals and on a small scale it has already in the single month of its existence made a great reputation and promises to be a power in the land. It has not only a standing in Bengal itself, but is daily expected and read with eagerness in other parts of India. When once placed on a carefully prepared and permanent foundation it cannot fail to be financially a success and politically a power. The very opposition it has received in many quarters shows that it is the representative of a force which has been waiting for a daily means of self-expression and, once possessed of that necessary weapon, can no longer be ignored.
But in order that Bande Mataram may fulfil its possibilities, it is desirable for all who are of its way of thinking, to unite and make it a success. No paper can be a great public organ which expresses merely the ideas of the few. Any party or school of thought which wishes to be strong and influential, must join in strengthening the mouthpiece of its common ideas. Bande Mataram is designed to be the organ of the most advanced school of nationalism in India. It will endeavour to propagate the gospels of self-help and self-respect. It will oppose the habit of mendicant petitioning and inert dependence on the Government. It will advocate the creation of a new basis for the Congress, definitely democratic in its nature, instead of the loose and ineffective constitution it now possesses. It will endeavour to rally into one great force all those who are desirous of organizing the nation for work and not for mere agitation and petitioning. Its ideal will be Swadeshi in all things, — Swadeshi in politics, Swadeshi in commerce and industry, Swadeshi in education.

Another distinguishing feature of Bande Mataram will be that it is not the property or organ of a single individual, but the voice of a party. Many writers of ability, will be on the staff. Besides Srijuktas Bipin Chandra Pal and Arabindo Ghose, Srijut Chitta Ranjan Das, Srijut Rajat Nath Ray, Srijut Hemendra Prasad Ghose, Srijut Syam Sunder Chakrabarti, Srijut Bijoy Chandra Chatterjee and others will be regular contributors to its columns. We hope also to get eminent men from other provinces to correspond with the paper. A good Mofussil correspondence will be organized, and arrangements will be made for correspondents in other parts of the world. The execution of this scheme needs time and general support from the public. It will be gradually developed and in a few months perfected.

The Company has been floated with a capital of Rs. 50,000 with option to increase to Rs. 1,00,000 and at present Rs. 21,000 is the money promised and another Rs. 29,000 will be placed on the market. Each share is worth Rs. 10. The shares have been purposely put at a low figure so that all who belong to the school of thought which Bande Mataram represents may
take a personal interest. Anyone who wishes to subscribe more liberally to its support may do so by buying a large number of shares.

All applications for shares with remittances should be sent to Raja Subodh Chandra Mullik of 12, Wellington Square, Calcutta.

Draft of a Prospectus of 1907

The Bande Mataram Publishers and Printers Company have now been conducting the daily paper Bande Mataram for a full year and are now in a position to approach the public with an offer of shares on which a dividend for the next year is practically assured. So long as the paper was carried on at a loss and its future ill-assured, the Company had to invite the public to invest in it rather as a patriotic undertaking which deserved support than as a promising business enterprise; but the paper is now self-supporting and in a short time at the present rate of increase will be a paying concern, provided the capital required is subscribed. The following statement will show the present financial condition and give some basis for forming an opinion as to future prospects.
No. of Shareholders. 66
Amount of Shares already subscribed. 7,000
Loans advanced on condition of repayment by the raising of shares 18,000
Outstanding liabilities. 9,000
Liabilities to be converted into shares 1,500
Farther outlay necessary for Press & Type 1,000

35,500

Full amount of maximum Capital in Shares 50,000
Amount of Capital to be raised in order to stand clear 27,000
Amount of Shares the Company has still the power to raise 43,000
Budget of Monthly Expenses sanctioned by the Directors [no entry]

Notes and Memos

I. Srijut Aurobindo Ghose is appointed Managing Director with full powers subject to the following provisions:—

1. The Budget to be fixed by the Directors, which he shall not exceed.
2. All appointments, dismissals, increments etc. to be in the power of the Directors only, but power of provisional appointments, degradations etc. is given to the Managing Director subject to sanction by the Directors at their next meeting.
3. When the Secretary and other officials or members of the Committee of Management are not in agreement, the orders of the Managing Director will be final.

II. The Managing Director shall be assisted by a Committee of Management consisting of four persons including the Secretary,

1 The total was summed before the last entry (Rs. 1000) was added. — Ed.
the work to be distributed among them according to the following Departments.

1. Cash and Disbursements and general assistance to the Managing Director, especially in the matter of seeing that the books are regularly written up. NCM [Nirod Chandra Mullik]

2. Finance — i.e. Advertisements, Cash Sales, Subscriptions (V.P.P.) and generally whatever relates to the income of the paper. HPG [Hemendra Prasad Ghose]

3. Editorial — i.e. the arrangements for work and the improvement of the paper. The responsibility for the matter does not go with this charge, as that can only be undertaken by a Managing Editor. SSC [Shyam Sunder Chakravarti]

4. General Correspondence and Press, with Dispatch, Stores, etc. Secretary

Srijut Benoy Banerji shall exercise general supervision with the Secretary over the General Department, and be given whatever assistance he may require for any duties he may find it impossible to discharge in person.

The Managing Director shall have power to alter the distribution of work whenever he finds it working defectively.

III. The Budget is fixed at Rs. 4500 a month, according to the scheme drawn up by Srijut Prakash Chandra Dutt subject to the modifications subsequently made. It shall not on any account be exceeded until the paper becomes profitable, when the Managing Director will draw up a fresh scheme for the improvement of the paper. The reductions under the scheme shall be effected by the 24th February.

IV. Payments to the staff are to be made for the present out of the Rs. 500 received for shares with whatever comes in by way of daily realizations. No other money from shares is to be utilized henceforth for current expenditure but all strictly credited to Capital Account. The Rs. 500 abovementioned will be repaid to this account by instalments from the daily realizations.

V. Disbursements must be made according to the fixed rules. There shall be separate accounts for Capital Account, Paper,
Establishment and general expenses, Daily Expenditure. The daily realizations shall be divided under these heads and only enough for the fourth item kept in the Office, the rest being paid into the bank. Whatever old bills have to be paid subsequent to the 24th February must be paid out of capital account except such as properly belong to the current month. When unexpected liabilities have to be met, an attempt should be made to raise shares to meet them.

VI. Srijut Girija Sundar Chukrabarti shall be appointed travelling Agent for the collection of shares, subscriptions etc. and asked to complete his Bombay tour as soon as possible so as to proceed to East Bengal for shares. Other agents shall be appointed on the commission system in Madras, Bombay and C. P. and Berar.

[2]

Budget

1. Money to be immediately paid for the scheme to be possible
   Schroder Rs. 1000 at least.
   Dickinson Rs. 1000.
   Type Rs. 1000.
   Establishment Rs. 2000 at least.
2. Arrears of work to be brought up and new system begun — yet no increase of establishment possible.
3. System of four accounts to be introduced rigidly as soon as 1 is solved.
4. List of old liabilities.

2. Advertisements difficult to procure unless paper is boomed and cash sale & circulation increase.
3. Subscriptions.
1. Editorial matter insufficient. More hands required for articles etc. but fresh expenditure impossible.
2. News almost nil, more expenditure on telegrams, etc. necessary, but impossible. Reporters to be engaged but this means fresh expenditure.
3. Correspondent arrangements.
4. Working of Editorial Department — especially editing of Reports and Telegrams. Present staff seems unable to do it.

1. Correspondence.
2. Despatch horribly bad, how to improve it?
3. Stores — daily check.
4. Stocktaking.
5. Press. Another Press absolutely necessary but no money.

APPENDIX THREE

Nationalist Party Documents

The two pieces in this appendix are reproduced from Sri Aurobindo’s manuscripts. Both are sketches of a proposed reorganisation of the Nationalist Party around the time of the Surat Congress (December 1907).

[1]

SUGGESTED RULES OF BUSINESS FOR THE CONGRESS

SUBJECTS COMMITTEE: —

1. Each of the six Provinces, namely, Bengal, Bombay, Madras, United Provinces, The Punjab and the Central Provinces shall return Members to the Subjects Committee as follows: —

   Bengal & Assam .................... 20.
   Bombay ........................... 15.
   Madras ........................... 15.
   United Provinces ................. 15.
   Punjab ............................ 10.
   Central Provinces ............... 10.

2. No subject shall be brought up for discussion at the Congress unless it should have been previously discussed in the Subjects Committee.
VOTING: —

3. For the purpose of voting on any proposition that is brought before the Congress, the delegates of each Province shall elect 170 Representatives distributed among the six Provinces as follows: —

Bengal ......................... 40.
Bombay ............................. 30.
Madras ................................. 30.
United Provinces ................. 30.
Punjab ................................. 20.
Central Provinces ............... 20.

The method of election shall be the same as in the case of the Members of the Subjects Committee.

4. None but such Representatives shall be entitled to vote on any proposition that may come up before the Congress.

5. Any proposition for which the majority of the Representatives vote shall be deemed to be carried by the Congress, provided that if the Representatives of any two Provinces unanimously vote against any proposition, the same shall be dropped.

6. Election of Subjects Committee and Representatives. For the purpose of electing Members of the Subjects Committee and Representatives, each Province shall be sub-divided into Electoral Divisions each to return a fixed number of Electors. For the present the Delegates from each District of a Province attending shall meet and elect one person from among themselves to act as the Elector of that District and the capital City of each Province may be allowed to elect 5 Electors from among the Delegates representing that City.

7. The Electors of each Province shall meet separately before the session of the Congress opens and elect the Members of the Subjects Committee and the Representatives from among themselves by a majority of votes. The Voting shall be by ballot
and each Elector shall put down in writing the names of the Members not exceeding the appointed number whom he may desire to be the Members of the Subjects Committee and Representatives for his Province. For this purpose each Elector shall receive a printed form to be supplied by the Secretaries.

PRESIDENT:

8. The Reception Committee of the Province where the Congress is being held shall have the right by majority of Votes to nominate the President of the Congress for that year and such nomination shall be accepted by the Congress unless negatived by a three-fourths majority of the Representatives.

9. The President shall preside over the Session of the Congress and control the conduct of business.

10. Every Representative shall have the right to bring forward any proposition for discussion before the Congress or to move any amendment to any proposition under discussion, provided in the first case he should have given 12 hours' previous notice in writing to the General Secretaries to enable them to bring it up before the Subjects Committee for discussion and provided in the second case he should have given an hour's previous notice in writing to the President.

11. On each contested proposition the votes of the Representatives shall be counted by the President appointing if necessary Tellers one from each side and either by the Representatives dividing or the President calling out each Representative by name and recording his vote.

12. The Members of the Subjects Committee shall meet once every day and oftener if necessary and frame the Resolutions to be brought up before the Congress on that or the following day and the Secretaries shall place a printed copy of such Resolutions in the hands of each Representative at least two hours before the time fixed for the Meeting of the Congress that day.
13. The Subjects Committee shall select from among the general body of Delegates the speakers on each Resolution. In the case of amendments the Representative moving the amendment shall have the right to select his seconder and after an amendment has been seconded the mover of the original proposition shall have the right of reply or he may select any other person to reply on his behalf.

14. Where possible, the Representatives shall have a conspicuous portion of the Pandal reserved for them to facilitate voting and counting of votes.

APPENDIX FOUR

A Birthday Interview

Sri Aurobindo gave this interview to a newspaper correspondent in the Alipore Magistrate’s Court on 15 August 1908.

An Interview

Ever since the commencement of the trial until Saturday [15 August 1908] Arabindo has preserved a stolid lethargic demeanour. From the first day’s hearing to the thirty-sixth, he has occupied one bench, his eyes immovably fixed on the floor, totally indifferent to the unfolding issues of the case.

The Arabindo of Saturday was, however, quite another being. His personality, hitherto grave and prepossessed, had been metamorphosised into one of sprightliness and sunniness. The cause of all this jollification, as Arabindo explained, was to a certain extent remarkable. “In the first place,” he explained, “today is my birthday; and we are celebrating it as best we can under the circumstances. I was born on the 15th August 1872, and on that anniversary in 1906 the National College opened its doors to teach among other things, the principles of Swadeshism. It was either the day before or the day after my birthday, 1907,” he continued waxing warm with the subject “that I was arrested in connection with the first ‘Bande Mataram’ sedition case. And more remarkable still my birthday is round again today and the Magistrate has given a definite assurance that he will commit on the evidence given in this, a case not of sedition but revolution.

“Besides all this my brother [Barindra]1 is threatened on my birthday to be charged with abetment of murder in the Mozufferpore affair, besides having to stand his trial for conspiracy.

1 MS Birendro
These are what I call a remarkable string of coincidences,” he added with a smile.

“Are we getting tired of this protracted trial you ask? Well, to be candid we are, although we don’t mind it in the least. As a matter of fact it is useless pumping witnesses about my supposed editorship of the ‘Bande Mataram.’ I certainly have edited the ‘Bande Mataram,’ but this I only did on different occasions when Bepin Babu first edited it, and I will state now once and for all I never, never did occupy its editorial chair. I must also deny that I fathered the many brilliant leaders that have appeared in that paper. I certainly did write some of them, but I cannot claim the authorship of the best of them. I wish I could,” he added with a twinkle.

Arabindo’s facetious parting shot to the “frequenter” was: “You can add to those coincidences the fact that I shall be very probably coming back from the Andamans on my birthday next year.”
Note on the Texts

BANDE MATARAM: POLITICAL WRITINGS AND SPEECHES 1890–1908 includes all of Sri Aurobindo’s surviving political writings and speeches from the years before his arrest in May 1908. Political writings and speeches from the period after his imprisonment are published in Kar-
mayogin: Political Writings and Speeches 1909–1910, volume 8 of THE COMPLETE WORKS OF SRI AUROBINDO.

The bulk of the present volumes consists of articles published in the newspaper Bande Mataram in 1906, 1907 and 1908. They also include writings and a resolution from before the Bande Mataram period, speeches delivered during that period, writings from that period not published during the author’s lifetime and, in four appendixes, writings and jottings connected with the Bande Mataram, documents relating to the organisation of the Nationalist Party, and an interview.

HISTORICAL BACKGROUND

Sri Aurobindo became interested in the problem of Indian independence while still a student in England. He once wrote, correcting a statement by a biographer:

At the age of eleven Aurobindo had already received strongly the impression that a period of general upheaval and great revolutionary changes was coming in the world and he himself was destined to play a part in it. His attention was now drawn to India and this feeling was soon canalised into the idea of the liberation of his own country.

At Cambridge University, between 1890 and 1892, Sri Aurobindo gave a number of “revolutionary speeches” before the “Indian Majlis”, a student club. These speeches have unfortunately been lost. The only record of his political thinking at this time are some jottings he wrote in a notebook under the heading “India Renascent” (page 3).
Returning to India in February 1893, Sri Aurobindo took up work in the Princely State of Baroda. Later that same year, he began to contribute articles on the Indian National Congress to the *Indu Prakash* of Bombay. These proved to be too outspoken for the proprietor of this newspaper. Compelled to tone them down, Sri Aurobindo soon lost interest in the project. For the next twelve years he published nothing on Indian politics. During this interval he wrote a few unfinished articles in his notebooks, which were not published until after his passing. In 1905, as the agitation against the partition of Bengal began to pick up steam, he again saw an opening for serious political journalism. Around this time he wrote and had printed two or three pamphlets, one of which, *Bhawani Mandir*, survives. All available political writings from the pre-1906 period are published in Part One of these volumes.

In February 1906, Sri Aurobindo left his job in Baroda and settled in Calcutta. Even before then he had made contact with the advanced nationalists of Bengal, who had begun to split off from the established group, whom they called “Moderates”. The advanced group, who called themselves the New Party or Nationalists, but were called by their opponents “Extremists”, wanted to make the Indian National Congress a dynamic political organisation with an aggressive policy. All the Indian-owned English-language dailies of Calcutta were in the control of men of moderate if not loyalist views. From the end of 1905, the Nationalists discussed the desirability of starting their own English daily; but nothing was done until August 1906, when Bipin Chandra Pal, the most important Nationalist leader of Bengal, launched the *Bande Mataram*. Its first issue appeared on 6 August 1906. That same day, Pal left on a political tour. Before his departure from Calcutta, he asked Sri Aurobindo to contribute articles to the new newspaper. Sri Aurobindo agreed, and from that time until his arrest two years later, he was one of the chief *Bande Mataram* writers.

Pal had started *Bande Mataram* “with only Rs 500 in his pocket”. Not surprisingly, the paper was soon in financial trouble. At Sri Aurobindo’s suggestion, it was reorganised in October 1906 as a joint-stock company. At that time, he and Pal were named co-editors. A few weeks later, Pal was forced to leave by Sri Aurobindo’s supporters, who wanted to put forward a more openly revolutionary programme.
Sri Aurobindo later wrote that he “would not have consented to this departure, for he regarded the qualities of Pal as a great asset to the Bande Mataram”. He was “perhaps the best and most original political thinker in the country, an excellent writer and a magnificent orator: but the separation was effected behind Sri Aurobindo’s back when he was convalescing from a dangerous attack of fever”. In any event, from the moment Sri Aurobindo returned to work, he “controlled the policy of the Bande Mataram along with that of the party in Bengal”. Although never financially stable, the Bande Mataram was a success, and in June 1907, a weekly edition was begun. This consisted almost entirely of matter reprinted from the daily edition. Articles written by Sri Aurobindo while the Bande Mataram was under Pal’s editorship are published in Part Two; articles written while it was under Sri Aurobindo’s editorship and before the weekly edition started are published in Part Three; articles written during the first seven months after the start of the weekly are published in Part Four.

At the end of December 1907, Sri Aurobindo left Calcutta to attend the Surat session of the Indian National Congress. Before and after the session, he delivered a number of speeches in different cities. Many of these survive in one form or another. Transcripts of nine of them are published in Part Five.

Sri Aurobindo returned to Calcutta in February 1908 and resumed the editorship of the Bande Mataram. At the same time he addressed meetings in Calcutta and other parts of Bengal. This writing and speaking continued until 2 May 1908, when he was arrested and put on trial in what became known as the Alipore Bomb Case. His writings and speeches from February to May 1908 are published in Part Six. Sri Aurobindo remained in jail until May 1909, when he was acquitted and released. During his imprisonment the Bande Mataram was suppressed by the British government under the provisions of the Press Act of 1908.

At the time of Sri Aurobindo’s arrest, a number of documents were seized from his house. Among them were several articles on politics that he had written in 1907 and 1908 but never offered for publication. Some of these were used as evidence in the Alipore trial and later found their way into print. These writings are reproduced directly from Sri Aurobindo’s manuscripts in Part Seven.
Only a few manuscripts of Bande Mataram articles survive; these are published in Appendix One. Nine memoranda or notes dealing with the newspaper’s management and promotion are reproduced in Appendix Two, while two documents dealing with Nationalist party politics are reproduced in Appendix Three. Appendix Four consists of an interview given by Sri Aurobindo during the preliminary trial of the Alipore Bomb Case.

THE AUTHORSHIP OF THE ARTICLES

The Bande Mataram was a complete daily newspaper with the usual features: news, editorials, advertisements, etc. Most of its news was taken from other Calcutta papers (see Appendix Two, 5). The originality of the Bande Mataram lay in the articles printed on its editorial page. These were of four main kinds: (1) “leaders” or political editorials of some length; (2) “paras”, shorter pieces dealing with various topics, often citing and discussing leaders printed in other newspapers; (3) columns written in a personal, sometimes humorous style, under headings like “By the Way”; (4) articles on a variety of topics that were signed or marked “communicated”.

None of the articles in categories (1) to (3) were signed. Nationalist writers in British India were subject to prosecution for sedition, a crime carrying a maximum sentence of transportation for life. If the articles were left unsigned, the only person liable to prosecution was the registered printer of the paper. Many such printers (often not the actual printers of the paper) were convicted and sentenced to longer or shorter periods of imprisonment.

At least seven men wrote articles published anonymously in the editorial columns of the Bande Mataram: Bipin Chandra Pal, Sri Aurobindo, Hemendra Prasad Ghose, Shyam Sunder Chakravarti, Bijoy C. Chatterjee, Satish Mukherji and Upendranath Banerji. The following is known about the connection of these men with the paper:

Bipin Chandra Pal. The founder of Bande Mataram, Pal was its editor-in-chief between 6 August and 12 October 1906. (During most of this period he was away from Calcutta, but he often sent in articles.) On 12 October Pal was named joint-editor along with Sri Aurobindo. Between November 1906 and April 1908 he had no connection with
the paper and contributed no articles.

Sri Aurobindo (Aurobindo Ghose). Soon after joining the Bande Mataram in August 1906, Sri Aurobindo became its most important writer. On 12 October he was appointed joint-editor with B. C. Pal, and in November became editor-in-chief. He remained in charge of the policy of the paper until his arrest on 2 May 1908.

Hemendra Prasad Ghose. He joined the staff of the Bande Mataram on 5 September 1906 and became an important writer, working on and off until the paper’s demise in 1908.

Shyam Sunder Chakravarti. After the departure of Pal in November 1906, Shyam Sunder became Bande Mataram’s second most important writer. Hemendra Prasad wrote of him in his diary: “Suffice it to say — he is an engine.” The number of articles that were written by him appears to be substantial. His contribution to the success and influence of the Bande Mataram has not been adequately recognised.

Bijoy C. Chatterjee. There is no evidence of his connection with the paper before January 1908. After that, he became one of its major writers.

Satish Chandra Mukherji. Head of the National Council of Education and editor of the Dawn, Satish Chandra had little time to write for the Bande Mataram. According to Hemendra Prasad, he contributed a few articles, which were invariably accepted.

Upendranath Banerji. A member of Barindra Kumar Ghose’s revolutionary group, Upendranath joined the Bande Mataram around December 1906. He also wrote for the Bengali paper Yugantar. From mid-1907 he was kept busy by revolutionary work.

It is known that Sri Aurobindo was the leading writer for the Bande Mataram from November 1906 to May 1908, except when he was absent from Calcutta. During such periods, he later wrote, “it was Shyam Sundar who wrote most of the Bande Mataram editorials, those excepted which were sent by Sri Aurobindo from Deoghar.” For

1 As a matter of policy the name of the editor-in-chief was not printed after the departure of Bipin Chandra Pal. Once, in November 1906, Sri Aurobindo’s name was printed on the first page as “editor”, but this lapse was not repeated. Sri Aurobindo is referred to as editor-in-chief in Hemendra Prasad Ghose’s contemporary diary and in an article published by Bipin Chandra Pal in 1932.
information on Sri Aurobindo’s presence in or absence from Calcutta, see Table 1 on page 1153.

**Selection of Articles Published in the Present Volumes**

In the present volumes are published all editorial articles from surviving issues of the *Bande Mataram* that the editors believe were written by Sri Aurobindo. Since the articles were not signed, the selection was necessarily a matter of editorial judgment. In making their choice, the editors have based themselves on (1) documentary evidence, (2) internal evidence, (3) the opinions of other authorities.

(1) **Documentary Evidence**

Primary documents consulted consist of (a) eyewitness evidence concerning the presence in or absence from Calcutta of Sri Aurobindo and other *Bande Mataram* writers; (b) statements and other evidence by participants concerning the authorship of the articles in general or of particular pieces.²

Relevant data available in these documents are presented in the text and tables on pages 1153 to 1157.

2 Primary documents consulted include:

Bagchee, Moni. Letter dated 23 November 1971, listing a few articles known by him to be by his father-in-law Shyam Sunder Chakravarti. Sri Aurobindo Ashram Archives.

Banerji, Upendranath. List of articles said by him to be by Sri Aurobindo, compiled in 1939. Sri Aurobindo Ashram Archives.

Sri Aurobindo. Manuscripts of various dates in Sri Aurobindo Ashram Archives.

www.holybooks.com
Chronological Data

Sri Aurobindo joined the *Bande Mataram* a day or two after 6 August 1906, and continued to contribute to it until his arrest on 2 May 1908. Between these two dates he was several times absent from Calcutta and at least twice was incapacitated by illness. (During his absences from Calcutta he occasionally sent in articles for publication.) The following table presents all that is known from contemporary documents about his presence in or absence from Calcutta and periods of illness between August 1906 and May 1908.³

³ Due to want of space, information on the presence in or absence from Calcutta of other *Bande Mataram* writers is not given in this chronology. Some information is given in the list of writers on pages 1150–51.
Only two handwritten drafts of *Bande Mataram* articles written by Sri Aurobindo survive. (These are identified in Table 2 as “SA draft”. They are published in Appendix One.) He made a list of articles he had written in one of his notebooks. Unfortunately only one of these articles survives (“SA NB” in the table). The only other contemporary document providing information on authorship of *Bande Mataram* articles is the diary of Hemendra Prasad Ghose (“HPG diary” in the table). During the 1940s, Sri Aurobindo was shown transcripts of 37 articles published in the weekly *Bande Mataram*. He identified 26 of them as his (“SA list” in the table). Around the same time, while correcting manuscripts of books or articles dealing with his own life and works or while preparing editions of his works, he provided information that establishes his authorship of a few *Bande Mataram* articles (“SA MSS” in the table). In 1939 Upendranath Banerji examined articles in issues of the daily *Bande Mataram* published between March and June 1907. He assigned 21 of them to Sri Aurobindo (“UB list” in the table). In 1949, in a booklet and an article on Sri Aurobindo, Hemendra Prasad Ghose discussed a few articles by Sri Aurobindo (“HPG 1949”).

It should be noted that none of these attempts at ascription was systematic or comprehensive. Only a fraction of the surviving articles was dealt with. None of the participants considered articles published before February 1907 or after January 1908. Each individual dealt with articles in an even narrower range of dates. The earliest article Sri Aurobindo was shown was dated 18 March 1907, the latest, 25 November 1907. He was only shown articles that had been published in the weekly edition. Upendranath Banerji considered only articles published between March and June 1907. Hemendra Prasad Ghose mentioned only about twenty articles in his diary and fewer in his publications. In no case was his purpose in mentioning them to clarify questions of authorship. Several of the articles he mentioned are short and unimportant.

---

4 See list of sources in footnote 1 for bibliographical information. Bipin Chandra Pal and Shyam Sunder Chakarvarti never identified any articles as being written by Sri Aurobindo. However, Pal did publish certain articles as his own, and Shyam Sunder told his son-in-law, the writer Moni Bagchee, that certain *Bande Mataram* articles were his.
It should also be noted that none of the methods of identification was foolproof. Most of the documents date from twenty or more years after the period. The “lists” of Sri Aurobindo and Upendranath Banerji were compiled more than thirty years after the publication of the articles. Neither of them made a careful study of the articles they were shown. It is quite possible that mistakes of ascription occurred. One article definitely written by Hemendra Prasad (he mentioned it in his diary the day it was published) was later included in Sri Aurobindo’s and Upendranath’s lists of articles written by Sri Aurobindo. Another article ascribed to Sri Aurobindo by Upendranath Banerji is clearly not by Sri Aurobindo and has not been published in this book. Several articles on the list of those identified by Sri Aurobindo seem, on the basis of content and style, to be by another writer. They have nevertheless been given the benefit of the doubt and included in the present collection.

5 The article in question is “Bankim Chandra (1893–1894)”, published as Sri Aurobindo’s in the Supplement to the Sri Aurobindo Birth Centenary Library (vol. 27, pp. 351–55). Both Sri Aurobindo and Upendranath apparently assumed that this article was a continuation of Sri Aurobindo’s “Rishi Bankim Chandra”, which had been published the previous week. If they had carefully read Hemendra Prasad’s poorly written, academic article, it would have been obvious to them that it could never have been written by Sri Aurobindo.

6 The article in question is “No Common Ideal”, published as Sri Aurobindo’s in the Supplement to the Sri Aurobindo Birth Centenary Library.

7 A number of articles that seem overall to be by a writer other than Sri Aurobindo have openings that are very much in Sri Aurobindo’s style. It is possible that Sri Aurobindo, as editor-in-chief, rewrote the opening but let the body of the article stand. If later only the opening was read out to him, he might well have identified the article as his.

(2) Internal Evidence

Only fifty-six articles are listed in the above table. Sri Aurobindo unquestionably wrote many more. It is clear from the publications of B. C. Pal, Hemendra Prasad Ghose and Suresh Deb cited in footnote 2 that Sri Aurobindo was the principal writer for *Bande Mataram* between August 1906 and April 1908. During this period some 630 issues of *Bande Mataram* were published. It may be assumed that Sri Aurobindo contributed articles to most issues that came out while he was in Calcutta and in good health.

Since none of *Bande Mataram*’s editorial articles were signed, and only a few can be assigned to an author by means of the available documentary evidence, the question of the authorship of the rest, in particular the question of which of them were written by Sri Aurobindo, can only be decided by reference to the articles themselves. In selecting the articles to be included in this volume, the editors have taken the following factors into consideration:

**Views.** As editor-in-chief, Sri Aurobindo did not impose uniformity of opinion on the various *Bande Mataram* writers; their political views were however generally consistent. All agreed on basic matters of policy such as Swaraj, Swadeshi, Boycott and National Education.
They differed occasionally on subordinate issues such as village uplift, caste, etc. Articles that express opinions at variance with Sri Aurobindo’s known views on such matters are assumed to have been written by others.

**Approach and tone.** Articles by writers other than Sri Aurobindo sometimes contain reasoned arguments concerning the legitimacy of India’s political demands, or appeals to the better feelings of the British public. Sri Aurobindo rarely took this approach. He once wrote, speaking of himself in the third person: “As a politician it was part of Sri Aurobindo’s principles never to appeal to the British people; that he would have considered as part of the mendicant policy.”

**Personal references.** The editorial tone adopted by the *Bande Mataram* writers was generally impersonal. However they occasionally made passing references to persons and events they had seen themselves. References to English university life and the Baroda state sometimes suggest that the article in question was written by Sri Aurobindo.

**Citations.** Articles known to be by Shyam Sundar Chakravarti and Hemendra Prasad Ghose often contain long quotations from or allusions to certain British prose writers (Mill, Macaulay) and poets (Shakespeare, Milton). Sri Aurobindo’s articles contain few quotations but occasional allusions to a wide range of Biblical, classical, European and Indian literary works.

**Clichés.** Writings known to be by Hemendra Prasad Ghose and other members of the *Bande Mataram*’s staff often contain clichés and other outworn expressions. The presence of such expressions is a sign that the article was not written by Sri Aurobindo.

**English grammar and usage.** Articles by writers other than Sri Aurobindo sometimes contain obvious errors in grammar and usage. Articles by Sri Aurobindo contain few or none.

**Style.** Sri Aurobindo’s style can generally be recognized even if its attributes cannot be enumerated. In deciding whether a certain article is in Sri Aurobindo’s style, the editors have relied on their subjective judgment, informed by a close familiarity with Sri Aurobindo’s writings of all periods. They have had to keep in mind, however, a fact noted by Sri Aurobindo — that “Shyam Sundar [Chakravarti] caught up some imitation” of his style, “and many could not distinguish between their
writings”. He also noted, in an essay written some years before the start of the *Bande Mataram*, that it is difficult if not impossible to distinguish a given prose style from a good imitation of it:

In an English literary periodical it was recently observed that a certain Oxford professor who had studied Stevenson like a classic, attempted to apportion to Stevenson & Lloyd Osbourne their respective work in the Wrecker, but his apportionment turned out [to] be hopelessly erroneous. To this the obvious answer is that the Wrecker is a prose work and not poetry. There was no prose style ever written that a skilful hand could not reproduce as accurately as a practised forger reproduces a signature.

The editors have made every effort to distinguish pieces actually written by Sri Aurobindo from those written in an imitation of his style. They acknowledge that such judgments are not infallible.

(3) The Opinions of Other Authorities

Attempts have been made by other scholars to determine the authorship of *Bande Mataram* articles. The editors of the present edition have consulted all available works in which articles are ascribed to Sri Aurobindo or to others. They also benefited from the research and opinions of the editors of *Bande Mataram: Early Political Writings – I* (1972), Jayantilal Parekh and Sanat Kumar Banerji.

Taking into consideration the documentary and internal evidence and the authoritative opinions available to them, the editors of the present volume have made their own list of 353 articles they believe

8 The principal works consulted are:
were written by Sri Aurobindo. These may be placed in three categories: (1) 56 articles for which there is documentary evidence of Sri Aurobindo’s authorship; (2) 102 articles which, given the weight of internal evidence and/or authoritative opinions, may be assigned to Sri Aurobindo with a high degree of confidence; (3) 195 articles, for which there is no such weight of evidence, but which the editors believe should be assigned to Sri Aurobindo rather than to any other Bande Mataram writer. The 56 articles in the first category are listed in Table 2 above. The 102 in the second are listed in Table 3 below. The remaining articles are not listed, but may be determined by process of elimination from the complete list of articles in the Table of Contents (Parts Two, Three, Four and Six).

The articles listed in the following table are those for which there is no documentary proof of Sri Aurobindo’s authorship, but which the editors believe, with a high degree of confidence, to be his work. These 102 articles, together with the 56 listed in Table 2, constitute that portion of the extant articles of Bande Mataram that can confidently be regarded as the work of Sri Aurobindo.

Around 1300 unsigned political writings were published in surviving issues of the daily and weekly editions of the *Bande Mataram* between 20 August 1906 and 3 May 1908. The editors have examined all of them, and assigned 353 to Sri Aurobindo. If 300 articles are subtracted from the total as having been published while Sri Aurobindo was ill or away from Calcutta, the portion assigned to him comes to about one-third. Given that there were generally no more than three full-time editorial writers working for the *Bande Mataram*, the number of articles assigned by the editors to Sri Aurobindo does not appear to be excessive.

The editors concede that they may have missed some articles written by Sri Aurobindo and that some of those they have assigned to him may have been written by others. In one sense, however, all the editorials published in the *Bande Mataram* between mid-October 1906 and May 1908 may be said to have his stamp on them. As the Nationalist leader Jitendra Lal Bannerji wrote in 1909:

> From the very first, the hand of the master was visible in the writings of the “Bande-Mataram”, and that master the world tacitly agreed to accept as Aravinda Ghosh. And yet it will be a mistake to suppose that Aravinda did all or even much of the writing for the new paper. He was assisted in this undertaking by a fine band of co-adjutors, chief among whom must be mentioned Babu Shyam Sundar Chakravarti. . . . In one respect, however, the judgment of the public was sure
and unerring. Whoever the actual contributor to the “Bande-Mataram” might be — the soul, the genius of the paper was Aravinda. The pen might be that of Shyam Sundar or who not — the world did not care about it; but the voice was the voice of Aravinda Ghosh: his the clear clarion notes calling men to heroic and strenuous self-sacrifice; his the unswerving, unaltering faith in the high destinies of his race; his the passionate resolve to devote life, fame, fortune, all to the service of the Mother.9

THE FILE OF THE BANDE MATARAM

There are several breaks in the sequence of articles published here as Sri Aurobindo’s. Some of these breaks are due, as noted above, to periods of illness or absence from Calcutta. Most of the others are due to gaps in the file of the Bande Mataram.

The Bande Mataram was published continuously from August 1906 to October 1908. (Sri Aurobindo was connected with the paper only until his arrest in May 1908.) Only a single file of the daily edition survives.10 Many issues are missing from it. Of the 540 issues of the daily Bande Mataram that appear to have been printed between 6 August 1906 (when Sri Aurobindo joined) and 2 May 1908 (when he was arrested),11 only 371 complete issues survive. This is roughly two-thirds of the issues that were printed during the period of Sri Aurobindo’s connection with the newspaper.12

10 Formerly in the possession of the Prabartak Sangha of Chandernagore, this file was donated to the Sri Aurobindo Ashram Archives in 1978. Microfilm copies are available from the Nehru Memorial Museum and Library, New Delhi.
11 Because the file is incomplete and the numbering of issues was neither complete nor consistent, it is impossible to determine exactly how many issues were printed. To arrive at the figure 540, we have counted every weekday between 6 August 1906 and 2 May 1908, and subtracted dates where there is documentary evidence that no issue was brought out.
12 Two articles printed in these volumes — “The Results of the Congress” (31 December 1906) and “Look on This Picture, Then on That” (6 May 1907) — are not found in the surviving file of the Bande Mataram. They have been reproduced from Sri Aurobindo and the New Thought in Indian Politics (see footnote 8).
The first volume of the weekly edition of the Bande Mataram consisted of fifty-one issues. All of these survive. Forty-eight of them came out during the period of Sri Aurobindo’s connection with the paper. The weekly edition consisted almost entirely of matter reprinted from the daily edition. Certain articles found in the weekly but not in any surviving issue of the daily evidently were printed in issues of the daily that have been lost.

The following month-by-month table will give some idea of places where the file of the daily Bande Mataram is deficient. It will be seen that most of the missing issues are from the first seven months of the newspaper’s existence. Note that one cannot always be certain whether the issue for a given date lacks because no issue was printed or because none was preserved.

NOTES ON SPECIFIC PIECES

Part One. Writings and a Resolution 1890–1906

All the pieces in this part were written before the start of the Bande Mataram in August 1906. Many of them were not completed or published during Sri Aurobindo’s lifetime.

India Renascent. 1890–92. Written in a notebook used by Sri Aurobindo at Cambridge.

New Lamps for Old with India and the British Parliament

The ten articles comprising “India and the British Parliament” and New Lamps for Old were published anonymously in the Indu Prakash, a Marathi–English weekly newspaper of Bombay, in 1893 and 1894. Sri Aurobindo wrote these articles on the invitation of K. G.
Deshpande, the editor of the English section of the journal, whom he had known at Cambridge. “The first two articles”, Sri Aurobindo later noted,

made a sensation and frightened [Mahadev Govind] Ranade and other Congress leaders. Ranade warned the proprietor of the paper that, if this went on, he would surely be prosecuted for sedition. Accordingly the original plan of the series had to be dropped at the proprietor’s instance. Deshpande requested Sri Aurobindo to continue in a modified tone and he reluctantly consented, but felt no farther interest and the articles were published at long intervals and finally dropped of themselves altogether.

“India and the British Parliament”. Published in Indu Prakash on 26 June 1893. Under the heading was printed “Communicated” (i.e., from a special correspondent). In the next issue of the newspaper, 3 July 1893, the editor (presumably K. G. Deshpande) referred to the essay in the following paragraph, also headed “India and the British Parliament”:

Under this heading we had a communication from a very able writer in our last issue. Our readers must have been struck with the tone and conclusions of that article. We shall be very happy to receive any communication from our readers on the subject. Meanwhile we are trying to get a series of articles on the question and the one implied therein as to where we are drifting and in what direction our political work should lie. The last article [i.e. “India and the British Parliament”] will thus be a kind of trumpet note.

New Lamps for Old. The promised series began on 7 August 1893. Below the first instalment was published the following editorial note:

We promised our readers some time back a series of articles on our present Political Progress by an extremely able and keen observer of the present times. We are very much pleased to give our readers the first instalment of that series. The title under which these views appear is “New lamps for old” which is very suggestive though a metaphorical one. The preface will take
us over to the next issue. The views therein contained are not those that are commonly held by our Politicians, and for this reason they are very important. We have been long convinced that our efforts in Political Progress are not sustained, but are lacking in vigour. Hypocrisy has been the besetting sin of our Political agitation. Oblique vision is the fashion. True, matter of fact, honest criticism is very badly needed. Our institutions have no strong foundation and are in hourly danger of falling down. Under these circumstances it was idle — nay, criminal, — to remain silent while our whole energy in Political Progress was spent in a wrong direction. The questions at issue are momentous. It is the making or unmaking of a nation. We have therefore secured a gentleman of great literary talents, of liberal culture and considerable English experience, well versed in the art of writing and willing, at great personal inconvenience and probable misrepresentation, to give out his views in no uncertain voice, and, we may be allowed to add, in a style and diction peculiarly his own. We bespeak our readers’ most careful and constant perusal on his behalf and assure them that they will find in those articles matter that will set them thinking and steel their patriotic souls.

The eight remaining articles of the series appeared on the following dates: 2) 21 August 1893; 3) 28 August 1893; 4) 18 September 1893; 5) 30 October 1893; 6) 13 November 1893; 7) 4 December 1893; 8) 5 February 1894; 9) 6 March 1894.

**At the Turn of the Century.** Editorial title. Circa 1900. This piece evidently was written towards the beginning of the first year of the century. First published, along with the next piece, in *Sri Aurobindo: Archives and Research* in 1983.

**Old Moore for 1901.** Circa 1901. “Old Moore’s Almanack” (known also as *Vox Stellarum*) was an English almanac first brought out by Francis Moore in 1700. Along with the usual information found in almanacs — the time of the rising and setting of the sun and moon, etc. — Old Moore’s provided “predictions of coming events . . . by a notable astrologer of the nineteenth century”. Old Moore’s of 1901 contained a column of predictions for each month of the year. Basing himself on these predictions, Sri Aurobindo wrote, in his own words,
summaries of what he thought would be the year’s most significant developments. First published, along with the preceding piece, in *Sri Aurobindo: Archives and Research* in 1983.

**The Congress Movement.** Editorial title. Circa 1903 (the Ahmedabad Congress, mentioned in passing in the piece, was held in December 1902). First published in *Sri Aurobindo: Archives and Research* in 1983.

**Fragment for a Pamphlet.** Editorial title. Circa 1901 – 5. Sri Aurobindo wrote this fragment in a notebook he first used in Baroda around 1901. It is impossible to determine the exact date of the piece. First published in *Bande Mataram: Early Political Writings – I* in 1972.

**The Proposed Reconstruction of Bengal: Partition or Annihilation.** Circa 1904. This piece was written during an early stage of the agitation against the partition of Bengal, after the original announcement of December 1903 but before the full list of districts to be taken from Bengal and combined with Assam had been announced. First published in *Bande Mataram: Early Political Writings – I* in 1972.

**On the Bengali and the Mahratta: Notes.** Editorial title. 1902 – 6. Written on a sheet of paper that was among those seized by the police when Sri Aurobindo was arrested in May 1908. The sheet was put in as evidence in the Alipore Bomb Trial and subsequently reproduced in a government file containing transcripts of documentary evidence. 13 Published here for the first time in a book of Sri Aurobindo’s writings.

**Bhawani Mandir.** 1905. This famous pamphlet was written by Sri Aurobindo not long before August 1905, when a copy was received by a British official in Broach (a town not far from Baroda) and reported to the government (J. C. Ker, *Political Trouble in India*, 1917, pp. 33–34). It was used as evidence in the Alipore Bomb Trial, and later cited in the Rowlatt Report (1919). Rediscovered after independence among

---

Note on the Texts

the Alipore Bomb Trial papers, it was reproduced in the *Hindusthan Standard* in October 1956 and later in various publications of the Sri Aurobindo Ashram. Of the genesis of the pamphlet, Sri Aurobindo wrote: “Bhawani Mandir was written by Sri Aurobindo but it was more Barin’s idea than his.” Barindra Kumar Ghose, Sri Aurobindo’s younger brother, actually went to central India to choose a site for the Temple to the Mother (Bhawani Mandir). Sri Aurobindo continued, “The idea of Bhawani Mandir simply lapsed of itself. Sri Aurobindo thought no more about it, but Barin who clung to the idea tried to establish something like it on a small scale in the Manicktala Garden.” The present text has been checked against a copy of the original pamphlet.

**Ethics East and West.** Editorial title. Circa 1902–6. There is no positive evidence by which this fragment might be dated. The handwriting is that of the Baroda period. It was seized when Sri Aurobindo’s house was searched in May 1908, put in as evidence in the Alipore Bomb Trial, and reproduced in a government file containing transcripts of documentary evidence and later in *Terrorism in Bengal* (see footnote 13). Published here for the first time in a book of Sri Aurobindo’s writings.

**Resolution at a Swadeshi Meeting.** Sri Aurobindo proposed this resolution at a Swadeshi meeting held in Baroda on 24 September 1905. A report of the meeting, which included Sri Aurobindo’s resolution, was published in Marathi in the *Kesari* of Poona on 3 October 1905. It has been retranslated into English by the editors of the present volume.

**A Sample-Room for Swadeshi Articles.** Editorial title. 1905–6. Sri Aurobindo wrote two drafts of this proposal sometime before he left Baroda in February 1906. The manuscript was seized and put in as evidence in the Alipore Bomb Trial, and subsequently reproduced in a government file containing transcripts of documentary evidence and later in *Terrorism in Bengal* (see footnote 13). The present text has been compiled by collating the fair-copy and rough draft, which have both undergone some damage since 1908, with the sometimes defective text reproduced in *Terrorism in Bengal*.

**On the Barisal Proclamation.** Editorial title. November 1905 or shortly thereafter. On 7 November 1905, Aswini Kumar Dutta and other Nationalist leaders of Barisal issued a proclamation in which they
urged the people of the district to support the Swadeshi movement. A short while later Bampfylde Fuller, the Lieutenant-Governor of Eastern Bengal and Assam, summoned Dutta and the others and demanded that they withdraw the proclamation. A day or two later, they sent a letter to Fuller’s private secretary informing him that as Fuller was of the opinion that the proclamation contained “certain expressions that may tend to lead people to commit breaches of the peace, we withdraw the same”. The district magistrate thereupon issued a notification that the leaders “had withdrawn the appeal because they had understood that the appeal was seditious and provocative of breaches of the peace”. It was apparently after receiving news of this misleading notification (which ultimately caused the district magistrate to be fined for defamation) that Sri Aurobindo wrote this article. Its first pages are not available. They had been torn out of the notebook in which it was written even before it was produced as evidence in the Alipore Bomb Trial.

The articles published in this section all appeared in Bande Mataram on the dates given. They are not dealt with separately here.

Part Three. Bande Mataram under the Editorship of Sri Aurobindo: 24 October 1906 – 27 May 1907

The articles published in this section all appeared in Bande Mataram on the dates given. Most issues published between November 1906 and February 1907 have been lost. Sri Aurobindo certainly wrote many articles during this period. In one of his notebooks he made lists of certain articles, presumably those written by him, classified under subject headings. These lists are reproduced on pages 199–200. (It will be noted that an article in one of the surviving issues, “The Man of the Past and the Man of the Future”, is not among those listed by Sri Aurobindo. The editors nevertheless consider this article to be Sri Aurobindo’s on the basis of internal evidence.)

The Doctrine of Passive Resistance. This seven-part series of articles
was published in the Bande Mataram on the following dates: 1) 11 April 1907; 2) 12 April 1907; 3) 13 April 1907; 4) 17 April 1907; 5) 18 and 19 April 1907; 6) 20 April 1907; 7) 23 April 1907. All but the last were published under the dual heading: “THE NEW THOUGHT: THE DOCTRINE OF PASSIVE RESISTANCE”. The editors have published the series in a single sequence since it comprises a single work with a single connected argument. It is probable that the series was completed before the first instalment was published. In all likelihood it was written in Deoghar, where Sri Aurobindo stayed from the beginning of January until the beginning of April 1907.

It is certain that the series was written by Sri Aurobindo. It was identified as his by Hemendra Prasad Ghose and Upendranath Banerji, as well as by Sri Aurobindo himself. When it was brought to his attention that a writer had ascribed the series to Bipin Chandra Pal, Sri Aurobindo wrote:

I was the writer of the series of articles on “Passive Resistance” published in April 1907 to which reference has been made. . . .
I planned several series of this kind for the Bande Mataram and at least three were published of which “Passive Resistance” was one.

Another of these series apparently was “Shall India Be Free?”, which also appeared under the heading “THE NEW THOUGHT”. Four articles of this series were published between 27 April and 2 May 1907. The third series was apparently the one referred to in the first sentence of the first instalment of The Doctrine of Passive Resistance: “In a series of articles, published in this paper soon after the Calcutta session of the Congress [December 1906], we sought to indicate our view both of the ideal which the Congress had adopted . . . and of the possible lines of policy by which that ideal might be attained.” Unfortunately, this series has not survived, since almost all of the issues of the Bande Mataram from the two months following the Calcutta Congress have been lost.

Reflections of Srinath Paul, Rai Bahadoor, on the Present Discontents.
Published in the Bande Mataram on 5 April 1907. A number of satirical poems were printed on the editorial pages of the Bande Mataram. According to Sri Aurobindo, these “were the work of Shyam Sundar
Chakravarti”. There is, however, one exception. In his coverage of the Berhampore Conference (30 March–1 April 1907), Hemendra Prasad Ghose devoted a paragraph to the speech of the chairman of the Reception Committee, a Moderate named Srinath Paul. Hemendra Prasad wrote that Paul’s loyalist utterances “provoked the audience to drown his words in hisses”, and that he finished his address “perspiring and short of breath” (Bande Mataram, 2 April 1907). After reading Hemendra Prasad’s report, Sri Aurobindo, who was then in Deoghar, wrote this take-off on Paul’s address. Thirty-five years later he remembered the piece while the book Collected Poems and Plays was being compiled. He wrote then to his secretary that he had published in the weekly Bande Mataram not only the play Perseus the Deliverer and the translation Vidula, but also “a political satire in verse purporting to be the report of the Reception Committee Chairman at a Moderate Conference”. The piece could not be located at that time because it had been published not in the weekly but in the daily edition, which was not then available. It is being reproduced here for the first time since 1907. It should be noted that Sri Aurobindo mentioned this verse satire and no other. There is no reason to believe that the long satirical verse-play The Slaying of Congress was written by him.

Rishi Bankim Chandra. Published in the Bande Mataram on 16 April 1907. In 1923 it was reprinted as a pamphlet entitled Rishi Bunkim Chandra by the Prabartak Publishing House, Chandernagore. In 1940 a slightly revised version was included in the booklet Bankim–Tilak–Dayananda, published by the Arya Publishing House, Calcutta. In the present volume, the text is reprinted as it appeared in the Bande Mataram.

Part Four. Bande Mataram under the Editorship of Sri Aurobindo: 28 May–22 December 1907

The first issue of the weekly edition of the Bande Mataram appeared on Sunday, 2 June 1907. The weekly edition consisted almost entirely of articles and other features that had been published in the daily edition

14 Hemendra Prasad told the story of the origin of this piece in “Reminiscences of Aurobindo Ghose” (see footnote 2).
during the preceding week. It was intended for people in Calcutta who did not buy the daily, and for circulation in the outlying districts of Bengal and in other provinces. Some articles published in issues of the daily that have been lost are preserved only in the weekly edition.

The articles published in this part are not dealt with separately here. They all appeared in the *Bande Mataram* daily edition (and sometimes also in the weekly edition) on the date indicated. (If an article was first published in a now-missing issue of the daily edition, its exact date can be determined if only one issue of the week is missing. Otherwise, there are two or more possible dates.) The following is known about the one speech included in this part:

**Advice to National College Students.** This speech was delivered at the Bengal National College, Calcutta, on 23 August 1907. On 2 August, learning that he was about to be arrested for sedition, and wishing to spare the Bengal National College any embarrassment, Sri Aurobindo resigned the post of principal of that institution. Then, according to the *Dawn and Dawn Society’s Magazine* (September 1907):

On the 22nd August last the students and teachers of the Bengal National College in meeting assembled expressed their heartfelt appreciation of the eminent qualities as a teacher, of Srijut Aurobindo Ghose, their late beloved Principal, and recorded their deep regret at his resignation on the 2nd of August, 1907, of the high office which he had filled with such conspicuous ability and so much personal sacrifice during the first year of the existence of the college. They also expressed heartfelt sympathy with him in his present troubles in connection with his prosecution on the alleged charge of publishing certain seditious articles in the *Bande Mataram*. It was further resolved that a photograph of the late principal be taken to be hung up in the college hall. Accordingly the next day Srijukta Aurobindo Ghose was invited to come over to the college premises to be photographed. [The report here describes his reception by the students.] The teachers then requested him on behalf of the boys to speak to them a few words of advice. In response to the desire of the boys to hear from him he delivered in a voice choked with emotion a soul-stirring address of which we proceed to give the substance: —

---

www.holybooks.com
The text of the speech was reproduced in Two Lectures of Sriyut Aravinda Ghose, B.A. (Cantab.) (Bombay, 1908), and was reprinted in Speeches of Aurobindo Ghose from the first edition (1922).

Part Five. Speeches: 22 December 1907 – 1 February 1908

During a trip to and from western India in the winter of 1907–8, Sri Aurobindo delivered at least fourteen speeches. Three of them were preserved in the form of transcripts published shortly afterwards in different newspapers, three others in the form of police reports in English, and five in the form of transcripts made first in Marathi by friends or police agents and subsequently retranslated into English. No transcripts of the other three speeches are known to exist.

Reports of nine of the fourteen speeches are reproduced in this part. Only two of them — those published in the Bande Mataram — may be considered reasonably adequate representations of his words. The other transcripts were recorded in language that is awkward or defective in one way or another. These have been edited to a greater or lesser extent to make them more clear and readable.

Our Experiences in Bengal. Speech delivered in Poona on 13 January 1908 at Gaikwad Wada, the residence of Bal Gangadhar Tilak, at whose invitation Sri Aurobindo had come to the Maharashtrian city. The text reproduced here was first printed on 19 January in the Mahratta (Poona), an English newspaper with which Tilak was connected. Another transcript, longer but employing more defective English, was published in the Daily Telegraph and Deccan Herald on 15 January. The Deccan Herald version was included in the Supplement to the Sri Aurobindo Birth Centenary Library in 1972 and subsequently in Sri Aurobindo's Speeches. The Mahratta version is reproduced here for the first time in a book.

National Education. Speech delivered on 15 January 1908 in Girgaum, Bombay. A translation in Marathi was published in the Kesari on 21 January. This was retranslated into English by a police agent and published in the Bombay Native Paper Report (a police intelligence report) in 1908. This English text was included in the Supplement to
the Sri Aurobindo Birth Centenary Library in 1973, and subsequently in Sri Aurobindo’s *Speeches*. The present text has been retranslated by the editors from a Marathi report.

**The Present Situation.** Speech delivered at Mahajan Wadi, Bombay, on 19 January 1908. A transcript was published in the *Mahratta* on 2 February 1908. That text was revised by Sri Aurobindo and reprinted in the weekly *Bande Mataram* on 23 February. Subsequently it appeared in *Two Lectures of Sriyut Aravinda Ghose, B.A. (Cantab.)* (1908) and elsewhere. It has formed part of Sri Aurobindo’s *Speeches* from the first edition (1922).

**The Meaning of Swaraj.** Speech delivered in Nashik on 24 January 1908. A translation in Marathi was published the next day in the Nashik *Vritta*. This text was retranslated into English by a police agent and published in the Bombay Presidency Police *Abstract of Intelligence*, vol. 21, no. 6, of 1908. That English text was reproduced in *Sri Aurobindo: Archives and Research* in 1977, and subsequently in Sri Aurobindo’s *Speeches*.

**Swadeshi and Boycott.** Speech delivered in Dhulia on 26 January 1908. Notes were taken on the spot by a police agent, who later had a fair copy typed. This transcript is extensive but deficient in terms of English usage and grammar. (The most obvious defects have been corrected in the present text.) The notes and typed transcript were put in as evidence in the Alipore Bomb Trial. Reproduced here for the first time.

**Bande Mataram.** Speech delivered in Amravati, Maharashtra, on 29 January 1908. A third-person text was published as a news item in the daily *Bande Mataram* on 5 February 1908. It has formed part of Sri Aurobindo’s *Speeches* from the first edition (1922).

**The Aims of the Nationalist Party.** Speech delivered at the Venkatesh Theatre, Nagpur, on 30 January 1908. Marathi translations of this and the two speeches that follow were published in Nagpur soon after the event. Those texts were subsequently retranslated into defective English and printed in Government of India Political Home (Special) File 195-A, and reproduced in National Archives of India History of the Freedom Movement Papers, Region IV & V, file 94. From there they were reproduced in *Sri Aurobindo: Archives and Research* in 1980, and subsequently in Sri Aurobindo’s *Speeches*.

**Our Work in the Future.** Speech delivered at the Venkatesh Theatre,
Nagpur, on 31 January 1908. See the note to “The Aims of the Nationalist Party”.

Commercial and Educational Swarajya. Speech delivered at the Itwari Bazar, Nagpur, on 1 February 1908. See the note to “The Aims of the Nationalist Party”.

Part Six. Bande Mataram under the Editorship of Sri Aurobindo: 6 February – 2 May 1908, with Speeches Delivered during the Same Period

The articles published in this section all appeared in Bande Mataram on the dates indicated. They are not dealt with separately here.

Speeches in Part Six

Speeches at Pabna. “Resolution at Bengal Provincial Conference” was moved at the Pabna session of the Provincial Conference on 12 February 1908. A report was published in the Dawn and Dawn Society's Magazine in April 1908. This was included (with an incorrect date) in the 1993 edition of Sri Aurobindo's Speeches. “Speech at the National Education Conference” was delivered at a public meeting in Pabna on 13 February 1908. A report was published in the Bande Mataram daily on 17 February 1908, and reproduced (in a slightly shortened form) in the Dawn and Dawn Society's Magazine in April. That text was reproduced in Sri Aurobindo's Speeches in 1993. In the present volume, the Bande Mataram text is reproduced.

Speech at Panti's Math. Delivered at Panti's Math, an open space in north Calcutta, on 3 April 1908. This brief transcript was noted down by a police agent and put in as evidence in the Alipore Bomb Trial. The last sentence was considered one of the most damaging things Sri Aurobindo said in his recorded speeches.

United Congress. Speech delivered at Panti's Math, Calcutta, on 10 April 1908. A third-person report was published as a news item in the weekly Bande Mataram on 12 April. Reproduced in Sri Aurobindo's Speeches from the first edition (1922).

Baruipur Speech. Delivered in Baruipur, Bengal, on 12 April 1908. A third-person transcript was published as a news item in the daily
Note on the Texts

Bande Mataram on 17 April. Reproduced in Sri Aurobindo’s Speeches from the first edition (1922).

Palli Samiti. Speech delivered at a conference in Kishoregunj, Eastern Bengal and Assam, on 20 April 1908. A transcript was published in the weekly Bande Mataram on 26 April. Reproduced in Sri Aurobindo’s Speeches from the first edition (1922).

Part Seven. Writings from Manuscripts 1907 – 1908

All the pieces in this part were written while the Bande Mataram was being published but did not appear in it. All were seized by the police when Sri Aurobindo was arrested on 2 May 1908, and put in as evidence against him by the prosecution. Court transcriptions of two of the pieces were reproduced in a journal in 1909. After Sri Aurobindo’s passing, the original manuscripts of all five of the pieces were recovered. The texts in the present volume have been transcribed from these manuscripts.

The Bourgeois and the Samurai. Editorial title. 1906 – 7. This article was intended not for the Bande Mataram, but for a certain “Review”, presumably The Modern Review or another monthly journal. The notebook containing the manuscript was seized in May 1908 and never seen by Sri Aurobindo again. Four years after his passing, it and several other notebooks were rediscovered and restored to the Sri Aurobindo Ashram. The text was transcribed and published in Sri Aurobindo: Archives and Research in 1978. It is complete in that it has a beginning, a middle and an end, but it was never prepared by the author for publication. As a result certain passages were not fully worked into the text. These passages have been inserted by the editors either in the text itself (if the point of insertion was sufficiently clear) or in footnotes.

The New Nationalism. Editorial title. Late 1907 or early 1908. The present text follows the manuscript exactly. Sri Aurobindo first wrote, on separate pages, two incomplete paragraphs, each with a heading meant to be the title of the piece. Then, on a third page, he began again, this time without any heading. As neither of the existing headings was selected as the final title, the editors have placed a general editorial title above them both. The “former article, in this Review” referred
to in the first complete paragraph is undoubtedly “The Bourgeois and the Samurai”. The text of “The New Nationalism” was put in as evidence by the prosecution in the Alipore Bomb Trial. In the beginning of 1909 this piece and “The Morality of Boycott” (see below) were reproduced from the court transcripts by Swaraj, a fortnightly review published from London by Bipin Chandra Pal. The London text was later reproduced in the Hindusthan Standard and elsewhere.

**The Mother and the Nation.** Editorial title. 1907 or 1908. Put in as evidence by the prosecution in the Alipore Bomb Trial. Published here for the first time.

**The Morality of Boycott.** 1908. This essay was found in Sri Aurobindo’s room at the time of his arrest on 2 May 1908. This circumstance suggests that it was meant to be published in the next or a forthcoming issue of Bande Mataram. It was transcribed and put in as evidence in the Alipore Bomb Trial, and reproduced from the court transcript in London in 1909 (see the note to “The New Nationalism”), and later in Selections from the Bande Mataram (see under Publication History below), in the Hindusthan Standard, and a number of other places. “A Fragment” (see the next note) has always been published as part of “The Morality of Boycott”, but it seems to be the incomplete opening of a separate piece.

**A Fragment.** 1908. This piece was found along with “The Morality of Boycott” at the time of Sri Aurobindo’s arrest in May 1908. It was apparently written at the same time but left unfinished.

**Appendixes**

The pieces in the first three appendixes were written during the period of publication of the Bande Mataram. Appendix Four comprises an interview given by Sri Aurobindo while he was under trial in the Alipore Bomb Case.

**Appendix One. Incomplete Drafts of Three Articles**

Among the papers seized from Sri Aurobindo’s house at the time of his arrest on 2 May 1908 are two sheets containing partial drafts of two Bande Mataram articles: “Nagpur and Loyalist Methods” (16
November 1907) and “By the Way. In Praise of Honest John” (18 November 1907). These are the only handwritten drafts of matter for the *Bande Mataram* that still exist. Also on 2 May 1908 a separate sheet was seized that contained a partial draft of another article on John Morley that was never published. The contents of these sheets are reproduced here for the first time.

Appendix Two. Writings and Jottings
Connected with the *Bande Mataram* 1906–1908

These writings all deal with the organisation, finance, printing and promotion of the *Bande Mataram*. Written by Sri Aurobindo between 1906 and 1908, they show that he took an active interest in every aspect of the newspaper’s production.

*“Bande Mataram” Printers & Publishers, Limited.* This prospectus was first published in the *Bande Mataram* on 1 October 1906, or perhaps earlier (many issues from this period are missing), and reproduced thereafter in several issues of the journal. The joint-stock company it describes was Sri Aurobindo’s idea, and it is probable that he was the author of all or most of this text. It was signed by him and ten other prominent Nationalists. On 14 October, the *Bande Mataram* company was registered with the government. After that date the text of the prospectus was altered to reflect this fact.

*Draft of a Prospectus of 1907.* This text was written by Sri Aurobindo in his own hand on a loose sheet of paper. It is an incomplete draft of a prospectus for the Bande Mataram Publishers and Printers Company, offering shares to the public for their financial as well as their patriotic value. The text must have been written late in 1907, “a full year” after the Bande Mataram began to appear under the aegis of the company.

*Notes and Memos.* These seven pieces were written by Sri Aurobindo in notebooks or on loose sheets of paper between 1906 and 1908. They were among the papers seized by the police at the time of his arrest in May 1908, and were put in as evidence against him in the Alipore Bomb Trial.

[1] A draft memorandum on the budget and management of *Bande Mataram*, setting forth the powers of the Managing Director (Sri Aurobindo) and the subordinate officers and staff members. Date uncertain.
Appendix Three: Nationalist Party Documents

In 1907 and 1908, Sri Aurobindo was one of the leaders of the “Nationalist Party”, one of two factions within the Indian National Congress. (The Nationalists were called “Extremists” by the members of the rival faction, whom the Extremists referred to as Moderates. As foreseen by Sri Aurobindo in “The New Nationalism” [p. 1109], these “nicknames of party warfare have . . . passed into the accepted terminology used by serious politicians and perpetuated by history”, and it is by the nicknames that the parties are known today.) The two documents reproduced in this appendix were written by Sri Aurobindo as part of his effort to reform the existing Congress organisation or else to found a separate Nationalist Congress. They were among the papers seized by the police when his room was searched at the time of his arrest in May 1908. They are published here for the first time.

Letters and telegrams written by Sri Aurobindo as leader of the Nationalist Party of Bengal are published in On Himself.
[1] Suggested Rules of Business for the Congress. 1907–8. This typewritten document contains one or two small corrections in ink that seem to be in Sri Aurobindo’s handwriting. This, and the fact that it was found in Sri Aurobindo’s room, makes it likely that it was his work. He was among those who believed that the Congress ought to have a written constitution and rules of procedure. The present document is an attempt, from the Nationalist side, to formulate such a set of rules.

[2] Proposed Organisation of Separate Nationalist Party. The Nationalist and Moderate factions of the Indian National Congress split apart at the Surat Congress (December 1907). Around the time of the split, Sri Aurobindo was making plans to form a separate Nationalist Party, which would have its own branches and meet separately from the Moderate-dominated Congress. This document is an incomplete sketch of the organisation that such a separate Nationalist Party might have.

Appendix Four. An Interview

Sri Aurobindo gave this informal interview to a correspondent of the Empire, a Calcutta daily, on 15 August 1908, his thirty-sixth birthday. At that time he and a number of others were being tried in the Alipore Magistrate’s Court in what became known as the Alipore Bomb Trial.

Publication History

All the Bande Mataram articles reproduced in this volume first appeared in the newspaper on the dates indicated. After its demise, two collections of Bande Mataram articles, some of which were written by Sri Aurobindo, were published. The Vande Mataram Press, Poona, issued three volumes entitled The Bande Mataram in 1909 (this collection was quickly proscribed by the British government). The Swaraj Publishing House, Benares, published Selections from the Bande Mataram in 1922.

In 1957, 1958 and 1964 a number of Bande Mataram articles ascribed to Sri Aurobindo were published by Professors Haridas and Uma Mukherjee in three volumes: “Bande Mataram” and Indian Nationalism, Sri Aurobindo’s Political Thought, and Sri Aurobindo and the New Thought in Indian Politics (see footnote 8 for bibliographical
The selection of the articles was the work of the Mukherjees, assisted in the first two volumes by Hemendra Prasad Ghose.

The seven articles making up *The Doctrine of Passive Resistance* were published as a booklet by the Sri Aurobindo Ashram in 1948 and subsequently. In 1965 the same publisher brought out a selection of thirty-four articles thought to be by Sri Aurobindo in another booklet entitled *On Nationalism*. A new selection of fifty-six articles was brought out in 1996 as Part Three of the second edition of *On Nationalism*.

Two of Sri Aurobindo’s speeches were printed in Bombay in 1908 as *Two Lectures of Sriyut Aravinda Ghose, B. A. (Cantab.)*. These and other speeches were subsequently reproduced in various collections in English and in Marathi and Gujarati translation. In 1922 six speeches from the *Bande Mataram* period, along with six from the *Karmayogin* period (1909–10) and “An Open Letter to My Countrymen” (1909), were published by the Prabartak Publishing House, Chandernagore, as *Speeches of Aurobindo Ghose*. This book was reproduced by the Arya Publishing House, Calcutta, in 1948 under the shortened title *Speeches*, and by the Sri Aurobindo Ashram, Pondicherry, in 1952. In the fourth edition, brought out by the same publisher in 1969, another open letter, “To My Countrymen”, was included. More additions were made to the fifth (1974) and sixth (1993) editions.

In 1972 an attempt was made to publish all *Bande Mataram* articles written by Sri Aurobindo, all speeches delivered by him during the *Bande Mataram* period, and all available political writings from his manuscripts under the title *Bande Mataram: Early Political Writings – I*. This book was reprinted in 1973 and 1995.

The present volume corresponds largely to *Bande Mataram: Early Political Writings – I*. The selection of the articles has been completely redone, but it does not differ greatly from the selection made for the 1972 volume. All available manuscript writings and speeches have been included, several of them appearing here for the first time in a book.

Karmayogin

Political Writings and Speeches

1909 – 1910
Sri Aurobindo in the Alipur Jail, 1909

www.holybooks.com
Publisher’s Note

Sri Aurobindo launched the *Karmayogin*, “A Weekly Review of National Religion, Literature, Science, Philosophy, &c.,” on 19 June 1909, six weeks after his release from jail on conclusion of the Alipore Bomb Trial. Between then and February 1910, when he left Calcutta, he edited this journal, writing most of its contents himself. In addition to articles on political and related matters, the *Karmayogin* contained essays on philosophy, yoga, education, art and literature, as well as translations and poetry. The political articles are published in this volume, the other items are listed at the end of the *Karmayogin* issue they appeared in. A table at the end of the volume shows where these other items are published in THE COMPLETE WORKS OF SRI AUROBINDO.

Sri Aurobindo delivered a number of speeches between May and October 1909. Texts of some of them were published in the *Karmayogin* and other journals. Others were preserved only in notes jotted down by police agents. The speeches are published in this volume according to date of delivery and not of publication.

Some of the articles included in this volume were published in booklets brought out between 1918 and 1923 and later reprinted. When a revised edition of one of these booklets was published in 1937, a disciple of Sri Aurobindo’s wrote a review of it that he sent to Sri Aurobindo for approval. Sri Aurobindo’s response gives some idea of his attitude at that time towards his earlier writings:

Yes, I have seen it [the disciple’s review], but I don’t think it can be published in its present form as it prolongs the political Aurobindo of that time into the Sri Aurobindo of the present time. You even assert that I have “thoroughly” revised the book and these articles...
are an index of my latest views on the burning problems of the day and there has been no change in my views in 27 years (which would surely be proof [of] a rather unprogressive mind). How do you get all that? My spiritual consciousness and knowledge at that time was as nothing to what it is now — how would the change leave my view of politics and life unmodified altogether? There has been no such thorough revision; I have left the book as it was, because it would be useless to modify what was written so long ago — the same as with Yoga and its objects [The Yoga and Its Objects]. Anyway the review would almost amount to a proclamation of my present political views — while on the contrary I have been careful to pronounce nothing — no views whatever on political questions for the last I don’t know how many years.

The bulk of the contents of the present volume was first published in book-form in 1972 as Karmayogin: Early Political Writings — II, volume 2 of the Sri Aurobindo Birth Centenary Library. The text of the present edition, the first with the title Karmayogin: Political Writings and Speeches 1909–1910, has been checked against the Karmayogin journal and the sources of the speeches and revised articles.

A WEEKLY REVIEW

OF

National Religion, Literature, Science, Philosophy, &c.,

Contributors:—S. J. Avrokendi Ghoke and others

Office.—14 Sham Bazar Street,
CALCUTTA.

www.holybooks.com
WHEN I was asked to speak to you at the annual meeting of your sabha, it was my intention to say a few words about the subject chosen for today,—the subject of the Hindu religion. I do not know now whether I shall fulfil that intention; for as I sat here, there came into my mind a word that I have to speak to you, a word that I have to speak to the whole of the Indian Nation. It was spoken first to myself in jail and I have come out of jail to speak it to my people.

It was more than a year ago that I came here last. When I came I was not alone; one of the mightiest prophets of Nationalism sat by my side. It was he who then came out of the seclusion to which God had sent him, so that in the silence and solitude of his cell he might hear the word that He had to say. It was he that you came in your hundreds to welcome. Now he is far away, separated from us by thousands of miles. Others whom I was accustomed to find working beside me are absent. The storm that swept over the country has scattered them far and wide. It is I this time who have spent one year in seclusion, and now that I come out I find all changed. One who always sat by my side and was associated in my work is a prisoner in Burma; another is in the north rotting in detention. I looked round when I came out, I looked round for those to whom I had been accustomed to look for counsel and inspiration. I did not find them. There was more than that. When I went to jail, the whole country was alive with the cry of Bande Mataram, alive with the hope of a nation, the hope of millions of men who had newly risen out of degradation. When I came out of jail I listened for that

Delivered at Uttarpara, Bengal, on 30 May 1909. Text published in the Bengalee, an English-language newspaper of Calcutta, on 1 June; thoroughly revised by Sri Aurobindo and republished in the Karmayogin on 19 and 26 June.
cry, but there was instead a silence. A hush had fallen on the country and men seemed bewildered; for instead of God's bright heaven full of the vision of the future that had been before us, there seemed to be overhead a leaden sky from which human thunders and lightnings rained. No man seemed to know which way to move, and from all sides came the question, “What shall we do next? What is there that we can do?” I too did not know which way to move, I too did not know what was next to be done. But one thing I knew, that as it was the Almighty Power of God which had raised that cry, that hope, so it was the same power which had sent down that silence. He who was in the shouting and the movement was also in the pause and the hush. He has sent it upon us, so that the nation might draw back for a moment and look into itself and know His will. I have not been disheartened by that silence, because I had been made familiar with silence in my prison and because I knew it was in the pause and the hush that I had myself learned this lesson through the long year of my detention. When Bipin Chandra Pal came out of jail, he came with a message, and it was an inspired message. I remember the speech he made here. It was a speech not so much political as religious in its bearing and intention. He spoke of his realisation in jail, of God within us all, of the Lord within the nation, and in his subsequent speeches also he spoke of a greater than ordinary force in the movement and a greater than ordinary purpose before it. Now I also meet you again, I also come out of jail, and again it is you of Uttarpara who are the first to welcome me, not at a political meeting but at a meeting of a society for the protection of our religion. That message which Bipin Chandra Pal received in Buxar jail, God gave to me in Alipore. That knowledge He gave to me day after day during my twelve months of imprisonment and it is that which He has commanded me to speak to you now that I have come out.

I knew I would come out. The year of detention was meant only for a year of seclusion and of training. How could anyone hold me in jail longer than was necessary for God’s purpose? He had given me a word to speak and a work to do, and until that word was spoken I knew that no human power could hush me,
until that work was done no human power could stop God's instrument, however weak that instrument might be or however small. Now that I have come out, even in these few minutes, a word has been suggested to me which I had no wish to speak. The thing I had in my mind He has thrown from it and what I speak is under an impulse and a compulsion.

When I was arrested and hurried to the Lal Bazar hajat I was shaken in faith for a while, for I could not look into the heart of His intention. Therefore I faltered for a moment and cried out in my heart to Him, “What is this that has happened to me? I believed that I had a mission to work for the people of my country and until that work was done, I should have Thy protection. Why then am I here and on such a charge?” A day passed and a second day and a third, when a voice came to me from within, “Wait and see.” Then I grew calm and waited. I was taken from Lal Bazar to Alipore and was placed for one month in a solitary cell apart from men. There I waited day and night for the voice of God within me, to know what He had to say to me, to learn what I had to do. In this seclusion the earliest realisation, the first lesson came to me. I remembered then that a month or more before my arrest, a call had come to me to put aside all activity, to go into seclusion and to look into myself, so that I might enter into closer communion with Him. I was weak and could not accept the call. My work was very dear to me and in the pride of my heart I thought that unless I was there, it would suffer or even fail and cease; therefore I would not leave it. It seemed to me that He spoke to me again and said, “The bonds you had not strength to break, I have broken for you, because it is not my will nor was it ever my intention that that should continue. I have another thing for you to do and it is for that I have brought you here, to teach you what you could not learn for yourself and to train you for my work.” Then He placed the Gita in my hands. His strength entered into me and I was able to do the sadhan of the Gita. I was not only to understand intellectually but to realise what Srikrishna demanded of Arjuna and what He demands of those who aspire to do His work, to be free from repulsion and desire, to do work for Him without

www.holybooks.com
the demand for fruit, to renounce self-will and become a passive and faithful instrument in His hands, to have an equal heart for high and low, friend and opponent, success and failure, yet not to do His work negligently. I realised what the Hindu religion meant. We speak often of the Hindu religion, of the Sanatana Dharma, but few of us really know what that religion is. Other religions are preponderatingly religions of faith and profession, but the Sanatana Dharma is life itself; it is a thing that has not so much to be believed as lived. This is the dharma that for the salvation of humanity was cherished in the seclusion of this peninsula from of old. It is to give this religion that India is rising. She does not rise as other countries do, for self or when she is strong, to trample on the weak. She is rising to shed the eternal light entrusted to her over the world. India has always existed for humanity and not for herself and it is for humanity and not for herself that she must be great.

Therefore this was the next thing He pointed out to me, — He made me realise the central truth of the Hindu religion. He turned the hearts of my jailers to me and they spoke to the Englishman in charge of the jail, “He is suffering in his confinement; let him at least walk outside his cell for half an hour in the morning and in the evening.” So it was arranged, and it was while I was walking that His strength again entered into me. I looked at the jail that secluded me from men and it was no longer by its high walls that I was imprisoned; no, it was Vasudeva who surrounded me. I walked under the branches of the tree in front of my cell, but it was not the tree, I knew it was Vasudeva, it was Srikrishna whom I saw standing there and holding over me His shade. I looked at the bars of my cell, the very grating that did duty for a door and again I saw Vasudeva. It was Narayana who was guarding and standing sentry over me. Or I lay on the coarse blankets that were given me for a couch and felt the arms of Srikrishna around me, the arms of my Friend and Lover. This was the first use of the deeper vision He gave me. I looked at the prisoners in the jail, the thieves, the murderers, the swindlers, and as I looked at them I saw Vasudeva, it was Narayana whom I found in these darkened souls and misused bodies. Amongst
these thieves and dacoits there were many who put me to shame by their sympathy, their kindness, the humanity triumphant over such adverse circumstances. One I saw among them especially who seemed to me a saint, a peasant of my nation who did not know how to read and write, an alleged dacoit sentenced to ten years’ rigorous imprisonment, one of those whom we look down upon in our Pharisaical pride of class as chhotalok. Once more He spoke to me and said, “Behold the people among whom I have sent you to do a little of my work. This is the nature of the nation I am raising up and the reason why I raise them.”

When the case opened in the lower court and we were brought before the Magistrate I was followed by the same insight. He said to me, “When you were cast into jail, did not your heart fail and did you not cry out to me, where is Thy protection? Look now at the Magistrate, look now at the Prosecuting Counsel.” I looked and it was not the Magistrate whom I saw, it was Vasudeva, it was Narayana who was sitting there on the bench. I looked at the Prosecuting Counsel and it was not the Counsel for the prosecution that I saw; it was Srikrishna who sat there, it was my Lover and Friend who sat there and smiled. “Now do you fear?” He said, “I am in all men and I overrule their actions and their words. My protection is still with you and you shall not fear. This case which is brought against you, leave it in my hands. It is not for you. It was not for the trial that I brought you here but for something else. The case itself is only a means for my work and nothing more.” Afterwards when the trial opened in the Sessions Court, I began to write many instructions for my Counsel as to what was false in the evidence against me and on what points the witnesses might be cross-examined. Then something happened which I had not expected. The arrangements which had been made for my defence were suddenly changed and another Counsel stood there to defend me. He came unexpectedly,—a friend of mine, but I did not know he was coming. You have all heard the name of the man who put away from him all other thoughts and abandoned all his practice, who sat up half the night day after day for months
and broke his health to save me,—Srijut Chittaranjan Das. When I saw him, I was satisfied, but I still thought it necessary to write instructions. Then all that was put from me and I had the message from within, “This is the man who will save you from the snares put around your feet. Put aside those papers. It is not you who will instruct him. I will instruct him.” From that time I did not of myself speak a word to my Counsel about the case or give a single instruction and if ever I was asked a question, I always found that my answer did not help the case. I had left it to him and he took it entirely into his hands, with what result you know. I knew all along what He meant for me, for I heard it again and again, always I listened to the voice within: “I am guiding, therefore fear not. Turn to your own work for which I have brought you to jail and when you come out, remember never to fear, never to hesitate. Remember that it is I who am doing this, not you nor any other. Therefore whatever clouds may come, whatever dangers and sufferings, whatever difficulties, whatever impossibilities, there is nothing impossible, nothing difficult. I am in the nation and its uprising and I am Vasudeva, I am Narayana, and what I will, shall be, not what others will. What I choose to bring about, no human power can stay.”

Meanwhile He had brought me out of solitude and placed me among those who had been accused along with me. You have spoken much today of my self-sacrifice and devotion to my country. I have heard that kind of speech ever since I came out of jail, but I hear it with embarrassment, with something of pain. For I know my weakness, I am a prey to my own faults and backslidings. I was not blind to them before and when they all rose up against me in seclusion, I felt them utterly. I knew then that I the man was a mass of weakness, a faulty and imperfect instrument, strong only when a higher strength entered into me. Then I found myself among these young men and in many of them I discovered a mighty courage, a power of self-effacement in comparison with which I was simply nothing. I saw one or two who were not only superior to me in force and character,—very many were that,—but in the promise of that intellectual
ability on which I prided myself. He said to me, “This is the young generation, the new and mighty nation that is arising at my command. They are greater than yourself. What have you to fear? If you stood aside or slept, the work would still be done. If you were cast aside tomorrow, here are the young men who will take up your work and do it more mightily than you have ever done. You have only got some strength from me to speak a word to this nation which will help to raise it.” This was the next thing He told me.

Then a thing happened suddenly and in a moment I was hurried away to the seclusion of a solitary cell. What happened to me during that period I am not impelled to say, but only this that day after day, He showed me His wonders and made me realise the utter truth of the Hindu religion. I had had many doubts before. I was brought up in England amongst foreign ideas and an atmosphere entirely foreign. About many things in Hinduism I had once been inclined to believe that it was all imagination; that there was much of dream in it, much that was delusion and *maya*. But now day after day I realised in the mind, I realised in the heart, I realised in the body the truths of the Hindu religion. They became living experiences to me, and things were opened to me which no material science could explain. When I first approached Him, it was not entirely in the spirit of the Bhakta, it was not entirely in the spirit of the Jnani. I came to Him long ago in Baroda some years before the Swadeshi began and I was drawn into the public field.

When I approached God at that time, I hardly had a living faith in Him. The agnostic was in me, the atheist was in me, the sceptic was in me and I was not absolutely sure that there was a God at all. I did not feel His presence. Yet something drew me to the truth of the Vedas, the truth of the Gita, the truth of the Hindu religion. I felt there must be a mighty truth somewhere in this Yoga, a mighty truth in this religion based on the Vedanta. So when I turned to the Yoga and resolved to practise it and find out if my idea was right, I did it in this spirit and with this prayer to Him, “If Thou art, then Thou knowest my heart. Thou knowest that I do not ask for Mukti, I do not ask for anything
which others ask for. I ask only for strength to uplift this nation, I ask only to be allowed to live and work for this people whom I love and to whom I pray that I may devote my life.” I strove long for the realisation of Yoga and at last to some extent I had it, but in what I most desired, I was not satisfied. Then in the seclusion of the jail, of the solitary cell I asked for it again. I said, “Give me Thy adesh. I do not know what work to do or how to do it. Give me a message.” In the communion of Yoga two messages came. The first message said, “I have given you a work and it is to help to uplift this nation. Before long the time will come when you will have to go out of jail; for it is not my will that this time either you should be convicted or that you should pass the time as others have to do, in suffering for their country. I have called you to work, and that is the adesh for which you have asked. I give you the adesh to go forth and do my work.” The second message came and it said, “Something has been shown to you in this year of seclusion, something about which you had your doubts and it is the truth of the Hindu religion. It is this religion that I am raising up before the world, it is this that I have perfected and developed through the rishis, saints and avatars, and now it is going forth to do my work among the nations. I am raising up this nation to send forth my word. This is the Sanatana Dharma, this is the eternal religion which you did not really know before, but which I have now revealed to you. The agnostic and the sceptic in you have been answered, for I have given you proofs within and without you, physical and subjective, which have satisfied you. When you go forth, speak to your nation always this word that it is for the Sanatana Dharma that they arise, it is for the world and not for themselves that they arise. I am giving them freedom for the service of the world. When therefore it is said that India shall rise, it is the Sanatana Dharma that shall rise. When it is said that India shall be great, it is the Sanatana Dharma that shall be great. When it is said that India shall expand and extend herself, it is the Sanatana Dharma that shall expand and extend itself over the world. It is for the dharma and by the dharma that India exists. To magnify the religion means to magnify the country. I have shown you
that I am everywhere and in all men and in all things, that I am in this movement and I am not only working in those who are striving for the country but I am working also in those who oppose them and stand in their path. I am working in everybody and whatever men may think or do they can do nothing but help on my purpose. They also are doing my work; they are not my enemies but my instruments. In all your actions you are moving forward without knowing which way you move. You mean to do one thing and you do another. You aim at a result and your efforts subserve one that is different or contrary. It is Shakti that has gone forth and entered into the people. Since long ago I have been preparing this uprising and now the time has come and it is I who will lead it to its fulfilment."

This then is what I have to say to you. The name of your society is "Society for the Protection of Religion". Well, the protection of the religion, the protection and upraising before the world of the Hindu religion, that is the work before us. But what is the Hindu religion? What is this religion which we call Sanatana, eternal? It is the Hindu religion only because the Hindu nation has kept it, because in this peninsula it grew up in the seclusion of the sea and the Himalayas, because in this sacred and ancient land it was given as a charge to the Aryan race to preserve through the ages. But it is not circumscribed by the confines of a single country, it does not belong peculiarly and for ever to a bounded part of the world. That which we call the Hindu religion is really the eternal religion, because it is the universal religion which embraces all others. If a religion is not universal, it cannot be eternal. A narrow religion, a sectarian religion, an exclusive religion can live only for a limited time and a limited purpose. This is the one religion that can triumph over materialism by including and anticipating the discoveries of science and the speculations of philosophy. It is the one religion which impresses on mankind the closeness of God to us and embraces in its compass all the possible means by which man can approach God. It is the one religion which insists every moment on the truth which all religions acknowledge, that He is in all men and all things and that in Him we move and have
our being. It is the one religion which enables us not only to understand and believe this truth but to realise it with every part of our being. It is the one religion which shows the world what the world is, that it is the lila of Vasudeva. It is the one religion which shows us how we can best play our part in that lila, its subtlest laws and its noblest rules. It is the one religion which does not separate life in any smallest detail from religion, which knows what immortality is and has utterly removed from us the reality of death.

This is the word that has been put into my mouth to speak to you today. What I intended to speak has been put away from me, and beyond what is given to me I have nothing to say. It is only the word that is put into me that I can speak to you. That word is now finished. I spoke once before with this force in me and I said then that this movement is not a political movement and that nationalism is not politics but a religion, a creed, a faith. I say it again today, but I put it in another way. I say no longer that nationalism is a creed, a religion, a faith; I say that it is the Sanatana Dharma which for us is nationalism. This Hindu nation was born with the Sanatana Dharma, with it it moves and with it it grows. When the Sanatana Dharma declines, then the nation declines, and if the Sanatana Dharma were capable of perishing, with the Sanatana Dharma it would perish. The Sanatana Dharma, that is nationalism. This is the message that I have to speak to you.
IN SPITE of the foul weather a large number of people assembled on Sunday afternoon at Beadon Square where a big Swadeshi meeting was held under the presidency of Babu Ramananda Chatterji, Editor of the Prabasi. Several speakers addressed the meeting. We publish below an authorised version of Mr. Aurobindo Ghose’s speech delivered at that meeting.

Sj. Aurobindo Ghose said that when in jail he had been told that the country was demoralised by the repression. He could not believe it then, because his experience of the movement had been very different. He had always found that when Swadeshi was flagging or the Boycott beginning to relax, it only needed an act of repression on the part of the authorities to give it redoubled vigour. It seemed to him then impossible that the deportations would have a different effect. When nine of the most active and devoted workers for the country had been suddenly hurried away from their homes without any fault on their part, without the Government being able to formulate a single definite charge against them, surely the Boycott instead of decreasing would grow tenfold more intense. And what after all was the repression? Some people sent to prison, some deported, a number of house-searches, a few repressive enactments, limiting the liberty of the press and the platform. This was nothing compared with the price other nations had paid for their liberty. They also would have to suffer much more than this before they could make any appreciable advance towards their goal. This was God’s law; it was not the rulers who demanded the price, it was God who demanded it. It was his law that a fallen nation should not be allowed

Delivered at Beadon Square, Calcutta, on 13 June 1909. Text published in the Bengalee on 15 June and reproduced in the Karmayogin on 19 June.
to rise without infinite suffering and mighty effort. That was the price it had to pay for its previous lapses from national duty.

The speaker did not think that there was any real demoralisation. There might be a hesitation among the richer and more vulnerable parts of the community to hold conferences or meetings or give public expression to their views and feelings. He did not measure the strength of the movement by the number of meetings or of people present at the meetings. He measured it by the strength and indomitable obstinacy of feeling and purpose in the hearts of the people. Their first duty was to keep firm hold on their ideal and perform steadfastly the vows they had made before God and the nation. The rulers were never tired of saying that we should get self-government when we were fit. Fitness meant national capacity and strength was the basis of capacity. That was what Lord Morley really meant when he asked himself repeatedly whether this was a real uprising of the nation or a passing excitement. He meant, was it a movement with real strength in it, a movement with elemental force enough in it to resist and survive? That experiment was now being made. They must not expect substantial gains at so small a cost.

He had heard vaguely of the reforms when in prison; he had heard them ecstatically described. He was surprised to hear that description. He had been in England for fourteen years and knew something of the English people and their politics. He could not believe that England or any European people would give substantial reforms after so short an agitation and so scanty a proof of national strength. It was not the fault of the British people, it was a law of politics that they, who have, should be unwilling to yield what they have until they had fully tested the determination of the subject people and even then they would only give just as much as they could not help giving. When he came out, he found what these reforms were. The so-called introduction of the elective principle was a sham and the power given was nothing. For the rest, it was a measure arranged with a skill which did credit to the diplomacy of British statesmen so that we should lose and they gain. It
would diminish the political power of the educated class which was the brain and backbone of the nation, it would sow discord among the various communities. This was not a real reform but reaction. They would have to go much further in suffering and self-sacrifice before they could hope for anything substantial. They must hold firm in their determination and keep the Swadeshi unimpaired and by that he meant the determination to assert their national individuality in every branch of national activity.

There was one thing that might be said, how could we expand the Swadeshi if all our methods were taken out of our hands? That could easily be done by the Government. The authorities in this country had absolute and irresponsible power. It had practically been admitted by a responsible member of the Liberal Government that the liberty of no subject of the British Crown was safe in this country if the Government of India took it into its head that he was dangerous or inconvenient, if it were informed by the police who had distinguished themselves at Midnapore or by information as tainted— the perjurers, forgers, informers, approvers, for what other information could they have, circumstanced as they were by their own choice in this country,— that such and such men had been seditious or were becoming seditious or might be seditious or that their presence in their homes was dangerous to the peace of mind of the C.I.D. Against such information there was no safety even for the greatest men in the country, the purest in life, the most blameless and inoffensive in their public activity.

Then there was this sunset regulation. It appeared that we were peaceful citizens until sunset, but after sunset we turned into desperate characters,— well, he was told, even half an hour before sunset; apparently even the sun could not be entirely trusted to keep us straight. We had, it seems, stones in our pockets to throw at the police and some of us, perhaps, dangle bombs in our chaddars. How was this prohibition brought about? Merely by a little expenditure of ink in the Political Department. It would be quite easy to extend it further and prevent public meetings. It was being enforced on us that our
so-called liberties were merely Maya. We believed in them for a time and acted on the belief; then one fine morning we wake up and look around for them but they are not there. In reality they never were there; they were Maya, illusions; this was the reason why not only could we not accept reforms which did not mean real control, but some of us did not believe even in that. We doubted not only the sham control but the sham of the reforms themselves, but still control was the minimum on which all were agreed. The question remained, if all our liberties were taken away, what were we to do? Even that would not stop the movement. Christ said to the disciples who expected a material kingdom on the spot, “The kingdom of heaven is within you.” To them too he might say, “The kingdom of Swaraj is within you.”

Let them win and keep that kingdom of Swaraj, the sense of the national separateness and individuality, the faith in its greatness and future, the feeling of God within ourselves and in the nation, the determination to devote every thought and action to his service. Here no coercion or repression could interfere; here there was no press law or sunset regulation. And it was a law of the psychology of men and nations that the Brahman once awakened within must manifest itself without and nothing could eventually prevent that manifestation. Moreover, their methods were borrowed from England. England gave them and encouraged their use when it was inoffensive to her, but the moment they were used so as to conflict with British interests and to expand national life and strength, they were taken away. But the Indians were a nation apart; they were not dependent on these methods. They had a wonderful power of managing things without definite means. Long before the Press came into existence or telegraph wires, the nation had a means of spreading news from one end of the country to another with electrical rapidity — a Press too impalpable to be touched. They had the power of enforcing the public will without any fixed organisation, of associating without an association — without even the European refuge of a secret association. The spirit was what mattered, if the spirit were there, the movement would
find out its own channels; for after all it was the power of God manifested in the movement which would command its own means and create its own channels. They must have the firm faith that India must rise and be great and that everything that happened, every difficulty, every reverse must help and further their end. The trend was upward and the time of decline was over. The morning was at hand and once the light had shown itself, it could never be night again. The dawn would soon be complete and the sun rise over the horizon. The sun of India’s destiny would rise and fill all India with its light and overflow India and overflow Asia and overflow the world. Every hour, every moment could only bring them nearer to the brightness of the day that God had decreed.
Ourselves

The KARMAYOGIN comes into the field to fulfil a function which an increasing tendency in the country demands. The life of the nation which once flowed in a broad and single stream has long been severed into a number of separate meagre and shallow channels. The two main floods have followed the paths of religion and politics, but they have flowed separately. Our political activity has crept in a channel cut for it by European or Europeanised minds; it tended always to a superficial wideness, but was deficient in depth and volume. The national genius, originality, individuality poured itself into religion while our politics were imitative and unreal. Yet without a living political activity national life cannot, under modern circumstances, survive. So also there has been a stream of social life, more and more muddied and disturbed, seeking to get clearness, depth, largeness, freedom, but always failing and increasing in weakness or distraction. There was a stream too of industrial life, faint and thin, the poor survival of the old vigorous Indian artistic and industrial capacity murdered by unjust laws and an unscrupulous trade policy. All these ran in disconnected channels, sluggish, scattered and ineffectual. The tendency is now for these streams to unite again into one mighty invincible and grandiose flood. To assist that tendency, to give
voice and definiteness to the deeper aspirations now forming obscurely within the national consciousness is the chosen work of the Karmayogin.

There is no national life perfect or sound without the chaturvarnya. The life of the nation must contain within itself the life of the Brahmin, — spirituality, knowledge, learning, high and pure ethical aspiration and endeavour; the life of the Kshatriya, — manhood and strength moral and physical, the love of battle, the thirst for glory, the sense of honour, chivalry, self-devotion, generosity, grandeur of soul; the life of the Vaishya, — trade, industry, thrift, prosperity, benevolence, philanthropy; the life of the Shudra, — honesty, simplicity, labour, religious and quiet service to the nation even in the humblest position and the most insignificant kind of work. The cause of India’s decline was the practical disappearance of the Kshatriya and the dwindling of the Vaishya. The whole political history of India since the tyranny of the Nandas has been an attempt to resuscitate or replace the Kshatriya. But the attempt was only partially successful. The Vaishya held his own for a long time, indeed, until the British advent by which he has almost been extinguished.

When the chaturvarnya disappears, there comes varnasankara, utter confusion of the great types which keep a nation vigorous and sound. The Kshatriya dwindled, the Vaishya dwindled, the Brahmin and Shudra were left. The inevitable tendency was for the Brahmin type to disappear and the first sign of his disappearance was utter degeneracy, the tendency to lose himself and while keeping some outward signs of the Brahmin to gravitate towards Shudrahood. In the Kaliyuga the Shudra is powerful and attracts into himself the less vigorous Brahmin, as the earth attracts purer but smaller bodies, and the Brahmatej, the spiritual force of the latter, already diminished, dwindles to nothingness. For the Satyayuga to return, we must get back the Brahmatej and make it general. For the Brahmatej is the basis of all the rest and in the Satyayuga all men have it more or less and by it the nation lives and is great.

All this is, let us say, a parable. It is more than a parable, it is a great truth. But our educated class have become so unfamiliar
with the deeper knowledge of their forefathers that it has to be translated into modern European terms before they can understand it. For it is the European ideas alone that are real to them and the great truths of Indian thought seem to them mere metaphors, allegories and mystic parables. So well has British education done its fatal denationalising work in India.

The Brahmin stands for religion, science, scholarship and the higher morality; the Kshatriya for war, politics and administration; the Vaishya for the trades, professions and industries; the Shudra for labour and service. It is only when these four great departments of human activity are all in a robust and flourishing condition that the nation is sound and great. When any of these disappear or suffer, it is bad for the body politic. And the two highest are the least easy to be spared. If they survive in full strength, they can provide themselves with the two others, but if either the Kshatriya or the Brahmin go, if either the political force or the spiritual force of a nation is lost, that nation is doomed unless it can revive or replace the missing strength. And of the two the Brahmin is the most important. He can always create the Kshatriya, spiritual force can always raise up material force to defend it. But if the Brahmin becomes the Shudra, then the lower instinct of the serf and the labourer becomes all in all, the instinct to serve and seek a living as the one supreme object of life, the instinct to accept safety as a compensation for lost greatness and inglorious ease and dependence in place of the ardours of high aspiration for the nation and the individual. When spirituality is lost all is lost. This is the fate from which we have narrowly escaped by the resurgence of the soul of India in Nationalism.

But that resurgence is not yet complete. There is the sentiment of Indianism, there is not yet the knowledge. There is a vague idea, there is no definite conception or deep insight. We have yet to know ourselves, what we were, are and may be; what we did in the past and what we are capable of doing in the future; our history and our mission. This is the first and most important work which the Karmayogin sets for itself, to popularise this knowledge. The Vedanta or Sufism, the temple
or the mosque, Nanak and Kabir and Ramdas, Chaitanya or Guru Govind, Brahmin and Kayastha and Namadura, whatever national asset we have, indigenous or acclimatised, it will seek to make known, to put in its right place and appreciate. And the second thing is how to use these assets so as to swell the sum of national life and produce the future. It is easy to appraise their relations to the past; it is more difficult to give them their place in the future. The third thing is to know the outside world and its relation to us and how to deal with it. That is the problem which we find at present the most difficult and insistent, but its solution depends on the solution of the others.

We have said that Brahmatej is the thing we need most of all and first of all. In one sense, that means the pre-eminence of religion; but after all, what the Europeans mean by religion is not Brahmatej; which is rather spirituality, the force and energy of thought and action arising from communion with or self-surrender to that within us which rules the world. In that sense we shall use it. This force and energy can be directed to any purpose God desires for us; it is sufficient to knowledge, love or service; it is good for the liberation of an individual soul, the building of a nation or the turning of a tool. It works from within, it works in the power of God, it works with superhuman energy. The re-awakening of that force in three hundred millions of men by the means which our past has placed in our hands, that is our object.

The European is proud of his success in divorcing religion from life. Religion, he says, is all very well in its place, but it has nothing to do with politics or science or commerce, which it spoils by its intrusion; it is meant only for Sundays when, if one is English, one puts on black clothes and tries to feel good, and if one is continental, one puts the rest of the week away and amuses oneself. In reality, the European has not succeeded in getting rid of religion from his life. It is coming back in Socialism, in the Anarchism of Bakunin and Tolstoy, in many other isms; and in whatever form it comes, it insists on engrossing the whole of life, moulding the whole of society and politics under the law of idealistic aspiration. It does not use the word God or
grasp the idea, but it sees God in humanity. What the European understood by religion, had to be got rid of and put out of life, but real religion, spirituality, idealism, altruism, self-devotion, the hunger after perfection, is the whole destiny of humanity and cannot be got rid of. After all God does exist and if He exists, you cannot shove Him into a corner and say: “That is your place, and, as for the world and life, it belongs to us.” He pervades and returns. Every age of denial is only a preparation for a larger and more comprehensive affirmation.

The Karmayogin will be more of a national review than a weekly newspaper. We shall notice current events only as they evidence, help, affect or resist the growth of national life and the development of the soul of the nation. Political and social problems we shall deal with from this standpoint, seeking first their spiritual roots and inner causes and then proceeding to measures and remedies. In a similar spirit we shall deal with all sources of national strength in the past and in the present, seeking to bring them home to all comprehensions and make them applicable to our life, dynamic and not static, creative and not merely preservative. For if there is no creation, there must be disintegration; if there is no advance and victory, there must be recoil and defeat.
The Ideal of the Karmayogin

A NATION is building in India today before the eyes of the world so swiftly, so palpably that all can watch the process and those who have sympathy and intuition distinguish the forces at work, the materials in use, the lines of the divine architecture. This nation is not a new race raw from the workshop of Nature or created by modern circumstances. One of the oldest races and greatest civilisations on this earth, the most indomitable in vitality, the most fecund in greatness, the deepest in life, the most wonderful in potentiality, after taking into itself numerous sources of strength from foreign strains of blood and other types of human civilisation, is now seeking to lift itself for good into an organised national unity. Formerly a congeries of kindred nations with a single life and a single culture, always by the law of this essential oneness tending to unity, always by its excess of fecundity engendering fresh diversities and divisions, it has never yet been able to overcome permanently the almost insuperable obstacles to the organisation of a continent. The time has now come when those obstacles can be overcome. The attempt which our race has been making throughout its long history, it will now make under entirely new circumstances. A keen observer would predict its success because the only important obstacles have been or are in the process of being removed. But we go farther and believe that it is sure to succeed because the freedom, unity and greatness of India have now become necessary to the world. This is the faith in which the Karmayogin puts its hand to the work and will persist in it, refusing to be discouraged by difficulties however immense and apparently insuperable. We believe that God is with us and in that faith we shall conquer. We believe that humanity needs us and it is the love and service of humanity, of our country, of the race, of our
religion that will purify our heart and inspire our action in the struggle.

The task we set before ourselves is not mechanical but moral and spiritual. We aim not at the alteration of a form of government but at the building up of a nation. Of that task politics is a part, but only a part. We shall devote ourselves not to politics alone, nor to social questions alone, nor to theology or philosophy or literature or science by themselves, but we include all these in one entity which we believe to be all-important, the dharma, the national religion which we also believe to be universal. There is a mighty law of life, a great principle of human evolution, a body of spiritual knowledge and experience of which India has always been destined to be guardian, exemplar and missionary. This is the sanatana dharma, the eternal religion. Under the stress of alien impacts she has largely lost hold not of the structure of that dharma, but of its living reality. For the religion of India is nothing if it is not lived. It has to be applied not only to life, but to the whole of life; its spirit has to enter into and mould our society, our politics, our literature, our science, our individual character, affections and aspirations. To understand the heart of this dharma, to experience it as a truth, to feel the high emotions to which it rises and to express and execute it in life is what we understand by Karmayoga. We believe that it is to make the yoga the ideal of human life that India rises today; by the yoga she will get the strength to realise her freedom, unity and greatness, by the yoga she will keep the strength to preserve it. It is a spiritual revolution we foresee and the material is only its shadow and reflex.

The European sets great store by machinery. He seeks to renovate humanity by schemes of society and systems of government; he hopes to bring about the millennium by an act of Parliament. Machinery is of great importance, but only as a working means for the spirit within, the force behind. The nineteenth century in India aspired to political emancipation, social renovation, religious vision and rebirth, but it failed because it adopted Western motives and methods, ignored the spirit, history and destiny of our race and thought that by taking over
European education, European machinery, European organisation and equipment we should reproduce in ourselves European prosperity, energy and progress. We of the twentieth century reject the aims, ideals and methods of the Anglicised nineteenth precisely because we accept its experience. We refuse to make an idol of the present; we look before and after, backward to the mighty history of our race, forward to the grandiose destiny for which that history has prepared it.

We do not believe that our political salvation can be attained by enlargement of Councils, introduction of the elective principle, colonial self-government or any other formula of European politics. We do not deny the use of some of these things as instruments, as weapons in a political struggle, but we deny their sufficiency whether as instruments or ideals and look beyond to an end which they do not serve except in a trifling degree. They might be sufficient if it were our ultimate destiny to be an outlying province of the British Empire or a dependent adjunct of European civilisation. That is a future which we do not think it worth making any sacrifice to accomplish. We believe on the other hand that India is destined to work out her own independent life and civilisation, to stand in the forefront of the world and solve the political, social, economical and moral problems which Europe has failed to solve, yet the pursuit of whose solution and the feverish passage in that pursuit from experiment to experiment, from failure to failure she calls her progress. Our means must be as great as our ends and the strength to discover and use the means so as to attain the end can only be found by seeking the eternal source of strength in ourselves.

We do not believe that by changing the machinery so as to make our society the ape of Europe we shall effect social renovation. Widow-remarriage, substitution of class for caste, adult marriage, intermarriages, interdining and the other nostrums of the social reformer are mechanical changes which, whatever their merits or demerits, cannot by themselves save the soul of the nation alive or stay the course of degradation and decline. It is the spirit alone that saves, and only by becoming great and
free in heart can we become socially and politically great and

We do not believe that by multiplying new sects limited
within the narrower and inferior ideas of religion imported from
the West or by creating organisations for the perpetuation of the
mere dress and body of Hinduism we can recover our spiritual
health, energy and greatness. The world moves through an indis-
pensable interregnum of free thought and materialism to a new
synthesis of religious thought and experience, a new religious
world-life free from intolerance, yet full of faith and fervour,
accepting all forms of religion because it has an unshakable
faith in the One. The religion which embraces Science and faith,
Theism, Christianity, Mahomedanism and Buddhism and yet is
none of these, is that to which the World-Spirit moves. In our
own, which is the most sceptical and the most believing of all,
the most sceptical because it has questioned and experimented
the most, the most believing because it has the deepest experi-
ence and the most varied and positive spiritual knowledge,—
that wider Hinduism which is not a dogma or combination of
dogmas but a law of life, which is not a social framework but
the spirit of a past and future social evolution, which rejects
nothing but insists on testing and experiencing everything and
when tested and experienced turning it to the soul’s uses, in this
Hinduism we find the basis of the future world-religion. This
sanatana dharma has many scriptures, Veda, Vedanta, Gita,
Upanishad, Darshana, Purana, Tantra, nor could it reject the
Bible or the Koran; but its real, most authoritative scripture is in
the heart in which the Eternal has His dwelling. It is in our inner
spiritual experiences that we shall find the proof and source of
the world’s Scriptures, the law of knowledge, love and conduct,
the basis and inspiration of Karmayoga.

Our aim will therefore be to help in building up India for the
sake of humanity — this is the spirit of the Nationalism which
we profess and follow. We say to humanity, “The time has come
when you must take the great step and rise out of a material
existence into the higher, deeper and wider life towards which
humanity moves. The problems which have troubled mankind
The Ideal of the Karmayogin  

can only be solved by conquering the kingdom within, not by harnessing the forces of Nature to the service of comfort and luxury, but by mastering the forces of the intellect and the spirit, by vindicating the freedom of man within as well as without and by conquering from within external Nature. For that work the resurgence of Asia is necessary, therefore Asia rises. For that work the freedom and greatness of India is essential, therefore she claims her destined freedom and greatness, and it is to the interest of all humanity, not excluding England, that she should wholly establish her claim.

We say to the nation, “It is God’s will that we should be ourselves and not Europe. We have sought to regain life by following the law of another being than our own. We must return and seek the sources of life and strength within ourselves. We must know our past and recover it for the purposes of our future. Our business is to realise ourselves first and to mould everything to the law of India’s eternal life and nature. It will therefore be the object of the Karmayogin to read the heart of our religion, our society, our philosophy, politics, literature, art, jurisprudence, science, thought, everything that was and is ours, so that we may be able to say to ourselves and our nation, ‘This is our dharma.’ We shall review European civilisation entirely from the standpoint of Indian thought and knowledge and seek to throw off from us the dominating stamp of the Occident; what we have to take from the West we shall take as Indians. And the dharma once discovered we shall strive our utmost not only to profess but to live, in our individual actions, in our social life, in our political endeavours.”

We say to the individual and especially to the young who are now arising to do India’s work, the world’s work, God’s work, “You cannot cherish these ideals, still less can you fulfil them if you subject your minds to European ideas or look at life from the material standpoint. Materially you are nothing, spiritually you are everything. It is only the Indian who can believe everything, dare everything, sacrifice everything. First therefore become Indians. Recover the patrimony of your forefathers. Recover the Aryan thought, the Aryan discipline, the Aryan character, the
Aryan life. Recover the Vedanta, the Gita, the Yoga. Recover them not only in intellect or sentiment but in your lives. Live them and you will be great and strong, mighty, invincible and fearless. Neither life nor death will have any terrors for you. Difficulty and impossibility will vanish from your vocabularies. For it is in the spirit that strength is eternal and you must win back the kingdom of yourselves, the inner Swaraj, before you can win back your outer empire. There the Mother dwells and She waits for worship that She may give strength. Believe in Her, serve Her, lose your wills in Hers, your egoism in the greater ego of the country, your separate selfishness in the service of humanity. Recover the source of all strength in yourselves and all else will be added to you, social soundness, intellectual pre-eminence, political freedom, the mastery of human thought, the hegemony of the world.”
“Swaraj” and the Musulmans

We extract in our columns this week the comments of Srijut Bipin Chandra Pal’s organ, Swaraj, on the Government’s pro-Mahomedan policy and its possible effects in the future. We are glad to see this great Nationalist again expressing his views with his usual originality and fine political insight. We do not ourselves understand the utility of such a campaign as Srijut Bipin Chandra is carrying on in England. In politics quite as much as in ordinary conduct the rule of desh-kal-patra, the right place, the right time and the right person, conditions the value and the effectiveness of the work. For Bipin Babu’s mission there could not be a worse place than England, a worse time than the present and a worse audience than the British people. What is the prophet of self-help and dissociation doing in England? Or what kind of message is this that he carries to the British public, “We do not welcome your favours, we reject your help and sympathy and will have no political association with you until Swaraj is ours,— and therefore I am here speaking to you and publishing my views to a British audience in London”? We can only suppose that Bipin Babu does really imagine he can produce some kind of effect worth having, moral if not substantial, upon the ruling nation, and if so what does it portend? Is Saul also among the prophets? Does Bipin too stand in the doorway of Britannia?

The first three or four issues of Swaraj disappointed our expectations. A sense of the unreality of his position seemed to haunt the writer and robbed his writing of the former strength and close touch with the subject. It was the old views, the familiar thought, the well-known manner, but it neither convinced, illuminated nor inspired. This month’s Swaraj is more confident and effective, although the thing still seems to be in the air. The passage extracted and the admirable character-sketch of Srijut
Shyamsunder Chakravarti are the best things in the issue. Bipin Babu seems to have recovered the copious vein of thought, the subtle and flexible reasoning, the just and original view of his subject which made one wait with impatience for every fresh number of *New India*. His attitude towards the Reform scheme and the Mahomedan demand for a separate electorate is the attitude which has consistently been adopted by the Nationalist party in Bengal towards the Hindu-Mahomedan question in ordinary politics. We do not fear Mahomedan opposition; so long as it is the honest Swadeshi article and not manufactured in Shillong and Simla, we welcome it as a sign of life and aspiration. We do not shun, we desire the awakening of Islam in India even if its first crude efforts are misdirected against ourselves; for all strength, all energy, all action is grist to the mill of the nation-builder. In that faith we are ready, when the time comes for us to meet in the political field, to exchange with the Musulman, just as he chooses, the firm clasp of the brother or the resolute grip of the wrestler.

That time has not yet come. There is absolutely no reason why the electoral question should create bad blood between the two communities, for if we leave aside the limited number who still hunger after loaves and fishes or nurse dead delusions, the reforms have no living interest for the Hindu. His field of energy lies elsewhere than in the enlarged pretences of British Liberalism. His business is to find out his own strength and prepare it for a great future, and the less he meddles with unreal politics and nerveless activities, the better for the nation. The Mahomedan has not progressed so far. He has to taste the sweets of political privilege and find them turn to ashes in his mouth. He has to formulate demands, rejoice at promises, fume at betrayals, until he thoroughly discovers the falsity and impossibility of his hopes. His progress is likely to be much swifter than ours has been in the past, for he gets the advantage if not of our experience, at least of the ideas now in the air and of the more bracing and stimulating atmosphere. He is more likely to demand than to crave, and his disillusionment must necessarily be the speedier. And it is then that he too will seek the strength in
himself and touch the true springs of self-development. Our best policy is to leave the Mahomedan representatives on the councils to work out their destiny face to face with the bureaucracy, with no weightier Hindu counterpoise than the effete politicians, the time-servers and the self-seekers.

Of one thing we may be certain, that Hindu-Mahomedan unity cannot be effected by political adjustments or Congress flatteries. It must be sought deeper down, in the heart and the mind, for where the causes of disunion are, there the remedies must be sought. We shall do well in trying to solve the problem to remember that misunderstanding is the most fruitful cause of our differences, that love compels love and that strength conciliates the strong. We must strive to remove the causes of misunderstanding by a better mutual knowledge and sympathy; we must extend the unflinching love of the patriot to our Musulman brother, remembering always that in him too Narayana dwells and to him too our Mother has given a permanent place in her bosom; but we must cease to approach him falsely or flatter out of a selfish weakness and cowardice. We believe this to be the only practical way of dealing with the difficulty. As a political question the Hindu-Mahomedan problem does not interest us at all, as a national problem it is of supreme importance. We shall make it a main part of our work to place Mahomed and Islam in a new light before our readers, to spread juster views of Mahomedan history and civilisation, to appreciate the Musulman’s place in our national development and the means of harmonising his communal life with our own, not ignoring the difficulties that stand in our way but making the most of the possibilities of brotherhood and mutual understanding. Intellectual sympathy can only draw together, the sympathy of the heart can alone unite. But the one is a good preparation for the other.

Jhalakati Speech

FELLOW-COUNTRYMEN, delegates and people of Barisal and Bakarganj: —

I have first to express to you my personal gratitude for the kindly reception you have accorded to me. For a year I have been secluded from the fellowship and brotherly embrace of my fellow-countrymen. To me, therefore, the kindliness of your welcome must awake much keener feelings than would have been the case in other circumstances. Especially is it a cause of rejoicing to me to have that welcome in Barisal. When I come to this District, when I come to this soil of Bakarganj which has been made sacred and ever memorable in the history of this country — I come to no ordinary place. When I come to Barisal, I come to a chosen temple of the Mother — I come to a sacred pithasthan of the national spirit — I come to the birth-place and field of work of Aswini Kumar Dutta.

It is now the fourth year since I came to Barisal first on the occasion of the Provincial Conference. Three years have passed since then — they have been years of storm and stress to the country, — they have been years during which history has been making, during which the people of India have been undergoing a process of rebirth. Many things have happened in these years, especially in the last few months. One sign of what has been happening in the past is this empty chair (pointing to the chair upon which Aswini Kumar’s photo was placed). One aspect of these years has been a series of repressions. They have been years in which the country has had to undergo the sufferings

and sacrifices which repression involves. Barisal has had its full share of these sufferings. They had begun even before I last came among you. You had then the regulation lathi of the Police and the Gurkha visitation. After that there have been other forms of coercion. In this very town of Jhalakati you had to pay a punitive police tax. It was a punitive tax, punitive not of any offence of which you have been guilty, — for you have been guilty of none. In Barisal, there was no disturbance, no breach of the law. On the contrary, you have always been patient and self-restrained — you have always kept within the four corners of the law. What you have been punished for was your patriotism — you were punished for your Swadeshism — you were punished for your successful organisation of boycott. That tax was borne by the mahajans of Jhalakati with the readiness and uncomplaining endurance of large-hearted patriotism.

And now there have come the deportations. You have been called to endure the exile of those who have been dearest to you, who stood for all that was patriotic and noble in the district. Of the deportations Barisal has had more than its full share. Of those deported three are sons of this district. The man whose name will live for ever on the lips of his countrymen as one of the great names of the age — one of the makers of the new nation — Aswini Kumar Dutta has been taken away from you. His active and devoted lieutenant has been taken away from you. That warm-hearted patriot whom I am proud to have had the privilege of calling my personal friend — Manoranjan Guha — has been taken away from you. Why have they been exiled? What was their offence? Can anyone in Barisal name a single action — can anyone of those who have sent him into exile name definitely any single action which Aswini Kumar Dutta has committed, of which the highest and noblest man might not be proud? Can anyone name a single action of Krishna Kumar Mitra’s which would be derogatory to the reputation of the highest in the land? There have indeed been charges, — vague charges, shameless charges, — made. The law under which they have been exiled requires no charge. The law under which they have been exiled has been impugned in Parliament.
as an antiquated and anomalous Regulation, utterly out of place and unfit to be used in modern times. When it was so attacked and its use by the Government of India challenged, Lord Morley, the man who rules India with absolute sway and stands or should stand to us as the incarnation of British statesmanship, made an answer which was not the answer of a statesman but of an attorney. “The law,” he said, “is as good a law as any on the Statute Book.” What is meant — what does Lord Morley mean — by a “good law”? In a certain sense every law is a good law which is passed by an established authority. If there were a law which made Swadeshi illegal, by which to buy a Swadeshi cloth would become a criminal action punishable by a legal tribunal — there have been such laws in the past — and if that were enacted by the Legislative Council, it would be in Lord Morley’s sense of the word as good a law as any upon the Statute Book. But would it be a good law in the true sense or a travesty of law and justice? Lord Morley says it is a good law. We say it is a lawless law, — a dishonest law, — a law that is, in any real sense of the word, no law at all. For what is its substance and purpose? It provides that when you cannot bring any charge against a man which can be supported by proofs — and when you have no evidence which would stand for a moment before a court of justice, in any legal tribunal — when you have nothing against him except that his existence is inconvenient to you, then you need not advance any charge, you need not bring any evidence, you are at liberty to remove him from his home, from his friends, from his legitimate activities and intern him for the rest of his life in a jail. This is the law which is as good a law as any on the Statute Book! But what does its presence on the Statute Book mean? It means that under certain circumstances or whenever an absolute authority chooses, there is no law in the land for any subject of the British Crown — no safety for the liberty of the person.

It is under this law that nine of the most devoted workers for the country have been exiled, some of whose names are household words in India and incompatible with any imputation of evil. When the authorities were pressed in Parliament for an account of the reasons for their action they would not bring and
refused to bring any definite accusation. Once indeed under the pressure of cross-examination a charge was advanced,—wild, vague and baseless. It was said in effect that these men were instigators and paymasters of anarchy and bloodshed. What was the authority under which such a charge was made? How was it that this monstrous falsehood was allowed to proceed from the mouths of His Majesty’s Ministers and pollute the atmosphere of the House of Commons? Is there a man in his senses who will believe that Aswini Kumar Dutta was the instigator and paymaster of anarchy and bloodshed or that Krishna Kumar Mitra was the instigator and paymaster of anarchy and bloodshed,—men whose names were synonymous with righteousness of action and nobility of purpose and whose whole lives were the embodiment of uprightness, candour and fair and open living before all men? We have been told that it was not only on police evidence that they were exiled. That was not what was said at the beginning. At first it was on police information that the deportations were justified and any attempt to impugn that authority was resented. But now that police information has been shown to be false and unreliable, it is said that there was other than police information to justify the action of the authorities. We know what that information must have been. I will not make any sweeping charge against a whole body of men without exception. I know that even among the police there are men who are upright and observe truth and honesty in their dealings. I have met such men and honoured them. But we know what the atmosphere of that department is, we know what the generality of police officers are and how little reliance can be placed upon them. Of the value of police information Midnapore is the standing and conclusive proof. Besides this police information what else can there have been? Obviously the information on which the police has relied in certain of these cases—the evidence of the hired perjurer and forger, of the approver who to save himself from a baseless charge makes allegations yet more unfounded against others and scatters mud on the most spotless reputations in the land. If there were any other source besides this, we know too what that must have been. There are a sprinkling of Vibhishans among us,
— men who for their own ends are willing to tell any lie that they think will please the authorities or injure their personal enemies. But if the Government in this country have upon such information believed that the lives of Aswini Kumar Dutta and Krishna Kumar Mitra are a mere mask and not the pure and spotless lives we have known, then we must indeed say, “What an amount of folly and ignorance rules at the present moment in this unhappy country.”

Well, we have had many other forms of repression besides these deportations. We have had charges of sedition, charges of dacoity and violence, brought against the young men who are the hope of our country — charges such as those which we have seen breaking down and vanishing into nothing when tested by a high and impartial tribunal. This is the nature of the repression we have been called upon to suffer. It has been so engineered by the underlings of the Government that it strikes automatically at those who are most energetic, most devoted, most self-denying in the service of the mother country. It addresses itself to the physical signs, the outward manifestations of our national life, and seeks by suppressing them to put an end to that national life and movement. But it is a strange idea, a foolish idea, which men have, indeed, always cherished under such circumstances, but which has been disproved over and over again in history, to think that a nation which has once risen, — once has been called up by the voice of God to rise, — will be stopped by mere physical repression. It has never so happened in the history of a nation, nor will it so happen in the history of India. Storm has swept over us today. I saw it come. I saw the striding of the storm-blast and the rush of the rain and as I saw it an idea came to me. What is this storm that is so mighty and sweeps with such fury upon us? And I said in my heart, “It is God who rides abroad on the wings of the hurricane, — it is the might and force of the Lord that manifested itself and His almighty hands that seized and shook the roof so violently over our heads today.” A storm like this has swept also our national life. That too was the manifestation of the Almighty. We were building an edifice to be the temple of our Mother’s worship — were rearing
her a new and fair mansion, a palace fit for her dwelling. It was then that He came down upon us. He flung Himself upon the building we had raised. He shook the roof with His mighty hands and part of the building was displaced and ruined. Why has He done this? Repression is nothing but the hammer of God that is beating us into shape so that we may be moulded into a mighty nation and an instrument for His work in the world. We are iron upon His anvil and the blows are showering upon us not to destroy but to re-create. Without suffering there can be no strength, — without sacrifice there can be no growth. It is not in vain that Aswini Kumar has been taken from his people. It is not in vain that Krishna Kumar Mitra has been taken from us and is rotting in Agra Jail. It is not in vain that all Maharashtra mourns for Tilak at Mandalay. It is He, not any other, who has taken them and His ways are not the ways of men, but He is all-wise. He knows better than we do what is needful for us. He has taken Aswini Kumar Dutta away from Barisal. Is the movement dead? Is Swadeshi dead? The rulers of the country in their scanty wisdom have thought that by lopping off the heads the movement will cease. They do not know that great as he is, Aswini Kumar Dutta is not the leader of this movement, that Tilak is not the leader, — God is the leader. They do not know that the storm that has been sweeping over the country was not sent by them, but by Him for His own great purposes. And the same strength that was manifested in the storm today and in the storm of calamity that has passed over the country — the same strength is in us.

And if they are mighty to afflict, we are mighty to endure. We are no ordinary race. We are a people ancient as our hills and rivers and we have behind us a history of manifold greatness, not surpassed by any other race. We are the descendants of those who performed tapasya and underwent unheard-of austerities for the sake of spiritual gain and of their own will submitted to all the sufferings of which humanity is capable. We are the children of those mothers who ascended with a smile the funeral pyre that they might follow their husbands to another world. We are a people to whom suffering is welcome and who
have a spiritual strength within them, greater than any physical
force. We are a people in whom God has chosen to manifest
Himself more than any other at many great moments of our
history. It is because God has chosen to manifest Himself and
has entered into the hearts of His people that we are rising
again as a nation. Therefore it matters not even if those who are
greatest and most loved are taken away. I trust in God’s mercy
and believe that they will soon be restored to us. But even if they
don’t come again still the movement will not cease. It will move
forward irresistibly until God’s will in it is fulfilled. He fulfils
His purposes inevitably and this too He will fulfil. Those who
are taken from us must after all some day pass away. We are
strong in their strength. We have worked in their inspiration.
But in the inevitable course of nature they will pass from us and
there must be others who will take their places. He has taken
them away from us for a little in order that in their absence we
might feel that it was not really in their strength that we were
strong, in their inspiration that we worked but that a Higher
Force was working in them and when they are removed, can
still work in the hearts of the people. When they pass away
others will arise or even if no great men stand forth to lead,
still the soul of this people will be great with the force of God
within and do the work. This it is that He seeks to teach us
by these separations — by these calamities. The men are gone.
The movement has not ceased. The National School at Jhalakati
was started one month after the deportation of Aswini Kumar
Dutta; that is a patent sign that the movement is not, as our
rulers would ignorantly have it, got up by eloquent agitators.
The movement goes on by the force of nature; it works as force
of nature works and goes inevitably on, whatever obstacle comes
in the way.

What is it that this movement seeks, not according to the
wild chimeras born of unreasoning fear but in its real aim and
purpose? What is it that we seek? We seek the fulfilment
of our life as a nation. This is what the word Swaraj, which is a
bug-bear and terror to the Europeans, really means. When they
hear it, they are full of unreasoning terrors. They think Swaraj
is independence, it is freedom and that means that the people are going to rise against them in rebellion, that means there are bombs behind every bush, that every volunteer who gives food to his famine-stricken countrymen or nurses the cholera-stricken, is a possible rebel and dacoit. Swaraj is not the Colonial form of Government nor any form of Government. It means the fulfilment of our national life. That is what we seek, that is why God has sent us into the world to fulfil Him by fulfilling ourselves in our individual life, in the family, in the community, in the nation, in humanity. That is why He has sent us into the world and it is this fulfilment that we demand; for this fulfilment is life and to depart from it is to perish. Our object, our claim is that we shall not perish as a nation, but live as a nation. Any authority that goes against this object will dash itself against the eternal throne of justice — it will dash itself against the laws of nature which are the laws of God, and be broken to pieces.

This then is our object and by what means do we seek it? We seek it by feeling our separateness and pushing forward our individual self-fulfilment by what we call Swadeshi — Swadeshi in commerce and manufacture, in politics, in education, in law and administration, in every branch of national activity. No doubt this means independence, it means freedom; but it does not mean rebellion. There are some who fear to use the word “freedom”, but I have always used the word because it has been the mantra of my life to aspire towards the freedom of my nation. And when I was last in jail I clung to that mantra; and through the mouth of my counsel I used this word persistently. What he said for me — and it was said not only on my behalf, but on behalf of all who cherish this ideal, — was this: If to aspire to independence and preach freedom is a crime you may cast me into jail and there bind me with chains. If to preach freedom is a crime then I am a criminal and let me be punished. But freedom does not mean the use of violence — it does not mean bombs; it is the fulfilment of our separate national existence. If there is any authority mad enough to declare that Swadeshism, national education, arbitration, association for improvement of our physique, is illegal, it is not stamping out anarchism; it is
on the contrary establishing a worse anarchism from above. It sets itself against the law of God that gives to every nation its primary rights. The judge in the Alipore case said that the aspiration after independence and the preaching of the ideal of independence was a thing no Englishman could condemn. But if you say that the aspiration after independence is a thing none can condemn and yet put down by force the only peaceful means of securing independence, you are really declaring that it is the practice of independence which you will not tolerate. Because a few have gone mad and broken the law you have chosen to brand a whole people, to condemn a nation and to suppress a whole national movement. With that we have nothing to do. We have no voice in the government of our country; and the laws and their administration are things in which you don’t allow us to have any concern. But one thing is in our own power; — our courage and devotion are in our power, our sacrifice, our suffering are in our power. That you cannot take away from us, and so long as you cannot take that from us you can do nothing. Your repression cannot for ever continue, for it will bring anarchy into the country. You will not be able to continue your administration if this repression remains permanent. Your government will become disorganised; the trade you are using such means to save will languish and capital be frightened from the country.

We have therefore only to suffer. We have only to be strong and enduring. All this machinery of coercion, all this repression, will then be in vain. That is the only virtue that is needed. We shall never lose our fortitude, our courage, our endurance. There are some who think that by lowering our heads the country will escape repression. That is not my opinion. It is by looking the storm in the face and meeting it with a high courage, fortitude and endurance that the nation can be saved. It is that which the Mother demands from us, — which God demands from us. He sent the storm yesterday and it carried the roof away. He sent it today with greater violence and it seized the roof to remove it. But today the roof remained. This is what He demands of us. — “I have sent my storms upon you, so that you may feel and
train your strength. If you have suffered by them, if something has been broken, it does not matter, so long as you learn the lesson that it is for strength I make you suffer and always for strength.” What did the volunteers do today when they flung themselves in crowds on the roof and braved the fury of the hurricane and by main strength held down the roof over their heads? That is the lesson that all must learn and especially the young men of Bengal and India. The storm may come down on us again and with greater violence. Then remember this, brave its fury, feel your strength, train your strength in the struggle with the violence of the wind, and by that strength hold down the roof over the temple of the Mother.
Bakarganj Speech

I have spent the earlier part of my life in a foreign country from my very childhood, and even of the time which I have spent in India, the greater part of it has been spent by me on the other side of India where my mother tongue is not known, and therefore although I have learned the language like a foreigner and I am able to understand it and write in it, I am unable, I have not the hardihood, to get up and deliver a speech in Bengali.

The repression and the reforms are the two sides of the political situation that the authorities in this country and in England present to us today. That policy has been initiated by one of the chief statesmen of England, one famous for his liberal views and professions, one from whom at the inception of his career as Secretary of State for India much had been expected. Lord Morley stands at the head of the administration in India, clad with legal and absolute power; he is far away from us like the gods in heaven, and we do not see him. And just as we do not see the gods in heaven but are obliged to imagine them in a figure, so we are compelled to imagine Lord Morley in a sort of figure, and the figure in which he presents himself to us is rather a peculiar one. Just as our gods sometimes carry weapons in their hands and sometimes they carry in one hand the khadga and in another hand the varabhaya, so Lord Morley presents himself to us with a khadga in one hand and the varabhaya in another, and he invites us to consider him in this image. From the beginning there has been this double aspect in him. He has, so to speak, spoken in two voices from the beginning. One voice at the beginning said “sympathy”, while the other voice

said “settled fact”; one voice speaks of reforms and elective representation, and the other voice speaks of the necessity of preserving absolute government in India to all time. First of all he has given you, with a great flourish it has been announced that he was going to give, and he has given, a non-official majority in the Legislative Council; he has given an elective system, he has given to a certain extent the power of voting in the Council, voting on Government measures. On the face of it these seem very large concessions; it seems that a very substantial measure of self-government has been given; that is the tone in which the English papers have been writing today; they say that this reform is a great constitutional change and that it opens a new era in India. But when we examine them carefully, it somehow comes to seem that these reforms of Lord Morley are, like his professions of Liberalism and Radicalism, more for show than for use.

This system which Lord Morley has given us is marred by two very serious defects. One of them is this very fact that the elected members will be in the minority, the nominated non-officials and the officials being in the majority; and the second is that an entirely non-democratic principle has been adopted in this elective system, the principle of one community being specially represented.

The Government of India is faced today by a fact which they cannot overlook, a fact which is by no means pleasant to the vested interests which they represent, but at the same time a fact which cannot be ignored, and that is, that the people of India have awakened, are more and more awakening, that they have developed a real political life, and that the demands they make are demands which can no longer be safely left out of the question. There is the problem before the Government, “What to do with this new state of things?” There were two courses open to them — one of frank repression and the other course was the course of frank conciliation, either to stamp out this new life in the people or to recognise it; to recognise it as an inevitable force which must have its way, however gradually. The Government were unable to accept either of these alternative policies. They
have tried to mix them, and in trying to mix them they have adopted the principle of pressing down the movement with one hand and with the other hand trying to circumvent it. “You demand a popular assembly, you demand self-government. Well, we give you a measure of self-government, an enlarged and important Legislative Council, but in giving we try so to arrange the forces that the nation instead of being stronger may be weaker. Your strength is in the educated classes, your strength is more in the Hindu element in the nation than in the Mohammedan element, because they have not as yet awakened as the Hindu element has awakened. Well, let us remember our ancient policy of divide and rule, let us depress the forces which make for strength and raise up the force which is as yet weak and set up one force against the other, so that it may never be possible for us to be faced in the Legislative Council by a united majority representing the Indian people and demanding things which we are determined never to give.”

Obviously when two forces stand against each other equally determined in two opposite directions, the people can only effect their aim by pressure upon the Government. That is a known fact everywhere, which every political system recognises, for which every political system has to provide. In every reasonable system of government there is always some provision made for the pressure of the people upon the Government to make itself felt. If no such provision is made, then the condition of that country is bound to be unsound, then there are bound to be elements of danger and unrest which no amount of coercion can remove, because the attempt to remove them by coercion is an attempt to destroy the laws of nature, and the laws of nature refuse to be destroyed and conducted. We have no means to make the pressure of the people felt upon the Government. The only means which we have discovered, the only means which we can use without bringing on a violent conflict, without leading to breaches of the law on both sides and bringing things to the arbitrament of physical force, have been the means which we call passive resistance and specially the means of the boycott. Therefore just as we have said that the boycott is a settled fact
because the Partition of Bengal is not rescinded and it shall remain so until it is rescinded, so we must say that the boycott must remain a settled fact because we are allowed no real control over the Government.

For the time the Government have succeeded in separating two of the largest communities in India; they have succeeded in drawing away the Mohammedans because of their want of education and enlightenment and of political experience which allows them to be led away by promises that are meant for the ear, by promises of concessions which the Government cannot give without destroying their own ends. For a time until the Mohammedans by bitter experience see the falseness of their hopes and the falseness of the political means which they are being induced to adopt, until then it will be difficult for the two communities to draw together and to stand united for the realisation of their common interest.

These are times of great change, times when old landmarks are being upset, when submerged forces are rising, and just as we deal promptly or linger over the solution of these problems, our progress will be rapid or slow, sound or broken. The educated class in India leads, but it must never allow itself to be isolated. It has done great things; it has commenced a mighty work, but it cannot accomplish these things, it cannot carry that work to completion by its own united efforts. The hostile force has recognised that this educated class is the backbone of India and their whole effort is directed towards isolating it. We must refuse to be isolated, we must recognise where our difficulties are, what it is that stands in the way of our becoming a nation and set ourselves immediately to the solution of that problem.

The problem is put to us one by one, to each nation one by one, and here in Bengal it is being put to us, and He has driven it home. He has made it perfectly clear by the events of the last few years. He has shown us the possibility of strength within us, and then He has shown us where the danger, the weakness lies. He is pointing out to us how it is that we may become strong. On us it lies, on the educated class in Bengal, because Bengal leads, and what Bengal does today the rest of India will do tomorrow;
it specially lies upon us, the educated class in Bengal, to answer the question which God has put to us, and according as we answer, on it depends how this movement will progress, what route it will take, and whether it will lead to a swift and sudden salvation or whether, after so many centuries of tribulation and suffering, there is still a long period of tribulation and suffering before us. God has put the question to us, and with us entirely it lies to answer.
GENTLEMEN, today I will speak a few words on the Gita. The main object of that philosophy is found in the Vedanta, which is the basis of Hindu thought and life, and according to the Vedanta, life is dominated by maya or avidya. We are driven into action because we are ignorant of our true selves, of the true nature of the world. We identify ourselves with our bodies, our desires, our sorrows, and not our spirits. We lose ourselves in our happiness, griefs and pleasures.

By these motives we are driven into action. This life is a chain of bondage which keeps us revolving. We are surrounded on all sides by forces which we cannot control. As man has a perpetual desire for freedom, he is driven by forces he cannot control. Under the influence of these forces within or without, action takes place. The object of Hindu philosophy is to make man no longer a slave, but to escape from bondage and to make human beings free. Hindu philosophy tries to go into the root of things. What is the real beginning of maya? . . . Whatever we may try, from the nature of the world we cannot escape from bondage. There is a knowledge, by attaining which we can become free.

In the Gita we find that Srikrishna unites the Vedanta philosophy with the philosophy of Sankhya. Modern science denies that man has a soul. Science considers only the laws of nature. It regards nature as material, and man as merely a product of nature. It says man is a creation of natural forces. All his actions are results of fixed laws, and he has no freedom. According to the Sankhya, man has a soul and is essentially the Purusha.

Delivered at Khulna, Bengal, on 25 June 1909. Noted down by police agents and reproduced in a Government of Bengal confidential file. A note preceding the report of the speech says that “about three-fourths of it have been taken down”. The text needed emendation in many places.
and not matter. The spirit does not act. The soul is calm and motionless. Prakriti is always shifting and changing, and under her influence all actions take place. Prakriti acts.

Man can only free himself by recognising that he is the Purusha. Srikrishna adopts this theory of Sankhya in the Gita, and he also adopts the philosophy of Vedanta. He says that man has an immortal soul, but there is also a universal soul. Man is merely part of God. He is merely a part of something that is eternal, infinite, omniscient and omnipotent. This eternal power is what really exists, and in all that we see, hear, feel, it is He alone who exists. It is He alone whom we feel and see. Parameshwara builds up this world by His maya. He is the master of the great illusion which we call maya. This He made to express Himself, the One. All these things around us are transitory. Within us is that which cannot change, which is eternally free and happy. If man feels himself miserable, it is because he in his ignorance allows himself to be dominated by egoism (ahankara). He thinks that he is all. He does not realise that God is the master of this lila. He thinks that it is I who act, I who am the lord of my body, and because he thinks so, he is bound by his action. By these forces he is driven from birth to birth. The great illusion is that this body which he inhabits is himself; next he identifies himself with the mind and thinks it is I who think, see and feel. In reality, according to the Gita, God is within the heart of every creature.

The second thing you have to recognise is that you are only a part of Him, who is eternal, omniscient and omnipotent.

His first answer to Arjuna is that the feeling which has come upon him is not the pure feeling. It is a feeling of egoism. Still Arjuna does not understand how that can be.

How can it be my dharma to kill my own brothers and relations? How can it be to slaughter my nation and house? Srikrishna answers according to the spirit of Hindu ideas. He says that it is your dharma, because you are a Kshatriya. This is a dharma of a particular kind. The duty of the Kshatriya is not the same as that of the Brahmin, and that of the Shudra is not equal to that of the Kshatriya. If a Shudra adopts the dharma
of a Brahmin, he brings about the confusion of all laws and leads to the destruction and not to the betterment of mankind. It is nature which teaches you your own dharma. This is your dharma. If you shrink from upholding the cause of virtue, truth and justice, out of a feeling which is inconsistent, you are guilty, you bring in confusion, you encourage yourself to give up your duty.

Still Arjuna is not satisfied. Srikrishna goes still deeper. He says that the whole of our life is determined by maya which is of three kinds — sattwa, rajas, and tamas. Their nature is this. Sattwa leads to knowledge, rajas leads to action, and tamas leads to inaction and ignorance. These are the qualities of nature which govern the world. The swabhava which leads you to work is determined by the three gunas. Action is determined by swabhava. All action leads to bondage and is full of defects. What you call virtue or virtues, they have defects in themselves. The virtue of Brahmins is a great virtue. You shall not kill. This is what ahinsa means. If the virtue of ahinsa comes to the Kshatriya, if you say I will not kill, there is no one to protect the country. The happiness of the people will be broken down. Injustice and lawlessness will reign. The virtue becomes a source of misery, and you become instrumental in bringing misery and conflict to the people. Your duty to your family seems to conflict with your duty to society, that of society to the nation, and that of the nation to mankind. How shall we follow the path which leads to salvation? It is difficult to say what is right and what is wrong. How to decide it then? There is one way: do action in yoga, and then you rise above ignorance, and sin cannot touch you, and you rise above all that hampers you and binds you.

What is yoga? Not a certain process. When we think of yoga, we think of a man who shuts himself up in a cave and subjects himself to certain practices. He frees himself from all bondage. But Srikrishna uses yoga in a different sense. He says: Do action in yoga. The first element is samata. Samata means you shall look with equal eyes upon happiness and misfortune, praise and blame, honour and dishonour, and success and failure. You shall regard none of these, but with a calm and unshaken mind
you should proceed with the work which you are given to do, unshaken by the praise or censure of the world. The man who has this *samata* has no friends and no enemies. He looks upon all with equal feelings, because he has knowledge, because he has looked into himself, then out into the world. He finds himself everywhere and all in himself. He finds himself in all because God is in all. Whether he looks at the high or low, he sees no difference and sees that in every creature there is Narayana. He sees that he is only an *ansha* of one who is in every particle of matter. If there be any differences, they are only temporary and outward. He is only that through which Vasudeva carries on his *lila*. He is not anxious to know what will happen tomorrow, because the action is not guided by laws. The man who has communion with God has no reason to be guided by laws, because he knows God is alone and all. He is not troubled by the fruits of his action. “You have the right to action, to work, but not to the fruit. Work and leave the result to me. Those men whom you shrink from slaying are already slain. These men would all perish. Therefore the fruit is already obtained beforehand by me. Your anxiety for the result is ignorance.” The destiny of the world is fixed. When a man has to do anything he must know that the fruits are with God. Man is to do what God wills.

*Yoga* means freedom from *dwandwa*. The Yogin is free from the bondage of pleasure and pain, of anger and hatred and attachment, of liking and disliking, because he looks with equal eyes on all. He does not shrink from misfortune or misery, happiness or unhappiness. He rises above the bondage of the body, because no man can give him pleasure or pain, because he has his own source of strength, of delight and happiness. This is the freedom which the *Gita* says the *yoga* gives, the freedom which we ordinarily mean by *mukti*. This is the freedom which the *Gita* promises. He says if you act in *yoga*, you rise above grief and pain, even above all things. You are free from fear or sin, because you do not act for yourself. You do not act because you will get pleasure, but for the sake of God; that is how you are to reach *yoga*. If you wish to be happy, you must give up all your works to God. You must do all your work for His
sake, and therefore sin does not touch you. It is only because of selfishness that sin touches you. If you realise that Narayana is in all, it follows that you lose the smaller, the individual limited self. You look to wider things. You see yourself in the family, in the community, race, humanity, and all things in the world. You forget yourself altogether. You work for the race and others, for mankind. It is not God's work when you follow after your selfishness. The Gita says: “Your welfare is God's business.” If you work for Him you have no fear, because God stretches out His hand of mercy to you. It is to that which the yoga leads.

The teaching of the Gita, if it is followed, delivers you from all possibility of sin, of sorrow. He says: “Take refuge in me. I shall free you from all evil. Do everything as a sacrifice to me.” That is the goal towards which you move. The name of Hari will free you from all evil.

This is the way in which Srikrishna has solved the problem put by Arjuna. Arjuna says: “It is my duty to fight for justice, it is my duty as a Kshatriya not to turn from Dharmayuddha, but I am perplexed, because the consequences will be so terrible. The people I am to slay are dear to me. How can I kill them?” Krishna says: “There is no doubt an apparent conflict of duties, but that is the nature of life. Life is itself a problem, a very entangled thread, which it is impossible to undo. But it is I who do all these things, I who am leading you to the fulfilment of your duties. Leave it to me. If you do your duty, it is a thing which I am bringing about. You are not doing it from selfishness. It is a thing necessary for my purpose. It is a thing which is decreed, already done, but it is now to be effected in the material world. Whatever happens, it happens for the best. I now give you my knowledge, the key to yoga. I remove the veil of ignorance from you. I give you the meaning of yoga.” In the Gita Srikrishna gives certain rules by which a man may hold communion with God.

The Gita says that man is not a bundle of outward cares and griefs, of things that do not last. Man is a garment which is put off from time to time, but there is within us something which is omniscient and eternal and cannot be drowned.
Srikrishna gave Arjuna the *divya chakshu*, with which he saw the Vishwarupa. He now sees Vasudeva everywhere. He sees within him things that cannot be seen by the mysteries of science. With this knowledge comes to him that force.

How can I act, yet be free from bondage? The Gita says that the man who has knowledge has to do exactly what other men do. He has to live as a man in his family, race and nation. But there is a difference which is internal and not external. By the internal difference he acts in communion with God; others act in pursuance of their desires. He knows by experience how a man can act when he is free from desire. This force of action is the force of God Himself. He is not troubled by the result of action; he gets eternal bliss.

This is the whole teaching of the Gita. It is *yoga* which gives utter perfection in action. The man who works for God is not shaken by doubts.

The teaching of the Gita is a teaching for life, and not a teaching for the life of a closet. It is a teaching which means perfection of action. It makes man great. It gives him the utter strength, the utter bliss which is the goal of life in the world.
Facts and Opinions

The Message of India

The ground gained by the Vedantic propaganda in the West, may be measured by the growing insight in the occasional utterances of well-informed and intellectual Europeans on the subject. A certain Mrs. Leighton Cleather speaking to the Oriental circle of the Lyceum Club in London on the message of India has indicated the mission of India with great justness and insight. We need not follow Mrs. Cleather into her dissertation on the Kshatriyas, whom for some mysterious reason she insists on calling the Red Rajputs, but it is true that the first knowledge of Vedantic truth and the Rajayoga was the possession of the Kshatriyas till Janaka, Ajatashatru and others gave it to the Brahmins. But the real issues of this historical fact are inevitably missed by the lecturer. She is on a surer ground when she continues, “India’s message to the world today she considered to be the realisation of the life beyond material forms. The East has taken for granted the reality of the invisible and has no fear. The recognition of the soul in ourselves and others leads to the recognition of the universal soul and the great word of the Upanishads: ‘This soul which is the self of all that is, this is the real, this the self, that thou art.’ Modern civilisation has lost sight of
the fundamental law of self-sacrifice as conditioning man’s evolution.”

We have here, very briefly put, the triple message of India, psychical, spiritual and moral. India believes in and has the key to a psychical world within man and without him which is the source and basis of the material. This it is which Europe is beginning dimly to discover. She has caught glimpses of the world beyond the gates, her hands are fumbling for the key but she has not yet found it. Immortality proved and admitted, it becomes easier to believe in God. The spiritual message is that the universal self is one and that our souls are not only brothers, not only of one substance and nature, but live in and move towards an essential oneness. It follows that Love is the highest law and that to which evolution must move. Ananda, joy and delight, are the object of the līla and the fulfilment of love is the height of joy and delight. Self-sacrifice is therefore the fundamental law. Sacrifice, says the Gita, is the law by which the Father of all in the beginning conditioned the world, and all ethics, all conduct, all life is a sacrifice willed or unconscious. The beginning of ethical knowledge is to realise this and make the conscious sacrifice of one’s own individual desires. It is an inferior and semi-savage morality which gives up only to gain and makes selfishness the basis of ethics. To give up one’s small individual self and find the larger self in others, in the nation, in humanity, in God, that is the law of Vedanta. That is India’s message. Only she must not be content with sending it, she must rise up and live it before all the world so that it may be proved a possible law of conduct both for men and nations.

Lord Honest John

On the converse side a passage from Mr. Algernon Cecil’s “Six Oxford Thinkers” is instructive. He dwells on the self-contradictory and ironic close of John Morley’s life. “He the philosophic Liberal, the ardent advocate of Home Rule, the persistent foe of war and coercion, is closing his fine record of public service with a coronet on his head as the ruler of India,
of the child of Clive and Warren Hastings, of the creature of
strife and fraud; as one might say, a benevolent despot in an
absolute constitution imposed and administered by an alien
race.” We in India are sure of the despotism but have some
doubts about the benevolence. Nor can we accept the phrase,
absolute constitution, as anything but an oxymoron, a “witty
folly”, a happy and ironical contradiction in terms. But for the
rest the implied criticism is just.

The Failure of Europe

Mr. Cecil sees in this ending of Honest John as Lord Morley
the failure of Liberalism; and it must be remembered that the
failure of Liberalism means the abandonment of the gospel
of Liberty, Equality and Fraternity as a thing unlivable, and
that again means the moral bankruptcy of Europe. “Liberal-
ism in any intelligible sense cannot last another generation. In
a score of years the strange adventure on which the nations
of Europe embarked in 1789 will be concluded, and we shall
revert, doubtless with many and formidable changes, to an ear-
lier type. The principles of unchecked individual liberty and
unrestricted competition have, to use the ancient phrase, been
tried in the balance and found wanting. The golden dreams
which so lately cheated the anxious eyes of men have tarnished
with time. Their splendour has proved illusive and they have
gone the way of other philosophies down a road upon which
there is no returning. The old aristocrats have been swept away
and some malicious spirit has given us new ones bathed in the
most material sort of golden splendour. And Misery, Vice and
Discontent stalk among the drudges of society much as they
did before.” Mr. Cecil like most Europeans sees that European
liberalism has failed but like most Europeans utterly misses
the real reason of the failure. The principles of 1789 were
not false, but they were falsely stated and selfishly executed.
Europe had not the spiritual strength, nor the moral force to
carry them out. She was too selfish, too short-sighted, too ma-
terialistic and ignorant. She deserved to fail and could not but
fail. It is left for Asia and especially for India to reconstruct the world.

**British Fears**

The genesis of the Imperial Press Conference is to be found in that feeling of insecurity which is driving England to seek allies on the Continent and gather round her the children of her loins beyond the seas. During the better part of the nineteenth century after her triumph over Napoleon and her amazing expansion in India, she felt too strong to need extraneous assistance. Mistress of the seas, enormously wealthy, monopolist almost of the world’s commerce, she followed on the Continent a policy of splendid isolation broken only by the ill-starred alliance with the third Napoleon. She fought for her own hand everywhere and felt strong enough to conquer. Her Colonies she regarded only as a nuisance. They were a moral asset, probably, but hardly a material. They assisted her in no way, they excluded her commerce by tariffs, they took her protection without payment and yet exacted internal independence with an inordinate and querulous jealousy of her interference and unwillingness to allow even the slightest iota of British control to mar the perfection of their autonomy. But a change has come over the spirit of her dream. Mighty powers have arisen in the world, young, ardent, ambitious, rapidly expanding, magnificently equipped, moving with the sureness and swiftness of material forces towards empire and aggrandisement. Their armies are gigantic forces against which England’s would be as helpless as a boy in the hands of a Titan. Their wealth increases. They are beating England out of the chosen fields of her commercial expansion, and it is only by bringing out all the reserves of her old energy that she can just keep a first place; worst of all, their navies grow and if they cannot keep pace with hers in numbers, equal it in efficiency. On the other hand India, her passive source of wealth, strength and prestige, is struggling in her turn to exclude British commerce and assert autonomy without British control. England is uneasy; she cannot slumber at night for thinking of
her precarious future. To her excited imagination German airships fill the skies and the myriad tramp of the Teuton is heard already marching on London, while huge conspiracies spring up like mushrooms in India and evade the eager grasp of the Police with a diabolical skill which leaves behind only arrests and persecution of innocent men, hard judicial comments, a discredited C.I.D. and a desperate weeping Englishman. One can no longer recognise the strong, stolid, practical, invincible Britisher in the emotional, hysterical, excitable, panic-stricken race dancing to the tune of its newly liberated imagination.

The Journalistic War Council

It is not surprising under such circumstances that leading Englishmen should call a Press Conference and turn it into a War Council full of such themes as military conscription and naval expansion and always looking out of the corner of its eye at Imperial Federation. The aid and backing of the Colonies has now become a necessity to British imagination. England seeks an American alliance and hungers after the unity of the Anglo-Saxon world, but there are hostile elements in America which militate against that dream. Parting with her old friends of the Triple Alliance she embraces France, her ancient and traditional enemy; she courts her bug-bear Russia and many of her publicists are ready to excuse and condone the most savage, merciless and inhuman system of tyranny in the world provided she gets a friend in need. But these are uncertain and transitory supports, while the Colonies are bound by ties of blood and interest. The objective of the Press Conference is therefore the Colonies, the union of the English throughout the Empire. And although Srijut Surendranath has been led to the gathering in gilded fetters and is “the most picturesque figure” in the Conference, that is all he is, a picture, even if a speaking picture, — nothing else. For the rest it is Anglo-India that has been called to the great journalistic War Council, not India. The real India has no place there. We wish Srijut Surendranath could have realised it. It might have prevented him from indulging in rhetorical hyperboles about
“the wise and conciliatory policy of Lord Morley” — forgetful of the nine deportees, forgetful of the many good and true men in jail for Swadeshi, forgetful of Midnapore and all it typifies.

Forgotten Eventualities

It is strange that British statesmanship should be blind to certain possibilities which will follow from their new Colonial policy. Among the first results of the new idea has been the federation of Australia and the federation of South Africa. The former event is not of such importance to the world as the latter. The referendum in Natal is indeed an event of the first significance, but what it portends is the rise of a new and vigorous nation, perhaps a new empire in South Africa, — certainly not the consolidation of the British Empire. Great organisms like these tend inevitably to separate existence. The one thing that stands in the way is the present inability of these organisms to defend their separate existence. Australia lies under the outstretched sword of Japan to say nothing of the subtler, less apparent but more ominous menace of Germany. Canada is kept to England by the contiguity of a powerful, well-organised and expanding foreign State. South Africa on the other hand is occupied by a strong military race with a stubborn love of independence in its very blood. In the last war it has become aware of its supreme military capacity but also of its inability to hold its freedom without a navy. Yet the main cry of England now is that the Colonies should organise military and naval defence in order to lighten the burden of England and help her in her wars! They are not satisfied with the contribution of a Dreadnought. They want an Australian navy, a South African navy. Surely, God has sealed up the eyes and wits of these Imperialistic statesmen. They have eyes but they cannot see; they have minds but they are allowed only to misuse them.

National Vitality

Nothing is stranger than the difference presented by Europe and Asia in the matter of national vitality. European nations seem
to have a brief date, a life-term vigorous but soon exhausted; Asiatic races persist and survive. It was not so in old times. Not only Greece and Rome perished, Assyria, Chaldea, Phoenicia are also written in the book of the Dead. But the difference now seems well-established. France is a visibly dying nation, Spain seems to have lost the power of revival, Italy and Greece have been lifted up by great efforts and sacrifices but show a weak vitality, the Anglo-Saxon race is beginning everywhere to recede and dwindle. On the other hand in Asia life pulsates victoriously. Japan has risen at one bound to the first rank of nations; China untouched by her calamities renovates her huge national life. The effect on India of an accumulation of almost all the conditions which bring about national death, has been a new lease of life and a great dynamic impulse. Of the Mahomedan races, not a single one is decadent. Persia rises from her weakness full of youthful enthusiasm and courage though not yet of capacity. Arabia in her deserts surges with life. Egypt after her calamities is undergoing new birth; as far as Morocco the stir of life is seen. And today Turkey, the sick man, has suddenly risen up vigorous and whole. What is the source of this difference? Is it not in this that Asia has developed her spirituality and Europe has turned from it? Europe has always tended to live more in matter and in the body than within; and matter when not inert is always changing; the body is bound to perish. The high pressure at which Europe lives only tends to disintegrate the body more rapidly when the spiritual sources within are not resorted to for stability.
NO NATIONAL awakening is really vital and enduring which confines itself to a single field. It is when the soul awakens that a nation is really alive, and the life will then manifest itself in all the manifold forms of activity in which man seeks to express the strength and the delight of the expansive spirit within. It is for ananda that the world exists; for joy that the Self puts Himself into the great and serious game of life; and the joy which He sees is the joy of various self-expression. For this reason it is that no two men are alike, no two nations are alike. Each has its own separate nature over and above the common nature of humanity and it is not only the common human impulses and activities but the satisfaction and development of its own separate character and capacities that a nation demands. Denied that satisfaction and development, it perishes. By two tests, therefore, the vitality of a national movement can be judged. If it is imitative, imported, artificial, then, whatever temporary success it may have, the nation is moving towards self-sterilisation and death; even so the nations of ancient Europe perished when they gave up their own individuality as the price of Roman civilisation, Roman peace, Roman prosperity. If, on the other hand, the peculiar individuality of a race stamps itself on the movement in its every part and seizes on every new development as a means of self-expression, then the nation wakes, lives and grows and whatever the revolutions and changes of political, social or intellectual forms and institutions, it is assured of its survival and aggrandisement.

The nineteenth century in India was imitative, self-forgetful, artificial. It aimed at a successful reproduction of Europe in India, forgetting the deep saying of the Gita — “Better the law of one’s own being though it be badly done than an alien dharma well-followed; death in one’s dharma is better, it is a dangerous
thing to follow the law of another’s nature.” For death in one’s own dharma brings new birth, success in an alien path means only successful suicide. If we had succeeded in Europeanising ourselves we would have lost for ever our spiritual capacity, our intellectual force, our national elasticity and power of self-renovation. That tragedy has been enacted more than once in history, only the worst and most mournful example of all would have been added. Had the whole activity of the country been of the derivative and alien kind, that result would have supervened. But the life-breath of the nation still moved in the religious movements of Bengal and the Punjab, in the political aspirations of Maharashtra and in the literary activity of Bengal. Even here it was an undercurrent, the peculiar temperament and vitality of India struggling for self-preservation under a load of foreign ideas and foreign forms, and it was not till in the struggle between these two elements the balance turned in the favour of the national dharma that the salvation of India was assured. The resistance of the conservative element in Hinduism, tamasic, inert, ignorant, uncreative though it was, saved the country by preventing an even more rapid and thorough disintegration than actually took place and by giving respite and time for the persistent national self to emerge and find itself. It was in religion first that the soul of India awoke and triumphed. There were always indications, always great forerunners, but it was when the flower of the educated youth of Calcutta bowed down at the feet of an illiterate Hindu ascetic, a self-illuminated ecstatic and “mystic” without a single trace or touch of the alien thought or education upon him that the battle was won. The going forth of Vivekananda, marked out by the Master as the heroic soul destined to take the world between his two hands and change it, was the first visible sign to the world that India was awake not only to survive but to conquer. Afterwards when the awakening was complete a section of the nationalist movement turned in imagination to a reconstruction of the recent pre-British past in all its details. This could not be. Inertia, the refusal to expand and alter, is what our philosophy calls tamas, and an excess of tamas tends to disintegration and disappearance. Aggression
is necessary for self-preservation and when a force ceases to conquer, it ceases to live — that which remains stationary and stands merely on the defensive, that which retires into and keeps within its own kot or base, as the now defunct Sandhya used graphically to put it, is doomed to defeat, diminution and final elimination from the living things of this world. Hinduism has always been pliable and aggressive; it has thrown itself on the attacking force, carried its positions, plundered its treasures, made its own everything of value it had and ended either in wholly annexing it or driving it out by rendering its further continuation in the country purposeless and therefore impossible. Whenever it has stood on the defensive, it has contracted within narrower limits and shown temporary signs of decay.

Once the soul of the nation was awake in religion, it was only a matter of time and opportunity for it to throw itself on all spiritual and intellectual activities in the national existence and take possession of them. The outburst of anti-European feeling which followed on the Partition gave the required opportunity. Anger, vindictiveness and antipathy are not in themselves laudable feelings, but God uses them for His purposes and brings good out of evil. They drove listlessness and apathy away and replaced them by energy and a powerful emotion; and that energy and emotion were seized upon by the national self and turned to the uses of the future. The anger against Europeans, the vengeful turning upon their commerce and its productions, the antipathy to everything associated with them engendered a powerful stream of tendency turning away from the immediate Anglicised past, and the spirit which had already declared itself in our religious life entered in by this broad doorway into politics, and substituted a positive powerful yearning towards the national past, a still more mighty and dynamic yearning towards a truly national future. The Indian spirit has not yet conquered the whole field of our politics in actuality, but it is there victoriously in sentiment; the rest is a matter of time, and everything which is now happening in politics, is helping to prepare for its true and potent expression. The future is now assured. Religion and politics, the two most effective and vital
expressions of the nation’s self having been nationalised, the rest will follow in due course. The needs of our religious and political life are now vital and real forces and it is these needs which will reconstruct our society, recreate and remould our industrial and commercial life and found a new and victorious art, literature, science and philosophy which will be not European but Indian.

The impulse is already working in Bengali art and literature. The need of self-expression for the national spirit in politics suddenly brought back Bengali literature to its essential and eternal self and it was in our recent national songs that this self-realisation came. The lyric and the lyrical spirit, the spirit of simple, direct and poignant expression, of deep, passionate, straightforward emotion, of a frank and exalted enthusiasm, the dominant note of love and Bhakti of a mingled sweetness and strength, the potent intellect dominated by the self-illuminated heart, a mystical exaltation of feeling and spiritual insight expressing itself with a plain concreteness and practicality — this is the soul of Bengal. All our literature, in order to be wholly alive, must start from this base and whatever variations it may indulge in, never lose touch with it. In Bengal, again, the national spirit is seeking to satisfy itself in art and, for the first time since the decline of the Moguls, a new school of national art is developing itself, the school of which Abanindranath Tagore is the founder and master. It is still troubled by the foreign though Asiatic influence from which its master started, and has something of an exotic appearance, but the development and self-emancipation of the national self from this temporary domination can already be watched and followed. There again, it is the spirit of Bengal that expresses itself. The attempt to express in form and limit something of that which is formless and illimitable is the attempt of Indian art. The Greeks, aiming at a smaller and more easily attainable end, achieved a more perfect success. Their instinct for physical form was greater than ours, our instinct for psychic shape and colour was superior. Our future art must solve the problem of expressing the soul in the object, the great Indian aim, while achieving anew the triumphant combination of perfect interpretative form and colour. No Indian has so strong
an instinct for form as the Bengali. In addition to the innate Vedantism of all Indian races, he has an all-powerful impulse towards delicacy, grace and strength, and it is these qualities to which the new school of art has instinctively turned in its first inception. Unable to find a perfect model in the scanty relics of old Indian art, it was only natural that it should turn to Japan for help, for delicacy and grace are there triumphant. But Japan has not the secret of expressing the deepest soul in the object, it has not the aim. And the Bengali spirit means more than the union of delicacy, grace and strength; it has the lyrical mystic impulse; it has the passion for clarity and concreteness and as in our literature, so in our art we see these tendencies emerging — an emotion of beauty, a nameless sweetness and spirituality pervading the clear line and form. Here too it is the free spirit of the nation beginning to emancipate itself from the foreign limitations and shackles.

No department of our life can escape this great regenerating and reconstructing force. There is not the slightest doubt that our society will have to undergo a reconstruction which may amount to revolution, but it will not be for Europeanisation as the average reformer blindly hopes, but for a greater and more perfect realisation of the national spirit in society. Not individual selfishness and mutually consuming struggle but love and the binding of individuals into a single inseparable life is the national impulse. It sought to fulfil itself in the past by the bond of blood in the joint family, by the bond of a partial communism in the village system, by the bond of birth and a corporate sense of honour in the caste. It may seek a more perfect and spiritual bond in the future. In commerce also so long as we follow the European spirit and European model, the individual competitive selfishness, the bond of mere interest in the joint-stock company or that worst and most dangerous development of co-operative Capitalism, the giant octopus-like Trust and Syndicate, we shall never succeed in rebuilding a healthy industrial life. It is not these bonds which can weld Indians together. India moves to a deeper and greater life than the world has yet imagined possible and it is when she has found the secret of expressing herself
in these various activities that her industrial and social life will become strong and expansive.

Nationalism has been hitherto largely a revolt against the tendency to shape ourselves into the mould of Europe; but it must also be on its guard against any tendency to cling to every detail that has been Indian. That has not been the spirit of Hinduism in the past, there is no reason why it should be so in the future. In all life there are three elements, the fixed and permanent spirit, the developing yet constant soul and the brittle changeable body. The spirit we cannot change, we can only obscure or lose; the soul must not be rashly meddled with, must neither be tortured into a shape alien to it, nor obstructed in its free expansion; and the body must be used as a means, not over-cherished as a thing valuable for its own sake. We will sacrifice no ancient form to an unreasoning love of change, we will keep none which the national spirit desires to replace by one that is a still better and truer expression of the undying soul of the nation.

The Right of Association

M Y FRIEND Pandit Gispati Kavyatirtha has somewhat shirked today his duty as it was set down for him in the programme and left it to me. I hope you will not mind if I depart a little from the suggestion he has made to me. I would like, instead of assuming the role of a preacher and telling you your duties which you know well enough yourselves, to take, if you will allow me, a somewhat wider subject, not unconnected with it but of a wider range. In addressing you today I wish to say a few words about the general right of association especially as we have practised and are trying to practise it in India today. I choose this subject for two reasons, first, because it is germane to the nature of the meeting we are holding, and secondly, because we have seen arbitrary hands laid upon that right of association which is everywhere cherished as a sign and safeguard of liberty and means of development of a common life.

There are three rights which are particularly cherished by free nations. In a nation the sovereign powers of Government may be enjoyed by the few or the many, but there are three things to which the people in European countries cling, which they persistently claim and after which, if they have them not, they always aspire. These are first, the right of a free Press, secondly, the right of free public meeting, and thirdly, the right of association. There is a particular reason why they cling to these three as inherent rights which they claim as sacred and with which authority has no right to interfere. The right of free speech ensures to the people the power which is the greatest

Speech delivered at Howrah, Bengal, on 27 June 1909. Text published in the Bengalee on 29 June; thoroughly revised by Sri Aurobindo and republished in three issues of the Karmayogin in July and August.

www.holybooks.com
means for self-development, and that is the power of spreading
the idea. According to our philosophy it is the idea which is
building up the world. It is the idea which expresses itself in
matter and takes to itself bodies. This is true also in the life
of humanity; it is true in politics, in the progress and life of a
nation. It is the idea which shapes material institutions. It is the
idea which builds up and destroys administrations and Govern-
ments. Therefore the idea is a mighty force, even when it has
no physical power behind it, even when it is not equipped with
means, even when it has not organised itself in institutions and
associations. Even then the idea moves freely abroad through
the minds of thousands of men and becomes a mighty force. It
is a power which by the very fact of being impalpable assumes
all the greater potency and produces all the more stupendous
results. Therefore the right of free speech is cherished because
it gives the idea free movement, it gives the nation that power
which ensures its future development, which ensures success in
any struggle for national life, however stripped it may be of
means and instruments. It is enough that the idea is there and
that the idea lives and circulates. Then the idea materialises itself,
finds means and instruments, conquers all obstacles and goes on
developing until it is expressed and established in permanent
and victorious forms.

This right of free speech takes the form first of a free Press. It
is the Press which on its paper wings carries the idea abroad from
city to city, from province to province until a whole continent is
bound together by the links of one common aspiration. The right
of public meeting brings men together. That is another force.
They meet together on a common ground, moved by a common
impulse, and as they stand or sit together in their thousands, the
force of the idea within moves them by the magnetism of crowds.
It moves from one to another till the hidden shakti, the mighty
force within, stirred by the words thrown out from the platform
travels from heart to heart and masses of men are not only
moved by a common feeling and common aspiration, but by the
force of that magnetism prepared to act and fulfil the idea. Then
comes the right of association, the third of these popular rights.
The Right of Association

Given the common aspiration, common idea, common enthusiasm and common wish to act, it gives the instrument which binds men to strive towards the common object by common and associated actions; the bonds of brotherhood grow, energy increases, the idea begins to materialise itself to work in practical affairs and that which was yesterday merely an idea, merely a word thrown out by the eloquence of the orator, becomes a question of practical politics. It becomes work for it begins to work and fulfil itself. Therefore the people prize these rights, consider them a valuable asset, cling to and cherish and will not easily sacrifice them. Therefore they resent the arbitrary interference which takes from them what they consider indispensable for the preparation of national life.

Association is the mightiest thing in humanity; it is the instrument by which humanity moves, it is the means by which it grows, it is the power by which it progresses towards its final development. There are three ideas which are of supreme moment to human life and have become the watchwords of humanity. Three words have the power of remoulding nations and Governments, liberty, equality and fraternity. These words cast forth into being from the great stir and movement of the eighteenth century continue to act on men because they point to the ultimate goal towards which human evolution ever moves. This liberty to which we progress is liberation out of a state of bondage. We move from a state of bondage to an original liberty. This is what our own religion teaches. This is what our own philosophy suggests as the goal towards which we move, \textit{mukti} or \textit{moksha}. We are bound in the beginning by a lapse from pre-existent freedom, we strive to shake off the bonds, we move forward and forward until we have achieved the ultimate emancipation, that utter freedom of the soul, of the body, of the whole man, that utter freedom from all bondage towards which humanity is always aspiring. We in India have found a mighty freedom within ourselves, our brother-men in Europe have worked towards freedom without. We have been moving on parallel lines towards the same end. They have found out the way to external freedom. We have found out the way to internal
freedom. We meet and give to each other what we have gained. We have learned from them to aspire after external as they will learn from us to aspire after internal freedom.

Equality is the second term in the triple gospel. It is a thing which mankind has never accomplished. From inequality and through inequality we move, but it is to equality. Our religion, our philosophy set equality forward as the essential condition of emancipation. All religions send us this message in a different form but it is one message. Christianity says we are all brothers, children of one God. Mohammedanism says we are the subjects and servants of one Allah, we are all equal in the sight of God. Hinduism says there is one without a second. In the high and the low, in the Brahmin and the Shudra, in the saint and the sinner, there is one Narayana, one God and he is the soul of all men. Not until you have realised Him, known Narayana in all, and the Brahmin and the Shudra, the high and the low, the saint and the sinner are equal in your eyes, then and not until then you have knowledge, you have freedom, until then you are bound and ignorant. The equality which Europe has got is external political equality. She is now trying to achieve social equality. Nowadays their hard-earned political liberty is beginning to pall a little upon the people of Europe because they have found it does not give perfect well-being or happiness and it is barren of the sweetness of brotherhood. There is not fraternity in this liberty. It is merely a political liberty. They have not either the liberty within or the full equality or the fraternity. So they are turning a little from what they have and they say increasingly, “Let us have equality, let us have the second term of the gospel towards which we strive.” Therefore socialism is growing in Europe. Europe is now trying to achieve external equality as the second term of the gospel of mankind, the universal ideal. I have said that equality is an ideal even with us but we have not tried to achieve it without. Still we have learned from them to strive after political equality and in return for what they have given us we shall lead them to the secret of the equality within.

Again there is fraternity. It is the last term of the gospel. It is the most difficult to achieve, still it is a thing towards which
all religions call and human aspirations rise. There is discord in
life, but mankind yearns for peace and love. This is the reason
why the gospels which preach brotherhood spread quickly and
excite passionate attachment. This was the reason of the rapid
spread of Christianity. This was the reason of Buddhism’s rapid
spread in this country and throughout Asia. This is the essence
of humanitarianism, the modern gospel of love for mankind.
None of us have achieved our ideals, but human society has
always attempted an imperfect and limited fulfilment of them. It
is the nature, the dharma of humanity that it should be unwilling
to stand alone. Every man seeks the brotherhood of his fellow
and we can only live by fraternity with others. Through all its
differences and discords humanity is striving to become one.

In India in the ancient times we had many kinds of as-
sociation, for our life was much more complex and developed
than it became afterwards. We had our political associations, we
had our commercial associations, our educational, our religious
associations. As in Europe, so in India men united together for
many interests and worked in association for common ideals.
But by the inroads of invasion and calamity our life became
broken and disintegrated. Still, though we lost much, we had our
characteristic forms in which we strove to achieve that ideal of
association and unity. In our society we had organised a common
village life. It was a one and single village life in which every man
felt himself to be something, a part of a single organism. We had
the joint family by which we tried to establish the principle of
association in our family life. We have not in our social develop-
ments followed the path which Europe has followed. We have
never tended to break into scattered units. The principle of as-
sociation, the attempt to organise brotherhood was dominant in
our life. We had the organisation of caste of which nowadays we
hear such bitter complaints. It had no doubt many and possibly
inherent defects, but it was an attempt, however imperfect, to
base society upon the principle of association, the principle of
closely organising a common life founded on common ideas,
common feelings, common tendencies, a common moral disci-
pline and sense of corporate honour. Then we had an institution

www.holybooks.com
which in its form was peculiar to India, which helped to bind men together in close brotherhood who had a common guru or the initiation into a common religious fraternity. All these we had. Then the impact of Europe came upon us and one by one these institutions began to be broken. Our village life is a thing of the past. The village has lost its community, it has lost its ideals, it has lost that mutual cordiality and binding together by an intimate common life which held it up and made its life sweet and wholesome. Everywhere we see in the village moral deterioration and material decay. Our joint family has been broken. We are scattering into broken units and brother no longer looks upon brother. There is no longer the bond of love which once held us together, because the old ties and habit of association are being broken up. Our caste has lost its reality. The life has gone from within it and it is no longer an institution which helps towards unity, a common life or any kind of brotherhood. For once the idea is broken, the ideal within which is the principle of life is impaired, the form breaks up and nothing can keep it together. Therefore we find all these things perishing.

Well, we have been losing these things which were part of our associated life. But on the other hand we looked at the civilised nations of the West who are rushing upon us and breaking our society to pieces, and we saw that in those nations there were other centres of association, other means of uniting together. However imperfectly we began to seize upon them and try to use them, our life in the nineteenth century was a weak and feeble life. It had no ideals, no mighty impulses behind to drive or uplift it. It was bewildered and broken by the forces that came upon it; it did not know how to move and in what direction to move. It tried to take whatever it could from the life of the rulers. It strove to take their political associations and develop that principle of association. But our political associations had a feeble life bound together only by a few common interests which by ineffective means they tried to establish or protect. Political association among us led to very little action, for it was an association which looked mainly to others for help and did not look to the sources of strength within. These and other kinds of associations
which we then tried to form tended mainly in one direction. They were institutions for the exchange of thought, associations for the spread of knowledge, by which we instinctively but imperfectly tried to encourage and express the growing idea that was within us. This was the one real value of most of our political associations. Then there came the flood of national life, the mighty awakening which appeared first in Bengal. The principle of association began to take a new form, it began to assume a new life. It no longer remained a feeble instrument for the expression of the growing idea within us, it began to become an instrument indeed. It began to become a power. How did this new kind of association grow and to what objects did it address itself? The movement was not planned by any human brain, it was not foreseen by any human foresight. It came of itself, it came as a flood comes, as a storm comes. There had been slow preparations which we did not institute or understand. These preparations were mainly among the young men, the rising generation, the hope of India. There the spirit first awoke. At first it was not what we would call an association; it was only a temporary union of young men for a temporary cause. They called themselves by a name which has since become terrible to many of our friends of the Anglo-Indian Press. They called themselves volunteers. For what did they volunteer? They volunteered for service to the representatives of the nation who came together to deliberate for the good of the people. This is how it first came, as an idea of service, the idea of service to those who worked for the motherland. Out of that grew the idea of service to the Mother. That was the first stage and the root from which it grew into our political life. Then there was another stream which rose elsewhere and joined the first. Our Anglo-Indian brothers to whom we owe so much and in so many ways, did us this service also that they always scoffed at us as weaklings, men who were doomed to perpetual slavery and had always been a race of slaves because the people of Bengal had no martial gift, because they are not physically strong, because whoever chooses to strike them can strike and expect no blow in return. Therefore they were unfit for self-government, therefore they must remain slaves for ever.
Our Anglo-Indian friends do not proclaim that theory now. They have changed their tone. For the spirit of the nation could bear the perpetual reproach no longer, the awakening Brahman within our young men could bear it no longer. Associations grew up for physical exercise and the art of self-defence and grew into those Samitis which you have seen flourishing and recently suppressed. We were determined to wash the blemish away. If this was the blemish, to be weak, if this was the source of our degradation we determined to remove it. We said, “In spite of our physical weakness we have a strength within us which will remove our defects. We will be a race of brave and strong men. And that we may be so, we will establish everywhere these associations for physical exercise.” That, one would think, was an innocent object and had nothing in it which anyone could look upon with suspicion. In fact we never thought that we should be looked upon with suspicion. It is the Europeans who have trumpeted physical culture as a most valuable national asset, the thing in which the English-speaking nations have pre-eminently excelled and which was the cause of their success and energy. That was the second seed of association.

There was a third seed and it was the thing for which our hearts yearned, the impulse towards brotherhood. A new kind of association came into being. That was the association which stood by labour and service and self-sacrifice, whose object of existence was to help the poor and nurse the sick. That was the flowering out of the Hindu religion. That was what Swami Vivekananda preached. That was what Aswini Kumar Dutta strove to bring into organised existence. That was what the Ramakrishna Mission, the Little Brothers of the Poor at Barisal tried to effect. This was the third way in which the new association established itself, the third seed of union, the third stream of tendency seeking fulfilment. All these streams of tendency came together, they united themselves and have been in their broad united purifying current the glory of our national life for the last three years. These Samitis of young men by labour, by toil for the country, worship of the motherland held themselves together and spread the habit of association and the
growth of brotherhood over the land. That is their spirit and ideal and that the way in which these associations have been established.

These are the associations which have now been crushed out of existence under a charge which cannot be and has not been maintained, a charge which has been disproved over and over again. It is a monstrous charge. The charge is that these associations are associations of hatred and violence, associations for rebellion and dacoity. That is the charge under which these associations have been suppressed. I have come recently back from Barisal. While I was there I heard and read something of the work of the young men’s association in Barisal, the association called the Swadesh Bandhab Samiti which with its network covered the whole district of Bakarganj. This association grew out of a much smaller association started by Aswini Kumar Dutta called the Little Brothers of the Poor. What was the work commenced by these Little Brothers of the Poor? When epidemic broke out, when cholera appeared in all its virulence, the young men of the Barisal Brajamohan College went out in bands. They nursed the sick, they took charge of those who had been abandoned, they took up in their arms those whom they found lying on the roadside. They were not deterred in those moments by the prejudice of caste or by the difference of creed. The orthodox Brahmin took up in his bosom and nursed the Mohammedan and the Namasudra. They did not mind the epidemic or fear to catch the contagion. They took up and nursed them as brother nurses brother and thus they rescued many from the grasp of death. Aswini Kumar Dutta is in exile. How did he establish that influence which caused him to be thought dangerous? By philanthropy, by service. While ordinary colleges under the control of the Government were mere soulless machines where they cram a few packets of useless knowledge into the brain of the student, Aswini Kumar breathed his own lofty and noble soul into the Brajamohan College and made it an engine indeed out of which men were turned, in which hearts and souls were formed. He breathed his noble qualities into the young men who grew up in the cherishing warmth and sunlight of his influence. He made
his college an institution which in the essentials of education was a model for any educational institution in the world. This is how he built up his influence among the educated class. They followed him because he had shaped their souls between his hands. It is therefore that they loved him, it is therefore that they saw no fault in him. His influence among the common people was built up by love, service and philanthropy. It was out of the seed he planted that the Swadesh Bandhab Samiti grew.

What was the work of this Samiti, the existence of which could no longer be tolerated in the interests of the peace and safety of the Empire? First of all it continued with that blessed work which the Little Brothers of the Poor had begun, nursing, serving, saving the poor, the sick and the suffering. They made it their ideal to see that there was no sick man or sick woman of however low a class or depressed a caste, of whom it could be said that they went unhelped in their sickness in the Bakarganj District. That was the first crime the association committed.

The second crime was this. These young men went from house to house seeking out the suffering and the hungry when famine broke out in the country. To those who were patiently famishing they brought succour, but they did more. There were many people who belonged to the respectable classes on whom the hand of famine was laid. They would not go for help to the relief works; they would not complain and show their misery to the world. The young men of Barisal sought out these cases and secretly, without injuring the feelings of the suffering, they gave help and saved men and women from starvation. This was the second crime of the Swadesh Bandhab Samiti.

Then there was another. The social life of Bengal is full of discord and quarrels. Brother quarrels with brother and quarrels with bitter hatred. They carry their feud to the law-courts; they sin against the Mother in themselves and in others; they sow the seed of lasting enmity and hatred between their families. And beyond this there is the ruin, the impoverishment of persistent litigation. The young men of the Swadesh Bandhab Samiti said, “This should not be tolerated any more. We will settle their
The Right of Association

differences, we will make peace between brother and brother. We will say to our people, ‘If there is any dispute let us try to settle it first. If you are dissatisfied with our decision you can always go to the law-courts; but let us try first.’” They tried, and hundreds of cases were settled out of court and hundreds of these seeds of enmity and hatred were destroyed. Peace and love and brotherhood began to increase in the land. This was their third crime.

Their fourth offence is a great crime nowadays. These young men had the hardihood to organise and help the progress of Swadeshi in the land. There was no violence. By love, by persuasion, by moral pressure, by appeals to the Samaj and the interests of the country, they did this work. They helped the growth of our industries; they helped it by organising the condition for their growth, the only condition in which these infant, these feeble and languishing industries can grow, the general determination to take our own goods and not the goods of others, to give preference to our Mother and not to any stranger. In no other district of Bengal, in no other part of India was Swadeshi so well organised, so perfectly organised, so peacefully and quietly organised as in Barisal. That was the last and worst crime they committed. For these crimes they have been proclaimed, they have been forbidden to exist. This Swadesh Bandhab Samiti carried organisation to a perfection which was not realised in other districts because it is not every district which can have an Aswini Kumar Dutta or a Satis Chandra Chatterji. But the same impulse was there, the same tendencies were there. I do not know any single society of the kind in Bengal which has not made some attempt to help the people in times of famine or to bring succour to the sick and suffering or to remove quarrels and discord as well as to help the growth of Swadeshi by organising that exclusive preference to which we have given the name of boycott. These were general offences, common crimes.

But there was another thing that led to the suppression. This was an association that had that very dangerous and lethal weapon called the lathi. The use of the lathi as a means of self-defence was openly taught and acquired, and if that was not
enough there was the imagination of a very highly imaginative police which saw hidden behind the lathi the bomb. Now nobody ever saw the bombs. But the police were quite equal to the occasion; they thought there might be bombs. And what if there were not? Their imagination was quite equal to realising any bomb that could not be materialised,—in baithak-khanas and elsewhere. The police suspected that the lathi was the father of the bomb. Their procedure was simple with the simplicity of the highest detective genius. When they heard of a respectable-sized dacoity, they immediately began to reason it out. They said, “Now why are there so many dacoities in the land? Obviously the lathi fathered the bomb and the bomb fathers the dacoities. Who have lathis? The Samitis. Therefore it is proved. The Samitis are the dacoits.” Our efficient police have always shown a wonderful ability. Generally when a dacoity is committed, the police are nowhere near. They have not altered that; that golden rule still obtains. They are not to be found when the dacoity takes place. They only come up when the dacoity is long over and say, “Well, this is the work of the National volunteers.” They look round to see what is the nearest Samiti and, if they find any which has been especially active in furthering Swadeshi, they say, “Here is the Samiti.” And if there is anyone who was somewhat active in connection with the work of the Samiti, they say at once, “Well, here is the man.” And if he is a boy of any age from twelve upwards, so much the better. The man or boy is instantly arrested and put into hajat. After rotting there some days or weeks, the police can get no evidence and the man has to be released. That does not frighten the courageous police; they immediately arrest the next likely person belonging to the Samiti. So they go on persevering until they lose all hope of finding or creating evidence. Sometimes they persist, and members of the Samitis, sometimes mere boys, have to rot in hajat until the case goes up to a court of justice and the judge looks at the case and after he has patiently heard it out has to ask, “Well, but where is the evidence?”

Formerly, you may remember, those of you who have lived
in the villages, that wherever there was any man in a village who was physically strong the police wrote down his name in the black book of budmashes. He was at once put down as an undesirable. That was the theory, that a man who is physically strong must be a hooligan. Physical development was thus stamped out of our villages and the physique of our villagers began to deteriorate until this movement of Akharas and Samitis came into existence to rescue the nation from absolute physical deterioration and decay. But this was an immortal idea in the mind of our police and it successfully effected transmigration. It took this form, that these Samitis encourage physical education, they encourage lathi-play, therefore they must be the nurseries of violence and dacoity and factories of bombs. Our rulers seem to have accepted this idea of the police. So perhaps this is the crime these Samitis have committed. Nothing has been proved of all this easy theorizing. It is yet to be known when and where the bomb has been associated with the work of the Samitis in Eastern Bengal. There was indeed a great dacoity in Eastern Bengal and the theory was started that it was done by one of the Samitis, but even our able detective police were unable to prove any association in that case. They did catch hold of some young men apparently on principle. There is a confidential rule,—it is confidential but the public have come to know of it,—that “somebody must be punished for the day’s work.” That was the circular of a Lieutenant-Governor of this province and the police no doubt thought it ought to be observed faithfully. So they caught hold of some likely men and the people so charged were about to be “punished for the day’s work”; but fortunately for them a judge sat upon the High Court Bench who remembered that there was such a thing as law and another thing called evidence, things whose existence was in danger of being forgotten in this country. He applied the law, he insisted on having the evidence, and you all know the result.

These associations, then, which were the expression of our growing national life and the growing feeling of brotherhood among us, did such work as I have described, and these were
the ways, guiltless of any offence in the eyes of the law, in which they did their work. Still they have been suppressed not because they were criminal, but because their existence was inconvenient. It has always been the case that when established institutions of government were unwilling to move with the times, they have looked with suspicion upon the right of association and the right of free speech, they have discouraged the right of a free Press and the right of public meeting. By destroying these instruments they have thought to arrest the progress which they did not love. This policy has never permanently succeeded, yet it is faithfully repeated with that singular stupidity which seems natural to the human race. The sword of Damocles hangs over our Press. It is nominally free, but we never know when even that simulacrum of freedom may not be taken from it. There is a law of sedition so beautifully vague and comprehensive that no one knows when he is committing sedition and when he is not. There is a law against the preaching of violence which enables a Magistrate whenever he chooses to imagine that your article advocates violence, to seize your machine. The press is taken away and of course the case goes up to the High Court, but by that time the paper suffers so much that it becomes difficult or impossible for it to rear its head again. There is a notification by which, as I pointed out in Beadon Square the other day, a meeting becomes peaceful or criminal not according to the objects or to the behaviour of the people assembled but according as the sun is up or the sun is down. There is a law of proclamation by which our right of association can be taken from us whenever they please by a stroke of the pen. The British people have certain traditions, they have certain ways of thinking and fixed ideas of which they cannot entirely get rid. It is for that reason they have not yet passed a law entirely and expressly suppressing the freedom of the Press or the right of public meeting. But even that may come. What should we do under these circumstances? We see the sword of Damocles hanging lower and lower over our heads. Our association may be declared criminal and illegal at any moment. The executive can any moment
it pleases confiscate our press. We ourselves are liable to be arrested and harassed at any moment without evidence, “on suspicion”, by an irresponsible and apparently unpunishable police. Under whatever difficulties and whatever restrictions may be put upon us, we must of course go on. But the restrictions may be greater in future. The sword is hanging lower and lower over our heads. Still we cannot stop in our work. The force within us cannot be baulked, the call cannot be denied. Whatever penalty be inflicted on us for the crime of patriotism, whatever peril we may have to face in the fulfilment of our duty to our nation, we must go on, we must carry on the country’s work.

After all what is an association? An association is not a thing which cannot exist unless we have a Chairman and a Vice-Chairman and a Secretary. An association is not a thing which cannot meet unless it has its fixed meeting place. Association is a thing which depends upon the feeling and the force within us. Association means unity, association means brotherhood, association means binding together in one common work. Where there is life, where there is self-sacrifice, where there is disinterested and unselfish toil, where there are these things within us, the work cannot stop. It cannot stop even if there be one man who is at all risks prepared to carry it on. It is only after all the question of working, it is not a question of the means for work. It is simply a question of working together in common in one way or in another. It is a matter of asking each other from time to time what work there is to be performed today and what is the best way of performing it, what are the best means of helping our countrymen, what work we shall have to do tomorrow or the day after and having settled that to do it at the appointed time and in the appointed way. That is what I mean when I say that it is a question of working and not of means. It is not that these things cannot be done except by the forms which our European education has taught us to value. Whatever may be the difficulties we can go on with the work. The association that we shall have will be the association of brothers who are united heart to heart, of fellow-workers joined
hand-in-hand in a common labour, the association of those who have a common motherland. It is the association of the whole country, to which every son of India and every son of Bengal ought by the duty of his birth to belong, an association which no force can break up, the association of a unity which grows closer day by day, of an impulse that comes from on high and has drawn us together in order that we might realise brotherhood, in order that the Indian nation may be united and united not merely in the European way, not merely by the common self-interest, but united by love for the common country, united by the ideal of brotherhood, united by the feeling that we are all sons of one common Mother who is also the manifestation of God in a united humanity. That is the association which has been coming into being, and has not been destroyed, since the movement came into existence. This is the mighty association, which unites the people of West Bengal with the people of East and North Bengal and defies partition, because it embraces every son of the land, — bhai bhai ek thain, or brother and brother massed inseparably together. This is the ideal that is abroad and is waking more and more consciously within us. It is not merely a common self-interest. It awakens God within us and says, “You are all one, you are all brothers. There is one place in which you all meet and that is your common Mother. That is not merely the soil. That is not merely a division of land but it is a living thing. It is the Mother in whom you move and have your being. Realise God in the nation, realise God in your brother, realise God in a wide human association.” This is the ideal by which humanity is moved all over the world, the ideal which is the dharma of the Kaliyuga, and it is the ideal of love and service which the young men of Bengal so thoroughly realised, love and service to your brothers, love and service to your Mother and this is the association we are forming, the great association of the people of Bengal and of the whole people of India. It increases and will grow for ever in spite of all the obstacles that rise in its way. When the spirit of Aswini Kumar Dutta comes into every leader of the people and the nation becomes one great Swadesh Bandhab Samiti, then it will be accomplished.
This is for ever our national ideal and in its strength our nation will rise whatever law they make; our nation will rise and live by the force of the law of its own being. For the fiat of God has gone out to the Indian nation, “Unite, be free, be one, be great.”
Opinion and Comments

The Highest Synthesis

In the Bengalee’s issue of the 29th June there is a very interesting article on Nationalism and Expediency, which seems to us to call for some comment. The object of the article is to modify or water the strong wine of Nationalism by a dash of expediency. Nationalism is a faith, the writer admits; he even goes much further than we are prepared to go and claims for Nationalism that it is the highest of all syntheses. This is a conclusion we are not prepared to accept; it is, we know, the highest which European thought has arrived at so far as that thought has expressed itself in the actual life and ideals of the average European. In Positivism Europe has attempted to arrive at a higher synthesis, the synthesis of humanity; and Socialism and philosophical Anarchism, the Anarchism of Tolstoy and Spencer, have even envisaged the application of the higher intellectual synthesis to life. In India we do not recognise the nation as the highest synthesis to which we can rise. There is a higher synthesis, humanity; beyond that there is a still higher synthesis, this living, suffering, aspiring world of creatures, the synthesis of Buddhism; there is a highest of all, the synthesis of God, and that is the Hindu synthesis, the synthesis of Vedanta. With us today Nationalism is our immediate practical faith and gospel not because it is the highest possible synthesis,
but because it must be realised in life if we are to have the chance of realising the others. We must live as a nation before we can live in humanity. It is for this reason that Nationalist thinkers have always urged the necessity of realising our separateness from other nations and living to ourselves for the present, not in order to shut out humanity, but that we may get that individual strength, unity and wholeness which will help us to live as a nation for humanity. A man must be strong and free in himself before he can live usefully for others, so must a nation. But that does not justify us in forgetting the ultimate aim of evolution. God in the nation becomes the realisation of the first moment to us because the nation is the chosen means or condition through which we rise to the higher synthesis, God in humanity, God in all creatures, God in Himself and ourself.

Faith and Analysis

Because Nationalism is the highest synthesis, it is more than a mere faith, says the Bengalee, it embodies an analysis, however unconscious or even inadequate, of the actual forces and conditions of life. We do not quite understand our contemporary’s philosophy. An unconscious analysis is a contradiction in terms. There may be a vague and ill-expressed weighing of things in the rough, but that is not analysis. Analysis is in its nature a deliberate intellectual process; the other is merely a perception of things separately or together but without analysis. And analysis is not inconsistent with faith, but must accompany it unless the faith is merely superstition. Every faith is to a certain extent rational, it has its own analysis and synthesis by which it seeks to establish itself intellectually; so has Nationalism. What the Bengalee means is apparently that our faith ought not to exceed our observation; in other words, we ought to calculate the forces for and against us and if the favourable forces are weak and the unfavourable strong, we ought to move with caution and hesitation. Now that is a very different question which has nothing to do with the philosophical aspect of Nationalism but with the policy of the moment. Our position is that Nationalism
is our faith, our *dharma*, and its realisation the duty which lies before the country at the present moment. If so, it is a thing which must be done and from which we cannot turn merely because the forces are against us. If we rely on an analysis of forces, what is it we arrive at? It was only yesterday that there was a series of articles in the *Bengalee* which sought to establish the proposition that the Hindus on whom the burden of the movement has fallen are a doomed and perishing race. The writer arrived at that conclusion by patient and exhaustive analysis. What else does analysis show us? It shows us one of the most powerful Governments in the world determined not to part with its absolute control and aided for the present by a large part of one of the chief communities in India. On the other side a people unequipped, unorganised, without means or resources, divided within itself, a considerable portion of it inert, and even in the educated class a part of it unsympathetic, afraid, insisting on caution and prudence. Shall we then turn from our work? Shall we deny God? Rationality demands that we should. And if we do not, it is simply because it would be to deny God, because we have “mere” faith, because we believe that God is within us, a spiritual force strong enough to overcome all physical obstacles, weaknesses, disabilities, that God is in the movement, that He is its leader and guides it, that we belong to the world and the future and are not a spent and dying force. This faith we hold because we understand the processes by which He works and can therefore see good in evil, light in the darkness, a preparation for victory in defeat, a new life in the apparent process of disintegration.

**Mature Deliberation**

That the movement is from God has been apparent in its history. Our contemporary does not believe that God created and leads the movement, he thinks that Srijut Surendranath Banerji created it and leads it. Only so can we explain the extraordinary statement, “every step that has been taken in construction has been preceded by mature deliberation”. Is this so? Was the Swadeshi
movement preceded by mature deliberation? Everybody knows that it was scouted by our leaders and, if it had been again proposed to them a month before it suddenly seized the country, would still have been scouted. It came as a flood comes and swept away everybody in its mighty current. Was the Boycott preceded by mature deliberation? Everybody knows how it came, advocated by obscure mofussil towns, propagated by a Calcutta vernacular newspaper, forced on leaders who shrank from it with misgivings, accepted it with tremors and even then would only have used it for a short time as a means of pressure to get the Partition reversed. Everybody knows how it spread over Bengal with the impetuosity of a cyclone. Was the National Education movement preceded by mature deliberation? It came suddenly, it came unexpectedly, unwelcome to many and still damned with a halfhearted support by the leaders of the country. This is what we mean by saying that God is in the movement and leads it. It is a greater than human force, incalculable, sudden and impetuous, which has swept over the country shattering and recreating, transforming cowards into heroes, lovers of ease into martyrs, self-seekers into self-sacrificers, changing in a few years the whole outlook, temper and character of a nation.

The Importance of the Individual

It is not surprising that with these ideas the Bengalee should deprecate the call for continued courage and self-sacrifice which has been made by Srijut Aurobindo Ghose in his speech at Jhalakati, for to that speech the article is a controversial answer. The cry for expediency resolves itself into an argument for individual prudence on the part of the leaders. “It seems to us to be a fatal idea that for the progress of the nation individuals are not necessary or that particular individuals are not more necessary than other individuals.” And the writer asks whether an organ is justified in cutting itself off for the sake of the organism, and immediately answers his own question partially by saying, yes, when the interests of the organism require it. The metaphor is a false one; for the individual is not an organ, he is simply
an atom, and atoms not only can be replaced but are daily replaced, and the replacement is necessary for the continued life of the organism. In times of stress or revolution the replacement is more rapid, that is all. Whatever the importance of particular individuals, — and the importance of men like Sj. Aswini Kumar Dutta or Sj. Krishna Kumar Mitra is not denied by any man in his senses and was not denied but dwelt upon by the speaker at Jhalakati, — they are not necessary, in the sense that God does not depend upon them for the execution of His purposes. Our contemporary does not expressly deny God’s existence or His omnipotence or His providence, and if he accepts them, he is debarred from insisting that God cannot save India without Sj. Surendranath Banerji or Sj. Aswini Kumar Dutta, that He is unable to remove them and find other instruments or that their deportation or disappearance will defer the fulfilment of His purposes to future centuries.

The Fatalism of Action

Our contemporary does however seem to doubt these qualities in the Ruler of all. He holds it to be a fatal doctrine “that we are none of us necessary, that everything that is happening or can happen is for the best, that God is seeking His fulfilment in inscrutable ways, that He will Himself lead the country when our prominent men are removed from the arena.” This, he says, is fatalism, and by flinging the word fatalism at Srijut Aurobindo, he thinks he has damned his position. The word fatalism means usually a resigned passivity, and certainly any leader who preached such a gospel would be injuring the country. That would be indeed a fatal doctrine. But our contemporary admits that it is a fatalism of action and not of inaction he is censuring, he blames the speaker for advocating too much action and not too little. All that the “fatalism” censured means is a firm faith in the love and wisdom of God and a belief based on past experience that as it is His purpose to raise up India, therefore everything that happens or can happen just now will tend to the fulfilment of His purpose. In other words, there is
now an upward tendency in the nation with an immense force behind it and, in such conditions, it is part of human experience that the force makes use of every event to assist the progress of the tendency until its contribution to human development is fulfilled. That is the idea of Kala or the Zeitgeist working, and, put religiously, it means that God being Supreme Wisdom uses everything for His supreme purposes and out of evil cometh good. This is true of our private life as every man of spiritual insight can testify; he can name and estimate the particular good which has come out of every apparent evil in his life. The same truth applies to the life of the nation.

God's Ways

When it is said that God’s ways are inscrutable, it is simply meant that man’s reason, on which the Bengalee lays so much stress, is not always sufficient to estimate at the time the object He has in a particular dispensation of calamity or defeat. It seems to be nothing but calamity and defeat and it is only afterwards that the light of reason looking backwards is able by the illumination of subsequent events to understand His doings. Therefore we must have faith and an invincible faith or else the calamities will be too great for our courage and endurance. Is this a false doctrine or a fatal doctrine? Will the country be injured by it or helped by it? Srijut Aurobindo never said that God would step in to fill the place of Srijut Aswini Dutta or others removed from the arena. His position was that God has been driving on the movement from the beginning and was always the leader when they were with us and remains the leader when they are taken from us.

Adequate Value

The Bengalee insists however that individual life is quite as sacred for its own purposes as national life for its higher purposes, that the nation must get adequate value for each sacrifice that the individuals make, and that great men must protect themselves from danger because their removal at a critical moment may
mean incalculable injury. We deny that individual life is as sacred as national life; the smaller cannot be so sacred as the greater, self cannot be so sacred as others, and to say that it is quite as sacred for its own purposes is to deify selfishness. Our lives are useful only in proportion as they help others by example or action or tend to fulfil God in man. It is not true that my ease is sacred, my safety is sacred, or my self-interest is sacred. This if anything is “a fatal doctrine”. We do not deny that sacrifice cannot be an end to itself; no one is so foolish as to advance any such proposition. But when the Bengalee argues that the individual must demand adequate value for every sacrifice he makes on the national altar, it shows a complete inability to appreciate the nature of sacrifice and the laws of politics. If we had acted in this Bania spirit, we should never have got beyond the point at which we stood four years ago. It is by unhesitating, wholehearted and princely sacrifices that nations effect their liberty. It has always been so in the past and the laws of nature have not altered and will not alter to suit the calculating prudence of individuals. A great man is valuable to the nation and he should guard himself but only so far as he can do so without demoralising his followers, ceasing from the battle or abdicating his right to leadership. He should never forget that he leads and the nation looks up to him as a fountain of steadfastness, unselfish service and courage. Expediency means national expediency, not individual expediency. Even so it must be the larger expediency which makes great sacrifices and faces great risks to secure great ends. Statesmanship is not summed up in the words prudence and caution, it has a place for strength and courage.

Expediency and Nationalism

We have met the arguments of the Bengalee at some length because we hold the teaching in this article to be perilous in its tendencies. There is plenty of selfishness, prudence, hesitating calculation in the country, plenty of fear and demoralisation in the older generation. There is no need to take thought and labour
for increasing it. Steadfastness, courage, a calm and high spirit are what we now need, wisdom to plan and act, not prudence to abstain from action. Nationalism tempered by expediency is like the French despotism tempered by epigrams. The epigrams undermined the despotism, the expediency is likely to undermine and in some quarters is visibly undermining the Nationalism. More “incalculable injury” is likely to be done by teaching of this kind at this juncture than by the removal of any great man, however pre-eminent and inspiring his greatness.
A Task Unaccomplished

THERE is no question so vital to the future of this nation as the spirit in which we are to set about the regeneration of our national life. Either India is rising again to fulfil the function for which her past national life and development seem to have prepared her, a leader of thought and faith, a defender of spiritual truth and experience destined to correct the conclusions of materialistic Science by the higher Science of which she has the secret and in that power to influence the world's civilisation, or she is rising as a faithful pupil of Europe, a follower of methods and ideas borrowed from the West, a copyist of English politics and society. In the one case her aspiration must be great, her faith unshakable, her efforts and sacrifices such as to command the admiration of the world; in the other no such greatness of soul is needed or possible; — a cautious, slow and gradual progress involving no extraordinary effort and no unusual sacrifices is sufficient for an end so small. In the one case her destiny is to be a great nation remoulding and leading the civilisation of the world, in the other it is to be a subordinate part of the British Empire sharing in the social life, the political privileges, the intellectual ideals and attainments of the Anglo-Celtic race. These are the two ideals before us, and an ideal is not mere breath, it is a thing compelling which determines the spirit of our action and often fixes the method. No policy can be successful which does not take into view the end to be attained and the amount and nature of the effort needed to effect it. The leader of industry who enters on a commercial enterprise, first looks at the magnitude of his field and intended output and equips himself with capital and plant accordingly, and even if he cannot commence at once on the scale of his ideal he holds it in view himself, puts it before the public in issuing his prospectus and estimating the capital necessary, and
all the practical steps he takes are conceived in the light of his original aspiration and ordered towards its achievement. So it is with the political ventures of a nation. To place before himself a great object and then to shrink in the name of expediency from the expenditure and sacrifice called for in its pursuit is not prudence but ineptitude. If you will be prudent, be prudent from the beginning. Fix your object low and creep towards it. But if you fix your object in the skies, it will not do to crawl on the ground and because your eyes are sometimes lifted towards the ideal imagine you are progressing while you murmur to those behind, “Yes, yes, our ideal is in the skies because that is the place for ideals, but we are on the ground and the ground is our proper place of motion. Let us creep, let us creep.” Such inconsistency will only dishearten the nation, unnerve its strength and confuse its intelligence. You must either bring down your ideal to the ground or find wings or aeroplane to lift you to the skies. There is no middle course.

We believe that this nation is one which has developed itself in the past on spiritual lines under the inspiration of a destiny which is now coming to fulfilment. The peculiar seclusion in which it was able to develop its individual temperament, knowledge and ideas; — the manner in which the streams of the world poured in upon and were absorbed by the calm ocean of Indian spiritual life, recalling the great image in the Gita, — even as the waters flow into the great tranquil and immeasurable ocean, and the ocean is not perturbed; — the persistence with which peculiar and original forms of society, religion and philosophical thought were protected from disintegration up till the destined moment; — the deferring of that disintegration until the whole world outside had arrived at the point when the great Indian ideal which these forms enshrined could embrace all that it yet needed for its perfect self-expression, and be itself embraced by an age starved by materialism and yearning for a higher knowledge; — the sudden return of India upon itself at a time when all that was peculiarly Indian seemed to wear upon it the irrevocable death-sentence passed on all things that in the human evolution are no longer needed; — the miraculous
uprising and transformation of weakness into strength brought about by that return; — all this seems to us to be not fortuitous and accidental but inevitable and preordained in the decrees of an over-ruling Providence. The rationalist looks on such beliefs and aspirations as mysticism and jargon. When confronted with the truths of Hinduism, the experience of deep thinkers and the choice spirits of the race through thousands of years, he shouts “Mysticism, mysticism!” and thinks he has conquered. To him there is order, development, progress, evolution, enlightenment in the history of Europe, but the past of India is an unsightly mass of superstition and ignorance best torn out of the book of human life. These thousands of years of our thought and aspiration are a period of the least importance to us and the true history of our progress only begins with the advent of European education! The rest is a confused nightmare or a mere barren lapse of time preparing nothing and leading to nothing. This tone is still vocal in the organs of the now declining school of the nineteenth century some of which preserve their influence in the provinces where the balance in the struggle between the past and the future has not inclined decidedly in favour of the latter. In Bengal it is still represented by an undercurrent of the old weakness and the old want of faith which struggles occasionally to establish itself by a false appearance of philosophical weight and wisdom. It cannot really believe that this is a movement with a divine force within and a mighty future before it. The only force it sees is the resentment against the Partition which in its view is enough to explain everything that has happened, the only future it envisages is reform and the reversal of the Partition. Recently, however, the gospel of Nationalism has made so much way that the organs of this school in Bengal have accepted many of its conclusions and their writings are coloured by its leading ideas. But the fundamental idea of the movement as a divine manifestation purposing to raise up the nation not only for its own fulfilment in India but for the work and service of the world and therefore sure of its fulfilment, therefore independent of individuals and superior to vicissitudes and difficulties, is one which they cannot yet grasp. It is a sentiment which has been
growing upon us as the movement progressed, but it has not yet been sufficiently put forward by the organs of Nationalism itself, partly because the old idea of separating religion from politics lingered, partly because the human aspects of the Nationalist faith had to be established before we could rise to the divine. But that divine aspect has to be established if we are to have the faith and greatness of soul which can alone help us in the tremendous developments the signs of the time portend. There is plenty of weakness still lingering in the land and we cannot allow it to take shelter under the cry of expediency and rationality and seek to kill the faith and force that has been born in the hearts of the young. The Karmayogin has taken its stand on the rock of religion and its first object will be to combat these reactionary tendencies and lead the nation forward into the fuller light for which the Bande Mataram and other organs of the new faith only prepared. The gospel of Nationalism has not yet been fully preached; its most inspiring tenets have yet to be established not only by the eloquence of the orator and inspiration of the prophet but by the arguments of the logician, the appeal to experience of the statesman and the harmonising generalisations of the scientist.
Mr. Mackarness’ Bill

We find in India to hand by mail last week the full text of Mr. Mackarness’ speech in introducing the Bill by which he proposes to amend the Regulation of 1818 and safeguard the liberties of the subject in India. We are by no means enamoured of the step which Mr. Mackarness has taken. We could have understood a proposal to abolish the regulation entirely and disclaim the necessity or permissibility of coercion in India. This would be a sound Liberal position to take, but it would not have the slightest chance of success in England and would be no more than an emphatic form of protest not expected or intended to go farther. British Liberalism is and has always been self-regarding, liberal at home, hankering after benevolent despotism and its inevitable consummation in dependencies. To ask Liberal England to give up the use of coercion in emergencies would be to ask it to contradict a deep-rooted instinct. We could have understood, again, a Bill which while leaving the Government powers of an extraordinary nature to deport the subject, under careful safeguards, in unusual and well-defined circumstances and for no more than a fixed period, would yet leave the aggrieved subject an opportunity after his release of vindicating his character and, if it appeared that he had been deported unwarrantably and without due inquiry or in spite of complete innocence, of obtaining fitting compensation. Such an act would meet both the considerations of State and the considerations of justice. It would leave the Government ample power in emergencies but would take from it the freedom to deport out of caprice, panic or unscrupulous reactionism. Deportation would then be a rare act of State necessity, not an autocratic lettre de cachet used to bolster up injustice or crush all opposition to the continuance of autocratic absolutism. Mr. Mackarness’ Bill seems to us to leave the essence of deportation just where it was
before. The changes made are purely palliative and palliative not of the unjust, irritating and odious character of the measure but of the apparent monstrosity of deporting a man without even letting him or his friends or the world know what charge lay against him or whether any charge lay against him. It is this which gives an ultra-Russian character to the Regulation and makes the Liberal conscience queasy. The proposed changes are a salve to that conscience, not a benefit to the victim of deportation. It makes his position, if anything, worse. It is bad to be punished without any charge, it is worse to be punished on a charge which you are debarred to all time from disproving.

There are three changes which the Bill contemplates. Instead of being able to confine a man until farther orders the Viceroy has to renew his sanction every three months, a change which may have some deterrent effect on a Viceroy with a Liberal conscience but to others will mean merely a quarterly expenditure of a drop of ink and a few strokes of the pen. Another and more important change is the provision that, to qualify for deportation, “a British subject must be reasonably suspected of having been guilty of treasonable practices or of a crime punishable by law, being an act of violence or intimidation and tending to interfere with or disturb the maintenance of law and order”. “That” thinks Mr. Mackarness “insures in the first place that a man must have been guilty of some definite offence. At any rate it is intended to provide for that.” Unfortunately the intention is all, there is no real provision for carrying it out, except the clause that the warrant shall contain a definite statement of the character of the crime. How will this clause help the alleged intention of the Bill? It is only the character of the crime that has to be defined and, if the authorities relying on a Mazarul Haq or a Rakhal Laha frame a charge say against Srijut Surendranath Banerji of waging war or abetting or conspiring to wage war or financing unlawful assemblies and incontinently deport him, would the Liberal conscience be satisfied? Or would it be possible for the Moderate leader to meet this charge, however definite in character? It is evident that to carry out the “intention” of the Bill it would be necessary to name the specific act or acts which constitute the
offence and the time and circumstances of commission, for it is only a precise accusation that can be met. Even if the charge be precise in its terms, Mr. Mackarness’ Bill provides no redress to the deportee. All that he can do is to submit a “representation” to the officials who have deported him. Those who know the ways of the bureaucrat can tell beforehand the inevitable answer to such representations, “The Government have considered your representation and see no cause to alter the conclusions they had arrived at upon sufficient and reliable information.” So the deportation will stand, the charge will stand and the last condition of the deportee will be worse than his first. The only advantage the Bill will secure is the greater opportunities for effective heckling in the House of Commons if facts can be secured which throw doubt on the charge; but the Government has always the answer that its evidence is reliable and conclusive but for reasons of State policy it is not advisable to disclose either its nature or its sources, and the relics of the Liberal conscience will be satisfied. As things stand the deportations have made even some Imperialistic consciences uneasy and that advantage will be lost under the new Bill.

Mr. Mackarness has admitted that the regulations are absolutely hateful and he would prefer to propose their entire abolition if such a proposal had any chance of acceptance by a British House of Commons. His amendments will not make them less hateful, they will only make them less calmly absurd. That is a gain to the Government, not to us or to justice. The only provisions that would make deportation a reasonable though still autocratic measure of State would be to allow the Viceroy to deport a person, stating the charge against him, for a period of not more than six months and oblige the Government to provide the deportee on release with full particulars as to the nature of the information on which he was deported, so that he might seek redress against malicious slander by individuals or, if it were considered impolitic to disclose the sources of information, for wanton and arbitrary imprisonment by the authorities. The measure would still be oppressive but it would then give some chance to an aggrieved and innocent man, so
long as a sense of justice and some tradition of independence still linger in the higher tribunals of the land. Such a measure would have been a moderate measure and would have left the essential absolutism of Government in India unchanged. But even to this the Bill does not rise. It is noticeable that the only Irish Nationalist whose name was on the Bill repudiated it as soon as he heard Mr. Mackarness’ speech, on the ground that he had been under the impression that the Bill went much farther than was now stated. The other names were those of British Liberals or Conservatives. This is significant of the difference between the sympathy we may expect even from conscientious English Liberals and the real fellow-feeling of a Nationalist who has himself known what it is to live under the conditions of bureaucratic coercion. Mr. Mackarness has fought the cause of the deportees in the spirit of genuine Liberalism, but his Bill is a concession to that watery British substitute for it which is only Imperialism afraid of its convictions.

OTHER WRITINGS BY SRI AUROBINDO IN THIS ISSUE

Yoga and Human Evolution
The Katha Upanishad I.1
ABU Aurobindo Ghose rose amidst loud cheers and said that when he consented to attend the meeting, he never thought that he would make any speech. In fact, he was asked by the organisers of the meeting simply to be present there. He was told that it would be sufficient if he came and took his seat there. Now he found his name among the speakers. The Chairman of the meeting, whose invitation was always an order, had called upon him to speak.

He had two reasons as to why he ought not to speak. The first was that since he was again at liberty to address his countrymen he had made a good many speeches and he had exhausted everything that he had to say and he did not like to be always repeating the same thing from the platform. He was not an orator and what he spoke was only in the hope that some of the things he might say might go to the hearts of his countrymen and that he might see some effect of his speeches in their action. Merely to come again and again to the platform and the table was not a thing he liked. Therefore he preferred to see what his countrymen did.

Another reason was that unfortunately he was unable to address them in their mother language and therefore he always felt averse to inflict an English speech on a Bengali audience.

That evening he wished to speak only a few words because he owed an explanation to his friends. The form that his activities had taken after he had come from jail had disappointed a great many.

There was first a great friend of his own and India’s who lived in Hare Street — (laughter) — and he was very much

Delivered at Kumartuli Park, Calcutta, on 11 July 1909. Text published in the Bengalee on 13 July and reproduced in the Karmayogin on 14 August.
disappointed by the form of his (the speaker’s) activities. So
great was this friend’s anxiety for the Indians that that anxiety
had cost him Rs. 15,000. (A voice: “Another Rs. 7,500 as
costs.”) In his anxiety to help the Indians he followed the
ancient maxim that truth meant only whatever was for the good
of others. Unfortunately the judge would not take that large
view of the matter. And so our friend was silently suffering. (A
voice: “Passive resistance.” Laughter) His friend said that he had
heard that Sj. Aurobindo Ghose had promised to devote himself
to literature and religion, and it was strange that Mr. Ghose
should go to Jhalakati and make speeches on Swadeshi and
boycott.

He (the speaker) was devoting himself to literature and reli-
gion. He was writing as he wrote before on Swaraj and Swadeshi,
and that was a form of literature. He was speaking on Swaraj
and Swadeshi and that was part of his religion. (Cheers)

Another quarter he had disappointed was the police.
(Laughter) He had received a message from them saying that
he was opening his mouth too much. He gave an interview to
a press representative and told him something mainly about the
food and accommodation in the Government Hotel at Alipore.
(Laughter) He was immediately informed that that was a great
indiscretion on his part and that it would bring trouble on him.
When he went to Jhalakati the attentions of the police pursued
him. They told the Barisal people and the local merchants that if
he (the speaker) was taken there the District Conference would
be stopped. They got the answer that that was not in the people’s
hands, but the coming of Aurobindo Ghose was in their hands
and Aurobindo Babu would come whatever the consequences
to the Conference. And the Conference did take place. After
his return he was again informed that he was qualifying for
deportation — his fault was that he was appearing too much
in public meetings. Some of the best loved workers in the
country had already been deported and the first reason alleged
was that they had been financing assassination and troubling
the peace of the country. When the Government in Parliament
were heckled out of that position, it escaped as if by accident
from one of the members that one very important reason for the deportation was that the deportees had taken part in the Swadeshi agitation. This was borne out by the suggestion he had received, and it seemed that it was by supporting the Swadeshi that they laid themselves open to deportation. Now, he had an unfortunate temper and it was that he did not like to be intimidated. Intimidation only made him persist in doing his duty more obstinately, and if he spoke today, it was partly because of that friendly suggestion.

There were other friends who were nearer to us than those he had mentioned, but they also were dissatisfied with his activities. There was, for instance, a friend in Madras (The Indian Patriot) who invited him to give up politics and become a Sannyasi. This anxiety for his spiritual welfare somewhat surprised him at the time, but he was yet more surprised by the persistence of his friend’s anxiety. One reason for suggesting inactivity to him was that he was imperilling his safety. That was a very singular reason to put before a public man for shirking his duty.

Another reason for his Madras friend’s advice was that he (the speaker) was speaking against the reforms. It appeared that he (the speaker) was guilty of a great error in throwing a doubt on the reality of the reforms. Whenever any offer was made to the country by the officials, it was a habit of his to look at it a little closely. It was a part of English politeness, and also a principle of their commerce that when a present was given or an article sold it was put in a very beautiful case and its appearance made very attractive. But his long residence in England had led him to know that there were a kind of goods, called Brummagem goods, and that was a synonym for shoddy. He looked into the reforms and they seemed to him to belong to that class. Then there was another point. He was a little jealous of gifts from that quarter because the interests of the people and the officials were not the same. The position was such that if reforms gave any increase and enlargement of the people’s rights or rather a beginning in that direction—for at present the people had no real right or share in the government—any beginning of the kind meant a shrinking of bureaucratic powers. It was not likely
that the officials would readily give up any power to which they cling. Therefore when reform was offered he always asked himself how far that was a real beginning of self-government or how far it was something given to them to draw their attention from their real path to salvation. It seemed to him that the reforms give them not the slightest real share in the government of the country, but instead they would merely throw an apple of fresh discord among them. They would only be a cause of fresh strife and want of unity. Those who are led away by the reforms would not only diminish the powers of this country but lead others into the wrong path.

Only two or three days ago, his fears were confirmed. Certain utterances had come from one from whom they were least expected — one who had served and made sacrifices for the country. He said that those who spread the gospel of Swaraj were madmen outside the lunatic asylum and those who preached passive resistance as a means of gaining Swaraj were liars who did not speak out their real thoughts to save their skin; he invited the country to denounce them as enemies of the country and of its progress and justified all that the Government had done by saying that the only attitude the Government could take was stern and heartless repression.

Well, if it were true that only fear made them take to passive resistance, if they flinched now from the boycott because some had been deported, if they ceased to proclaim the ideal of Swaraj, if they ceased to preach the boycott, then only it would be true that they had adopted an ideal that they could not reach and proclaimed means of reaching it in which they did not believe, because they were anxious to save their skin.

He had heard many warnings recently that those who persisted in public agitation would be deported. For himself, and he was not a model of courage, residence for the best part of a year in a solitary cell had been an experience which took away all the terrors of deportation. (Cheers) If he had ever had any fears, the kindness of the authorities in giving him that experience had cured him of them. (Laughter) He had found that with the ideal of Swaraj to uphold and the mantra of “Bande Mataram” in the
heart, there was nothing so very terrible in jail or deportation. That was the first thing he would like to impress on them as the result of his experience. Imprisonment in a righteous cause was not so terrible as it seemed, suffering was not so difficult to bear as our anticipations made it out. The prize to which they aspired was the greatest to which a nation could aspire and if a price was asked of them, they ought not to shrink from paying it.

He was not afraid of deportations and imprisonment but he was afraid of the hand which patted them on the back and the voice that soothed. The mixed policy of repression and kindness was the thing he feared most. The whip was still there uplifted though it was not just now falling upon them, but the other hand was held out to stroke the head and soothe. This offer of conciliation in one hand and the pressure of repression in the other might have the effect of slackening their efforts and bewildering their intelligence. They must not forget that nine of their most devoted workers were rotting in British jails under the name of deportation. What was the meaning of conciliation when men like Aswini Kumar Dutta, Krishna Kumar Mitra and others were taken away from them and not restored? What kind of conciliation was this which was offered us while this great wrong remained unremedied? Who could trust such a conciliation?

Let them not forget what they had set out to do when they declared the boycott. They had determined to undo the Partition of Bengal. The Partition still remained. So long as that remained, should they listen to the soothing voice? Should they give up the boycott or slacken the boycott? They had determined to revive the industries of their country. They had determined to save their countrymen from chronic starvation, but that had not yet been accomplished. Should they leave the boycott or slacken the boycott while it remained unaccomplished? Would the reforms save the country from that chronic starvation? When famine came the Government opened relief works as soon as its local officials could bring themselves to acknowledge that there was a famine in the land. That saved a number of lives, but it did not save us from the misery, the mortality, the thousands of
ruined homes. That did not strike at the root of the chronic starvation and famine; Swadeshi and boycott alone could strike at the root. So long as the exploitation of the country by foreign trade remained, would they injure their country by giving up or slackening the boycott? Would they be faithful to the country if under such circumstances they were ready to listen to the soothing voice? If they did that, it would be because they could not bear the sufferings and pay the price of raising up their country and they would prove themselves unworthy of the freedom to which they aspired. The time was a critical one and when the question was once more put to them they must always be ready to answer.

The 7th of August was very near. It was the birthday of the boycott, the birthday of the new spirit in India.

It was not much they had to do. Only once more to utter the sacred mantra of “Bande Mataram”, once more to declare that India was not lifeless, that Bengal was faithful to the vow she had made. He waited to see what would happen on that date in Bengal, whether they would attend in their hundreds or in their thousands or in their tens of thousands. It was Bengal on which the burden of the struggle fell because she first had preached the Gospel and she first had had the courage to bear suffering for the Gospel. Therefore God had given them the privilege to bear the greater part of the suffering. By so doing He had shown a great love towards Bengal. The fate of India was with the Bengalis. As they answered the question put to them, the future would be determined. It was not the first time the question had been put or the last time it would be put, for it was not the crisis of a moment but a protracted struggle. The question was with them always and every moment their responsibility for answering it in the right sense remained with them. But especially on such a day as the 7th of August the responsibility was great. He waited to see what would be the answer to the question.

But even if the response were less than he expected, even if the demoralisation he had heard of were real and there were a shrinkage in the numbers that attended, that would not discourage him.
So long as in this country there were a few who had the courage of their faith, so long as there were even a few who were ready to proclaim their faith and live it, there was no fear for the ultimate triumph of the faithful.

It is described in the Christian Bible how the cult of the true faith was almost extinguished by persecution and all Israel turned from Jehovah to foreign idols, and even the chief prophet of the faith thought himself alone and hid his head. God called to him to go forth and strive with the priests of Baal. “Always,” He said, “in the nation I have chosen there are some who confess me and now too in this nation there are seven thousand who have not bowed the knee to Baal.” So always in this Bengal which God had chosen there would always be several thousands who would be true to the faith and never bow the knee to false gods. If the voices that proclaimed it were silenced, if the organisers were taken away, others would rise in their place; if those were taken, still others would come, if few, yet faithful. Some would always be left who would not be afraid to utter the name of their Mother. Some would still preserve the faith and preach the Gospel; theirs was the blood of Raktabij. (*Laughter and cheers*)

For their action sprang from no passing or material interest but from something that was imperishable and perennial. It was something which the fire could not burn and the sword could not kill, the winds of repression could not wither and all the waters could not drown. For all that there was a great importance in the nation’s response on the 7th of August. On our action now it depended whether salvation came swiftly or were put off and the struggle and suffering prolonged for decades.

On their fidelity to Swadeshi, to boycott, to passive resistance rested the hope of a peaceful and spiritual salvation. On that it depended whether India would give the example unprecedented in history of a revolution worked out by moral force and peaceful pressure. For on the 7th August the strength of the nation would be measured, not the numerical strength, but the moral strength which was greater than anything physical. He appealed to the audience to see that no one of the thousands assembled remained absent on that day.
They must remember that it was a day of worship and consecration, when the Mother looked upon her assembled children. She would ask on this 7th of August how many were faithful to her and whether after her centuries of affliction she had still years of suffering to endure, or by the love and strength of her children might expect the approaching hour of her felicity. If they were unfaithful now let them remember to whom they would be unfaithful,—to themselves, to their vows, to the future of their country, to God, to their Mother.
Facts and Opinions

An Unequal Fight

Our controversy with the Bengalee is like a conflict between denizens of two different elements. Not only has our contemporary the advantage of prompt reply, but he has such a giant’s gulp for formulas, such a magnificent and victorious method of dealing with great fundamental questions in a few sentences, such a generous faculty for clouding a definite point with sounding generalisations that he leaves us weak and gasping for breath. However in our own feeble way we shall try to deal with the several points he has raised. Their importance must be our excuse for the length of our reply. One great difficulty in our way is that our contemporary for the convenience of his argument chooses to attribute to us the most ridiculous opinions born out of his own prolific brain and generous facility in reading whatever he chooses into other people’s minds. He thinks, for instance, that by seeing a special manifestation of Divine Power and Grace in a particular movement we mean to shut God out from all others. This is a fair sample of the “inconsistencies” which the Bengalee is always finding in his own brain and projecting into ours. If we have to guard ourselves at every point against such gratuitous misconceptions, argument becomes impossible. Neither space nor patience will allow of it.
God and His Universe

The Bengalee takes as its fundamental position that God is Absolute, Eternal and Universal in all movements and not limited to any particular. Very true, but a vague statement of abstract truth like this leads nowhere beyond itself. What are the concrete implications in this generalisation? God is not only the Absolute, Eternal and Universal in His own essence, but He manifests in the relative, transient and particular. The Absolute is an aspect of Him necessary for philosophical completeness; but if He were only Absolute, then this phenomenal world would be only Maya, God akarta and all action purely illusory. If He were only Eternal we might regard this world as something not full of Him, but a separate creation which may or may not be subject to His immediate action. It is because He is the Universal that the clarified vision sees Him in every being and every activity. As the Absolute He stands behind every relative, as the Eternal He supports every transient and assures the permanence of the sum of phenomena; as the Universal He manifests Himself in every particular.

The Scientific Position

Still, there is the question, how does He manifest Himself? There is a school which holds that He has once for all manifested Himself in certain eternal and universal laws and has no other connection with the universe. This was the attitude definitely taken by the Indian Social Reformer when it ridiculed Sj. Aurobindo Ghose's Uttarpara speech. God does not speak to men through their inner selves in Yoga or otherwise, there is no way of communion between Him and humanity, there is no special action of His power or grace anywhere. He speaks to men only through His laws; in other words, He does not speak to them at all. He does not act personally, He acts through His laws; in other words, He does not act at all, His laws act. This is an intelligible position and it contains the whole real quarrel
between Science and Religion. Science does not as yet recognise God. Taking its stand on the material senses and logical argument from external phenomena it demands proof before it will admit His existence. It sees plenty of proof of Shakti, of Prakriti, of Nature; it sees none of the Purusha or any room for His existence. If He exists at all, it must be as an Impersonal Being immanent in but different from Force and Energy and Himself inactive; but even of this there is no proof. Religion holds that God is not only impersonal but personal, not only Purusha but Prakriti, not only Being but Shakti; He is all. For the proof of its position Religion appeals to something higher than logic or the senses, to spiritual experience and the direct knowledge drawn from the secret discipline it has developed in most parts of the world.

**Force Universal or Individual**

It is not clear whether our contemporary recognises any personality in its Universal God or only recognises Him in all movements as natural Law. We hold that He manifests Himself in particulars not as Law, which is only a generalisation of the methods by which He acts, but as Shakti working for the Purusha. He puts Himself as force, energy, motive-power into every particular. It is perfectly true that every particular contains Him, but there are differences in the force of His manifestation. This is obvious in individuals. The strength of every particular individual is the strength of God and not his own, because every particular strength is merely a part of the universal force and it is really the universal force and not the individual strength that is acting. But in living beings, when consciousness has become separate, the individual is allowed to suppose himself to be strong in his own strength. He is not really so. God gave the strength and He can take it away. He gave it power to act and He can baffle its action of the fruits the individual sought and turn it to quite other results. This is so common an experience that we do not see how any man with the power of introspection can deny it. Only at ordinary times, when things seem to be
moving according to our calculations, we forget it, but on certain occasions He manifests Himself with such force either in events or in our own actions that unless we are blinded by egoism or by infatuation we are compelled to perceive the universality of the force that is acting and the insignificance of the individual. So also there are particular movements in particular epochs in which the Divine Force manifests itself with supreme power shattering all human calculations, making a mock of the prudence of the careful statesman and the scheming politician, falsifying the prognostications of the scientific analyser and advancing with a vehemence and velocity which is obviously the manifestation of a higher than human force. The intellectual man afterwards tries to trace the reasons for the movement and lay bare the forces that made it possible, but at the time he is utterly at fault, his wisdom is falsified at every step and his science serves him not. These are the times when we say God is in the movement, He is its leader and it must fulfil itself however impossible it may be for man to see the means by which it will succeed.

**Faith and Deliberation**

The next point is the question of mature deliberation. The Bengalee here tries to avoid confession of its error by altering the meaning of language. The mature deliberation of which it spoke applies only to particular acts and, even then, it was not one man or a dozen but the whole self-conscious part of the country which took part in these mature deliberations. The facts do not square with this modified assertion. The majority even of the particular steps taken in pursuance of the ideas which swept over the country were not taken in pursuance of mature deliberation but were the result in some men of a faith which defied deliberation and in others of a yielding to the necessity of the movement. The National Council of Education came into existence because Sj. Subodh Chandra Mallik planked down a lakh of rupees and was followed by the zamindar of Gauripur, an act of faith, because the Rangpur schoolboys and their guardians refused to go back on their action in leaving the Government
school and established a school of their own, also an act of faith, and because some leading men of the country recognised that something must be done on the spot to prevent the honour of the nation being tarnished by abandonment of this heroic forlorn hope while others thought it a good opportunity to materialise their educational crotchets. Was this mature deliberation or a compound of faith, idealism and risky experiment? The Boycott came into existence because of the wrath of the people against the Partition and the vehement advocacy of a Calcutta paper which, supported by this general wrath, bore down the hesitations of the thinkers, the politicians and the economists. Almost every step towards Swadeshi, every National school established was an act of faith in the permanence of the movement, a faith not justified by previous experience. These were acts of boldness, often of rashness, not of mature deliberation. Mature deliberation implies that having consulted the lessons of past experience and weighed the probabilities of the future and the possibilities of the present, we take the step which seems most prudent and likely to bring about sure results. The Bombay mill-owners deliberated maturely when they said, “This movement born of a moment's indignation will pass like the rest; go to, let us raise our prices and make hay while the sun shines.” The leaders deliberated maturely when they said, “The rush towards National Education will not last and if encouraged it will mean the destruction of private institutions and the payment of a double tax for education.” So they stopped the students’ strike, withheld their moral support and by this mature deliberation put, like the Bombay mill-owners, almost insuperable obstacles in the way of the movement. It was the unconsciously prepared forces in the country that made their way in spite of and not because of the mature deliberation. It was a minority convinced of the principles of self-help and passive resistance, full of faith, careless of obstacles, believing in the force of ideas, and not the whole self-conscious portion of the country, which mainly contributed, by its eloquence, logic, consistency, self-sacrifice and the impact of its energy on the maturely-deliberating majority, to the permanence of the movement. These are the facts.
As for the conclusion from them we never made the absurd statement evolved out of the Bengalee’s imagination that God is everywhere except in the conscious and deliberate activities of men. What we say and hold to is that the Divine force manifests itself specially when it effects mighty and irresistible movements which even the ignorance and egoism of man is obliged to recognise as exceeding and baffling his limited wisdom and his limited strength.

**Our “Inconsistencies”**

A third point is the proposition that out of evil cometh good and that everything that happens or can happen is for the best. Here our contemporary finds an inconsistency, for did we not say that just now everything works for the upraising of India because there is an upward trend which all forces assist. “Curiously enough,” he says, “the writer thinks the two propositions identical.” Curiously enough, we do. We say that just now India is being raised up and everything tends to God’s purpose in raising her up, even calamity, even evil, even error. He uses them for His purpose and out of evil bringeth good. We said “just now”, because it is not true that God has always raised up India and always there has been an upward trend; sometimes He has cast her down, sometimes there has been a downward trend. Even that was for the good of India and the world as we shall take occasion to show. Where then is the limitation or the inconsistency? The limitation in the phrase “just now” applies to the upward trend, to the particular instance and not to the principle that out of evil cometh good, which is universal and absolute.

**Good out of Evil**

It is strange to find a philosopher like our contemporary parading in this twentieth century the ancient and hollow platitude that such a doctrine, however true, ought not to be applied to individual conduct because it will abrogate morality and personal responsibility. This is a strange answer, too, to an argument
which simply sought to confirm the faith and endurance of our people in calamity by the belief that our confidence in our future was not mistaken and that these calamities were necessary for God’s high purpose. The evil we spoke of was not moral evil, but misfortune and calamity. But we do not shrink from the doctrine that sin also is turned to His purposes and, so far as that goes, we do not see how such a doctrine abrogates morality. The wisdom and love of God in turning our evil into His good does not absolve us of our moral responsibility. Our contemporary shows this want of connection between the two positions himself when he asks whether one should not in that case play the traitor in order to assist the progress of the tendency. The gibe shows up the absurdity not of our faith but of his argument. Our selfish or sinful acts, our persistence in ignorance or perversity are for the best in this obvious sense that God makes out of them excellent material for the work He is about, which always tends to the good of humanity. The persecution of Christianity by the powers of the ancient world was utterly evil, but it was for the best; without it there could not have been that noble reaction of sublime and exalted suffering which finally permeated the human mind with the impulse of sacrifice for high ideals, and by introducing a mental soil fit for the growth of altruism sowed the seeds of love, sweetness and humanity in that hard selfish lust-ridden European world. The Bengalee no doubt would have counselled the Christian martyrs not to be so rash and unreasoning but to demand from God a balance of profit and loss for each individual sacrifice and only after mature deliberation decide whether to obey the voice of God in their conscience or offer flowers to Venus and divine homage to Nero.

Loss of Courage

But the question of self-sacrifice needs separate handling and we have not the space to deal with it in this issue as its importance deserves. The Bengalee counters our suggestion about the superfluity of prudence and the instinct of self-preservation at the present moment by the assertion that there is an excess
of unreasoning rashness. That is a question of standpoint and vocabulary. But when the Bengalee goes on to say that when evil results ensue from their imprudence the rash and unreasoning lose heart and become unbelievers, we have a right to ask to whom the allusion is directed. In the young, the forward, the men stigmatised by the Bengalee as rash and unreasoning we find no loss of courage or faith but only a hesitation on what lines to proceed now that the old means have been broken by repressive laws. Among the older men we do indeed find a spirit of depression for which we blame those who in the face of the repressions drew in their horns out of mature deliberation and allowed silence and inactivity to fall on the country. But these were never men of faith. We who believe in God's dispensations have not lost heart, we have not become unbelievers. Our cry is as loud as before for Swaraj and Swadeshi; our hearts beat as high.

**Intuitive Reason**

However there is hope for our contemporary. He has admitted in his idea of rationality the place of the intuitive reason, and it is precisely the intuitive reason, speaking oftentimes in the present stage of human development through the inspiration that wells up from the heart, which is the basis of faith and exceeds the limits of the logical intellect. For this is the highest form of faith when the intuitive reason speaks to the heart, captures the emotions and is supported by reflection. This is the faith that moves mountains and there is nothing higher and more powerful except the yet deeper inner knowledge.
Exit Bibhishan

Mr. GOPAL Krishna Gokhale has for long been the veiled prophet of Bombay. His course was so ambiguous, his sympathies so divided and self-contradictory that some have not hesitated to call him a masked Extremist. He has played with Boycott, “that criminal agitation”; he has gone so far in passive resistance as to advocate refusal of the payment of taxes. Eloquent spokesman of the people in the Legislative Council, luminous and ineffective debater scattering his periods in vain in that august void, he has been at once the admired of the people and the spoilt darling of the Times of India, the trusted counsellor of John Morley and a leader of the party of Colonial self-government. For some time the victim of his own false step during the troubles in Poona he was distrusted by the people, favoured by the authorities, some of whom are said to have canvassed for him in the electoral fight between him and Mr. Tilak. The charge of cowardice which he now hurls against his opponents was fixed on his own forehead by popular resentment. So difficult was his position that he refrained for some years from speech on the platform of the Congress. But his star triumphed. His own opponents held out to him the hand of amity and re-established him in the universal confidence of the people. Gifted, though barren of creative originality, a shrewd critic, a splendid debater, a good economist and statistician, with the halo of self-sacrifice for the country over his forehead enringed with the more mundane halo of Legislative Councillorship, petted by the Government, loved by the people, he enjoyed a position almost unique in recent political life. He was not indeed a prophet honoured in his own country and black looks and black words were thrown at him by those who distrusted him, but throughout the rest of India his name stood high and defied assailants.
In his recent speech at Poona the veiled prophet has unveiled himself. The leader of the people in this strange and attractive double figure is under sentence of elimination and the budding Indian Finance Minister has spoken. The speech has caused confusion and searchings of the heart among the eager patriots of the Bengal Moderate school, rejoicing in the ranks of Anglo-India. The Bengal labour to defend the popular cause without injuring the popular leader, the Statesman rejoices and holds up the speech even as Lord Morley held up the certificate to him as the Saviour of India for the confusion of rebels in Parliament and outside it. Covered by a reprobation of the London murders it is a sweeping, a damning philippic against the work of the last four years and a call to the country to recede to the position occupied by us previous to 1905. It is a forcible justification of repression and a call to Government and people to crush the lovers and preachers of independence. The time at which it comes lends it incalculable significance. The Morleyan policy of crushing the new spirit and rallying the Moderates has now received publicly the imprimatur of the leading Moderate of western India and that which was suspected by some, prophesied by others at the time of the Surat Congress, the alliance of Bombay Moderatism with officialdom against the new Nationalism, an alliance prepared by the Surat sitting, cemented by subsequent events, confirmed by the Madras Convention, is now unmasked and publicly ratified.

The most odious part of the Poona speech is that in which Mr. Gokhale justifies Government repression and attempts to establish by argument what Mr. Norton failed to establish by evidence, the theory that Nationalism and Terrorism are essentially one and under the cloak of passive resistance, Nationalism is a conspiracy to wage war against the King. This proposition he seeks to establish by implication with that skill of the debater for which he is justly famous. By taking the London murders as the subject-matter for the exordium of a speech directed against the forward party he introduces the element of prejudice from the very outset. After reviewing past political activities he takes up the clue he had thus skilfully thrown down and pursues it.
In his view, the ideal of independence was the beginning of all evil. The ideal of independence is an insane ideal; the men who hold it even as an ultimate goal, Tilak, Chidambaram, Aswini Kumar, Manoranjan, Bipin Chandra, Aurobindo, are madmen outside the lunatic asylum. Not only is it an insane ideal, it is a criminal ideal. “It should be plain to the weakest understanding that towards the idea of independence the Government could adopt only one attitude, that of stern and relentless repression, for these ideas were bound to lead to violence and as a matter of fact they had, as they could all see, resulted in violence.”

Farther, in order to leave no loophole of escape for his political opponents, he proceeds to assert that they were well aware of this truth and preached the gospel of independence knowing that it was a gospel of violence and “physical conflict with the Government”. We again quote the words of the reported speech. “Some of their friends were in the habit of saying that their plan was to achieve independence by merely peaceful means, by a general resort to passive resistance. The speaker felt bound to say that such talk was ridiculous nonsense and was a mere cloak used by these men to save their own skins.” In other words we are charged with having contemplated violence such as we all see, viz., the murders in London and the assassinations in Bengal, as inevitable effects of our propaganda, and physical conflict with the Government, in other words rebellion, as the only possible means of achieving independence. We are charged with preaching this gospel of violence and rebellion while publicly professing passive resistance, with the sole motive of cowardly anxiety for our personal safety. The accusation is emphatic, sweeping, and allows of no exception. All the men of the Nationalist party revered by the people are included in the anathema, branded as lunatics and cowards, and the country is called upon to denounce them as corruptors and perturbers of youth and the enemies of progress and the best interests of the people.

Mr. Gokhale stops short of finding fault with European countries for being free and clinging to their freedom. He is good enough not to uphold subjection as the best thing possible for a
nation, and we must be grateful to him for stopping short of the
gospel of the Englishman whose abusive style he has borrowed.
But man is progressive and it may be that Mr. Gokhale before he
finishes his prosperous career, will reach the Hare Street beaitudes.
At present he adopts the philosophy of his ally and teacher,
Lord Morley, and wraps himself in the Canadian fur coat. The
love of independence may be a virtue in Europe, it is crime and
lunacy in India. Acquiescence in subjection is weakness and un-
manliness in non-Indians, in this favoured country it is the only
path to salvation. In the West the apostles of liberty have been
prophets when they succeeded, martyrs when they failed; in this
country they are corruptors and perturbers of youth, enemies of
progress and their country. Mendicancy, euphoniously named
cooporation, can bring about colonial self-government in India
although there is no precedent in history, but passive resistance,
although, when most imperfectly applied and hampered by ter-
rorism from above and below, it gave the seed of free institutions
to Russia, cannot bring about independence in India even if it be
applied thoroughly and combined with self-help, because there
is no precedent in history. As has often been pointed out by
Nationalist writers, both mendicancy and self-help plus passive
resistance are new methods in history; both are therefore exper-
iments; but while mendicancy is an isolated experiment which
has been fully tried, failed thoroughly and fallen into discredit,
self-help and passive resistance are methods to which modern
ations are more and more turning, but they have been as yet
tried only slightly and locally. It must be admitted that in India,
so tried, their only result so far has been the Morley reforms.
But was it not Mr. Gokhale who to defend mendicancy declared
that the book of history was not closed and why should not a
new chapter be written? But the book is only open to the sacred
hands of the Bombay Moderate; to the Nationalist it seems to
be closed. But according to Mr. Gokhale we ought in any case
to acquiesce because England has not done so badly in India as
she might have done. His argument is kin to the Anglo-Indian
logic which calls upon us to be contented and loyal because
England is not Russia and repression here is never so savage as
repression there; as if a serf were asked to be contented with
serfdom because his master is kind or else his whip does not
lacerate so fiercely as the other master’s next door. Mr. Gokhale
cannot be ignorant that our ideal of independence has nothing
to do with the badness or goodness of the present Government
in its own kind. We object to the present system because it is
a bureaucracy, always the most narrow and unprogressive kind
of Government, because it is composed of aliens, not Indians,
and subject to alien control, and most essentially because it is
based on a foreign will imposed from outside and not on the
free choice and organic development of the nation.

We might go on to expose the other inconsistencies and
sophistries of Mr. Gokhale’s speech. We might well challenge
the strangeness of a sweeping and general charge of cowardice
against the nation’s leaders proceeding from the “broken reed”
of Poona. But we are more concerned with the significance of his
attitude than with the hollowness of his arguments. Lord Morley
the other day quoted Mr. Gokhale’s eulogium of the Asquith
Government, saviours of India from chaos, as a sufficient an-
swer to the critics of deportation. There was some indignation
against Lord Morley for his disingenuousness in suppressing
Mr. Gokhale’s condemnation of the deportations; but it now
appears that the British statesman did not make the mistake of
quoting Mr. Gokhale without being sure of the thoroughness of
the latter’s support. As if in answer to the critics of Lord Morley
Mr. Gokhale hastens to justify the deportations by his emphatic
approval of stern and relentless repression as the only possible
attitude for the Government towards the ideal of independence
even when its achievement is sought through peaceful means.
Mr. Gokhale’s phrase is bold and thorough; it includes every
possible weapon of which the Government may avail itself in
the future and every possible use of the weapons which it holds
at present. On the strength of Mr. Gokhale’s panegyric Lord
Morley mocked at Mr. Mackarness and his supporters as more
Indian than the Indians. We may well quote him again and apply
the same ridicule, the ridicule of the autocrat, to Mr. Beachcroft,
the Alipur judge, who acquitted an avowed apostle of the ideal of
independence. Mr. Gokhale, at least, has become more English than the English. A British judge, certainly not in sympathy with Indian unrest, expressly admits the possibility of peaceful passive resistance and the blamelessness of the ideal of independence. A leader of Indian Liberalism denounces that ideal as necessarily insane and criminal and the advocates of passive resistance as lunatics and hypocritical cowards, and calls for the denunciation of them as enemies of their country and their removal by stern and relentless repression. Such are the ironies born of co-operation. It is well that we should know who are our enemies even if they be of our own household. Till now many of us regarded Mr. Gokhale as a brother with whom we had our own private differences, but he has himself by calling for the official sword to exterminate us removed that error. He publishes himself now as the righteous Bibhishan who, with the Sugrives, Angads and Hanumans of Madras and Allahabad, has gone to join the Avatar of Radical absolutism in the India Office, and ourselves as the Rakshasa to be destroyed by this new Holy Alliance. Even this formidable conjunction does not alarm us. At any rate Bibhishan has gone out of Lanka, and Bibhishans are always more dangerous there than in the camp of the adversary.
I THANK you for the kindly welcome that you have accorded to me. The time fixed by the law for the breaking up of the meeting is also at hand, and I am afraid I have disappointed one or two speakers by getting up so soon. But there is just one word that has to be spoken today.

Recently a speech has been made in the Bengal Legislative Council by the Lieutenant-Governor of this province, a speech which I think is one of the most unfortunate and most amazing that have ever been delivered by a ruler in his position. The occasion of the speech was a reference to certain murders that have recently been committed in London. Those murders have been committed by a young man with whom there has been no proof that any other man in India or in England is connected, no proof that any conspiracy has been behind him. Not only so but the Police in London have declared that so far as their evidence goes they find that the murder was dictated by personal and not political motives. That crime is still the subject of a trial which has not been closed. Was this the time, — was this the occasion for the Lieutenant-Governor of Bengal to rise from his seat in the Legislative Council and practically associate the whole country with and make the whole country responsible for the crime of a single isolated youth in London? Not only so, but the Lieutenant-Governor, in referring to the crime, said that there had been plenty of denunciations in this country but those denunciations did not go far. And he wanted from us one thing more and that was co-operation. He wants co-operation from the whole community. He further saddled his request with the threat that if this co-operation were not

Delivered at College Square, Calcutta, on 18 July 1909. Text published in the Bengalee on 20 July and reproduced in the Karmayogin on 24 July.

www.holybooks.com
obtained, steps would have to be taken in which there would be no room for nice discrimination between the innocent and the guilty.

The murders that have been committed in Bengal have been sufficiently proved by the failure of case after case to be the acts of isolated individuals. There has been only a single instance which is still sub judice, and even if it were fully established, it would only prove that the crime was done in one case by a small group of men. Under such circumstances what is the co-operation that the L.-G. demands from us? He will not be satisfied if we denounce and dissociate ourselves from the crime. He wants co-operation. It is at least desirable that he should name and describe the co-operation he insists on before he carries out the remarkable threat with which he has sought to enforce his demand. There has been much talk recently, in a wider sense, of co-operation. Now, gentlemen, we are a people who demand self-government. We have a government in which we are not at all associated and over which we have no control. What is the co-operation a government of this kind can really demand from us? It can only demand from us obedience to the law, co-operation in keeping the law and observing peace and order. What further co-operation can they expect from us? Even in the matter which the L.-G. has mentioned, we are at a loss to see how a people circumstanced like ourselves can help him.

Still I have a proposal to make. I think there is only one way by which these unfortunate occurrences can be stopped. The ruler of Bengal in his speech spoke in approval of a certain speech made by Mr. Gokhale at Poona recently. In that speech Mr. Gokhale declared that the ideal of independence was an ideal which no sane man could hold. He said that it was impossible to achieve independence by peaceful means and the people who advocate the peaceful methods of passive resistance are men who, out of cowardice, do not speak out the thought that is in their heart. That idea of Mr. Gokhale's has been contradicted beforehand by the Sessions Judge of Alipore and even an Anglo-Indian paper was obliged to say that Mr. Gokhale’s justification
of the repressions on the ground that stern and relentless repression was the only possible attitude the Government could adopt towards the ideal of independence was absurd because the ideals and the thoughts of a nation could not be punished. This was a very dangerous teaching which Mr. Gokhale introduced into his speech, that the ideal of independence — whether we call it Swaraj or autonomy or Colonial Self-Government, because these two things in a country circumstanced like India meant in practice the same (loud applause), — cannot be achieved by peaceful means. Mr. Gokhale knows or ought to know that this ideal which he decries is deeply-rooted in the minds of thousands of people and cannot be driven out. He has told the ardent hearts which cherish this ideal of independence and are determined to strive towards it that their ideal can only be achieved by violent means. If any doctrine can be dangerous, if any teacher can be said to have uttered words dangerous to the peace of the country, it is Mr. Gokhale himself. (Loud cheers) We have told the people that there is a peaceful means of achieving independence in whatever form we aspire to it. We have said that by self-help, by passive resistance we can achieve it. We have told the young men of our country, “Build up your own industries, build up your own schools and colleges, settle your own disputes. You are always told that you are not fit for self-government. Show by example that you are fit to govern yourselves, show it by developing self-government through self-help and not by depending upon others.”

There is a second limb to that policy and it is passive resistance. Passive resistance means two things. It means first that in certain matters we shall not co-operate with the Government of this country until it gives us what we consider our rights. Secondly, if we are persecuted, if the plough of repression is passed over us, we shall meet it not by violence, but by suffering, by passive resistance, by lawful means. We have not said to our young men, “when you are repressed, retaliate;” we have said, “suffer.” Now we are told that by doing so we are encouragers of sedition and anarchism. We have been told by Anglo-Indian papers that by speaking in Beadon Square and other places on
patriotism and the duty of suffering we encourage sedition. We are told that in preaching passive resistance we are encouraging the people to violate law and order and are fostering violence and rebellion. The contrary is the truth. We are showing the people of this country in passive resistance the only way in which they can satisfy their legitimate aspiration without breaking the law and without resorting to violence. This is the only way we can find to co-operate in maintaining peace and order.

The co-operation we expect from the Lieutenant-Governor of Bengal and from the Government of this country in return is that they will respect the primary rights of the people of this country, they will respect the right of public meeting and the right of a free press and the right of free association. If they co-operate so far then we can assure them that this movement will advance on peaceful lines and the thing which troubles them will cease for ever. But the L.-G. says that measures will be passed which will observe no nice discrimination between the innocent and the guilty. A more cynical statement has seldom issued from a ruler in the position of Sir Edward Baker. If the threat is carried out, who will be the gainers? I do not deny that it may for a time stop our public activities. It may force the school of peaceful self-development and passive resistance to desist for a while from its activities at least in their present form. But who will gain by it? Not the Government, neither Mr. Gokhale and his school of passive co-operation. It is the very terrorists, the very anarchists, whom you wish to put down, who will gain by it. It will remove from the people their one hope, but it will give the terrorists a fresh incentive and it will teach the violent hearts, the undisciplined and ardent minds a very dangerous lesson that there is no peaceful way to the fulfilment of their aspirations and the consequence will be such as one trembles to contemplate. I trust the threat will never be carried out. I trust that the Government will be ruled by wise counsels and consider the matter more carefully. There are ominous signs and it seems as if measures were about to be passed which will put an end to the right of public meeting and the public expression of our feelings. But I trust that wiser counsels will yet prevail.
The Government should remember that it stands dissociated from the people by its very constitution. If it wants co-operation it cannot get the co-operation which is simply another name for passive obedience. That is the doctrine which is being taught today, the doctrine of the divine right of officials and the obligation on the people of passive obedience. That is a doctrine which no modern nation can accept. No modern nation can accept the extinction of its legitimate and natural hopes. Co-operation can only be given if the Government which is now alien becomes our own, if the people have a share in it, not merely in name, not merely by the right of talk in the legislative council, not merely by apparent concessions, but by getting some measure of control in the matter of legislation, in the expenditure of the taxes they are called on to pay for the maintenance of the administration, if, in short, they can be given some starting-point from which in future the Government of the country can be developed into a Government of the people. That is the only condition upon which the co-operation, of which we hear so much nowadays, can be given. Without it co-operation is a satire, it is a parody. It is the co-operation in which one side acts and the other side merely says “yes” which is demanded of us. We cannot give our sanction to such co-operation. So long as even that little of substantial self-government is not conceded to us, we have no choice but to cleave firmly to passive resistance as the only peaceful path to the realisation of our legitimate aspirations. We cannot sacrifice our country. We cannot give up the ideal that is dear to our heart. We cannot sacrifice our Mother. If you take away our primary rights all that is left for us is passive resistance and peacefully to suffer, peacefully to refuse the parody of co-operation which we are asked to give.
Facts and Opinions

The Indiscretions of Sir Edward

The speech of Sir Edward Baker in the Bengal Council last week was one of those indiscretions which statesmen occasionally commit and invariably repent, but which live in their results long after the immediate occasion has been forgotten. The speech is a mass of indiscretions from beginning to end. Its first error was to rise to the bait of Mr. Madhusudan Das’ grotesquely violent speech on the London murders and assume a political significance in the act of the young man Dhingra. The theory of a conspiracy behind this act is, we believe, generally rejected in England. It is not supported by a scrap of evidence and is repudiated by the London police, a much more skilful detective body than any we have in India and, needless to say, much more reliable in the matter of scrupulousness and integrity. It is the opinion of the London police that the act was dictated by personal resentment and not by political motives. It is not enough to urge in answer that the young man who committed this ruthless act himself alleges political motives. His family insist that he is a sort of neurotic maniac, and it is a matter of common knowledge that natures so disturbed often catch at tendencies in the air to give a fictitious dignity and sensational interest to actions really dictated by the exaggerated feelings common to
these nervous disorders. Madanlal Dhingra evidently considered that Sir William Curzon-Wyllie was his personal enemy trying to alienate his family and interfere with his personal freedom and dignity. To an ordinary man these ideas would not have occurred or, if they had occurred, would not have excited homicidal feelings. But in disturbed minds such exaggerated emotions and their resultant acts are only too common. Unless and until something fresh transpires, no one has a right to assume that the murder was a political assassination, much less the overt act of a political conspiracy. Anglo-Indian papers of the virulent type whose utterances are distorted by fear and hatred of Indian aspirations, may assume that of which there is no proof,—nothing better can be expected of them. But for the ruler of a province not only to make the assumption publicly but to base upon it a threat of an unprecedented character against a whole nation is an indiscretion which passes measure.

The Demand for Co-operation

The second crying indiscretion in Sir Edward’s speech is the extraordinary demand for co-operation which he makes upon the people of this country. It is natural that a Government should desire co-operation on the part of the people and under normal circumstances it is not necessary to ask for it; it is spontaneously given. The circumstances in India are not normal. When a Government expects co-operation, it is because it either represents the nation or is in the habit of consulting its wishes. The Government in India does not represent the nation, and in Bengal at least it has distinctly set itself against its wishes. It has driven the Partition through against the most passionate and universal agitation the country has ever witnessed. It has set itself to baffle the Swadeshi-Boycott agitation. It has adopted against that movement all but the ultimate measures of repression. Nine deportations including in their scope several of the most respected and blameless leaders of the people stand to their debit account unredressed. Even in giving the new reforms, inconclusive and in some of their circumstances detrimental to
the best interests of the country, it has been anxious to let it be known that it is not yielding to the wishes of the people but acting on its own autocratic motion. Against such a system and principle of administration the people of this country have no remedy except the refusal of co-operation and even that has been done only within the smallest limits possible. Under such circumstances it is indeed a grotesque attitude for the ruler of Bengal to get up from his seat in the Council and not only request co-operation but demand it on pain of indiscriminate penalties such as only an autocratic government can inflict on the people under its control, and this with the full understanding that none of the grievances of the people are to be redressed. The meaning of co-operation is not passive obedience, it implies that the Government shall rule according to the wishes of the people and the people work in unison with the Government for the maintenance of their common interests. By advancing the demand in the way he has advanced it, Sir Edward Baker has made the position of his Government worse and not better.

**What Co-operation?**

The delusion under which the Government labours that the Terrorist activities have a great organisation at their back, is the source of its most fatal mistakes. Everyone who knows anything of this country is aware that this theory is a fabrication. If it were a fact, the conspiracy would by this time have been exposed and destroyed. The assassinations have in all instances, except the yet doubtful Maniktola conspiracy now under judicial consideration, been the act of isolated individuals, and even in the Maniktola instance, if we accept the finding of the Sessions Court, it has been shown by judicial investigation that the group of young men was small and so secret in their operations that only a few even of those who lived in their headquarters knew anything of the contemplated terrorism. Under such circumstances we fail to see either any justification for so passionate a call for co-operation or any possibility of an answer from the public. All that the public can do is to express disapprobation of
the methods used by these isolated youths. It cannot turn itself into a huge Criminal Investigation Department to ferret out the half-dozen men here and there who possibly contemplate assassination and leave its other occupations and duties after the pattern of the police who in many quarters are so busy with suppressing fancied Swadeshi outrages that real outrage and dacoity go unpunished. We do not suppose that Sir Edward Baker himself would make such a demand, but if he has any other cooperation in view it would be well if he would define it before he proceeds with his strenuous proposal to strike out right and left at the innocent and the guilty without discrimination. On the other hand the Anglo-Indian papers are at no loss for the definite method of co-operation which they demand from the country on peril of “stern and relentless repression”. They demand that we shall cease to practise or to preach patriotism and patriotic self-sacrifice and submit unconditionally to the eternally unalterable absolutism which is the only system of government Lord Morley will tolerate in India. That demand has only to be mentioned to be scouted.

Sir Edward’s Menace

The final indiscretion of Sir Edward Baker was also the worst. We do not think we have ever heard before of an official in Sir Edward’s responsible position uttering such a menace as issued from the head of this province on an occasion and in a place where his responsibility should have been specially remembered. We have heard of autocrats threatening contumacious opponents with condign punishment, but even an autocrat of the fiercest and most absolute kind does not threaten the people with the punishment of the innocent. The thing is done habitually — in Russia; it has been done recently in Bengal; but it is always on the supposition that the man punished is guilty. Even in the deportations the Government has been eager to impress the world with the idea that although it is unable to face a court of justice with the “information, not evidence” which is its excuse, it had ample grounds for its belief in the
guilt of the deportees. Sir Edward Baker is the first ruler to declare with cynical openness that if he is not gratified in his demands, he will not care whether he strikes the innocent or the guilty. By doing so he has dealt an almost fatal blow at the prestige of the Government. If this novel principle of administration is applied, in what will the Government that terrorises from above be superior to the dynamiter who terrorises from below? Will not this be the negation of all law, justice and government? Does it not mean the reign of lawless force and that worst consummation of all, Anarchy from above struggling with Anarchy from below? The Government which denies the first principle of settled society, not only sanctions but introduces anarchy. It is thus that established authority creates violent revolutions. They abolish by persecution all the forces, leaders, advocates of peaceful and rapid progress and by their own will set themselves face to face with an enemy who cannot so be abolished. Terrorism thrives on administrative violence and injustice; that is the only atmosphere in which it can thrive and grow. It sometimes follows the example of indiscriminate violence from above; it sometimes, though very rarely, sets it from below. But the power above which follows the example from below is on the way to committing suicide. It has consented to the abrogation of the one principle which is the life-breath of settled governments.

The Personal Result

Sir Edward Baker came into office with the reputation of a liberal ruler anxious to appease unrest. Till now he has maintained it in spite of the ominous pronouncement he made, when introducing measures of repression, about the insufficiency of the weapons with which the Government was arming itself. But by his latest pronouncement, contradicting as it does the first principles not only of Liberalism but of all wise Conservatism all over the world, he has gone far to justify those who were doubtful of his genuine sympathy with the people. Probably he did not himself realise what a wound he was giving to his own reputation and
A One-sided Proposal

A writer in the Indian World has been holding out the olive branch to the advanced Nationalist party and inviting them into the fold of the body which now calls itself the Congress. The terms of this desirable conciliation seem to us a little peculiar. The Nationalists are to give up all their contentions and in return the Bombay coterie may graciously give up their personal dislike of working with the Nationalist leaders. This is gracious but a little unconvincing. The only difficulty the mediator sees in the way is the constitutional point raised by a section of the Moderates against the arbitrary action of the Committee of the Convention in passing a constitution and forcing it on the delegates without submission to freely elected delegates sitting in a session of the Congress itself. The mediator proposes to get round the objection by the Bombay coterie agreeing to pass the Constitution en bloc through the Congress provided an undertaking is given by the Nationalists that they will accept bodily the whole of the Constitution and make no opposition to any of its provisions! A very remarkable proviso! The writer assumes that the Nationalists have accepted the Constitution bodily and are willing to sign the creed. We think he is in error in his assumptions. The Nationalists are not likely to give any undertaking which will abrogate their constitutional right to make their own proposals about the Constitution at the beginning or to suggest amendments to it hereafter. They will sign no creed, as it is against their principles to make the Congress a sectional body and they refuse to bind themselves to regard colonial self-government as the ultimate goal of our national development. Whatever resolutions are passed by a properly constituted Congress they will accept as the temporary opinion of the majority while reserving the right, which all minorities reserve, of preaching their own convictions. They refuse to regard the Madras Convention or the contemplated Lahore Convention as a sitting of the Congress or

www.holybooks.com
its resolutions as the will of the country. The position taken, that
the Bombay coterie are in possession of the Congress and it is
theirs to admit the Nationalists or not at their pleasure is one
we cannot recognise. If there is to be a united Congress it must
resume its life at the point where the Calcutta session broke off.
All that has happened in between is a time of interregnum.

The Only Remedy

The attempt to reunite the parties on such lines is foredoomed
to failure. Nor is it likely that even if the Nationalists were
entirely accommodating there would be any chance of union.
The attitude of Mr. Gokhale is conclusive on this point. Not
only has he definitely separated himself and his school from the
advocates of Swaraj and passive resistance but he has denounced
them as enemies of the country and handed them over to the
“stern and relentless repression” of the authorities. The Tribune
calls on Bengal to give up the boycott on the ground that it is
no longer sanctioned by the “Congress” as it chooses to call a
body which even the whole of the Moderate party were unable
to join. The only remedy for the situation is for those who desire
unity to rebuild the National Assembly from the bottom on the
basis of provincial unity and abstention from any mutilated body
Moderate or Nationalist, however august the name under which
it masks its unrepresentative character, so long as it professes to
speak for the nation and yet refuses to admit freely its elected
representatives.

The Bengalee and Ourselves

The Bengalee has answered our facts and opinions with its facts
and comments. Unfortunately we find in our contemporary’s an-
swer all comment and no fact. For the most part he is busy trying
to prove that we were really inconsistent and contradictory, or,
if he misunderstood us, it was due to our uninstructed use of
language. In the first place we did not expressly say that we saw
God in everything and only specially in special movements. Of
course we did not. As we pointed out we could not be always guarding ourselves against gratuitous misconceptions, and the omnipresence of God is such an obvious fact that it has not to be expressly stated. It is curious that our contemporary's powerful intelligence seems still unable to grasp the point about leadership. If the movement were the result of human calculation or guided by human calculation, or even if every constructive step were the result of mature deliberation, there would be no point in insisting that the movement was created and led (we beg pardon, we mean specially created and led,) by God and not by human wisdom. We pointed out that none of these statements could be advanced in the face of the facts, and our contemporary has not been able to meet our arguments; he has simply restated his previous unsupported assumption. Secondly, we were unfortunate enough to use in one place the word “His” where our contemporary thinks we should have used the word “that”. With all submission we think our language was perfectly clear. We said His purpose and we meant His purpose, the purpose of raising up India. Then again we were unfortunate enough to indulge in an ironical repetition of our contemporary’s phrase “mere” faith, within commas inverted and our contemporary with portentous seriousness insists on taking this as our own epithet and seriously meant. We have pointed out that in our idea of faith it includes the logical analysing reason, it includes experience and exceeds it. It exceeds logical reason because it uses the higher intuitive reason; it exceeds experience because experience often gives the balance of its support to one conclusion where faith using intuition inclines to the opposite conclusion.

God and Man

Our contemporary does not understand why we wrote of God and the universal force or why we insisted on the special manifestation of the Divine Force as opposed to its veiled workings through human egoism. We did so because we had to oppose the excess of that very egoism. We have not risen to the heights of Monism from which he scoffs benignly at our dualism. It
may be the final truth that there is nothing but God, but for the purposes of life we have to recognize that there is a dualism in the underlying unity. It profits nothing to say, for instance, “The Divine Force wrote two columns of Facts and Comments the other day in the Bengalee.” God reveals Himself not only in the individual where He is veiled by ignorance and egoism, but in Himself. When the Bengalee sees no alternative to man’s self-conscious action except unconscious action, it is under the influence of European materialism which sees only conscious creatures in an unconscious inanimate Nature. The Divine Force is not unconscious but conscious and intelligent and to see Him as a conscious power only in men is to deny Him altogether. When again our contemporary uses a misapplication of the truth of Adwaita to justify the deifying of his own reason, he is encouraging practical atheism while taking the divine name in vain. God manifests Himself in everything, He manifests Himself in our reason, therefore let us forget God and rely on our own human calculations. That is the train of argument. What is the use of relying on God? let us look to our own safety. What is the use of being brave in the hour of peril? If our leader goes, the movement stops. *Mam anusmara yudhya cha*, is the motto of the Karmayogin. God manifests Himself in the individual partially, but He stands behind the progress of the world wholly. We are bound to use our own intellects, we cannot help it if we would, but we must remember that it is a limited intellect and be prepared for the failure of our schemes and plans, for calamity, for defeat, without making these things an excuse for abandoning His work, laying our principles on the shelf or sending out a cry to discourage steadfastness and self-sacrifice. Our plans may fail, God’s purpose cannot. That is why we laid so much stress on the fact that this has been a movement which, as the man in the street would say, has led itself, in which individuals have been instruments and not the real shapers and leaders. We have faith and we believe in the great rule of life in the Gita, “Remember me and fight.” We believe in the mighty word of assurance to the bhakta, *Macchittab sarvadurgani matprasadat tarishyasi*, “If thou reposest thy heart and mind in Me by My grace thou shalt
pass safe through all difficulties and dangers.” We believe that the Yoga of the Gita will play a large part in the uplifting of the nation, and this attitude is the first condition of the Yoga of the Gita. When anybody tries to discourage our people in this attitude, we are bound to enter the lists against him. We recognise that to argue with those who have only opinions but no realisation is a hopeless task, since it is only by entering into communion with the Infinite and seeing the Divine Force in all that one can be intellectually sure of its conscious action. But at least we can try to remove the philosophical delusions and confusions which mislead men from the right path and veil European materialism under generalities drawn from Vedanta.

Ourselves

In our third issue we wrote, “On account of the inconvenience of the printing press there has been some irregularity in the publication of the second and the third issues of the paper. With a view to remove this difficulty we are making better arrangements for printing the paper. The next issue of Karmayogin will be published on Saturday the 17th instant instead of on Saturday the 10th.” The publication of the next issue was, consequently, delayed. We are glad to be in a position to inform our readers that better arrangements have been made, and henceforth the Karmayogin will be regularly published, and our readers will be able to detect an improvement in the get-up of the paper. The unusual and unexpected demand for the paper necessitates the reprinting of the back numbers. We shall be glad to know the issue or issues each subscriber would want. We would take this opportunity of saying that we have no connection with the Bengali Karmayogin to be published from Uttarpara. It is an independent paper with which we have no connection. The conductors of the paper have only our permission to publish Bengali translations of articles appearing in the Karmayogin.
The Doctrine of Sacrifice

THE GENIUS of self-sacrifice is not common to all nations and to all individuals; it is rare and precious, it is the flowering of mankind's ethical growth, the evidence of our gradual rise from the self-regarding animal to the selfless divinity. A man capable of self-sacrifice, whatever his other sins, has left the animal behind him; he has the stuff in him of a future and higher humanity. A nation capable of a national act of self-sacrifice ensures its future.

Self-sacrifice involuntary or veiled by forms of selfishness is, however, the condition of our existence. It has been a gradual growth in humanity. The first sacrifices are always selfish — they involve the sacrifice of others for one's own advancement. The first step forward is taken by the instinct of animal love in the mother who is ready to sacrifice her life for the young, by the instinct of protection in the male who is ready to sacrifice his life for his mate. The growth of this instinct is the sign of an enlargement in the conception of the self. So long as there is identification of self only with one's own body and its desires, the state of the jiva is unprogressive and animal. It is only when the self enlarges to include the mate and the children that advancement becomes possible. This is the first human state, but the animal lingers in it in the view of the wife and children as chattels and possessions meant for one's own pleasure, strength, dignity, comfort. The family even so viewed becomes the basis of civilisation, because it makes social life possible. But the real development of the god in man does not begin until the family becomes so much dearer than the life of the body that a man is ready to sacrifice himself for it and give up his ease or even his life for its welfare or its protection. To give up one's ease for the family, that is a state which most men have attained; to give up one's life for the honour of the wife or the safety of the
home is an act of a higher nature of which man is capable in individuals, in classes, but not in the mass. Beyond the family comes the community and the next step in the enlargement of the self is when the identification with the self in the body and the self in the family gives way to the identification with the self in the community. To recognise that the community has a larger claim on a man than his family is the first condition of the advance to the social condition. It corresponds to the growth of the tribe out of the patriarchal family and to the perfection of those communal institutions of which our village community was a type. Here again, to be always prepared to sacrifice the family interest to the larger interest of the community must be the first condition of communal life and to give one’s life for the safety of the community, the act of divinity which marks the consummation of the enlarging self in the communal idea. The next enlargement is to the self in the nation. The evolution of the nation is the growth which is most important now to humanity, because human selfishness, family selfishness, class selfishness having still deep roots in the past must learn to efface themselves in the larger national self in order that the God in humanity may grow. Therefore it is that Nationalism is the dharma of the age, and God reveals himself to us in our common Mother. The first attempts to form a nationality were the Greek city, the Semitic or Mongolian monarchy, the Celtic clan, the Aryan kula or jati. It was the mixture of all these ideas which went to the formation of the mediaeval nation and evolved the modern peoples. Here again, it is the readiness to sacrifice self-interest, family interest, class interest to the larger national interest which is the condition of humanity’s fulfilment in the nation and to die for its welfare or safety is the supreme act of self-consummation in the larger national ego. There is a yet higher fulfilment for which only a few individuals have shown themselves ready, the enlargement of the self to include all humanity. A step forward has been taken in this direction by the self-immolation of a few to humanitarian ideals, but to sacrifice the interests of the nation to the larger interest of humanity is an act of which humanity in the mass is not yet capable. God prepares, but He does not hasten the
ripening of the fruit before its season. A time will come when this also will be possible, but the time is not yet. Nor would it be well for humanity if it came before the other and lesser identification were complete; for that would necessitate retrogression in order to secure the step which has been omitted. The advance of humanity is a steady progress and there is no great gain in rushing positions far ahead, while important points in the rear are uncaptured.

The national ego may easily mean nothing more than collective selfishness. I may be ready to sacrifice money and ease for the country in order to secure my wealth, fame or position and property which depend upon her security and greatness. I may be ready to sacrifice these and more for her because of the safety of the home and the hearth which her safety ensures. I may be ready to sacrifice much for her because her greatness, wealth, ease mean the greatness, wealth, ease of my community or my class. Or I may be ready to sacrifice everything to secure her greatness because of my pride in her and my desire to see my nation dominant and imperial. All these are forms of selfishness pursuing man into the wider life which is meant to assist in liberating him from selfishness. The curse of capitalism, the curse of Imperialism which afflict modern nations are due to this insistence. It is the source of that pride, insolence and injustice which affect a nation in its prosperity and by that fatal progression which the Greeks with their acute sense for these things so clearly demarcated, it leads from prosperity to insolence and outrage and from insolence and outrage to that *ate*, that blind infatuation, which is God’s instrument for the destruction of men and nations. There is only one remedy for this pursuing evil and it is to regard the nation as a necessary unit but no more in a common humanity.

There are two stages in the life of a nation, first, when it is forming itself or new-forming itself, secondly, when it is formed, organised and powerful. The first is the stage when Nationalism makes rightly its greatest demands on the individual, in the second it should abate its demands and, having satisfied, should preserve itself in Cosmopolitanism somewhat as the individual
preserves itself in the family, the family in the class, the class in the nation, not destroying itself needlessly but recognising a larger interest. In the struggles of a subject nation to realise its separate existence, the larger interest can only be viewed in prospect and as a higher inspiration to a broadminded and generous patriotism. No sacrifice of the nation to the larger interest is possible, for the nation must exist before it can sacrifice its interests for a higher good.

We are at present in the first or formative stage, and in this stage the demand of Nationalism is imperative. It is only by the sacrifices of the individual, the family and the class to the supreme object of building up the nation that under such adverse circumstances Nationalism can secure the first conditions for its existence. Every act of the new Nationalism has been a call for suffering and self-sacrifice. Swadeshi was such a call, arbitration was such a call, national education was such a call, above all, passive resistance was such a call. None of these things can be secured except by a general readiness to sacrifice the individual and the family to the interests of the nation. Nowadays a new call is visibly forming, the call on the higher classes to sacrifice their privileges and prejudices, as the Japanese Samurai did, for the raising up of the lower. The spread of a general spirit of ungrudging self-sacrifice is the indispensable prelude to the creation of the Indian nation. This truth is not only evident from the very nature of the movement we have initiated, but it is borne out by the tests of history and experience to which we have been recently asked to refer in each individual case before the act of sacrifice is decided. It is by the appeal to history and experience that the Nationalist party has convinced the intellect, just as by its inspiring ideals and readiness to suffer, it has carried with it the heart of the nation. The demand that we should in every individual case go into a review of the whole question is excessive and impossible. It is enough if we are generally convinced of the utility and necessity of sacrifice and feel the individual call. It must be remembered that we cannot argue from the condition of a people formed, free and prospering to that of a people subject, struggling and miserable. In the first case the individual is not
called to frequent acts of self-sacrifice, but only to those regularly demanded by the nation and to a general readiness for especial sacrifice in case of necessity, but in the second the necessity is a constant quantity. Nor is it a sound principle to demand in such circumstances an adequate value for every individual act of courage and self-denial. It would indeed be singular for the individuals of a subject nation asked for the price of their liberty to say to the Dispenser of Karma, “You shall give me so much in return for every individual sacrifice and we must know your terms beforehand. We will not trust you to the extent of a single pice worth of result for our sufferings.” Not by such men or such a spirit have subject nations been delivered.

The Greatness of the Individual
Facts and Opinions

The Spirit in Asia

A spirit moves abroad in the world today upsetting kingdoms and raising up new principalities and powers the workings of which are marked by a swiftness and ubiquity new in history. In place of the slow developments and uncertain results of the past we have a quickness and thoroughness which destroy in an hour and remould in a decade. It is noteworthy that these rapid motions are mostly discernible in Asiatic peoples.

The Persian Revolution

The Persian Revolution has settled with a swiftness and decisiveness second only to the movement of Turkey the constitutional struggle in Iran between a reactionary Shah and a rejuvenated, eager and ardent nation. The weak and unstable promise-breaker at Teheran has fallen, mourned by a sympathetic Anglo-India but by no one else in the world. Since the late Shah under the pressure of passive resistance yielded a constitution to his people, the young Nationalism of Persia has been attempting to force or persuade his son to keep the oaths with which he started his reign. Some deeds of blood on both sides, some sharp encounters have attended the process.
but the price paid has been comparatively small. Like other
Asiatic States in a similar process of transformation Persia has
rejected the theoretic charms of a republic; she has set up a
prince who is young enough to be trained to the habits of
a constitutional monarch before he takes up the authority of
kingship. In this we see the political wisdom, self-restraint and
instinct for the right thing to be done which is natural to ancient
nations who, though they have grown young again, are not
raw and violent peoples new to political thought and experi-
ment.

Persia's Difficulties

A great and difficult task lies before the newly-risen nation.
No other people is so difficultly circumstanced as the Persians.
Weak in herself, long a stranger to good government, military
strength and discipline, financial soundness and internal effi-
ciency, Persia has to evolve all these under the instant menace
from north and south of two of the greatest European empires.
The threat of Russia to act herself if the new government does
not instantly guarantee security on its borders, a threat made
on the morrow of a violent *coup d'état* and before there has
been time for the Regency to cope with any of the immedi-
ate difficulties surrounding it, is typical of the kind of peril
which this proximity is likely to produce. Self-restraint and
patience towards these doubtful friends and unbounded en-
ergy and decision within are the only qualities by which the
statesmen of Persia can surmount the difficulties in their path
and satisfy the claims posterity makes upon them. The internal
reorganisation of Persia and the swift development of military
strength are the first needs. Till then Persia must bear and
forbear.

The New Men in Persia

It is worthy of notice that Sipahidar and Sardar Assad, the
Bakhtyari leader, who have effected this revolution, are men
who in their youth have studied in Europe. They should know the springs of European politics and thoroughly understand the way in which European Powers have to be dealt with as well as the necessities and conditions of internal reorganisation. The problem for all Asiatic peoples is the preservation of their national individuality and existence while equipping themselves with the weapons of the modern struggle for survival. A deep study of European politics, a strong feeling for Asiatic institutions and ideals, a selfless patriotism and immense faith, courage and self-restraint are the qualities essential to their leaders in these critical times. It is reassuring to find Persians high in praise of the self-denying and lofty character of the new Regent. In the absence of a patriotic King like the Mikado such a man alone can form the centre of national reconstruction.

Madanlal Dhingra

Madanlal Dhingra pays the inevitable and foreseen penalty of his crime. We have no wish whatever to load the memory of this unfortunate young man with curses and denunciations. Rather we hope that in his last moments he will be able to look back in a calm spirit on his act and with a mind enlightened by the near approach of death prepare his soul for the great transit. No man but he can say what were the real motives for his deed. If personal resentment and exaggerated emotions were the cause of his crime, a realisation of the true nature of the offence may yet help the soul in its future career. If on the other hand a random patriotism was at its back, we have little hope that reflection will induce him to change his views. Minds imbued with these ideas are the despair of the statesman and the political thinker. They follow their bent with a remorseless firmness which defies alike the arrows of the reasoner and the terrors of a violent death. He must in that case go forth to reap the fruits in other bodies and new circumstances. Here his country remains behind to bear the consequences of his act.
Press Garbage in England

It is at least gratifying to find that the theory of conspiracy is exploded except in the minds of Anglo-Indian papers and perhaps of a few Anglo-Indian statesmen and officials. Not a single circumstance has justified the wild suspicions and wilder inventions which journals like the Daily Mail and Daily Express poured thick upon the world in the first few days that followed the occurrence. These strange fictions are still travelling to us by mail. The most extraordinary of them is perhaps that launched by a certain gentleman who is bold enough to give his name, upon the World. It seems that long ago the redoubtable Krishnavarma in a moment of benign and expansive frankness selected this gentleman and revealed to him the details of a gigantic plot he has been elaborating for the last eight years with a view to the murder wholesale and retail of Anglo-Indian officials. If the story were true, Krishnavarma’s confidant ought certainly to have been put in the dock as an accessory before the crime on the ground of criminal concealment. These romances sound ridiculous enough now that we read them three weeks afterwards when the excitement of the hour has passed, but the harm this kind of journalism can do was sufficiently proved at the time of the Chinese disturbances and the trouble which preceded the Boer War. That these daily voidings of impudent falsehood and fabrication should be eagerly swallowed by thousands shows the rapid deterioration of British dignity and sobriety.

Shyamji Krishnavarma

The exaggerated view of Mr. Shyamji Krishnavarma as an arch conspirator of malign subtlety and power who has long been inculcating terrorist opinions among young men and building up a secret society, is one which none can accept who has any knowledge of this gentleman’s past career. Mr. Shyamji Krishnavarma is an earnest, vehement and outspoken idealist passionately attached to his own views and intolerant of all
who oppose them. He first went to England to breathe the atmosphere of a free country where he could speak as well as think as he chose. He was then a strong constitutionalist and his chief intellectual preoccupations were Herbert Spencer, Home Rule and the position of the Native States. When the new movement flooded India it carried Mr. Krishnavarma forward with it. He became an ardent Nationalist, a confirmed passive resister with an idealistic aversion to violent methods and a strong conviction that, whatever might be the case with other countries, India would neither need nor resort to them. His conversion to Terrorism is quite recent and has astonished most those who knew him best. We know that Sj. Bipin Pal went to England with the confident expectation of finding full sympathy and co-operation from the editor of the *Indian Sociologist*. The quarrel between the two resulting from the change in Mr. Krishnavarma’s views is a matter of public knowledge. We refuse therefore to believe that Mr. Krishnavarma has been a plotter of assassination and secret disseminator of Terrorism or that the India House is a centre for the propagation and fulfilment of the ideas he has himself ventilated in the *Times*.

Nervous Anglo-India

Time was when Srijut Surendranath Banerji was held by nervous Anglo-India to be the crowned King of an insurgent Bengal, a very pestilent fellow flooding the country with sedition and rebellion. The whirligig of Time brings round with it strange revenges and at this moment Srijut Surendranath is returning to India acclaimed by English Conservatives as a pillar of the British Empire, India’s representative with a mighty organisation behind him pledged to loyalty, co-operation and the support of Morleyan reform. After Surendranath, Srijut Bipin Chandra Pal, reputed editor of *Bande Mataram* and author of the great Madras speeches, loomed as the arch-plotter of revolution and the chief danger to the Empire. The same Bipin Chandra is now a peaceful and unsuspected journalist and lecturer in London acquitted, we hope, of all wish to be the Ravana destined to
shake the British Kailas. But Anglo-India needs a bogeyman and
by a few letters to the *Times* Mr. Krishnavarma has leaped into
that eminent but unenviable position. Who knows? In another
year or two even he may be considered a harmless if incon-
venient idealist. What is it, one wonders, that has turned the
firm, phlegmatic Briton into a nervous quaking old woman in
love with imaginative terrors? Is it democracy? Is it the new
sensationalist Press run by Harmsworth and Company? The
phenomenon is inexplicable, but it is to be feared it is going to
be permanent.

The Recoil of Karma

There is a general law that Karma rebounds upon the doer. As-
sociated in Hindu philosophy mainly with the individual and the
theory of rebirth, this truth has also been recognised as equally
applicable on other lines to the present life and to the destiny
of nations. The Karma of the British people in India has been
of a mixed quality. So far as it has opened the gates of Western
knowledge to the people of this country it has been good and
in return the thought and knowledge of India has poured back
upon Europe to return the gift with overmeasure. Had they in
addition consciously raised up and educated the whole people,
all the fruits of that good Karma would have gone to England.
But the education they have given is bad, meagre and restricted
to the few, and their sympathy for the people has been formal and
deficient. In consequence the main flood of the new thought and
knowledge has been diverted to America, the giant of the future,
which alone of the nations has shown an active and practical
sympathy and understanding of our nation. British Karma in
India has been bad in so far as it has destroyed our industries and
arrested our national development. This Karma is also beginning
to recoil, patently in Boycott and unrest, much more subtly
in the growing demoralisation of British politics. Already the
jealous love of liberty is beginning to wane in the upper classes
in England, political thinkers are emerging who announce the
failure of democracy, the doctrine of the rule of the strong man
is gaining ground and the temptation to strengthen the executive at the expense of the liberty of the citizen is proving too powerful even for a Radical Government. It seems impossible that even a veiled despotism or a virtual oligarchy should ever again rule in England, yet stranger things have happened in history. The change may come by the growth of Socialism and the seizure of the doctrine of State despotism by masterful and ambitious minds to cloak a usurpation the ancient and known forms of which would not be tolerated, just as the Caesars, while avoiding the detested name and form of kingship, yet ruled Rome under the harmless titles of Princeps and Imperator, first man of the state and general, far more despotically than Tarquin could have done. Under whatever disguises the change may steal upon the people, one thing is certain that if Lord Morley and the Anglo-Indian proconsuls succeed in perpetuating absolutism in India, it will recoil from India to reconquer England. The Nationalists of this country are fighting not only for the liberties of India but for the liberties of England.

**Liberty or Empire**

It is an ancient and perpetually recurring choice which is now being offered to the British people, the choice between liberty and empire. The two are incompatible except by the substitution of a free federation for a dominion. Rome was offered the choice. She won an empire and lost her liberty. External expansion has always been accompanied by a concentration of internal power in King or oligarchy. Athens, the only people who attempted to be imperial and despotic abroad and democratic at home, broke down in the attempt. In English history also we find that the great expansion in the eighteenth century led to the reactionary rule of the third George and it was not till England after the severe lesson in America adopted her present colonial system that expansion and democracy went hand in hand. That system was not an imperial system but a loose collection of free states only nominally united by the British Crown. The Indian problem is the test of British Liberalism. The colonial system as it stands
cannot obtain between two States which are not mother and daughter. The one would not tolerate it, the other would not be content with it. But if England can bring herself to extend in a different form the principle of a collection of free States to India, she may keep her position in the world and her liberty together. Despotic empire and liberty she cannot keep; she must either yield up absolutism abroad or renounce liberty at home.
An Open Letter to My Countrymen

THE POSITION of a public man who does his duty in India today, is too precarious to permit of his being sure of the morrow. I have recently come out of a year’s seclusion from work for my country on a charge which there was not a scrap of reliable evidence to support, but my acquittal is no security either against the trumping up of a fresh accusation or the arbitrary law of deportation which dispenses with the inconvenient formality of a charge and the still more inconvenient necessity of producing evidence. Especially with the hounds of the Anglo-Indian Press barking at our heels and continually clamouring for Government to remove every man who dares to raise his voice to speak of patriotism and its duties, the liberty of the person is held on a tenure which is worse than precarious. Rumour is strong that a case for my deportation has been submitted to the Government by the Calcutta Police and neither the tranquillity of the country nor the scrupulous legality of our procedure is a guarantee against the contingency of the all-powerful fiat of the Government watchdogs silencing scruples on the part of those who advise at Simla. Under such circumstances I have thought it well to address this letter to my countrymen, and especially to those who profess the principles of the Nationalist party, on the needs of the present and the policy of the future. In case of my deportation it may help to guide some who would be uncertain of their course of action, and, if I do not return from it, it may stand as my last political will and testament to my countrymen.

The situation of the Nationalist party is difficult but not impossible. The idea of some that the party is extinct because its leaders are sentenced or deported, is an error which comes of looking only at the surface. The party is there, not less powerful and pervading than before, but in want of a policy and a
leader. The first it may find, the second only God can give it. All great movements wait for their God-sent leader, the willing channel of His force, and only when he comes, move forward triumphantly to their fulfilment. The men who have led hitherto have been strong men of high gifts and commanding genius, great enough to be the protagonists of any other movement, but even they were not sufficient to fulfil one which is the chief current of a worldwide revolution. Therefore the Nationalist party, custodians of the future, must wait for the man who is to come, calm in the midst of calamity, hopeful under defeat, sure of eventual emergence and triumph and always mindful of the responsibility which they owe not only to their Indian posterity but to the world.

Meanwhile the difficulties of our situation ask for bold yet wary walking. The strength of our position is moral, not material. The whole of the physical strength in the country belongs to the established authority which our success would, so far as its present form is concerned, abolish by transforming it out of all possibility of recognition. It is natural that it should use all its physical strength to prevent, so long as it can, that transformation. The whole of the moral strength of the country is with us. Justice is with us, nature is with us, the law of God which is higher than any human justifies our action, youth is for us, the future is ours. On that moral strength we must rely for our survival and eventual success. We must not be tempted by any rash impatience into abandoning the ground on which we are strong and venturing on the ground on which we are weak. Our ideal is an ideal which no law can condemn; our chosen methods are such that no modern Government can expressly declare them illegal without forfeiting its claim to be considered a civilised administration. To that ideal and to those methods we must firmly adhere and rely on them alone for our eventual success. A respect for the law is a necessary quality for endurance as a nation and it has always been a marked characteristic of the Indian people. We must therefore scrupulously observe the law while taking every advantage both of the protection it gives and the latitude it still leaves for pushing forward our cause and our
propaganda. With the stray assassinations which have troubled the country we have no concern, and, having once clearly and firmly dissociated ourselves from them, we need notice them no farther. They are the rank and noxious fruit of a rank and noxious policy and until the authors of that policy turn from their errors, no human power can prevent the poison-tree from bearing according to its kind. We who have no voice either in determining the laws or their administration, are helpless in the matter. To deportation and proclamation, the favourite instruments of men incapable of a wise and strong rule, we can only oppose a steady and fearless adherence to the propagandism and practice of a lawful policy and a noble ideal.

Our ideal is that of Swaraj or absolute autonomy free from foreign control. We claim the right of every nation to live its own life by its own energies according to its own nature and ideals. We reject the claim of aliens to force upon us a civilisation inferior to our own or to keep us out of our inheritance on the untenable ground of a superior fitness. While admitting the stains and defects which long subjection has induced upon our native capacity and energy, we are conscious of that capacity and energy reviving in us. We point to the unexampled national vigour which has preserved the people of this country through centuries of calamity and defeat, to the great actions of our forefathers continued even to the other day, to the many men of intellect and character such as no other nation in a subject condition has been able to produce, and we say that a people capable of such unheard-of vitality is not one which can be put down as a nation of children and incapables. We are in no way inferior to our forefathers. We have brains, we have courage, we have an infinite and various national capacity. All we need is a field and an opportunity. That field and opportunity can only be provided by a national government, a free society and a great Indian culture. So long as these are not conceded to us, we can have no other use for our brains, courage and capacity than to struggle unceasingly to achieve them.

Our ideal of Swaraj involves no hatred of any other nation nor of the administration which is now established by law in this
country. We find a bureaucratic administration, we wish to make it democratic; we find an alien government, we wish to make it indigenous; we find a foreign control, we wish to render it Indian. They lie who say that this aspiration necessitates hatred and violence. Our ideal of patriotism proceeds on the basis of love and brotherhood and it looks beyond the unity of the nation and envisages the ultimate unity of mankind. But it is a unity of brothers, equals and freemen that we seek, not the unity of master and serf, of devourer and devoured. We demand the realisation of our corporate existence as a distinct race and nation because that is the only way in which the ultimate brotherhood of humanity can be achieved, not by blotting out individual peoples and effacing outward distinctions, but by removing the internal obstacles to unity, the causes of hatred, malice and misunderstanding. A struggle for our rights does not involve hatred of those who mistakenly deny them. It only involves a determination to suffer and strive, to speak the truth boldly and without respect of persons, to use every lawful means of pressure and every source of moral strength in order to establish ourselves and disestablish that which denies the law of progress.

Our methods are those of self-help and passive resistance. To unite and organise ourselves in order to show our efficiency by the way in which we can develop our industries, settle our individual disputes, keep order and peace on public occasions, attend to questions of sanitation, help the sick and suffering, relieve the famine-stricken, work out our intellectual, technical and physical education, evolve a Government of our own for our own internal affairs so far as that could be done without disobeying the law or questioning the legal authority of the bureaucratic administration, this was the policy publicly and frankly adopted by the Nationalist party. In Bengal we had advanced so far as to afford distinct proof of our capacity in almost all these respects and the evolution of a strong united and well-organised Bengal had become a near and certain prospect. The internal troubles which came to a head at Surat and the repressive policy initiated immediately afterwards, culminating in the destruction of our organisations and the effective intimidation of Swadeshi workers
and sympathisers by official underlings, have both been serious checks to our progress and seem for the moment to have postponed the realisation of our hopes to a distant future. The check is temporary. Courage and sane statesmanship in our leaders is all that is wanted to restore the courage and the confidence of the people and evolve new methods of organisation which will not come into conflict even with the repressive laws.

The policy of passive resistance was evolved partly as the necessary complement of self-help, partly as a means of putting pressure on the Government. The essence of this policy is the refusal of co-operation so long as we are not admitted to a substantial share and an effective control in legislation, finance and administration. Just as “No representation, no taxation” was the watchword of American constitutional agitation in the eighteenth century, so “No control, no co-operation” should be the watchword of our lawful agitation — for constitution we have none, — in the twentieth. We sum up this refusal of co-operation in the convenient word “Boycott”, refusal of co-operation in the industrial exploitation of our country, in education, in government, in judicial administration, in the details of official intercourse. Necessarily, we have not made that refusal of co-operation complete and uncompromising, but we hold it as a method to be enlarged and pushed farther according as the necessity for moral pressure becomes greater and more urgent. This is one aspect of the policy. Another is the necessity of boycott to help our own nascent energies in the field of self-help. Boycott of foreign goods is a necessary condition for the encouragement of Swadeshi industries, boycott of Government schools is a necessary condition for the growth of national education, boycott of British courts is a necessary condition for the spread of arbitration. The only question is the extent and conditions of the boycott and that must be determined by the circumstances of the particular problem in each case. The general spirit of passive resistance has first to be raised, afterwards it can be organised, regulated and, where necessary, limited.

The first obstacle to our evolution is the internal dispute which has for the moment wrecked the Congress and left in
its place the hollow and mutilated simulacrum of a National Assembly which met last year at Madras and, deprived though it is of the support of the most eminent local leaders, purposes to meet again at Lahore. It is a grievous error to suppose that this dispute hung only on personal questions and differences of a trifling importance. As happens inevitably in such popular contests, personal questions and differences of minor importance intervened to perplex and embitter the strife, but the real questions in debate were those which involved the whole future development of the spirit and form of self-government in this country. Were that spirit and form to be democratic or oligarchic? Were they to be constitutional in procedure or governed by arbitrary and individual choice and discretion? Was the movement to be progressive and national or conservative and parochial in its aims, policy and spirit? These were the real issues. The Nationalist party stood for democracy, constitutionalism and progress. The Moderate party, governed by an exaggerated respect for old and esteemed leaders, helped, without clearly understanding what they did, those who stood for oligarchy, arbitrary procedure and an almost reactionary conservatism. Personal idiosyncrasies, preferences, aversions settled like a thick cloud over the contest, the combatants on both sides flung themselves on every point of difference material or immaterial as a pretext or a weapon, the tactics of party warfare were freely used and, finally, the deliberate obstinacy of a few Moderate leaders in avoiding discussion of the points of difference and the unruly ardour of the younger men on both sides led to the violent scenes at Surat and the break-up of the Congress. If the question is ever to be settled to the advantage of national progress, the personal and minor differences must be banished from the field and the real issues plainly and dispassionately considered.

The questions of particular importance which divide the parties, are the exact form of Swaraj to be held forward as an ideal, the policy of passive resistance and the form of certain resolutions. The last is a question to be decided by the Congress itself and all that the Nationalists demand is that discussion shall not be burked and that they shall not be debarred from their
constitutional right of placing their views before the National Assembly. On the other points, they cannot sacrifice their ideal or their policy, but their contention is that these differences ought not in a free deliberative assembly to stand in the way of united progress. The Swaraj matter can easily be settled by the substitution of “full and complete self-government” for “self-government on Colonial lines” in the Swaraj resolution. The difference as to passive resistance hinges at present on the Boycott resolution which the Nationalist party — and in this they are supported by a large body of Moderate opinion, — cannot consent to sacrifice. But here also they are willing to submit the question to the arbitrament of a freely elected Congress, though they refuse to recognise a close and limited Subjects Committee as the final authority. It will be seen therefore that the real question throughout is constitutional. The body which at present calls itself the Congress, has adopted a constitution which is close, exclusive, undemocratic and so framed as to limit the free election of delegates by the people. It limits itself by proposing a number of articles of faith in a particular form of words to every intending delegate before he can take his seat; it aims at the election of delegates only by select bodies and associations instead of the direct election of the people; it excuses many from the chances of election and gives them an undue weight in the disposal of the affairs of the assembly. These and similar provisions no democratic party can accept. A Nationalist Conference or a Moderate Convention may so guard its integrity, but the Congress is and must be a National Assembly admitting freely all who are duly elected by the people. The proposed passing of this reactionary constitution by a body already limited under its provisions will not cure the constitutional defect. It is only a Congress elected on the old lines that can determine the future provisions for its constitution and procedure with any hope of universal acceptance.

It is not therefore by any manipulation of the Convention Congress that a solution of the problem can be brought about, but by the Provincial Conferences empowering the leaders of
both parties to meet in Committee and provide for an arrangement which will heal differences and enable the Congress to work smoothly and freely in the future. If there is a minority who refuse to associate themselves with any such attempt, the majority will be justified by the mandate of the Provinces in disregarding them and meeting to carry out the popular wish. Once the lines are settled they can be submitted to the free choice of a freely elected Congress for acceptance, rejection or modification. This will restore a Congress on sound constitutional lines in which the bitter experience of the past may be relied on to prevent those mistakes of obstinacy and passion which prevented a solution of the problem at Surat.

Outside the Congress the chances of united working are more complete than within it. There are only two questions which are likely either to trouble harmony or hamper action. The first is the question of the acceptance or rejection of the present reforms introducing, as they do, no element of popular control nor any fresh constitutional principle except the unsound principle of privileged representation for a single community. This involves the wider question of co-operation. It is generally supposed that the Nationalist party is committed to the persistent and uncompromising refusal of co-operation until they get the full concession of Swaraj. Nationalist publicists have not cared to combat this error explicitly because they were more anxious to get their ideal accepted and the spirit of passive resistance and complete self-help popularised than to discuss a question which was not then a part of practical politics. But it is obvious that a party advancing such a proposition would be a party of doctrinaires and idealists, not of practical thinkers and workers. The Nationalist principle is the principle of “No control, no co-operation.” Since all control has been refused and so long as all control is refused, the Nationalist party preaches the refusal of co-operation as complete as we can make it. But it is evident that if, for instance, the power of imposing protective duties were given to a popular and elective body, no serious political party would prefer persistence in commercial boycott to the use of the powers conceded. Or if education were similarly
made free of official control and entrusted to a popular body, as Lord Reay once thought of entrusting it, no sensible politician would ask the nation to boycott that education. Or if the courts were manned by Indian judges and made responsible not to the Executive but to a Minister representing the people, arbitration would immediately take its place as a supplementary aid to the regular courts. So also the refusal to co-operate in an administration which excludes the people from an effective voice does not involve a refusal to co-operate in an administration of which the people are an effective part. The refusal of autocratic gifts does not involve a refusal to take up popular rights inalienably secured to the people. It is on the contrary with the object of compelling the concession of the various elements of Swaraj by peaceful moral pressure and in the absence of such concessions developing our own institutions to the gradual extrusion and final supplanting of bureaucratic institutions that the policy of self-help and passive resistance was started. This acceptance of popular rights does not imply the abandonment of the ideal of complete autonomy or of the use of passive resistance in case of any future arbitrary interference with the rights of the people. It implies only the use of partial Swaraj as a step and means towards complete Swaraj. Where the Nationalists definitely and decisively part company with an influential section of the Moderates is in refusing to accept any petty or illusory concession which will draw away our aspirations from their unalterable ideal or delude the people into thinking they have secured real rights.

Another question is that of cleaving to and enforcing the Boycott. In Bengal, even if there are some who are timid or reactionary enough to shrink from the word or the thing, the general feeling in its favour is emphatic and practically unanimous. But it is time now to consider seriously the question of regulating the boycott. Nationalists have always demurred to the proviso “as far as possible” in the Swadeshi resolution on account of the large loophole its vagueness left to the hesitating and the lukewarm, and they have preferred the form “at a sacrifice”. But it will now be well if we face the concrete problems of the boycott.

www.holybooks.com
While we must keep it absolute wherever Swadeshi articles are procurable as also in respect to pure luxuries with which we can dispense, we must recognise that there are necessities of life and business for which we have still to go to foreign countries. The public ought to be guided as to the choice of the countries which we shall favour in the purchase of these articles, — necessarily they must be countries sympathetic to Indian aspirations, — and those which we shall exclude. The failure to deal with this question is largely responsible for the laxity of our political boycott and our consequent failure to get the Partition rescinded. There are also other questions, such as the attempt of shopkeepers and merchants to pass off foreign goods wholesale as Swadeshi, which must be taken up at once if the movement is not to suffer a serious setback.

A final difficulty remains, — by what organisation are we to carry on the movement even when these questions are settled? The Nationalist programme was to build up a great deliberative and executive organisation on the basis of a reconstituted Congress, and this scheme still remains the only feasible means of organising the country. Even if a united Congress cannot be secured, the provinces ought to organise themselves separately, and perhaps this may prove to be the only possible way of restoring the Congress, by reconstituting it from the bottom. Even the District organisations, however, cannot work effectively without hands, and these we had provided for in the Sabhas and Samitis of young men which sprang up on all sides and were just succeeding in forming an efficient network of organisation all over Bengal. These are now being suppressed by administrative order. It becomes a question whether we cannot replace them by a loose and elusive organisation of young men in groups ordering each its own work by common agreement and working hand in hand, but without a rigid or definite organisation. I throw out the suggestion for consideration by the leaders of thought and action in the provinces where unity seems at all feasible.

This then is the situation as it presents itself to me. The policy I suggest to the Nationalist party may briefly be summed up as follows: —
1. Persistence with a strict regard to law in a peaceful policy of self-help and passive resistance.

2. The regulation of our attitude towards the Government by the principle of “No control, no co-operation.”

3. A rapprochement with the Moderate party wherever possible and the reconstitution of a united Congress.

4. The regulation of the Boycott movement so as to make both the political and the economic boycott effective.

5. The organisation of the Provinces if not of the whole country according to our original programme.

6. A system of co-operation which will not contravene the law and will yet enable workers to proceed with the work of self-help and national efficiency, if not quite so effectively as before, yet with energy and success.

Facts and Opinions

The Police Bill

The Police Bill has passed the Committee and next week, it is rumoured, will be made law. It is a provision for giving absolute power to the Police Commissioner and his underlings. It is true that the power is limited in time in certain respects, but so long as it lasts it is arbitrary, absolute, without checks and, practically, without appeal. We hear that the present Police Commissioner resents any proposal to put a check on his absolute power as a personal insult. If so, he is in good company, for he only follows the example of that great philosopher and democratic statesman, Lord Morley, who resents democratic criticism of his measures and actions as a crime and sacrilege and a petty amendment of the present provisions for the deportation of inconvenient persons as a vote of censure. The spirit of absolutism fostered by arbitrary government in India is not only swallowing up the old British virtues in India itself but encroaching on the free spirit of England. The powers of prohibition, regulation and arrest provided for in the Bill will exalt Mr. Halliday into the Czar of Calcutta. It is noticeable that any man may be arrested for the breach of any law by any policeman without a warrant and be sentenced to a fine of a hundred rupees or, for certain political offences among others,
to a month’s hard labour. Any meeting can be stopped for a week at the sweet will and discretion of an individual. The provisions for search and entry of the police into houses and so-called public places are so ample as to give a power of inquisition and domiciliary visit second only to the Russian. Even boardings, messes and private lodging-houses are liable to entry at any hour and on any pretext. And by an inspired improvement on the stringent Bombay Act no action of the police, however vexatious, unwarranted and malicious, can be punished unless the aggrieved party can prove bad faith, a condition which in nine cases out of ten of malicious harassment is impossible of satisfaction. It is a sound principle that where a citizen has been causelessly harassed, the burden of proving good faith rests on the harasser. An opposite proviso means the destruction of the liberty of the person. No man’s personal freedom and dignity will henceforth be safe for a moment from the whims of the lowest policeman in the street. The authorities may say that this is not the purposed object of the Bill. We have nothing to do with the intention of the framers, we have to do only with the provisions of the law itself, and it is enough if all these things are rendered possible under the provisions. To make bad laws and plead good intentions is an old evasion of weak and violent rulers.

The Political Motive

That there is a political motive behind the Bill, any child can see and to conceal it only the most flimsy precautions have been taken. The prohibition of public meetings can have no reference to any but Swadeshi meetings, the reference to objectionable cries is obviously aimed at the national cry of Bande Mataram and the power of harassing under the pretext of regulating public processions and meetings can have no objective but the revived meetings and processions which have shown that the national movement was not dead but only suspended. Other provisions of the Bill may be dictated by the sole object of strengthening the hands, already overstrong, of the Calcutta Police in keeping
order, but the nature and wording of these provisions coupled with the amazingly comprehensive definition of “public place” leave us no option but to see the obvious political motive behind. It is possible for the Police Commissioner under these provisions to paralyse every legitimate form of public activity in the city of Calcutta. It is no use sheltering under the provisions of the Bombay Act. The Bombay Act has been used to paralyse public activity of a kind inconvenient to the Government in that city. What, moreover, was the necessity of suddenly resorting to the stringency of the Bombay Act at this particular juncture? It is not alleged that any of the meetings or processions recently organised were disorderly or led to disturbance or public inconvenience. The only fresh emergency was the political.

A Hint from Dinajpur

The *Amrita Bazar Patrika* notices a case from Dinajpur which may give a few hints to Sir Edward Baker if he really wants or is wanted to establish police autocracy in Calcutta. Mr. Garlick there justified the caning of witnesses and accused by the police as a necessary “method of examination” without which the administration of justice in this country cannot be carried on. He says, “I dare say the police frequently quicken the witness’ answers with a cut from their riding canes. Such methods of examination are no doubt to be deprecated but without them I do not suppose the police would get any information at all.”

The case will come up before the High Court and we await with interest the view that authority will take of this novel legal dictum. Meanwhile why should not Sir Edward Baker take time by the forelock and, after a now familiar method, validate such “methods” beforehand by a clause in his Police Bill empowering any policeman to cut with a cane any citizen whom he may fancy guilty of breaking any law so as to persuade him to desist? Of course the said policeman will not be liable to punishment unless it can be proved that he cut in bad faith.
The Swadeshi Steam Navigation Company

We publish elsewhere an appeal from the promoters of the enterprise which first encouraged Indian energy and capital into the new path many are now preparing to follow. This Company, as the pioneer, had to face all the difficulties of a novel enterprise of considerable magnitude and it has suffered more than others from competition supported by official sympathy. To Nationalists it will be sufficient to recall the name of Chidambaram Pillai, condemned to a long term of imprisonment on the strength of police reports, and the plucky struggle made by the Company against overwhelming odds. The Company represents an output of patriotic effort and self-sacrifice such as no other has behind it and it would be a public disgrace if its appeal went unheard.

A Swadeshi Enterprise

One of the great weaknesses of the Swadeshi movement at present is the ease with which, under the stress of necessity, we admit articles as Swadeshi which are to all intents and purposes foreign. It is always therefore an encouraging sign when a real Swadeshi enterprise is started which liberates us from the necessity of such humiliating compromises, especially when they affect articles of daily necessity. We take for an instance what we choose to call Swadeshi umbrellas although these are Swadeshi only so far as the labour of fitting the parts together is concerned. Sirdar Rajmachikar of Poona and his brother have done a service to Swadeshi by starting a factory in which all the parts except the iron ribs and stretchers are either made in the factory or, in the matter of the cloth, procured from Poona and Bombay mills. The only drawback is the high prices of these articles compared with the cheapness of the fractionally Swadeshi umbrellas. This we believe, is largely due to the high prices of the cloth produced from the Bombay mills, but the people of Bombay and Poona are taking these umbrellas by the thousand in spite of the difference. We hope Bengal will be as patriotic in this small but important matter. The prices will come
down as soon as a sufficient market is created. Meanwhile we must take the Swadeshi article at a sacrifice as we have pledged ourselves to do by any number of vows and resolutions. To replace foreign by indigenous in the objects of daily use is the very life-breath of Swadeshi.
Youth and the Bureaucracy

Sir Edward Baker is usually a polite and careful man and a diplomatic official. It is not his fault if the policy he is called upon to carry through is one void of statesmanship and contradictory of all the experience of history. Neither is it his fault if he lacks the necessary weight in the counsels of the Government to make his own ideas prevail. He carries out an odious task with as much courtesy and discretion as the nature of the task will permit and, if we have had to criticise severely the amazing indiscretion foreign to his usual habits which he was guilty of on a recent occasion, it was with a recognition of the fact that he must have forgotten himself and spoken on the spur of the moment. But as the Anglo-Indian bureaucracy is now constituted, Sir Edward’s personal superiority to his two predecessors is of no earthly use to us. We acknowledge the politeness and self-restraint of the wording in his recent advertisement to the educational authorities and the public at large of the inadvisability of allowing students to mix in the approaching Boycott celebration. But his reserve of language cannot succeed in blinding the public, still less the parties addressed, to the real nature of this promulgation. To parties circumstanced like the authorities of the Bengal Colleges official or private it is one of those hints which do not differ from orders. The whole Calcutta University has been placed under the heel of the Executive authority and no amount of writhing or wry faces will save Principals and Professors from the humiliating necessities proper to this servile and degraded position. They have sold themselves for lucre and they must eat the bitter bread of their self-chosen servitude. If they are asked to do the spy’s office or to be the instruments for imposing on young men of education and respectability restrictions unexampled outside Russia, it is not theirs to reject the demand instantly.
as freemen would indignantly reject such degrading proposals. They must remember that the affiliation of their colleges and the grants which alone can enable them to satisfy the arduous conditions of affiliation depend on the fiat of those who make the demand. These things are in the bond. For the rest, the unwisdom of the wise men and the imprudence of the prudent who stopped the students’ strike is becoming more and more apparent. Prudence and wisdom for the proprietors of private schools, for the country it was the worst imprudence and unwisdom. It has turned the training ground of our youth into a means of restraining the progress of our people and denying them that liberty which the other nations of the world enjoy. A university in which the representatives of academic culture are only allowed to keep their position on condition of forfeiting their self-respect and the pen of the pedagogue supplements the baton of the policeman, is no longer worth keeping.

But there are other considerations affecting a wider circle than the educational world, which arise immediately out of this notice. Ever since the beginning of this movement the opponents of progress have with an admirable instinct hit upon the misleading and intimidation of the youth of this country as the best means of thwarting the movement. Their direct attempts having failed, they are now trying to keep down the rising spirit of young India by objurgations addressed to the guardians and by playing on their selfishness and fears. Once the National Education movement was thwarted of its natural course and triumphant success by the leaders, it was easy for the bureaucrats to enforce this policy by gathering up all the authority of the Universities into their hands and using it as a political lever. The loss of education and a career, — this was the menace which they held over the guardians and young men of the country and by the continual flourishing of this weapon they have succeeded in putting back for a while the hour of our national fulfilment. The unwholesome and dangerous effects of denying the aspirations of youth a peaceful outlet, as dangerous to the government as they are unwhole-
some to the country, the arbiters of official policy in spite of their experience are too blind to realise. Bad leadership, bad because marred by selfishness and timidity, has aided the political experience and insight of the English rulers in inflicting upon the cause a check which still works to hamper us in our progress. We do not propose to waste space by answering the sophistries which our opponents advance to cover their interested suggestions. It is enough to say in answer that in all civilised countries young men are freely permitted to take part in politics and their want of interest in the chief national activity would be considered a mark of degeneration. It is not the arguments of adversaries but their own personal and class interests which actuate those among us who at the bidding of Anglo-Indians official or unofficial deter our young men from attending public meetings or mixing in the national movement. To these also we can say nothing. Men who can prefer the selfish gratification of their transitory individual needs and interests to the good of the nation are not needed in the new age that is coming. They are there only to exhaust a degraded and backward type which the world and the nation are intended soon to outgrow. If some of them still pose as men of weight and leading, it is only for a moment. They will vanish and the whole earth heave a sigh of relief that that type at least is gone for ever.

But to the young men of Bengal we have a word to say. The future belongs to the young. It is a young and new world which is now under process of development and it is the young who must create it. But it is also a world of truth, courage, justice, lofty aspiration and straightforward fulfilment which we seek to create. For the coward, for the self-seeker, for the talker who goes forward at the beginning and afterwards leaves his fellows in the lurch there is no place in the future of this movement. A brave, frank, clean-hearted, courageous and aspiring youth is the only foundation on which the future nation can be built. This seventh of August in this year 1909 is not an ordinary occasion. It is a test, a winnowing-fan, a separator of the wheat and the chaff. Because it is so, Sir Edward Baker

www.holybooks.com
has been inspired by an overruling Providence to publish his notification and the authorities of colleges to act according to their kind. The question is put not to these but to the young men who are asked under pain of academical penalties to abstain from an activity which is both their right and their duty. Let them remember that they disobey no law of the land and no provision of morality if they attend the celebration of the new nation's birthday. They will only disobey what professes to be an exercise of school discipline, but is nothing of the kind. It does not fall within the province of a schoolmaster to dictate what shall be the political opinions or activities of his pupils, nor are College professors concerned with what their students may do outside the precincts of College and hostel in the hours of their lawful liberty, so long as there is no infringement of law or morality. The attempt is a usurpation of the rightful authority of guardians or, in the case of those who have come of age, of their right to govern their own personal action. There only remains the question of self-interest. That is a point we leave to their hearts and consciences, whether they shall prefer their own interests or their country's. But if once they decide for the nobler part, let them stand by the choice they have made. God does not want falterers and flinchers for his work, nor does he want unstable enthusiasts who cannot maintain the energy of their first movements. Secondly, let them not only stand by their choice but stand by their comrades. Unless they develop the corporate spirit and the sense of honour which refuses to save oneself by the sacrifice of one's comrades in action when that sacrifice can be averted by standing together, they will not be fit for the work they will have to do when they are a little older. Whatever they do let them do as a body, whatever they suffer let them suffer as a body, leaving out the coward and the falterer but, once they are compact, never losing or allowing anything to break that compactness. If they can act in this spirit, heeding no unpatriotic counsels from whatever source they come, then let them follow their duty and their conscience, but let them do nothing in a light even if fervent enthusiasm, moving forward without due consid-
eration and then showing a weakness unworthy of the nation to which they belong and the work to which they have been called.

Facts and Opinions

The Englishman on Boycott

The speech of Sj. Bhupendranath Bose at the boycott celebration and the Open Letter of Sj. Aurobindo Ghose have put the Englishman in a difficulty. It has been the habit of this paper to lay stress on any facts or suggestions real or imaginary which it could interpret as pointing to violence and so persistently damn the movement as one not only revolutionary in the magnitude of the changes at which it aims but violently revolutionary in its purposed methods. The speech and the open letter have cut this imaginary ground away from under its feet. As a matter of fact there is nothing new in the attitude of either the Moderate or the Nationalist leader. What they say now they have said always.

The Moderate party have always been in favour of constitutional methods which, whatever be the precise meaning of that phrase in a country where no constitution exists, must certainly exclude illegality and violence. The Nationalists on their side have always, while repudiating the principle that men are under all circumstances bound to obey unjust or injurious laws imposed without national consent, advocated observance of the law in the circumstances of India both on grounds of policy and in the interests of sound national development. Passive resistance to arbitrary edicts and proclamations in order to assert civic rights,
test illegal ukases or compel their recall is not breach of the law but a recognised weapon in the defence of civic liberty. Yet the Englishman chooses to save its face by imagining a change of front in the Boycott policy. There is no change. The Boycott has always been a movement within the law and such it remains. If there have been some individual excesses, that no more detracts from the legality of the movement than the excesses of individual strikers would affect the legality of a strike. The Englishman is full of anxiety as to the best way to meet the imagined change of front. With great sapiency it suggests to the Government the free use of deportation, for which it has been for some time clamouring in vain, and threatens the boycotters with an anti-boycott. One does not quite see how this mighty movement could be engineered. If a boycott of Indians by Englishmen is suggested, we would remind our contemporary that in life in this country Indians might conceivably do without Englishmen but Englishmen cannot do without Indians. That is precisely the strength of our position. The misfortune is that we ourselves still fail to realise it.

Social Boycott

It seems to be especially the Boycott President’s able defence of social boycott as opposed to violent constraint that has alarmed the Englishman. Here also there is nothing new. The social boycott is a weapon absolutely necessary for the enforcement of the popular will in this matter, the power of using fiscal law for the same purpose being in the hands of authorities who have been publicly declared by Lord Curzon to be active parties in British exploitation of the resources of India. It means the coercion of a very small minority by a huge majority in the interests of the whole nation; it consists merely in a passive abstinence from all countenance to the offender,— sending him to Coventry, in the English phrase; it is effective and, if properly applied, instantaneously effective; it involves, as the Englishman has been obliged to see, no violence, no disregard of public order, no breach of the peace. The only weapon the Englishman can
find against it is deportation, and after all you cannot deport a whole town, village or community. The Nationalist party have always struggled for and often obtained the recognition of the social boycott at various District Conferences and it has been freely and effectively applied in all parts, though mostly in East Bengal. It is gratifying to find the most moderate of Bengal Moderate leaders supporting and justifying it in a carefully prepared and responsible utterance on an occasion of the utmost public importance.

National or Anti-national

We have long noticed with the deepest disapprobation and indignation the equivocal conduct of the National Council authorities with regard to matters of great national importance, but we have held our peace from unwillingness to hurt an institution established with such high hopes and apparently destined to play an important part in the development of the nation. We can hold our peace no longer. The action of the authorities in forbidding their students to attend a national festival commemorating the inception of the movement by which the College and Council were created,—a prohibition extended by them to the mofussil schools,—is only the crowning act of a policy by which they are betraying the trust reposed in them by the nation, contradicting the very object of the institution and utterly ruining a great and salutary movement. They imagine that by being more servile than the most servile of the ordinary institutions and flaunting their high academical purpose they will save themselves from official repression and yet keep the support of the people. They are wrong. Already there is such deep dissatisfaction with the Council that the mofussil schools are dying of inanition and people are turning away from the new education as differing in no essential from the old. If the authorities persist in their evil course, the public mind will write Anti-national instead of National over their signboard in Bow Bazaar and their schools be left empty of students. We shall return to this subject in a future issue.
The Boycott Celebration

A NATIONAL festival is the symbol of the national vitality. All outward action depends eventually on the accepted ideas and imaginations of the doer. As these are, so is his aspiration; and although it is not true that as is his aspiration, so is his action, yet it is true that as is his aspiration, so will his action more and more tend to be. If it is the idea that finally expresses itself in all material forms, actions, institutions and consummations, it is the imagination that draws the idea out, suggests the shape and gives the creative impulse. Hence the importance of celebrations like the Seventh of August, especially in the first movements of a great national resurgence. A time may come when the living meaning may pass out of a solemnity or anniversary and leave it a dead form which only the persistence of habit preserves, but that cannot happen until the underlying idea is realised and the imaginative impulse towards creation has victoriously justified itself and exhausted its sources of satisfaction. The ideas which the boycott celebration holds as its roots and the imaginations to which it appeals are not yet even partially satisfied and, until they have confirmed themselves in victorious action and are perpetuated in lasting forms and institutions, it is of the first importance that this great festival should be celebrated in some form or other and, as far as possible, in the form it originally took. There is a meaning in the imaginative conservatism which refuses to part with the cherished pomps and even the little details of show and brightness which have always been associated with this day, the procession, the places, the meeting, the flags, music, songs, the vow, the resolution. Any laxness in these minutiae would show a fainting of the imagination which clings to the festival and its underlying ideas and a carelessness in the heart about those emotions without which the idea by itself is always inoperative. This appeal to the

www.holybooks.com
The Boycott Celebration

imagination and nourishing of the emotions is especially neces-
sary when the outward circumstances are widely different from
the cherished hopes and imaginations and the speedy advent of
the longed-for future seems to the reason distant or improbable.
That is why importance is attached in all countries to ceremonies
and festivals. There are many of us who are inclined to speak
with contempt of speeches and shows, and there was a time when
we too in our impatience of the mere babbler were inclined to
echo the cry for silent work. A juster knowledge of human psy-
chology has led us to modify our view on that head. Man is not
by nature a silent animal nor in the mass is he capable of work
without frequent interchange of speech. Talk is necessary to him,
emotion is necessary to him, imagination is necessary to him;
without these he cannot be induced to action. This constitutes
the supreme importance of the right of free speech and free meet-
ing; this also constitutes the justification of symbolical holidays
and festivals. Speech and writing are necessary to the acceptance
and spread of the idea without which there can be no incentive
to action. Ceremonies help the imagination and encourage it to
see in the concrete that which cannot be immediately realised. It
was out of the gurge and welter of an infinite oratory, thousand-
throated journalism, endless ceremonies, processions, national
festivals that the appallingly strenuous action of the Revolution-
ary and Napoleonic age in France arose to reconstitute society
and transform Europe. Let us not therefore despise these mighty
instruments. God has created them and the natural human love
for them for very great and abiding purposes. Even in these few
years the Ganapati and Shivaji festivals, instituted by the far-
seeing human sympathy and democratic instinct of Mr. Tilak,
have done much to reawaken and solidify the national feeling
of Maharashtra, and we can all feel what a stimulus to the
growth and permanence of the movement we have found in the
celebrations of the 7th August and the 16th October. They are to
us what sacred days are to the ordinary religions. The individual
religious man can do without them, collective religion cannot.
These are the sacred days in the religion of Nationalism, the
worship of God the Mother.
The 16th October is the idea of unity, the worship of the Mother one and indivisible. The 7th of August is the idea of separateness, the worship of the Mother free, strong and glorious. Both these ideas are as yet ideas merely, realised in our faith and aspiration by the shaping imagination, not yet materialised in the world of concrete fact. This, according to our Vedantic ideas, is how the world and things whether in general or particular come into being. They exist first in seed form in the silent and unexpressed idea, in a world of deep sleep where there is as yet no action of thought or deed, only the inert, inoperative idea. Shiva the white and pure, the ascetic, the still, contemplative Yogin holds them in himself as Prajna, the Wise One, God ideal. But Shiva is tamasic and rajas is necessary to induce motion before things can exist. The thing has next to sprout out of the seed and take a volatile and unfixed shape in the psychic world where it waits for a material birth. Here Brahma, the flaming, shapeless and many-shaped, holds them in his brilliant vibrating medium of active imagination and thought and by his daughter Vach, the Goddess Speech eldest-born of the world, puts them into shape and body as Hiranyagarbha, God imaginative and therefore creative. Last they take permanent shape and abide in some material body, form, organism. Vishnu there holds them in his fixed and visible cosmos as Virat, God practical, until the divine imagination wearies of them and Shiva as destroyer draws them back again, their outward form disintegrated and their supporting imaginations dead, into the seed-state from which they emerged. For a long time the idea of unity, the idea of a strong national self-expression were merely sleeping and inoperative ideas held as sounding words rather than possibilities. Still the repetition of the words like the repetition even mechanical of a powerful mantra, began to awaken the divine force latent in the idea and, however feebly, it began to stir. But it was not till the 16th of October and the 7th of August that these ideas seized on the faith and imagination of the people and took shape, volatile and unfixed but still shape, as a living aspiration. The day of material realisation is yet distant. Moving to unity we are still divided by external and internal agencies. Moving towards
strength and freedom we are still subject to external force and internal weakness. But this we have gained that the purpose and imagination of unity and strength is rooted in the hearts and minds of a great and the most vigorous portion of the young generation, inheritors of the future, beyond the power of force or sophistry to remove. Having secured so much we can go on in the confidence that, whatever now happens to the pioneers, Hiranyagarbha has taken the new ideas into his protection and when that has once happened Virat must inevitably fulfil them.

It is a short-sighted and superficial outlook which sees in the 16th October only the day of mourning for the partition of Bengal or in the 7th August only a commemoration of the Boycott. The Boycott is a symbol, the mourning a symbol. When the weapon of Boycott has done its work, we shall lay it aside, but the 7th August we shall not lay aside, for it is our sacred Day of Awakening. When the Partition is rescinded, we shall cease to go into annual mourning, but the 16th October will not fall into oblivion or desuetude, for it is our sacred Day of the Worship of the Indivisible Mother. These are the imaginations, these the mighty and creative thoughts and aspirations which we seek to foster by these celebrations. Therefore we regard the holding of the Boycott Day as a national duty. Let those who scoff at it and talk of the necessity of silent sadhana, for we have heard of such, be warned how they desecrate sacred words by using them as a convenient cant and try, out of selfish and infidel fears, to thwart in the minds of the young the work which by these celebrations God has been doing.

A Birthday Talk

In my childhood before the full development of my faculties, I became conscious of a strong impulse in me. I did not realise what it was then, but it grew stronger and stronger as I gained in years till all the weakness of my childhood, fear, selfishness, etc., vanished from my mind. From the day of my return to the mother country, the impulse is surging forth in great force, and my set purpose and devotion are becoming more confirmed with the trials and oppressions to which I am subjected. When some divine power by the grace of God manifests itself in a human being any efforts to develop it give a new force to the national life. You will have to sacrifice yourself at the feet of your Mother. You should, therefore, devote yourself with firm faith and whole heart to her service. Service of our motherland is our highest duty at this moment. This must be our duty in this iron age. It is now the time for us to conserve our energy. Do not be impatient, do not despair. Do not lose faith. The present fatigue and inactivity are natural; you will find instances of them in the history of every nation. Everyone must store up energy. Be prepared with fresh hope and vigour for the worship of the Mother. Divine power has infused this nation with a new power. This power will exalt the nation one day.

Delivered at Sri Aurobindo's residence in Calcutta on 15 August 1909, his thirty-seventh birthday. Text in Bengali published in Bharat Mitra on 21 August; subsequently translated into English and published in a police intelligence report.
Srijut Surendranath Banerji’s Return

The veteran leader of Moderate Bengal has returned from his oratorical triumphs in the land of our rulers. The ovations of praise and applause which appreciative audiences and newspaper critics of all shades of opinion have heaped upon him, were thoroughly deserved. Never has the great oratorical gift with which Srijut Surendranath is so splendidly endowed, been displayed to such faultless advantage as in these the crowning efforts of his old age. The usual defect of his oratory, an excess of language and rhetoric over substantial force, a defect which also limited Gladstone’s oratory and made it the glory of an hour instead of an abiding possession to humanity, was absent from these speeches in England. For the first time the orator rose to the full height of a great and sound eloquence strong in matter as in style. With the statesman’s part in the speeches we do not wholly agree. Nevertheless it must be accounted as righteousness to Srijut Surendranath that he enforced the Moderate Nationalist view of things,—a very different view from Mr. Gokhale’s which is certainly not Nationalism and hardly even strong enough to be called Moderatism,—to its utmost limits and did not leave the English public under the vain delusion that some paltry tinkering with the Legislative
Councils would satisfy the aspirations of an awakened India. His first speeches accepting the reforms were great blunders which might have done infinite harm, but his later utterances, however equivocal on this point, did much to redress the balance. We await with interest Sj. Surendranath’s action in this matter. In our view the one policy for us is “No control, no co-operation,” and in this we believe we are supported not only by the whole mass of advanced Nationalist opinion but by a great body of Moderates. The danger is that the older Moderates, trained in a much less exacting system of political agitation, may attempt to enforce the demand for control only in speech while in action conceding co-operation without control and thus giving away for some fancied and worthless advantage the vital position of the new movement. The reforms give no control, therefore the reforms must be rejected. Co-operation is our only asset, the only thing we can offer in exchange for control, the only thing by withholding which we can by pressure bring about the cession of control. It would be the height of political folly to give away our only asset for nothing.

A False Step

Sj. Surendranath’s maladroit reference to the outrages when speaking at Bombay was a false step which he has since made some attempt to recover. However it be put, it was maladroit and unnecessary. Any promise of co-operation in this respect implies an admission that we have the power to prevent these incidents and are therefore to some extent responsible either for bringing them about or for not stopping them before. It echoes the indiscretion by which Sir Edward Baker sought to make a whole nation responsible for these acts of recklessness and excuses the vindictive and headstrong utterances in which Mr. Gokhale tried to protect his own party and invoke the fiercest repression against his Nationalist countrymen. The isolated instances of assassination during the last year or more have been the reaction, deplorable enough, against the insane policy of indiscriminate police rule and repression which was started
and progressively increased in the recent stages of the movement. Not by a single word or expression ought any public man to allow the responsibility to be shifted from the right quarter and to rest in the slightest degree on the people who had no part in them, no power to detect and stop the inflamed and resolute secret assassin and no authority given them by which they can bring about the removal of the real causes of the symptom. To dissociate oneself is a different matter. That should be done clearly, firmly and once for all.

A London Congress

It is a pity that his oratorical triumphs in England seem to have blinded Sj. Surendranath to their small utility to the country. So far has he been led away by the slight and transient effect he has produced on the surface of the public mind in England that he is attempting to revive the old and futile idea of a Congress in London. Whether he will prevail on his fellow-Conventionalists to perpetrate this huge waste of money, we cannot say. The break-up of the Congress and the “stern and relentless repression” of the Nationalist party has delivered the old Congress Conservatives from the fear of public opinion. Needless to say, no so-called Congress held under such circumstances will be representative of the people. It is the old love of striking theatrical effects addressed to an English audience as patrons that has been revived in Sj. Surendranath by his visit. We notice that the dead cant about the faith in the sense of justice of the Government and the British democracy once more reappears in the columns of the Bengalee. All these are bad signs. What is it that the Moderate Leader proposes to effect by this expenditure of money which might be so much better used in the country itself? We fail to see how a meeting of forty or fifty Indians, however eminent and respectable, prosing about Indian grievances and the sense of justice of Lord Morley can do any lasting service to the cause of India in England. Even if this could be turned into a really imposing theatricality, the effect of such shows in European countries is
merely a nine days’ wonder unless they are followed up. It is natural that an orator should overrate the effect of oratory, but Sj. Surendranath is surely aware that the greatest speeches or series of speeches unconnected with its own interests now produce on the blasé British public only the effect of a passing ripple which is immediately effaced by the next that follows. Either therefore his proposal means only some temporary theatricals and waste of money or he must persuade our people to resume the old abandoned policy and carry on a perennial campaign in England for the “education” of the British Public. Only as part of such a campaign had the proposal of a London Congress ever any meaning or justification. But even in its best days the Congress leaders could never produce enough men, money and energy for so stupendous a work, and it is doubly impossible now that the old policy is discredited. Certainly, if Sj. Surendranath thinks that the newly awakened energies of India are going to follow him in throwing themselves into this channel, he is grievously mistaken. Not all his prestige and influence can put back the hands of the clock so utterly. The Indian movement has really to deal not with the British democracy, which is an almost negligible factor in Indian affairs, but with the politicians in Parliament, His Majesty’s ministers and the powerful influence in England of the official and commercial English out here. These are hard-headed and obstinate forces which, so far as they can at all rise out of the narrow groove of class interests or racial pride and prejudice, can only be influenced by one consideration, the best way to preserve the Empire in India. Even in the minds of Sir Henry Cotton and Mr. Mackarness that cannot fail to be a dominant consideration. If any educational work has to be done in England, it is to convince these classes that it is only by the concession of control that the co-operation of the Indian people can be secured. And that work is best done from India.
The Power that Uplifts

OF ALL the great actors who were in the forefront of the Italian Revolution, Mazzini and Cavour were the most essential to Italian regeneration. Of the two Mazzini was undoubtedly the greater. Cavour was the statesman and organiser, Mazzini the prophet and creator. Mazzini was busy with the great and eternal ideas which move masses of men in all countries and various ages, Cavour with the temporary needs and circumstances of modern Italy. The one was an acute brain, the other a mighty soul. Cavour belongs to Italy, Mazzini to all humanity. Cavour was the man of the hour, Mazzini is the citizen of Eternity. But the work of Mazzini could not have been immediately crowned with success if there had been no Cavour. The work of Cavour would equally have been impossible but for Mazzini. Mazzini summed up the soul of all humanity, the idea of its past and the inspiration of its future in Italian forms and gave life to the dead. At his breath the dead bones clothed themselves with flesh and the wilderness of poisonous brambles blossomed with the rose. Mazzini found Italy corrupt, demoralised, treacherous, immoral, selfish, wholly divided and incapable of union; he gave her the impulse of a mighty hope, a lofty spirituality, an intellectual impulse which despising sophistry and misleading detail went straight to the core of things and fastened on the one or two necessities, an ideal to live and die for and the strength to live and die for it. This was all he did, but it was enough. Cavour brought the old Italian statesmanship, diplomacy, practicality and placed it at the service of the great ideal of liberty and unity which Mazzini had made the overmastering passion of the millions. Yet these two deliverers and lovers of Italy never understood each other. Mazzini hated Cavour as a dishonest trickster and Machiavellian, Cavour scorned Mazzini
as a fanatic and dangerous fire-brand. It is easy to assign superficial and obvious causes for the undying misunderstanding and to say that the monarchist and practical statesman and the utopian and democrat were bound to misunderstand and perpetually distrust and dislike each other. But there was a deeper cause.

The one thing which Mazzini most hated and from which he strove to deliver the hearts and imaginations of the young men of Italy was what he summed up in the word Machiavellianism. The Machiavellian is the man of pure intellect without imagination who, while not intellectually dead to great objects, does not make them an ideal but regards them from the point of view of concrete interests and is prepared to use in effecting them every means which can be suggested by human cunning or put into motion by unscrupulous force. Italian patriotism previous to the advent of Mazzini was cast in this Machiavellian mould. The Carbonari movement which was Italy’s first attempt to live was permeated with it. Mazzini lifted up the country from this low and ineffective level and gave it the only force which can justify the hope of revival, the force of the spirit within, the strength to disregard immediate interests and surrounding circumstances and, carried away by the passion for an ideal, trusting oneself to the impetus and increasing velocity of the force it creates, to scorn ideas of impossibility and improbability and to fling life, goods and happiness away on the cast of dice already clogged against one by adverse Fortune and unfavourable circumstance. The spiritual force within not only creates the future but creates the materials for the future. It is not limited to the existing materials either in their nature or in their quantity. It can transform bad material into good material, insufficient means into abundant means.

It was a deep consciousness of this great truth that gave Mazzini the strength to create modern Italy. His eyes were always fixed on the mind and heart of the nation, very little on the external or internal circumstances of Italy. He was not a statesman but he had a more than statesmanlike insight. His plan of a series of petty, local and necessarily abortive insurrections
strikes the ordinary practical man as the very negation of common sense and political wisdom. It seems almost as futile as the idea of some wild brains, if indeed the idea be really cherished, that by random assassinations the freedom of this country can be vindicated. There is, however, a radical difference. Mazzini knew well what he was about. His eyes were fixed on the heart of the nation and as the physician of the Italian malady his business was not with the ultimate and perfect result but with the creation of conditions favourable to complete cure and resurgence. He knew final success was impossible without the creation of a force that could not be commanded for some time to come. But he also knew that even that force could not succeed without a great spiritual and moral strength behind its action and informing its aspirations. It was this strength he sought to create. The spiritual force he created by the promulgation of the mighty and uplifting ideas which pervade his writings and of which *Young Italy* was the organ.

But moral force cannot be confirmed merely by ideas, it can only be forged and tempered in the workshop of action. And it was the habit of action, the habit of strength, daring and initiative which Mazzini sought to recreate in the torpid heart and sluggish limbs of Italy. And with it he sought to establish the sublime Roman spirit of utter self-sacrifice and self-abnegation, contempt of difficulty and apparent impossibility and iron insensibility to defeat. For his purpose the very hopelessness of the enterprises he set on foot was more favourable than more possible essays. And when others and sometimes his own heart reproached him with flinging away so many young and promising lives into the bloody trench of his petty yet impossible endeavours, the faith and wisdom in him upheld him in the face of every discouragement. Because he had that superhuman strength, he was permitted to uplift Italy. Had it been God's purpose that Italy should become swiftly one of the greater European powers, he would have been permitted to free her also. He would have done it in a different way from Cavour's,—after a much longer lapse of time, with a much more terrible and bloody expense
of human life but without purchasing Italy’s freedom in the French market by the bribe of Savoy and Nice and with such a divine output of spiritual and moral force as would have sustained his country for centuries and fulfilled his grandiose dream of an Italy spiritually, intellectually and politically leading Europe.

The work was given to Cavour precisely because he was a lesser man. Mazzini saw in him the revival of Machiavellianism and the frustration of his own moral work. He was wrong, but not wholly wrong. The temper and methods of Cavour were predominatingly Machiavellian. He resumed that element in Italian character and gave it a triumphant expression. Like the Carbonari he weighed forces, gave a high place to concrete material interests, attempted great but not impossible objects and by means which were bold but not heroic, used diplomacy, temporising and shuffling with a force of which they were incapable and unlike them did not shrink from material sacrifices. He succeeded where they failed, not merely because he was a great statesman, but because he had learned to cherish the unity and freedom of Italy not as mere national interests but as engrossing ideals. The passion greater than a man’s love for child and wife which he put into these aspirations and the emotional fervour with which he invested his Liberal ideal of a free Church in a free State, measure the spiritual gulf between himself and the purely Machiavellian Carbonari. It was this that gave him the force to attempt greatly and to cast all on the hazard of a single die. He had therefore the inspiration of a part of the Mazzinian gospel and he used the force which Mazzini created. Without it he would have been helpless. It was not Cavour who saved Italy, it was the force of resurgent Italy working through Cavour.

History often misrepresents and it formerly represented the later part of the Revolution as entirely engineered by his statecraft, but it is now recognised that more than once in the greatest matters Cavour planned one way and the great Artificer of nations planned in another. But Cavour had the greatest gift of a statesman, to recognise that events were wiser than himself and throwing aside his attachment to the
success of his own schemes to see and use the advantages of a situation he had not foreseen. This gift Mazzini, the fanatic and doctrinaire, almost entirely lacked. Still the success of Cavour prolonged in the Italian character and political action some of the lower qualities of the long-enslaved nation and is responsible for the reverses, retardations and deep-seated maladies which keep back Italy from the fulfilment of her greatness. Mazzini, with his superior diagnosis of the national disease and his surgeon’s pitilessness, would have probed deeper, intensified and prolonged the agony but made a radical cure.

The circumstances in India forbid the use of the same means as the Italians used. But the general psychological laws which govern nations in their rise, greatness, decline and resurgence are always the same. The freedom we seek in India may be different in its circumstances from Italian freedom, the means to be used are certainly different, but the principle is the same. The old patriotism of the nineteenth century in India was petty, unscrupulous, weak, full of insincerities, concealment, shufflings, concerned with small material interests, not with great ideals, though not averse to looking intellectually and from far-off at great objects. It had neither inspiration nor truth nor statesmanship. Nationalism has done part of the work of a Mazzini by awakening a great spiritual force in the country and giving the new generation great ideals, a wide horizon of hope and aspiration, an intense faith and energy. It has sought like Mazzini to raise up the moral condition of the nation to the height of love, strength, self-sacrifice, constancy under defeat, unwearied and undaunted perseverance, the habit of individual and organised action, self-reliance and indomitable enterprise; but it has rejected the old methods of insurrectionary violence and replaced them by self-help and passive resistance.

That work is not yet complete and only when it is complete will it be possible for a strength to be generated in the country which the past represented by the bureaucracy will consent to recognise as the representative of the future and to abdicate in its favour by a gradual cession of powers. It is our hope
that as the work has begun, so it will continue in the spirit of Nationalism and not only the political circumstances of India be changed but her deeper diseases be cured and by a full evocation of her immense stores of moral and spiritual strength that be accomplished for India which Mazzini could not accomplish for Italy, to place her in the head and forefront of the new world whose birth-throes are now beginning to convulse the Earth.

Anandamath I (continued)
Facts and Comments

The Cretan Difficulty

Foreign affairs are as a rule lightly and unsubstantially dealt with by Indian journals. This is partly due to want of the necessary information, partly to the parochial habit of mind encouraged by a cabined and subject national life which cannot enlarge its imagination outside the sphere of those immediate and daily events directly touching ourselves. And yet the happenings of today in Asia, Europe and Africa are of great moment to the future of India and full of encouragement and stimulus to the spirit of Nationalism. The recent events in Turkey are an instance. It is not the methods of the Young Turks which have any lesson for India. The circumstances are too dissimilar to warrant any fanciful theories of that kind. It is rather the character of the party of freedom which bears a lesson to all struggling nationalities. The dominant qualities of the democratic leaders — and these are the qualities they have imparted to the movement, — are strength, manhood, a bold heart, a clear brain, a virile efficiency. The Government they have established has been showing these qualities to the full in its treatment of the Cretan difficulty. It has shown that free Turkey, while not rashly oblivious of the circumstances created by an unfortunate past, will not tolerate any attempt
to be treated as Sultan Abdul Hamid suffered himself to be treated. Sultan Abdul Hamid, afraid of his subjects, afraid of the world, afraid even of his spies and informers, followed the weak and cowardly policy of a dishonest, intriguing and evasive Machiavellianism. He conducted that policy with a certain skill and statecraft in details which eventually evoked admiration, but it could neither save Turkey from ignominy and weakness nor permanently protect a throne based upon cruelty, falsehood and despicable meanness. All that it did, for Satan must be given his due, was to stave off a final disruption of Turkey and expulsion of the Ottoman from Europe. But true freedom is always conscious of strength and knows that it is better to perish than to live for a short while longer at the cost of continual insult, degradation and weakness. The first efforts of the new Government have been to save what remained of the outskirts of Turkish empire in Europe, the suzerainty in Crete, the supreme control in Macedonia. Their diplomacy has been strong, outspoken and fearless. It did not flinch nor in any way draw back a step or lower its tone until it forced Greece to a satisfactory attitude and obliged the Powers to baffle the tortuous Greek methods by lowering the Greek flag in Canea. It has quietly ignored the attempt of the Powers to interfere even by a suggestion in the direct question between itself and Greece; for we read that Turkey is not going to give any formal answer to the Powers’ Note recommending pacific counsels as that Note did not call for any reply. It has been supported by the newly liberated nation by means of a Boycott which would have alarmed into reason a stronger Government than that of Athens. And as strength, when firm and able, can never be ignored, it has secured the sympathy of the Powers in the shape of concessions which would never have been yielded to a weak or overcautious Government. Strength attracts strength; firm and clear-minded courage commands success and respect; strong and straight dealing can dispense with the methods of dissimulation and intrigue. All these are signs of character and it is only character that can give freedom and greatness to nations.
Greece and Turkey

It is not to be imagined, however, that this is the closing chapter. The question between Greece and Turkey will have eventually to be fought out by the sword. It is true that the immediate question is for the moment settled and the rent in the Cretan patchwork mended. But that patchwork is not of a kind to last. The Greek Government is not likely to give up its methods in Crete, the Christian population their desire for union with Athens or the present Cretan administration their secret sympathy with and support of these aspirations. It would have been a simpler matter if the population of the island had been wholly Christian, but there is a Mahomedan population also which is as eagerly attached to the Turkish connection as the others are desirous of the Greek. The ancient history of Crete supports the sentiment of Greek unity, its later history the sentiment of imperial Ottoman greatness. And apart from Crete, there are inevitable sources of quarrel in Macedonia. Some day the Powers will have to stand aside and allow these natural enemies to settle the question in the only possible way. The result of such non-intervention in an armed struggle could not be doubtful. The Mongolian is a stronger spirit than the Slav, the Muslim a greater dynamic force than the Christian, and it is only ignorance and absolutism that has for the time depressed the Turk. The disparity between the Turk and the Greek is abysmal. The former is a soldier and statesman, the latter a merchant and intriguer. A war between two such Powers with none to intervene would speedily end with the Turk not only in occupation of Thessaly but entering Athens.

Spain and the Moor

Another corner of the Asiatic world — for Northern Africa is thoroughly Asianised if not Asiatic, — is convulsed with struggles which may well precede another resurgence. There was a time when the Moor held Spain and gave civilisation to semi-barbarous Europe. The revolution of the wheel has now gone to
its utmost length and finds the Spaniard invading Morocco. But this invasion does not seem to promise any Spanish expansion in Africa. With infinite difficulty and at the cost of a bloody émeute in Spain King Alfonso’s Government have landed a considerable army in Morocco and yet with all that force can only just protect their communications and stand facing the formidable country where the stubborn Kabyle tribesmen await the invader. There the army is hung up for the present, unwilling to retreat and afraid to advance, and the Spanish General has again sent to Spain for reinforcements, a feat of military strategy at which he seems to be exceptionally skilful. If the men of the mountains are fortunate enough to have a leader with a head on his shoulders, the circumstances augur a reverse for Spain as decisive and perhaps more sanguinary than the Italian overthrow in Abyssinia. Meanwhile King Alfonso has sacrificed all his youthful popularity by this ill-omened war and the bloody severity which has temporarily saved his throne. And with the popularity of the young King has gone the friendship of the Spanish nation for England, for the Spaniards accuse that friendship of the origination of these troubles and the British Government as the selfish instigators of the intervention in Morocco.

The London Congress

Since we made our remarks on the proposal of a Congress session in London, we have seen two reasons urged for this reactionary step. It is necessary, it seems, to prevent judgment going against us in England by default and also to win the sympathy of the civilised world. The former argument we have already answered in our last issue. Neither the speeches of a famous orator nor the conjoint speeches of many less famous will win for us the support of the British people for claims which go directly against their interests. Only a prolonged and steady campaign in England all the year round for several years can make any impression of a real and lasting kind and even that impression cannot in the nature of things be sufficient for the purpose. Those who are on the side of Indian interests must always be in the
minority and will always be denounced by the majority as allies
of the enemies of English interests. Even now that is increasingly
the attitude of the public towards Mr. Mackarness and his sup-
porters and we do not think Sj. Surendranath’s eloquence has
changed matters. Already the most prominent critics of Lord
Morley and his policy of repression have received intimation
from their constituents of their serious displeasure and are in
danger of losing their seats at the next election. This is in itself
a sufficient refutation of the fable that speeches and Congresses
in England can change an ignorant British public into informed
and enthusiastic supporters of Indian self-government. It is only
political necessity and the practical recognition that change is
inevitable which can convert the statesmen of England. As for
the opinion of the civilised world, we do not despise it as a
moral force. But its practical effect is so little as to be almost nil.
In a constitutional question between the present Government in
India and the people we do not see what can be the place or mode
of operation of the world’s opinion or sympathy. An academical
approval of our aims can be of no help to us. Nor is the sym-
pathy of the world likely to be excited beyond such academical
approval unless the Government faithfully imitates the Russian
precedent in dealing with popular aspirations. Even then it is
not likely to tell on the action of the Government concerned
which will certainly resent foreign interference in its dealings
with its own subjects. The impotence of the civilised world
was strikingly shown in the crisis of Russian despotism and
at the time of the Boer War. Even were it otherwise, a London
session of the Congress would only awaken a passing interest.
In that respect the visit of Swami Vivekananda to America and
the subsequent work of those who followed him did more for
India than a hundred London Congresses could effect. That is
the true way of awaking sympathy, — by showing ourselves to
the nations as a people with a great past and ancient civilisation
who still possess something of the genius and character of our
forefathers, have still something to give the world and therefore
deserve freedom, — by proof of our manliness and fitness, not
by mendicancy.
Political Prisoners

We extract elsewhere some very telling criticisms from the pen of the well-known positivist Mr. Frederic Harrison on the treatment of political prisoners. This is a subject on which a Nationalist writer is naturally somewhat shy of dilating, as any stress on the brutality and callousness of the treatment to which not only convicted but undertrial prisoners of gentle birth and breeding are sometimes subjected in Indian jails, might be misinterpreted by our opponents as an unwillingness to face the penalties which repressive legislation inflicts on those who cherish great aspirations for their race and country. But two instances have occurred recently which compel attention. One is the death of the convicted prisoner Ashok Nandi of consumption brought on by exposure and neglect during fever in the undertrial period of the Alipur Case. We exonerate from blame the jail authorities who were exceptionally humane men and would have been glad to deal humanely with the prisoners. But their blamelessness only brings out the barbarity of a system which allows of the confinement of a delicate ailing lad in a punishment cell exposed night after night to the dews and cold of an unhealthy season, and that without his having committed any fault or shown anything but the mildest and most docile of characters. The other case is that of Mr. Achyutrao Kolhatkar of Nagpur, editor of the Deshsevak, a gentleman of distinguished education, ability and character, who was convicted for the publication in his paper of the reports of Sj. Aurobindo Ghose's speeches delivered at a time when Mr. Kolhatkar was absent from Nagpur. The Sessions Judge of Alipur declared on the police reports of these speeches that so far from being seditious or violent they told in favour of the speaker and not against him. We find it difficult to believe that the newspaper report of speeches from which the police could extract nothing that was not in the speaker's favour, could be at all seditious. Be that as it may, Mr. Kolhatkar was convicted and perhaps, according to the “strong man” code of ethics, forfeited claim to generous treatment by his refusal to apologise. We have heard rumours of treatment being meted
out to him which can only be described as studied brutality and
the evidence of eye-witnesses who have seen the condition to
which he was reduced, do not encourage us to reject these re-
ports as fabrications. Finally, the refusal of the Central Provinces
Government to face independent medical inspection and so dis-
pose of the serious allegations publicly preferred put a very ugly
aspect on this case. If the allegations are true, they amount to
a treatment which would evoke the loudest indignation and
reprobation in England if applied under the same circumstances
in another country. But we cherish little hope of redress. The
prison system of the European nations is only a refined and
systematised savagery perpetuating the methods of ancient and
medieval barbarity in forms that do not at once shock the
eye. Besides, the account of the recent starvation strike of the
Suffragettes has shown what callous and brutal treatment can
be inflicted by English officials in England itself even on women,
and women of education, good birth, position and culture, guilty
only of political obstruction and disorderliness. Yet this is the
civilisation for which we are asked to sacrifice the inheritance of
our forefathers!

An Official Freak

We suppose in a bureaucracy it is inevitable that officials should
be masters and be able to inflict inconvenience and loss on the cit-
izen without any means of redress. Last Monday the publication
of a new weekly named Dharma, edited by Aurobindo Ghose,
was due and had been widely announced. The issue was ready
and the printer duly attended the Police Court to declare his
responsibility for printing and publishing the periodical. Except
under very unusual circumstances this is a mere formality and
one would have thought no difficulty could intervene, but noth-
ing could persuade the Court Official to refrain from delaying
the acceptance till the next day. It was pointed out that this
would entail unnecessary inconvenience and perhaps consider-
able financial loss, but that naturally did not concern him as he
was the master of the public and not their servant. The next
day a variation of the same vexatious procedure was repeated. It was whispered, we do not know with what truth, that the first delay was for the Criminal Investigation Department to have time to find out whether the printer had been convicted in any sedition case. If so it was a futile delay. There is no concealment of the responsibility with regard to this paper. The name of the editor and proprietor was openly given and the printer was there to accept his responsibility. This does not look like intended sedition. If there were any doubt the required information could easily have been gained from the Manager of the paper who was present and would no doubt have been glad to save delay and loss by stating the printer’s antecedents. It was not likely that he would conceal a conviction as that would be a thing impossible to suppress. But then, if officialdom were to acquire a common sense, the laws of Nature would be sadly contravened and it is better to inflict loss on individuals than to upset a law of Nature.

Soham Gita

Every Bengali is familiar with the name of Shyamakanta Banerji the famous athlete and tiger-tamer but it may not be known to all that after leaving the worldly life and turning to the life of the ascetic, this pioneer of the cult of physical strength and courage in Bengal has taken the name of Soham Swami and is dwelling in a hermitage in the Himalayas at Nainital. The Swami has now published a philosophical poem in his mother tongue called the Soham Gita. The deep truths of the Vedanta viewed from the standpoint of the Adwaitavadin and the spiritual experiences of the Jnani who has had realisation of dhyan and samadhi are here developed in simple verse and language. We shall deal with the work in a more detailed review in a later issue.
Bengal and the Congress

THE DISSENSIONS in the Congress have been a severe test of the capacity of the Indian people to act politically under modern conditions. The first necessary element of democratic politics is difference of opinion, robust, frank, avowed, firmly and passionately held, and the first test of political capacity in a democratic nation is to bear these differences of opinion, however strong and even vehement, without disruption. In a monarchy differences of opinion are either stifled by an all-powerful absolute will or subordinated and kept in check by the supreme kingly arbiter; in an aristocracy the jealousy of a close body discourages free opinion and its free expression; in a bureaucracy stereotyped habits of action and method lead to a fixed and inelastic way of thinking and difference of opinion, when tolerated, is kept by the exigencies of administration private and largely ineffective. It is democracy alone that demands free divergence of opinion in politics and open propagandism and debate as the very breath of its nostrils. The tendency to democracy creates freedom of speech and thought and these in their turn hasten the advent of democracy. All attempts to silence by force or evasion important differences of opinion are anti-democratic and though they do not necessarily show an incapacity for government, do show an incapacity for democratic politics. The democratic tendency in humanity is and has long been pressing forward victoriously to self-fulfilment and the modern attempt of the banded forces of autocracy, bureaucracy, plutocracy and theocracy to turn its march can only result in its growing stronger by the check and urging forward with greater impetuosity to its goal. It is therefore the democratic tendency and the democratic capacity which must be accepted and shown by any nation which aspires to go forward and be among the leaders of the world. In the
matter of the Congress it is only Bengal, so far, that has shown
the democratic capacity of being able to meet and discuss and
to a certain extent work together in spite of grave and even
fundamental differences. To a large extent this is due to the
fact that all parties in Bengal have some common ground. Just
as the different parties in a well-organised country, even when
they differ in everything else, have this foundation of union and
common tolerance that all are desirous of the freedom, great-
ness and sound internal condition and development of their
nation, so we in Bengal are all agreed in holding the devel-
opment of a well-organised, self-sufficient and self-governing
people as the immediate and ultimate object of all our poli-
tics. This is only to say that Bengal has attained earlier than
other provinces to political perception and sound political in-
stincts. There are forces of disruption in Bengal as everywhere
else, but it says much for the capacity and insight of the mass
of the educated class that these forces have been overborne
and Bengal preserves her unity. The credit is due much more
to the people themselves than to the leaders on either side,
and this itself is the healthiest sign of all and the guarantee
of democratic development. When the people are wiser than
their leaders and wise men, the democratic future of a country
is assured. Men of great gifts and strong character are often
carried away by their eager perceptions and at such moments
it is the sound common sense of a capable democracy that
sets right the balance. It was this common sense that saved
the situation after Surat. The people had the instinct to desire
unity and the good sense to see that unity was not possible
or, if possible, was not worth having by the sacrifice of the
movement which Bengal had initiated. That such an unthink-
able repudiation would have been the first result of surrender
to the Convention leaders of Bombay and Madras, has been
sufficiently proved by the determined rejection of the Boycott
resolution at the meeting of the Convention last December.
The Pabna resolution for a United Congress was therefore so
framed as to leave the Convention Committee a door open for
reconciliation. They rejected the opportunity on a constitutional
technicality of a purely verbal character and of doubtful validity
and proceeded to show the honesty of this sudden passion for
scrupulous constitutional procedure when they imposed a con-
stitution on the body they chose to call the Congress without
allowing it to be submitted for acceptance or amendment by
that body. The resolution at Hughly ought to be differently
framed so as not only to make a United Congress possible
but to bring it about so far as Bengal can help towards that
consummation.

In Bengal there are three classes of opinion as to the best way
of meeting the difficulty. There is a small section of the Moderate
party which desires the Convention Congress to stand and the
Nationalists to be excluded. There are two courses open to this
minority. They may insist on the Bengal Provincial Conference
and the District Committees accepting the body created by the
Congress Committee as the real Congress and on their loyally
following the rules and the instructions of this Congress and its
Provincial Committee. If that were accepted the Bengal Provin-
cial Conference would become a Moderate organisation and,
while commercial Swadeshi would be preserved, the Boycott
would disappear from the avowed programme of Bengal. But
we do not think anyone will have the hardihood to make this
proposal in so many terms and, if any ventured so far, it would
be without any chance of popular acceptance. A more probable
course is for this minority to agree to a vague and easily evaded
resolution which they will have no intention of accepting as a
guide to conduct and to oppose the passing of any more definite
resolution on the ground that Bengal ought to preserve its own
integrity and leave the rest of India to its divisions. The object
they would aim at is to leave the Convention and its Commit-
tees to figure as the real Congress and Congress Committees and
themselves be free to join them without popular disapproval. But
the inevitable consequence would be that the Nationalists will be
compelled to erect another body which would represent their in-
terests. The erection of a rival National Congress at Nagpur last
year was prevented by the Government, fortunately, we think,
for no such body could really claim to be a National Assembly
any more than the Convention can justly claim that character. But if a United Congress proves impossible, the Nationalists cannot allow the Convention unchallenged to delude the world by pretending to voice authoritatively the sense of the Indian nation.

A second section of opinion is that of advanced Moderates and among these we find two ways of thinking. Some lay stress on the unconstitutional conduct of the Convention Committee in forcing their constitution on the Madras Convention without submitting it to discussion and seemed to think that by passing it through the next sitting the constitutional defect will be cured. They seem to forget that it will be a Congress elected under this unconstitutional constitution to which the question will be submitted. In effect, therefore, a body unconstitutionally elected will sit to validate the unlawful law under which it was born and so cure its own unconstitutional character without getting rid of the initial and incurable defect which prevents it from sitting at all. The constitutional difficulty will not be met and the political difficulty will remain as serious as ever, for the Nationalists would still be excluded and the menace to our unity in Bengal would increase every year. Others of the advanced Moderates see more clearly and can understand that only a freely elected Congress, as freely elected as the Hughly Conference will be, can accept this constitution or form any other. Any resolution passed on this subject must therefore contemplate a freely elected session and the submission to it of any constitution proposed or drafted for the better organisation of Congress procedure and Congress affairs.

The third section of opinion is that of the Nationalist party. Immediately after the fracas at Surat, on the same day indeed, the party became acutely sensible of the nature of the catastrophe which had occurred and its first step was to take an attitude which might leave the way open to reconciliation; and this attitude they maintained at all the subsequent Conferences where they were either represented or dominant. We do not agree with Lala Lajpat Rai’s suggestion that the Congress should always remain in the hands of the Moderates; a popular body must remain
either in the hands of the party which numerically predominates or be run by a joint body representing them proportionately to their numbers. But the Nationalists would not deny the name of Congress to a body merely because its administration was in the hands of a single party. They refuse it because that body by a constitution passed without right or authority excludes a powerful section of opinion in the country and pretends to be a National Congress when it is really a party organisation. If the Convention were to consent to a free election and a free constitution, the Nationalist party would not allow a matter of nomenclature, however important, to stand in the way of reunion. But the Convention constitution is not free. It is in the first place a close oligarchical constitution seeking to limit the right of election to a few privileged bodies affiliated to itself. Even if this reactionary limitation were to be confirmed by a freely elected Congress the Nationalists would have no cause of complaint, for they would still be free to organise a party institution which would spread the knowledge and appreciation of democratic principles and get this limitation abrogated from within the Congress itself. But the Constitution is also not free in virtue of the eligibility to delegateship being limited to those who can sign a declaration of faith specially designed to exclude the advanced school of patriotism. This limitation is vital. A national Assembly cannot bind itself by any creed but the creed of patriotism which is understood and which it would be futile to express. The Nationalist party cannot accept the limitation of delegateship by an exclusive creed. They would not seek to bind it by their own creed, still less can they accept a creed which contravenes their avowed principles. The Congress may always pass a resolution expressing its aims and objects. That is merely the opinion of the majority and can always be changed if the minority becomes the majority. But a personal subscription to views one does not hold is unthinkable to any man of honour and probity. These are the three parties and their views. The election of a free Congress is the only possible way to their final reconciliation, the omission of the creed the only condition of the continuance of a United Congress. It is for
the good sense of the people at large to decide between these conflicting views and determine what is best for Bengal and the nation.

Facts and Comments

The Kaul Judgment

The Kaul Boycott case which has attracted some comment in the Press is one which ought to be drawn more prominently into public notice. The Settlement Patwary of Kaul together with four leading Banias, two Zamindars and a Brahmin of the place were charged by the police with having held a Boycott meeting which endangered the peace of the town. It is alleged that they agreed to impose a penalty upon all persons using foreign sugar after a certain date and a heavier fine on anyone importing the commodity. It does not appear that there was any complaint from a single person in the neighbourhood as to any such meeting being held, still less to their being inconvenienced or stopped in their avocations by any action or threatened action on the part of the defendants. But on the ipse dixit of the complaining constable the defendants were found guilty and bound over to keep the peace. The defendants themselves denied the meeting and alleged that they took no part in politics and were guiltless of any religious objection to foreign sugar. In itself the case appears to be a judicial vagary of the worst kind. But the remarkable pronouncements of the Sub-divisional Officer of Kaithal on the juristic aspects of the case make it of more than local importance.
Mr. Garett in his judgment starts a very surprising metaphysical argument by drawing a nice distinction between illegal, non-legal and wrongful acts. Illegal acts are those against which the law provides a penalty either by criminal or civil action. Non-legal acts are those which are contrary to public policy but are left to social opinion to discourage. Wrongful acts, according to Mr. Garett, are those which, being neither illegal nor non-legal, are yet abhorrent to the moral sense of men of reason. We do not know if this remarkable definition of wrongful acts will be supported by lawyers. But Mr. Garett farther improves on these distinctions by assevering on the strength of an Irish judgment that a perfectly legal action becomes illegal when it is done by many persons in combination, provided anyone can show that his interests as an individual or as one of a class are aimed at or necessarily injured. In order that we may not be accused of misrepresenting the learned Sub-divisional Officer we quote the words of the judgment. “Without quoting chapter, verse and date I call to mind the judgment of the late Lord Chief Justice of Ireland, I believe, Baron Rolleston, in what is known as the Baker’s Case. In that case it was held that the baker had a cause of action against the farmers of the village in which he established a bakery because they combined to boycott his bakery by each establishing a kitchen for the preparation of the bread for themselves and their servants, their motive being simply a difference on political grounds. The Irish farmers did not go so far as the defendants are said to have gone in this case, and they in nowise interfered with the baker personally. The illegality of their action consisted in their combining to do an act which if done separately would have been legal. The learned Judge observed to the effect that whereas a single man may be left to work out his own salvation when opposed by an individual, he could claim protection from a combination. In that case there were no proposals to inflict fines or outcaste, yet the act was held illegal. It is very certain therefore that an act which in violence far outstrips that, is, if not illegal, at least wrongful.”
The Implications in the Judgment

That is the judgment. It is obvious that these remarkable dicta have very wide implications and, if upheld, make every combination harmful to personal or class interests impossible under the law. That has been for some time the tendency of magisterial decisions in India. Every action for instance which may be objectionable to a number of Mahomedans is now liable to be forbidden because it is likely to lead to a breach of the peace, and one is dimly beginning to wonder whether the day may not yet come when worship in Hindu temples may be forbidden on that valid ground. Under Mr. Garett’s dictum it seems to depend purely on the bias of the judge what action will or will not be allowed by the law. A teetotal judge may easily penalise a party of men going into a public house to drink, because it is an action abhorrent to his moral sense as a man of reason. And certainly it would not be unarguable that such a combined action might very easily lead to a breach of the peace, much more easily than the meeting of a few hundred or thousand men on the Boycott day. By his other dictum every caste decision forbidding a breach of caste rules is a punishable act, every trade strike is a punishable act, every National School Committee is liable to an action under the law for injuring the interests of the local Government school, every big concern aiming at the extinction in a locality of the retail shopkeeper and the capture of his business commits a wrongful act, or an illegal act, it is not clear which; all Swadeshi, Boycott, National Education movements are objectionable. The Tariff Reform movement itself is only saved by being directed against men outside the country, even if it is so saved, for after all it affects adversely the middlemen who bring in foreign manufactures. Even if, driven beyond endurance by my dhobi’s delays, I combine with some friends to open and patronise a laundry, I can be stopped by a magisterial sympathiser with the rights of the individual. If this is Irish law, all we can say is that it is very Irish indeed and we do not yearn to have it imported into India. The object of the learned Magistrate was no doubt to aim a blow at the Swadeshi movement which
is probably abhorrent to his moral sense as a man of reason. The Sessions Judge has refused to interfere with the discretion of the executive, but there is more here concerned than the discretion of the executive. There is a very original and far-reaching elucidation of the law behind the executive discretion. We hope that the victimised citizens of Kaul will carry their appeal higher and get a more authoritative pronouncement on the juristic philosophy of the learned Mr. Garett.

The Social Boycott

The reason why we have drawn so much attention to this case, is its intimate connection with the question of social boycott. We are advocates of this weapon not in all cases, but in circumstances where milder expedients are impotent to prevent a wound to the body social or body politic by refractory or conscienceless individuals who wish to enjoy all the benefits of social existence while disregarding the vital necessities of the society. We are aware of the grave consequences of the misuse of the social boycott to prevent the legitimate exercise by the individual of his free reason and honest conviction. We therefore advocate it only in very serious instances where the whole community is attacked in a vital point and is practically at one in resenting the act as fatally injurious to it. For instance when the turbulent Mahomedans of Eastern Bengal made an organised attack on the property of Hindus and on the honour of Hindu women, the Hindu community of East Bengal would have been perfectly justified in boycotting Mahomedans as servants. Similarly, now that the educated classes of the Hindu community are at one in the belief that the Swadeshi movement supported by Boycott is necessary to the economical existence of their community, to say nothing of the whole nation, they are justified in refusing to have any dealings with those who out of personal and selfish motives deal a blow at that movement by persisting in the purchase of foreign articles. The use of this weapon of self-defence by Hindu castes became hurtful because it was applied without discrimination and not always with honesty. Had it been confined to cases
of gross moral depravity destructive of social order, there would have been no revolt against it. The penalising of the pursuit of education in foreign countries and similar blunders recoiled on the caste system and it is notable that communities with a strong democratic common sense like the Mahrattas have even while adhering to orthodox religion avoided the worst of these errors. But the misuse of a necessary instrument is no argument against its necessary and discriminating use. We hold the use of this instrument, not in all cases but in the most heinous, to be legitimate in protecting the life of the nation.

The Law and the Nationalist

There are several points connected with the national movement in which the law is in a state of dangerous uncertainty. The exact limit of sedition is one of them, the matter of social boycott is another. We believe that social boycott involving no violence or direct coercion is perfectly legal but it is certain that not only the Anglo-Indian community at large but a portion of the judiciary would be glad to find it illegal. Any doubt on such subjects ought to be removed, for although ignorance is in itself no excuse in law, it ought to be a defence when it is created by the uncertainties of the law itself. We think the Nationalists ought to take every opportunity of testing the extent of the liberties still allowed to us in the ordinary course of the law. We are aware that a section of Nationalist opinion has held that our principle of Swadeshi Boycott ought to debar us from taking any part in any legal proceedings whatever. While many of us had openly expressed our admiration for the heroic stoicism with which this principle has been adhered to in many cases, we have not held it binding on any except those fine consciences to whom it appealed nor would we allow it to guide our own action. We hold that no Nationalist should resort to the British Courts under the present political conditions as against a brother Nationalist or in any circumstances which give him a real choice. If he is dragged to the criminal or civil courts by others he is entitled to defend himself to the end by all the means that the
law provides. If arbitration is refused in a case where his interests are attacked, he is absolved from the self-denying obligation, or if the law of the land compels him as a landholder or propertied or business man to protect himself by certain legal forms, it is obvious that he cannot deny himself that protection without imperilling work or wealth necessary to the nation. The same overriding rule of necessity which compels us to exclude machinery and other instruments of education, work and production from the Boycott, limits the application of the arbitration principle and the abstention from British Courts. Formerly we were content to go our way in doubtful cases, such as the limits of the law of sedition, putting our own interpretation and taking the consequences of a too elastic reading of the law. We even held ourselves justified in the case of unjust and arbitrary laws in breaking them not by violence but peacefully and passively, as the Dissenters did in England, so as to get them either tested or altered. This we still hold to be morally and politically justifiable. But the outbreak of Terrorism compels us to restrict our circle of passive resistance lest even by the most peaceful rejection of unjust laws we should seem to be encouraging lawlessness and disorder. Still, if we are to observe the law scrupulously, just or unjust, we must know what the law is, and now that there is a man at the head of judicial administration who knows the law and tries to keep to it, we ought to take advantage of this now unusual circumstance and use every opportunity to fix the legal position of our movement and its methods.
The Hughly Resolutions

WE PUBLISH in this issue the draft resolutions of the Hughly Reception Committee which have reached our hands in a printed form. Formerly our information had been that the Committee had based its resolutions on the Pabna Conference resolutions and preserved them in the spirit if not in the letter. We regret to find that this information was erroneous. While appreciating the labours of the Committee we cannot pretend to be satisfied at the result. The letter of the Pabna resolutions has been preserved in a few cases and their manly and dignified character contrasts strangely with the company in which they are found, but for the most part the mass of the resolutions represent an attempt to go back to the tone of appeal, prayer and protest which Bengal had decided to give up until the concession of real control should impart to these forms the sense of power which can alone save them from the stamp of a futile mendicancy. The phrasing also of these draft resolutions seems to us to be defective. The pronouncements of opinion of a public assembly of this standing ought to be free from an undignified effusiveness, prolixity or argumentativeness. Whatever argument is needed beyond what is barely necessary for an adequate expression of the assembly’s opinion on the subject in hand, should be reserved for the speeches. That too is the proper place for enthusiasm, eloquence and rhetoric. To import those elements into the resolutions themselves is to import into the assembly’s pronouncements an appearance of immaturity and inexperienced youthfulness not conducive to its dignity in the eyes of those who are accustomed to the serious handling of weighty affairs. Two of the resolutions, quite apart from other objections, travel beyond the scope of the assembly by their local character. The proper place for such resolutions is the District Conference and the
mere fact of the larger assembly being held in a particular dis-
trict does not change the character of the Conference whose
business is to express the opinion and guide the public activities
of the people of Bengal in matters affecting the country and
the province as a whole. These resolutions deal with particular
local interests of the people of Hughly and the riparian towns
and districts on the banks of the Ganges. If the Conference is
to handle local matters, there is no reason why they should
ignore similar wants and necessities in the districts of East Ben-
gal. Finally, there are two questions of national importance in
which the Nationalist party holds views connected with a dis-
tinct policy and on which it is necessary to know the opinion
of the country, and in these two matters the resolutions of the
Committee do not satisfy us. The resolution on the Reforms
contains a parenthesis which is unwarranted by the facts and
will have the effect of committing the people of Bengal to the
acceptance of the Reforms with all their vital imperfections and
disastrous tendencies. The resolution on the Congress, while
unexceptionable in sentiment, has the vital defect of not deal-
ing with the crucial questions at issue or showing a way to
the realisation of the desirable consummation advocated. At
Pabna there was a distinct means pointed out and, since that
has been rendered null and void, the people of Bengal must
take other means as definite and more decisive to see that their
wishes are no longer ignored. To call on the leaders is to ex-
press merely a pious wish and the time has gone by when
in this matter the action can be left to the discretion of the
leaders. They may ignore the resolution in their action or say
that they could find no means of carrying out the wishes of the
Conference.

In view of these defects the Nationalist party in Calcutta
have drawn up a number of draft resolutions and amendments
of the Reception Committee’s draft which they propose to bring
forward before the Subjects Committee. We hold it imperative
that in these matters there should be no unnecessary secrecy or
hole and corner action. We have nothing to conceal either from
the Government, the people or those whose opinions may differ
from ours. Our propaganda is open, frank and democratic. The actual details of action, when action is in our hands, are best discussed in Cabinets and private Committees, but in a people striving to be free and democratic deliberation must be public and policy openly and fully expressed. Unfortunately, the late period at which we were able to procure a copy of the draft resolutions and the necessity of immediate action have made it impossible to circulate the draft in time to receive the opinions of Mofussil Nationalists or even to consult all who are in Calcutta. We have however sent copies to the Mofussil and hope that the delegates will be ready with any suggestions they may have to make when they meet at Hughly. The want of a Nationalist daily at this time is being severely felt; we have to do what we can with the means at our disposal.

The alterations made in the Committee’s draft have been dictated by the considerations above stated. We have thought it right to adhere to the decision arrived at by us at Pabna to clear our politics of all that is low and humiliating in tone and substance and to make self-reliance, self-respect and a manly expression of opinion the cast of our public resolutions. There are certain matters in which the ultimate decision rests with the Government and yet in which the people are bound to express their opinion, but so long as they have no recognised instrument through which they can bring their weight to bear in these matters, all they can do is to place their opinion on record and leave to the Government the responsibility of ignoring the opinion of a whole province. The expression of opinion is addressed to the people of this province and of the whole country; it is their sympathy and moral support we seek and we do not wish to appeal to an authority which is not bound to listen to or consider our appeals and protests and with whom even the reception of public resolutions by great bodies representing whole populations is a matter of rare condescension and favour. When we have a direct and effective share in administration, then will be the time to submit representation and protest to a Government which will be partly ours. In our draft resolutions everything expressing this attitude of appeal and unavailing objurgation
has been rigorously excluded and in only one instance we have followed the precedent of the Pabna Conference in making a demand, not because we expect it to be fruitful but to mark a strong sense of the serious breach of a definite promise with which the authorities have long been charged and the nonfulfilment of an elementary obligation binding on all Governments popular or democratic which ranks along with the preservation of order and the defence of the country from foreign invasion. We were somewhat opposed to the making even of this demand at the time of the Pabna Conference, but now that the authorities profess a willingness to reform the administration and claim co-operation on our part, it is advisable to emphasise the serious failings which make co-operation under present conditions impossible and to indicate the conditions which can make co-operation of a real kind possible to the people. The draft resolutions on Councils Reform, local self-government and the improvement of judicial administration have the latter purpose in view. Purely local resolutions we propose to omit. We have restored in our draft the Pabna resolution on the Boycott; we do not see any sufficient reason for departing from the Pabna wording whether to lower the tone or to enter into an unnecessary justification of the legitimate character of the Boycott which a body like the Conference long committed to the movement ought to take for granted. We have omitted the first clause of the Education Resolution for the same reasons which motivated its exclusion at Pabna and especially because we look with suspicion on mass education entirely under official control. If primary education is placed under free District Boards, there will be no farther objection; otherwise we must confine ourselves to the effective extension of National Education to the primary stage. We totally reject the resolution on the Terrorist outrages which no Bengal Conference ought to pass after the speech of the Lieutenant Governor which still stands on record and has not been withdrawn. Sir Edward Baker distinctly declared that the Government has no farther use for mere denunciations of the outrages however fervently worded and he has thrown on the whole country the responsibility for the cessation of the
assassinations or their continuance. The suitable course for the Conference is to dissociate itself in a dignified manner from all forms of violence and quietly remind the authorities that the atmosphere in which the worst forms of political crime can alone exist is of their creation and the means of eradicating them in their hands. The people are helpless spectators of this miserable strife and the Conference has no right to pass any resolution which would even by implication admit their responsibility.

There remain the questions of Reform and the Congress. On the former we have already stated the attitude of the Nationalist party which is not irreconcilable on the point but refuses to countenance any reform which does not begin the concession of self-government. Especially is it impossible for us to accept a measure which introduces permanent elements of discord and maims the growing national sentiment by perpetuating divisions, to say nothing of the false and vicious principles, destructive of democratic development on which it is based. The reform ensures us nothing but an increase in the number of nominated and elected members and a non-official, not an elective, majority. It also holds out to us a promise of ampler discussion, interpel- lation and division. But the rules for formation of electorates, election and the conduct of business as well as the admissibility of particular elections and an unqualified power of veto are all in the hands of the authorities. There might be an increase of moral weight behind a popular opinion or protest, but equally there might be an increase of moral weight behind the Government if they can succeed in passing anti-national measures by a majority of members, official, nominated and elected from convenient electorates, as approved by a majority in a reformed Council. In any case we would not think so doubtful and trivial a concession worth accepting,—for gratitude for concessions implies acceptance of the concessions,—and when it is practically an inducement for consenting to the permanent mutilation of the body politic and offered without amnesty, cessation of repressive measures or release of the deportees it is binding on the Nationalist delegates to stand or fall by the rejection of the measure.
In the matter of a united Congress we have pointed out that it is imperatively necessary to provide a means by which the desired union can be brought about. The difficulties in the way of union are two, the creed and the Constitution. The Constitution of the body now calling itself the Congress has been framed and imposed on it without consulting even that body and it is well known that many members of the Moderate party refuse to join a body constituted by a means which, even if it were not ultra vires, would be as arbitrary as the most arbitrary action of which even Lord Curzon’s Government was ever guilty. The Nationalists on their part insist that they cannot be called on to accept a Constitution of many clauses of which they disapprove and which was imposed on a body from which they were specially excluded. The call on them to join a body which insists on their forswearing their fundamental principles before they enter, is still more absurd. Therefore a freely elected Congress constituted on the old lines is the only solution and the Conference must decide that point if it is serious in its desire. Our draft resolution provides a means by which negotiations can be carried on by Bengal with the other provincial leaders and the organisers of what is called the Lahore Congress and, in case of unanimity proving impossible, for the assembling of a real united Congress on the initiative of Bengal in co-operation with all who desire union. We admit that the success of the plan depends on its acceptance by the Bengal Moderates, but we believe it was substantially this idea which the deported Moderate leader Sj. Krishna Kumar Mitra was trying to get carried out when he was arrested. We see no reason why Bengal Moderates should object to it. At any rate this is the Nationalist proposal.

In addition to these amendments and substitutions we have appended two additional resolutions to which there ought to be no objection. One of them is in the Pabna list and we do not know why it should be omitted.
APPENDIX

Bengal Provincial Conference
Hughly – 1909

DRAFT RESOLUTIONS

I. That this Conference places on record its profound feelings of regret and sorrow at the death of Lord Ripon who has justly been called the father of local self-government in India and whose policy of justice and righteousness will for ever enshrine his memory in the hearts of the people of this country. This Conference also urges that immediate steps should be taken to perpetuate his memory.

II. (a) That this Conference is of opinion that the system of Government obtaining in the self-governing British Colonies should be extended to India.

(b) That while expressing its gratefulness to the Government for the concessions made in the recent Reform Scheme, this Conference records its firm conviction that no reform will ensure the happiness and contentment of the people unless it gives them a direct control over the finances of the country.

NATIONALIST DRAFT RESOLUTIONS

I. That this Conference places on record its sorrow at the death of Lord Ripon who was an earnest and sincere sympathiser with Indian aspirations and did much for the cause of local self-government.

II. (a) As in the Committee’s draft.

(b) That this Conference emphatically condemns the principle of separate electorates on sectarian lines and of special privileges for one community which it is intended to introduce into the Reform Scheme and is farther of the opinion that no reform will be acceptable to the country which does not concede to the people a direct and substantial control over finance and legislation.

The rest to be omitted.

The draft resolutions in the left column were written by the Moderate Congress leaders. The Nationalist draft resolutions were written by Sri Aurobindo.
(c) That this Conference is further of opinion that any undue favour in the matter of representation in the Councils which may be shown to any particular community cannot fail to encourage sectarianism in the different communities and to create dissensions and political troubles amongst them.

(d) That this Conference also urges the Government to publish the rules framed in accordance with Lord Morley’s Scheme before they are finally adopted.

III. (a) That this Conference declines to accept the Partition of Bengal as a settled fact or question and resolves to continue the agitation against it with a view to its reversal or modification.

(b) That in this connection this Conference appeals to the Government of India to act in the spirit of His Majesty’s assurance in his recent message that the rectification of errors has ever been one of the guiding principles of British Government in India.

IV. That this Conference urges the people to continue the Boycott of foreign goods which is, in its opinion, a perfectly legitimate movement and is calculated to promote the political as well as industrial and economic welfare of the country.

V. That this Conference urges upon the country the necessity of using Swadeshi articles in preference to foreign, even at a sacrifice, and developing the resources of the country.

IV. That this Conference accords its fullest support to the Boycott movement and recommends its farther extension both as a political weapon and as a measure of economic protection.

N.B. This is the Pabna resolution.

V. As in the Reception Committee’s draft.
Draft Resolutions of the Hugly Conference

VI. That this Conference places on record its emphatic and unqualified condemnation of the detestable outrages and deeds of violence which have been recently committed and is of opinion that such acts will retard the progress of the country.

VI. That this Conference looks with strong disapproval on all methods of violence and holds that the furtherance of the national movement should be effected by peaceful and legitimate means, and it warns the authorities that the policy of repression stimulates terrorist activity and the best way to paralyse it is to restore normal conditions.

VII. (a) That this Conference records its emphatic protest against the repressive measures adopted by the Government and especially against the deportation of nine Bengali gentlemen without trial or charge and further protests against the persistent refusal of the Government to furnish any information regarding the charges against them and to give them an opportunity of exculpating themselves. This Conference considers the immediate release of the deportees as absolutely necessary in the interests of justice and fair-play.

(b) That having regard to the grave risk of injustice involved in Government action based upon ex parte and untested informations and to the penal laws of the country, this Conference urges upon the Government the repeal of the Bengal Regulation III of 1818.

VIII. That having regard to the prevalence of Cholera, Malaria and Smallpox in the province throughout the year and the abnormal death rate as disclosed in the last Sanitary Report of Bengal, this Conference urges the Government as well as the
people to adopt amongst others the following measures: —

(1) The sinking of wells and the excavation and reservation of tanks in the villages for purely drinking purposes.

(2) The draining of the rural areas.

(3) The clearing of jungle in the inhabited areas of towns and villages.

(4) The prevention of noxious discharges from septic tanks into the River Hughly which form the principal cause of Cholera in the riparian towns and villages on both banks of the said river.

IX. That this Conference recommends —

(a) That all local self-governing bodies and Panchayats should, without further delay, be vested with powers to elect their own Chairman.

(b) That the principle of representation should be extended to village Union Committees and Panchayats.

(c) That the Union Committees should be vested with powers to initiate and carry on measures for the sanitary improvement of the areas within their jurisdiction and that grants of money should be made to them for that purpose.

X. (a) That this Conference urges the Government to take immediate action on their circular on free primary education issued about three years ago and invites their attention to the fact that the grants in aid of technical and scientific education are not at all commensurate with the needs of the country.

N.B. This is the Pabna resolution with some verbal modifications.

IX. That this Conference is of opinion that local self-governing bodies including Panchayats and Village Union Committees should be entirely elected on the principle of popular representation and freed from official control and that Village Union Committees should be vested with powers and provided with the necessary funds to carry on sanitary improvements.

X. That in the opinion of this Conference steps should be taken for promoting a system of education literary, technical and scientific suited to the requirements of the country on national lines and under national control and maintaining national schools throughout the country. Clause (a) is omitted.
(b) That in view of the recent educational policy of the Government which has practically closed the doors of the University against many students of the province and the necessity of organising a system of literary, scientific, technical and industrial education suited to the requirements of the country, this Conference urges the people to take steps to establish educational institutions throughout the country on national lines and under national control.

XI. (a) That, while recording its satisfaction at the recognition by the Government of India of the principle of separation of Judicial from Executive functions, this Conference regrets that effect has not yet been given to it.
(b) That this Conference is of opinion that the only effective method of reforming the Police is to separate the Judicial from the Executive functions and that no scheme for such separation will be successful unless all the Judicial Officers are placed under the direct control and supervision of the High Court.
(c) That this Conference is further of opinion that for the better administration of Civil and Criminal justice in the country, the District and Sessions Judges should be recruited from among the ranks of the legal profession.

XII. That this Conference enters a strong protest against the Calcutta Police Bill which is an uncalled for measure of an absolutely retrograde

XI. That this Conference is of opinion that the separation of judicial from executive functions, which has been recognised in principle, should be forthwith put into effect and all judicial officers placed under the direct control and supervision of the High Court and that provision should be made in the scheme for the District and Sessions Judges being appointed in future from the ranks of the legal profession in this country.

XII. As in the Committee's draft except that in place of “enters a strong protest against” should be put “strongly condemns”.
character and which will restrict the freedom of action of the people in Calcutta and will subject them to unscrupulous harassments.

XIII. (a) That in view of the large surplus under the head of Stamp Revenue and the growing poverty of the people, this Conference urges upon the Government the necessity of reducing the Court fees levied for the institution of suits and complaints.

(b) That having regard to the ruinous expenses of litigation in Courts of law, this Conference is of opinion that arbitration Courts should be established throughout the country.

XIV. That with a view to mitigate the hardship arising from chronic high prices of food stuffs, this Conference urges on the District Associations the necessity of establishing Co-operative Banks and Stores with Dharmagolas throughout the country.

XV. That in view of the ravages of wild animals and the frequent dacoities in the towns and villages, this Conference appeals to the Government to repeal the Arms Act.

XVI. That this Conference views with apprehension the decrease in the normal growth of the Bengali Hindu population and hereby appoints a Committee consisting of the following gentlemen to ascertain the causes which have led to this state of things and to suggest what steps should be taken to prevent it.

XIII. Omit clause (a), otherwise as in the Committee’s draft.

XIV. As in the Committee’s draft.

XV. That in view of the ravages of wild animals and frequent dacoities in the towns and villages against which there is no adequate protection, this Conference is of opinion that the Arms Act should be repealed or radically modified.

XVI. As in the Committee’s draft.
XVII. That this Conference, while sympathising with the Indian residents of South Africa in their struggle for equal rights and privileges with the White population and admiring their firm attitude, places on record its deep sense of indignation at the gross wrongs inflicted on them and suggests the adoption of Boycott of Colonial and British goods by other Provinces of India by way of protest and retaliation.

XVIII. That having regard to the gradual diminution of commons or pasture land for cattle, this Conference urges the Government and the people specially the land-holding classes to adopt measures for the protection and preservation of cows and oxen.

XIX. That this Conference is of opinion that the Government grants of money for drainage and irrigation purposes in Bengal which is essentially an agricultural Province are lamentably inadequate for its needs and urges the Government to take the following steps at an early date: —

1. The dredging of the Bhagirathi.
2. The immediate adoption of the measures recommended by Mr. Horn and other expert engineers for the prevention of the annual floods in the Arambagh Sub-division by the overflow water of the Begua Breach.
3. The draining of the Kadua Math in the Amta basin in the District of Howrah.

XX. That in the present situation of the country united action being highly

XVII. As in the Committee's draft, except that after “firm attitude” should be inserted “and heroic sufferings”.

XVIII. As in the Committee's draft, except that the words “the Government and” should be omitted.

XIX. Omit

XX. That this Conference considers a United Congress imperatively
desirable, this Conference earnestly appeals to the leaders to bring about a compromise between the two wings of the Indian Nationalist party and to arrange for holding a United Congress.

XXI. That with a view to inaugurate a vigorous system of self-help and voluntary work for the redress of their grievances, this Conference urges the people to organise village Committees, Sub-Divisional Associations and District Associations.

necessary in the interests of the country and believes that the best way to bring about union is to hold a session elected as in all Congresses up to 1906, to which any future arrangements for the procedure of the Congress shall be submitted.

(b) That in this view it appoints the following Committee to confer on behalf of the province with the organisers of the meeting at Lahore and with other provincial leaders for the holding of such a session and it farther empowers the Committee in case of necessity to propose and arrange for this session being held in Calcutta in co-operation with all who are desirous of union.

Additional Resolutions.

1. That this Conference is of opinion that two of the most necessary and important classes of enterprise from the point of view of our commercial development are (1) Swadeshi Banks and (2) Steam Navigation Companies to control the waterways of Bengal, and urges on the country the necessity of initiating and supporting such enterprises, and it expresses its appreciation of the efforts of those who have already undertaken work of this kind.

2. That the Conference is of opinion that physical training be encouraged by all means to infuse greater manliness in the younger generation and make them capable of self-protection and self-defence.
Speech at the Hughly Conference

Aurobindo Ghose spoke to Resolution No. IV — “that this conference urges the people to continue the boycott of foreign goods inaugurated on August 7th 1905, which is, in its opinion, a perfectly legitimate movement and is calculated to promote the political as well as the industrial and economical welfare of the country.”

Moulvi Dedar Bux moved and Sasankajiban Roy seconded it.

Aurobindo Ghose said: —

Mr. President and Members: — I desire to say two words before I say anything further — I entreat you to hear me out without expressing or giving any sign either of approval or dissent; I pray you to hear me in perfect silence. This is a resolution which nobody can oppose. It is not my intention to bring any amendment with regard to it, but I have simply to make a brief statement without argument of any kind from the standpoint of myself and those who are of the same way of thinking as myself. You are aware that we have a certain theory of politics, a certain view with regard to political action in this country. We hold that as we have no effective share in the administration of this country, and our position is such that there is no means of having even our prayers and petitions listened to, therefore the only effective course for us to take is, as far as possible, to withhold our co-operation from the Government, until they give us some effective control over the administration and some constitutional means by which we can bring the voice of the people and the weight of public opinion to bear upon the management of affairs.

of the affairs of this country. We hold that in these circumstances we ought to put forward the interests of the country partly by a movement of self-help and so far as we have power to deal with the Government by means of passive resistance, peaceably and within the law. And this passive resistance we do not wish to confine merely to commercial boycott. We hold that it can and should be extended to other kinds of boycott. ("Hear, hear") We don't hold that it should be done with absolute thoroughness but so far as is possible and rational and so far as is wise in the interests of the country. Last year at Pabna a resolution was passed which gave room for our view of politics and it was our intention to press this resolution upon the Subjects Committee. But we found that by pressing the point on the Committee the hope of a United Congress and the unity of Bengal and this Provincial Conference might be seriously imperilled. Now we are extremely anxious for the unity of the Congress. We are anxious we should throw no obstacle in the way of any hope of union, therefore we have decided not to press that amendment in the Subjects Committee, nor to bring forward our full amendment with regard to the reforms. At the same time we want it to be clearly understood that in taking this course we are not for a moment receding from the policy and line we have taken up, and we consider for obvious reasons that it is absolutely necessary for us, especially at this time, to make it clear that we have not receded so far as the resolution goes. We thoroughly support it. But at the same time we wish it to be understood that we keep our position and we adhere to our policy of a boycott — of a boycott movement without any qualification, as a measure of policy for this country, as a political weapon, and as a measure of economical protection. ("Bande Mataram.")
Facts and Opinions

Impatient Idealists

The President of the Hughly Conference, in reference to the formal statement by Sj. Aurobindo Ghose of the adherence of the Nationalist party to the policy of self-help and passive resistance in spite of their concessions to the Moderate minority, advised the party of the future under the name of impatient idealists to wait. The reproach of idealism has always been brought against those who work with their eye on the future by the politicians wise in their own estimation who look only to the present. The reproach of impatience is levelled with equal ease and readiness against those who in great and critical times have the strength and skill to build with rapidity the foundations or the structure of the future. The advice to wait is valueless unless we know what it is that we have to wait for and why it is compulsory on us to put off the effort which might be made at the present. If we can progress quickly there must be adequate reasons given us for preferring to progress slowly or to stand still. We have not yet heard those adequate reasons. As far as we have gone, the only reason we have been able to find is that the fears and hesitations of our Moderate countrymen stand in our way. The whole Asiatic world is moving forward with enormous rapidity. In Persia, in Turkey, in Japan the impatient idealists have by
means suited to the conditions of the country effected the freedom and are now busy building up the dignity and strength of their motherland. Constitutional Government has been everywhere established or is being prepared for consciously and with a steady eye to its establishment in the immediate future. Even in Russia a Duma has been established with however restricted an electorate. Of all the great nations of the world India alone is bidden to wait. It is bidden by Lord Morley and Anglo-India to wait for ever. It is bidden by its own leaders to wait till the rulers are induced by prayers and petitions to concede a constitutional government and we have been told by those rulers when that will be — never. We have been told not by conservative statesmen but by the chief teacher of Radicalism and democracy. Under the circumstances, which is the more unpractical and idealistic, the impatience of the Nationalist or the supine and trustful patience of the President of the Hughly Conference?

The Question of Fitness

It is possible the President had his eye on the question of fitness or unfitness which is the stock sophistry of the opponents of progress. One of the delegates strangely enough selected the occasion of moving the colonial self-government resolution for airing this effete fallacy. The storm of disapprobation which his lapse evoked proves that in Bengal at least that superstition is dead in the minds of the people, and it is well, for no nation can live which at the bidding of foreigners consents to despise itself and distrust its capacities. We freely admit that no nation can be fit for liberty unless it is free, none can be wholly capable of self-government until it governs itself. We freely admit that if we were given self-government we should commit mistakes which we would have to rectify, as has been done even by nations which were old in the exercise of free and self-governing functions. We freely admit that the liberated nation would have to face many and most serious problems even as Turkey and Persia have to face such problems today, as Japan had to face them in the period of its own revolution. But to argue from
these propositions to the refusal of self-government is to use
a sophistry which can only impose on the minds of children.
In the nineteenth century owing to a stupefying education we
had contracted the trustfulness, naivety and incapacity to think
for itself of the childish intellect and we swallowed whole the
sophisms which were administered to us. But we have thrown
off that spell and if the impatient idealists of the Nationalist
party had done nothing else for their country this would be
sufficient justification for their existence that they have made a
clean sweep of all this garbage and purified the intellect and the
morale of the nation. It is enough if the capacity is there in the
race and if we can show by our action that it is not dead. This we
have shown by organised successful and national action under
circumstances of unprecedented difficulty. If the success is now
jeopardised, it is because of the temporary revival of the weak-
nesses of our nineteenth century politics and the desire to fall
back into safe and easy methods in spite of their unfruitfulness.
That is a weakness which is not shared by the whole nation, but
is only temporarily suffered because a situation of unprecedented
difficulty has been created in which it was not easy to see our
way and in the silence that was unfortunately allowed to fall on
the country and deepen the uncertainty, the forces of reaction
found their opportunity. In times of difficulty to stop still for
a long time is a cardinal error, the best way is to move slowly
forward, warily watching each step but never faltering. Action
solves the difficulties which action creates. Inaction can only
paralyse and slay.

Public Disorder and Unfitness

A favourite device of the opponents of progress is to point to
the frequent ebullitions of tumult and excitement which have
recently found their way into our political life and argue from
them to our unfitness.

In the mouths of our own countrymen the use of this argu-
ment arises partly from political prejudice but still more from
inexperience of political life and the unexamined acceptance of
Anglo-Indian sophistries. But in the mouths of Englishmen this kind of language cannot be free from the charge of hypocrisy. They know well of the much worse things that are done in political life in the West and accepted as an inevitable feature of party excitement. The rough horseplay of public meetings which is a familiar feature of excited times in England, would not be tolerated by the more self-disciplined Indian people. As for really serious disturbance the worst things of that kind which have happened in India occurred at Surat when Sj. Suresh-dranath Banerji was refused a hearing and on the next day when Mr. Tilak was threatened on the platform by the sticks and chairs of Surat loyalists and the Mahratta delegates charged and after a free fight cleared the platform. The refusal to hear a speaker by dint of continuous clamour, hisses and outcries is of such frequent occurrence in England that it would indeed be a strange argument which would infer from such occurrences the unfitness of the English race for self-government. We may instance the University meeting at which Mr. Balfour was once refused a hearing and at the end of an inaudible speech two undergraduates dressed as girls danced up to the platform and gracefully offered the Conservative statesman a garland of shoes which was smilingly accepted. As for the storming of platforms and turning out of the speakers and organisers, that also is a recognised and not altogether infrequent possibility of political life in England. A case remarkable for its sequel happened at Edinburgh when a faith-healer attempted to speak against Medicine and the undergraduates forced their way in, attacked and wounded the police, smashed all the chairs, hurled a ruined piano from the platform and hooted the discreetly absent orator in his hotel and challenged him to come out with his speech. On complaint the Chancellor of the University declared his approval of this riot and in a court of law the students were acquitted on the plea of justification. It may well be said that such a view of what is permissible in political life ought not to be introduced into India, but it is the worst hypocrisy for the citizens of a country where such things not only happen but are tolerated and sometimes approved by public opinion,
to turn up the whites of their eyes at Indian disorderliness and argue from it to the unfitness of the race for democratic politics. And it must be remembered that worse things happen on the Continent, free fights occurring even in august legislatures, yet it has not been made an argument for the English people going over to the Continent to govern the unfit and inferior European races.
The Hughly Conference

THE CHANCES of politics are in reality the hidden guidance of a Power whose workings do not reveal themselves easily even to the most practised eye. It is difficult therefore to say whether the successful conclusion of the Provincial Conference at Hughly without the often threatened breach between the parties, will really result in the furtherance of the object for which the Nationalists consented to waive the reaffirmation of the policy formulated at Pabna and refrained from using the preponderance which the general sentiment of the great majority of the delegates gave them at Hughly. If things go by the counting of heads, as is the rule in democratic politics, the Nationalist sentiment commands the greater part of Bengal. But in leaders of recognised weight, established reputation and political standing the party is necessarily inferior to the Moderates, both because it is a younger force very recently emerged and because its leaders have been scattered by a repression which has aimed at the tall heads of the party. There is also a large body of sentiment in the Mofussil which is Nationalist at heart but does not always venture to be Nationalist in action because of the difficulties in the way of the Nationalist programme and the respect due to the elder leaders. On the other hand among the young men who command the future, Moderatism is dead and what takes its place is a Nationalism which loves rather to act than to think, because it has not yet accustomed itself to the atmosphere of strenuous political thought. In fact the spirit of Nationalism and its objects are becoming universal but its methods, though preferred, are not always adhered to and its thought has not everywhere penetrated below the surface.

The possibility or otherwise of united action was the governing thought throughout the Conference. The tendency to break to pieces was very prominent in the first day’s proceedings and
The Hughly Conference was fostered by certain incidents slight in themselves but each of which was in the existing state of feeling a quite possible pretext for disruption. It was from an observation of the proceedings of the first day that either party offered its programme of action for the second. The Nationalist party intended to put forward a formal protest against any acceptance of the reforms in however slight a degree, to press the Pabna resolution on the Boycott and above all to insist on the Conference taking some definite step which would either materialise the chances of a United Congress or once for all show that union was impossible. The Moderate leaders came determined on four things, not to allow any resolution recognising general passive resistance, not to allow any resolution amounting to an absolute refusal of the Reforms, not to allow any resolution debarring delegates from Bengal from joining the Lahore Convention in case of that body rejecting union and not to consent even to the bringing forward of any amendment or proposal of a pronounced nationalist character in the Conference. On all these points it was made quite evident that if the Nationalists pressed their points the Conference would be broken up by the secession of the Moderate leaders. In all these disputed matters, therefore, the Nationalists gave way and adhered only to their main point of securing some definite step in relation to the holding of a united Congress.

It is necessary to explain this action on the part of our party, for in his speech on the Boycott resolution Sj. Aurobindo Ghose purposely refrained from stating more than the bare facts in order that nothing he might say should lead to excitement or anything which could be an excuse for friction. It is not that the Nationalist party is not willing or able to stand by itself if that proves inevitable and seems the best course in the interests of Nationalism and the future of the country. But it has always been the ideal of the Nationalists to make of the Congress a great and living body deliberative in the manner of free assemblies which consider from various points of view what is best for the country and decide by majority or, whenever possible, unanimously, the parties holding together not by identity of views but by one common aim and interest and the combined freedom and re-
straint of a constitution which provides for the free expression of opinion under fair and impartial rules. They seek also a centre for the country’s strength which can give authority to a network of organisation systematising the work of the nation. They seek in other words a centre of deliberation and a centre of order and authority which can take charge of national progress. To seek this centre outside the long established body to which the nation has looked as the pivot of its political activities would have been a waste of material already half-prepared for the purpose. In attempting to convert this instrument to its proper uses they may have committed errors of over-eagerness and passionate impatience, the ordinary faults of a party of progress still young and energetic, but the errors on the other side were yet greater. The errors of life and progress are more exuberant and striking but less fatal than the errors of decay and reaction. However that be, in the attempt the instrument itself was broken, but it is capable of being mended if the past errors on both sides can be got rid of, and it is the duty of the Nationalist party to give a fair chance to the forces that make for the preservation of this old and honoured institution. This is the more incumbent on them as the sense of the country is in favour of an attempt to restore unity. A democratic party is bound to give the utmost weight to the general sense of the country in a matter of such primary importance.

It remains to be seen whether the great concessions made by the party will bear any fruit. The situation is not wholly encouraging. The position taken by the Moderate leaders that the Nationalists even if they are in a majority, must not try to enforce resolutions which travel beyond the limits of common agreement and unanimity and must allow resolutions to pass which are contrary to their principle and policy on pain of a Moderate secession may be tolerated for some time; but how long can a growing sentiment and ideal representing the future consent to be restrained within such iron limits? And if such be the basis of union proposed, it is obvious that the Congress will be a united Congress only in name and the attendance of the Nationalists perfunctory or useless. If on the other hand the
resolutions of the Congress are recognised as the opinion of the majority leaving the minority perfect freedom to bring in their own resolutions when they have converted the mass of public opinion to their views, the unity will be real and living. We were never in favour of shams. It is only righteousness that exalts a nation and righteousness means going straight; nothing can long endure which is based upon unreality and hollowness. If therefore there is any union it must be one which recognises that there are two parties in the country and that each has a right not only to exist but to make itself felt. This is a right we have not refused to the Moderate party when we were in the majority; if they refuse it to us, then the talk of unity must cease and Sir Pherozshah Mehta and Mr. Gokhale must have their way.

This is the position from the Nationalist point of view. We hope that the largeness of the sacrifice made will not, in view of the slightness of the chance in favour of which everything else was thrown overboard, create any dissatisfaction in the party. All shades of Nationalist opinion were represented at Hughly and they consented to be guided in the matter by Srijut Aurobindo Ghose on whom the responsibility of leadership fell in the absence of older colleagues who have been temporarily or permanently removed from the field. The Nationalist party is in practical possession of the heart and mind of Bengal. It is strongly supported in other parts of India and controls Maharashtra. It is growing in strength, energy and wisdom. It surely inherits the future. Under such circumstances it can afford to wait.
Facts and Opinions

The Two Programmes

There could hardly be a more striking contrast than the pronounced dissimilarity between the resolutions passed at the Hughly Provincial Conference under the pressure of the Moderate leaders’ threat to dissociate themselves from the proceedings if the Pabna resolutions were reaffirmed and the resolutions passed at the enthusiastic and successful District Conference held last Saturday and Sunday in the Surma Valley. They are severally the reaffirmation of two different programmes, the advanced Moderate programme of a section of opinion in West Bengal supported by Faridpur in the East and a sprinkling of individuals in some of the large towns and the Nationalist programme as advanced by East Bengal and a great section of opinion in the West. The advanced Moderate programme contemplates Colonial self-government as a distant and ultimate goal, advocates commercial boycott of foreign goods, contemplates National education as an educational experiment supported practically by some, in theory only by others, and regards self-help as a pendant and subordinate to so-called constitutional agitation, in other words, the acceptance of everything the Government does subject to protest, criticism and, when necessary, invective. This is the theory of co-operation
plus opposition, opposition in words, co-operation in practice. It has to be seen how far the reassertion of this policy, for some time discredited, will go in its results and what is the underlying motive of the Moderate leaders in insisting on the reassertion at this particular moment when the Partition, deportations, coercive laws are in full operation and not a single one of our grievances redressed. The Nationalist programme asserts autonomy as the right of all nations, advocates the use of every legitimate and peaceful means towards its establishment whether swift or gradual, and especially favours the use of self-help to train and organise the nation for self-government and of passive resistance to confirm and defend the measures of self-help and to bring pressure on the bureaucracy to yield a substantial measure of self-government. The defect of the Nationalist party is not in energy or organisation, for it has a superior capacity in these respects to its opponents, but in means and the present weight of its personalities. It is only by effective, persistent and organised work with what means it has at its disposal that the party can make up for this inferiority. That organisation must now be taken definitely in hand. It is doubtful whether the frail hope of a United Congress will ever take shape as a materialised fact, and even if it does, it is likely to be under such circumstances that the Nationalists would be ill-advised to put their main energy into Congress work until they have so all-pervading and solid a strength in the country as to make it possible for them to assert themselves without any peril to the united progress of the nation. They must vindicate the superiority of their programme by its effectual execution and result, leaving the Moderates for the present to the raptures of their rapprochement with the bureaucracy.

The Reforms

An argument advanced in favour of the Reforms is that, however ineffectual and illusory the expansion of the Legislative Councils may be — and the illusory nature of that expansion cannot be seriously denied, — still there is included in the Reform Scheme a
measure of local self-government generous, complete and effective, which is well worth acceptance. We are by no means certain how far a substantial measure of local self-government is really contemplated by the Government. It was originally proposed, we believe, to form local self-governing bodies elected by the people and uncontrolled by any official chairman. But many things were originally proposed which seem to have little chance of taking shape as ultimate actualities. We are not aware how far the measure will be carried out, what limitation may be put upon it or whether the control of the official chairman will not be replaced by a higher and more distant but eventually more effective control. We shall have to be thoroughly assured on these points before we can allow that any measure of local self-government included in the measure can outweigh the nugatory character of the main change in the instruments of government. Unless the local self-government is complete and ungrudging, it may be a convenient measure and to a slight extent strengthen the educated class in the mofussils, but it cannot be a vital measure or even one of the first importance among changes of administrative structure. In any case it cannot outweigh, however full it may be, the disastrous character of the principle of separate electorates introduced by Lord Morley, intentionally or unintentionally, as the thin end of a wedge which, when driven well home, will break our growing nationality into a hundred jarring pieces. Only by standing aloof from the new councils can this destruction be avoided. This is the point on which we feel bound to lay stress again and again because it is the one vital and effective thing in the new measure, all the rest is mere frippery and meaningless decoration. It would be a poor statesmanship which bought a small and temporary gain by throwing away the future of the nation and the hope of a united India, and posterity will have reason to curse the memory of any popular leader who for the sake either of more gilt on the “gilded shams” or even for a real measure of local self-government, induces the nation to accept the reforms with the separate electorate and special privileges for one community as an essential feature.
The Limitations of the Act

There is another point in this connection which destroys the little value that might possibly have attached to the argument from Lord Morley’s intentions about local self-government. One peruses the Act in vain for a guarantee of any measure of reform which may be conceded under it to the people except the number of elected and nominated members in the Councils. Everything else, literally everything else, is left to the discretion of Anglo-Indian officialdom. No doubt the present Secretary of State will have the ultimate decision as to the rules of election, nomination, formation of electorates, acceptance or rejection by the Government of elected members, veto, division, interpellation etc., and he may decide to put the felt on thickly and copiously. But even if this be done, not one of these things will be assured to us, not one of them but may be reversed by subsequent Viceroyals and Secretaries of State without infringing the meagre provisions of this Act. As for local self-government we fail to find any guarantee either for its introduction or, if introduced, — as, no doubt, Lord Morley will have some slight respect even yet for his own reputation, — for its retention in the future. What is to prevent a future Alexander MacKenzie in the Viceregal seat from so altering any measure that may be given as to render it nugatory and what is to prevent a future Curzon in the India Office from confirming this step rearwards? So far as we have been able to find, nothing at all. We are just where we were before, with concessions granted by arbitrary condescension which may be withdrawn at any moment by arbitrary arrogance. Well may Lord Morley say that this is not a measure of self-government and, if he thought it were, he would not concede the measure. The Nationalist party is not opposed to all acceptance of reform; it would welcome and support a measure which would really concede even a minimum of control and provide a means for future expansion while perpetually guaranteeing the small amount conceded; but a measure by which no control is given, no step taken is guaranteed as to permanence and no provision is made for future expansion is one which no thinking man
would care to have even apart from other defects, and no practical politician will look at for a moment when coupled with provisions disastrous to the future of the nation.

**Shall We Accept the Partition?**

This may sound a startling proposition to a nation which is perpetually reaffirming its decision never to accept the settled fact. But it rises definitely upon the question of accepting the reforms. We cannot conceal from ourselves the staringly patent fact that if we accept the reforms, we accept the Partition. The new changes are partly meant to confirm the division which every English statesman declares it to be essential to British prestige to perpetuate, and if the older leaders of West Bengal accept the reforms and stand for Sir Edward Baker’s Council or allow their followers to stand for it, the sooner the partition resolution is deleted from the proceedings of Provincial and District conferences and the celebration of the 16th October discontinued, the better for our national honesty and sincerity. If the West Bengal leaders, who under the pressure of public opinion gave up their seats on the old Council and the idea of becoming Honourables in future, join the reformed Council in Calcutta, there is nothing to prevent the East Bengal leaders from joining Sir Lancelot Hare’s Council in the capital of the New Province. If that happens, where will the Anti-Partition agitation be and where the solemn vow of unity? To solemnly meet once a year and declare that we will never, never accept what we have accepted, would be a farce too hypocritical for the conscience of the most cynical or the intelligence of the most deluded to tolerate. Any revival of the fiction that it is East Bengal which has been partitioned from West Bengal and therefore there is no obligation on the West Bengal leaders to boycott the Councils while the East Bengal leaders are so bound, will not be suffered. But the Moderates have definitely and rigidly excluded political boycott from their programme; yet what is the abstention from the Councils but a political boycott? If they carry this exclusion to its logical result and accept the reformed Councils, that is the
end of the Anti-Partition agitation. Lord Morley’s policy will be entirely successful and Mr. Gokhale may still more loudly acclaim him as the saviour of India from a state of anarchy and chaos.

The Process of Evolution
Facts and Opinions

The Convention President

The nomination of Sir Pherozshah Mehta as the President of the three men’s Convention at Lahore is not an event that is of any direct interest to Nationalists. Just as the three tailors of Tooley Street represented themselves as the British public, so the three egregious mediocrities of the Punjab pose as the people of their province and, in defiance of the great weight of opinion among the leading men and the still stronger force of feeling among the people against the holding of a Convention Congress at Lahore, are inviting the representatives of the Moderate party to a session of what is still called, even under these discouraging circumstances, the Indian National Congress. It is of small importance to us whom these three gentlemen elect as their President. The nomination was indeed a foregone conclusion. Sir Pherozshah Mehta, having got rid of his Nationalist adversaries, now rules the Convention with as absolute a sway as he ruled the Corporation before the European element combined against him and showed that, servile as Bombay respectability might be to the Corporation lion, it was still more servile to the ruling class. Indirectly, however, the election is of some importance to Bengal owing to the desire of the people of this province for a United Congress. It is no longer a secret that in Bengal
Moderate circles the feeling against Sir Pherozshah is almost as strong as it is in the Nationalist party. It has even been threatened that, if Sir Pherozshah becomes the President, Bengal will not attend the session at Lahore. This has since been qualified by the proviso that Bengal as a province will not attend, although some individuals may overcome their feelings or their scruples. Bengal as a province would in no case attend the sitting of a mutilated Congress. Even the whole Moderate party were not likely to attend unless their objections on the score of constitutional procedure were properly considered. All that the threat can mean is that, even of those who would otherwise have gone, most will not attend. This is, after all, a feeble menace. Neither Sj. Surendranath nor Sj. Bhupendranath nor the Chaudhuri brothers are likely to forego attendance, and, for all practical purposes, these gentlemen are the Moderate party in Bengal. If the Bengal leaders do go to Lahore, they are certain to obey meekly the dictates of Sir Pherozshah Mehta; for there is not one of them who has sufficient strength of character to stand up to the roarings of the Bombay lion. They were in the habit of obeying him even when he had no official authority, and it can well be imagined how the strong, arrogant and overbearing man will demean himself as President, and how utterly impossible it will be even to suggest, either in Subjects Committee or in full meeting, any idea which will not be wholly palatable to the autocrat. Sj. Surendranath Banerji at Hughly advanced the strangely reactionary conception of the President of a Congress or Conference as by right not less absolute than the Czar of all the Russias, bound by no law and no principle and entitled to exact from the Conference or Congress implicit obedience to his most arbitrary and unconstitutional whims and caprices. This absolutist conception is likely to be carried out to the letter at the Lahore Convention. If ever there was any hope that the Lahore session of the Convention might be utilised for bringing about a United Congress, that has now disappeared. The hope was cherished by some, but it was from the first an idle expectation. A firm combination of all, whether Moderates or Nationalists, who are in favour of union, and the holding of a freely elected
Congress at Calcutta was all along the only chance of bringing about union.

**Presidential Autocracy**

The conception of the President as a Russian autocrat and the assembly as the slave of his whims is one which is foreign to free and democratic institutions, and would, if enforced, make all true discussion impossible and put in the hands of the party in possession of the official machinery an irresistible weapon for stifling the opinions of its opponents. It is a conception against which the Nationalist party have struggled from the beginning and will struggle to the end. The ruling of the President is final on all points of order, but only so long as he governs the proceedings of the body according to the recognised rules of debate. He cannot dictate the exclusion of resolutions or amendments which do not seem to him rational or expedient, but must always base his action on reasons of procedure and not on reasons of state. The moment he asserts his individual caprice or predilection, he lays himself open to an appeal to the whole assembly or even, in very extreme cases, to an impeachment of his action by a vote of censure from the delegates. It has been erroneously alleged that the Speaker of the House of Commons sways the House with an absolute control. The Speaker is as much bound by the rules of the House as any member; he is the repository of the rules and administers an old and recognised procedure, elaborate and rigid in detail, which he cannot transgress, nor has any Speaker been known to transgress it. Some have been suspected of administering the rules, wherever they left discretion to the Speaker, with a partiality for one party, but even this has been rare, and it was always the rules of procedure that were administered, not personal whim or caprice. As the present Speaker pointed out recently in his evidence before a public Commission, there is a recognised means by which the conduct of the Speaker can be called in question by the House. It would be strange if it were otherwise. The framers of the British Constitution, who so jealously guarded every loophole by which autocracy might
creep into any part of the system, were not likely to leave such a glaring defect of freedom uncorrected, if it had ever existed.

Mr. Lalmohan Ghose

The death of Mr. Lalmohan Ghose removes from the scene a distinguished figure commemorative of the past rather than representative of any living force in the present. His interventions in politics have for many years past been of great rarity and, since the Calcutta Congress, had entirely ceased. It cannot therefore be said that his demise leaves a gap in the ranks of our active workers. He was the survivor of a generation talented in politics rather than great, and, among them, he was one of the few who could lay claim to the possession of real genius. That genius was literary, oratorical and forensic rather than political but as these were the gifts which then commanded success in the political arena, he ought to have stood forward far ahead of the mass of his contemporaries. It was the lack of steadiness and persistence common enough in men of brilliant gifts, which kept him back in the race. His brother Mr. Manmohan Ghose, a much less variously and richly gifted intellect but a stronger character, commanded by the possession of these very qualities a much weightier influence and a more highly and widely honoured name. In eloquence we doubt whether any orator of the past or present generation has possessed the same felicity of style and charm of manner and elocution. Mr. Gokhale has something of the same debating gift, but it is marred by the dryness of his delivery and the colourlessness of his manner. Mr. Lalmohan Ghose possessed the requisite warmth, glow and agreeableness of speech and manner without those defects of excess and exaggeration which sometimes mar Bengali oratory. We hope that his literary remains will be published, especially the translation of the Meghnad Badh, which, from such capable hands, ought to introduce favourably a Bengali masterpiece to a wider than Indian audience.
The Past and the Future

OUR CONTEMPORARY, the Statesman, notices in an unusually self-restrained article the recent brochure re-published by Dr. A. K. Coomaraswamy from the Modern Review under the title, “The Message of the East”. We have not the work before us but, from our memory of the articles and our knowledge of our distinguished countryman’s views, we do not think the Statesman has quite caught the spirit of the writer. Dr. Coomaraswamy is above all a lover of art and beauty and the ancient thought and greatness of India, but he is also, and as a result of this deep love and appreciation, an ardent Nationalist. Writing as an artist, he calls attention to the debased aesthetic ideas and tastes which the ugly and sordid commercialism of the West has introduced into the mind of a nation once distinguished for its superior beauty and grandeur of conception and for the extent to which it suffused the whole of life with the forces of the intellect and the spirit. He laments the persistence of a servile imitation of English ideas, English methods, English machinery and production even in the new Nationalism. And he reminds his readers that nations cannot be made by politics and economics alone, but that art also has a great and still unrecognised claim. The main drift of his writing is to censure the low imitative un-Indian and bourgeois ideals of our national activity in the nineteenth century and to recall our minds to the cardinal fact that, if India is to arise and be great as a nation, it is not by imitating the methods and institutions of English politics and commerce, but by carrying her own civilisation, purified of the weaknesses that have overtaken it, to a much higher and mightier fulfilment than any that it has reached in the past. Our mission is to outdistance, lead and instruct Europe, not merely to imitate and learn from her. Dr. Coomaraswamy speaks of art, but it is certain that a man of his wide culture would not
exclude, and we know he does not exclude, thought, literature and religion from the forces that must uplift our nation and are necessary to its future. To recover Indian thought, Indian character, Indian perceptions, Indian energy, Indian greatness, and to solve the problems that perplex the world in an Indian spirit and from the Indian standpoint, this, in our view, is the mission of Nationalism. We agree with Dr. Coomaraswamy that an exclusive preoccupation with politics and economics is likely to dwarf our growth and prevent the flowering of originality and energy. We have to return to the fountainheads of our ancient religion, philosophy, art and literature and pour the revivifying influences of our immemorial Aryan spirit and ideals into our political and economic development. This is the ideal the *Karmayogin* holds before it, and our outlook and Dr. Coomaraswamy's do not substantially differ. But in judging our present activities we cannot look, as he does, from a purely artistic and idealistic standpoint, but must act and write in the spirit of a practical idealism.

The debasement of our mind, character and tastes by a grossly commercial, materialistic and insufficient European education is a fact on which the young Nationalism has always insisted. The practical destruction of our artistic perceptions and the plastic skill and fineness of eye and hand which once gave our productions pre-eminence, distinction and mastery of the European markets, is also a thing accomplished. Most vital of all, the spiritual and intellectual divorce from the past which the present schools and universities have effected, has beggared the nation of the originality, high aspiration and forceful energy which can alone make a nation free and great. To reverse the process and recover what we have lost, is undoubtedly the first object to which we ought to devote ourselves. And as the loss of originality, aspiration and energy was the most vital of all these losses, so their recovery should be our first and most important objective. The primary aim of the prophets of Nationalism was to rid the nation of the idea that the future was limited by the circumstances of the present, that because temporary causes had brought us low and made us weak, low therefore must be our aims and weak our methods. They pointed the mind of the people to a great
and splendid destiny, not in some distant millennium but in the comparatively near future, and fired the hearts of the young men with a burning desire to realise the apocalyptic vision. As a justification of what might otherwise have seemed a dream and as an inexhaustible source of energy and inspiration, they pointed persistently to the great achievements and grandiose civilisation of our forefathers and called on the rising generation to recover their lost spiritual and intellectual heritage. It cannot be denied that this double effort to realise the past and the future has been the distinguishing temperament and the chief uplifting force in the movement, and it cannot be denied that it is bringing back to our young men originality, aspiration and energy. By this force the character, temper and action of the Bengali has been altered beyond recognition in a few years. To raise the mind, character and tastes of the people, to recover the ancient nobility of temper, the strong Aryan character and the high Aryan outlook, the perceptions which made earthly life beautiful and wonderful, and the magnificent spiritual experiences, realisations and aspirations which made us the deepest-hearted, deepest-thoughted and most delicately profound in life of all the peoples of the earth, is the task next in importance and urgency. We had hoped by means of National Education to effect this great object as well as to restore to our youth the intellectual heritage of the nation and build up on that basis a yet greater culture in the future. We must admit that the instrument which we cherished and for which such sacrifices were made, has proved insufficient and threatens, in unfit hands, to lose its promise of fulfilment and be diverted to lower ends. But the movement is greater than its instruments. We must strive to prevent the destruction of that which we have created and, in the meanwhile, build up a centre of culture, freer and more perfect, which will either permeate the other with itself or replace it if destroyed. Finally, the artistic awakening has been commenced by that young, living and energetic school which has gathered round the Master and originator, Sj. Abanindranath Tagore. The impulse which this school is giving, its inspired artistic recovery of the past, its intuitive anticipations of the future, have to be popularised and made a national possession.
Dr. Coomaraswamy complains of the survivals of the past in the preparations for the future. But no movement, however vigorous, can throw off in a few years the effects of a whole century. We must remember also why the degradation and denationalisation, “the mighty evil in our souls” of which the writer complains, came into being. A painful but necessary work had to be done, and because the English nation were the fittest instrument for His purpose, God led them all over those thousands of miles of alien Ocean, gave strength to their hearts and subtlety to their brains, and set them up in India to do His work, which they have been doing faithfully, if blindly, ever since and are doing at the present moment. The spirit and ideals of India had come to be confined in a mould which, however beautiful, was too narrow and slender to bear the mighty burden of our future. When that happens, the mould has to be broken and even the ideal lost for a while, in order to be recovered free of constraint and limitation. We have to recover the Aryan spirit and ideal and keep it intact but enshrined in new forms and more expansive institutions. We have to treasure jealously everything in our social structure, manners, institutions, which is of permanent value, essential to our spirit or helpful to the future; but we must not cabin the expanding and aggressive spirit of India in temporary forms which are the creation of the last few hundred years. That would be a vain and disastrous endeavour. The mould is broken; we must remould in larger outlines and with a richer content. For the work of destruction England was best fitted by her stubborn individuality and by that very commercialism and materialism which made her the antitype in temper and culture of the race she governed. She was chosen too for the unrivalled efficiency and skill with which she has organised an individualistic and materialistic democracy. We had to come to close quarters with that democratic organisation, draw it into ourselves and absorb the democratic spirit and methods so that we might rise beyond them. Our half-aristocratic half-theocratic feudalism had to be broken, in order that the democratic spirit of the Vedanta might be released and, by absorbing all that is needed of the aristocratic and theocratic culture, create for the Indian race a new and
powerful political and social organisation. We have to learn and use the democratic principle and methods of Europe, in order that hereafter we may build up something more suited to our past and to the future of humanity. We have to throw away the individualism and materialism and keep the democracy. We have to solve for the human race the problem of harmonising and spiritualising its impulses towards liberty, equality and fraternity. In order that we may fulfil our mission we must be masters in our own home. It is out of no hostility to the English people, no race hatred that we seek absolute autonomy, but because it is the first condition of our developing our national self and realising our destiny. It is for this reason that the engrossing political preoccupation came upon us; and we cannot give up or tone down our political movement until the lesson of democratic self-government is learned and the first condition of national self-fulfilment realised. For another reason also England was chosen, because she had organised the competitive system of commerce, with its bitter and murderous struggle for existence, in the most skilful, discreet and successful fashion. We had to feel the full weight of that system and learn the literal meaning of this industrial realisation of Darwinism. It has been written large for us in ghastly letters of famine, chronic starvation and misery and a decreasing population. We have risen at last, entered into the battle and with the Boycott for a weapon, are striking at the throat of British commerce even as it struck at ours, first by protection and then by free trade. Again it is not out of hatred that we strike, but out of self-preservation. We must conquer in that battle if we are to live. We cannot arrest our development of industry and commerce while waiting for a new commercial system to develop or for beauty and art to reconquer the world. As in politics so in commerce, we must learn and master the European methods in order that we may eventually rise above them. The crude commercial Swadeshi, which Dr. Coomaraswamy finds so distasteful and disappointing, is as integral a part of the national awakening as the movement towards Swaraj or as the new School of Art. If this crude Swadeshi were to collapse and the national movement towards autonomy come to nothing, the artistic renascence he
has praised so highly, would wither and sink with the drying up of the soil in which it was planted. A nation need not be luxuriously wealthy in order to be profoundly artistic, but it must have a certain amount of well-being, a national culture and, above all, hope and ardour, if it is to maintain a national art based on a widespread development of artistic perception and faculty. Moreover, aesthetic arts and crafts cannot live against the onrush of cheap and vulgar manufactures under the conditions of the modern social structure. Industry can only become again beautiful if poverty and the struggle for life are eliminated from society and the co-operative State and commune organised as the fruit of a great moral and spiritual uplifting of humanity. We hold such an uplifting and reorganisation as part of India’s mission. But to do her work she must live. Therefore the economical preoccupation has been added to the political. We perceive the salvation of the country not in parting with either of these, but in adding to them a religious and moral preoccupation. On the basis of that religious and moral awakening the preoccupation of art and fine culture will be added and firmly based. There are many who perceive the necessity of the religious and moral regeneration, who are inclined to turn from the prosaic details of politics and commerce and regret that any guide and teacher of the nation should stoop to mingle in them. That is a grievous error. The men who would lead India must be catholic and many-sided. When the Avatar comes, we like to believe that he will be not only the religious guide, but the political leader, the great educationist, the regenerator of society, the captain of co-operative industry, with the soul of the poet, scholar and artist. He will be in short the summary and grand type of the future Indian nation which is rising to reshape and lead the world.

Facts and Opinions

The Rump Presidential Election

The Lahore Special Correspondent of the Rashtra Mat telegraphs to his paper a story of the proceedings at the Presidential election for the Rump Congress at Lahore, which, if correct, sheds a singular light on the proceedings of the valiant Three who are defending the bridge of conciliation and alliance between the bureaucracy and the Moderates which now goes by the name of the Indian National Congress. According to this correspondent, the account of Sir Pherozshah's election cabled from Lahore is incorrect and garbled. What really happened was that eighteen gentlemen assembled at Lahore as the Reception Committee, of whom more than half were employees of Mr. Harkissen Lal's various commercial ventures. This independent majority voted plump for Mr. Harkissen Lal's candidate, Sir Pherozshah, but the rest were strong and firm for Sj. Suren-dranath Banerji. This revolt in the camp led to much anxiety and confusion and great efforts were made to bring back the insurgents to their allegiance, but in vain. If this account is correct, no criticism can be too strong for the misrepresentation which suppressed the facts of the election. Was it not circulated that Sir Pherozshah would not accept the Presidentship unless it were offered unanimously? A strenuous attempt was made
to save the face of the Dictator by representing in the Lahore
cables that the nomination of Sj. Surendranath by the Bengal
Convention Committee was only a suggestion in a private letter.
But even then, what of Burma? What of this remarkable division
in the toy committee itself at Lahore? We imagine that the Lion
will put his dignity in his pocket or in his mane or any other
hiding place that may be handy and accept the Presidentship;
and if he does, we also imagine that he will roar discreetly at
Lahore about the touching and unanimous confidence placed in
him and the imperative voice of the whole country calling him to
fill this great and responsible position of a Rump President! We
have a suggestion for our highly esteemed Lion. Why not save
his dignity and effect his object by appointing some lieutenant
like Mr. Watcha as President? In that case Sir Pherozshah would
be as much President in fact as if he enjoyed the doubtful and
mutilated honours of the Rump Presidentship.

Nation-stuff in Morocco

The Powers of Europe are highly indignant at the tortures and
mutilations practised by Mulai Hamid on his vanquished rival,
El Roghi, and his captured adherents. There is no doubt that the
savage outbreak of mediaeval and African savagery of which
the Moorish Sultan has been guilty, is revolting and deprives
him personally of all claim to sympathy; but European moral
indignation in the matter seems to us to be out of place when we
remember the tortures practised by American troops on Filipinos
(to say nothing of the ghastly details of lynching in the Southern
States), and the unbridled atrocities of the European armies in
China. Be that as it may, we come across a remarkable account,
extracted in the Indian Daily News, of the stuff of which the
Moorish people are made. The narrator is Belton, the English-
man who commanded the Sultan’s army and has resigned his
post as a protest against the Sultan’s primitive method of treating
political prisoners. Death and mutilation seem to have been the
punishments inflicted. Belton narrates that twenty officers of El
Roghi had their right hands cut off and then seared, according
to the barbarous old surgical fashion, in a cauldron of boiling oil, to stop the bleeding. Not from one of these men, reports the English soldier with wonder, did there come, all the time, a single whimper. And he goes on to tell how one of them, after the mutilation, quietly walked over to the fire where the cauldron was boiling, and, while his stump was being plunged in the boiling liquid, lighted from the flame with the utmost serenity a cigarette he held in his hand. Whatever may be the present backwardness of the Moors and the averseness to light of their tribes, there is the stuff of a strong, warlike and princely nation in the land which gave birth to these iron men. If ever the wave of Egyptian Neo-Islam and Mahomedan Nationalism sweeps across Morocco, Europe will have to reckon with no mean or contemptible people in the North West of Africa.

Cook versus Peary

It is with a somewhat sardonic sense of humour that we in India, whom that eminently truthful diplomat, Lord Curzon, once had the boldness to lecture on our mendacity and the superior truth of the Occidental, have watched the vulgar squabble between Dr. Cook and Commander Peary about the discovery of the North Pole. Long ago, most of the romance and mystery had gone out of the search for the Pole. The quest, though still extremely difficult and even perilous to an incautious adventurer, had no longer the charm of those gigantic dangers which met and slew the old explorers. It was known besides that little was likely to reward the man who succeeded, and there was small chance of anything but ice and cold being discovered at the North Pole. What little of the interesting and poetic was left in the idea, has now gone out of it for ever, and only a sense of nausea is left behind, as the controversy develops and leaves one with a feeling that it would have been better if the goal of so many heroic sacrifices had been left undiscovered for all time, rather than that it should have been discovered in this way. The spectacle of two distinguished explorers, one, we suppose from his title, an American naval officer and the other a savant not unknown to fame, hurling at
each other such epithets as liar and faker, accusing each other of vile and dishonourable conduct, advancing evidence that when examined melts into thin air, citing witnesses who, when questioned, give them the lie, while all Europe and America join and take sides in the disgusting wrangle, is one that ought to give pause to the blindest admirer of Western civilisation and believer in Western superiority. We certainly will not imitate the general run of European writers who, arguing smugly from temporary, local or individual circumstances, talk, in the style of self-satisfied arrogance, of Oriental barbarity, Oriental treachery and mendacity, Oriental unscrupulousness; we will not say that the continents of Europe and America are peopled by nations of highly civilised liars, imposters and fakers of evidence without any sense of truth, honour or dignity, although we have as good cause as any Western critic of Asia; but at any rate the legend of European superiority and the inferior morals of the Asiatic has, by this time, been so badly damaged that we think even the Englishman might think twice before it bases its opposition to national aspirations on the pretensions of the Pharisee. It is evident that we are as good as the Europeans; we think we are in most respects better; we certainly could not be worse.
Nationalist Organisation

The time has now come when it is imperative in the interests of the Nationalist party that its forces should be organised for united deliberation and effective work. A great deal depends on the care and foresight with which the character and methods of the organisation are elaborated at the beginning, for any mistake now may mean trouble and temporary disorganisation hereafter. It is not the easy problem of providing instruments for the working of a set of political ideas in a country where political thought has always been clear and definite and no repressive laws or police harassment can be directed against the dissemination of just political ideals and lawful political activities. We have to face the jealousy, suspicion and hostility of an all-powerful vested interest which it is our avowed object to replace by Indian agencies, the opposition, not always over-nice in its methods, of a rich and influential section of our own countrymen, and the vagueness of thought and indecisiveness of action common to the great bulk of our people even when they have been deeply touched by Nationalist sentiment and ideals. To form a centre of order, clear, full and powerful thought, swift effectiveness, free and orderly deliberation, disciplined and well-planned action must be the object of any organisation that we shall form. Two sets of qualities which ought not to be but often are conflicting, are needed for success: resolute courage and a frank and faithful adherence to principle on the one side and wariness and policy on the other.

The first mistake we have to avoid is the tendency to perpetuate or imitate old institutions or lines of action which are growing out of date. The Nationalist party is a young and progressive force born of tendencies, aims and necessities which were foreign to the nineteenth century, and, being a party of the future and not of the immediate past, it must look, in all it does...
and creates, not to the past but to the future. There are still in the party the relics of the old desire to raise up a rival Congress and assert our claim to be part legatees of the institution which came to a violent end at Surat. Our claim stands and, if a real Congress is again erected, it must be with the Nationalists within it and not excluded. The strength of the demand in the country for a United Congress is a sufficient vindication of the claim. But if we try still farther to enforce it by holding a rival session and calling it the Congress, we shall take an ill-advised step calculated to weaken us instead of developing our strength. A technical justification may be advanced by inviting men of all shades of opinion to such a session, but as a matter of fact none are likely to attend a session summoned by pronounced Nationalists unless they are pronounced Nationalists themselves. A United Congress can be effectively summoned only if we are able to effect a combination of Nationalists, advanced Moderates and that large section of opinion which, without having pronounced views, are eager to revive a public body in which all opinions can meet and work together for the good of the country. Such a combination would soon reduce Sir Pherozshah’s Rump Congress to the lifeless and meagre phantasm which it must in any case become with the lapse of time and the open development of the Mehta-Morley alliance. But to create another Rump Congress on the Nationalist side would be to confound confusion yet worse without any compensating gain. It would moreover throw on the shoulders of the Nationalists a portion of the blame for perpetuating the split, which now rests entirely on the other side.

If a Nationalist Rump Congress is inadvisable and inconsistent with the dignity of the Nationalist party and its aversion to mere catchwords and shams, an imitation of the forms and working of the old Congress is also inadvisable. We were never satisfied with those forms and that working. The three days’ show, the excessively festal aspect of the occasion, the monstrous preponderance of speech and resolution-passing over action and work, the want of true democratic rule and order, the weary waste of formal oratory without any practical use or object, the incapacity of the assembly for grappling with the real problems
of our national existence and progress, the anxiety to avoid public discussion which is the life-breath of democratic politics, these and many other defects made the Congress in our view an instrument ill-made, wasteful of money and energy and the centre of a false conception of political deliberation and action. If we imitate the Congress, we shall contract all the faults of the Congress. Neither can we get any help from the proceedings of the Nationalist Conference which met at Surat; for that was a loose and informal body which only considered certain immediate questions and emergencies arising out of the Surat session. Yet a centre of deliberation and the consideration of past progress and future policy is essential to the building of the Nationalist party into an effective force conscious of and controlling its mission and activities. We shall indicate briefly the main principles on which we think the organisation of such a body should be based.

The first question is of the scope and object of the institution. In the first place, we must avoid the mistake of making it a festival or a show occasion intended to excite enthusiasm and propagate sentiment. That was a function which the Indian National Congress had, perhaps inevitably, to perform, but a body which tries to be at once a deliberative assembly and a national festival, must inevitably tend to establish the theatrical and holiday character at the expense of the practical and deliberative. National festivals and days of ceremony are the best means of creating enthusiasm and sentiment; that is the function of occasions like the 7th August and the 16th October, the Shivaji Utsav and similar celebrations. We must resolutely eschew all vestiges of the old festival aspect of our political bodies and make our assembly a severely practical and matter-of-fact body. Secondly, we must clearly recognise that a body meeting once a year cannot be an effective centre of actual yearlong work; it can only be an instrument for deliberation and the determination of policy and a centre of reference for whose consideration and adjudgment the actually accomplished work of the year may, in its main features and the sum of its fulfilment, be submitted. The practical work must be done by quite
different organisations, provincial and local, carrying out the policy fixed by the deliberative body but differently constituted; for, as the object of an executive body is entirely different from the object of a deliberative body, so its constitution, rules and procedure must be entirely different. In fact our All-India body must be not a Congress or Conference even, but a Council, and since in spite of Shakespeare and Sj. Baikunthanath Sen, there is much in a name and it largely helps to determine our attitude towards the thing, let us call our body not the Nationalist Congress, Convention or Conference, but the Nationalist Council.

If the body is to be a Council, its dimensions must be of such a character as to be manageable and allow of effective discussion in the short time at our disposal. A spectacular Congress or Conference gains by numbers, a Council is hampered by them. Therefore the maximum number of delegates must be fixed and apportioned to the different parts of the nation according to their numbers. Secondly, in the proceedings themselves all elements of useless ornament and redundancy must be purged out, such as the long Presidential Speech, the Reception Committee Chairman’s speech and the division of the proceedings into the secret and effective Subjects Committee sittings and the public display of oratory in the full assembly. The first two features are obviously useless for our purpose and a mere waste of valuable time. With the disappearance of the spectacular aspect usually associated with our public bodies, the reason for the mere display of oratory also disappears. The only other utility of the double sitting is that the full assembly forms a Court of Appeal from the decision of the Subjects Committee and an opportunity to the minority for publicly dissenting from any decision by a majority which they might otherwise be supposed to have endorsed. The necessity for the first function arises from the imperfectly representative character of the Subjects Committee, as it is at present elected; the necessity for the second function from the absence of publicity in its proceedings. If the whole Council sits as Subjects Committee, the necessity for the Court of Appeal or the public assertion of dissent will not occur. The
only justification for the existence of the Subjects Committee in our present political bodies is their unwieldy proportions, the only reason for its secrecy the attempt to conceal all difficulties in the way of coming to a unanimous conclusion; and neither of these reasons will have any existence in a Nationalist Council. The subjects can be fixed by a small executive body existing throughout the year, which will be in charge of all questions that may arise in connection with the Council, subject to approval or censure by the Council itself at its annual meeting. The resolutions on these subjects can be formed in the Council and additional resolutions can be brought forward, if the Council approves. All unnecessary oratory should be avoided and resolutions formulating policy of a standing character can be first got out of the way by a formal motion of them from the Chair. After this preliminary, the Council can go into Committee to consider, approve or amend the report of progress made by the Secretaries for the past year, and, on the second day, resolutions demanding debate and deliberation may be discussed in full Council.

The next question is the procedure and constitution. We desire no autocratic President, no oligarchy of ex-Presidents and long-established officials, no looseness of procedure putting a premium on party trickery and unfair rulings. The only body of officials will be two general secretaries and two secretaries for each province, forming the executive body of the Council, who will be for the most part recorders of provincial work and summoners of the Council and will have no power to direct or control its procedure. Instead of an autocratic and influential President we should have a Chairman who will not intervene in the discussion with his views, but confine himself to guiding the deliberations as an administrator of fixed rules of procedure which he will not have the power to depart from, modify or amplify. He must therefore be, like the Speaker of the House of Commons, not an active and prominent leader who cannot be spared from the discussion, but a man of some position in the party whose probity and fairness can be universally trusted.

The last question is that of the electorate. We throw out the suggestion that, in the first place, we should cease to be bound by
the British provincial units which are the creation of historical circumstances connected with the gradual conquest of India by the English traders, and have no correspondence with the natural divisions of the people, and should adopt divisions which will be favourable to the working out of the Nationalist policy. And since the main work of the party will have to be done through the vernacular, the most natural and convenient divisions will be those of the half dozen or more great literary languages, minor or dialectal tongues of inferior vitality being thrown under the great vernaculars to which they geographically or by kinship belong. It was the programme of the Nationalist party in Bengal to create a register of voters throughout the country, who could form a real electorate. Such a conception would have been impracticable in the old days when the people at large took no active part in politics; it was fast approaching the region of practicability when the repressions broke the natural course of our national development and introduced elements of arbitrary interference from above and a feeble and sporadic Terrorist reaction from below, the after-swell of which still disturbs the country. Sj. Bipin Chandra Pal has written advocating the creation of a register of Nationalists, as a basis for organisation. This is, no doubt, the only sound basis for a thoroughly democratic organisation, but so long as the after-swell lasts and the tempest may return, so long as police misrule does not give way to the complete restoration of law and order, a register of Nationalists would only be a register of victims for investigators of the Lalmohan and Mazarul Haq type to harass with arrests, house-searches, binding down under securities, prosecutions with no evidence or tainted evidence, and the other weapons which Criminal Procedure and Penal Code supply, and against which there can be no sufficient redress under an autocratic regime not responsible to any popular body, leaning on the police rather than on the people and master of the judiciary. In these circumstances we can only create convenient limited electorates for the election of our council delegates, awaiting a more favourable condition of things for democratising the base of our structure.

On these principles we can establish a deliberative body
which will give shape, centrality and consistency to Nationalist propaganda and work all over the country. We invite the attention of the leading Nationalist workers throughout India to our suggestion. The proposal has been made to hold a meeting of Nationalists at Calcutta at which a definite scheme and rules may be submitted and, as far as possible, adopted in action so that the work may not be delayed. No United Congress is possible this year, and if or when it comes, the existence of our body which is avowedly a party organisation will not interfere with our joining it.
An Extraordinary Prohibition

PANDIT Bhoje Dutt of Agra has been in our midst for some time, and none had hitherto imagined that he was a political agitator or his preachings dangerous to the public peace. We all knew him as secretary of the Suddhi Samaj, a religious body having for its object the re-admission of converts from Hinduism into the fold of the religion and also, we believe, the admission of converts to Hinduism from other religions into Hindu society with the full status of Hindus. The society has been working for some time with signal success and no breach of the law or the peace. Yet the other day Mr. Swinhoe thought fit to prohibit the Pandit from lecturing in Calcutta and the public from attending his lectures for the space of two months. We reproduce the order as it affords singularly clear proof of the contention, always advanced by Nationalists, that under the present system such public liberty as we enjoy, is not an ensured right but an insecure concession, based not on status but on permission, and therefore not, properly speaking, a liberty at all. It runs: —

“Whereas it has been made to appear to me by evidence adduced before me that Pandit Bhoje Dutt, political agitator and Editor of the vernacular paper ‘Musafir Arya’, Agra, has arrived in Calcutta and intends to lecture in the Albert Hall in Calcutta this evening at 8 p.m. on the subject of ‘Musulman logonke barkhilaf’ i.e. against the interests of Mahomedans: —

And whereas I am satisfied that such lecturing or preaching by the said Pandit Bhoje Dutt at any place or in any building in Calcutta may lead to a serious disturbance of the public tranquillity and rioting which will be a source of danger to human life and public safety: —

And whereas I am satisfied that the immediate prevention of such lecturing and preaching by the said Pandit Bhoje Dutt
within the town of Calcutta is necessary in the interests of human life and safety and in order to prevent any riot or affray, I do hereby under Section 144 of the Criminal Procedure Code order and direct the said Pandit Bhoje Dutt to refrain from delivering any lecture or preaching or holding or taking part in any meeting within the town of Calcutta, and I hereby direct the public generally to refrain from attending or taking part in any lecture or preaching by the said Pandit Bhoje Dutt and to refrain from attending or taking any part in any meeting or meetings held by or on behalf of the said Pandit Bhoje Dutt in the town of Calcutta and I farther direct that this order shall remain in force for a period of two months from the date thereof.

Given under my hand and seal of this court dated the 25th September 1909."

The value of the evidence which so easily satisfied Mr. Swinhoe may be judged from its inaccuracy and triviality. Pandit Bhoje Dutt is not a political agitator, but a religious preacher and social reformer; the proposed lecture had nothing to do with the Mahomedans and was upon the Hindu Puranas, and there was no breach of peace or any approach to a breach of the peace at Monghyr. So much for the accuracy. Secondly, Mr. Swinhoe ought to have known that, although a lecture may be against the interests of the Mahomedans, “Against the interests of the Mahomedans” cannot be the title or subject of a lecture, and we can only suppose that this satisfactory witness was a badly-educated detective or informer who either did not know his own meaning or could not make it clear to Mr. Swinhoe. Nor is it alleged that the preaching in Monghyr resulted in a breach of the peace, only that it nearly so resulted. On such incorrect and flimsy evidence, given ex parte and without any opportunity to the lecturer to expose its falsity, a magistrate is able and willing to deprive a citizen of his civic rights for two months and hamper a legitimate movement. If, after proper enquiry, the Magistrate had found that there was likely to be anything inflammatory in the lecture, he could have stopped the speaker from giving that or any similar lecture, but, even so, there would be no ground for a prolonged denial of civic rights. Farther, it is not enough that
An Extraordinary Prohibition

a lecture should be against the interests of any community, for there may be such a thing as legitimate opposition of interests; the conversion of Hindus to Mahomedanism is against the interest of Hindus and the conversion of Mahomedans to Hinduism is against the interest of Mahomedans, but neither religion can, on that ground, be denied the right of proselytisation. If it be argued that wherever the exercise of legitimate rights may lead to a breach of the peace, that exercise may be stopped, we say that this is a most dangerous principle, since it would be enough for any section of the community to break or threaten to break the peace to stop others from the exercise of their legitimate rights. On such grounds Mr. Asquith should be debarred from holding any meeting because the suffragettes climb walls and throw stones wherever he goes! Such a principle simply means putting a premium upon lawlessness. In other countries the indiscreet use of powers by Magistrates is restrained by public opinion but in India there is no such safeguard.

(Since the above was in type, the Police have undertaken to prove their statements, and the facts stated above must be taken as Pandit Bhoje Dutt’s side of the case. Our general criticisms of the policy of the order remain unaffected. The chance now given to the Police to substantiate their case ought to have been given to the Pandit before the order was passed. — EDITOR)

Facts and Opinions

The Apostasy of the National Council

We have received an open letter from some teachers of the Rangpur National school in which they warn the President of the National Council of Education of the evil effects likely to ensue from the recent National Risley Circular and protest strongly against the policy underlying it. For reasons of space we are unable to publish the letter. The signatories point out that the movement took its birth in the boycott movement and was from the first, closely associated with it in nature and sympathy, that the participation of young men in the national awakening has been one of the chief causes of its rapid progress and success and that the new policy of the Council not only divorces education from the life of the country, but destroys the sympathy and support of the most progressive elements in the nation. It is also pointed out that the donation made by Raja Subodh Mallik, from which the practicability of the movement took its beginning, and the sacrifices made by the teachers and students of the first established schools were intimately connected with the revolt against the Risley Circular, and yet the same circular is repeated in a more stringent form by the Council itself. There were two conditions attached to Raja Subodh Chandra’s gift: the first that the maintenance of the Rangpur and Dacca schools,
which were created to give shelter to students who persisted in taking part in politics in spite of all prohibitions, should be assisted out of his donation, and second that no form of Government control should be submitted to by the Council. It would be mere hypocrisy to deny that the issue of the prohibitory telegrams by the Secretary was the result of the Government circular previous to the seventh of August. We do not know by what morality or law of honour the Council clings to the donation while infringing in the spirit its most vital condition. Perhaps these things also, no less than courage and sincerity, are considered unessential in this new “national” education. We notice that Sj. Hirendranath Dutt at Dacca seems to have openly proclaimed the abjuration of all connection with politics as part of the duty of a “National” school. We must therefore take the divorce of the National Council from the national movement as part of a deliberate and permanent policy, and not, as it might otherwise have been imagined, a temporary aberration due largely to the fact that the President and the most active of the two Secretaries are members of Legislative Councils and therefore parts of the Government which is supposed to have no control over the institution. All that we can now expect of the Council is to be a centre of scientific and technical education; it can no longer be a workshop in which national spirit and energy are to be forged and shaped.

The Progress of China

A recent article in the Amrita Bazar Patrika gives a picture of the enormous educational progress made by China in a few years. In the short time since the Boxer troubles China has revolutionised her educational system, established a network of modern schools of all ranks, provided for a thorough modern education for her princes and nobles, and added to the intellectual education a thorough grounding in military knowledge and the habits of the soldier, so that, when the process is complete, the whole Chinese people will be a nation trained in arms whom the greatest combination of powers will not care to touch. On
another side of national development, a railway has just been opened which has been entirely constructed and will be run by Chinese. When the process of education is well forward, it is intended by the Chinese Government to transform itself into a constitutional and Parliamentary government, and in its programme this great automatic revolution has been fixed to come off in another eight years. No other race but the Chinese, trained by the Confucian system to habits of minute method, perfect organisation and steady seriousness in all things great and small, could thus calmly map out a stupendous political, social and educational change, as if it were the programme of a ceremonial function, and carry it out with thoroughness and efficiency. Once the Chinese have made up their minds to this revolution, they are likely to carry it out with the greatest possible completeness, businesslike method, effective organisation, and the least possible waste and friction. In the history of China, no less than the history of Japan, we are likely to see the enormous value of national will-power using the moral outcome of a great and ancient discipline, even while breaking the temporary mould in which that discipline had cast society, thought and government. We in India have an ancient discipline much more powerful than the Chinese or Japanese; but where is the centre of sovereignty in India which will direct the national will-power to the right use of that discipline? Where even is the centre of national endeavour which will make up for the absence of such a Government? We have a Government manned by aliens, out of touch with and contemptuous of the sources of national strength and culture; we have an education empty of them which seeks to replace our ancient discipline by a foreign strength, instead of recovering and invigorating our own culture and turning it to modern uses; we have leaders trained in the foreign discipline who do not know or believe in the force that would, if made use of, revolutionise India more swiftly and mightily than Japan was or China is being revolutionised. It is this and not internal division or the drag of old and unsuitable conditions that makes the work in India more difficult than in any other Asiatic country.
Partition Day

Partition Day comes round again on the 16th October. Last year, executive caprice prevented the day from being celebrated with all its accustomed ceremonies; this year, there is not likely to be a similar interference, and we trust that all the usual circumstances of the occasion will be observed without any abridgment. On the 7th of August the official organisers were afraid to start the procession from the College Square; now that Šj. Surendranath is with us, we trust that no such unworthy considerations will be allowed to mar the fullness and imposing nature of this feature. From no other centre in Calcutta is an effective procession at all probable, and it was seen last August that the only result of trying to change it was to break up the procession and mar its effect. The two most essential features, however, of the Partition Day are the Rakhi Bandhan and the reading of the National Proclamation; it is above all a day of the declaration of Bengal’s indivisible unity and these two functions are for that reason the very kernel of the observances. It is unfortunate that the celebration should coincide this year with the Puja sales, as this may interfere with the closing of the shops, which is the most salient sign of protest against the dismemberment. We hope the official organisers are taking steps to counteract this unfavourable factor.
Nationalist Work in England

We publish in this issue an article by Sj. Bipin Chandra Pal in which he suggests the necessity of a Nationalist agency or bureau in England, and states the reasoning which has led him to modify the views formerly held by the whole party on the inutility of work in England under the present political conditions. Bipin Babu has been busy, ever since his departure from India, in work of this kind and it goes without saying that he would not have engaged in it or persisted in it under discouraging circumstances, if it had not been borne in on him that it was advisable and necessary. At the same time, rightly or wrongly, the majority of our party still believe in the concentration of work into the effort to elicit and organise the latent strength of the nation, and cannot believe that work in England at present is anything but hopeless and a waste of money and energy. We freely admit that under certain circumstances an agency in England might become indispensable. That would certainly be the case if an elective body with substantial but limited powers were established in India and serious differences of opinion were to arise between the Government and the popular representatives. But such a state of things is yet remote, and the reformed councils will certainly not be such a body. At present, what will such a bureau or agency do for the country? Bipin Babu suggests that it may supply the British public with correct information so as to stem the tide of unscrupulous or prejudiced misinformation pouring into England through Reuter and other Anglo-Indian sources, and that, if the British public get correct information, they will at once put a stop to the policy of repression. We confess, our impression is the reverse, — that however correct the information we supply, the British public as a whole — we do not speak of just and open-minded individuals, — will still prefer to put confidence in the misstatements of their
own countrymen rather than in the true statements of what they believe to be an inferior race indebted to them for any element of civilisation it may now possess. Our impression is that even a correct idea of the facts would not necessarily lead to a correct appreciation and policy based on those facts; — many political and psychological factors would interfere.

If we are to change our opinion, it must be either as the result of new experience showing the effect of agitation in England or of new reasoning correcting the imperfections of our old premises and conclusions. The only fact that seems to be in favour of a readjustment of our views, is the energetic campaign in Parliament of Mr. Mackarness and his friends for the release of the deportees. It is alleged that, but for the untoward incident of the Curzon-Wyllie murder, some if not all the deportees would by this time have been released. We have our doubts about this conclusion. Sir Henry Cotton and some of his colleagues were always ever-hopeful about the effect of their pressure, and their expectations were more than once disappointed. No ministerial pronouncement ever lent any colour to their idea that the release was imminent when the assassination happened. All that the Government had promised, was to consider the question of the deportees’ farther detention, in the usual course, on the presentation of the six-monthly report, a consideration usual without any Parliamentary agitation. The discomfort of the questions was, no doubt, great and the long-established sentiment of many Liberals and not a few Conservatives was offended by the long detention of public men without a trial. But this in itself, though it strewed the path of the deporters with thorns instead of its being, as they would have liked, strewn with roses, would not, by itself, have secured the release of the deportees. Even if it had, the release of one or two or more of the deportees would not have removed the policy of repression. Only the repeal of the Act could have done that, and it must have been followed by the eradication of executive illegalities and police harassment as well as of the readiness of Government to pass repressive legislation, before the real obstacles in the way of peaceful progress could be removed. Would an agency in England seriously help
towards such a consummation, — that is the question. It means the diversion of money and effort, and we must see a reasonable chance of a return before we embark on it.

Bipin Babu urges that it will, and bases his conception on a certain reading of the British character and policy which we hesitate to endorse in its entirety. It is quite true that we have heard of certain irresponsible Englishmen longing for a violent outbreak on the part of the people, which would give them an excuse for equally violent measures to crush Indian aspirations for ever. But we do not believe for a moment, that some of the responsible officials, — and that we believe is all Bipin Babu implies, — cherished the same idea. We think that all Government officials have regarded the outbreak of Terrorism, small though it was, with alarm and the utmost anxiety to get rid of it, and indeed we believe the institution of organised repression to have been the result of an ignorant and unreasoning alarm which hugely exaggerated the dimensions and meaning of the outbreak, as well as wholly misunderstood the drift of the Nationalist movement. We take exception also to Bipin Babu’s suggestion of the bully in the British character being responsible for the repressions, as if it were something peculiar to the British race. What Bipin Babu wishes to indicate by this phrase, the readiness to use repression and what are erroneously called strong measures, to intimidate a popular movement, is a tendency which belongs not to British character especially but to human nature, and should be considered the result not of character but of the position. The Government in India favour repression because it seems the only way of getting over what they regard as a dangerous movement, without concessions which mean the immediate or gradual cessation of their absolute paramountcy. It is a case of incompatible interests, and until both parties can be brought to a modus vivendi, such it will remain. How is that incompatibility to be surmounted, for, at first sight, it seems to be an insurmountable obstacle. Bipin Babu relies on the enlightened self-interest of the British people and to a certain extent on their civilised conscience. We think we may as well leave
the civilised conscience out of the reckoning for the present. The civilised conscience is a remarkably queer and capricious quantity, on which, frankly, we place no reliance whatever. It is very sensitive to breaches of principle by others and very indignant when the same breaches of principle are questioned in its own conduct. It sees the mote in other eyes; it is obstinately unaware of the beam in its own. It is always criticising other nations, but it ignores or is furious at criticism of its own. It has fits of sensitiveness in which it makes large resolutions, but it can never be trusted to persist in them contrary to its own interests. This civilised conscience is not peculiar to the British people, but belongs in a greater or less degree to every European nation with the possible exception of Russia. We prefer infinitely to rely, if we have to rely on anything, on the sense of enlightened self-interest. Here also we differ from Bipin Babu. He argues as if the British were a thoughtful and clear-minded people, and only needed the data to be correctly placed before them in order to understand their interests correctly. This is far from the truth about British character. The English are, or were, a people with a rough practical common sense and business-like regularity and efficiency which, coupled with a mighty thew and sinew and a bulldog tenacity and courage, have carried them through all dangers and difficulties and made them one of the first peoples of the globe. They have had men of unsurpassed thought-power and clearness of view and purpose, but the race is not thoughtful and clear-minded; on the contrary on all questions requiring thought, intelligence and sympathy they are amazingly muddle-headed and can only learn by knocking their shins against hard and rough facts. When this first happens, they swear profusely, rub their shins and try to kick the obstacle out of the way. If it consents to be kicked out of the path, they go on their way rejoicing; otherwise, after hurting their shins repeatedly they begin to respect the obstacle, stop swearing and kicking, and negotiate with it. In this process, familiar to all who have to do with Englishmen from the point of view of conflicting interests, there is much rough practical sense but little thought
and intelligence. It is on this conception of the British character that the Nationalist party has hitherto proceeded. The hard fact of a continued and increasing Boycott, an indomitable national movement, a steady passive resistance, have been the obstacles they have sought to present to the British desire for an absolute lordship. We must prevent these obstacles from being kicked out of the way by repression, but the way to achieve that end is to show a tenacity and courage and a power of efficiency rivalling the British, and not to make an appeal to the conscience and clear common sense of the British public. We could only imagine such an appeal having an effect in the as yet improbable circumstance of a Liberal Government with a small majority dependent for its existence on a powerful Socialist and Independent Labour party. Even if this should be the result of the approaching general elections, the appeal could not have effect unless the hard facts were there in strong evidence in India itself. Our whole effort should be devoted to establishing these hard facts in a much more efficient and thorough way than we have hitherto done, and the only way is for the Nationalist party to establish its separate existence, clear from the drag of Moderatism on the one side and disturbance by ill-instructed outbreaks of Terrorism on the other, and erect itself into a living, compact and working force in India.

One day the Government in India will be obliged to come to the Nationalist party, which it is now trying to destroy, for help in bringing about a satisfactory settlement of the quarrel between the bureaucracy and the people. But that will not be till they have exhausted their hopes of achieving the same end on their own terms by playing on the weaknesses of the Moderate party. If the country were to follow the Moderate lead and content itself with the paltry and undesirable measure of reform now proposed, the progress of India towards self-government would be indefinitely postponed. The Nationalist party therefore, while showing all willingness to coalesce with the Moderates in the Congress on reasonable terms, must jealously guard their separate individuality and existence and decline to enter the Congress on terms
which would make them an inoperative force and perpetuate the misbegotten creature of the Allahabad Convention Committee under the name of the Congress. Nor should they be drawn into experiments in England which are, at present, of doubtful value or none.
College Square Speech – 2

M R. AUROBINDO Ghose next rose amid loud cheers and cries of “Bande Mataram”. He said that the meeting was the last they could hold before the Partition Day, which was approaching, and so he could speak a few words about that illustrious day which should be observed with great national enthusiasm. The 16th October had become a memorable day, not only in the history of India, but in that of the world. The 7th of August was the day of the awakening of the nation and the 16th October was the day when that awakened nation publicly declared its individuality and indestructible vitality. A time might come when the future generation would have an occasion to celebrate that day as one of national rejoicing. The speaker then dwelt upon the several aspects of Partition Day, when Bengal was split up, and said he did not recognise the separation and would not do so. It was on that day that they declared through the leaders of the nation, and by a national proclamation, that the unity of Bengal remained intact and that there was no power strong enough to break it. He explained the true meaning of the Swadeshi and boycott movements and went on to say that they should have a separate existence. They had a past and a future and should assert their individuality. He emphasised the fact that every country in the world was more or less Swadeshi. So Bengal must learn the value of self-help. The Partition Day should also be associated with national determination to revive the commerce and industry of the country and to regain that prosperity which once prevailed in India. Bengal must remain united.

Mr. Ghose proceeded to say that the national movement was

*Delivered at College Square, Calcutta, on 10 October 1909. Text published in the Times of India (Bombay) on 11 October.*
beset with manifold difficulties. Holding up before the audience a piece of Manchester cloth, stamped with the words “Bande Mataram”, he exclaimed that the great cause was suffering on account of certain unprincipled men who were trying to assail the Swadeshi movement from all sides. The speaker had learned with great sorrow that foreign cloths were still pouring into the market and having a large sale. The more the difficulties in the way, he declared, the stronger would the movement be. He concluded his address by asking his countrymen to observe the 16th of October with due mourning.
GENTLEMEN, — The time before us is extremely short. There are other speakers who will address you and the sun is now hastening down to its set. Therefore I hope you will excuse me if what I have to say to you is very briefly said. We meet here preliminary to the holding of the anniversary of the Partition. Babu Lalit Mohan Das has told you the significance of that day. Let me add this, that the 16th October has become one of the chief landmarks of our year, and not only the chief landmark of our year but the landmark of the progress of our movement — a movement of the progress of Swadeshi and boycott which we undertook in the year when the Partition was effected. We see on that day how far it has progressed, or if it has receded, how far it has receded. We are carrying on that movement at the present time under the greatest difficulties possible. Every kind of obstruction is being thrown in our way. You know very well what efforts have been made to mar the attendance at the meeting. It is supposed that the meeting is mainly composed of students, a delusion which the authorities cannot get rid of and therefore strenuous efforts are made to prevent students of our colleges from joining any political meeting and pressure is brought to bear upon the authorities of colleges to dismiss from their employment any professor who joins in the political life of his country. Yesterday the news was published of the suppression of another Samiti, the Anushilan Samiti. We all know what the Anushilan Samiti is. We all know that it is one of those Samitis which has the least to do with politics. It is one of the most self-restrained and self-denying of all the associations and confined itself to perfectly harmless activities, to improve

Delivered at Bhawanipur, Calcutta, on 13 October 1909. Text published in the Bengalee on 15 October.
the physique of the nation, to give relief in time of famine, to help their countrymen on occasions like the recent Ardhoday Yog. This was the kind of work which this Samiti did. Suddenly the Government has found out that with the existence of this society it is impossible to carry on the administration of the law. Our associations have been suppressed and we are carrying on this Swadeshi movement without organisation, without proper instrument and without proper equipment. We have to face any number of temptations, we have to face any number of obstacles, we have to face also intimidation. In spite of all that, we cling to the movement and we go on with it.

The one message we can give to you, under such circumstances, is the message to hold firm. If you cannot progress see that you have not receded. Hold firm to the Swadeshi, hold firm to your refusal to the recognition of the Partition, hold firm to the national movement which is uplifting India. Let not any act of yours individually or collectively make you guilty in the eye of posterity in this critical hour of the destinies of India. Remember this, whether we look to our own efforts to raise the nation or whether we look to our rulers, that nothing can be done by the weak and so nothing is given to the weak. Remember the people of England do not understand weakness. They only understand strength. Remember this that they do not understand those who aspire to a height and yet flinch. They only understand resolution, steadfastness and determination. Even if you look from that standpoint the only message that the leader of the people can give to you is always to hold firm. If we look higher, if we look to the deeper significance of this movement, remember that whenever a subject nation arises it is by the will of God. If only we are true and hold firm, everything in this God-given movement will help towards the goal. As favourable circumstances help us so also will unfavourable circumstances help us. Temptation is necessary to maintain the moral fibre of the nation, both to maintain and to strengthen it. Resistance to obstacles is necessary to train its capacity to resistance, refusal to yield to intimidation necessary to attain that strength and courage without which no nation can rise, or if it rises to
maintain itself in the great struggle which pervades this world. Therefore, whatever happens to us, once we have started let us carry it forward. If we are defeated it is in order to learn how to conquer. If we are suppressed it is in order to learn how to rise irresistibly; and if we for a moment recoil, it is in order that we may be led forward more swiftly and further on. Therefore I trust that even with all these obstacles and even in spite of various rumours we hear on this 16th of October, the landmark of our progress, we will show that we have not receded one step but progressed. Even if it is not so, let us remember the enormous difficulties that we have to face. Let us remember the power that led us on. Whatever happens let us have faith and courage — faith that looks beyond all momentary obstacles and reverses and sees the goal that God has set before us, and the courage that never flinches for a moment but moves forward calmly, wisely, but strongly and irresistibly to that goal.
Beadon Square Speech – 2

Then amidst fresh cheers and renewed and prolonged shouts of “Bande Mataram” in came Babu Aurobindo Ghose and the inevitable rush for rakhi bandhan ensued for a few minutes. Babu Aurobindo also spoke a few words in Bengali. He said that he was unwilling to speak in a foreign tongue on such a sacred occasion. He was not, on the other hand, accustomed to speak in his mother tongue. But he would only say one thing, viz., that the rakhi bandhan was not only a bond of thread but it was the semblance of another tie. It was the sign of uniting the hearts of millions of people of United Bengal. The rakhi might be removed in a day or two but that sacred bond of hearts would remain firm through all ages. There was no power on earth which could untie that sacred knot — it was a national bond. They had taken oath. They should stick to it, God helping.

Delivered at Beadon Square, Calcutta, on 16 October 1909, the fourth anniversary of the effectuation of the Partition of Bengal. Report published in the Bengalee on 17 October.
Facts and Opinions

Gokhale’s Apologia

We do not think we need waste much space on the arguments of the recent speech in which Mr. Gokhale has attempted to reconcile the contradictory utterances in which his speeches have lately abounded. Vibhishan’s utterances are of little importance nowadays to anyone except the Government and Anglo-India, who are naturally disposed to make the most of his defection from the cause of the people. Justice Chandavarkar, who long ago gave up the cause of his country for a judgeship and whose present political opinions can be estimated from his remarks in the Swaraj case, grandiloquently condemned the “vilification” to which Mr. Gokhale has been exposed, and declared that condemnation from such quarters was the greatest compliment a man like his protege could have. Of course the worthy judge could not foresee that the Englishman would hail the first Servant of India as a brand plucked from the burning and compliment him on being the only righteous and right-thinking man among Indian politicians, — which is after all a little hard on Sir Pherozshah Mehta and Mr. Harkissen Lal. But in the same report that enshrines Mr. Chandavarkar’s semi-official rhetoric, we have it that the Commissioner of Police and his deputy were present to support the speaker with their moral influence and loudly
applauded his sentiments. Surely this was a yet greater com-
pliment to Mr. Gokhale, — the greatest he could receive. And
if we suppose, with the Bombay Judge, that the condemnation
of his countrymen is an honour for which the erstwhile popular
leader eagerly pants, surely the support and loud applause of the
two highest police officials in the land, — and one of them his
old friend, Mr. Vincent, of whom he must have pleasant mem-
ories connected with his famous apology to the British army,
— must have been yet dearer to the statesman’s heart. Only
three things are noteworthy in the speech itself. Mr. Gokhale
fervently declares that it is not only the duty of every Indian to
shun religiously all aspirations towards independence, but also
to rush to the defence of the Government when it is attacked.
This explains Mr. Gokhale’s recent speeches. It is a pity that
he awoke to the sense of his duty so late; otherwise, not being
overburdened by a sense of consistency he might have rushed
to the help of the Government against himself when he was
loudly advocating political Boycott and even outdistancing the
most extreme Nationalist by suggesting the refusal of payment
of taxes. The second thing we note, is the remarkable statement
that, even if we try to use peaceful methods, the Government
will not long allow them to retain their peaceful character. This
can mean only that the Government will deliberately force the
advocates of Indian freedom to use violent means by persecuting
the use of lawful and peaceful methods. We had recently to
dissent from a much more limited suggestion by Sj. Bipin Pal,
but an aspersion of this kind from Mr. Gokhale, not on officials
but on the Government whom he is supporting so thoroughly
in their policy, is amazing. Truly, Mr. Gokhale hardly seems to
know what discretion means. In the same way he tried to teach
the young men of India, among whom he admits that the gospel
of independence has gained immense ground, that violence was
the only road to the realisation of their cherished ideal. Finally,
we find Mr. Gokhale appealing to the people of this country to
give up their ideals from personal self-interest and the danger
of harassment and martyrdom which attends the profession and
pursuit of the new politics. Truly has a mighty teacher arisen in
India! We could have passed by an argument based on the doubt whether our course was right and helpful to the country, but this sordid appeal to the lowest motives in humanity, selfishness and cowardice, makes one’s gorge rise. And this is the man who claims, we hear, to have preceded the Nationalists as a prophet of self-sacrifice and the cult of the motherland. Well may we echo the cry of the Israelite malcontents, “These be thy gods, O Israel!”

The People’s Proclamation

In our last issue we commented on the importance and significance of the People’s Proclamation as part of the celebration of the 16th October. It is a curious irony of Fate that, immediately afterwards, it should have been deliberately decided by our leaders to drop the Proclamation from the proceedings. We do not know in what particular quarter of that quaking morass of fears and apprehensions which is called the mind of our leaders, or in answer to what particular touch the tremor arose which has manifested itself in this amazing excision. The mutilated copy of last year’s circular which is disgraced by this act of inexplicable backsliding and timidity, comes out under the signatures of Sjts. Surendranath Banerji, Motilal Ghose and Rai Jotindranath Chaudhuri. We are certainly astonished to find Moti Babu’s name under such a document and we can only assume that it was inserted without getting his consent or that consent was asked and given by telegraph from Deoghar without his being informed of the omission. Originally, there was another honoured name in that place, but the gentleman who bore it declined to sign unless the omission was rectified, and Moti Babu’s name seems to have been thrust in at the last moment in order to fill up the gap,—a proceeding not very complimentary to one of the first living names in Bengal. Nor do we quite understand how Rai Jotindranath Chaudhuri induced himself to be a consenting party to the omission, if indeed he knew of it. Be that as it may, the Nationalist leaders will do their duty in opposing this act of culpable weakness. But we are curious to
know how the people will take it. Their attitude will be some sign of the present altitude of the political thermometer. The tone and temper of the movement showed a distinct rise till the Hughly Conference, subsequently it seems to have been sinking. And no wonder, with such leadership. Even a nation of strong men led by the weak, blind or selfish, becomes easily infected with the vices of its leaders, and the strength of Bengal though immensely increased, is not yet the perfect and tempered steel that it must become, hard as adamant and light in the lifting.

The Anushilan Samiti

The proclamation of the Anushilan Samiti in Calcutta is one of the most autocratic and unjustifiable acts that the bureaucracy have yet committed. The Calcutta Samiti has distinguished itself, since the beginning of its career, by the rigidity with which it has enforced its rule of not mixing as an association with current politics and confining itself to such activities as were not only unobjectionable, but of such a nature that even the most autocratic Government, provided it had the least sympathy with the moral and physical improvement of its subjects, must wholly approve. Its original and main motive has been the improvement of the physique in the race, and there has been no instance in which the Samiti has gone beyond its function as a physical training institution or tried to use the improved physique for any combined purpose. Beyond this the main activities have been turned to the help of the Police and the public on such occasions as the Ardhoday Yog, to the organisation of famine relief, in which the Samiti has done splendid work, and recently to other action recommended by the Government itself. We believe it has even to a certain extent enjoyed the approbation of high European officials. It is indeed an ironical comment on the demand for co-operation that the only great association born of the new movement which has shown any anxiety to depart from a line of strict independent activity and co-operate with the Government, should have been selected, at this time of peace and quiet, for proclamation on the extraordinary ground
that it interferes in some undefined and mysterious way with the administration of the law. Advocates of co-operation, take note. Meanwhile what can the man in the street conclude except that the Government is determined to allow no organisation to exist among the Bengalis which has the least trace in it of self-help, training and patriotic effort? For no explanation is vouchsafed of this arbitrary act. In an august and awful silence the gods of Belvedere hurl their omnipotent paper thunderbolts, careless of what mere men may think, confident in their self-arrogated attributes of omnipotence, omniscience and omni-benevolence, a divine, irresistible and irresponsible mystery.

The National Fund

We have received a letter from Mr. A. C. Sen of Delhi in which he recommends that the National Fund should be utilised for a Swadeshi Museum. The necessity of such an institution has been engaging our attention for some time, and no one can dispute the immense advantages that will accrue from it; but the institution, if properly conceived and managed, needs only a small initial fund for its support in the first stages of its existence and will soon become self-supporting. It is quite unnecessary to divert to it a large sum like the National Fund. Meanwhile, if we allow divided counsels to obtain as to the disposal of the fund, the only result will be that it will remain where it is, useless and unused. We note that the opposition to the proposal unanimously passed at Hughly emanates from a few individuals whose justification for professing to speak in the name of the subscribers is not yet clear,—the Anglo-Indian papers who are interested in preventing the erection of the hall, and, among Indian papers, the Hindu Patriot, the Indian Mirror, and the Indian Nation, all of them papers of a very limited circulation and opposed to the national movement in its most vital features. We are not aware that any organ of the popular party, Moderate or Nationalist, has opposed the sense of the country as formulated in Sj. Surendranath Banerji’s resolution at Hughly.
Union Day

The 16th of October is generally known as the Partition Day, and it is inevitable that, so long as the administrative division stands, this feature should be emphasised. Especially now that the Reforms threaten to make the division in our administrative lives permanent and real, a mournful significance attaches to the celebration this year. It is possible that, before the day comes round again, the fatal complaisance and weakness of leaders and people may have effected the division between East and West Bengal which the hand of Lord Curzon attempted in vain. The Reform drives in the thin end of the wedge, the rulers know how to trust to time and national cowardice and inertia to do the rest. But if we can overcome the temptation as we overcame the intimidation, the 16th of October will take its place among the national festivals of the future under the name of Union Day.

The unity of Bengal was almost complete when Lord Curzon struck his blow; but there were defects, little fissures which might under untoward circumstances develop into great and increasing cracks. Lord Curzon’s blow devised in a spirit of Machiavellian statesmanship, but delivered in a fit of unstatesmanlike haste and fury, instead of splitting asunder, soldered Bengali unity into a perfect whole. Bengal one and indivisible came into existence on the 16th of October. The indivisibility has yet to be confirmed by withstanding the covert and subtle pressure of the reformed Councils, but, even if for a moment there is backsliding, the young hold the future and in their hearts Bengal is one and indivisible.

The unity of India has been slowly prepared by the pressure from above and the creation of a reaction from below. It is only by that reaction giving birth to a self-conscious democracy aspirant towards oneness and freedom and reliant on its own
manhood, that the dream of a United India can be materialised. The publication of the People’s Proclamation on the 16th was the first self-conscious utterance of such a democracy, as yet imperfect and inchoate but aware of its separate existence and conscious of its potential strength. That democracy is now alive in Bengal and Maharashtra, it is struggling to get existence in Punjab and Madras and, to a slighter extent, in the other provinces. When it is fully awake all over India, the unity of the whole country will be within sight. On the 16th of October, in the People’s Proclamation, the first condition of a United India was created.

There is yet another unity which is as yet only dimly symbolised in the ceremony of the Rakhi, a unity which cannot come into being until a perfect comradeship in aspiration, in struggle, in suffering shall have been created throughout the length and breadth of the land, — the unity in national comradeship of the children of one mighty Mother, whatever their class or condition, — Indian fraternity based on Indian liberty and Indian equality.

Mahomedan Representation

The question of separate representation for the Mahomedan community is one of those momentous issues raised in haste by a statesman unable to appreciate the forces with which he is dealing, which bear fruit no man expected and least of all the ill-advised Frankenstein who was first responsible for its creation. The common belief among Hindus is that the Government have decided to depress the Hindu element in the Indian people by raising the Mahomedan element, and ensure a perpetual preponderance in their own favour by leaning on a Mahomedan vote purchased by a system of preference. The denials of high-placed officials, who declare that it is only out of a careful consideration for the rights and interests of minorities that they have made special Mahomedan representation an essential feature of the Reform Scheme, have not convinced a single Hindu mind; for the obvious retort is that it is only one minority which is specially cared for and this special care is extended to it even in provinces where it is in a large majority. No provision at all has been made for the safeguarding of Hindu minorities, for the Parsis, the Sikhs, the Christians and other sections which may reasonably declare that they too are Indians and citizens of the Empire no less than the Mahomedans. The workings of
this belief in the mind of the premier community in India cannot at present be gauged. It is not till the details of the Reform Scheme are published, the elections over, the councils working and the preponderance of the pro-government vote visible, that those workings can assume a definite shape. At present irritation, heart-burning, a sullen gloom and a growing resolve to assert and organise their separate existence and work for their own hand are the first results of the separatist policy. How far Sir Pherozshah and his valiant band will be able to fight this growing discontent, remains to be seen. It is quite possible that the pro-Mahomedanism of the Reform Scheme may lead to a Hindu upheaval all over India, as fervent and momentous as the convulsion in Bengal, Madras and Maharashtra which followed Lord Curzon's Partition blunder. How far it will advantage the Mahomedans to be in active opposition to an irritated and revolted Hindu community throughout the country they live in, is a question for Mahomedans to consider. A certain section with Syed Hyder Reza at their head, have considered it and are against the separate representation altogether. Another section represented by Mr. Ali Imam are for a compromise between the full Moslem demand for separate electorates and the Hindu demand for equal treatment of all communities. Unfortunately, this compromise is merely the Government scheme which Hindu sentiment has almost unanimously condemned as unfair and partial. The only section of Hindus in its favour is the dwindling minority which follows the great Twin Brethren of Bombay; and the support given by Mr. Gokhale and Sir Pherozshah to the separate representation idea is likely to cost them their influence with the moderate Hindu community everywhere outside the narrow radius of their personal influence. A third section rejoicing in the leadership of Mr. Amir Ali, are the irreconcilables of militant Islam aspiring to hold India under the British aegis as heirs of the Mogul and keepers of the gateway of India. The Reform Scheme is the second act of insanity which has germinated from the unsound policy of the bureaucracy. It will cast all India into the melting pot and complete the work of the Partition. Our own attitude is clear. We will have no part or lot in reforms which
give no popular majority, no substantive control, no opportunity for Indian capacity and statesmanship, no seed of democratic expansion. We will not for a moment accept separate electorates or separate representation, not because we are opposed to a large Mahomedan influence in popular assemblies when they come, but because we will be no party to a distinction which recognises Hindu and Mahomedan as permanently separate political units and thus precludes the growth of a single and indivisible Indian nation. We oppose any such attempt at division whether it comes from an embarrassed Government seeking for political support or from an embittered Hindu community allowing the passions of the moment to obscure their vision of the future.

The Growth of Turkey

The article on young Turkey and its military strength, extracted in our columns this week from the *Indian Daily News*, is one of great interest. Behind the deprecation of Turkish Chauvinism and Militarism we hear the first note of European alarm at the rise of a second Asiatic Power able to strike as well as to defend its honour and integrity against European aggression. The fact that it is the army in Turkey which stands for free institutions, is the greatest guarantee that could be given of the permanence of the new Turkey, for it assures a time of internal quiet while the country goes through the delicate and dangerous process of readjusting its whole machinery and ways of public thought and action from the habits of an irresponsible autocratic administration to those which suit free institutions and democratic ideas. No doubt, the support of the army veils a Dictatorship. But that is an inevitable stage in a great and sudden transition of this kind, and suits Asiatic countries, however perilous it may have been in other times to European countries when men could not be trusted not to misuse power for their own purposes to the detriment of their country. In Europe the present high standard of public spirit, duty and honour was the slow creation of free institutions. To Asiatics, not yet corrupted, as many of us in India have been, by the worst part of European individualism and an
unnatural education divorced from morality and patriotism, a high standard of public spirit, duty and honour comes with the first awakenings of a freer life; for the Asiatic discipline has always been largely one of self-effacement, the subordination of the individual to a community and the scrupulous adhesion to principle at the cost of personal predilection and happiness. As in Turkey now, so in Japan, it was a few strong men who, winning control of the country by the strength of great ideas backed by the sword, right supported by might, held the land safe and quiet while they revolutionised the ideas and institutions of the whole nation, forged a strength by sea and land no enemy could despise and secured from the gratitude of their race for their wisdom, selflessness and high nobility of purpose that implicit following which at first they compelled by force. The complaint that the young Turks ignore the necessity of civil reorganisation, commerce and education is a complaint without wisdom, if not without knowledge. The circumstances of Turkey demand that the first attention of her statesmen should be given to military and naval efficiency. The Revolution plucked her from the verge of an abyss of disintegration. The desperate diplomacy and cunning of Sultan Abdul Hamid had stayed her long on that verge, but she was beginning to slip slowly over when the stronger hand of Mahmud Shevket Pasha seized her and drew her back. Even so, the deposition of the cunning and skilful diplomatist of Yildiz Palace might have been the signal for a general spoliation of Turkey. Austria began a rush for the Balkans, Greece tried to hurry a crisis in Crete. The shaking of the Turkish sword in the face of the Greek and the rapid and efficient reorganisation of army and navy against Europe were both vitally necessary to the safety of the Empire. They were the calculated steps not of Chauvinism but of a defensive statesmanship.

China Enters

The circle of constitutionally governed Asiatic countries increases. To Turkey, Persia and Japan, China is added. Towards the close of the ten years set apart in the Chinese programme
Facts and Opinions

for the preparation of self-government, the Chinese Government has kept its promise to grant a constitution. Provincial Assemblies have been established, are working and have shown their reality and independence by opposing Government demands. The electoral basis of an Imperial Assembly has been provided. There cannot be the slightest doubt that the steady, resolute, methodical Chinese, with their unrivalled genius for organisation, will make a success of the constitutional experiment. In all Asia now, with the exception of Siam and Afghanistan, the only countries which are denied a constitutional Government are those which have not vindicated their national freedom. Even in Afghanistan the first ineffective stirrings of life have been seen and will grow to something formidable before many years are over. We wonder whether Lord Morley and his advisers really believe that when they are surrounded by a free and democratic Asia, the great Indian race can be kept in a state of tutelage and snail-paced advancement, much less put off to a future age in the dim mists of a millennial futurity to which the penetrating vision of the noble and Radical Lord cannot pierce. The worst opponents of Indian freedom know well what this Asiatic constitutionalism means, and therefore the Englishman struggles, in the face of continual disappointment, to foresee the speedy collapse of Nationalism and Parliamentary Government in Persia, Turkey and even Japan as the inevitable fate of an institution foreign to the Asiatic genius, which is popularly supposed to recoil from freedom and hug most lovingly the heaviest chains.

The Patiala Arrests

For some time past the Native States of Rajputana and Punjab have been vying with each other in promulgations and legislations of a drastic character against sedition and conspiracy. The object of these edicts seems to be to stifle all agitation or semblance of any political thought and activity that may be directed against the existing state of things not
in the States themselves but in British India. Otherwise, it is impossible to account for the Draconian severity of the language and substance of these ukases or the foolish thoroughness of some of the measures adopted, such as the prohibition of entry even to colourless papers like the Bengalee. The exponents of Anglo-Indian opinion point triumphantly to these measures both as a proof of aristocratic loyalty to British officialdom and as an index of the severity with which the agitation would be visited if, instead of the misplaced leniency of British bureaucrats, we were exposed to the ruthlessness of an indigenous government. As every Indian knows, these self-gratulations are insincere and meaningless. The majority of Native States are wholly under the thumb of the Resident and, with the exception of one or two independent princes, like the Gaekwar, neither Maharaja nor Council of Administration can call their souls their own. On all this comes the commotion in Patiala. The Patiala conspiracy has yet to be proved to be more real than the Midnapur specimen. But, if all is true that is being asserted in the Punjab press as to the refusal of the most ordinary privileges of defence to the numerous accused and the amazing and successful defiance of High Court orders by Mr. Warburton, the police are not going the best way to convince the public opinion on this point. The facts stated amount to a gross and shameless denial of justice. We do not blame the young Maharaja for his inability to interfere in favour of the oppressed victims of police rule. We know how helpless the princes are in the face of an Anglo-Indian Resident or employee and we wholly discredit the newspaper assertion that these strange proceedings were initiated or are willingly countenanced by him. It was first asserted that—as usual!—the police had full evidence and information in their hands. The present delay and sufferings entailed prove sufficiently that they had nothing of the kind—again, as usual. The arrested Arya Samajists may be innocent or guilty, but the procedure used against them would be tolerated in no country where law and equity were supreme.
The Daulatpur Dacoity

The extraordinary story from Daulatpur of a dacoity by young men of good family, sons of Government servants, is the strangest that has yet been handled by the detective ability of a very active police — more active, if not successful, we are afraid, in cases of this kind than those in which the dacoits are of a less interesting character. The details as first published read more like a somewhat gruesome comic opera, than anything else. Dacoits who wear gold watches and gold spectacles on their hazardous expeditions, dacoits who talk English so as to give a clue to their identity, dacoits who turn up at a railway station wearing gold watches, barefooted and stained with mud, dacoits who carry in their pockets bloodcurdling oaths neatly written out for the police to read in case they are caught, are creatures of so novel and eccentric a character that they must have either come out of a farcical opera or escaped from the nearest lunatic asylum. The later accounts modify some of the more startling features of the first, but until the story for the prosecution is laid before the Courts, thoroughly known and thoroughly tested, sensational headlines and graphic details are apt to mislead.

Place and Patriotism

The elevation of Mr. Krishnaswamy Aiyar to the Bench some short time ago was the occasion for some comments from the Moderate Press highly eulogistic of the man and the choice. Mr. Aiyar was a successful lawyer and a capable man and we have no doubt his elevation was justified. But the curious habit of ultra-Moderate politicians gravitating to the Bench is a survival of those idyllic times when a judgeship or a seat in the Legislative Council was the natural goal of the political leader who rose by opposing the Government. This harmony between place and patriotism, opposition and preferment was natural to those times for whose return the lovers of the peaceful past sigh in vain. Mr. Krishnaswamy Aiyar belonged to the old school
and his final consummation is natural and laudable. But our object in writing is not so much to praise Mr. Aiyar as to suggest to the Government that, if they would similarly promote Sir Pherozshah Mehta, they would be rewarding a loyal champion and at the same time conferring a boon on the country. Farther, if only done in time, it might save the Convention from going to pieces.

The Dying Race

Dr. U. N. Mukherji recently published a very interesting brochure in which he tried to prove that the Hindus were a dying race and would do well to imitate the social freedom and equality of the still increasing Mahomedans. Srijut Kishorilal Sarcar has gone one better and proves to us by equally cogent statistics that not only the Hindus but the Mahomedans are a dying race,—even if the Hindus be in some places a little more rapid in the race for extinction than the followers of Islam. With all respect to the earnestness of these two gentlemen we think it would have been well if they had been less strenuous in their discouraging interpretations and chosen a less positive title. The real truth is that, owing to an immense transition being effected under peculiarly unfavourable conditions, both communities, but chiefly the more progressive Hindu, are in a critical stage in which various deep-seated maladies have come to the surface, with effects of an inevitable though lamentable character. None of these maladies is mortal and the race is not dying. But the knife of the surgeon is needed and it is to the remedy rather than the diagnosis that attention should be pointedly directed. The mere decline in the rate of increase is in itself nothing. It is a phenomenon which one now sees becoming more and more marked all the world over and it is only countries backward in development and education which keep up the old rate of increase. The unfit tend to multiply, the fit to be limited in propagation. This is an abnormal state of things which indicates something wrong in modern civilisation. But, whatever the malady is, it is not peculiar to Hindus or to India, but a worldwide disease.
The Death of Señor Ferrer

The extraordinary commotion in Europe over the execution of the enthusiast and idealist Ferrer, — a judicial murder committed by Court Martial, — has revealed a force in Europe with which statesmen and Governments will have very soon to deal on pain of extinction. We have no sympathy with the philosophy or practice of Anarchism, holding, as we do, that the Anarchist philosophy is some millenniums ahead of the present possible evolution of humanity and the Anarchist practice some millenniums behind. But Señor Francisco Ferrer was no mere Anarchist. He was a man of high enthusiasms and ideas, engaged, at great sacrifice and, as it turns out, risk to himself, in freeing the Spanish mind by education from the fetters of that bigoted Clericalism which has been the ruin of Spain. For a man of this kind — a man of eminent culture and unstained character, the friend and fellow worker of distinguished men all over the occidental world, — to be shot without any reputable evidence by a military tribunal regardless of universal protest, was an outrage on civilisation and an insult to European culture. Such an incident, however, might have happened formerly with no result but a few indignant articles in the Continental Liberal Press. This time it has awakened a demonstration all over the Western world which is, we think, unprecedented in history. The solidarity and deep feeling in that demonstration means that the huge inert Leviathan, on whose patient back the aristocratic and middle class of Europe have built the structure of their polity and society, is about to move. When he really uplifts his giant bulk, what will become of the structure? Will it not tumble into pieces off his back and be swallowed up in the waters of a worldwide revolution?

The Budget

It is curious that England which was, a little while ago, the most conservative and individualistic of nations, the least forward in the race towards socialism, should now be the foremost. The socialistic Radical, the forerunner of insurgent Leviathan, is in

www.holybooks.com
the Cabinet and has framed a Budget. The Budget is the pivot on which English progress has turned from the beginning. The power of the purse in the hands of the Commons has been the chief lever for the gradual erection of a limited democracy. The same power is now being used for the gradual introduction of a modified socialism, and, by a curious provision of Fate, seems destined to be also the occasion for the final destruction of one at least of the two remaining restrictions on democracy, the veto of the Lords and the limitation of the suffrage. The Lords were bound to oppose the Budget, for the triumph of socialism means the destruction of the aristocracy. The Lords, therefore, have either to fight or to fall; and the pathos of their situation is that, in all probability, the choice is not theirs and that, whether they fight or not, they cannot but fall. The Lords have only continued to exist because they were discreet enough to lie low and give a minimum of trouble. As for the limitation of the suffrage, it is not at all unlikely that the daring and unscrupulous campaign of the suffragettes may end in the concession of universal suffrage. For, if women are given the vote, the proletariat will not be content to remain without it. They too can lift crowbars and hammers and break glass roofs!

A Great Opportunity

The end of the great struggle between the last representative of European autocracy and the insurgent Demos, is not yet. At present the Czar holds the winning cards. The mismanagement of the Revolution by a people unaccustomed to political action has put advantages into his hands to which he has no right. But it is significant that the revolution still smoulders. As Carlyle wrote of the French Revolution, it is unquenchable and cannot be stamped down, for the fire-spouts that burst out are no slight surface conflagration but the flames of the pit of Tophet. Murder and hatred rising from below to strike at murder and tyranny striking from above, that is the Russian Revolution. Had another man than a Romanoff, the race obstinate and unteachable, sat on the throne at St. Petersburg, the victory of the autocracy after
such imminent and deadly peril would have been surely used to prevent, by healing measures and perfectly spontaneous concessions, a repetition of the sanguinary struggle. It is probably the last opportunity Fate will concede to the Czar Nicholas and it is a great opportunity. But he will not take it and in the shadow forces are again gathering which are likely in the end to destroy him. The Czarina is sleepless in deadly anxiety for the safety of her child; the Czar, leaving her behind, enters Italy and is guarded by an army. In Russia the Ministry balances itself on the top of a frail edifice crowning the volcano that still sputters below. One wonders why they should think it worth their while to bolster up sanguinary injustice for a season at so huge a cost.

Buddha’s Ashes

Again the powers that be have committed a blunder. If any of the wise men who weave the tangled web of Anglo-Indian statesmanship at Simla, had a little common sense to salt their superior wisdom, they would never have allowed the strong feeling against the removal of Buddha’s ashes to vent itself so long in public expression without an assurance at least of favourable consideration. We have waited long for that simple and natural act of statesmanship, but in vain. It is such a trivial matter in itself, concession would be so graceful, natural and easy; yet the harm done by perverseness and churlishness is so immense! We wonder whether our official Governors ever think. It is very easy. What would they feel if the bones of a great Englishman, say, the Duke of Wellington, were so treated! But the diseased attachment to prestige and the reputation of an assured wisdom and an inflexible power have sealed up the eyes of those in high places.

Students and Politics

All India and especially Bengal owes a debt of gratitude to Mr. Hasan Imam for his strong, manly and sensible remarks on the vexed question of students and politics as President of the Beharee Students Conference at Gaya. Contrast this honest
utterance and robust recognition of unalterable facts with the fencings, refinements and unreal distinctions of Mr. Gokhale's utterance. The difference is between a man with an eye and a clear practical sense and a mere intellectual, a man of books and words and borrowed thoughts, proud of his gift of speech and subtlety of logic, but unable to penetrate a fact even when he sees it. With Mr. Hasan Imam a strong personal force enters the field of politics.
A GREAT man has fallen, perhaps the greatest force in the field of political action that the nineteenth century produced, the maker of Japan, the conqueror of Russia, the mighty one who first asserted Asia’s superiority over Europe in Europe’s own field of glory and changed in a few years the world’s future. Some would say that such a death for such a man was a tragedy. We hold otherwise. Even such a death should such a man have died, in harness, fighting for his country’s expansion and greatness, by the swift death in action which, our scriptures tell us, carry the hero’s soul straight to the felicity of heaven. The man who in his youth lived in imminent deadly peril from the swords of his countrymen because he dared to move forward by new paths to his God-given task, dies in his old age by a foreign hand because, at the expense of justice and a nation’s freedom, he still moved forward in the path of his duty. It is a difficult choice that is given to men of action in a world where love, strength and justice are not yet harmonised, and he who chooses in sincerity and acts thoroughly, whether he has chosen well or ill, gathers punya for himself in this world and the next. Then he was building a nation and he lived to do his work, for his death would not have profited. He was building an Empire when he died and by his death that Empire will be established. The soul of a great man, fulfilled in development but cut off in the midst of his work, enters into his following or his nation and works on a far wider scale than was possible to him in the body. Korea will gain nothing by this rash and untimely act, the greatest error in tactics it could have committed. The Japanese is the last man on earth to be deterred from his ambition or his duty by the fear of death, and the only result of this blow will be to harden Japan to her task. She has science, organisation, efficiency, ruthlessness, and
she will grind the soul out of Korea until it is indistinguishable from Japan. That is the only way to perpetuate a conquest, to kill the soul of the subject nation, and the Japanese know it. A subject nation struggling for freedom must always attract Indian sympathy, but the Koreans have not the strength of soul to attain freedom. Instead of seeking the force to rise in their own manhood, they have always committed the unpardonable sin against Asiatic integrity of striving to call in a European power against a brother Asiatic. The Koreans have right on their side, but do not know how to awaken might to vindicate the right. The Japanese cause is wrong from the standpoint of a higher morality than the merely patriotic, but they believe intensely in their religion of patriotic duty and put all their might into its observance. It is not difficult to predict with which side the victory will lie.

Prince Hirobumi Ito was the typical man of his nation, as well as its greatest statesman and leader. He went ahead of it for a while only to raise it to his level. He had all its virtues in overflowing measure and a full share of its defects and vices. Absolutely selfless in public affairs, quiet, unassuming, keeping himself in the background unless duty called him into prominence, calm, self-controlled, patient, swift, energetic, methodical, incapable of fear, wholly devoted to the nation — such is the Japanese, and such was Ito. As a private man he had the Japanese defects. Even in public affairs, he had something of the narrowness, unscrupulousness in method and preference of success to justice of the insular and imperial Japanese type. Added to these common characteristics of his people he had a genius equal to that of any statesman in history. The eye that read the hearts of men, the mouth sealed to rigid secrecy, the rare, calm and effective speech, the brain that could embrace a civilisation at a glance and take all that was needed for his purpose, the swift and yet careful intellect that could divine, choose and arrange, the power of study, the genius of invention, the talent of application, a diplomacy open-minded but never vacillating, a tireless capacity for work, — all these he had on so grand a scale that to change the world's history was to him
a by-no-means stupendous labour. And he had the ancient Asiatic gift of self-effacement. In Europe a genius of such colossal proportions would have filled the world with the mighty bruit of his personality; but Ito worked in silence and in the shade, covering his steps, and it was only by the results of his work that the world knew him. Like many modern Japanese, Ito was a sceptic. His country was the God of his worship to whom he dedicated his life, for whom he lived and in whose service he died. Such was this great Vibhuti, who came down to earth in a petty family, an Eastern island clan, a nation apart and far behind in the world’s progress, and in forty years created a nation’s greatness, founded an Empire, changed a civilisation and prepared the liberation of a continent. His death was worthy of his life. For there are only two deaths which are really great and carry a soul to the highest heaven, to die in self-forgetting action, in battle, by assassination, on the scaffold for others, for one’s country or for the right, and to die as the Yogin dies, by his own will, free of death and disease, departing into that from which he came. To Ito, the sceptic, the patriot, the divine worker, the death of the selfless hero was given.
The Hindu Sabha

A

N INDICATION of the immense changes which are coming over our country, is the sudden leaping into being of new movements and organisations which are, by their very existence, evidence of revolutions in public feeling and omens of the future. The dead bones live indeed and the long sleep of the ages is broken. The Moslem League was indicative of much, the Hindu Sabha is indicative of yet more. The Nationalist party, while in entire disagreement with the immediate objects and spirit of the League, welcomed its birth as a sign of renovated political life in the Mahomedan community. But the Mahomedan community was always coherent, united and separately self-conscious. The strength of Islam lay in its unity and cohesion, the fruit of a long discipline in equality and brotherhood, the strength of the Hindu in flexibility, progressive-ness, elasticity, a divination of necessary changes, broad ideas, growing aspirations, the fruit of a long discipline in intellectual and moral sensitiveness. The Moslem League meant that the Mahomedan was awakening to the need of change, the growth of aspiration in the world around him,—not yet to the broad ideas modern life demanded. The Hindu Sabha means that the Hindu is awakening to the need of unity and cohesion.

Does it mean more? Does it indicate a larger statesmanship, quicker impulse to action, a greater capacity for the unity and cohesion it seeks? Is the Hindu Sabha a novel body, with the power in it to effect a great object never before accomplished, the effective union of all shades of Hindu opinion from the lax Anglicised Agnostic, Hindu in nothing but birth and blood, to the intense and narrow worshipper of the institutes of Raghunandan? Or is it merely an ineffectual aspiration, like the old Congress, capable of creating a general sympathy and oneness of aim, but not of practical purpose and effective organisation? There are only two
things strong enough to unite Hinduism, a new spiritual impulse based on Vedanta, the essential oneness of man, the transience and utilitarian character of institutions, the lofty ideals of brotherhood, freedom, equality, and a recognition of the great mission and mighty future of the Hindu spiritual ideas and discipline and of the Indian race,— or else a political impulse strong enough to unite Hindus together for the preservation and advancement of their community. The Hindu Sabha could not have come into being but for the great national movement which awakened the national spirit, the sense of past greatness, the divination of a mighty future, transforming the whole spirit and character of the educated community. But we fear that in its immediate inception and work it leans for its hope of success on a lower and less powerful motive — rivalry with Mahomedan pretensions and a desire to put the mass and force of a united Hinduism against the intensity of a Mahomedan self-assertion supported by official patronage and Anglo-Indian favour. Alarm and resentment at the pro-Mahomedan policy underlying the Reform Scheme and dissatisfaction with the Bombay conventionists for their suicidal support of the Government policy entered largely into the universal support given by Punjab Hindus to the new body and its great initial success. Mortification at the success of Mahomedans in securing Anglo-Indian sympathy and favour and the exclusion of Hindus from those blissful privileges figured largely in the speech of Sir Pratul Chandra Chatterji who was hailed as the natural leader of Punjab Hinduism. These are not good omens. It is not by rivalry for Anglo-Indian favour, it is not by quarrelling for the loaves and fishes of British administration that Hinduism can rise into a united and effective force. If the Hindu Sabha takes its anchor on these petty aspirations or if it founds any part of its strength on political emulation with the Mahomedans, it will be impossible for the Nationalist party to join in a movement which would otherwise have their full sympathy and eager support.

Lala Lajpat Rai struck a higher note, that of Hindu nationalism as a necessary preliminary to a greater Indian Nationality. We distrust this ideal. Not that we are blind to facts, — not that
we do not recognise Hindu-Mahomedan rivalry as a legacy of the past enhanced and not diminished by British ascendency, a thing that has to be faced and worked out either by mutual concession or by a struggle between nationalism and separatism. But we do not understand Hindu nationalism as a possibility under modern conditions. Hindu nationalism had a meaning in the times of Shivaji and Ramdas, when the object of national revival was to overthrow a Mahomedan domination which, once tending to Indian unity and toleration, had become oppressive and disruptive. It was possible because India was then a world to itself and the existence of two geographical units entirely Hindu, Maharashtra and Rajputana, provided it with a basis. It was necessary because the misuse of their domination by the Mahomedan element was fatal to India’s future and had to be punished and corrected by the resurgence and domination of the Hindu. And because it was possible and necessary, it came into being. But under modern conditions India can only exist as a whole. A nation depends for its existence on geographical separateness and geographical compactness, on having a distinct and separate country. The existence of this geographical separateness is sure in the end to bear down all differences of race, language, religion, history. It has done so in Great Britain, in Switzerland, in Germany. It will do so in India. But geographical compactness is also necessary. In other words, the desh or country must be so compact that mutual communication and the organisation of a central government becomes easy or, at least, not prohibitively difficult. The absence of such compactness is the reason why great Empires are sure in the end to fall to pieces; they cannot get the support of that immortal and indestructible national self which can alone ensure permanence. This difficulty stands in the way of British Imperial Federation and is so great that any temporary success of that specious aspiration will surely result in the speedy disruption of the Empire. In addition, there must be a uniting force strong enough to take advantage of the geographical compactness and separateness, — either a wise and skilfully organised government with a persistent tradition of beneficence, impartiality and oneness with the nation, or else a living national
The secret of Roman success was in the organisation of such a government; even so, it failed, for want of geographical compactness, to create a world-wide Roman nationality. The failure of the British rule to root itself lies in its inability to become one with the nation either by the effacement of our national individuality or by the renunciation of its own separate pride and self-interest. These things are therefore necessary to Indian nationality, geographical separateness, geographical compactness and a living national spirit. The first was always ours and made India a people apart from the earliest times. The second we have attained by British rule. The third has just sprung into existence.

But the country, the \textit{swadesh}, which must be the base and fundament of our nationality, is India, a country where Mahomedan and Hindu live intermingled and side by side. What geographical base can a Hindu nationality possess? Maharashtra and Rajasthan are no longer separate geographical units but merely provincial divisions of a single country. The very first requisite of a Hindu nationalism is wanting. The Mahomedans base their separateness and their refusal to regard themselves as Indians first and Mahomedans afterwards on the existence of great Mahomedan nations to which they feel themselves more akin, in spite of our common birth and blood, than to us. Hindus have no such resource. For good or evil, they are bound to the soil and to the soil alone. They cannot deny their Mother, neither can they mutilate her. Our ideal therefore is an Indian Nationalism, largely Hindu in its spirit and traditions, because the Hindu made the land and the people and persists, by the greatness of his past, his civilisation and his culture and his invincible virility, in holding it, but wide enough also to include the Moslem and his culture and traditions and absorb them into itself. It is possible that the Mahomedan may not recognise the inevitable future and may prefer to throw himself into the opposite scale. If so, the Hindu, with what little Mahomedan help he may get, must win Swaraj both for himself and the Mahomedan in spite of that resistance. There is a sufficient force and manhood in us to do
a greater and more difficult task than that, but we lack unity, brotherhood, intensity of single action among ourselves. It is to the creation of that unity, brotherhood and intensity that the Hindu Sabha should direct its whole efforts. Otherwise we must reject it as a disruptive and not a creative agency.

Invitation (poem)
Facts and Opinions

House Searches

One wonders what would happen in any European country if the police as a recompense for their utter inefficiency and detective incapacity were armed with the power, and allowed to use it freely, of raiding the houses of respectable citizens, ransacking the property of absent occupants and leaving it unsafe and unprotected, carrying off the business books of Presses, newspapers and other commercial concerns, the private letters of individuals, books publicly sold and procurable in every bookshop, violating the sanctity of correspondence between wife and husband, searching the persons of ladies of the house even though it be by female hands, and trampling on the sanctity of the home, the dignity of the person and the self-respect which every race worthy of existence holds to be dearer than life itself. And all this in spite of the fact, exemplified a hundred times over, that these inquisitions are wholly infructuous and can serve no purpose but harassment and exasperation. Usually the searches are undertaken, if we do not err, on the vague information of disreputable hirelings used as spies and informers, the statements of lying approvers eager to save their own skins by jeopardising innocent men, and confessions to the police of arrested prisoners made either for the same purpose
or dictated by a morbid vanity and light-headed braggadocio which invents facts and details in order to give dignity to petty crime and magnitude to small and foolish undertakings. The ludicrously irrelevant and useless nature of the articles which are usually the sole reward of this odious activity are its sufficient condemnation. Even if the widespread conspiracy dreamed of by the authorities were a fact, is it conceivable that respectable men, knowing the police to be on the alert, would risk liberty and property by storing bombs, looted ornaments or treasonous correspondence in their houses? We are aware that the right of house search is a necessary weapon in the hands of authority for the suppression of crime, but it was never meant that this should be misused in order to supply the place of detective ability in the Police. House searches are unwarrantable unless the information on which they proceed is precise, reliable and highly probable. Judging from results not one of these epithets can be applied to the numerous searches which are now becoming a standing feature of life in Bengal. And if the search of the persons of ladies is to become another common feature of these domiciliary visits, we fear that the patience of a people jealously sensitive on these matters will not long endure the strain. Surely, the higher authorities ought to have sufficient good sense to draw the inevitable conclusion from experience, perceive the limitations of this weapon and, if not for the possible evil consequence of creating still greater disaffection, yet for its barren inutility, renounce its excessive use.

Social Reform and Politics

There are two methods of progress, two impelling motives from which great changes and far-reaching reforms can be effected. One is the struggle of selfish interests between man and man, class and class, working out progress by ignoble strife, the forced compromise and convenient barter of the lower kind of politics. The other is the impulse and clash of mighty ideas, noble aspirations, great national or humanitarian aims, the things which
inspire mankind in its upward march and create empires and nations. Both are freely used by the Master of the world in His careful providence and various economy. Often they are intermingled. But it cannot be doubted which is most healthful to the individual, the nation and the race. The social result worked out by a bitter and selfish struggle between upper class and lower class, Labour and Capital, is one thing; the harmony created by a mighty enthusiasm, such as led the aristocracy of Japan to lay down their exclusive privileges and, without reserve, call upon the masses to come up and share their high culture, their seats of might and their ennobling traditions, is quite another. Hindu society in the mofussil is now bitterly divided, and tends more and more to be convulsed, by the new aspirations of the lower castes and the inability of the higher to decide how they will meet the demand. It is a bad sign that the action of both sides tends more and more to be selfish and narrow, political in the worst sense of the word. To barter help in Swadeshi or faithfulness to Hinduism for social privileges, or to bribe the masses to Swadeshism by petty and calculated concessions will tend neither to the genuineness of the Swadeshi sentiment, nor the strength of the national movement, nor the dignity and purity of our religion. It is an evil and foreign principle which has entered into our system, one of the many evil results of our disastrous contact with European civilisation at a time of national weakness and disintegration and our attempt to assimilate it without first vindicating our inner liberty and establishing ourselves as free agents. A great social revolution in this ancient society ought only to come as the fruit of a mighty national, humanitarian and religious impulse. The fault of the present state of things rests largely with the waning insight and statesmanship of the Brahmins. Formerly, they would not have been wanting either in concerted action, largeness of view or skilfulness of device. It was not their wont to stand still in an inert and impossible conservatism but to recognise circumstances and meet them without sacrificing the essence of their religion or the basic principles of Hindu society.
The Deoghar Sadhu

Recently some of the Bengali papers have contained detailed information of the feat of a Sadhu who buried himself for some days not, as in the well-known Punjab case, giving up his outward consciousness and entering into the jada samadhi or inert inner existence, but in full possession of his outer senses and conversing at times from his living tomb with visitors outside. The correspondent of the Bengalee tells us that the local people were dissatisfied with the Sadhu because the peculiar power he evinced was unattended by any moral elevation or true ascetic qualities. It is a general delusion that the power thus shown is a very great and almost supernatural siddhi and ought to be in the possession only of very highly developed souls. A false Indian tradition is partly responsible for the error; partly, it is due to the supreme ignorance of the deeper secrets of our being which belongs to the limited and self-satisfied materialistic Science of Europe now dominant in our midst. There is nothing wonderful in the feat of the Deoghar Sadhu, which was the result of the conquest of the breath, pranayam, achieved by certain physical and mental processes and not necessarily dependent on moral or spiritual progress. The kumbhak or retention of the prana, dispensing with the process of inbreathing and outbreathing, is the final achievement of the process and the kumbhak can, when thoroughly conquered, be continued for an indefinite period. Given the power of kumbhak, it is obvious that one can stay under water or earth or in a room hermetically sealed for as long as the state continues. The power of stopping the heartbeats, dispensing with the process of breathing, and other of the outworks of Yogic knowledge and achievement are being slowly established in order to break down the exclusive pride of European Science and prepare for a new order of knowledge and a greater science to which its dogmatic narrowness is bitterly and scornfully opposed.
The Great Election

It is not often that we care to dwell at length on the incidents of English politics in which, as a rule, India is not concerned nor affected by the results. A Brodrick to a Hamilton, a Morley to a Brodrick succeeds, and the sublime continuity of British policy, continuous in nothing else but this one determination to maintain absolutism in India, takes care that India shall have no reason to interest herself in Imperial affairs. The present crisis in England, however, is so momentous and its results so incalculable that it is impossible to say that India will not be affected by its gigantic issues. The importance of the election turns not upon the issues of the Budget, though these are of no small magnitude, but upon the great constitutional question of the House of Lords and its veto. The veto of the House of Lords is the drag on the Parliamentary locomotive. It is the one obstacle that stands between England and a peaceful revolution. It is true that this veto has been exercised very sparingly and only when the Liberals have introduced measures of a revolutionary character or containing clauses which meant a too rapid subversion of ancient landmarks and safeguards; but this is precisely the use in the British Constitution of the otherwise useless, ineffective and somnolent Upper House. It has used the veto if not with perfect wisdom, yet with a moderation and an eye to its own safety that betokened at least a perfect discretion. In spite of this reserve the obstruction offered by the Lords to Liberal measures and their complacent acceptance of Conservative legislation has become more and more exasperating to the Liberal party and has often threatened a collision which was averted either by the submission of the Lords or the support of its obstructive policy by the electors at the polls. So long as the social preponderance of the aristocracy and the possession of land and wealth, on which that preponderance rested, was not touched, the Lords
have submitted to the gradual loss of political preponderance
and the slow advance of England from an aristocratic to a
middle-class rule and even from a middle-class rule to a limited
democracy, limited by the existence of the Lords themselves and
the restriction of the franchise. A new force, a fatal solvent of
established institutions, has entered European politics with the
steady slow irresistible advance of Socialism, and England, long
exempt from the working of this great tide of idealistic thought,
is being more and more swiftly undermined, its cherished ideals
sapped, its administrative and social structure threatened by
the wash of the advancing waters. The uneasiness engendered
in the more richly propertied classes by this advance of the
destroyer has come to a head as a result of the provisions of
the Budget by which the land, emblem and guarantee of English
Conservatism, of the inviolability of private property and the
survival of the old world society in its most vital features, has
been subjected to substantial taxation. The innovation creates
a probability of continual nibbling until under the impulse of a
growing Socialism, land is nationalised, its proprietors bought
out, and aristocracy destroyed. The Lords have either to resist
the process in its first step or make up their minds to gradual
extinction.

The question for the Upper House is how they will resist.
It is open to them either to reject the Budget altogether — a
measure of too drastic severity, — to throw out the Land clauses,
— a device which will expose the Peers to the charge of violating
the unwritten Constitution for the selfish purpose of saving their
own pockets and throwing the burden of taxation on the middle
class and the working men, — or to amend the Budget so as to
lighten the land taxes and deprive them of their more inoffensive
features. The last device has the disadvantage of being no more
than a palliative, while it amounts to as serious a breach of the
financial privilege of the House of Commons as the others. The
omens point to a rejection of the bill by the Peers, but we doubt
whether they will care to incur the odium of so disturbing the
finances of the country. In all probability they will amend and
leave to the Ministry the responsibility of dissolving Parliament
with no Budget sanctioned and the insecurity to the taxpayers resulting from this unprecedented and anomalous situation. The burden of choice will then fall upon the Commons, who must either submit to the destruction of the first and most essential safeguard of popular liberty in England, the popular control of taxation and the Exchequer, or take up the challenge given by the Peers. The first course is unthinkable. No Liberal Ministry especially, would care to go down to posterity as having betrayed the people of England and the future of democracy by such a sacrifice of the palladium of British liberty. Mr. Asquith may either dissolve as soon as the Lords refuse to withdraw their amendments or he may ask the King to create a number of Liberal Peers large enough to swamp the Conservative majority in the Lords, or he may at once bring in a bill for the limitation of the veto of the Upper House and dissolve upon it so as to raise definitely the question of the veto as the one real issue before the electors. The first course has this great disadvantage, that the real issues may be covered over by the clamour of the Conservative party against the socialistic trend of the new taxation and by the cry of Tariff Reform. By dint of repeated iteration the Conservatives have created an impression in many minds that the present Ministry is deeply tinged with Socialism and the Budget a deliberate attack on property. The effect this cry is having on the mind of the wealthier classes is shown by the number of defections in the Liberal ranks, — not so many, however, as might have been expected, — and the diminution of the Liberal vote at the bye-elections. The Budget opens the door to Socialism, but is in none of its provisions Socialistic, the only real novelty of importance being the land taxes which have their counterpart in countries the reverse of Socialistic. The Ministry is itself a curious conglomeration of Moderates, Radicals, and extreme Radicals, but there is not a single Socialist in its ranks and many of its members are avowedly anti-Socialistic in their temper and opinions. Nevertheless, the cry is having its effect on the susceptible British elector and, unless it is met, will imperil a great number of Liberal seats. The cry of Tariff Reform has its charm for a certain number of working men, but is not in
itself so formidable as the catchword of Property in Danger. To
dissolve upon the rejection of the Budget will have the effect
of preventing a clear issue from being raised and confusing the
public mind by the entanglement of three separate questions,
Socialism and the Budget, Free Trade or Tariff Reform, and the
veto of the House of Lords. The Ministry have everything to lose,
the Opposition everything to gain by this confusion of issues.

The second device is being urged upon the Prime Minister by
some of his supporters who are rather shortsighted politicians
than men with the outlook of the statesman. The temporary
difficulty would no doubt be surmounted, but it is a matter
of unfailing experience that Liberal Peers so created gravitate
in a very short time to Conservatism. If these Peers had to be
actually created, the Liberal Ministry would very soon be face
to face again with a similar situation, and the drastic remedy of
doubling the bulk of the House of Lords could not be repeated
ad infinitum. On the other hand, if the Peers yielded in order to
avoid so great an indignity to their rank and order, they would
do so under the most rigorous compulsion and be all the more
eager to hamper and distress their victors in less vital matters.
Mr. Asquith would avoid a particular difficulty, but only to
perpetuate the great stumbling-block of all Liberal Ministries,
a permanently Conservative Upper House. On the other hand
he has a chance, if he boldly seizes on this issue, of avoiding
a fight on the weaker points of the Budget, of forcing to the
forefront a great constitutional issue in which everything liberal
or even truly conservative in England ought to be on his side,
and destroying at one blow and forever this perpetual thorn in
the side of Liberalism and obstacle to radical legislation.

The drastic device of swamping the Lords with newly cre-
ated Liberal Peers will be too much needed shortly to be thrown
away now. When in the new Parliament, the bill for the limita-
tion of the Peers’ veto has been carried through the Commons,
it will have to be carried through the Lords as well before it
can receive the King’s sanction and become law, and, since the
Lords as they are will not consent to their own nullification, it
is only by the swamping device that this great resolution can
be effected. The only question is whether the bill should be brought in before or postponed till after the election. To bring in the bill before, pass it formally through the Commons without permitting much debate and immediately dissolve for a mandate from the country, would be the boldest but also the best policy for the Ministers. It would definitely raise the question as the one issue of the election and, if confined to the limitation and not the destruction of the veto, — so as to avoid the charge of destroying the constitution, — would rally the whole force of Liberalism behind Mr. Asquith. We do not know whether the course has suggested itself to the tacticians of the party, but it seems to us that it gives the only chance of a really effective and victorious electioneering campaign.

With all this, what are the chances of a Liberal victory? Very small, unless the Labour-Socialist vote is conciliated. The great feature of the recent bye-elections has been the repeated splitting of the democratic vote between Labourite and Liberal, the substantiality of the Labour vote and the consequent defeat of the Ministerial candidate and return of the Conservative in spite of a democratic majority in the constituency. For the Socialist party this is the right policy, by their independent attitude on an occasion of such vital importance to convince the Liberals that they cannot hope to exist as a power without coming to terms with the Socialist vote. But for the Liberals to accept a triangular contest would be sheer suicide. It would mean either a Conservative majority, not in the country — for the pendulum has not swung back so far — but in the House, or a Conservative Ministry with the Irish Nationalists holding the balance of power. It would be well worth Mr. Asquith’s while to give the Socialist-Labour faction the 80 seats they hope to win, on condition of holding the other Liberal seats secure from competition. But an accommodation of this kind would mean an alliance with Socialism, as well as with Ireland, and some very drastic social legislation in the next Parliament. It is difficult to gauge the weight of the Moderate element in the Cabinet, and it may be strong enough to face defeat rather than permit such an alliance.
We have dealt with this subject and its issues at length, partly in order to draw the attention of our readers to the issues and methods of a great and critical election in a democratic country. The introduction of democratic institutions in India, more genuine than the present Reform Scheme, cannot be long delayed, and it will be well for those of us who think to study their working in the European country which serves as a model to others. But beyond this aspect of the elections, there is a deeper interest to us Indians in the great constitutional struggle now at hand. The abolition or limitation of the Lords’ veto is a question of supreme importance to the Indian politician. When the time comes, — and it is coming surely, — that popular assemblies have to be established in India, the veto of the Lords will be the one instrument that reaction will use to stay reform for a long season. It is that instrument which has baffled Irish Nationalism. If it continues to exist, it will baffle Indian Nationalism also. Although, therefore, Liberal and Conservative are one in their attitude towards India, every Indian patriot must watch with keen interest the result of the struggle and desire, not the success of the departing Ministry, but victory for the destroyers of the Lords’ veto.

Facts and Opinions

A Hint of Change

The end of our long waiting for the advent of strength into the hearts and minds of the people may yet be distant, but one sign of an approaching change is growing more and more manifest, the intense yearning for a field, an outlet, a path open to the pent-up activities of an awakened nation. Arising from long sleep and torpor, the nation threw itself with energy into a field of activity which seemed immeasurably vast and full of a glorious promise. One would have said that no one could stop that mighty outpouring of enthusiasm, unselfishness and heaven-aspiring force. But there was a flaw, a source of weakness. Our past defects, hesitations, timidities, weaknesses, vices, arrogance, light-headedness, selfishness, scepticism, inconsistency, our readiness to succumb to difficulties, to despair at the first check,—all these things were in us, trampled down by the inrush of higher feelings and a greater and nobler energy, but not thrown out, not utterly replaced. The nation had entered headlong into a wonderful sadhana, but without knowledge, without the deliberate sankalpa, the requisite diksha. It was the only way it could be begun. But the sadhak has to have chittashuddhi before he can attain realisation; he must cleanse his bosom of much perilous stuff. That cleansing is done partly by
replacing the lower feelings by the higher, cowardice by courage, hatred by love, weakness by strength, partly by working out the evil in imagination or action and rejecting it as it comes up into the mind or the life. It was the first process that took place in the beginning of the movement, it is the second that is now in progress. In the first years of the movement a nation of cowards became heroes, sceptics became blind believers, the light-minded full of serious purpose, men eaten up by selfishness martyrs and ascetics, waverers full of tenacity, the low, loose and immoral inspired by a high and generous idealism and purity. But the work was not complete. In the groundwork of the new nation the old evil stuff lingered, and therefore God trampled our work to pieces in order to have it out, so that it might be seen, recognised and rejected. It was that work the repressions and reforms have come to do, and it is almost done. Had we gone on in our first victorious rush, unhampered and undefeated, we would have entered the kingdom of Swaraj with an imperfect national character, full of temporarily repressed vices which would have come to the surface as soon as the great stimulus of a successful struggle had been removed, and the last state of the nation might have been worse than its first; at any rate there would have been infinite troubles, reverses and disasters for the liberated nation, such as are in store for a nation like Persia where the struggle for freedom has not been sufficiently intense, arduous and complicated in its features to purify the people and build its character. It is well to have done with our troubles, reverses and defeats before the end is gained, so that we may enter our kingdom pure and strong. We ought now to be able to recognise what it was that has made us fail in the hour of trial; for there can be no doubt that we have partially failed. To recognise the defects is to reject them, and with the will to rise, will come the means which will help to raise us. The spirit of the nation is rising again. Only it must be clearly recognised that the old outlets are not the right ones. Solid and thorough work, self-discipline by means of noble and orderly action, this is the path by which we shall arrive at a higher national character and evolution.
Pretentious Shams

In an unguarded moment our friend and India’s, the Statesman of Chowringhee, has for once blurted out the truth. While, in common with other Anglo-Indian papers, it descants in strains of dithyrambic eloquence on the magnitude of the reforms the Government in its deep, wise and impossibly sagacious generosity has given and this thrice blessed country has been privileged to receive, it inadvertently admits that the Legislative Councils, as they hitherto existed, were pretentious shams. As we point out in our article this week, the new Councils differ in no way from the old except in being more pretentious. The old were shams because they gave no control to the people while affecting to listen and give consideration to the popular voice, which was, as a matter of fact, only heard to be ignored, — except in very occasional instances which only accentuated the sense of dependence on the caprice of the official governors. The new Councils are of precisely the same character, and the only differences of importance are the non-official majority — so carefully arranged as to secure a permanent popular minority, — the increased number of the elected members, and the facilities given for debate. With a permanent popular minority and the denial of all control, this is mere heaping of gilt on the surface of the toy. The Indian papers have recognised the nugatory character of the reforms and the tone of cold dissatisfaction in their comments is very marked. When the Councils begin to work, even the Moderates will realise that the new Councils are not only void of any true principle of popular representation and control, but injurious to the interests of the people.

The Municipalities and Reform

Under the new conditions, the Municipalities and District Boards form a substantial part of the electorate and return a certain proportion of the members. We do not think we exaggerate when we say that the only chance of any really independent popular representatives entering the new Councils
is provided by these bodies. The University member or one or two of the landholders may occasionally assert independence, but the chances, at present, are in favour of their belonging to that type of representatives who are satisfied if they can pose as representatives of the nation by merely refusing to agree with the Government in all the details of their policy and measures. The one chance of a robust and healthy opposition lies in the election of independent men by the Municipalities and, to a lesser extent, by the District Boards. They will, however, be in a hopeless minority and will always be liable to disqualification by any of the engines provided for that purpose in the rules, if they support their opposition in the Council by agitation in the country. And we have yet to see what changes will be made in the District Boards and Municipalities under the new policy. Great hopes have been entertained that, whatever may be done in the Councils, the Municipalities will be made really free and popular bodies, and, we remember, that expectation was urged at the Hughly Conference as a reason for not rejecting the reforms. We doubt whether this expectation will be any more fruitful than the hopes of a great advance towards popular institutions in the reform of the Councils. Under the new scheme the Municipalities are the only weak point in the Government armour, and we rather fancy the Government will follow the policy of thorough and mend that point as well. Time will show whether we or the Moderates are right. So far we have always been right in these matters and they have always been wrong, the new Councils being only the latest of numerous instances during the last few years.

**Police Unrest in the Punjab**

The action of some of the statesmen of this country seems to be guided by the principle that the best way to bring about a particular object is to try and promote its opposite. They certainly desire the political unrest to cease, but their action seems to be carefully calculated to prolong it. No more irritating action could have been taken in the present state of the public mind
than the persistence in sedition-hunting which is being practised on a large scale in the Punjab. There is not the least sign of trouble or violence or even widespread agitation of any kind in that province. The causes which excited agitation and violence formerly were purely local and, with the removal of the cause, the effect, as it was bound to do, disappeared. Since then, the Punjab has been profoundly quiet, and the opposition to the Convention Congress and the convocation of the Hindu Sabha, presided over by so inoffensive a personage as Sir Pratul Chandra Chatterji, were the only signs of life it gave. We wonder, is it the first-mentioned activity which has led to the raids, searches and arrests? The almost universal opposition to a body which has faithfully excluded the Nationalists and enjoys the support and patronage of Mr. Gokhale, may seem to the authorities a certain sign of widespread seditious feeling in the land. Is it by stirring up sedition with a police pole that the Punjab bureaucrats think they can get rid of unrest?
The Reformed Councils

THE GREAT measure which is to carry down the name of Lord Morley to distant ages as the inaugurator of a new age in India, — so at least all the Anglo-Indian papers and not a few of the Moderates tell us, — is now before us in all its details. The mountains have again been in labour, and the mouse they have produced this time is enormous in size and worthy of the august mountains that produced him, but not the less ridiculous for all that. What is it that this much-trumpeted scheme gives to a people which is not inferior in education or intellectual calibre to the Turk, the Persian and the Chinese who already enjoy or are in sight of full self-government? There are four elements which have always to be considered in a change of this kind, first, the nature of the electorate, second, the composition of the body itself, thirdly, the freedom of election, fourthly, the scope, functions and powers of the assemblies. There is not one of these points in which the people have really gained, there is hardly one of them in which they are not worse off than under the old system.

What change has been made in the electorates? Except that they have been increased in number, we do not see that there has been any real change at all, and an increase in number is of no value in itself, but only if the number of elected members represent a force sufficient to give the people its proper weight in the legislation and administration of the country. We shall show under the third head that we have gained nothing in this direction. On the other hand not only class, as was formerly the case, but creed has been made the basis of representation and, therefore, unless the Hindus have the strength of mind to boycott a system which creates a distinction insulting as well as injurious to the community, this measure, while giving us not an atom of self-government, will be a potent engine for dividing the nation.
into two hostile interests and barring the way towards the unity of India. Formerly, there were only two classes in India, the superior European and the inferior Indian; now there will be three, the supreme European, the superior Mahomedan and the inferior Hindu. This is loss number one, and it is no small one, to the Mahomedan no less than the Hindu. The official of course gains.

Even if there is no democratic or even semi-democratic basis of election — merely small established bodies which can in no sense be called the people, — something might be gained if the Councils were so composed as to give a preponderance or powerful voice to independent elected representatives. That is what the Councils profess to do and that is why so much parade is made of the non-official majority. What are the facts? In the Viceroy’s Council there are to be thirty-five avowedly Government members, twenty-eight being officials and seven nominated. Of the twenty-five elected members eleven will be sent from the new Councils all over India; as we shall show from the Bengal examples, these Councils will contain a predominant pro-Government vote even among the non-official members and their representatives will be therefore pro-Government men. That makes forty-six reliable votes for the Government. Of the remaining fourteen three will be Europeans who will naturally side with the Government; that makes forty-nine. Of the remaining eleven five will be specially elected Mahomedan representatives and, as under the new system the Mahomedans are a favoured class depending for the continuance of that favour on good behaviour, that means another five reliable votes for the Government, which makes fifty-four. Of the remaining six all are representatives of the landholding class who dare not be too independent, — although they will no doubt oppose in small matters, which they can do with impunity as there is not the slightest chance of the Government being defeated. The consequence will be that on the Viceroy’s Council there is not any reasonable chance of there being a single independent member representing the people. This startling result of the Reforms may not seem at first credible, but if our argument is carefully followed, it will establish itself. No doubt, one or two men like Mr. Gokhale, Sir Pherozshah Mehta...
or Dr. Rash Behari Ghose will be admitted by permission, but that privilege we had on better terms under the old system.

Let us pass to the Bengal Councils and establish our position. In East Bengal there will be twenty-two nominated and two specially nominated against eighteen elected members establishing at once a standing Government majority of six. Of the eighteen who might oppose, there will be four members who in the nature of things are bound to be Europeans and four specially elected Mahomedan members, which at once raises the reliable Government vote to thirty-two; five representatives of District and Local Boards, who, from the preponderance of Mahomedans on those bodies, are bound to be Mahomedans, two representatives of landholders of whom one at least is likely to be a Mahomedan and the other, being a landholder, cannot afford to be too independent. There remain three members of Municipal bodies who are all likely to be independent, if the elections are not interfered with by indirect pressure. Therefore, out of forty-two members only three are likely to be independent members. It is needless to point out that the representative of the non-official members on the Viceroy’s Council is sure to be a pro-Government man.

We pass on to West Bengal where things ought to be better. Here there are twenty-two nominated against twenty-six elected members, giving at first sight a non-Government majority of four. But we have to subtract from the apparent majority and add to the apparent minority four members from European or predominatingly European constituencies, four Mahomedan members and the member for the University, now practically a department of the Government. That gives a Government vote of thirty-one and a possible opposition vote of seventeen. Of these again five are representatives of the landholders who cannot be independent to any notable extent and of whom only one or two are likely to be independent at all. There are, therefore, only twelve votes of which we can have any hope, the representatives of the Boards and Municipalities. Here also the independent section of the community is hopelessly ineffective in numbers. Only four of these will be representatives of Bengal and this is one of
the most joyous results of the policy of partition and deportation plus co-operation which is the basis of the new measure. Here again the chances of an independent representative being returned to the Viceroy’s Council are small on paper, nil in reality.

When we come to the freedom of the electors in choosing their representatives, we find restrictions so astonishing as at once to expose the spirit and purpose of these reforms. The Boards and Municipalities which alone represent in a faint degree the people are debarred from electing anyone not a member of these bodies. Thus at one blow it is rendered impossible for a popular leader like Sj. Motilal Ghose, unless the Government choose to nominate him, to be on these amazing Councils. Farther, anyone dismissed from Government service, e.g. Sj. Surendranath, sentenced at any time to imprisonment or transportation, e.g. Mr. Tilak, or bound down, e.g. mofussil leaders like Sj. Anath Bandhu Guha or Sj. Hardayal Nag, the leading men of Mymensingh and Chandpur respectively, or declared by the authorities to be of undesirable antecedents, e.g. Lala Lajpat Rai, Sj. Aswini Kumar Dutta, Sj. Krishna Kumar Mitra and all Nationalists and agitators generally, are ipso facto incapable of representing the people under these exquisite reforms.

After all this it may seem a waste of time to go into the question of the scope, functions and powers of the Councils. They may briefly be summed up by saying that the Councils have no scope and no powers, and that they have also no functions except to talk, but by no means freely and no longer at large. We certainly do not object to the rule that no member shall talk for more than fifteen minutes at a stretch; our only regret is that the maximum could not be fifteen seconds. But since to talk inconclusively and ask questions which need not be answered unless the Government likes, is the only activity allowed to the august councillors, it seems like adding injury to insult to hedge in this windy privilege with so many restrictions. The restrictions placed on the putting of interpellations would rule out of order half the questions in the House of Commons. It is curious how carefully the Government has guarded itself against anything which might inconvenience it or put it into a corner. Even to ask
any question about the conduct or character of persons except in their official or public capacity, is banned, so that, for instance, if an official misconducts himself in a flagrant manner, so long as he can say that he has done it in his private capacity, the Government cannot be questioned as to the truth of the matter or its intentions with regard to the peccant individual. With a little legal ingenuity we think there is hardly any question, not of the baldest and most insignificant character, which could not be brought under the restricting clauses. And, to crown all, the President is given the power of disallowing any question on the ground that it will inconvenience the State, in other words himself and his Government, and he may disallow any supplementary questions without any reason whatever! Any resolution may be disallowed for a similar reason or absence of reason. When we add that Native States are held sacrosanct from discussion, the Military similarly safeguarded, and that no value need be attached to the resolutions of the Council on the Financial Statement and no resolutions at all can be proposed or passed on the Budget, we think we have said all that is necessary to paint in its true colours the glorious liberality of this most wonderful and unheard-of reform. We heartily congratulate Lord Morley, Lord Minto and their advisers on the skill with which the whole thing has been framed, the Moderates on the glorious price for which one or two of their leaders have sold the popular cause, the Hindus on their humiliation and the country generally on the disillusionment, we hope the final disillusionment, which these Councils, when they meet, will bring about far more successfully than could have been done by any Nationalist propaganda.

Facts and Opinions

The Bomb Case and Anglo-India

The comments of the Anglo-Indian papers on the result of the appeal in the Alipur case are neither particularly edifying nor do they tend to remove the impression shared by us with many thoughtful Englishmen that the imperial race is being seriously demoralised by empire. From the *Englishman* we expect nothing better, and in fact we are agreeably surprised at the comparative harmlessness of its triumphant article on the day after the judgment. Its reference to the nonsense about there being no sedition in India and no party of Revolution leaves our withers unwrung. We ourselves belong to a party of peaceful revolution, for it is a rapid revolution in the system of Government in India which is the aim of our political efforts, and it is idle to object to us that there have been no peaceful revolutions and cannot be. History gives the lie to that statement, whether it proceeds from Mr. Gokhale or from Anglo-India. We have also always admitted that there is a Terrorist party, for bombs are not thrown without hands and men are not shot for political reasons unless there is Terrorism in the background. All we have contended, — and our contention is not overthrown by the judgment in the Alipur appeal, which merely proves that the conspiracy was not childish, and by no means that it was a big
or widespread organisation, — is that the attempt of the Anglo-
Indian papers to blacken the whole movement, and especially
the whole Nationalist party, is either an erroneous or an un-
scrupulous attempt, and the disposition of the police to arrest
every young Swadeshi worker as a rebel and a dacoit is foolish,
wrong-headed, often dishonest, and may easily become fatal to
the chances of a peaceful solution of the dispute between the
Government and the people. The *Englishman*, however, repres-
sents a lower grade of intellect and refinement to which these
considerations are not likely to present themselves. The average
respectable Englishman is better represented by the *Statesman*,
and the one dominating note in the *Statesman* is that of regret
that the Courts had to go through the ordinary procedure of the
law and could not effect a swift, dramatic and terror-striking
vindication of the inviolability of the British Government. One
would have thought that a nation with the legal and political
traditions of the English people would have been glad that the
procedure of law had been preserved, the chances of error min-
imised and the State still safeguarded; and that no ground had
been given for a charge of differentiating between a political and
an ordinary trial to the prejudice of the accused. It is evident,
however, that the type of Englishman demoralised by empire
and absolute power considers that, in political cases, the Law
Courts should not occupy themselves with finding out the truth,
but be used as a political instrument for vengeance and striking
terror into political opponents.

**The Nadiya President’s Speech**

We congratulate Mr. Aswini Banerji on the able and vigorous
speech delivered by him as the President of the Nadiya Confer-
ence. He took up an attitude which was at once manly and free
from excess or violence. For ourselves the first point we turned
to was the pronouncement on the Reforms. We do not think
the judgment of the country on this ill-conceived measure could
have been put with greater truth and force than in the periods
of good-humoured contempt and irony, scathing yet in perfectly
good taste, in which Mr. Banerji disposed of the claims of the Reform Scheme to be a measure of popular self-government. If all public men take the same attitude, the day of a true measure of popular control will be much nearer than if we affect a qualified satisfaction with this political bauble. As Mr. Banerji forcibly pointed out, it does not provide for a popular electorate, it does not admit of the election of popular leaders, it does not create a non-Government majority, or, as we would add, even the reasonable possibility of a strong opposition on essential points. What has the country to do with a reformed Council stripped of these essentials? The jo-hookums, the self-seekers, the nonentities who wish to take advantage of the exclusion of distinguished and leading names in order to enjoy, at the expense of the country’s interests, the kudos and substantial advantages of a seat on the Councils will scramble for the newly-created heaven; that is the kind of co-operation which the Government will get from the non-Musulman part of the nation under this scheme. The country remains sullen and dissatisfied.

Mr. Macdonald’s Visit

The tour undertaken by Mr. Ramsay Macdonald in India has been cut short by the call from England summoning him home to take his part in the great struggle which is the beginning of the end of Conservative and semi-aristocratic England. In the peaceful revolution which that struggle presages and in which it must sooner or later culminate, Mr. Macdonald’s party stands to be the final winners. It is the semi-Socialistic Radical element in the Ministry attracted toward the Labour party to which the precipitation of this inevitable struggle is due. The Labour party is now predominatingly Socialistic and is purging itself of the old individualistic leaven which looked forward to no higher ideal than an eight-hours day, Old Age pensions and Trade Union politics. The Labour members, Messrs. Burt and Fenwick, who represent this old-world element, have received notice to quit from the Labour organisations which helped them into Parliament and much nonsense of a kind familiar to ourselves is
being talked about the ingratitude of Labour to these veterans. The only justification for the existence of these gentlemen in Parliament is that they stand for the new insurgent demos and, if they cannot keep pace with the advancing sentiment of the people who keep them in Parliament, their duty is to retire, and the ingratitude is theirs if they try to hamper the progress of their lifelong supporters by fighting the representatives of the new aspirations in the interests of a middle-class party. Mr. Macdonald belongs to the new thought, but he is, we believe, one of those who would hasten slowly to the goal. He has not the rugged personality of Mr. Keir Hardie, but combines in himself, in a way Mr. Hardie scarcely does, the old culture and the new spirit. He has as broad a sympathy and as penetrating an intelligence as Mr. Nevinson, but not the latter’s quick intensity. Nevertheless, behind the slow consideration and calm thoughtfulness of his manner, one detects hidden iron and the concealed roughness of the force that has come to destroy and to build, some hint of the rugged outlines of Demogorgon, the claws of Narasingha. For every man is not only himself, he is that which he represents. Mr. Macdonald has been reserved and cautious during his visit and has spoken out only on the Reforms and Reuter, nor have his remarks on these subjects passed the limits of what any sincere Liberal would hold to be a moderate statement of the truth. Mr. Macdonald is one who does not speak out the whole of himself, he is a politician born, and born politicians do not care to outpace by too great a stride the speedily accomplishable fact. Whatever wider vistas they may see beyond, they prefer to move steadily towards them rather than to speak of them. So far as an Englishman can help India, and that under present circumstances is hardly at all, he certainly wishes to help. It is not his fault that the blindness of his countrymen and the conditions of the problem in India make men like him, perforce, little better than sympathetic spectators of the passionate struggle between established privilege and a nation in the making that the world watches now in India.
The Alipur Judgment

THE JUDGMENT of the Appeal Court in the Alipur Case has resulted in the reduction of sentences to a greater or less extent in all but two notable instances, and on the other hand, the maintenance of the finding of the Lower Court in all but six cases, on five of which there is a difference of opinion between the Chief Justice and Justice Carnduff. So long as these cases are still sub judice, we reserve our general comments on the trial. At present we can only offer a few remarks on special features of the judgment. The acquittal of the Maratha, Hari Balkrishna Kane, must give universal satisfaction, as his conviction in the absence of any evidence in the least establishing his guilt would have been a gross miscarriage of justice. The rejection of Section 121 and the consequent elimination of the death sentences is also a result on which the Government and the country may both be congratulated. Even in the case of actual political assassins the infliction of the death sentences, however legally justifiable, is bad policy. Death sentences for political crimes only provide martyrs to a revolutionary cause, nerve the violent to fresh acts of vengeance and terrorism, and create through the liberation of the spirits of the dead men a psychical force making for further unrest and those passions of political revolt and fierceness to which they were attached in life. The prolongation of terrorism is undesirable in the interests of the country; for, so long as young men are attached to these methods of violence, the efforts of a more orderly though not less strenuous Nationalism to organise and spread itself must be seriously hampered. We are glad to note that the Chief Justice has in no case condemned an accused on the evidence of the watch-witnesses alone. Such evidence is always suspect in the eyes of the people of this country and the gross blunders, if they were no worse, committed by several of the police witnesses in
this case deprive their identifications of all evidential value. Once the confessions were admitted as entirely voluntary and entirely true, the fate of the confessing prisoners and of those directly implicated by them as active members of the society was a foregone conclusion. The conviction of an accused on such a serious charge when there is no clear incriminating evidence against him except the confessions of others, is no doubt permissible under ordinary jurisprudence when these confessions create a moral certainty in the mind of the judge; but if this rule sometimes prevents the escape of the guilty, it not seldom lends itself to the punishment of the innocent. Of more importance, however, and the one serious flaw we are disposed to find in the Chief Justice's judgment, is the exaggerated importance attached to familiarity and intimacy between the leaders of the conspiracy and those whose guilt was open to doubt. When there is a secret conspiracy, it is inevitable that there should be numbers of men intimately associated with the members, perhaps even cooperating with them in surface political action, who are yet in entire ignorance of the close and dangerous proceedings of their friends. It was a recognition of this obvious fact that largely governed Mr. Beachcroft's findings; but we cannot help feeling that neither he nor the Appeal Court, ignorant, like all Englishmen, of the actual workings of the National Movement, have given sufficient weight to this consideration. As a result, the benefit of the doubt has not been extended where it should have been extended. Already it was a general conviction in the public mind that one innocent man had been convicted and succumbed to the rigours of jail life, while two are hopelessly condemned to the brutal and brutifying punishments by which European society avenges itself on the breakers of its laws,—we refer to the Kabiraj brothers found by Mr. Beachcroft to be innocent of conspiracy and therefore presumably innocent tools of conspirators. There is an uneasy sense that some at least have been added to the list by the judgment in appeal. Even if it be so, however, the judges have done their best, and the European legal system has always been a lottery by which it is easy, without any fault on the part of the judge, for the guilty to escape and the innocent
to suffer. It is perhaps one of the necessary risks of joining in Nationalist movements to be liable to be confounded in one fate with secret conspirators who happen to be associates in social or legitimate political relations, and when the C.I.D. throws its nets with a generous wideness, we ought not to whine if such accidents bring us into the meshes. The State must be preserved at any cost. In any case, the whole country must be grateful to Sir Lawrence Jenkins for the courtesy, patience and fairness with which he has heard the case and given every facility to the defence, an attitude which might with advantage be copied by certain civilian judges in and outside the High Court and even by certain Judges, not civilians, in other provinces.

Facts and Opinions

The Lieutenant-Governor’s Mercy

The outcry of the Moderates against the exclusion of their best men has led to certain concessions by which apparently the Government hope to minimise or obviate the formidable opposition that is slowly gathering head against the new Councils. These concessions remove not a single objectionable principle from the Bill. They are evidently designed to facilitate the admission into the Council of the two men in Bengal whose opposition may prove most harmful to the chances of the exceedingly skilful Chinese puzzle called the Councils Regulations, by which the consummate tacticians of Simla hope to preserve full control for the authorities while earning the credit of a liberal and popular reform. The modification by which men who have served three years on a Municipality become eligible even if they are no longer on any such body at the time of election, seems specially designed to admit Sj. Bhupendranath Bose who, with all the other well-known men of Bengal, was excluded by the careful provisions of the Scheme. But to have placated Sj. Bhupendranath and at the same time disqualified the greater Moderate leader would obviously have been an infructuous concession. Accordingly, we are now given to understand that the Lieutenant-Governor has been pleased to intimate to the most powerful man in Bengal that, if he
stands for election, the disqualification under which he has been placed, will be waived as a special concession in his favour! We do not know what were the feelings of Sj. Surendranath when he was informed that this back-door had been opened to him by the indulgence of the bureaucracy to its dismissed servant. But to us the permission seems to be more humiliating and injurious than the original exclusion, — to Bengal, if not to Surendranath personally. As things stand, he cannot make use of the concession without forfeiting his already much-imperilled popularity and putting himself uselessly into a ridiculous and undignified position. If he stood now, the whole country would believe that his dissatisfaction with the Reforms was due to his personal exclusion and not to the vicious principles of the Scheme. He would enter not in his own right, but by the grace and mercy of the bureaucracy of whom he has been the lifelong opponent. And to what end? To stand isolated or with a handful of ineffective votes against a solid phalanx of officials, Government nominees, Europeans, Mahomedans and lukewarm waverers or reactionaries. Sj. Surendranath gains nothing for himself or the country by entering the Councils on these shameful terms; he gains everything by holding aloof and standing out for better conditions.

An Ominous Presage

The *Indian Daily News* nowadays plays the *Statesman’s* abandoned role of the Friend of India. This journal has been recently harping on the necessity of the reform of the Municipalities and throwing out suggestions of the lines on which those reforms should be framed. We cannot imagine anything more ominous, more fatal to the little of self-government that we possess, than these suggested reforms. We pointed out in our article on the Reforms that under this scheme the Municipalities were the only weak point in the Government’s armour and we hazarded a prophecy that the Government would follow the policy of thorough and mend this vulnerable part. This is precisely what our Anglo-Indian “friend” earnestly and repeatedly
calls on them to do without farther delay. The principle to be enforced is that same false, vicious and antidemocratic principle of the representation of separate interests which has made the new Reforms a blow straight at the heart of progress instead of an important step in progressive development. It is true that the Daily News deprecates separate electorates and advocates official control veiled and occasional instead of official control insistent, naked and unashamed. But we know perfectly well that official control veiled and occasional, as in the universities, can be made as potent and effective a weapon for the suppression of independent action as official control direct and habitual. And if the European, the Mahomedan and the landlord are to predominate in the Municipalities as in the reformed Councils and the representation of the “professional classes” carefully restricted, we do not care whether it is done by separate electorates or by some other equally careful manipulation of the electoral lists. The result will be the same. The Daily News seems to be inspired in its anxiety for reform by two lofty motives, the predominance of the European vote, wealthy but small in numbers, and the distinction of the predominance of the professional men who, under present circumstances, can alone represent educated India. On the Councils the non-official European representation is small, not in proportion to the numbers of its constituency, but in its comparative voting power, yet this class is on the whole satisfied, because it not only gets what it knows to be disproportionately large representation but can be sure of the co-operation of the official in farthing its interests. On the Municipalities, if the direct official control disappears, it will be necessary for the European vote to be dominant so as to prevent a combination of other elements from pushing other interests to the detriment of European privilege or monopoly. The distinction which this journal, in common with other Anglo-Indian papers, draws between men with a real stake in the country and educated men, who apparently because of their education have none, sheds a flood of light on the kind of friendship which it cherishes for the people of this country.
Chowringhee Humour

The Statesman as a friend was intolerable; as a humorist it is hardly less difficult to bear. There was an elephantine attempt at sardonic humour in a recent article in which it weightily urged the educated community to overlook defects and take full and generous advantage of the great opportunity from the benefits of which they have been excluded. That is the peculiar humour of these reforms. They are a Barmecide’s feast, gorgeous dishes and silver covers with only unsubstantial air inside, and even from that chameleon’s feast the educated classes are carefully excluded, except in a pitifully infinitesimal degree. Yet the Anglo-Indian papers are indignantly remonstrating with the educated classes for not crowding to the table where there are no seats for them and feasting themselves fat on the dainty invisible meats which others are so eager to partake of. It may be asked why others are so anxious for these aerial privileges. Well, that is because it is only the educated classes who are really hungry for substantial political food, the others are eager to see and handle the gorgeous dishes and the silver covers, to say nothing of the kudos of having dined at so rich a house and its material advantages to the individual. But the educated Hindus have had a surfeit of specious outsides and are learning to merge the interests of the individual in the good of the nation.

The Last Resort

The resort to boycott is becoming instinctive in men’s blood; not only in India but everywhere, men confronted by opposition of a nature which renders it impossible to deal with it effectively, take to boycott with an admirable spontaneity. The rapid spread of this ancient Indian device since China and India applied it for the first time on the gigantic Asiatic scale, is a sign of the times. We can naturally understand the feeling of discomfort which leads the Anglo-Indian papers to deprecate this move on the part of the Moderates. It is true that the reported agreement to boycott the Councils has been denied by representatives of
Moderate opinion, but, whether a formal resolution to the effect was recorded or not at the momentous meeting in the Indian Association’s rooms, it is this policy which the Moderates are following, for the excellent reason that there is no other. As they pathetically complain, it is not they who have boycotted the Government but the Government which has boycotted them. That is not, of course, literally true. Sj. Ambikacharan Majumdar who has refused to stand as a candidate, is eligible under the Government rules; the disabilities in the way of Sjs. Bupendranath and Surendranath have been waived or removed. But this the Government has taken care to ensure, that if they enter, and evidently the Government desires that they should enter, it shall be as grandiose nonentities, stripped of all powerful backing, individual voices and nothing more. Co-operation on such conditions would be the end of the Moderate party in Bengal and the absolute destruction of the Moderates is an event, which, we confess, we could not contemplate with equanimity. We need a party which will form a convenient channel through which the Government can glide gradually down the path of concession until events have educated our bureaucracy to the point of recognising the necessity of negotiation with the Nationalists. We are therefore glad that the Government has made it imperative on the Moderates to answer boycott with boycott. We have expressed our admiration of the skill with which the Reform Regulations have been framed, but it is the skill of the keen-eyed but limited tactician cleverly manipulating forces for a small immediate gain, not of the far-seeing political strategist. On the contrary, the framers have flung away supports which they ought to have secured and secured others which are either weak or unreliable. The nonentities who are scrambling for a seat in the Council cannot hold the fort for them; the support of the landholders is lacking in sincerity and they are, besides, a force the bureaucracy themselves have stripped ruthlessly of their ancient strength and leadership, which cannot now be recovered by a seat on the Councils; the Musulmans have suddenly been raised by the amazingly shortsighted policy of Lord Morley into an eager, ambitious and pushing political force which will
demand a higher and ever higher price for its support. On the other hand the Moderates have been humiliated in the sight of all India and made a general laughing stock, and the entire Hindu community, always the mightiest in potentiality in the land and now growing conscious of its might, has been put far on the way to becoming a permanent and embittered opposition. O wonders of Anglo-Indian statesmanship!

The Men that Pass
The National Value of Art III
Facts and Opinions

The United Congress

The controversy which has arisen between the Bengalee and the Amrita Bazar Patrika on the subject of a united Congress does not strike us as likely to help towards the solution of this difficult question. We should ourselves have preferred to hold silence until the negotiations now proceeding between representatives of both sides in Calcutta are brought to a definite conclusion either for success or failure. But certain of the positions taken up by the Bengalee cannot be allowed to pass unchallenged. Our contemporary refers to the meeting in the Amrita Bazar Office last year as an All India Conference. He ought to know perfectly well that it was nothing of the kind. The Mahratta Nationalists were extremely anxious for a settlement and they approached the Bengal Moderates to that end through the mediation of Sj. Motilal Ghose. The terms arrived at were so humiliating that, although they gave way rather than imperil the success of the negotiations, it was with great difficulty they could bring themselves to consent, and Bengal Nationalism has never accepted the surrender on the subject of the creed. At the Hughly Conference, when the four Nationalist members of the Committee were named, great anxiety was expressed by the delegates that men should be chosen who would not repeat this
surrender. If the meeting in Bagbazar last year were an All India Conference, how is it that Bombay Moderatism refused to have anything to do with its resolutions, or that Sj. Surendranath and his following did not consider themselves bound by the decision to which they were a party and joined the Madras Congress? It was an attempt at negotiation and nothing more and, having fallen through, binds nobody. The Bengalee says that unless the Nationalists sign the creed, a United Congress is impossible, since no one shall be admitted to the Congress who is not satisfied with self-government within the Empire and constitutional means of agitation. This seems to us to be an indirect attempt at intimidating us by hinting that, if we do not join the Moderates on their own terms, we shall be declaring ourselves seditionists and anarchists. That is a method of bringing about unity which we think the Bengal Moderates had better leave to their friends in Bombay and Punjab; it will not work in Bengal. If by constitutional means is meant acquiescence in the Reforms,—that is the only constitution given to us,—we decline to join in using constitutional means. If peaceful means are intended, we do not know that any party advocating public political action is in favour of any but peaceful means. Nor is it a question of adhesion to or secession from the British Empire. That is an ultimate action which is too far off to form a question of practical politics or a subject of difference. The dispute is one of ideal, whether we shall aim at being a province of England or a separate nation on an equality with her carrying on our ancient Asiatic development under modern conditions. Whether such separateness and equality can be effected without breaking the English connection is a question which can only be decided by the final attempt at adjustment between Indian and British interests. We Nationalists lay stress on the ideal, which is a matter of principle, and not on the form it takes, which is a matter of expediency and detail. As far as the United Congress is concerned, the Nationalists are willing to accept the self-government of the provincial type as the object of the Congress and to make no attempt to disturb this provision until India becomes unanimous for a change, but any attempt to make
them sign a creed which violates their conscience will be resisted.
There can be no farther weakening on that point, and if the
Moderates demand that we shall lay down our principles on the
altar to Sir Pherozshah Mehta before they will admit fellowship
with us then farther negotiations are useless. Disunion must take
its course.

The Spirit of the Negotiations

Both the Bengalee and the Amrita Bazar Patrika seem to us to
misunderstand the spirit of the negotiations which are proceed-
ing. The Patrika harps on the inconsistency of the Moderate
leaders negotiating on one side and at the same time holding a
meeting to send delegates to the Three Men’s Congress at La-
hore. There is no such condition underlying the negotiations. At
Hughly Sj. Surendranath expressly reserved his liberty to attend
Sir Pherozshah’s Congress and there is no reason why he should
not do so if he thinks that his duty or his best policy. Nor do the
Nationalists ask the Bengal Moderates to refrain, though they
will naturally put their own interpretation on an alliance based
on the pusillanimous surrender of the Boycott Resolution. On
the other hand the Bengalee is quite mistaken in thinking that
what the Nationalists seek is admission to the Convention or
that they feel themselves under any necessity to go cap in hand
to Sir Pherozshah Mehta and Mr. Gokhale. On the contrary
they distinctly state that the Convention is not the Congress,
but they recognise that as a mere matter of convenience the
reparation of its errors by the Convention is the readiest method
of bringing about a compromise and they are therefore willing
to take the status quo as a basis for negotiations. They recognise
no obligation to conform submissively to that basis or approach
the Bombay leaders as the arbiters of their destiny.

A Salutary Rejection

We draw the attention of all weak-kneed Nationalists to the
ban placed by the Bombay Government on the candidature of
the distinguished and able Poona Nationalist, Mr. N. C. Kelkar. Mahratta Nationalism has never been so robustly uncompromising as the Bengal school in its refusal of co-operation in the absence of control, and Mr. Kelkar, though a sincere and ardent Nationalist, a friend and constant fellow-worker of Mr. Tilak, has always preserved an independent line in this matter and considered himself at liberty to help the cause of the country on bodies controlled by the Government. It greatly helps our cause that the Government should so emphatically set its face against any mistaken diplomacy of this kind. Mr. Kelkar’s only specific offence against eligibility was a sentence of fine and two months’ imprisonment for contempt of court, and that is short of the time required for ineligibility. Sj. Surendranath, who was, by the way, sentenced to six months for a still graver contempt, has been specially exempted, unasked, by the Lieutenant-Governor of Bengal from another disability. It is obvious therefore that Mr. Kelkar’s real offence was his Nationalist views and his friendship with Mr. Tilak. We hope that all compromising Nationalists will take the lesson of this rebuff to heart. The object of the Government is to rally the Mahomedans and the Moderates and isolate the Nationalists. No doubt they mean by the Moderates the Loyalist section of that party, but they are evidently wishful not to entirely alienate the Nationalist Moderates, if they can do so while excluding them from all real weight on the Councils. But by what reasoning any Nationalist can imagine that he will escape the operation of the excluding clauses, we are at a loss to understand. We may also ask our Mahratta brothers what advantage they have gained by being less rigid than ourselves. They are, if anything, more rigorously persecuted than we are in Bengal. Weakness of any kind does not pay in dealing with the Briton.

The English Revolution

The note of revolution which was struck with resounding force by Mr. Lloyd George and Mr. Winston Churchill in the quarrel with the Lords, is now ringing louder in England and has been
taken up in soberer but not less emphatic tones by Mr. Asquith and Sir Edward Grey. There can be no doubt that there was dissension in the Cabinet over the Budget and that the concessions made by the Government in the process of passing it were forced upon Mr. Lloyd George and certainly not to the taste of that fiery and uncompromising Celt. But the reactionary attempt of the House of Lords to control finance, has evidently closed up the ranks by driving the Moderates over to the cause of revolution. It is evidently felt by the Liberals that, with an Upper Chamber more and more shamelessly and constantly a mere tool of the Conservative leaders, it is impossible for any Liberal Government to accept office unless it has a mandate to end or mend the Lords. We cannot believe that a similar feeling will not actuate the great mass of Liberals all over Great Britain and heal all differences. Already the Labour Executive has decided to make the victory easier for the Government by not dividing the forward vote in a considerable number of constituencies and we have no doubt this is the outward sign of a secret compact between the Labour party and the Liberals by which the return of a powerful Socialist party has been secured. Even the extreme Socialists, who usually are against all dealing with the middle class and whose motto is “A plague on both your houses”, are calling on the Socialists of all shades to support the Government in abolishing the House of Lords. If Mr. Asquith had followed the line we suggested as possible in a previous number and introduced a moderate but effective bill for nullifying the Lords’ veto, he would certainly have gained a number of Moderate votes which will now be denied to him, but it is doubtful whether the gain of the entire Socialist vote, secured by keeping himself free to end the House of Lords, is not, in the present condition of English politics, a compensation far exceeding the loss. Already Tariff Reform is receding into the background and promises to be a subordinate issue. The battle is over the constitutional, not the fiscal issue. By their anxiety to bring Unionist Labour candidates into the field and the eager talk of Conservative leaders about the necessity of reforming the Lords, the party of reaction show that they perfectly understand from what quarters disaster
threatens. Now that the Liberal party is pledged to destroy the Lords’ veto, the English Revolution is assured and it will be not a middle class but a Socialist and Labour revolution. This result is assured whether the Liberals win or lose in the present battle. One campaign does not decide the fortunes of such a war.

Aristocratic Quibbling

When we speculated that the Lords would be more likely to amend the Budget and leave their opponents the onus of throwing the finances of the whole country into confusion, we underestimated the want of wit of which this highly venerable but somewhat brainless House is capable. This want of wit has shown itself in an unseasonable and wholly futile excess of refined cunning. The House of Lords felt that its great weakness, when its conduct went before the country for its verdict, would be the odium of its unconstitutional attempt to interfere with the control of the finances by the people. To mend the unconstitutional appearance of their act, they have taken up this position, that they have no right to amend but they have the right to reject the Budget. It appears to be a right which they have sometimes been unwise enough to claim, but never unwise enough to enforce. The aristocratic hairsplitter who discovered this quibble, seems to have forgotten that, however pleasing the distinction may be to his ingenuity, the mass of the voters will not care one straw to examine fine distinctions which claim the whole and disclaim the part. They will simply say that the right of rejection means the right of baffling the representatives of the people and paralysing finance. The other device of the Lords is to avoid the appearance of disputing the people’s right by putting the rejection in the form of a referendum to the people, a procedure which the British constitution does not include in itself and which is entirely new. Unfortunately they have made too much noise about the woes of the Dukes and Mr. Balfour has made the damaging admission that it is only the liquor and the land clauses to which he objects, so that it is too late to pretend that it is anxiety for the liberties of the people and
not solicitude for their own pockets and the pockets of their allies, the publicans, that has dictated their action. The indecent crowding of Lords who never before attended a single sitting, to reject the Budget, was also a tactical error. On the whole the action of the House of Lords has greatly helped Mr. Asquith and we may await with some confidence the result of a struggle in which India is deeply interested.
The Transvaal Indians

THE VISIT of Mr. Polak has excited once more a closer interest in the Transvaal question and associations are being formed for the agitation of the question. It will therefore be opportune to consider the practical aspect of the struggle in the Transvaal and the possibility of help from India. There can be no two opinions outside South Africa, and possibly Hare Street, as to the moral aspects of the question; for it must be remembered that the Indians in the Transvaal are not claiming any political rights, but merely treatment as human beings first, and, next, equality before the law. It is open to the South Africans to exclude Indians altogether, but, once they are admitted, they are morally bound to refrain from a treatment of them which is an extreme and unpardonable outrage on humanity. To degrade any part of the human race to the level of cattle is in the present stage of progress an insult and an offence to the whole of mankind. It would be equally reprehensible to whatever race the humanity so degraded belonged, but the fact that these men are Indians has made their sufferings a national question to us and a standing reproach to the British people who, out of selfish fear of offending their own kith and kin, allow this outrage to be committed on their own subjects whom they have deprived of all means of self-protection. The great glory of the Transvaal Indians is that while men under such circumstances have always sunk into the condition to which they have been condemned and needed others to help them out of the mire, these sons of Bharatavarsha, inheritors of an unexampled moral and spiritual tradition, have vindicated the superiority of the Indian people and its civilisation to all other peoples in the globe and all other civilisations by the spirit in which they have refused to recognise the dominance of brute force over the human soul. Stripped of all means of resistance,
a helpless handful in a foreign land, unaided by India, put off with empty professions of sympathy by English statesmen, they, ignored by humanity, are fighting humanity’s battle in the pure strength of the spirit, with no weapon but the moral force of their voluntary sufferings and utter self-sacrifice. Mr. Polak has well said that the Indian nation is being built up in South Africa. The phrase is true in this sense that the supreme example of the moral and spiritual strength which must be behind the formation of the new nation, has been shown first not in India but in South Africa. The passive resistance which we had not the courage and unselfishness to carry out in India, they have carried to the utmost in the Transvaal under far more arduous circumstances, with far less right to hope for success. Whether they win or lose in the struggle, they have contributed far more than their share to the future greatness of their country.

We must consider their chances of success, and though we do not wish to speak words of discouragement, it will not do to hide from ourselves the enormous difficulties in the way. For success, either the Government in England must interfere and compel the Transvaal to do right, or the Transvaal must be stirred by shame and by the interest of the poorer part of the Boer community to reverse the laws, or the Indian Government must intervene to protect its subjects. The first course is unthinkable. It would mean a quarrel with the newly conciliated Transvaal, the marring of the work of which the Liberal Government is justly proud, and a resentment in South Africa which the English ministry will not face for the sake of all India, much less of a handful of Indian coolies and shopkeepers. The poorer Boers will be only inconvenienced, not seriously hurt by the extinction of the Indian shopkeeper, and, in any case, they are not a class who are wont to act politically. The Transvaal Government is not likely to yield to any sense of shame. The Boers are a stark race, stubborn to the death, and the grit they showed in the face of the British Empire, they are also likely to show in this very minor trouble. Nor are they likely to have forgotten the action of the Indians who rewarded the
comparative leniency of the Boer Government previous to the war by helping actively in the British attack on the liberty of the Transvaal. With their slow minds and tenacious memories they are a people not swift to forget and forgive; we do not rely greatly on their present professions of friendship to the Power that took from them their freedom, and they are wholly unlikely to put from their minds the unpardonable intrusion of the Indian residents into a quarrel in which they had no concern or status.

There remains the Indian Government, and what can the Indian Government do? It can forbid, as has been suggested, Indian cooly recruitment for Natal. This would undoubtedly be a great blow to the planters and they would throw their whole influence into the Indian scale. But, on the other hand, the mass of the Natal whites are full of race prejudice and their desire is for that impossible dream, a white South Africa. A more effective measure would be the suspension of trade relations by the boycott of Colonial goods and the cessation of the importation of Indian raw materials into South Africa. But that is a step which will never be taken. Even if the Indian Government were willing to use any and every means, the decision does not rest with them but with the Government in England, which will not consent to offending the colonies. The Indian Government would no doubt like to see an end of the situation in the Transvaal as it weakens such moral hold as they still have over India, and they would prefer a favourable termination because the return of ruined Indians from the Transvaal will bring home a mass of bitterness, burning sense of wrong and standing discontent trained in the most strenuous methods of passive resistance. And many of them are Mahomedans.

The one favourable factor in favour of the Transvaal Indians is their own spiritual force and the chance of its altering the conditions by sheer moral weight. It is India’s duty to aid them by financial succour which they sorely need and the rich men of the country can easily afford, by the heartening effect of public and frequently expressed moral sympathy and by educating the whole people of India literate and
illiterate in an accurate knowledge of what is happening in the Transvaal. This is the only help India can give to her children over the seas so long as she is not master of her own destinies.

Facts and Opinions

Sir Pherozshah's Resignation

The resignation of Sir Pherozshah Mehta took all India by surprise. It was as much a cause of astonishment to his faithful friends and henchmen as to the outside world. The speculation and bewilderment have been increased by the solemn mystery in which the Dictator of the Convention has shrouded his reasons for a step so suddenly and painfully embarrassing to the body he created and now rules and protects. A multitude of reasons have been severally alleged for this sudden move in the game by ingenious speculators, but they seem mostly to be figments of the imagination. It was an ingenious guess that Sir Pherozshah has been appointed, as a reward for his great services to the Government, on the India Council and could, therefore, take no farther part in party politics. But until the appointment, if real, is announced, such self-denial is not obligatory, and surely Lord Morley would be quite willing to give his choice ten days' grace in order that he might pilot through this crisis in its fortunes a body so useful to the Government as the Convention that is striving this year to meet at Lahore. We ourselves lean to the idea that it is the complications ensuing on the unmasking of the Reforms that are chiefly responsible for the move. The Reforms are exasperating to Hindu sentiment, destructive to popular interests and a blow
even to the Loyalist Hindus who were loudest in acclaining the advent of the millennium. The Bombay leaders cannot accept the Reforms without exasperating the people or refuse them without offending the Government. They are in that embarrassing position which is vulgarly called being in a cleft stick. It is not surprising in a tactician of Sir Pherozshah’s eminence that, at such a critical juncture, he should prefer to guide the deliberations of the Lahore Convention from behind the veil rather than stand forward and become personally responsible for whatever he may think it necessary to compel the Convention to do. The Bengal Conventionists are already in danger of drifting away from the moorings and the new Regulations have, we believe, created the imminence of another dissension among the remaining faithful. The resignation of Sir Pherozshah makes it easier for the Bengal Moderates to attend the Lahore Congress, and that may not have been absent from the thoughts of the master tactician. But we never thought that Sir Pherozshah would care so much for the co-operation of the Bengalis as to allow Srijut Surendranath to be President, as certain sanguine gentlemen in Bengal seem to have expected. Failing Sir Pherozshah and Mr. Gokhale, who for obvious reasons cannot be put forward so soon after the Benares Presidentship, Mr. Madan Mohan Malaviya was evidently the man, and we find accordingly that he has been designated for the succession by the obedient coterie at Bombay. We await with interest the upshot of this very attractive entanglement and the method by which the Convention will try to wriggle out of the very difficult hole into which Lord Morley has thrust it.

The Council Elections

The elections for the Reformed Councils, so far as they have proceeded, entirely justify the description of the new bodies which we gave in our article on the Reforms. The elections for the United Provinces give a fair sample of the results which are sure to obtain all over India. With the exception of two or three gentlemen of the type of Pandit Madan Mohan Malaviya, there is none on the Council to represent the educated wealthy, much
less the people at large; all the rest are Europeans, Mahomedans and grandees. It is a Council of Notables, not a reformed Legislative Council representing both the Government and the people. In Bengal two gentlemen have been elected who represent the most lukewarm element in the popular party, for Sj. Baikunthanath Sen and Mr. K. B. Dutt stand not for the new movement in Bengal so much as for the old antiquated Congress politics which Bengal, even in its Moderate element, has left far behind. Behar sends one independent man in Mr. Deepnarain Singh. All the rest are of the dignified classes who either have no patriotic feelings or dare not express them. It is possible that Sir Edward Baker, in order to remove the stigma of unrepresentative subserviency from his Council, may try to nominate two or three who will help to keep Sj. Baikunthanath and his friend in countenance, but that purely personal grace will not mend matters. The Bengal Council is likely to be an even more select and unrepresentative body than we expected. We counted the District Boards as possible constituencies for representatives of opposition and independent opinion, but, for the most part, they might almost as well have been preserves for the aristocracy. In East Bengal it is evident that the Councils will be a Mahomedan and European body.

**British Unfitness for Liberty**

By all Anglo-Indian papers it was triumphantly announced as a conclusive proof of the unfitness of the Indian people for self-government that the Surat Congress should have been broken up by the storming of the platform when passions were highly excited and relations between parties at breaking-point. Every ordinary sign of excitement at a public meeting is telegraphed to England under some such graphic title as “Uproarious proceedings at the Provincial Conference”. But if rowdyism is a sign of unfitness for liberty, there is no country so unfit as England itself and logically, as lovers of England, our Anglo-Indian friends ought to pray that Germany, which knows how to sternly stop such disturbances, or Russia, which knows how to punish them,
should take charge of England and teach her people respect for law and order. The excitement of the great revolutionary struggle now proceeding in England has already in these few days induced such lawlessness and disorder that it is becoming almost impossible for Conservative speakers to command a public hearing. At first it was the Liberal Minister, Mr. Ure, whose meetings were systematically interrupted and broken up by organised Conservative rowdyism. Since then the Radicals have retaliated with much greater effect, first, with “good-humoured” interruption, then with more formidable tumult and, finally, we see the temper rising to absolute ferocity. Not only do we read in one telegram of four Conservative meetings which were of a disorderly nature, while Lord Kesteven and Lord Harris were refused a hearing, but the windows at Mr. Ure’s last meeting were broken with a battering-ram and several of his audience were cut; and the other day a Conservative meeting was broken up, the agent left senseless by his assailants and the candidate only saved by a skilful flight. Nor were the worst excesses of which our young men were accused in the prosecution of the Boycott and picketing, anywhere near the violence and recklessness of which Englishwomen have been systematically guilty during the last few months. Clearly it is time that a more capable nation conquered and took charge of England.

The Lahore Convention

The prospects of the Lahore Convention seem to be exceedingly clouded. In the matter of the Presidentship the fiat has gone forth from Bombay that Pandit Madan Mohan shall be President and, unless the dissatisfaction with the Mehta leadership has extended itself to the subservient Congress Committees, it is likely that the Bombay nomination will give the lead to the rest of the Conventionist coterie, excepting perhaps Burma and Bengal. The Convention is now at a critical stage of its destinies. Disowned by the Punjab, troubled by strained relations between Bombay and Bengal, it has received the crowning blow from the Government which supports it; its policy has been discredited.
before the country and once more it has been proved to a dis-
gusted people that the methods of the Conventionists lead to
nothing but rebuffs, humiliation and political retrogression in
the name of reform. If this body is to survive, there is need of a
strong hand and skilful guidance, otherwise the present session
is likely to be the last. Already the Convention is becoming the
refuge of an out-of-date and vanishing coterie who no longer
command the confidence of the country. By its very constitution
the Convention has cut itself off from the people and a few
men meeting in conclave elect the delegates in the name of an
indifferent or hostile public. The dying past in vain strives to
entrench itself in this insecure and crumbling fortress. Every day
will serve to undermine it more and more and the Nationalists
are content to let time and inevitable tendency do their work for
them. Only by a radical self-purification and change of policy
can the Convention hope to survive.
The Moderate Manifesto

THE PRACTICAL exclusion of the educated classes, other than Mahomedans, landholders and titled grandees, from the new Councils and the preference of Mahomedans to Hindus has rung the death-knell of the old Moderate politics in India. If the Moderate party is to survive, it has to shift its base and alter its tactics. If its leaders ignore the strong dissatisfaction and disillusionment felt by educated Hindus all over India or if they tamely acquiesce in a reform which seems to have been deliberately framed in order to transfer political preponderance from Hindus to Mahomedans and from the representatives of the educated class to the landed aristocracy, they will very soon find themselves leaders without a following. The Moderate party at present is held together merely by the prestige and personal influence of the small secret Junta of influential men who lead it, not by any settled convictions or intelligent policy. The personalities of Mr. Gokhale and Sir Pherozshah Mehta in Bombay, of Sj. Surendranath Banerji and Sj. Bhupendranath Bose in Bengal, of Pandit Madan Mohan Malaviya in the United Provinces, of Mr. Krishnaswamy Aiyar in Madras constitute Moderatism in their respective provinces. What these old and respected leaders decide in their close and secret deliberations is accepted, no longer without cavilling, but still with a somewhat reluctant acquiescence by their party. But the public mind has now been too deeply stirred for the leaders to ignore the opinion of the country. The resignation by Sir Pherozshah Mehta of his Presidentship of the Lahore Convention following so soon after the publication of the Regulations, the speech of Mr. Gokhale at the Deccan Sabha and the manifesto issued by the Calcutta Moderates are the first signs of the embarrassment felt by the heads of the party. There can be no doubt that they have
allowed themselves to be tools in the hands of the officials and were not prepared for being thrown overboard as the sole recompense.

The speech of Mr. Gokhale shows the line along which the Bombay Moderate leaders desire to pilot their followers. It is the line chalked out for them by Lord Minto and other Anglo-Indian advisers. A great deal of feeling has been created against Mr. Gokhale throughout the country by his justification of the “stern and relentless” measures employed by the Government against the Nationalist party and the Boycott movement and by the Bombay Government’s use of the new repressive legislation to crush a personal adversary in Mr. Gokhale’s interests. The Moderate leader has with a belated adroitness used the disqualification of the Nationalist, Mr. N. C. Kelkar, to rehabilitate himself, if that be possible, by championing the cause of a political opponent. We do not know whether Mahratta sentiment will be shallow enough to be misled by this manoeuvre. The disqualification of Mr. Kelkar is an incident we welcome as a gain to our cause. On the other hand, apart from the empty formula of protest and a formal recognition of the sentiment of the country against the defects of the measure, the speech is merely a repetition of Lord Minto’s appeal to give this vicious, injurious and insulting measure a fair chance,—on the very shadowy possibility to which the Moderate leaders still profess to cling, that all this alloy will be changed to pure gold in the next three years. Mr. Gokhale is still the political henchman of Lord Minto and echoes his sentiments with a pathetic fidelity.

The manifesto of the Moderate leaders in Calcutta is of more importance. The Bengal veterans have not yet lost caste by publicly turning against their countrymen and approving Government repression; they still keep some touch with public sentiment and have not yielded body and soul to the rallying call of Lord Morley. Even so fervid an anti-Nationalist as Dr. Rash Behari Ghose, to the great discontent and surprise of the *Englishman*, has signed the document. The manifesto shows a clear sense of the shortcomings of the measure of reform which was acclaimed with such gratitude by these
same able politicians when the skeleton had not been filled in
with its present generous padding. It is to be regretted that
a false note has been struck by the reference to the modifi-
cation of one clause and the complaint that the “relief” thus
afforded was insignificant and many distinguished men would
still be barred out of the Council. Are the distinguished men
of Bengal paupers cringing for personal doles that this kind of
language should be used or this kind of argument advanced?
We cannot congratulate the framer of the manifesto either on
the form or the matter of this unhappy sentence. The recog-
nition of class and creed as a basis of representation, the ex-
clusion of popular interests in favour of the dignified elements
in the community, the illusory nature of the non-official ma-
jority, the limitation of the functions of the Councils to crit-
icism without control and the denial of freedom of election
are the real gravamen of the charges against Lord Morley’s
measure, and the barring out of certain distinguished men is
a mere incident which can certainly be used in newspaper ar-
ticles and speeches as an indication of motive, but ought not
to have been introduced into a grave document of this na-
ture. The effective representation of the people, the preserva-
tion of sound democratic principles of representation in the
formation of the electorates and freedom of election are the
objects disinterested and patriotic men should hold before them,
not the privilege of entry into the Councils for distinguished
men.

But while the manifesto contains a full and exhaustive
statement of the objections to the Reform, it is silent as the
grave with regard to the practical methods which the Mod-
erate leaders propose to adopt in order to bring about real
reform. Will they follow the Bombay lead? Will they strike
out a line of their own? At the close of the manifesto there
is a pious expression of indomitable hope characteristic of
the Moderate party, the party of obstinate illusions; the sig-
natories, it seems, do not despair of the Government seeing
the error of their ways and modifying the regulations so as
to restore Lord Morley’s original scheme. There is something
heroic in this desperate absence of despair. It reminds us of the most heroic passage in Roman history when, after the massacre of Cannae, the beaten general and cause of the disaster returned an almost solitary fugitive to Rome, preferring flight to a soldier’s death, and the whole Roman senate came out to meet him and thank him that he had not despaired of his country. What is it that the Moderate leaders hope? Do they hope that the regulations will be so modified as to admit all the distinguished men whom they are interested in seeing at their back in the Councils? Or do they hope that the fundamental defects we have enumerated will be removed by a sort of spontaneous repentance and confession of original sin on the part of the Government? If so, what other basis have they for their incurable hopefulness except the faculty of the chameleon for living on unsubstantial air? The modifications of which they speak are not modifications, but a radical alteration of the whole spirit and details of the measure.

We also do not despair of a wholesome change in the attitude of the Government, but we do not believe in political miracles. There is no progress in politics except by the play of cause and effect, and if we want a particular effect, we must first create the suitable and effective cause. The only cause that can bring about so radical a change in the attitude of the Government is the failure of this misbegotten scheme and the necessity of substituting one better conceived and more liberal. And the only way to bring about the failure and the consequent necessity is to focus the whole opposition of the Hindu interest and the popular interest, with whatever Mahomedan assistance we can get, in a movement of abstention from the present Councils and an active agitation by effective means for the recognition of the great democratic principles that have been ignored and the formation of a new scheme after consultation with the popular leaders. This, it seems to us, is a legitimate sphere of activity for a strong and self-respecting Moderate party. But if they stultify themselves by accepting in any way a
measure designed to reduce them to nullity or impotence, they will commit suicide. Their empty protests against the defects of the Bill will be recognised as meaningless, for they will have deprived themselves of their only leverage for remedying the defects. The country has no room any longer for a party of mere sanguine expectancy and helpless dependence on the will of superior power. Moderatism at present is a mass of ill-defined aspirations, ungrounded hopes and helpless methods leading to perpetual and repeated disappointment, increasing weakness and deepening self-discontent. No party vowed to these uninspiring methods and depressing experiences can hope to survive at a time when political life is becoming more and more vivid and real. The Moderates must give up their vague unpracticality and adopt a definite aim, a distinct programme, effective methods.

We do not know whether the Moderate leaders could ever bring themselves so far as to stand out for a real measure of control as distinguished from a wider power of criticism. But there is no reason why they should not make up their minds to fight for a popular electorate based on education, exclusive of class and religious distinctions, free election and an elective majority, and refuse to be satisfied with less. In that case, the Nationalist party would represent a more advanced force standing out for a measure of effective control and a democratic electorate based on literacy, in addition to the Moderate demands. If, on the other hand, the Moderates would also accept control as a necessary factor of any political settlement, Moderate and Nationalist would again come into line and stand on a common platform, the only distinction being that one party would accept the settlement as a satisfactory solution for the present, while the other would regard it merely as an instrument for developing autonomy. But while the exclusory clauses of the Moderate Convention’s Constitution remain, this drawing together is not possible, or, if it were possible, could not be sincere and effective. Those clauses are a sign and pledge of the Mehta-
Morley alliance and ratify the policy of which Mr. Gokhale’s Poona speech was the expression, the policy of rallying the Moderates to the Government’s support and crushing the Nationalists.

Facts and Opinions

The United Congress Negotiations

The persistence of the Bengalee in shielding Moderate obstinacy under cover of an appeal to the wholly inconclusive proceedings of the private Conference in the Amrita Bazar Office last year shows both the paucity of possible arguments for the Moderate position and the readiness of its chief organ to ignore facts of which it has been reminded more than once and which it cannot deny. The difference between the conference last year and the recent negotiations is radical. That conference was between Conventionists and non-Conventionists, the recent negotiations were between Moderates and Nationalists. The Amrita Bazar Office Conference was an attempt made by certain leaders in Bengal and Maharashtra to secure admission for the Nationalists to the Convention. The United Congress Committee was confined to Bengal and sat to consider whether Bengal Moderates and Nationalists could not agree together before inviting the Conventionists of other provinces to accept the terms offered by United Bengal. Last year's Conference was a confabulation of leading men representing their own opinions only, this year's negotiations were conducted by men elected for the purpose by the Provincial Conference representing the whole of Bengal. At the Conference in Bagbazar it was the middle section of opinion,
neither Moderate nor Nationalist, of which Sj. Motilal Ghose, Rai Jotindranath Chaudhuri, and some of the older leaders in the Mofussil are the most influential members, which engineered a compromise in the absence of the Nationalist leaders. Sj. Tilak was a prisoner in Mandalay jail, Sj. Aurobindo Ghose under trial at Alipur, Sj. Khaparde and Sj. Bipin Chandra Pal absent in England. The compromise was reluctantly accepted by many of the Nationalists present,— as we have ascertained by correspondence with some of the chief Nationalists who attended,— and only because it was pressed on them that these were the only terms on which the Moderate party would admit of the idea of union. It was not accepted at all by the Bengal Nationalists and it has been recently admitted by the Amrita Bazar Patrika that letters were received from the Mofussil repudiating the surrender on the question of the creed. How is it that the Bengalee persists in ignoring these facts? The compromise was rejected by the Moderates themselves, Bombay refusing utterly to recognise the four Calcutta resolutions as a possible part of any treaty, and this was recognised by the Moderates this year; for at the first meeting of the United Congress Committee it was distinctly intimated to the Nationalist members that the four resolutions must not be pressed as a condition of union. In other words the one concession for which some of the leading Nationalists induced themselves to waive their rooted objections to constitution and creed, is expunged and the Nationalists are expected to be bound by a rejected compromise by which the Moderates refuse to be bound. They are expected to adhere to the concessions they made last year, while the only concession made to them is withdrawn. This fact is quite sufficient by itself to put the Bengalee’s argument out of court. We repeat that the recent negotiations had nothing to do with last year’s abortive compromise, rejected as it was by both parties immediately after it was made. Their sole object was to ascertain whether the Moderates would accept substantial concessions from the Nationalists without asking the latter to sacrifice their conscience and their principles. Apparently they are not. Therefore union is impossible.
A New Sophism

Another and very singular argument is advanced by the Bengalee which evinces a similar disregard of facts and of the real significance of facts. It is alleged that both sides in Bengal are agreed as to the four resolutions, that the creed is part of the four resolutions, that the creed was accepted by the Nationalists at Pabna and therefore they ought not to object to sign it as a condition of entering the Congress. In the first place, if the four resolutions are to be so binding on the Nationalists that they must be ready to sign one of them at the call of the Moderates, then they must be made equally binding on the Moderates and we call on them to sign a declaration of acceptance of the Boycott as a condition of entry into a United Congress. Just as the Moderates from Bombay accepted the Boycott resolution at Calcutta in deference to the weight of public opinion, so we accepted the Colonial self-government resolution as the opinion of the majority and are no more bound to subscribe to it personally than Sir Pherozshah Mehta is bound to subscribe to the Boycott. The four resolutions merely framed a compromise between the two political schools, not a declaration of Nationalist faith. As for Bengal, it is well known that the whole of Bengal does not accept Colonial self-government as the ultimate goal of political aspiration. At Pabna it was only to avoid a discussion dangerous to unity that the Nationalists contented themselves, in spite of the majority they had, with placing their dissent on record through the mouth of Sj. Manoranjan Guha. The Bengalee cannot have forgotten that incident. It was revived again at Hughly when the Moderates insisted on whittling down the Boycott to a mere commercial measure as a price of their adherence to the Conference and Sj. Aurobindo Ghose desired to bring forward an amendment, which he would subsequently withdraw, in order to mark that the Nationalists did not accept the resolution as the opinion of the country. The Moderate leaders threatened to withdraw if this was done and Sj. Aurobindo Ghose was requested to confine himself to the precedent established by Sj. Manoranjan Guha at Pabna. He then distinctly expressed his doubt whether
this would be sufficient to make the Nationalist attitude clear to the country and the advantage taken of our complaisance by the Bengalee to misrepresent the Nationalist attitude at Pabna shows that his apprehensions were perfectly justified. If this is the light in which the Moderates choose to put the Nationalist willingness to compromise, it may be necessary at the next Conference for our party not only to move an amendment but to put it to the vote regardless of Moderate threats of secession.

Futile Espionage

We wonder whether it is really impossible to maintain a great Empire without demoralising oneself and the country by means of an unworthy system of espionage. Since the initiation of the Swadeshi movement the army of spies and informers have grown as plentiful as insects round a bright light. Formerly men of some distinction had the honour of being watched in their houses, dogged in their goings, honoured by the private inspection of their correspondence. But nowadays it is enough to be suspected of patriotism to have the inefficient hirings of the Police, if not the worthy guardians of the Law themselves, sticking like burs to one’s heels. Is anything gained by these excessive and no doubt costly precautions? If we are to judge by the sorry specimens who have besieged us for the last six months, a more incapable creature than the ordinary Indian spy does not exist. He has an engaging simplicity of artifice which at once betrays his savoury vocation, and if he does not carry “spy” written legibly on his forehead, as a multitude of them do, he is so transparent in his methods that he might just as well be labelled, “Due at Royd Street.” Nor do we quite see what is gained by watching a man’s house or his office with an open brazenness. The office of the Dharma has recently been favoured with the loitering of watchers who spend their days gazing lovingly at the building and making affectionate and importunate enquiries as to the movements and habits of the editor. This open love-making strikes us as a little indecent; it would be better done behind a veil. And what do the authorities hope to gain by these
unique researches? Do they hope to see either bombs or packets of sedition being carried into the building? Or is a leader of public agitation likely to convert his newspaper office or his house into an open resort of secret conspirators? Even a bureaucracy ought to credit its political opponents with some little common sense, even if they cannot credit them with honesty of motive and frankness of action.

Constitutional Voyagers

We understand that some seven or eight faithful hearts are meditating the journey to Lahore to assist Mr. Madan Mohan Malaviya in carrying out Sir Pherozshah’s orders. We wish them a good voyage and a speedy repentance. One wonders, by the way, where the delegates of the Convention are going to start up from at the last moment. We watch in vain for the news of numerous elections all over the country. Secret conclaves, hushed-up quarrels, sittings with silent visitors, and, finally, secret elections seem to be the best features of convention politics! Or are the delegates ashamed of publishing their names?
Creed and Constitution

The attempt to bring about the unity of the two parties in Bengal as a preliminary to the holding of a United Congress has split on the twin rocks of creed and constitution. We will place before the country as succinctly as possible the issues which were posited during the negotiations and state clearly the Nationalist attitude, leaving it to Bengal to judge between us and the upholders of the Convention’s creed and constitution. We ask our countrymen to consider whether the concessions we made were not large and substantial and the single concession offered to us worthless and nugatory, whether the reservations we made were not justifiable and necessary, except on the view that principles are of no value in politics, and, if they come to the conclusion that the proposals we made were fair and moderate, we ask them to absolve us of all responsibility for the failure of the negotiations.

The terms offered by the Moderate party were based on a compromise framed at the Amrita Bazar Office last year which has since been rejected by the Moderates in one of its most important features, namely, the insistence on the acceptance of the four Calcutta resolutions as an indispensable condition of union. The Moderate proposal was that the Nationalists should sign the creed unconditionally and accept the Conventionist constitution, but that the Bombay leaders should be asked to consent to the formation of a Committee this year at Lahore to revise the Constitution and pass it as revised at the next session. The terms of the revision would naturally be left to that Committee and if it were equally composed of Nationalists and Moderates, there would have been some value in the concession. But by a rule of the Moderate constitution all Associations not of three years’ standing would be debarred from sending delegates. The formation of the Nationalists into
a distinct party was only completed in the year 1906, that is precisely three years ago, and the rule was evidently framed in order to help in making impossible the election of Nationalist delegates. At the time the rule was framed there was not and could not be any association of our party with the requisite qualification, and such bodies as would have been qualified now, have mostly perished in the storm of repression which broke on the Nationalists after the unnatural alliance between coercive conciliation and an Indian progressive party previous to the Surat Congress, — an alliance not then declared, but sufficiently proved by the conduct and utterances of Sir Pherozshah Mehta and Mr. Gokhale then and after. It is evident, therefore, that if we accepted the Moderate constitution apart from its utter illegality, we should be consenting to our own exclusion by an electoral device worthy of Lord Morley himself, even though the front door might be nominally open to us. Only an insignificant number of Nationalists would be able to qualify as delegates and the Revision Committee would be a Moderate Committee and the revision a mere modification of unessential details. The concession therefore was nugatory, as illusory as the Reforms offered to us by bureaucratic benignity. On the other hand, the Nationalists were expected to sign a creed which they could not uphold as their own conscientious belief, to recognise an unconstitutional constitution and to leave the four resolutions to the chances of a Moderate Subjects Committee and the possible prohibition of their amendments by a Mehta or Malaviya.

The Nationalist members of the Committee rejected these impossible demands and submitted proposals of their own on each of the three main points at issue. They consented to accept the first Article of the Moderate Constitution which declared the objects of the Congress to be self-government and the acquisition of the rights of British citizenship; they refused to accept the second Article which requires every representative elected by the people to subscribe personally to these objects as a precondition of entering the pandal as a delegate. They refused to accept the Constitution as a Constitution, but they consented
to accept it as a set of provisional rules allowed by mutual agreement to govern Congress proceedings until a real Constitution was passed next year, provided that the rule limiting the right of election to Associations of three years’ standing which accepted the creed, should be made inoperative by the same mutual agreement. They agreed not to press the four resolutions as a precondition of union, provided they received an assurance that they should not be debarred from bringing them in the Subjects Committee and, if necessary, in the Congress itself. The Moderates rejected the proposal; they demanded unconditional acceptance and subscription to the creed as the indispensable basis of union. Yet the Nationalists had really conceded everything which the other party could reasonably expect. They accepted a limited self-government as the object of the Congress, although they refused to accept it as their own, they accepted the Moderate Constitution with the exception of one subclause which meant the exclusion of Nationalist delegates; and made no farther stipulation that it should be changed in any way previous to being passed as the real legal Constitution of the Congress; they consented to leave over the question of the four resolutions, reserving only their constitutional right to move them in Subjects Committee and in Congress. We ask, could anything have been fairer, more generous, more thoroughly pervaded by the desire to bring about unity even at the cost of substantial, indeed immense concessions?

Our attitude with regard to the creed has been consistent throughout. We accepted the Colonial self-government resolution at Calcutta in 1906 because we saw that it was the opinion of the majority. We accepted it at Pabna and Hughly because it was the opinion of an influential minority whom we did not wish to alienate. If we had been asked to subscribe to it as a creed or even as the objects of the Congress in 1906, we should have at once and emphatically refused. At Pabna the Moderates did not venture to demand any such subscription from the delegates, they did not ask it at Hughly. They knew very well that the demand would have been indignantly repudiated by Bengal. We now go farther and consent to accept it as the objects of
the Congress, to be only altered when all India wishes to alter it, for that is the provision in the Moderate Constitution. We propose to accept it and adhere to it in the same spirit, either as the opinion of the majority or as a necessary concession to secure the adhesion of an influential minority. It is a political accommodation, nothing else. To consent to Article II, which is a clause of exclusion limiting popular election, is a very different matter. The Moderate argument was that it is not a creed we are asked to sign, but merely a declaration of acceptance of the objects of the Congress and that it need not in any way limit or modify our speech and action except for the few hours spent in the Congress pandal. Apart from the very doubtful political honesty of such a distinction, we do not believe that it is the view of the creed held in other parts of India and in practice it could not work. The District Associations and the political Associations electing delegates to the Congress are expected by the Moderate Constitution to subscribe to the Congress creed or statement of objects and, if they utter or allow their prominent members to utter sentiments or pass resolutions inconsistent with it, the Congress would have a right to feel embarrassed and stigmatise the departure as double dealing. This is the reason why we have always opposed the limitation of the aims or beliefs of the Congress by any hard and fast rule. We would oppose it even if the creed were a declaration of the Nationalist faith. Such a limitation deprives the Congress of its free and representative character, it hampers aspiration and public opinion, it puts a premium on political hypocrisy. Even if we allow the argument of the Bengal Moderates, our fundamental objection to Article II is not removed. It is an exclussory clause, it limits the right of the people to elect any representative they choose, it sets up an authority over the electorate in the same way as the exclussory clauses of the Government Reform Councils Regulations, it is a sort of Congress Test Act arbitrary and undemocratic. The true democratic principle is that the man elected by the people must be recognised as a delegate, whatever his opinions. We shall always oppose any restriction of the freedom of election by the Government; how can we consistently do so, if we recognise
a restriction in a popular assembly of our own making? And if this principle of exclusion is once admitted, where is it to stop? What guarantees us against the future introduction of a new clause demanding the signing of a declaration renouncing Boycott and passive resistance as a precondition of entrance into the pandal?

It will be seen therefore that from whatever point of view it is taken, the refusal to accept Article II of the Convention rules was not only reasonable, but the Nationalists could not have taken any other course without committing political and moral suicide. The reasonableness of our position on the two other points is self-evident and need not be argued. The refusal of these liberal concessions even by the Bengal Moderates shows that the holding of a united Congress is impossible. The argument that the Convention cannot accept such terms, only shows that the Convention can never be the basis of a united Congress and that, while it exists, a united Congress is out of the question. Before, therefore, any farther steps can be taken in that direction, we must await the collapse of the Convention which we believe to be not far distant. The Nationalist party have stated the terms on which alone they will consent to a compromise, and they will not lower them, neither will they renew negotiations until either the Convention is dead and buried or the Moderate leaders give up their attachment to the Convention creed and constitution.
To My Countrymen

TWO DECISIVE incidents have happened which make it compulsory on the Nationalist party to abandon their attitude of reserve and expectancy and once more assume their legitimate place in the struggle for Indian liberties. The Reforms, so long trumpeted as the beginning of a new era of constitutional progress in India, have been thoroughly revealed to the public intelligence by the publication of the Councils Regulations and the results of the elections showing the inevitable nature and composition of the new Councils. The negotiations for the union of Moderates and Nationalists in a United Congress have failed owing to the insistence of the former on the Nationalists subscribing to a Moderate profession of faith.

The survival of Moderate politics in India depended on two factors, the genuineness and success of the promised Reforms and the use made by the Conventionists of the opportunity given them by the practical suppression of Nationalist public activity. The field was clear for them to establish the effectiveness of the Moderate policy and the living force of the Moderate party. Had the Reforms been a genuine initiation of constitutional progress, the Moderate tactics might have received some justification from events. Or had the Moderates given proof of the power of carrying on a robust and vigorous agitation for popular rights, their strength and vitality as a political force might have been established, even if their effectiveness had been disproved. The Reforms have shown that nothing can be expected from persistence in Moderate politics except retrogression, disappointment and humiliation. The experience of the last year has shown that, without the Nationalists at their back, the Moderates are impotent for opposition and robust agitation. The political life of India in their hands has languished and fallen silent.
By the incontrovertible logic of events it has appeared that the success and vigour of the great movement inaugurated in 1905 was due to the union of Moderate and Nationalist on the platform of self-help and passive resistance. It was in order to provide an opportunity for the reestablishment of this union, broken at Surat, that the Nationalists gathered in force at Hughly in order to secure some basis and means of negotiation which might lead to united effort. The hand which we held out, has been rejected. The policy of Lord Morley has been to rally the Moderates and coerce the Nationalists; the policy of the Moderate party led by Mr. Gokhale and Sir Pherozshah Mehta has been to play into the hands of that policy and give it free course and a chance of success. This alliance has failed of its object; the beggarly reward the Moderates have received, has been confined to the smallest and least popular elements in their party. But the rejection of the alliance with their own countrymen by the insistence on creed and constitution shows that the Moderates mean to persist in their course even when all motive and political justification for it have disappeared. Discomfited and humiliated by the Government, they can still find no way to retrieve their position nor any clear and rational course to suggest to the Indian people whom they misled into a misunderstanding of the very limited promises held out by Lord Morley.

Separated from the great volume of Nationalist feeling in the country, wilfully shutting its doors to popularity and strength by the formation of electorates as close and limited as those of the Reformed Councils, self-doomed to persistence in a policy which has led to signal disaster, the Convention is destined to perish of inanition and popular indifference, dislike and opposition. If the Nationalists stand back any longer, either the national movement will disappear or the void created will be filled by a sinister and violent activity. Neither result can be tolerated by men desirous of their country’s development and freedom.

The period of waiting is over. We have two things made clear to us, first, that the future of the nation is in our hands, and, secondly, that from the Moderate party we can expect no
cordial co-operation in building it. Whatever we do, we must do ourselves, in our own strength and courage. Let us then take up the work God has given us, like courageous, steadfast and patriotic men willing to sacrifice greatly and venture greatly because the mission also is great. If there are any unnerved by the fear of repression, let them stand aside. If there are any who think that by flattering Anglo-India or coquetting with English Liberalism they can dispense with the need of effort and the inevitability of peril, let them stand aside. If there are any who are ready to be satisfied with mean gains or unsubstantial concessions, let them stand aside. But all who deserve the name of Nationalists, must now come forward and take up their burden.

The fear of the law is for those who break the law. Our aims are great and honourable, free from stain or reproach, our methods are peaceful, though resolute and strenuous. We shall not break the law and, therefore, we need not fear the law. But if a corrupt police, unscrupulous officials or a partial judiciary make use of the honourable publicity of our political methods to harass the men who stand in front by illegal ukases, suborned and perjured evidence or unjust decisions, shall we shrink from the toll that we have to pay on our march to freedom? Shall we cower behind a petty secrecy or a dishonourable inactivity? We must have our associations, our organisations, our means of propaganda, and, if these are suppressed by arbitrary proclamations, we shall have done our duty by our motherland and not on us will rest any responsibility for the madness which crushes down open and lawful political activity in order to give a desperate and sullen nation into the hands of those fiercely enthusiastic and unscrupulous forces that have arisen among us inside and outside India. So long as any loophole is left for peaceful effort, we will not renounce the struggle. If the conditions are made difficult and almost impossible, can they be worse than those our countrymen have to contend against in the Transvaal? Or shall we, the flower of Indian culture and education, show less capacity and self-devotion than the coolies and shopkeepers who are there rejoicing to suffer for the honour of their nation and the welfare of their community?
What is it for which we strive? The perfect self-fulfilment of India and the independence which is the condition of self-fulfilment are our ultimate goal. In the meanwhile such imperfect self-development and such incomplete self-government as are possible in less favourable circumstances, must be attained as a preliminary to the more distant realisation. What we seek is to evolve self-government either through our own institutions or through those provided for us by the law of the land. No such evolution is possible by the latter means without some measure of administrative control. We demand, therefore, not the monstrous and misbegotten scheme which has just been brought into being, but a measure of reform based upon those democratic principles which are ignored in Lord Morley’s Reforms,—a literate electorate without distinction of creed, nationality or caste, freedom of election unhampered by exclusory clauses, an effective voice in legislation and finance and some check upon an arbitrary executive. We demand also the gradual devolution of executive government out of the hands of the bureaucracy into those of the people. Until these demands are granted, we shall use the pressure of that refusal of co-operation which is termed passive resistance. We shall exercise that pressure within the limits allowed us by the law, but apart from that limitation the extent to which we shall use it, depends on expediency and the amount of resistance we have to overcome.

On our own side we have great and pressing problems to solve. National education languishes for want of moral stimulus, financial support, and emancipated brains keen and bold enough to grapple with the difficulties that hamper its organisation and progress. The movement of arbitration, successful in its inception, has been dropped as a result of repression. The Swadeshi-Boycott movement still moves by its own impetus, but its forward march has no longer the rapidity and organised irresistibility of forceful purpose which once swept it forward. Social problems are pressing upon us which we can no longer ignore. We must take up the organisation of knowledge in our country, neglected throughout the last century. We must free our social and economic development from the incubus of the
litigious resort to the ruinously expensive British Courts. We must once more seek to push forward the movement toward economic self-sufficiency, industrial independence.

These are the objects for which we have to organise the national strength of India. On us falls the burden, in us alone there is the moral ardour, faith and readiness for sacrifice which can attempt and go far to accomplish the task. But the first requisite is the organisation of the Nationalist party. I invite that party in all the great centres of the country to take up the work and assist the leaders who will shortly meet to consider steps for the initiation of Nationalist activity. It is desirable to establish a Nationalist Council and hold a meeting of the body in March or April of the next year. It is necessary also to establish Nationalist Associations throughout the country. When we have done this, we shall be able to formulate our programme and assume our proper place in the political life of India.

Facts and Opinions

The Perishing Convention

The Convention has met at Lahore and the fact that it could meet at all, has been hailed as a great triumph by the Anglo-Indian Press. But the success of this misbegotten body in avoiding immediate extinction has only served to show the marks of decay in every part of its being, and the loud chorus of eulogies streaming up from Anglo-India will not help to prolong its days. The miserable paucity of its numbers, the absence of great ovations to its leaders, the surroundings of stifling coldness, indifference and disapproval in the midst of which its orators perorated and resolved, have been too striking to be concealed. Even the Statesman, which is anxious to pass off this fiasco as a signal triumph for Moderatism and dwells on the enthusiasm and earnestness in the Bradlaugh Hall, — an enthusiasm and earnestness other reporters were unable to discover, — is obliged to admit the smallness of the circle to which these creditable feelings were confined. To this body calling itself the Indian National Congress how many delegates did the Indian nation send? The magnificent total of three hundred. From Bengal Sjs. Surendranath, Bhupendranath and A. Chaudhuri with less than half-a-dozen followers enriched Lahore with their presence; Madras could muster only twelve; the Central Provinces sent so
few that the reporters are ashamed to mention the number. The United Provinces sent, according to the *Amrita Bazar Patrika*’s correspondent, about thirty; the Bombay number is not mentioned, but even the *Statesman* does not go beyond eighty; the rest came from the Punjab. Even the Anglo-Indian champion of Conventionism, estimating largely and on the basis of hopes and expectations, cannot raise the total to four hundred. The same paper takes refuge in the “huge concourse” of spectators, but, when it comes to actual facts, the huge concourse melts away into some hundreds of spectators, an estimate supported by the statement in the *Bengalee* that there were considerably more spectators than delegates. It is admitted that Bradlaugh Hall which cannot seat more than three thousand was far from being filled, the *Statesman* observing two wings of the Hall to be quite empty and other accounts reporting the Hall to be half empty. An allowance of some thousand spectators to watch the performances of the gallant three hundred in this Thermopylae of Moderatism, will be as liberal as the facts will allow. Could there be more damning evidence of the unpopularity of this pretentious body of well-to-do oligarchs electing themselves semi-secretly in close electorates of a handful of men and yet daring to call themselves the nation’s Congress? The farce is almost over. The falsity of their pretensions has been shown up signally. The Convention will not dare again to meet in the Punjab; it will not come to Bengal; Nagpur, Amraoti and the Maharashtra are barred to it; and if the attendance from Madras is any sign, it will not be easy for it to command a following or an audience again in the Southern Presidency. What remains to Conventionism? Bombay city, Gujerat and the United Provinces are still open to them for a season. The abstention of a disgusted nation has passed sentence of death on this parody of the Indian National Congress.

The Convention President’s Address

The most remarkable feature of Pandit Madan Mohan Malaviya’s address is not what he said, but what he omitted to
say. If the accounts telegraphed can be trusted, he said nothing about self-government, nothing about Swadeshi, — the Boycott, of course, the Convention has boycotted, —- nothing about the Bengal deportees, only a few words about the Transvaal. The speech was really a speech about the Reforms and every other great question of Indian politics was ignored or neglected. The attitude of the Convention on the Reforms is marked by that open insincerity which is the hallmark of Moderate politics. The Convention resolution is made up of two parts, an ecstatic tribute of praise and gratitude to the two Lords Morley and Minto, for their earnest and “arduous” endeavours, (note the grotesque absurdity of the language), in extending to the people of this country a “fairly liberal” measure of constitutional reform, and a detailed and damning indictment of the measure for restrictions and provisions which are “excessive and unfair”, “unjust, invidious and humiliating”, “arbitrary and unreasonable”, and for the “general distrust” of the educated classes and the “ineffective and unreal” composition of the non-official majority. If there is any meaning in language, the second part of the resolution gives the lie direct to the first. The language used is far stronger than any the Karmayogin has ever permitted itself to employ in its condemnation of the Reforms and, if the condemnation is at all justified by facts, the Reforms are a reactionary and not a progressive piece of legislation. And yet who is the chief mouthpiece of the Convention and the most damaging critic of the Reforms? A gentleman who has set the seal of approval on Lord Morley’s measure by entering the Council of his province as an elected member. Actions speak more strongly than words, and the Government of India care little for criticism in detail so long as they get acceptation of the whole. From the Viceroy down to the obscurest Anglo-Indian scribbler the appeal to the Moderates is to criticise details hereafter, if they choose, but to accept the Reforms, the perpetual division of the two Indian communities, the humiliation of the Hindus, the extrusion of the educated classes from their old leading position, the denial of the only true basis of self-government, — to let, as the Indian Daily News persuasively
puts it, bygones be bygones. Anglo-India pats Moderatism on the back and says in effect: “What if we have kicked you downstairs? Can’t you be a good fellow and sit quietly on the bottom step until we take it in our heads to pull you up a little farther?” And Moderatism must comply if it wishes to be tolerated.

The Alleged Breach of Faith

The Moderate critics are never tired of harping on the difference between Lord Morley’s scheme and the Regulations and alleging or hinting that promises have been made to the ear which have been broken in the act. The Statesman very naturally resents the implied charge of breach of faith. We do not know what private hopes the Secretary of State may have held out to Mr. Gokhale or Sj. Surendranath Banerji, but, judging from Lord Morley’s public utterances, we do not think the charge of a breach of faith can be for a moment sustained. He has never pretended that his reform was the granting of a democratic constitution or the first step towards Parliamentary self-government. On the contrary he distinctly stated that if he had thought his measure to be anything of the kind he would have immediately withdrawn it. All that he promised was a scheme by which Indian public opinion could be more liberally consulted, and there were from the beginning distinct indications that the Government would put its own meaning on the phrase and draw a distinction between Indian opinion and Indian educated opinion. If the Moderates chose to interpret this limited concession as the granting of a constitution and a new Magna Charta, neither Lord Morley nor Lord Minto are to blame for a deliberate and gratuitous self-deception and deception of the people. The complaint that the non-official majority is ineffective and unreal, means simply that it is not a popular majority. We do not think the Government ever promised a popular majority; they promised a non-official majority and they have given it. If the Moderates chose to believe that the Government would go out of its way to make the non-official majority a popular one, they have themselves to thank.
for this pitiful self-delusion, against which the Nationalists have been warning the country for some time past. The truth is that they have been utterly worsted in their diplomatic relations with British Liberalism and they are now trying to exculpate themselves before the public by throwing the blame on their allies. No English statesman can be condemned for trying to get the best of a diplomatic bargain of this kind; the loser must blame his own folly, not the good faith of the other party. Did not the Bengal Moderates recently propose a similar bargain to the Nationalists in the United Congress Committee’s negotiations? And, if the Nationalists had been fools enough to agree, would they have been justified afterwards in quarrelling with the good faith of the Moderates merely because they themselves had chosen to enter the Convention on conditions which would have meant hopeless ineffectiveness in that body and political suicide outside? If infants in diplomacy choose to cherish an obstinate admiration for their own Machiavellian cleverness or mere bookmen who do not understand the A.B.C. of practical politics, elect to play the game with past masters of political statecraft, the result is a foregone conclusion. We have exposed over and over again the hollowness of the pretensions of this measure to figure as a great step forward in Indian administration or the beginning of a new progressive era in Indian politics, but we did not need the publication of the Regulations to open our eyes to this hollowness. Lord Morley’s own statements, the nature of things and of humanity and the clauses of the Reform Bill itself were a sufficient guide to anyone with even an elementary knowledge of politics.

The Nasik Murder

The tale of assassinations is evidently not at an end; and it is difficult to believe that it will be until a more normal condition of things has been restored. The sporadic and occasional character of these regrettable incidents is sufficient to prove that they are not the work of a widespread Terrorist organisation, but of individuals or small groups raw in organisation
and irresolute in action. The Anglo-Indian superstition of a great Revolutionary organisation like the Russian Revolutionary Committee is a romantic delusion. The facts are entirely inconsistent with it. What we see is that, where there is sporadic repression of a severe kind on the part of the authorities, there is sporadic retaliation on the part of a few youthful conspirators, perfectly random in its aim and objective. The Nasik murder is an act of terrorist reprisal for the dangerously severe sentence passed on the revolutionary versifier Savarkar. It is natural that there should have been many meetings in Maharashtra to denounce the assassination, but such denunciations do not carry us very far. They have no effect whatever on the minds of the men who are convinced that to slay and be slain is their duty to their country. The disease is one that can only be dealt with by removing its roots, not by denouncing its symptoms. The Anglo-Indian papers find the root in our criticism of Government action and policy and suggest the silencing of the Press as the best means of removing the root. If the Government believe in this antiquated diagnosis, they may certainly try the expedient suggested. Our idea is that it will only drive the roots deeper. We have ourselves, while strongly opposing and criticising the actions and policy of the bureaucracy, abstained from commenting on specific acts of repression, as we had no wish to inflame public feeling; but to silence Nationalism means to help Terrorism. Our view is that the only way to get rid of the disease is to disprove Mr. Gokhale’s baneful teaching that violence is the only means of securing independence, to give the people hope in a peaceful and effective means of progress towards that ideal, which is now the openly or secretly cherished ideal of every Indian, and to that end to organise peaceful opposition and progress within the law. If the Government can retrace their steps and remove the ban from lawful passive resistance and self-help and the Nationalist party, while holding its ultimate political aim, will define its immediate objective within limits which a Radical Government can hereafter consider, we believe politics in India will assume a normal course under
normal conditions. We propose to do our part; we will see whether the Government think it worth their while to respond. They ought to be able to understand by this time that Nationalism and not Moderatism is the effective political force in India.

Transvaal and Bengal

There are two crying grievances which have done more than anything else to embitter popular feeling against the authorities and in both cases the populations most directly affected have resorted to passive resistance as the only remedy open to them. The first is the gross and systematic oppression now being practised on the Indians in the Transvaal, the other the repression of national aspirations towards unity and self-development in Bengal, typified by Partition and Deportation. Nothing can be more inconsistent than the attitude taken by the Moderate Convention towards these two questions. They have telegraphed their sympathy with the heroic passive resistance of the Transvaal Indians; they have shown their sympathy with Bengal by boycotting our boycott. Eighteen thousand rupees were promised for the Transvaal Indians in the one scene of enthusiasm which relieved the depressed dullness of the proceedings, and although we have little hope that this spasmodic activity will be followed up by steady support, it is better than nothing. On the other hand the Bengal questions were left to be moved by Bengalis, the Partition to Sj. Bhupendranath, the Deportations to Mr. A. Chaudhuri. A deputation was appointed by the Convention to proceed to lay the question of Partition once more before Lord Morley; and of whom, think you, the deputation is to consist? Sj. Surendranath Banerji and Sj. Bhupendranath Bose. Not a single Moderate deputy is forthcoming from the whole of India to support Bengal even to this extent in its bitter and arduous struggle. Yet men are not ashamed to go from Bengal as self-elected delegates to a Convention which has disowned and dishonoured Bengal and which Bengal has disowned.
Our Cheap Edition

The difficulty felt by many students and educated men of small means in buying the Karmayogin at its ordinary price of two annas, has been so much pressed on our attention that we have found it necessary to bring out a cheaper edition at one anna a copy. It is not an easy thing in this country to establish a weekly review of this standard written in English, and it has therefore been necessary for us at the outset to place a price on the paper which should ensure its being self-supporting even with a limited circulation. The Karmayogin, however, is now sufficiently successful to allow of a concession of this kind being made without financial injury. The subscribers to the dearer edition will be compensated by the superior get-up and paper, while the cheaper edition will remove the grievance of the large number who have hitherto been debarred from reading the review by their scanty means.
National Education

FROM the beginning of the national movement, in spite of its enthusiasm, force, innate greatness, a defect has made itself apparent, a fatality of insufficient effectiveness has pursued it, which showed that there was a serious flaw somewhere in this brilliant opening of a new era. The nature of that flaw has been made manifest by the period of trial in which, for a time, the real force which made for success has been temporarily withdrawn, so that the weaknesses still inherent in the nation might be discovered and removed. The great flaw was the attempt to combine the new with the old, to subject the conduct of the resurgence of India to the aged, the cautious, the hesitating, men out of sympathy with the spirit of the new age, unable to grasp the needs of the future, afraid to apply the bold and radical methods which could alone transform the nation, sweep out the rottenness in our former corrupt nature and, by purifying Bengal, purify India. It is now apparent that it was the Nationalist element which by its energy, courage, boldness of thought, readiness to accept the conditions of progress, gave the movement its force and vitality. Wherever that force has been withdrawn, the movement has collapsed. The older men have shown themselves utterly unable either to supply the moral force that would sustain the forward march of the nation or the brain-power to grapple with national problems. In Swadeshi the force of sentiment supplied, and the persistence of the great mass of silent nationalism in resisting any attempt to draw back from boycott has preserved, the movement to prefer indigenous and boycott foreign goods, but the withdrawal of active Nationalist endeavour has resulted in the stoppage of progress. Swadeshi maintains itself, it no longer advances. National Education languishes because the active force has been withdrawn from it; it
does not absolutely perish because a certain amount of Nationalist self-devotion has entrenched itself in this last stronghold and holds it against great odds under the most discouraging circumstances. A certain amount only,—because part of the active enthusiasm and self-sacrifice which created the movement, has been deliberately extruded from it in obedience to fear or even baser motives, part has abandoned it in disgust at the degeneration of the system in incapable hands and the rest is now finding its self-devotion baffled and deprived of the chance of success by the same incapacity and weakness at headquarters.

The National Council of Education, as it is at present composed, has convicted itself of entire incapacity whether to grasp the meaning of the movement or to preserve or create the conditions of its success. To the majority of the members it is merely an interesting academical experiment in which they can embody some of their pet hobbies or satisfy a general vague dissatisfaction with the established University system. To others the only valuable part of it is the technical instruction given in its workshops. The two or three who at all regard it as part of a great national movement, are unnerved by fear, scepticism and distrust and, by introducing the principles of Chanakya into its public policy, are depriving it of the first condition of its continued existence. It is folly to expect that the nation at large will either pay heavily or make great sacrifices merely to support an interesting academic experiment, still less to allow a few learned men to spoil the intellectual development of the race by indulging their hobbies at the public expense. That the people will not support a mere technical education divorced from that general humanistic training which is essential to national culture, has been sufficiently proved by the failure of Mr. Palit’s Technical College to command adequate financial support. Unless this movement is carried on, as it was undertaken, as part of a great movement of national resurgence, unless it is made, visibly to all, a nursery of patriotism and a mighty instrument of national culture, it cannot succeed. It is foolish to expect men to make great sacrifices while discouraging their hope and enthusiasm.
It is not intellectual recognition of duty that compels sustained self-sacrifice in masses of men; it is hope, it is the lofty ardour of a great cause, it is the enthusiasm of a noble and courageous effort. It is amazing that men calling themselves educated and presuming to dabble with public movements should be blind to the fact that the success or failure of National Education is intimately bound up with and, indeed, entirely depends upon the fortunes of the great resurgence which gave it birth. They seem to labour under the delusion that it was an academical and not a national impulse which induced men to support this great effort, and they seek to save the institution from a premature death by exiling from it the enthusiasm that made it possible. They cannot ignore the service done by that enthusiasm, but they regard it merely as the ladder by which they climbed and are busy trying to kick it down. They are really shutting off the steam, yet expect the locomotive to go on.

The successful organisation of the Bengal National College in Calcutta was the work of its able and enthusiastic Superintendent aided by a body of young and self-sacrificing workers. The National Council which nominally controlled, in reality only hampered it; all that the Council contributed to the system, was its defects. The schools in the Mofussil were created by the enthusiasm of the Nationalist party, the propaganda of its leaders and the ardent self-devotion of little bands of workers who gave their self-sacrifice and enthusiasm to lay the foundations. The Nationalist Council has never lifted a single finger to help the Mofussil schools beyond doling out unsubstantial grants to maintain them merely as necessary feeders of the Calcutta institution. But unless a movement of this kind is supported by wise organisation and energetic propagandism emanating from an active central authority, it must soon sink under the weight of unsolved problems, unsurmounted difficulties and unamended defects. The curriculum of the Council is extraordinarily elaborate and expensive, and involves a great outlay for the formation of library, laboratory and workshops, and, arranged as it is on the vicious Western system of driving many subjects at a time into the growing intellect, is slow, cumbrous, a strain on the
The financial problem created is one of crushing difficulty, yet the Council think they have done their duty when they have created the problem and do not seem even to dream that there is any call on them to solve it. Even for the Calcutta College in whose maintenance they are more keenly interested, they can only make feeble and spasmodic efforts when, as annually happens, there is a deficit in the budget. The academical problem of teaching so many subjects in so short a time without outdoing the exploits of the Calcutta University as a brain-killing and life-shortening machine, does not seem to occur to these lofty and secluded minds. They are content with creating the problem and maintaining it by their system of examinations. Even if funds were forthcoming, there would still be the necessity of providing a regular and plentiful supply of teachers trained in an entirely new system of instruction. This urgent problem the Council has systematically ignored, and not even the elementary steps of establishing a Teachers’ Training Class in Calcutta and issuing a series of suitable books in the vernacular has been attempted. The only problems which the Council seems willing to grapple with are, first, the problem of supporting National Education without incurring the wrath of the officials and, secondly, the problem of evading the spirit of the clause which forbids it to subject itself to any form of Government control, while observing the letter so as to prevent the invalidation of its endowments.

But if the National Council is content to fail in its duty, the country cannot be content to allow this great educational enterprise to perish. We do not know how or by whom the Council is elected. It seems to have followed the example of so many bodies in India which have started as democratic institutions and ended as close corporations self-electing and self-elected. But if it is impossible to alter the component character of this body and put into it keener blood and clearer brains, some other centre of effort must be created which will undertake to grapple with the problems of National Education, the supply of trained and self-devoted teachers and of books which will guide them
in the imparting of knowledge on new lines, the reawakening of interest, hope and enthusiasm in the country, the provision of the necessary funds to the mofussil schools, the forcing on the Council by the pressure of public opinion of a more rational and a more national system of teaching. But the first condition of success is the reawakening of the national movement all along the line, and this can only be done by the organisation and resolute activity of the Nationalist party.

Facts and Opinions

Sir Edward Baker’s Admissions

Of all the present rulers of India Sir Edward Baker is the only one who really puts any value on public opinion. He has committed indiscretions of a startling character, he has loyally carried out a policy with which he can have no heartfelt sympathy, but his anxiety to conciliate public opinion even under these adverse circumstances betrays the uneasiness of a man who knows the force of that power even in a subject country and feels that the ruling class are not going the best way to carry that opinion with them. While all the other provincial Governors have confined their inaugural speeches to the most empty platitudes, he alone has sought to speak as a man would who feels the difficulties of a perplexing situation. But we do not think he has helped the Government by his speech. It is in fact a series of damaging admissions. He admits that the exclusion of the Calcutta men by the restrictions attending Municipal election is deliberate, and he cannot be ignorant that this means the exclusion of the leading brains and the most influential personalities in the country. He admits that the Government have taken care to preclude the chance of being face to face with a numerically strong and robust opposition in the Council. If so, the Councils are not a mirror of the political forces in the country, not a free popular
Facts and Opinions

assembly, but a carefully limited council of notables friendly to the existing state of things. Whether the Government are to blame or not for guarding their interests by this manipulation of electorates, is quite another question. All we say is that they have so guarded themselves and, as a result, these Councils may be the kind of advisory body the Government want, they are not the popular assemblies, mirrors of public opinion and instruments of rapid political development, which the people want. Sir Edward Baker says that no Government can be expected to run the risk of putting itself into a permanent minority,—such a state of things cannot be allowed for a day. We quite agree. That is what we have been telling the people for a very long time. Unfortunately, very different hopes and expectations were raised in the minds of Moderate politicians and communicated by them to the people at large. If the eulogies of the Reform Scheme and the benevolent intentions of Government had been couched in less glowing language, with less of misleading fervour, the present disappointment, irritation and revolt would have been avoided. It is much the best thing for a Government circumstanced like ours to be quite frank and say from the beginning, “This much we mean to give; farther you must not expect us to go.”

Calcutta and Mofussil

The point which Sir Edward Baker, in common with all Anglo-Indian publicists, makes of the distinction between Calcutta and the Mofussil, is quite justifiable if the Councils are to be only a superior edition of the local Municipalities out of all relation with the political actualities of the country. It is an indisputable fact that a great deal of the best in the life of Bengal gravitates towards the capital and the Partition of Bengal has made no difference in this powerful tendency. Calcutta is to Bengal what Paris is to France. It is from Calcutta that Bengal takes its opinions, its inspirations, its leaders, its tone, its programme of action. One very important reason of this almost inalienable leadership is the greater independence which men enjoy in Calcutta, another is the higher organisation of life, resources, activity in this great
centre of humanity. So long as these causes exist, the supremacy of Calcutta will remain. The object of the electoral rules is to destroy the supremacy of the Calcutta men, whose independence and freedom of speech and action are distasteful to the instincts of the dominant bureaucrat. The attempt to decentralise the political life of Bengal is not new. In the earlier days of the new movement the Nationalist leaders made strenuous appeals to the Mofussil centres to liberate themselves from Calcutta domination and become equal partners in a better organised provincial activity. They thought it possible then because, in the first surge of the movement, the Mofussil centres in East Bengal had developed a young political vitality and independence far in excess of the old vitality and independence of Calcutta. But even in these favourable circumstances it was found that, though the districts far outran the capital in the swiftness and thoroughness of their activity, they always waited for an intellectual initiative and sanction from the leaders in Calcutta. Barisal under Sj. Aswini Kumar Dutta was the exception. What the people themselves could not accomplish under the most favourable circumstances, the Government is not likely to effect merely by excluding the Calcutta leaders from the Council. The very conditions of the problem forbid it. They can only disturb the present equilibrium by making political life in the Mofussil as free and well-organised as the life of Calcutta. By their own action they have destroyed such freedom and organisation as had been created. Nor can they make their Councils the instrument of so vital a change unless they also make them the centre of the political life of Bengal. This they can only do by a large literate electorate, free elections and effectiveness of the popular vote. But, at present, that is not what the bureaucrats desire. They do not desire a free and vigorous political life evenly distributed throughout the country,—that is the Nationalist ideal. They desire to foster a faint political life confined to the dignified and subservient elements in the country while killing the independent popular life, which finds its centre in this city, by an official boycott. They forget that artificial means are helpless against natural forces.
The Non-Official Majority

Sir Edward complains strongly of the attribution of motives to the Government in the matter of the non-official majority. He argues in effect that the non-official majority cannot be described as unreal or a sham merely because the electorates are so arranged as to return a majority of men favourable to Government. The majority is a non-official majority, but it is not a popular majority. Sir Edward answers that it was never intended to be a popular majority. It was meant only to represent the “honest” public opinion which is capable in most things of seeing eye to eye with the Government; all the rest of public opinion is not honest and therefore unfit for representation. A most delightful specimen of bureaucratic logic! The plain question rising above all sophisms is this, is the Government aware or is it not that the great body of educated opinion in India demand a change in the system of Government involving popular control in the administration, a change which Lord Morley, with all Anglo-India to echo him, has declared impossible? If the Government doubts it, dare they take a plebiscite of literate opinion on the question? They dare not, because they know what the result will be. Is not this knowledge the reason for so manipulating the electorates that they shall mainly represent special interests easily influenced by the Government and not the mass of the literate population? We do not charge the Government with a breach of faith or a departure from their original promises. We do say that the Reforms are purely a diplomatic move to strengthen the Government and weaken the popular interest. Sir Edward stigmatises the popular sentiment which sees an opposition of interest all along the line between the bureaucracy and the people, as dishonest and unfit for self-government. What of the very fundamental opposition of interest we have pointed out? It is easy to fling epithets; it is not so easy to disprove facts. We do not wish to be unfair to anyone and we acknowledge that Sir Edward Baker has shown a liberality of purpose far superior to that of any other provincial ruler. If there were a chance of any of the Councils being a genuine popular assembly, Sir Edward’s
creation would have the best chance. But it is not that and cannot be. If he is satisfied with its present composition, his admiration is not shared by the people of this country. He says in effect that it is quite as dignified as any previous Council. We agree, even more so. But it is not dignity to which popular sentiment is advancing, it is democracy. If the Councils do not provide a channel for the advance of that sentiment, it will seek other means of self-accomplishment.

Sir Louis Dane on Terrorism

The amazing lecture given by the Satrap of the Punjab to the Maharaja of Darbhanga and the other gentlemen who were ill-advised enough to approach him with their expressions of loyalty and of abhorrence at the Nasik murder, is a sample of the kind of thing Moderate politicians may expect when they approach the bureaucracy with their “co-operation”. What it is precisely that the various Satraps want of their long-suffering allies, we cannot conjecture. Some seem to want, like Sir George Clarke, the entire cessation of political agitation, because the political agitator is the spiritual granduncle of the political assassin. Others seem to want the entire Indian community to leave their ordinary avocations and turn detectives, in order to supply the deficiencies of that costly police force through which the bureaucracy governs the country. But Sir Louis Dane’s diatribe seems difficult to account for except on the supposition that he is a disciple of Hare Street and believes that the whole population of India, from the Maharaja of Darbhanga to the grocer and the shoemaker, know the personality, intentions, plans and secret operations of the Terrorists and conceal them from the Government out of innate cussedness or invincible sympathy with the assassins. It is difficult to have patience with the insensate folly which persists in these delusions and, by lumping all political agitation into one category, does its best to bring about the calamity which it imagines. The fewer rulers like Sir Louis there are in this country, the better for the nation and the Government; for they are the best allies that Terrorism has.
The Menace of Deportation

Once more rumours of deportation are rife, proceeding this time from those pillars of authority, the police. It seems that these gentlemen have bruited it abroad that twenty-four men prominent and unprominent are within the next six or seven days to be deported from Bengal, and so successfully has the noise of the coming coup d’état been circulated that the rumour of it comes to us from a distant corner of Behar. It appears that the name of Sj. Aurobindo Ghose crowns the police list of those who are to be spirited away to the bureaucratic Bastilles. The offence for which this inclusion is made, is, apparently, that he criticises the Government, by which we presume it is meant that he publicly opposes the Reforms. It is difficult to judge how much value is to be attached to the rumour, but we presume that at least a proposal has been made. If we are not mistaken, this will make the third time that the deportation of the Nationalist leader has been proposed by the persistence of the police. The third time is supposed to be lucky, and let us hope it will be the last. The Government ought to make up its mind one way or the other, and the country should know, whether they will or will not tolerate opposition within the law; and this will decide it. Meanwhile, why does the thunderbolt linger? Or is there again a hitch in London?
BOYCOTT is an ideal, like freedom; it means independence in industry and commerce, as freedom means independence in administration, legislation and finance. But it is not always possible to accomplish the whole of the ideal by the first effort towards it. So long as we cherish the ideal whole and unbroken, we are at liberty to consult the demands of practicability and realise it, not at one rush, but by successive approximations, each being the vantage-ground for a fresh rush forward. This does not imply slow progress, the leisurely and gentlemanlike spreading out of the struggle for freedom through five or six centuries in order to avoid the perils of the struggle; it is rather the necessary condition of rapid progress. The force of the hunger for the whole ideal, of impatience with half realisations must remain behind, but the means of each advance must be secured by that which went before.

When the boycott movement first began, it was the opinion of Mr. Tilak and other Nationalist leaders that the exclusion of foreign goods should be directed against British products first of all. The immediate exclusion of all foreign goods was obviously impracticable. But very soon it became evident that the voice of the whole nation in Bengal and Maharashtra was for the more comprehensive movement, and the leaders wisely put aside their own opinion and made themselves simply executors of the national will. Wisely, because at such times there is something divinely inspired in the motions of the national mind which exceeds the human wisdom and statecraft of the individual. It was and remains true that the exclusion of all foreign goods is an impracticable measure in the present economical condition of India. But the comprehensive boycott movement was necessary, — first, in order that the ideal might be stamped deep into the consciousness of the people; and that has been done by the
very acts of repression which were largely designed, as admitted by Mr. Hobhouse, to crush the Swadeshi Boycott movement; — secondly, in order that the idea of India’s separate and self-sufficient existence as a nation might thoroughly replace the habit of dependence and contented economical servitude which English education and the effacement of political life had induced. That work also is done. The idea of Swadeshi has entered into the very marrow of our thought and feeling. It is therefore time now to consider the practical measures by which boycott may be made gradually and steadily successful.

Boycott is essentially a form of voluntary protection and it cannot do more than protection does towards the creation of industries. Protection serves two ends; it prevents the infant industry from being strangled in its weak unestablished state by full-grown and powerful competitors, it gives a stimulus to it by assuring it a market. It cannot supply the place of enterprise, business capacity, naturally favourable conditions. It can however mitigate the incidence of natural conditions, not entirely but comparatively unfavourable, by throwing a countervailing disadvantage into the scale of the more favourably circumstanced competing country. This is the limit of the utility of protection; it is also the limit of the utility of boycott. What boycott could do for the cloth industry, it has done, but for the producer to lean entirely on boycott and expect it to take the place of business enterprise, energy, capacity, the improvement of his goods, is to lay a burden on the national spirit which it is neither possible nor desirable that it should bear. The nation agrees to purchase an inferior indigenous article in place of a superior foreign article, not with the intention that the producer should be excused the necessity of improvement and should be able to force the inferior article on us to all eternity, but solely to give him time to improve his methods, his processes, his machinery, his dexterity in spite of the competition of his superior rival. It saves him from extinction, it gives him a period of grace; he must use it to reach and outdistance the excellence of his rival’s methods and production, and if he neglects this duty he does it at his peril and it is not open to him to cry out against the want of patriotism.
in the people because they withdraw a support which he has abused. The nation, again, agrees to deny itself necessaries or restrict the quantity of its purchase, not with the intention of permanently lowering its standard of comfort and living a barer and more meagre life, but in order to give time for capital and enterprise to increase the supply, so that eventually the wants of the nation may be supplied from within. If it is found that there is not an expansion of industry commensurate with the self-denial in the nation and that only a few businessmen are exploiting the national sentiment for their own personal profit, it is idle to expect the boycott to survive. We have noticed signs of a most unhealthy spirit of mutual trade jealousy among Swadeshi mill-owners, who seem to be under the impression that they are natural rivals for the patronage of the consumer. No single Indian producer can monopolise the supply necessary for national consumption, nor can even the whole body of Indian producers combined, at present, meet the demand. One Indian mill-owner gets nothing by the decline of another; on the contrary, his prosperity is bound up in the prosperity of all other Indian mills; for the maintenance of the boycott, which saved the mill industry at a crisis of its destinies, depends on the increased supply of Swadeshi cloth. Instead of attempting to rise by pressing each other down, it would be far better for the Indian producers to follow the example of English manufacturers and combine for the welfare of the national industry.

The first condition of a successful boycott, therefore, is the organisation of national industry with a view, first, to the improvement and extension of that which exists, secondly, to the opening up of new lines of enterprise. This is largely a work for the producer himself, but there is one duty which the leaders of the national movement can perform and that is to organise information. The nature of the industries that can be profitably opened in India, the unfavourable circumstances, the favourable, the means of obviating or mitigating the former, utilising and improving the latter, the conditions of success, the cost of outlay and management, this is the information that capital and enterprise need; the Swadeshi articles that can be procured, the
place of their manufacture, their price, quality and supply, this is the information needed by the consumer. To organise all this information would be to give a great stimulus to the advance of Swadeshi.

The second condition of a successful boycott is the organisation of supply. It is not possible for everyone to hunt Swadeshi articles to their source and purchase them. There must be a supplying agency which brings the goods to a near and convenient market and, as far as possible, to the doors of the people. The difficulty of supply is grievously felt in many parts of Bengal; but there is no one whose duty it is to consider the difficulty and meet it. Swadeshi is in danger of being stifled under the mass of spurious goods, foreign masking as indigenous, which the dishonest methods of European commerce pour into the country. There is no one to consider the problem of baffling this flank attack and devise methods of assuring the consumer that he gets the article which he wants. The organisation of a genuine and sufficient supply is the second condition of a practicable boycott.

These measures will help the growth of Swadeshi, but by themselves they can only partially serve the wider national aim which is the heart of the great movement commenced in 1905, the industrial independence of the Indian people. There is no doubt that the great mass of the Indian people cherish this aspiration and would willingly follow any practicable means of bringing it into the list of accomplished ideals. Previous to the great movement in Bengal this idea had been twice put into motion and produced a certain result, but the idea then was absolute abstention from all purchase of articles not genuinely Indian. Such a self-denial may be possible for the individual, it is not possible for great masses of men. The good sense of the nation therefore qualified the vow of abstinence by the proviso that it should be “as far as possible”. This, however, is a vague and fluid phrase. It has to be made precise if the movement is to advance from its purely idealistic character and put on the garb of practicability. Some attempt has been made to define it. The boycott of cloth, salt and sugar was made absolute; machinery,
medicines, objects of art and literature were exempted. But this was largely an empirical division based neither on a consideration of immediate possibility, nor on a reasoned policy. As a matter of fact the boycott of foreign sugar has hopelessly broken down, the boycott of cloth has had a partial success qualified by the necessity of taking yarn for Swadeshi cloth from England. A more practical definition is necessary.

The first principle we would suggest is to make a clear division between articles of necessity, interpreting the word in a broad sense, and articles of luxury and to have an absolute interdict of the latter unless they are of indigenous manufacture. The first reason for the interdict is that many articles of luxury are produced in India, but find it difficult to maintain themselves because they depend on the patronage of the rich, who are wedded to European vulgarity and want of taste in the appointments of their life. The poorer classes cannot indulge in luxuries; the middle class, in the present condition of the country, should not. An organised preference of Swadeshi arts and crafts by the rich would revive and stimulate a great source of national wealth and reopen a field of national capacity. Articles of necessity can be divided into those indispensable for life and a decent existence and those necessary for our work and business. In the former we can always prefer an inferior but usable indigenous article, in the latter no such self-denying ordinance can be imposed. I cannot be called upon to use an article or implement which cripples my business or puts me at a serious disadvantage with my competitor, merely because it is produced in the country, just as in my own home I cannot be called upon to use a pen which will not write, a lamp which will not give light, a cup which cracks and breaks after a few days’ use. But if the home article is usable or if the business implement is only slightly inferior to its foreign rival, then it would be unpatriotic and a violation of the boycott oath to prefer the foreign to the indigenous production. On these lines we believe a rational and workable meaning could be put on the proviso “as far as possible” which would not put too great a strain on human nature and could yet form the basis of an effective and practical protection of Indian
industry. A similar concession would have to be made in the case of Swadeshi articles which are too dear for the purse of the poorer classes, but there is no reason why the richer members of the community should not extend their protection to those industries which are compelled for the present to exceed greatly the foreign cost of production and yet have a future before them.

It will be evident therefore that, however far we may carry the boycott individually, there are limits which the mass of men cannot exceed. A considerable number of foreign articles must be purchased even for home consumption, still more for work and business. The question is, cannot this inevitable resort to the foreigner be so regulated as to assist materially the progress of the boycott and prepare the future industrial independence of the nation? This is the subject we propose to consider in our next issue.
The Patiala Case

The Patiala case has developed a real objective, which is the destruction of the Arya Samaj, the men arrested being merely pawns in the game. The speech of the Counsel for the prosecution, Mr. Grey, in no way sets out an ordinary case against individuals, nor is there any passage in it which gives any light as to particular evidence against the persons on their trial, but from beginning to end it is an arraignment of the Arya Samaj as a body whose whole object, semi-open rather than secret, is the subversion of British rule. Mr. Norton, taking advantage of the presence of Sj. Aurobindo Ghose in the dock, attempted to build up in the Alipur case an elaborate indictment of the whole national movement as a gigantic conspiracy, but he did not neglect the individual cases and made some attempt to conceal the extrajudicial object of his oratory by a continual reference to actual evidence, relevant or irrelevant, in the case. Mr. Grey has not given himself that trouble. The political character of his advocacy is open and avowed. But he follows his Calcutta precursor in the ludicrous jumps of his logic from trivial premises to gigantically incongruous conclusions, in his heroic attempt to make bricks out of straw. His chief arguments are that the Arya Samajists read the *Amrita Bazar Patrika* and the *Punjabee*,

www.holybooks.com
— to say nothing of the long defunct *Bande Mataram*, — and that some of the prominent members of the Arya Samaj are politicians and yet remain members of the Arya Samaj. The perfectly general interpretations by Swami Dayananda of the Vedic view of politics, are the basis of his attack, and even the vehement character of the great reformer’s polemics against other religions, the orthodox Hindu included, are pressed into the service of this unique argument. And all this is used to prejudice men under trial on a serious charge. Mr. Norton trifled with the traditions of the British bar by his pressing of trivial and doubtful evidence against the accused in the Alipur case, but it seems to us that Mr. Grey has departed still farther from those lofty traditions. And what if the Patiala Court decides that the Arya Samaj is a seditious body, seditious in origin, seditious in intention, seditious in action? Will the Government proscribe as an illegal association this wealthy, powerful and highly organised community containing more than half the brains and activity of the Punjab? Already the charge has been made that by giving special privileges to the Mahomedans, the Government have abandoned definitely the principle of religious neutrality on which their rule has hitherto been founded. The present Governor of the Punjab is possibly capable of such a step, — after the whitewashing of the Police in the Gulab Bano case and his speech to the Loyalist deputation, we can believe him capable of any rash and headstrong step. Fortunately, there is little likelihood that Mr. Grey’s oratory will be any more effective than Mr. Norton’s.

**The Arya Samaj and Politics**

We have received a communication from a member of the Samaj in which he puts to us certain pointed questions relating to the aims, character and works of the Samaj and of its founder’s teachings. We have not that direct and firsthand knowledge which would enable us to answer these questions with any authority. But on the general question our views are known. Aryaism is not an independent religion. It is avowedly an
attempt to revive the Vedic religion in its pristine purity. The Vedic religion is a national religion, and it embraces in its scope all the various activities of the national life. Swami Dayananda as a restorer of Vedicism included the theory of politics in his scope and revealed the intensely national character of the Hindu religion and morality. His work was avowedly a work of national regeneration. In dealing with the theory of politics as based on the Vedic religion he had naturally to include the truth that independence is the true and normal condition of a nation and all lapse into subjection must be a sin and degeneration, temporary in its nature. No man can deny this great truth. Freedom is the goal of humanity and Aryaism was in its nature a gospel of freedom, individual freedom, social freedom, intellectual freedom, freedom in all things, and the accomplishment of such an all-pervading liberation cannot come about without bringing national freedom in its train. If to perceive these truths of Vedism and of nature is to be political and seditious, then Swami Dayananda’s teaching was political and seditious and the religion he preached may be stigmatised as political and seditious. But if sedition be limited to its proper meaning, an attempt by illegal and violent means to bring about the fall of the established authority or prepare by word or action lawless opposition and revolution, then there is no sedition in the Swami’s preaching or in the belief and actions of the Arya Samaj. They use the perfectly legitimate means of strengthening the national life at all points and their objective is national regeneration through an active and free religion, not political revolution. Individual members may be Loyalists, Moderates, Nationalists, even Terrorists, but a religious body is not responsible for the political opinions of its individual members. The religious teaching of Swami Dayananda was inspired by national motives, not political; and the aims of the Arya Samaj are national, not political.

The Arya Disclaimer

The leaders of the Arya Samaj have issued a manifesto disclaiming the political motives attributed to them by the Counsel for
the Prosecution in his extraordinary opening address at Patiala. But is there any use in these repeated disclaimers? To a certain type of official mind, not in the minority in this country, every movement, body, organ of opinion or centre of activity that makes for national strength, efficiency or manhood is by that very fact suspect and indeed self-convicted as seditious and its very existence a crime to be punished by the law. The Governor of the Punjab is either himself an official of this class or swayed by advisers of that temper. Under such circumstances it is enough to issue once for all a strong and dignified repudiation of the charge and then proceed calmly with the great work the Samaj has undertaken, serenely strong and unperturbed in good fortune or evil fortune, good report or evil report, confident in God’s grace and the spiritual force communicated by the founder. This is the only course worthy of a manly community professing a robust and virile religion. Anxious repetition of unheeded disclaimers seems to us undignified and futile.

What Is Sedition?

The question, what is sedition, one of those Chinese puzzles which it seems impossible to solve, nevertheless presses for solution. In Nagpur it has been established that to laugh at the holder of a Government title is sedition. In the Swaraj Case Justice Chandavarkar has declared it to be the law that to condemn terrorism in strong language and trace it to its source is sedition. At Patiala it is contended that to read the Amrita Bazar Patrika and the Punjabi is sedition. We are not quite sure that at Patiala the prosecuting counsel did not hint that to bring Christianity or Mahomedanism into contempt or hatred is sedition. And we have these remarkable cases in the Punjab, where to translate Seeley’s Expansion of England or Mr. Bryan’s opinion of British rule in India seems to have a fair chance of being established as sedition. Mr. Stead’s Review of Reviews is now known to be a seditious publication. We are not sure, either, that the Indian Daily News is not even worse, for it is continually trying to bring the police, who are
an indispensable part of the Government established by law, into contempt and hatred, and the incorrigible persistence of its efforts is sufficient proof of motive, if not of conspiracy. Now one of the charges against a Punjab accused is that he wrote impugning the character of the subordinate police service — just like the *Indian Daily News* or Sir Andrew Fraser. We would suggest that Sir Andrew Fraser should be arrested in England and brought here to answer to the outraged police for the remarks passed by the Police Commission. The reasoning is perfectly fair. Any strong criticism, especially if it is persistent, lowers the reputation of the Government and creates in people a tendency to belittle, that is to say, have a contempt for authority established by law. It is still worse if the Government is accused of injustice, say, in the matter of the deportations or the Gulab Bano case; for that inevitably creates hatred. Therefore strong criticism of the Government is sedition. The *Amrita Bazar Patrika* and *Punjabee* strongly criticise the Government. Therefore they are seditious papers and their readers seditious conspirators. Every official is a member of the Government established by law; therefore to criticise strongly an official or a policeman, still more, officials or policemen as a class, is sedition. Christianity is the religion of the Government established by law; to criticise Christianity is to bring Christians into contempt; the Government are Christians; therefore to criticise Christianity is to bring the Government established by law into contempt. That is sedition. Therefore to criticise Christianity is sedition. To say that repression fosters Terrorism may be true, but it is seditious. To suggest a Press censorship, seriously or ironically, is to bring the administration of the law of sedition into contempt, that is, to bring the administrators into contempt; and the administrators are the Government established by law. Therefore Mr. Stead’s Open Letter to Lord Morley is seditious. We are almost afraid to go on, lest, finally, we should end by proving that the *Englishman* itself is an intolerably seditious rag,—for does it not try to bring Sir Edward Baker and the Government generally into contempt by intimating genially that they are liars, idiots and good-for-
nothing weaklings, — in connection with the Reforms and their unwillingness to put the whole population of India into prison? Would it not save trouble to prohibit speech or writing in India altogether?
A Thing that Happened

I

T IS not the policy of the Karmayogin to dwell on incidents whether of the present administration of the country or of the relations between the ruling caste and the people. To criticise persistently the frequent instances of highhandedness and maladministration inevitable under a regime like the present does not lead to the redress of grievances; all that it does is to create a prejudice against the reigning bureaucracy. The basis of our claim to Swaraj is not that the English bureaucracy is a bad or tyrannical Government; a bureaucracy is always inclined to be arrogant, self-sufficient, self-righteous and unsympathetic, to ignore the abuses with which it abounds, and a bureaucracy foreign and irresponsible to the people is likely to exhibit these characteristics in an exaggerated form. But even if we were ruled by a bureaucracy of angels, we should still lay claim to Swaraj and move towards national self-sufficiency and independence. On the same principle we do not notice or lay stress on the collisions between Englishmen and Indians which are an inevitable result of the anomalous and unnatural relations existing between the races. It is the relations themselves we seek to alter from the root instead of dealing with the symptoms. But the incident at Goalundo detailed in this week’s Dharma is one which the country has to take notice of, unless we are to suppose that the movement of 1905 was the last flaring up of national strength and spirit previous to extinction and that the extinction has now come. We have received a letter from the sufferer translated into English, it is from his own account that we summarise the facts.

A Brahmin Pandit with the title of Kavyatirtha, ignorant of English, was proceeding with two Bengali ladies from Mymensingh to Calcutta on Sunday the 2nd January by the Kali-gunge mail steamer, and reached Goalundo at 11 o’clock at night, too late to catch the Calcutta train. He and some other
passengers decided to spend the night in the steamer. While he was going down to look after his luggage, a European came up to him, caught his wrapper, twisted it tightly round his neck and said in Hindustani, “Who are you?” Getting no answer to his request for an explanation except the repetition of the question, he replied that he was a passenger. Thereupon without farther parley the Englishman proceeded to drag the unresisting Pandit to another steamer lying alongside. On the way the latter appealed to the sub-agent of the Steamer Company, a certain Sarat Babu, but, after a word from the Saheb, was told that he must accompany the aggressor to the Company’s agent, with a name which the Pandit caught as Joyce. It was not, however, to the Agent, but into a first-class cabin where there were three other Europeans and two English women, that the Brahmin was dragged and the door closed behind him. No sooner was he in the hands of this company than he was charged with having abused the Englishman whom he had never seen before in his life, and a savage blow dealt him in the left eye which cut the skin and set blood flowing freely. Blows after blows were rained on head and body, the head being cruelly battered, the lips cut open and some of the teeth loosened. His appeals for mercy were answered by a shower of kicks with booted feet on his head and the English women joined in the pastime by beating him furiously on the thigh with a dog chain. The unfortunate Bengali was by this time sick, stunned and almost senseless with the beating. The pain of the blows falling on his already bruised and battered head was intense and the iron chain drew blood with each cut. Fortunately he happened to fall against the door and it flew open. With difficulty he managed to crawl to the staircase; but at this moment the Englishman drew a revolver and, pointing it at him, cried out “Shala, I will shoot you.” In terror of his life the Brahmin managed anyhow to plunge down the stairs and dropped almost senseless at the bottom. His eyes were clotted with blood, but he caught a glimpse of Sarat Babu coming near him with a European whom he conjectured to be the Agent Mr. Joyce. A few words were spoken between the two. Afterwards Sarat Babu returned and told the Pandit that he
could expect no redress from the Company, but he might bring a criminal suit if he cared to do so. The farther happenings of that night need not be entered into, except to note the extraordinary conduct of the Company’s officers who almost immediately separated the two steamers and took the Kaligunge mail into midstream where they kept it until the Europeans had escaped in their steamer to Naraingunge. It was only possible to discover from the luggage labels that they belonged to a jute factory in Nakail near Aralia. There were some Bengali passengers present, including a pleader from Jessore and an employee of the Sealdah District Superintendent’s Audit office but, though they sympathised with and cared for their compatriot after he had escaped with his life, there was none to assist him at the moment of the outrage, nor could even the piteous cries of the ladies awake a spark of resolution anywhere in those present. The Samitis of young men are disbanded, the cry of Bande Mataram has sunk to rest, and royally-minded individuals like the perpetrators of this murderous assault can finish their imperial pastime unhindered.

We feel a great difficulty in dealing with this case. We are not in the habit of dealing in violent language, yet to write coolly of it is a little difficult. And if we describe the assault as an infamous atrocity or describe these English gentlemen and ladies as cowardly ruffians and fiendish assassins, we have to recollect that such phrases are properly applied to Indian Terrorists and we may be prosecuted under Sec. 153A if we apply them to Europeans who, after all, did nothing but amuse themselves. Moreover, any indication of the proper deserts of these people, however carefully expressed, might expose us to forfeiture of our Press and prosecution under the new laws. If we point out that such things seem to happen with impunity under the present conditions in India, Sec. 124A is lying in wait, ready to trip us up, and the Andamans or twenty years’ hard labour with handcuffs and fetters loom before our uneasy apprehensions. We do not know whether, considering how the Sedition law is being interpreted in Bombay, Nagpur and the Punjab, even mentioning this incident may not bring us within its provisions. It is impossible, however, to pass it over in silence, and we proceed, therefore, to
make a few observations, treading amid the pitfalls of the law as carefully as we can.

First, we have a word to the Government of East Bengal. It is very busy dealing with romantic dacoities, shapeless conspiracies, vague shadows of Terrorism, Arms Act Cases, meetings of Reform Councils overstocked with landholders and Mahomedans. We do not know whether it has any time or interest to spare for little sordid unromantic incidents of this kind. If it has any spare time, it might do worse in its own interests than glance once at that night’s doings at Goalundo. It is obviously impossible to appeal to the law. Even if the identity of the assailants were fixed, the culprits would at once bring a trumped-up countercharge, say, of robbery, dacoity, Anarchism or any handy accusation, and the word of a hundred Bengalis, of whatever position or honourable antecedents, would not weigh with any but an exceptional Judge, against that of a single Englishman, whatever his antecedents or education. The only probable result would be to add a term of imprisonment to the Pandit’s misfortunes. Even to reveal his name might expose him to the gentle mercies of the local Police in his District. All we can do, therefore, is to advertise the Shillong Government of what has happened and give them the chance of action.

Then, we have one word to say to the nation. The assault was motiveless and seems to have been committed merely because the Pandit was a Bengali and the Europeans felt in the mood to hammer a Bengali, perhaps out of the race-hatred which organs like the Englishman are busy fomenting with perfect impunity. There is no other explanation of the facts. The thing has happened and we wish to say at once that nothing in our remarks must be held to mean that we advise retaliation. But incidents like these never happen to a brave, patriotic and self-respecting nation; they happen only to those who cower and fear and, by their character, justify men who think themselves entitled to treat them like slaves. When the Bengalis showed themselves in the first ardour of 1905 a brave, patriotic and self-respecting nation, these incidents ceased to happen. If they are now reviving with features of a studied atrocity absent from
similar brutalities in the past, it must be because we are ceasing to deserve those appellations. The nation is cowering in silence under the terror of repressive laws, all symptoms of national life are discouraged by the leaders and the elders as dangerous and untimely. Those who dare to speak words of hope and courage to the people, are denounced by your vernacular journals, shut out by carefully devised creeds and regulations from the body you still call the National Congress, boycotted by some of your District Conferences. If the Government see anarchists and dacoits in every bush, you see deportations and house-searches in every lal-pagri. You cower in your homes, speak your opinions in hushed whispers, allow the national spirit to die out and your Mother to go down again into the black pit from which we raised her. And this incident at Goalundo is the first ominous warning God gives you of the inevitable result.

There is only one way to uphold a nation’s honour and to compel outrages upon it to cease automatically,—and that is to show that we are a nation and not a herd. If by any means within the law, the perpetrators of this outrage can be made to feel that Bengalis cannot be half-battered to death with impunity, it should doubtless be done. But no personal anger, no violent language or violent actions are needed. The reawakening of the national spirit ready to act fearlessly and blamelessly — for self-defence and prevention of a crime are blameless,—on every emergency great or small, will of itself be sufficient.

Facts and Opinions

Lajpat Rai’s Letters

The case of Parmanand, the Arya Samaj teacher, whom with a singular pusillanimity the D.A.V. College authorities have dismissed before anything was proved against him, has been of more than usual interest because of the parade with which Lajpat Rai’s letters to him were brought forward. The letters were innocent enough on the face of them, but prejudice and suspicion were deliberately manufactured out of the connection with Krishnavarma, the expression “revolutionary”, the use of the word “boys”, and an anticipation of the agrarian outbreak in connection with the Punjab Government’s ill-advised land legislation. The bubble has been speedily pricked by the simple statement of facts in the *Punjabee* and by Lajpat Rai’s own evidence. That Lajpat Rai was acquainted with Shyamji Krishnavarma when he was in England, was known already; so were many men who worked with him, Sir Henry Cotton among others, when he was only an enthusiastic Home Ruler and violently opposed to violence. The project of a Nationalist Servants of India Society well-equipped with a library and other appointments for political education was well advertised and known to the whole country previous to the first deportations. The anticipation of the agrarian outbreak in the letter expresses
an apprehension, not a desire, and merely shows that Lajpat Rai was uneasy at the rate at which the discontent was swelling and feared that it might lead to an outbreak prematurely forestalling the use of a peaceful pressure on the Government. It is remarkable how throughout his career the honesty and consistency of Lala Lajpat Rai’s adherence to a peaceful but strenuous Nationalism has been vindicated at every step, and this last revelation of his private and even secret letters is an ordeal of fire out of which he has triumphantly emerged with his consistency and his innocence wholly established.

A Nervous Samaj

It is with great regret that we find ourselves compelled to enlarge on the hint we gave in our last issue and comment adversely on the methods by which the Arya Samaj is attempting to save itself from the displeasure of the Government. It is well that it should have disclaimed sedition and repudiated the charge of being not a religious but a political body. But to run nervously to all and sundry for a testimonial of respectability, to sue for a certificate of loyalty to the Lieutenant-Governor of the Punjab and express gratitude for an ungracious, ambiguous and minatory letter of reply, to prejudge by dismissal a man whose guilt has yet to be proved, are actions which show that Swami Dayananda’s religion may have emancipated the intellects of the leading Samajists but has done little to elevate their character. We must also express our amazement at the action of the Samaj in accepting the resignation by Lala Lajpat Rai of his offices on the various governing bodies of the Samaj. There are two men who are the glory of the Samaj and by whose adherence and prominence it commands the respect and admiration of all India, Lala Lajpat Rai and Lala Munshiram. By its action with regard to the former, the Samaj will lose heavily, it has already lost heavily, in public estimation. In his generous anxiety for the body to which he has devoted the greater part of his life-work, Lala Lajpat Rai offered to it the chance of freeing itself from the attacks its enemies founded upon his connection with
it. It was an offer which he was bound to make, but the Samaj ought to have refused. Lajpat Rai's only offence is that he has worked and suffered for his country. By its action the Samaj has announced to the whole world that no man must dare to feel and act, however blamelessly, for his country if he wishes to be recognised by the Samaj. If so, Aryaism will perish from the face of India and leave no trace behind. The world has no use any longer for religious bodies which exclude courage, manliness, generosity, justice and patriotism from their moral practice.

The Banerji Vigilance Committees

The novel departure initiated by the fertile mind of Srijut Surendranath Banerji at Barrackpur in the creation of Vigilance Committees to check the nocturnal lovers of bomb and bullet practice on the E.B.S.R. has created great interest and amusement among his countrymen. There are many who are ungenerous enough to attribute this anti-Anarchical zeal less to loyalty and a noble “co-operative” instinct than to the fact that our great leader has himself to travel daily over the zone of danger. Even if it were so, the sneer is ungenerous. We all love our lives, we have all to travel occasionally by the E.B.S.R. in first or second class and we cannot ignore the fact that random bullets and explosive cocoanuts are not respecters of persons and, if they find the head even of a Nationalist leader in the way, will not be polite enough to walk round it. We shall all therefore be grateful to our old man eloquent, if he can ensure our common safety. But for ourselves, we do not see how he can effect his laudable object. It would be possible for Srijut Surendranath and the other estimable burgesses of Barrackpur to patrol the railway at night, but the weather is still cold, sleep is pleasant, bullets and cocoanuts perilous missiles, and, if anything happens, the police are quite capable of suspecting and arresting the too vigilant patrons of the public peace. One might revive the “National Volunteers” for the purpose; but the Samitis are disbanded, students forbidden to take part in politics or do anything that would interfere with their studies. They are
not likely to be enthusiastic for this kind of volunteer work under these conditions. And, if such organisations were created, it would be more likely to alarm than gratify a suspicious and nervous Government which might see in it a disingenuous device for reviving the proclaimed Samitis. The only other resource is for these novel vigilance men to turn detectives, discover the Terrorists and give information to the police, which they can only do by becoming agents provocateurs and so worming themselves into the confidence of their quarry. That is a kind of dirty work no Indian gentleman is likely to undertake even with the prospect of vindicating his loyalty, escaping house-searches and deportation and earning the encomiums of the Englishman.

Postal Precautions

Sj. Aurobindo Ghose has recently received an anonymous letter giving him the momentous information that a certain Gopal Chandra Ray of the C.I.D. with several assistants is busy watching 6 College Square and the Post Office and copying all the letters and postcards that come in his name without exception. Sj. Aurobindo has not the honour of the noble Gopal’s acquaintance, nor is he even aware whether this gentleman has any corporeal existence. The letter may be a hoax; or it may be sent by one of the “assistants”, weary to death of copying letters and postcards and of the inclement and uncomfortable business of an open air watch fanned by the breezes of Goldighi in this season. It does not matter to the gentleman honoured by these attentions whether the whole police force occupy Goldighi for inquisitorial purposes or whether numerous editions of his correspondence are turned out for the use of posterity by the disinterested labours of the C.I.D. Still, he has suggested to us certain proposals to be placed before the Government in this connection and we proceed to make them. In the first place, for the sake of humanity, a comfortable stall might be put up in the Square for the vigilant cow-keeper and his herd whence they could watch more happily and quite as effectively. Secondly, if
the Government would kindly instruct the Post Office not to lose one-tenth of Aurobindo Babu’s letters after copying them and delay the greater part of the others, there would probably be no harm done to the Empire. Thirdly, Sj. Aurobindo Ghose begs us to inform the authorities that he was never greatly in the habit of writing letters before and, after the exposure of his private correspondence with his friends and family by the prosecution in the Alipur case, he has almost dropped the practice, except in urgent matters of business. It is possible, therefore, for this part of the investigation to be carried on very cheaply, and the Government must not be deceived by any representations on part of Gopal or others that a big staff is wanted. Further, we are instructed to inform all intending correspondents of the above-mentioned facts so that they may not be disturbed or anxious about Sj. Aurobindo’s health if they get no answer to their letters. Secondly, it would be advisable for them, when writing to him, to forward a copy of the letter to the Secretary to the Bengal Government or to Mr. Denham of the C.I.D. Thirdly, if any one wishes to send by post specimens of bombs, revolvers, or anything explosive or picric, or plans and estimates for a conspiracy or insurrection great or small, he had better send it either by hand or through the editors of the Statesman or Englishman. No reply need be expected.

Detective Wiles

While we are on this subject, we might suggest to the C.I.D. to train up a few spies and informers, send them for the completion of their education to France and then appoint them as teachers in the College in India. Just now they do their work very clumsily. We may instance the case of a Eurasian or European gentleman rejoicing in an Irish name or alias and a false address, who left his card on Sj. Aurobindo Ghose and then opened fire with a letter requesting the loan of a revolver, brand new and serviceable, without which the Irish gentleman could not live any longer. Neither is it a good opening for acquaintance to come for financial help to a man known to be himself the possessor of
a very small income. To request advice how to serve the country or to become religious is a more plausible opening, but it ought to be followed up and sustained plausibly. Even the wearing of the saffron robe need not be a passport to effusive friendship, unless there is something behind, and not always even then. We may also refer to the romantic story of the Dead Letter Office return published the other day by Sj. Prabhaschandra Deb in the *Hitabadi*. This precious script was curiously enough addressed to Grey Street, without any number, in Prabhas Babu’s handwriting and with his signature so exactly reproduced as to defy discrimination even by an expert. As both Prabhas Babu and the police are well aware that there is now no connection between Sj. Aurobindo and any number in Grey Street, it was obviously the writer’s intention that it should go to the Dead Letter Office and from there to the C.I.D. Prabhas Babu’s suggestion was not, as the *Hitabadi* reported, to send it to the Calcutta Police for inquiry, but to return it to the Dead Letter Office. Sj. Aurobindo preferred to consign it to the waste paper basket as a more fitting repository. We cannot imagine any earthly use in these clumsy devices. Even Mr. Norton would find it difficult to make anything of a forgery, however exact, more hopelessly suspicious even than the “sweets” letter.
The New Policy

A POLICY of conciliation, a policy of trust in the people, a policy liberal, progressive, sure if slow,—that was the forecast made by the Moderate astrologers when the Reform comet sailed into our startled heavens. The prophets and augurs of the Anglo-Indian Press friendly to Moderate India—friendly on condition of our giving up all aspirations that go beyond the Reforms—prophesied high, loud and often to the same purpose, and if, like the Roman augurs, they winked and smiled mysteriously at each other when they met, the outside world was not supposed to know anything of their private opinions. Even the disillusionment caused by the publication of the Councils Rules has not prevented this party of wise and able politicians from supporting by participation the Reforms which they condemned, and belauding the intention of the Anglo-Indian reformers while swearing dismally and violently at their practice. Bad as it is, we must co-operate so as to make the best of the new measure. To make the best of a bad measure is to make it a success and so prevent or delay the coming of a better. This at least is our idea of the matter, but we belong to a party not of wise and able politicians who take the full profit of that which they condemn as disastrous and injurious, but of men who have the misfortune still to believe in logic, principle and experience. To be logical is to be a mere theorist, to cling to principle is to be a doctrinaire and to be guided by experience, the world’s and our own, is to be unpractical. Only those whose theory is confused and practice self-contradictory and haphazard, can be wise politicians and capable of guiding the country aright. From this standpoint the proclamation of all India as seditious is, doubtless, the first step in the new policy, the policy of conciliation and
liberalism. It is the sign-manual of the great reformer, Lord Morley, upon his work, the loud-tongued harbinger of the golden Age.

No particular motive can be alleged for this sudden proclamation, nor is any alleged. The people are left to speculate in the dark as to the mystic motives of Lords Minto and Morley in this remarkable step forward, or to get what light and comfort they can from the speculations of our Anglo-Indian friends and advisers, who seem to be as much in the dark as ourselves and can only profess their blind religious faith in the necessity and beneficence of the measure and appeal to all patriotic Indians to co-operate in coercing the national movement into silence. If India had been full of meetings of a seditious or doubtful nature, the necessity of the measure could have been established. Even if the national life were pulsating swiftly though blamelessly, its “aetiology”, — if we may use a word which may possibly be condemned by Mr. Petman or Mr. Grey as seditious,— could have been understood, though not its necessity. But at present, with the exception of an occasional scantily attended meeting in the Calcutta squares, the only political meetings held are those in which abhorrence of Terrorism is expressed or Vigilance Committees of leading citizens organised to patrol the E.B.S.R. at night even in this chilly weather, and those in which the Deccan Sabha drinks deep of the political sermons and homilies of Lord Morley’s personal friend, Mr. Gokhale. Was it to stop these that the proclamation of all India became necessary?

It has been freely alleged that the prevalence of bombs and Terrorism in Bombay, Punjab and Bengal is the justification of the measure, on the ground that open sedition leads to secret assassination, Nationalism to Terrorism. It is obvious that to attempt to meet secret conspiracy by prohibiting public agitation is a remedy open to the charge of absurdity. The secret conspirator rejoices in silence, the Terrorist finds his opportunity in darkness. Is not the liberty of free speech and free writing denied to the Russian people by more rigorous penalties, a more effective espionage, a far more absolute police rule than any that can be attempted in India? Yet where do the bomb and the
revolver, the Terrorist and the secret conspirator flourish more than in Russia? The conspirator has his own means of propaganda which the law finds it difficult to touch. The argument, however, is that it is only in an atmosphere of dissatisfaction, disaffection and sedition that the propaganda of the conspirator can be effective, and Nationalism creates that atmosphere. Criticism of the Government leads to dissatisfaction with the Government, dissatisfaction leads to the aspiration for a better form of Government, aspiration of this kind when baulked leads to disaffection, disaffection leads to secret conspiracy and assassination. Therefore stop all means of criticising the Government and the first cause being removed, the final effect will disappear. That this is the actual train of reasoning, conscious or unconscious, in the minds of those who advise, initiate or approve a policy of repression is beyond doubt. It is evident in all they say or write.

Unfortunately the statement of the premises in this chain is incomplete and the conclusion is therefore vitiated. The first premise may be granted at once. In a country well satisfied with its lot, a nation at ease and aware of prosperity and progress, the propaganda of the secret conspirator must necessarily fail. In India itself, if we are to believe the Times, secret societies have existed for upwards of forty or fifty years. How is it that they had no success and no one was aware of their existence until the reaction after Lord Ripon’s regime culminated in the viceroyalty of Lord Curzon? Dissatisfaction is not created by public criticism, it is created by the adverse facts on which public criticism fastens, and it crystallises either in public criticism or in secret discontent. The public criticism creates public agitation, the secret discontent creates secret conspiracy. Both are born of the same circumstances, but the lines of development are entirely different, nor is there much sympathy between them. The public agitator dreads the secret conspirator, the secret conspirator despises the public agitator, even when they are moving towards the same end. The man most detested and denounced by the Indian revolutionary organisations now active at Paris, Geneva and Berlin, is Sj. Bipin Chandra Pal, the prophet and
first preacher of passive resistance. Yet the object of both is almost identical, the Nationalist agitator insisting on perfect autonomy, the revolutionist on separation, both being merely different forms of independence. The question for the authorities is whether they will try to ignore or silence the public criticism or remove the cause of dissatisfaction. If they ignore without silencing public criticism, the dissatisfaction grows in volume until it becomes the aspiration for a better form of Government. They must then either satisfy that aspiration or silence it, they can no longer ignore it. This game of ignoring the obvious is, like the first crude attempt of Nationalism in India to ignore the Government, foredoomed to failure; it only postpones and intensifies the problem, it does not get rid of it. Yet this was the policy long followed by the Indian Government towards the Congress movement. On the other hand, they may silence the public criticism or trample on it. If they trample on it, the aspiration becomes disaffection not necessarily to the sovereign, but to the form and system of Government then obtaining, with a cry for absolute transformation. This was what happened in India in 1905. Trampling on public opinion without silencing its expression is mere madness; it leads to the genesis of great revolutionary movements, injures the Government, endangers public peace and order, and helps nobody. This method does not even postpone the necessity of a solution, it hastens it by intensifying the problem to breaking-point. Yet this was the policy of Lord Curzon. He not only permitted the expression of public discontent, but he fostered it by arguing with and trying to persuade it; yet he invariably trampled on the thing he permitted. It is statesmanship of this kind which ruins empires and destroys great nations. There is another kind of policy, and that is to play with the monster of discontent, to chide it, whip it and yet throw it sops while taking advantage of the monster’s preoccupation with the sop to wind the chain round its neck tighter and tighter. This is also bad policy. The whip enrages, the sop does not soothe but irritates, the tightening of the chain only shortens the distance between the tamer and the brute; — for the difficulty is that, the tamer has to hold the chain, he
cannot tie it to something else and get out of springing distance.

Eventually, either discontent has to be satisfied or silenced. If it is satisfied, the whole difficulty disappears and perfectly amicable relations are restored. That was the policy pursued by England with regard to its colonies after the severe lesson learned in America, with the result that the bond between the colonies and Great Britain still defies the efforts of Time and Circumstance to loosen or snap them. But if discontent is not to be satisfied, the question then for the ruler is whether he prefers it to crystallise in public agitation and peaceful but possibly effective resistance, or in secret conspiracy, terrorism and eventually armed insurrection. It must be one of the two, for to expect an immense impulse like the national impulse to sink to rest without being either crushed or satisfied, is to expect impossible miracles. The Anglo-Indian appeal to the political leaders to be satisfied and cease from agitation is a singularly foolish and futile one. If the political leaders were to comply, even the most popular and trusted of them, they would cease to be leaders the next day. The dwindling numbers that attend the Convention sittings are a signal proof of this very obvious fact; that diminution has been effected, it must be remembered, without public agitation, without any organisation or activity of the Nationalist party, by the mere operation of a law of Nature. The aspiration, however created, is there and it is a fire mounting out of the bowels of the earth, which no man’s hand can extinguish. The political leaders know that they cannot quench it, if they would; the Government thinks it can. And the method it seems to favour, if the extension of the Seditious Meetings Act and the prosecutions of papers and publications or their leaders all over India are any sign, is to silence public criticism.

If our view of the question is right, it is evident that to paralyse public agitation is to foster Terrorism, and we can only suppose that the Government think Terrorism easier to deal with than public agitation. This seems to us a grievous error. If experience shows anything, it is that Terrorism is never extinguished except by the removal of its causes. The difference between Terrorism and open rebellion is that open rebellion
often effects its object, but can easily be crushed, while Terrorism
does not effect its object, but cannot be crushed. The only thing
that Terrorism can do is to compel the Government to satisfy
partially the more moderate demands of peaceful agitation as
the lesser of two evils, and this is a result which the Terrorist
looks on with contempt. He is always extreme and fanatical and
will not be satisfied with anything less than immediate freedom
gained by violence. He is confident of his result, he is passion-
ately and intolerantly attached to his method. Irish Terrorism
only disappeared because of the expectation of Home Rule by
the alliance with British Liberalism; Russian Terrorism is still
kept alive by the impotence of the Duma; Anarchism flourishes
because the Governments of Europe have not found any way of
circumventing it. Terrorism may perish of inanition; coercion is
its food and its fuel.

The policy now being followed by Lord Minto’s Govern-
ment has neither immediate justification nor ultimate wisdom.
It is the old futile round which reluctant authority has always
trod when unable to reconcile itself to inevitable concession. It
is a wasteful, ruinous and futile process. For if the Government
were to declare tomorrow that it would no longer tolerate public
opposition and deport all the leaders of public and peaceful ag-
itation in the country, it would only stimulate more formidable
and unscrupulous forces and substitute a violent, dangerous and
agonising process for one which, even if a little painful, is helpful,
 economical and constructive.
Facts and Opinions

The High Court Assassination

The startling assassination of Deputy Superintendent Shams-ul-Alam on Monday in the precincts of the High Court, publicly, in daylight, under the eyes of many and in a crowded building, breaks the silence which had settled on the country, in a fashion which all will deplore. The deceased officer was perhaps the ablest, most energetic and most zealous member of the Bengal detective force. It was his misfortune that he took the leading part not only in the Alipur Bomb Case in which he zealously and untiringly assisted the Crown solicitors, but in the investigation of the Haludbari and Netra dacoities. The nature of his duties exposed him to the resentment of the small Terrorist bodies whose continued existence in Bengal is proved by this last daring and reckless crime. Under such circumstances a man carries his life in his hand and it seems only a matter of time when it will be struck from him. We have no doubt that the Government will suitably recognise his services by a handsome provision for his family. As for the crime itself, it is one of the boldest of the many bold acts of violence for which the Terrorists have been responsible. We wish we could agree with some of our contemporaries that the perpetrators of these deplorable outrages are dastards and cowards; for, if it were so, Terrorism would be a thing to be
abhorred, but not feared. On the contrary, the Indian Terrorist seems to be usually a man fanatical in his determination and daring, to prefer public places and crowded buildings for his field and to scorn secrecy and a fair chance of escape. It is this remarkable feature which has distinguished alike the crimes at Nasik, London, Calcutta, to say nothing of the assassination of Gossain in jail. With such men it is difficult to deal. Neither fear nor reasoning, disapprobation nor isolation can have any effect on them. Nor will the Government of this country allow us to use what we believe to be the only effective means of combating the spread of the virus among the people. All we can do is to sit with folded hands and listen to the senseless objurgations of the Anglo-Indian Press, waiting for a time when the peaceful expression and organisation of our national aspirations will no longer be penalised. It is then that Terrorism will vanish from the country and the nightmare be as if it never had been.

Anglo-Indian Prescriptions

The Anglo-Indian papers publish their usual senseless prescriptions for the cure of the evil. The Englishman informs us that it is at last tired of these outrages and asks in a tone full of genuine weariness when the Government will take the steps which Hare Street has always been advising. It seems to us that the Government have gone fairly far in that direction. The only remaining steps are to silence the Press entirely, abolish the necessity of investigation and trial and deport every public man in India. And when by removing everything and everyone that still encourages the people to persevere in peaceful political agitation, Russia has been reproduced in India and all is hushed except the noise of the endless duel between the omnipotent policeman and the secret assassin, the Englishman will be satisfied, — but the country will not be at peace. The Indian Daily News more sensibly suggests police activity in detecting secret organisations, — although its remarks would have sounded better without an implied prejudgment of the Nasik case. If the police were to employ the sound detective methods employed in England and France, it would
take them a little longer to effect a coup, but there would be some chance of real success. It is not by indiscriminate arrests, harassing house-searches undertaken on the word of informers paid so much for each piece of information true or false, and interminable detention of undertrial prisoners in jail that these formidable secret societies will be uprooted. Such processes are more likely to swell their numbers and add to their strength. The *Statesman* is particularly wroth with the people of this country for their objection to police methods and goes so far as to lay the blame for the murder of Shams-ul-Alam on these objections. If we had only submitted cheerfully to police harassment, all this would not have happened! The bitter ineptitude of our contemporary grows daily more pronounced and takes more and more refuge in ridiculously inconsequent arguments. Is it the objectionable methods or our objections to them that are to blame? We may safely say that, whatever influences may have been at work in the mind of the assassin, the occasional criticisms of vexatious house-search in the Bengali journals had nothing to do with his action. The *Statesman* does not scruple, like other Anglo-Indian papers, to question the sincerity of the condemnations of Terrorist outrage which are nowadays universal throughout the country, and to support its insinuations it has to go as far back as the Gossain murder and the demonstrations that followed it. Those demonstrations were not an approval of Terrorism as a policy, but an outburst of gratitude to the man who removed a dangerous and reckless perjurer whose evil breath was scattering ruin and peril over innocent homes and noble and blameless heads throughout Bengal. We do not praise or justify that outburst,—for murder is murder, whatever its motives,—but it is not fair to give it a complexion other than the one it really wore. If it had really been true that a whole nation approved of Terrorism and supported the assassin by secret or open sympathy, it would be a more damning indictment of British statesmanship in India than any seditious pen could have framed. The Chowringhee paper’s libellous insinuation that the secret societies are not secret and their members are known to the public, has only to be mentioned in order to show the spirit of
this gratuitous adviser of the Indian people. Nor can one peruse without a smile the suggestion that the Hindu community should use the weapon of social ostracism against the Terrorists. Whom are we to outcaste, the hanged or transported assassin, or his innocent relatives?

House Search

While we are on the subject we may as well make explicit the rationale of our objection to house search as it is used in Bengal. No citizen can object to the legitimate and necessary use of house search as an aid to the detection of crime; it is only to its misuse that objection can be made. We say that it is misuse to harass a man and his family merely because the police have a suspicion against him which they cannot establish or find any ground of evidence for — on the remote chance of finding incriminating correspondence or arms in his possession. It is a misuse to take this step on the information of characterless paid informers whose advantage it is to invent false clues so as to justify their existence and earn their living. It is a misuse to farther harass the householder by carrying off from his house half his library and his whole family correspondence and every other article to which the police take a fancy and which are often returned to him after infinite trouble and in a hopelessly damaged condition. A house search is never undertaken in civilised countries except on information of the truth of which there is moral certainty or such a strong probability as to justify this extreme step. To find out the truth of an information without immediately turning a household upside down on the chance of its veracity is not an impossible feat for detective ability in countries where all statements are not taken for gospel truth merely because they issue from the sacred lips of a policeman, and where police perjury or forgery is sure of swift punishment. Where a detective force is put on its mettle by being expected to prove every statement and take the consequences of illegal methods, they do manage to detect crime very effectively, while the chances of the innocent suffering are greatly minimised. In other countries there are
or have been Anarchist outrages, Terrorist propaganda, secret societies, but nowhere, except in Russia, are such methods used as are considered quite ordinary in India, nor, if used, would they be tolerated by the European citizen. If the police would confine themselves to legitimate detective activity, they would receive the full support of the public and the occasional trouble of a house search, caused by the existence of a suspected relative or dependent, would be patiently borne, — though it is absurd of the Statesman to expect a householder to be cheerful under such untoward circumstances. This is the rationale of our views in the matter, and we do not think there is anything in them either unreasonable, obstructive or inconsistent with civic duty.

The Elections

The Elections at the time of writing seem to point to the return of a Liberal Ministry dependent first on Labour, then on Irish votes for its very existence. At the end of last week after being long in a slight minority, the combined Liberal-Labour party exceeded the Conservatives by 14, but the Liberal vote, apart from the Labour representatives, was still well behind the Unionist numbers. The vicissitudes of this crisis have been utterly unlike those of any previous election. Instead of an even ebb and flow such as we find on former occasions, well-distributed all over the country, we see the United Kingdom ranged into two adverse parties on a great revolutionary issue, according to geographical, almost racial distribution. Wales, Scotland and the North are for the new age, the Centre and the South for the past. In the Southern, Midland and Eastern counties the Unionists have achieved a tremendous victory and we think there is hardly a constituency in which the Liberal majority has not been either materially, often hugely reduced or turned into a minority.

In the North, even in Yorkshire, still more in Westmoreland, the Unionists have achieved a few victories, but the verdict of the North as a whole has gone heavily against the Lords and for the Liberals. Wales is still overwhelmingly Radical in spite of one or two Conservative gains. In Scotland the Liberal party has
been amazingly successful and increased its majorities in many places, maintained them in most and balanced occasional losses by compensating victories. The Celt everywhere has declared for revolution, as was to be expected from that ardent, mobile and imaginative race; the frank, adventurous Scandinavian blood of the North may account for its progressive sympathies; but the rest of England is the home of the conservative, slow-natured Anglo-Saxon always distrustful of new adventures and daring innovations. The struggle seems to us to have been not so much one of opinions as of blood and instinct. It is notable that the Conservative victories have been attained not so much by the reduction and transference of the Liberal vote as by a rush of Conservative electors to the polls who did not vote in previous elections. The unparalleled heaviness of the polling shows how deeply the people have been stirred and feel the magnitude and importance of the issues.
The Viceroy’s Speech

THE SPEECH of Lord Minto on the occasion of the first meeting of the Viceroy’s Council under the new regime is a very important pronouncement; and the most momentous of the passages in the pronouncement are two, the one in which he disposes finally of any lingering hopes in the minds of the Moderates, the other in which he threatens to dispose finally of any lingering hopes in the minds of the Nationalists. It has been a Moderate legend which still labours to survive, that the intention of Lords Morley and Minto in the Reforms was to lay the foundations of representative self-government in India. This legend was perseveringly reiterated in direct contradiction of the Secretary of State’s famous pronouncement that, so far as his vision could pierce into the future, the personal and absolute element in Indian administration must for ever remain. Lord Minto has now stamped his foot on the Moderate legend and crushed it into atoms. We quote the important passages in which he accomplishes this ruthless destruction.

“We have distinctly maintained that representative Government in its Western sense is totally inapplicable to the Indian Empire and would be uncongenial to the traditions of Eastern populations — that Indian conditions do not admit of popular representation — that the safety and welfare of the country must depend on the supremacy of British administration — and that that supremacy can, in no circumstances, be delegated to any kind of representative assembly.... We have aimed at the reform and enlargement of our Councils but not at the creation of Parliaments. I emphasise what I have just said in view of the opinions to which advanced Indian politicians appear not infrequently to commit themselves.”

In the face of speech so plain and uncompromising it will
be difficult indeed to keep up the fiction that it is only the regulations which are objectionable and, if only the regulations are changed, we can with a clear conscience accept and participate in the Reforms. The Act and the Regulations are not different in aim or parentage; they have one origin, one object, one policy. Lord Minto has emphatically stated that the initiative in the Reforms was from beginning to end his own, and the facts bear out the truth of his statement. His inaugural speech has put a seal of finality on the death-doom of Moderatism of which the publication of the Councils’ rules was the pronouncement. The objective of Moderatism is colonial self-government, the means, the grace and goodwill of the British rulers, and the two British rulers whom they have hailed as apostles and fathers of Reform have declared explicitly that in no future age, however distant, and in no circumstances, however changed, can the official supremacy be delegated to any kind of representative assembly however safely constituted. Not even, therefore, a Russian Duma, that simulacrum of a Parliament, is to be granted to India even in remote and millennial futurity.

The other passage is the reference to the licence of a revolutionary Press as a means of combating Terrorism. The revolutionary Press has long since disappeared and, therefore, we can only suppose that Lord Minto means the Nationalist Press and that this pronouncement heralds fresh coercive legislation. The platform has been silenced, the Press must follow. Then Thought alone will remain free from the prohibitions of the law and even that may be coerced by the deportation and exile of anyone whom the Police may suspect of entertaining liberal opinions. Just as the first-quoted passage ensures the extinction of all Moderate activity, so this menace portends the extinction of all Nationalist activity. We do not know that we shall be altogether sorry. If the Englishman is tired of assassinations, we also are tired of the thankless and apparently unsuccessful task of regulating popular discontent and pointing out legitimate paths to national aspiration on the one hand and attempting to save the officials from themselves on the other. We have only persevered in it from a strong sense of our duty to the country.
But we are beginning to feel that Fate is more powerful than the strongest human effort. We feel the menace in the air from above and below and foresee the clash of iron and inexorable forces in whose collision all hope of a peaceful Nationalism will disappear, if not for ever, yet for a long, a disastrously long season.

Facts and Opinions

The Party of Revolution

Be the fault whose you will, ours or the Government’s, the existence of an organised party of armed Revolution in Indian politics is now a recognised factor of the situation. The enormous strides with which events have advanced and a sky full of trouble but also of hope been overcast and grown full of gloom and menace, can be measured by the rapidity with which this party has developed. It is only five years since the national movement sprang into being. The cry was then for self-help and passive resistance. Boycott, Swadeshi, Arbitration, National Education, were the hope of the future, the means of self-regeneration. In five years everything has been struck to the earth. Boycott has almost disappeared, Swadeshi languishes under sentence of arrest, Arbitration died still-born, National Education is committing suicide. A tremendous disintegration has taken place and we look amazed on the ruins of the work our labour and our sacrifice erected. It is a huge defeat, an astonishing catastrophe. And on those ruins grim, wild-eyed, pitiless to itself and to others, mocking at death and defeat with its raucous and careless laughter Revolution rises repeating the language of the old-world insurgents, cherishing a desperate hope which modern conditions deny, grasping at the weapons
which the Slav and the Celt have brought into political warfare. The seeds which the Yugantar sowed in its brief, violent and meteoric career have borne fruit in unexpected quarters and new-born journals repeat in foreign lands and in the English tongue the incitations to revolt and slaughter which have been put down in India by the strong hand of the law. Money is forthcoming to support a journalism which must obviously be all cost and no profit, young men exile themselves from their native land by openly joining the party of violence and in India itself repeated blows have been struck paralysing the hope and the effort to revive the activity of that broader and calmer Nationalism which, recognising modern conditions, still commands the allegiance of the bulk of the nation.

Its Growth

What is the precise nature, propaganda and strength of this party, which by so small an expenditure of energy has produced such surprising results? When the Yugantar, abandoning its habit of philosophic Revolutionism, first began to enter the field of practical politics, to sneer at passive resistance and gird at its chief exponents, no one thought that its change of attitude portended anything serious. Men read the paper for the amazing brilliance, grace and sustained force of its style, a new thing in Bengali journalism, and from the natural attraction men feel for strong writing and bold thought even when they do not agree with it. Afterwards the reckless fight of the Yugantar for existence attracted a more dangerous admiration and from that time the journal changed from a thing of literary interest into a political force. Even then it was taken as a practical guide only among a section of young men small in numbers and without means or influence. But things have changed since then. A void has been created by the conviction, deportation, self-imposed exile or silence of the great Nationalist speakers, writers, organisers, and the dangerous opinions and activities then created have rushed in to occupy the vacuum. The Nationalism we advocate is a thing difficult to grasp and follow, needing continual intellectual
exposition to keep its hold on the mind, continual inspiration and encouragement to combat the impatience natural to humanity; its methods are comparatively new in politics and can only justify themselves to human conservatism by distinguished and sustained success. The preaching of the new revolutionary party is familiar to human imagination, supported by the records of some of the most inspiring episodes in history, in consonance with the impatience, violence and passion for concrete results which revolutionary epochs generate. The growing strength of this party is not difficult to explain; it is extremely difficult to combat.

Its Extent

This party has two sides, the propaganda carried on in foreign countries, and the Terrorist activity always recrudescent in our midst. The latter is the most formidable in the present, the former the most dangerous in the future. The foreign propaganda was first located in London and confined to the single paper, the *Indian Sociologist*, first an organ of Shyamji Krishnavarma’s Home Rule Society and opposed to all methods of violence. The conversion of Krishnavarma to the Terrorism he once fiercely condemned, has been a very important factor in the growth of the new party. The propaganda has been driven from London only to spring at once into a ubiquitous activity abroad. From Paris Krishnavarma publishes the *Indian Sociologist*; from Berlin a new organ, significantly self-styled the Talwar, issues; in Geneva a paper naming itself the *Bande Mataram* busies itself with decrying the policy of the defunct *Bande Mataram* and denouncing its originator and former Editor; a paper called the *Free Hindustan* maintains itself in America. Wealthy men and women stand behind these organs, the Kathiawar Krishnavarma, the Parsi lady Mrs. Kama and possibly others who do not advertise their names. Young men of all nationalities in India seem to have joined these organisations and occasional pamphlets find their way into India in spite of the vigilance of the Post Office by means familiar to European revolutionism.
In India any violent propaganda is impossible; violent action takes its place and the swift succession of attempted or successful outrages in Gujerat, Maharashatra, Punjab and Bengal shows that if the movement is not organised, as in these foreign countries, it is equally widespread. The very existence of such a conspiracy must paralyse all other forms and methods of national aspiration by driving the Government and the Anglo-Indian community into the suppression of everything that goes beyond contented acceptance of that which exists. The revolutionists know this well and they have played their game with great skill and success.

Ourselves

Every established Government is bound to eradicate a movement of this kind and it will naturally use any means it thinks effective. We recognise this necessity, but we have no faith in the means the Government and the Anglo-Indians seem to favour. We are dead against covering over an evil by pretentious, sounding and hollow speech and measures; we do not believe in a remedial system which suppresses symptoms and leaves the roots untouched. All we can do is to stand aside and let the physician try his system — and this we propose to do from henceforward. We have written this week in order to explain our action and our attitude, but we shall abstain in future from comment on current Indian politics or criticism of Government and its measures until more favourable and normal conditions return. We only reserve to ourselves the liberty of writing once to point out the immense difference between Indian conditions in modern times and the historical precedents on which the revolutionists rely, — for which we had not sufficient space in this issue. With this exception the rest is silence. The Karmayogin was originally started as a weekly review intended to encourage the habit of deep and close thinking on all subjects and widen the intellectual range of the people, giving an especial importance to religion and the growth of spirituality. The disproportionate space allowed to current politics was necessitated by the absence of any political
organ devoted to that propaganda of peaceful Nationalism in which we saw the only way to healthy political development in India. Now that that way is barred by the legislator and the Terrorist, we return to our original intention.
The Necessity of the Situation

A VERY serious crisis has been induced in Indian politics by the revival of Terrorist outrages and the increasing evidences of the existence of an armed and militant revolutionary party determined to fight force by force. The effect on the Government seems to have been of a character very little complimentary to British statesmanship. Faced by this menace to peace and security the only device they can think of is to make peaceful agitation impossible. Their first step has been to proclaim all India as seditious. Their second is to announce the introduction of fresh legislation making yet more stringent the already all-embracing law of sedition. By these two measures free speech on press or platform will practically be interdicted, since the perils of truthfulness will be so great that men will prefer to take refuge either in a lying hypocrisy or in silence. Frankness, honesty, self-respecting and truthful opposition in Indian politics are at an end. The spirit which dictates the resort to these measures, will inevitably manifest itself also in the proclamation as illegal of all societies or organisations openly formed for the purpose of training the strength of the nation by solid and self-respecting political and educational work towards a free and noble future. By the law which gives the Government that power of arbitrary suppression associated work is rendered impossible, though not as yet penalised. If free speech, if free writing, if free association is made impossible under the law, it is tantamount to declaring a peaceful Nationalism illegal and criminal.

The effect of the recent assassinations on the Moderate party has been to throw them into a panic and demoralisation painful for any lover of Indian manhood to witness. It is quite possible for an Indian politician at this crisis to consider in a spirit of worthy gravity and serious recognition of the issues involved the
best way of combating the evil, even if it involves co-operation with a Government which persists in the repression of the national hopes and aspirations and seeks to compel co-operation by pressure instead of by winning the hearts of the people. But that is not the spirit shown by Moderate organs and by Moderate leaders. All that we can see is a desperate and cowardly sauve qui peut, an attempt by every man to save himself and to burrow under a heap of meaningless words. Wild denunciations of the revolutionary instruments as fiends, dastards, cowards, with loads of other epithets which defeat their purpose by their grotesque violence; strange panegyrics of the deceased police officer as a patriot, saint, martyr by those who formerly never discovered his transcendent merits or had a good word to say for the police; meetings to arrange steps for the suppression of Anarchism loudly advertised by leaders who know that they are powerless to take any effective steps in the present state of the country; Vigilance Committees which can at best pay for the hired vigils of watchmen easily avoidable by a skilful nocturnal assassin; — are these the speech and action of responsible and serious political leaders or the ravings and spasmodic gesticulations of a terrified instinct of self-preservation?

The Nationalist party can take no share in these degrading performances. On the other hand its own remedies, its own activities are doubly inhibited, inhibited from below by the paralysing effect of successful or attempted assassinations, inhibited from above by panic-stricken suspicion, panic-stricken repression. We have not disguised our policy, we have openly advertised our plans of party reconstruction and reorganisation, we have sought to speak and act candidly before the Government and the country, not extenuating the errors of the Government, not inflaming the minds of the people. The first answer to our propaganda was given by the revolutionary party in the blow struck at Nasik, the second by the Government in the extension of the Seditious Meetings Act to all India. We still felt it our duty to persevere, leaving the results of our activity to a higher Power. The assassination in the High Court and the announcement of a stringent Press legislation convinces us that any farther

www.holybooks.com
prosecution of the public activities we contemplated, will be vain and unseasonable. Until, therefore, a more settled state of things supervenes and normal conditions can be restored, we propose to refrain from farther political action. The Government and the Anglo-Indian community seem to be agreed that by some process of political chemistry unknown to us the propagation of peaceful Nationalism generates armed and militant revolutionism and that the best way to get rid of the latter is to suppress the former. We will give them the chance by suppressing ourselves so far as current Indian politics are concerned. We have no wish to embarrass the action of the Government or to accentuate the difficulties of the situation. The Government have no doubt a policy of their own and a theory of the best means of suppressing violent revolutionary activities. We have no faith in their policy and no confidence in their theory, but since it is theirs and the responsibility for preserving peace rests on them, let them put their policy freely and thoroughly into action. We advise our fellow Nationalists also to stand back and give an unhampered course for a while to Anglo-Indian statesmanship in its endeavours to grapple with this hydra-headed evil.

But before we resort to silence, we will speak out once freely and loudly to the Government, the Anglo-Indian community and the people. We will deliver our souls once so that no responsibility for anything that may happen in the future may be laid at our doors by posterity. To the Government we have only one word to say. We are well aware that they desire not the co-operation of the Nationalist party, but its annihilation. They trace the genesis of the present difficulties to the propaganda of the Nationalist leaders and an unstatesmanlike resentment is allowed to overpower their judgment and their insight. Choosing to be misled by a police whose incapacity and liability to corruption has been loudly proclaimed by their own Commissions presided over by their own officials, they have formed the rooted opinion that the leaders of Nationalism are secretly conspiring to subvert British rule, and neither the openness of our proceedings nor the utter failure of the police to substantiate these allegations have been able to destroy the illusion. The open
espionage, menace and detective machinations to which we are subjected, are sufficient proof of its persistence. Nevertheless, it is due to the Government that we should speak the truth and it is open to them to consider or reject it at their pleasure. The one, the only remedy for the difficulties which beset them in India, is to cease from shutting their eyes on unpleasant facts, to recognise the depth, force and extent of the movement in India, the radical change that has come over the thoughts and hearts of the people and the impossibility of digging out that which wells up from the depths by the spades of repression. They are face to face with aspirations and agitations which are not only Indian but Asiatic, not only Asiatic but worldwide. They cannot do away by force with these opinions, these emotions, these developments unless they first trample down the resurgence in Japan, China, Turkey and Persia and reverse the march of progress in Europe and America. Neither can they circumvent the action of natural forces which are not moved by but move the Indian political leaders. Reforms which would have satisfied and quieted ten years ago are now a mere straw upon a torrent. Some day they must make up their minds to the inevitable and follow the example of rulers all over the world by conceding a popular constitution with whatever safeguards they choose for British interests and British sovereignty, and the earlier they can persuade themselves to concede it, the better terms they can make with the future. This has been the traditional policy of England all over the world, and it has always been an evil day for the Empire when statesmen have turned their backs on English traditions and adopted the blind impolicy of the Continental peoples. They have seen at Lahore and Hughly that Moderatism is a dead force impotent to help or to injure, that whatever the lips may profess, the hearts of the people are with Nationalism. Impolitic severity may transfer that allegiance to the militant revolutionism which is raising its head and thriving on the cessation of all legitimate political activity. The Nationalist leaders will stand unswervingly by their ideals and policy, but they may prove as helpless hereafter as the Moderates are in the face of the present situation.
The Anglo-Indian community, through its recognised organs, is now busy inflaming hostility, hounding on the Government to farther ill-advised measures of repression and adding darkness to darkness and confusion to confusion. Statesmanship they never had, but even common sense has departed from them. The Indian people made a fair offer of peace and alliance to them at the beginning of the movement by including goods produced in India through European enterprise and with European capital as genuine Swadeshi goods; but instead of securing their future interests and position by standing in the forefront of the political and industrial development of India, they have preferred to study their momentary caste interest and oppose the welfare of the country to which they owe their prosperity. As a punishment God has deprived them of reason. They are hacking at the roots of British investment and industry in India by driving blindly towards the creation of more unrest and anarchy in the country. They are imperilling a future which can still be saved, by fanatical attachment to a past which is doomed. If they could look at politics with the eye either of the statesman or of the man of business, they would see that neither their political nor their commercial interests can be served by a vain attempt to hold this vast country by pressing a mailed heel on the throats of the people. The pride of race, the arrogance of colour, a bastard mercantile Imperialism are poor substitutes for wisdom, statesmanship and common sense. Undoubtedly, they may induce the Government to silence and suppress, to imprison and deport till all tongues are hushed and all organisations are abolished — except the voice of the bomb and the revolver, except the subterranean organisation that, like a suppressed disease, breaks out the more you drive in its symptoms. Have they ever contemplated the possibility of that result of their endeavours — the possibility that their confusion of Nationalism with Terrorism may be ignorant and prejudiced, and that the measures they advocate may only destroy the one force that can now stand between India and chaos?

To the people also we have a last word to say. We have always advocated open agitation, a manly aspiration towards
freedom, a steady policy of independent, self-sustained action and peaceful resistance to the repression of legitimate activities. That policy was only possible on condition of a certain amount of self-restraint in repressive legislation by the Government, and a great amount of courage, self-restraint, resolution and self-sacrifice on the part of the people. It appears we cannot count on any of these conditions. The rise of a revolutionist party fanatically opposed alike to the continuance of the British connection and to peaceful development makes our policy yet more impossible. A triangular contest between violent revolution, peaceful Nationalist endeavour and bureaucratic reaction is an impossible position and would make chaos more chaotic. Any action at the present moment would be ill-advised and possibly disastrous. The Government demands co-operation from the Moderates, silence from the Nationalists. Let us satisfy them and let there be no action on our part which can be stigmatised as embarrassing the authorities in their struggle with Terrorism.

The self-restraint of our party after the conviction of Mr. Tilak was rewarded by the breakdown of Moderatism after it had undisputed control of the press and platform for almost a year. A similar self-restraint will be equally fruitful now. Revolution paralyses our efforts to deal peacefully but effectively with Repression; Repression refuses to allow us to cut the ground from under the feet of Revolution. Both demand a clear field for their conflict. Let us therefore stand aside, sure that Time will work for us in the future as it has done in the past, and that, if we bear faithfully the burden of the ideal God has laid upon us, our hour may be delayed, but not denied to us for ever.
The Elections

The GREAT election is over, the first in England which has been fought on constitutional issues since the passing of the Reform Bill in the earlier part of the nineteenth century. The forces of reaction have put forth their utmost strength and, in the result, have only succeeded in just equalising their own numbers with those of the official Liberal party. This partial success will be more fatal to the cause of reaction than a defeat. For, in the coming Parliament, the Liberal Ministry will be dependent for their very existence on the forty Labour votes that represent the frankly socialistic element in English progressive opinion. Such a state of things has never before existed in English politics and a few years ago it would have been thought impossible. Practically, Socialist opinion will rule England so long as the Asquith Ministry lasts and, if the Socialists are wisely guided and refrain from abusing their opportunity, they will be able to take such steps in the modification of British politics as will ensure the triumph of Socialism in England at no distant date. Not only will the Government depend for its very existence on the Labour vote, but it will depend for its safety on Irish support. If, therefore, the Irish also are wisely guided and do not press the favourable situation too far, the long delayed concession of Home Rule is a certainty within the next two years. Necessarily, the success of the Irish and the Socialists can bear no fruit unless the veto of the House of Lords is annulled or a new elective Upper Chamber takes the place of the present absurd and antiquated institution. We have not therefore erred in forecasting a democratic revolution in England as the inevitable result of the action of the House of Lords in rejecting the Budget, or, as they euphemistically put it, referring it to the country. Mr. Balfour has recognised that the verdict of the United Kingdom has been given in favour of the Budget and against Tariff Reform. The real
issue is now, what it should have been throughout, the reform, abolition or replacement of the House of Lords.

When the elections were in progress, Mr. Asquith committed himself on the question of Home Rule, and, even if he wished to draw back from it, in face of his dependence on Labour and Irish votes he can no longer retreat. All that he has done is to qualify his promise of a final solution of the Irish question by stipulating that it shall contain provision for the supremacy of the Imperial Parliament as well as local autonomy of a liberal character for the Irish nation. This means not only the restriction of all Imperial questions to the province of the Parliament meeting in London, but the decision of questions between Ireland and England by the same body and possibly a power of veto in certain matters for the British Cabinet. It is impossible for an English statesman to go farther in the direction of Irish autonomy, and the Irish party will be well advised to accept even this qualified autonomy and make it an instrument for so developing the strength of the Irish nation as to make further concession in the future inevitable. The lifework of Parnell has not gone in vain; the two great questions he brought to a head by his masterly policy, the liberation of the Irish peasant from rack-renting landlords and the liberation of the Irish race from an unsympathetic domination, are both in process of solution within a quarter of a century of his untimely end. Liberty is a goddess who is exacting in her demands on her votaries, but, if they are faithful, she never disappoints them of their reward.

For India, the elections are as favourable as an English election can be. We do not regard the defeat of pro-Indian Liberal candidates as a calamity. There is always a limit to the efforts of members of Parliament, however sincere, who are bound by ties of party loyalty and discipline not to embarrass their official chiefs beyond a certain point. The Labour members and the Nationalists are bound by no such scruples and both of these parties have sympathy with India. The one problem before us is how to turn that sentiment of sympathy into an effective impetus towards action; for in European politics sentiment is not a sufficiently strong motive unless it is supported by some
practical community of interests. The Irish Parliamentary party were able to bring Home Rule into the category of realisable ideals because they made it to the interest of the British parties to get rid of the Irish difficulty; if that ideal is realised now, it will be because the interests of the English Liberals and the Irish Nationalists have become one and, therefore, they must accommodate each other. It is forces that effect great political changes, not moral sentiments or vague generosities. Even a great idea can only become operative when it is manifested as a working force with a definite aim and a distinct pressure on its environments.

Passing Thoughts

Vedantic Art

The progress a new tendency or a new movement is making can be measured by the amount of opposition it meets, and it is encouraging to note that the revival of Indian Art is exciting intellectual opponents to adverse criticism. Mr. Vincent Smith, a solid and well-equipped scholar and historian but not hitherto noted as an art-critic, recently lectured on Indian Art, ancient and modern. It is not surprising that he should find little to praise in the characteristic Vedantic Art of our country and seek to limit its excellence to a few masterpieces. Neither is it surprising that he should object to the revival of the national traditions as restoring Brahminic separateness from the traditions of the rest of the world. These are arguments that are as obvious as they are superficial. But it is strange to find him basing his opinion of the inferiority of the Vedantic style on its appeal not being universal. This merely means that the Vedantic motive and conventions are new to the European mind, and the average eye, enslaved to old associations, cannot immediately welcome what is new and ill-understood. Every new step forward in artistic tradition within Europe itself has been met by the same limited comprehension and has had to get the assent first of the trained and sensitive taste and then of the average mind before it could be said
to be universally recognised. The real question is whether the Vedantic style has anything in it that is true, deep and universal, whether it has a motive, a power of interpretation, a success in making Truth reveal itself in form, such as will ensure its conquest of prejudices based purely on inability to receive or welcome new impressions. The answer to that crucial question cannot be doubtful. Vedantic Art reveals spirit, essential truth, the soul in the body, the lasting type or idea in the mutable form with a power and masterly revelation of which European art is incapable. It is therefore sure to conquer Europe as steadily as Indian thought and knowledge are conquering the hard and narrow materialism of the nineteenth century.

Asceticism and Enjoyment

Small things are often indicative of great and far-reaching tendencies. While glancing at the Modern Review,—always the best worth perusal of our Indian monthlies,—our attention was arrested by a slight illustrated article on Railways in India and America. The writer contrasts the squalor, indigence and discomfort of railway travelling in this Paradise of the efficient Anglo-Indian with the lavish comfort and opulence of railway furnishings and appointments in the United States. The contrast is indicative of the immense gulf between the teeming wealth of America and the miserable indigence of India, once the richest country in the world. America is the land above all lands where enjoyment, bhoga, is frankly recognised and accepted. India, many would say, is the land above all lands where bhoga is sternly refused. That is the common view; we are not inclined to think it the correct view. The asceticism of India is a phase, a characteristic of a civilisation dominated by an unfavourable environment and driven in upon itself. The classical period when India was full of life, activity, development, abounding vigour, defending herself successfully against the impact of the outer barbarian, was a period of frank and lavish enjoyment far more intellectual, artistic, perfect than anything Europe has ever been capable of, even at its best. In yet older literature we find the
true spirit of India, a splendid capacity for bhoga and tyaga in their highest terms, the utter enjoyment of the householder, the utter renunciation of the sannyasin. To take the utmost joy of life, to be capable of the utmost renunciation of life, at one and the same time, in the same mind and body, to be master of both capacities and bound by neither,—this was the secret of India, the mighty discipline of which Janaka was the traditional exemplar. “Renounce all that thou mayest enjoy all,”—this is India’s characteristic message,—not Buddha’s absolute renunciation, not the European’s enslavement to his bodily, vital and intellectual desires and appetites. Tyaga within, bhoga without,—Ananda, the divine delight of the purified soul, embracing both.

Aliens in Ancient India

We extract elsewhere a brief article on the above subject from the December Indian Review for which we had no space in our former issues. The ancient Indian treatment of foreign residents forms a curious contrast to the spirit of exclusion which is growing upon modern nations. We have our own doubts about that little privilege of exemption from suits for debt which Mr. Hayavadana Rau mentions with appreciation; it would obviously place the alien merchant at a disadvantage when compared with the scrupulous honesty of the Indian traders, and we are not sure that it may not have been a subtle stroke of Chanakyalike diplomacy to coddle the resident foreign middleman out of existence while favouring the non-resident importer. The chief importance of the article is, however, the incidental light it throws on the organisation of life in ancient India. We are too apt to forget how noble, great and well-appointed a life it was. There were no railways, telegraphs or steamships, it is true, and democracy was beginning to go out of fashion in favour of a centralised bureaucratic monarchy. But in spite of these drawbacks, the ancient life of India was as splendid, as careful, as convenient, as humane, as enlightened in its organisation as that of any modern society or administration.
The Scholarship of Mr. Risley

We are not concerned with the political issues of Mr. Risley’s great oratorical effort in connection with the Press Bill, for we have renounced politics; but Mr. Risley as a scholar falls within our province, and we can only hope our remarks on that subject will not expose us to the provision against bringing officials into contempt. Even at that risk we must take leave to say that we can only hope Mr. Risley’s ethnological science is less remarkably muddled than his knowledge of Indian civilisation and literature. In his exhortation to Indian womanhood to stand fast to its ancient moorings he jumbles together Swayamvaras, the rape of the Sabines and Shacuntala in a miraculous fashion! At no Swayamvara that we are aware of, did the women come forward as peacemakers between the abducting hero and the disappointed suitors. Mr. Risley has been misled by pitchforking his early memories of Roman history into Indian epic and narrative. And need we say that there was neither Swayamvara, nor fighting nor peacemaking in the story of Shacuntala? This is the first time, moreover, that a startled Indian public has been pointed to Shacuntala as the ideal Hindu woman. Sita, Draupadi, Savitri, Damayanti,—these are familiar to us as ideals, but Shacuntala is Mr. Risley’s own addition. To us she is a beautiful poetic creation, not an exemplar of feminine conduct. We observe that the Bengalee is full of admiration for Mr. Risley’s poetic rapture over Shacuntala. We do not know whom we should congratulate more, the poet of the Press Bill or his admirer.

Anarchism

Are we not entitled, by the way, in the interests of the English language, to protest against the misapplication of the word Anarchists to the Indian Terrorists and Anarchism to their policy? Their methods are wild and lawless, their effort is to create anarchy; but Anarchism and Anarchist are terms which imply something very different, a thing as yet unknown either in practice or in theory to India. The Irish Fenians did the same things as
the Indian Terrorists are now practising, but nobody ever called them Anarchists; to misapply this term is to bring anarchy into the modern use of language. It is doubtful whether any Indian who has not been to Europe, really knows what Anarchism is. Philosophically, it is the negation of the necessity of government; in practice, it is often the use of assassination to destroy all government irrespective of its nationality or nature. Democracy is as abhorrent to the Anarchist as Czarism, a national government as intolerable as the government of the foreigner. All government is to him an interference with the liberty of the individual, and he sets out to assassinate Czar or democratic President, constitutional king or imperial Caesar with a terrible impartiality, an insane logicality. For if we ask him how liberty of any kind except the liberty of the strong to prey on the weak can exist in the absence of government, he will probably answer that by right education right ideas and right feelings will be established and the spirit of brotherhood will prevent the abuse of liberty, and if anyone infringes this unwritten law, he must be destroyed as if he were a noxious wild beast. And by a parallel logic he seeks to destroy all the living symbols of a state of society which stands in the way of the coming of his millennium.

The Gita and Terrorism

Mr. Risley repeats a charge we have grown familiar with, that the Gita has been misused as a gospel of Terrorism. We cannot find any basis for this accusation except the bare fact that the teaching of the Gita was part of the education given by Upendranath Banerji in the Maniktola garden. There is no evidence to show that its tenets were used to justify a gospel of Terrorism. The only doctrine of the Gita the Terrorist can pervert to his use, is the dictum that the Kshatriya must slay as a part of his duty and he can do it without sin if he puts egoism away and acts selflessly without attachment, in and for God, as a sacrifice, as an offering of action to the Lord of action. If this teaching is in itself false, there is no moral basis for the hero, the soldier, the judge, the king, the legislature which recognises
capital punishment. They must all be condemned as criminals and offenders against humanity. It is undoubtedly true that since the revival of religious thought in India the Gita has ceased to be what Mr. Risley calls it, a transcendental philosophy, and has been made a rule of life. It is undoubtedly true that selflessness, courage, a free and noble activity have been preached as the kernel of the ethics of the Gita. That teaching has in no country been condemned as ignoble, criminal or subversive of morality, nor is a philosophy of any value to any sensible being if it is only transcendental and cannot be lived. We strongly protest against the brand of suspicion that has been sought to be placed in many quarters on the teaching and possession of the Gita, — our chief national heritage, our hope for the future, our great force for the purification of the moral weaknesses that stain and hamper our people.
Passing Thoughts

The Bhagalpur Literary Conference

The prevalence of annual conferences in the semi-Europeanised life of Bengal is a curious phenomenon eloquent of the unreality of our present culture and the inefficiency of our modernised existence. Our old life was well, even minutely organised on an intelligent and consistent Oriental model. The modern life of Europe is well and largely organised on an intelligent and consistent Occidental model. It materialises certain main ideas of life and well-being, provides certain centres of life, equips them efficiently, serves the objects with which they are instituted. Our old life did the same. But this is precisely what our modern life does not do. Its institutions are apes of a foreign plan, unintelligent expressions of an idea which is not ours; they serve no civic, no national purpose. They are the spasmodic movements of an organism whose own life is arrested, but which feels itself compelled to move, however awkwardly and uselessly, if only to persuade itself that it is not dead. We have for instance a Literary Conference which meets once a year, if nothing occurs to prevent it. But such an annual celebration has no intelligent purpose except as the centre of an organised literary life. The pulse of our literary life is feeble and artificial. Its centres are conspicuous by their absence. In Europe the club, the literary
paper, the coterie, the school of writing, the Academy are distinct entities in which the members of the organism have living relations, a common atmosphere, a common intellectual food. They have no Literary Conference because the literary life of Europe is a reality. We in India have neither these institutions nor any other centres of our own. The Conference is a convulsive attempt to relate ourselves to each other, which evinces a vague desire for united living, but no capacity to effect it. There was a time when a vigorous literary life seemed about to form itself in Bengal, and its relics are seen in the literary magazine and the Sahitya Parishad; but at present these serve only to record the extremely languid pulsation of our intellectual existence. The great intellectual stir, hopefulness and activity of the last century has disappeared. The individual lives to himself, vigorously or feebly, according to the varying robustness of his personality or intensity of his temperament. Coordination is still far from us.

**Life and Institutions**

Life creates institutions; institutions do not create, but express and preserve life. This is a truth we are too apt to forget. The Europeans and especially our gurus, the English, attach an exaggerated importance to machinery, because their own machinery has been so successful, their organisation so strong and triumphant. In the conceit of this success they imagine that their machinery is the only machinery and that the adoption of their organisation by foreign peoples is all that is needed for perfect social and political felicity. In Europe this blind attachment to machinery does not do fatal harm, because the life of a free nation has developed the existing institutions and modifies them by its own irresistible law of life and development. But to take over those institutions and think that they will magically develop European virtues, force and robustness, or the vivid and vigorous life of Europe, is as if a man were to steal another’s coat and think to take over with it his character. Have not indeed many of us thought by masquerading in the amazing garb which nineteenth
century Europe developed, to become so many brown Englishmen? This curious conjuring trick did not work; hatted, coated and pantalooned, we still kept the chaddar and the dhooty in our characters. The fond attempt to become great, enlightened and civilised by borrowing European institutions will be an equally disastrous failure.

**Indian Conservatism**

In India we were, if possible, even more attached to our machinery — all the more because we had ceased to understand the science of social mechanics which they embodied. We attached a superstitious importance to maintaining our society exactly in the mould of our Shastras while in reality that mould had been altered out of recognition centuries ago. We quoted Parashara and Manu while we followed Raghunandan and custom. This religious fiction was very much like the English superstition about the British constitution which is supposed to be the same thing it was in the days of Lord Somers, but is really a thing Lord Somers would have stared at aghast as an unrecognisable democratic horror. The cause is the same in both cases — a robust and tenacious society freely developing its machinery in response to its inner needs while cherishing and preserving them. Englishman and Hindu have been alike in their tenacious conservatism and their refusal to accept revolution, alike in their respect for law and the thing established, alike in their readiness to change rapidly and steadily if the innovator would only disguise from them the fact that they were changing. The Hindu advanced more slowly because he was an Asiatic in a period of contraction, the Englishman more quickly because he was a European in a period of expansion. If our social reformers had understood this Indian characteristic, they might have revolutionised our society with comparatively small friction, but the parade of revolution which they made hampered their cause. Even as it is, Indian society, in Bengal at least, is changing utterly while all the time loudly protesting that it has not changed and will not change. The mould in which Raghunandan cast society, is disintegrating
as utterly as the mould of Parashara or Manu has disintegrated. What will replace it, is another matter.

Samaj and Shastra

Every Samaj must have its Shastra, written or unwritten. Where there is no Social Scripture, there is none the less a minute and rigid code of social laws binding men in their minutest actions. The etiquette of the European is no less binding than the minute scrupulosities of Manu or Raghunandan, and it is even more minute and scrupulous. It is a mistake to think that in Europe men can eat as they will, talk as they will, act as they will with impunity. They cannot — or at least they could not, though one hears of strange revolutions, and in the days of the suffragette everything is possible. Society everywhere is exacting, scrupulous, minute, pitiless in punishment of slight departures from its code, however absurd and unreasonable that code may be. But while in India the sanction is religious, in Europe it is social. In India a man dreaded spiritual impurity, in Europe he shrinks from the sneers and dislike of his class or his fellows. Social excommunication is always the ultimate penalty.

Revolution

But in Europe and India alike we seem to stand on the threshold of a vast revolution, political, social and religious. Whatever nation now is the first to solve the problems which are threatening to hammer Governments, creeds, societies into pieces all the world over, will lead the world in the age that is coming. It is our ambition that India should be that nation. But in order that she should be what we wish, it is necessary that she should be capable of unsparing revolution. She must have the courage of her past knowledge and the immensity of soul that will measure itself with her future. This is impossible to England, it is not impossible to India. She has in her something daemonic, volcanic, elemental — she can rise above conventions, she can break through formalities and prejudices. But she will not do
so unless she is sure that she has God’s command to do it,—
unless the Avatar descends and leads. She will follow a Buddha
or a Mohammad wherever he will lead her, because he is to her
either God himself, or his servant,—because as Sri Ramakrishna
would have put it, she saw the *chapras*. It was a little of that
daemonic, volcanic, elemental thing in the heart of the Indian
which Lord Curzon lashed into life in 1905. But the awakening
was too narrow in its scope, too feeably supported with strength,
too ill-informed in knowledge. Above all the Avatar had not
descended. So the movement has drawn back to await a farther
and truer impulse. Meanwhile let it inform its intellect and put
more iron into its heart, awaiting a diviner manifestation.

Sri Aurobindo left Calcutta for Chandernagore in the middle of February 1910. His connection with the Kar-
mayogin ceased with his sudden departure. The editorial matter in the issue of 19 February certainly was written
by him. Most articles in subsequent issues were written by Sister Nivedita. Two pieces by Sri Aurobindo
published in the Karmayogin after his departure are reproduced on the following pages.
Sj. Aurobindo Ghose

WE ARE greatly astonished to learn from the local Press that Sj. Aurobindo Ghose has disappeared from Calcutta and is now interviewing the Mahatmas in Tibet. We are ourselves unaware of this mysterious disappearance. As a matter of fact Sj. Aurobindo is in our midst and, if he is doing any astral business with Kuthumi or any of the other great Rishis, the fact is unknown to his other Koshas. Only as he requires perfect solitude and freedom from disturbance for his Sadhan for some time, his address is being kept a strict secret. This is the only foundation for the remarkable rumour which the vigorous imagination of a local contemporary has set floating. For similar reasons he is unable to engage in journalistic works, and Dharma has been entrusted to other hands.

Karmayogin no. 37, 19 March 1910
In Either Case

There are two movements of humanity, upward and downward, and both are irresistible. It may seem for a moment that the downward movement is arrested and an upward lift may for a while rejoice the hearts that are attached to a cause forsaken by God and Destiny. The majestic or impetuous rise of a religion, an idea, a nation may for a fleeting period be held back by main force and with a fierce and infinite labour the wheel may be driven back for the space of an inch or even two. But God cannot be deceived and God cannot be conquered by violence. Where He is the Charioteer, victory is certain and if He wheels back, it is only to leave ground which is no longer advantageous to Him and shift the conflict to terrain fixed beforehand for the victory. Often He forces His adversaries to drive Him from ground conquered and occupied in order that they may exhaust their strength on a position never meant to be permanently held and by their very triumph prepare a more decisive overthrow.

Minute minds fix themselves on details and say, “Here we have failed, there we have prevailed”; and if the record of defeats seems to be long and ill-balanced by doubtful successes, they grow discouraged and apprehend the ruin of their cause. So men deceive themselves as to the trend of events by not keeping their eyes open to the great stream of inevitable tendency which prevails over all backwashes and petty currents. And where defeat is predestined for a season, their want of faith leads to the very calamity which they apprehended. The eye of Faith is not one with the eye of Knowledge; — Faith divines in the large what Knowledge sees distinctly and clearly; but in the main thing Faith and Knowledge are one and the wisdom of the Lover is justified and supported by the wisdom of the Seer. Faith fights for God, while Knowledge is waiting for fulfilment,
and so long as the latter is withheld, the former is necessary. For without indomitable Faith or inspired Wisdom no great cause can conquer.

We must look therefore to the great tendency of things and interpret in their light the minute events that are passing at the moment. Is the main tendency of things upward or downward? If it is downward, even then we must strive, for the man who abandons a cause which is right because it is denied success, is despicable, and he inflicts a wound on mankind in the present and the future. Great causes which are fought out boldly to the end are made sacred by courage and suffering and their resurrection and final victory is inevitable. Only those which are supported by cowards and meanly abandoned, are erased from the books of the future. The mediaeval movement of civic liberty in France and Italy failed and gave place to Teutonic despotism, but it revived with a hundredfold force in the French Revolution and it was the impetuous rush earthwards of the souls that had fought for it hundreds of years before that shattered to pieces the once victorious feudal system. But if, as we are assured, the movement is upward, then we may persist in absolute confidence, sure that reverses in details are only meant to prepare and point the true way to victory.

Persistence does not imply persistence in methods that have proved to be infructuous or from which, though temporarily fruitful, God has withdrawn His sanction. We must remember that we are a nation not yet trained in the vaster movements of modern politics. Not only our rank and file, but our captains and our strategists need the training of events, the wisdom of experience to make them perfect. Fire, impetuosity, self-sacrifice, intellectual vigour, subtlety, wealth of ideas, fertility of resource to meet unexpected happenings, these have been given to us in abundance. But the perfect experience of the veteran in great battles, the acute political intelligence which comes of long familiarity with the handling of high affairs and national destinies, these are yet in us immature and in a state of pupillage. But God Himself is our master and teacher, for He would give to His chosen nation a faultless training and a perfect capacity.
Only we must be ready to acknowledge our mistakes, to change our path, to learn. Then only shall we victoriously surmount all obstacles and move steadily, impetuously, but without stumbling or swerving, to our goal.

Moreover, we have weaknesses that are still rampant and uncorrected in our midst. It is our first duty to purge these out of our hearts with a merciless surgery. If the intellectual equipment is deficient, the spiritual equipment is also far from perfect. Our leaders and our followers both require a deeper sadhana, a more direct communion with the Divine Guru and Captain of our movement, an inward uplifting, a grander and more impetuous force behind thought and deed. It has been driven home to us by experience after experience, that not in the strength of a raw unmoralised European enthusiasm shall we conquer. Indians, it is the spirituality of India, the sadhana of India, tapasya, jnanam, shakti that must make us free and great. And these great things of the East are ill-rendered by their inferior English equivalents, discipline, philosophy, strength. Tapasya is more than discipline; it is the materialisation in ourselves by spiritual means of the divine energy creative, preservative and destructive. Jnanam is more than philosophy, it is the inspired and direct knowledge which comes of what our ancients called drishti, spiritual sight. Shakti is more than strength, it is the universal energy which moves the stars, made individual. It is the East that must conquer in India’s uprising. It is the Yogin who must stand behind the political leader or manifest within him; Ramdas must be born in one body with Shivaji, Mazzini mingle with Cavour. The divorce of intellect and spirit, strength and purity may help a European revolution, but by a European strength we shall not conquer.

The movements of the last century failed because they were too purely intellectual and had not an enlightened heart behind them. Nationalism has striven to supply the deficiency; it has poured the inspirations of the heart into a swifter and more discerning intellectual activity. But Nationalism also has been defective; it has been Indian in sentiment and aspiration, European in practice and actuality. It has helped itself with the intellect, rejoicing in its own lightness, clearness, accuracy, shrewd insight,
but it has not been sufficiently supported by inspired wisdom. It has attached itself to imaginations and idealisms, but has not learned to discern the deeper Truth and study the will of God. It has been driven by ardent and vehement emotions, but was defective in clear will-power and the pure energy that is greater and more impetuous than any passionate feeling. Either Nationalism will purify itself, learn a more sacred truth and command a diviner impulse, or it will have to abandon utterly its old body and get itself a new. The pressure of events seems to be pointing in the latter direction. But in either case defeat cannot be the end, victory must be the end.

In all the events of the last year and a half the voice of the divine Teacher can be heard crying to us, “Abandon that you may possess; do my will and know yourselves, purify yourselves, cease to follow your fancies.” He that has ears, let him hear. Knowledge will not come without self-communion, without light from within, not even the knowledge of the practical steps that can lead to success. Every step that is taken in the light of a lower wisdom will fail until the truth is driven home.

The work that was begun at Dakshineshwar is far from finished, it is not even understood. That which Vivekananda received and strove to develop, has not yet materialised. The truth of the future that Bijoy Goswami hid within himself, has not yet been revealed utterly to his disciples. A less discreet revelation prepares, a more concrete force manifests, but where it comes, when it comes, none knoweth.

APPENDIX

*Karmayogin* Writings in Other Volumes of the Complete Works

Non-political writings from the *Karmayogin* are published in other volumes of *The Complete Works of Sri Aurobindo*. In the table below, the items included in each volume are listed in the order of their appearance in the *Karmayogin*. The original titles are given. Some of these writings were later revised by Sri Aurobindo.

**VOLUME 1. EARLY CULTURAL WRITINGS**

Two Pictures
Kalidasa’s Seasons
Suprabhat: A Review
Indian Art and an Old Classic
The Brain of India
The Revival of Indian Art
The National Value of Art
The Men that Pass
Conversations of the Dead
A System of National Education

**VOLUME 2. COLLECTED POEMS**

Invitation
Who?
An Image
The Birth of Sin
Epiphany
Baji Purbhou
Chitrangada

Note on the Text

*Karmayogin: Political Writings and Speeches 1909–1910* consists of articles published in the weekly newspaper *Karmayogin* in 1909 and 1910 and speeches delivered during the same period. The articles are published issue by issue in the order of their appearance, the speeches by date of delivery.

Between May 1909 and February 1910 Sri Aurobindo was the most prominent leader of the Nationalist or Extremist Party in Bengal. He had spent the previous year in jail while the Alipore Bomb Case, in which he was the principal accused, was under trial. Acquitted and released on 6 May 1909, he found the party disorganised and without an English-language organ, as the *Bande Mataram*, a newspaper he edited from 1906 to 1908, had been suppressed a few months after his arrest. He resolved to continue to place the nationalist ideal before the country; but he now conceived this ideal in less purely political terms than before his arrest. During his imprisonment he had undergone a series of spiritual experiences that had changed his outlook on life. When he decided to launch the *Karmayogin*, he conceived of it as “A Weekly Review of National Religion, Literature, Science, Philosophy, &c.”

The first issue of the *Karmayogin*, which came out on 19 June 1909, contained part of the “Uttarpara Speech”, which had been delivered on 30 May, as well as two important articles setting forth the purpose of the journal and the task before the country. Each issue of the journal after the first contained the following:

1. A column consisting of from three to twelve headlined paragraphs dealing with one or more topics. Between 26 June 1909 and 5 February 1910 the column was called “Facts and Opinions” (with some variants). On 12 February the heading was changed to “Passing Thoughts”. Subjects dealt with included current events, British rule, party politics, “national religion”, and the like.

2. One or two leading articles dealing with the same subjects in more depth.
Many issues also contained material by Sri Aurobindo in one or more of the following categories:

(3) Articles on philosophy, yoga and related topics. There is no clear border between articles in this category and those on national religion.

(4) Single articles or instalments of longer works on cultural topics: education, art, literature, etc.

(5) Literary works, including translations from the Sanskrit and the Bengali, poems, etc.

(6) Transcriptions of speeches. These were reproduced from other newspapers, which employed shorthand writers to take down the proceedings of public meetings. Some of them were revised by Sri Aurobindo for publication in the *Karmayogin*.

In addition, the *Karmayogin* contained:

(7) Articles and speeches by other persons reproduced from the Indian and British press.

(8) Articles written for the *Karmayogin* by other persons.

(9) Two or three pages of ordinary news per issue.

(10) Advertisements.

After the first several issues, the *Karmayogin* contained few articles written for it by other persons. Almost all original matter appearing in the journal was written by Sri Aurobindo.

In *Karmayogin: Political Writings and Speeches 1909–1910* the editors have reproduced only Sri Aurobindo’s columns (whatever the subject), his longer articles on current politics and national religion, and the speeches delivered during this period. Other writings by him published in the *Karmayogin* are listed at the end of each issue. A table at the end of the book gives the volume of THE COMPLETE WORKS OF SRI AUROBINDO in which these writings are published.

Sri Aurobindo left Calcutta in the middle of February 1910, probably before the nineteenth of the month. From that time the newspaper was edited by Sister Nivedita (Margaret Noble), and most of its articles were written by her. Writings (essays, translations and poems) that Sri Aurobindo had left behind in Calcutta continued to be published in the journal until it was discontinued on 2 April 1910. Sri Aurobindo spent late February and March incognito in the French enclave of Chandernagore, located thirty kilometers north of Calcutta. From here
he sent the amusing letter published in the *Karmayogin* of 19 March. His essay “In Either Case” was either left behind in Calcutta or sent from Chandernagore.

On 31 March Sri Aurobindo left Chandernagore for Calcutta and the next morning boarded a ship that took him to Pondicherry, the capital of French India. Here he remained for the rest of his life. His departure from Calcutta marked the end of his active involvement in politics.

**Printing history.** Most of the writings in the present volume made their first appearance in print since 1909–10 in *Karmayogin: Early Political Writings – II*, volume 2 of the Sri Aurobindo Birth Centenary Library (1972). “An Open Letter to My Countrymen” was issued as a pamphlet shortly after its publication in the *Karmayogin* in 1909. Several articles from the journal were reproduced, sometimes after revision, in three booklets: *The Ideal of the Karmayogin* (1918, 1919, 1921, 1927, 1937, 1938, 1945, 1950 and subsequently), *Man — Slave or Free?* (1922, 1966), and *The Need in Nationalism and Other Essays* (1923). The *Uttarpara Speech* was published as a booklet in 1919, 1920, 1922, 1943, 1950 and subsequently. An edition of Sri Aurobindo’s *Speeches*, including six speeches published in the present volume as well as the “Open Letter”, was brought out as a booklet in 1922 and reissued four times between 1948 and 1974. A new edition, published in 1993, included five speeches not published during Sri Aurobindo’s lifetime. Copies of them were discovered in British India government files and first published in *Karmayogin: Early Political Writings and Speeches – II* or in the journal *Sri Aurobindo: Archives and Research*.

The texts of all the writings and speeches published in the present volume have been checked against the original *Karmayogin*, the booklets *The Ideal of the Karmayogin* and *The Need in Nationalism*, and the original sources of the speeches.
Record of Yoga
Publisher’s Note

Record of Yoga is a diary of Sri Aurobindo’s yoga between 1909 and 1927. He kept it fairly regularly from 1912 to 1920, and also wrote a few entries in 1909, 1911 and 1927. At different times he gave this diary different names. “Record of Yoga” was the most typical and the editors have used it as the general title of the work.

During the years he kept the diary, Sri Aurobindo also wrote other materials relating to his practice of yoga. These include descriptions of the seven “chatusthayas” (groups of four elements), which are the basis of the yoga of the Record. These materials are published in the Introduction, in Parts Four and Five, and in the Appendix.

Sri Aurobindo wrote the diary and related materials by hand in various notebooks and on loose sheets of paper. He used a special terminology which included words from Sanskrit and other languages, as well as abbreviations, symbols and markings, some of which are difficult to represent in a printed book. The special terminology is explained in a separate glossary. The editors have tried to reproduce the details of the manuscripts as exactly as possible. Editorial problems arising from damage to the manuscripts, illegibility, etc. are indicated by means of the system explained in the Guide to Editorial Notation on the next page.

The text of the diary entries and related materials, transcribed and arranged by the editors, appears here for the first time as a book.
Guide to Editorial Notation

Most of this book has been transcribed from unrevised manuscripts. The text published here is as far as possible a verbatim transcript. Problems encountered in reproducing the manuscripts are indicated by means of the notation shown below.

<table>
<thead>
<tr>
<th>Notation</th>
<th>Textual Problem</th>
</tr>

Introduction

Sapta Chatusthaya
SAPTA CHATUSTHAYA

I Shanti-Chatusthaya.

समता शान्तिः सुखं धार्मिकं शान्तिचतुष्टयं।
Samata shantih sukham hasyam iti shantichatusthayam.

Samata

The basis of internal peace is samata, the capacity of receiving with a calm and equal mind all the attacks and appearances of outward things, whether pleasant or unpleasant, ill-fortune and good-fortune, pleasure and pain, honour and ill-repute, praise and blame, friendship and enmity, sinner and saint, or, physically, heat and cold etc. There are two forms of samata, passive and active, samata in reception of the things of the outward world and samata in reaction to them.

(1) Passive

Passive samata consists of three things—

तितिक्षोदासिनता नतिरिति समता।
titiksha, udasinata, natih iti samata

Titiksha

Titiksha is the bearing firmly of all contacts pleasant or unpleasant, not being overpowered by that which is painful, not being carried away by that which is pleasant. Calmly and firmly to receive both and hold and bear them as one who is stronger, greater, vaster than any attack of the world, is the attitude of titiksha.

Udasinata

Udasinata is indifference to the dwandwas or dualities; it means literally being seated above, superior to all physical and mental touches. Theudasina, free from desire, either does not feel the touch of joy & grief, pleasure and pain, liking and disliking, or he feels them as touching his mind and body, but not himself, he
being different from mind and body and seated above them.

Nati

Nati is the submission of the soul to the will of God; its acceptance of all touches as His touches, of all experience as His play with the soul of man. Nati may be with titiksha, feeling the sorrow but accepting it as God’s will, or with udasinatá, rising superior to it and regarding joy and sorrow equally as God’s working in these lower instruments, or with ananda, receiving everything as the play of Krishna and therefore in itself delightful. The last is the state of the complete Yogin, for by this continual joyous or anandamaya namaskara to God constantly practised we arrive eventually at the entire elimination of grief, pain etc, the entire freedom from the dwandwas, and find the Brahmananda in every smallest, most trivial, most apparently discordant detail of life & experience in this human body. We get rid entirely of fear and suffering; Anandam Brahmano vidván na bibheti kutaschana. We may have to begin with titiksha and udasinata but it is in this ananda that we must consummate the siddhi of samata. The Yogin receives victory and defeat, success and ill-success, pleasure and pain, honour and disgrace with an equal, a sama ananda,—first by buddhi-yoga, separating himself from his habitual mental & nervous reactions & insisting by vichara on the true nature of the experience itself and of his own soul which is secretly anandamaya,—full of the sama ananda in all things. He comes to change all the ordinary values of experience; amangala reveals itself to him as mangala, defeat & ill-success as the fulfilment of God’s immediate purpose and a step towards ultimate victory, grief and pain as concealed and perverse forms of pleasure. A stage arrives even, when physical pain itself, the hardest thing for material man to bear, changes its nature in experience and becomes physical ananda; but this is only at the end when this human being, imprisoned in matter, subjected to mind, emerges from his subjection, conquers his mind and delivers himself utterly in his body, realising his true anandamaya self in every part of the adhára.
It is this universal or sama ananda in all experiences which constitutes active samata, and it has three parts or stages, —

रसः प्रीतिरानन्दः इति सर्वानन्दः
Rasah, pritir anandah [iti sarvanandah]

Rasa is the appreciative perception of that guna, that áswada, taste and quality which the Ishwara of the lila perceives in each different object of experience (vishaya) and for the enjoyment of which He creates it in the lila. Pritih is the pleasure of the mind in all rasa, pleasant or unpleasant, sweet or bitter. Ananda is the divine bhoga superior to all mental pleasure with which God enjoys the rasa; in ananda the opposition of the dualities entirely ceases.

Shanti
Only when samata is accomplished, can shanti be perfect in the system. If there is the least disturbance or trouble in the mentality, we may be perfectly sure that there is a disturbance or defect in the samata. For the mind of man is complex and even when in the buddhi we have fixed ourselves entirely in udasinata or nati, there may be revolts, uneasinesses, repinings in other parts. The buddhi, the manas, the heart, the nerves (prana), the very bodily case must be subjected to the law of samata.

Shanti may be either a vast passive calm based on udásinata or a vast joyous calm based on nati. The former is apt to associate itself with a tendency to inaction and it is therefore in the latter that our Yoga must culminate.

Sukha
Sukham is the complete relief & release from duhkha, from vishada, which comes by the fulfilment of samata and shanti. The perfected Yogin has never in himself any touch of sorrow, any tendency of depression, cloud or internal repining and weariness, but is always full of a sattwic light and ease.

Hasya
Hasya is the active side of sukham; it consists in an active
internal state of gladness and cheerfulness which no adverse experience mental or physical can trouble. Its perfection is God’s stamp and seal on the siddhi of the samata. It is in our internal being the image of the smile of Srikrishna playing, bālavat, as the eternal bālaka and kumara in the garden of the world.
Shakti Chatusthaya

This may be called the siddhi of the temperament or nature in the lower system, in the internal triloka of mind, life & body, manas, prana, annam. To put it from a higher standpoint, it is the siddhi of the divine Shakti working in these three principles.

Vīrya, shakti, chandibhavah, sraddha, iti shaktichatusthayam.

Vīrya
The Chaturvārya

By Vīrya is meant the fundamental swabhavashakti or the energy of the divine temperament expressing itself in the fourfold type of the chaturvārya, in Brahmānyam, brahmashakti, brahmatejas, in kṣatram, kṣatrasahā, kṣatratējas, in Vaishyaswabhava, shakti and tejas, in Shudraswabhava, shakti and tejas. We must realise that the ancient Aryan Rishis meant by the chaturvārya not a mere social division, but a recognition of God manifesting Himself in fundamental swabhava, which our bodily distinctions, our social orders are merely an attempt to organise in the symbols of human life, often a confused attempt, often a mere parody and distortion of the divine thing they try to express. Every man has in himself all the four dharmas, but one predominates, in one he is born and that strikes the note of his character and determines the type and cast of all his actions; the rest is subordinated to the dominant type and helps to give it its complement. No Brahma is a complete Brahma, unless he has the Kṣatratējas in him, the Vaishyashakti and the Shudrashakti, but all these have to serve in him the fullness of his Brahmanyam. God manifests Himself as the four Prajapatis or Manus, the chatwāro manavah of the Gita, & each man is born in the ansha of one of the four; the first characterised by wisdom and largeness, the second by heroism and force, the third by dexterity and enjoyment, the fourth by work and service. The perfected man develops in himself all four capacities and contains at once the god of wisdom & largeness, the god of heroism and force, the god of skill and enjoyment, the god of work & service. Only, one stands dominant and leads and uses the others.
Brahmatejas

Jnanalipsa jnanaprakasha brahmavarchasyam sthairyam iti brahmatejah.

Lipsa

I give only the dominant qualities of the type in these definitions. The purna Yigin does not reduce his nature to inaction but perfects it and uplifts in order to place it at the service of the Ishwara in His lila. He accepts the jnanalipsa and purifying it of desire turns it into a divine reaching out towards prakasha of knowledge; this divine desireless reaching out of Brahma in personality to Brahman in the vishaya or object, is the new sense which lipsa acquires in the language of the siddha.

Jnanaprakasha

Jnana includes both the Para and the Apara Vidya, the knowledge of Brahman in Himself and the knowledge of the world; but the Yigin, reversing the order of the worldly mind, seeks to know Brahma first and through Brahma the world. Scientific knowledge, worldly information & instruction are to him secondary objects, not as it is with the ordinary scholar & scientist, his primary aim. Nevertheless these too we must take into our scope and give room to God’s full joy in the world. The methods of the Yigin are also different for he tends more and more to the use of direct vision and the faculties of the vijnana and less and less to intellectual means. The ordinary man studies the object from outside and infers its inner nature from the results of his external study. The Yigin seeks to get inside his object, know it from within & use external study only as a means of confirming his view of the outward action resulting from an already known inner nature.

Brahmavarchasya

Brahmavarchasya is the force of jnana working from within a man which tends to manifest the divine light, the divine power, the divine qualities in the human being.
Sthairya

Sthairya is the capacity of fixity in jnana; the man who is sthira is able to hold the light and power that enters into him without stumbling or being dazzled and blinded by the shock and to receive & express the divine gunas in himself without being carried away by them & subjected to the blind, rushing stream of Prakriti. He has the dharanasamarthyam & does not, from incapacity of the adhára, lose or spill these things as they enter into him.

Kshatratejas

अनयं साहसम यशोलिप्सात्मस्लाग्हात्मको शक्तिः।
Abhayam, sahasam, yasholipsa, atmaslagha, iti kshatratejah.

Abhaya & Sahasa

Abhayam is the passive freedom from fear which with a bold calmness meets and receives every menace of danger and shock of misfortune. Sahasam is the active courage and daring which shrinks from no enterprise however difficult or perilous and cannot be dismayed or depressed either by the strength or the success of the opposing forces.

Yashas

By yashas is meant victory, success and power. Although the Kshatriya must be ready to face and accept defeat, disaster and suffering, yet his objective, the thing towards which he moves, is yashas. He enters the field to conquer, not to suffer. Suffering is only a means towards victory. Here again the reaching out, the lipsa must come to be free from desire & consist in the divine reaching out of God within to His self-fulfilment as the Kshatriya. Therefore the Kshatriya must manifest in himself the nature of the Brahmin, jnana & sthairyam, since without knowledge in some form desire cannot perish out of the system.

Atmaslagha

Atmaslagha in the unpurified Kshatriya is pride, self-confidence & the knowledge of his own might. Without these qualities the Kshatriya becomes deficient in force & fails to effect himself in type & action. But with purification it becomes no longer the slagha
of the aham, but the slagha of the Atman, the divine Self within rejoicing in the shakti of God and its greatness and its power as it pours itself out in battle and action through the human adhara.

**Vaishyashakti**

Danam, vyayah, kaushalam, bhogalipsa, iti Vaishyashaktih.

Dana & pratidánā are the especial dharma of the Vaishya; his nature is the nature of the lover who gives and seeks; he pours himself out on the world in order to get back what he has given increased a hundredfold. Vyaya is his capacity to spend freely for this purpose without any mean and self-defeating miserliness in the giving. Kaushalam is the dexterity & skill which is able so to arrange the means, the equipment, the action as to produce the greatest results possible & the best arranged results. Law, arrangement, suiting of means to ends, of expenditure to return, are the joy of the Vaishya. Bhoga is his object; possession & enjoyment, not merely of physical things, but all enjoyment, enjoyment of knowledge, of power, of self-giving, of service, comes within its scope. The Vaishya, purified and liberated, becomes the supreme giver and lover & enjoyer, Vishnu’s ansha preserving & making the most of the world. He is the Vishnushakti, as the Brahma is the Shivashakti & the Kshatriya the Rudrashakti.

**Shudrashakti**

Kamah, premah, dasyalipsa atmasamarpanam iti Shudrashaktih.

The Shudra is God descending entirely into the lower world and its nature, giving himself up entirely for the working out of God’s lila in Matter & in the material world. From this standpoint he is the greatest of the four shaktis, because his nature goes direct towards complete atmasamarpana; but the Shudra bound has cut himself off from knowledge, power and skill & lost himself in the tamoguna. He has to recover the Brahma, Kshatriya & Vaishya in himself and give them up to the service of God, of man, of all beings. The principle of kamah or desire in him must change from
the seeking after physical well-being, and self-indulgence to the joy of God manifest in matter. The principle of prema must find itself and fulfil itself in dasyalipsa and atmasamarpana, in the surrender of himself to God and to God in man and the selfless service of God and of God in man. The Shudra is the master-spirit of the Kali, as is the Vaishya of the Dwapara, the Kshatriya of the Treta and the Brahmana of the Satya.

Shakti

Shakti is that perfection of the different parts of the system which enables them to do their work freely and perfectly.

Dehashakti

Mahattwabodho, balaslagha, laghuta, dharanasamarthyam iti dehashaktih.

The body is the pratistha in this material universe; for the working out of the divine lila on earth it is necessary that it should have especially the dharanasamarthyam or power of sustaining the full stream of force, of ananda, of widening knowledge & being which descends into mind and prana and the vital and bodily functions with the progress of the siddhi. If the body is unfit, the system is unable to hold these things perfectly. In extreme cases the physical brain is so disturbed by the shock from above as to lead to madness, but this is only in entirely unfit & impure adharas or when Kali descends angrily & violently avenging the attempt of the Asura to seize on her and force her to serve his foul & impure desires. Ordinarily, the incapacity of the body, the nervous system and the physical brain shows itself in slowness of progress, in slight derangements and ailments, in unsteady hold of the siddhi which comes & slips away, works & is spilled out. Dharanasamarthya comes by purification of the mind, prana and body; full siddhi depends upon full shuddhi.

Pranashakti

Purnata, prasannata, samata, bhogasamarthym, iti pranashaktih.
When in the physical sensations we are conscious of a full and steady vital force which is clear and glad and bright and undisturbed by any mental or physical shock, then there is the siddhi of the prana, the vital or nervous system. Then we become fit for whatever bhoga God imposes on the mind and body.

**Chittashakti**

स्निग्धता, तेजस्लग्धा, कल्याणस्रद्धा, प्रेमसामर्थ्यमि चित्तशक्तिः।

Snigdhatā, tejahslagha, kalyanasraddha, premasamarthyaṁ, iti chittashaktih.

These are the signs of chittashuddhi & shakti of the chitta or emotional parts of the antahkarana. The wider and more universal the capacity for love, a love self-sufficient and undisturbed by want or craving or disappointment and the more fixed the faith in God and the joy in all things as mangalam, the greater becomes the divine force in the chitta.

**Buddhishakti**

विशुद्धता, प्रकाश, विचित्रबोध, ज्ञानधारणसामर्थ्यमि बुद्धशक्तिः।

Vishuddhatā, prakāsha, vichitrabodha, jñanadhāranasamarthyaṁ iti buddhishaktih.

Manas & Buddhi need not be considered separately as these elements of power apply both to the sixfold indriya and the thought-power in the mind. Their meaning is clear. For the full sense of vishuddhata, refer to the explanation of shuddhi in the seventh chatusthaya.

**Chandibhava**

Chandibhavah is the force of Kali manifest in the temperament.¹

**Sraddha**

Sraddha is necessary in two things:—

शक्त्यम् भगवति चेति श्रद्धा।

Shaktyam Bhagawati cha, iti sraddha.

¹ The detailed description of this power is deferred.
There must be faith in the love & wisdom of God fulfilling Himself through us, fulfilling the Yogasiddhi, fulfilling our life work, working out all for our good even when it is apparently veiled in evil; and there must be faith in the power of the Shakti manifested by Him in this adhāra to sustain, work out and fulfil the divine knowledge, power & joy in the Yoga and in the life. Without sraddha there is no shakti; imperfect sraddha means imperfect shakti. Imperfection may be either in the force of the faith or in its illumination. It is sufficient at first to have full force of the faith, for we cannot from the beginning of the Yoga have full illumination. Then, however we err & stumble, our force of faith will sustain us. When we cannot see, we shall know that God withholds the light, imposing on us error as a step towards knowledge, just as He imposes on us defeat as a step towards victory.
Vijnanachatusthaya

Siddhis

Siddhis, their justification, dangers and use.

The two first chatusthayas of the adhara have reference mainly to the central principle of man’s existence, the antahkarana; but there is one superior faculty and one inferior instrument which have each its peculiar siddhi, the vijnana or supraintellectual faculty and the body. The siddhi of the vijnana and the siddhi of the body belong both of them to that range of experience and of divine fulfilment which are abnormal to the present state of humanity. These are called specially siddhis, because of their abnormal nature, rarity and difficulty; they are denied by the sceptic and discouraged by the saint. The sceptic disbelieves in them and holds them to be impostures, fables or hallucinations, as a clever animal might disbelieve in the reasoning powers of man. The saint discourages them because they seem to him to lead away from God; he shuns them just as he shuns the riches, power & attainments of this world, and for the same reason. We need not shun them and cannot shun them, because God is sought by us in His world-fulfilment as well as apart from the world and in the world these are the riches of His power and knowledge which we cannot avoid, once we dwell in Him perceiving and sharing His nature. Indeed, there is a stage reached by the Yogan when, unless he avoids all action in the world, he can no more avoid the use of the siddhis of power and knowledge than an ordinary man can avoid eating and breathing unless he wishes to leave his body; for these things are the natural action of the vijnana, the plane of ideal consciousness, to which he is rising, just as mental activity and physical motion are the natural action of man’s ordinary life. All the ancient Rishis used these powers, all great Avatars and Yogins and vibhutis from Christ to Ramakrishna have used them; nor is there any great man with the divine power at all manifest in him who does not use them continually in an imperfect form without knowing clearly what are these supreme faculties that he is employing. If nothing else, he uses the powers of intuition & inspiration, the power of ishita which brings him
the opportunities he needs and the means which make these opportunities fruitful and the power of vyapti by which his thoughts go darting & flashing through the world & creating unexpected waves of tendency both around him and at a distance. We need no more avoid the use of these things than a poet should avoid the use of his poetical genius which is also a siddhi unattainable by ordinary men or an artist renounce the use of his pencil. At the same time there is a justification for the denial of the sceptic and the renunciation by the saint, & of this justification we must take note. The saint renounces because when these siddhis show themselves fragmentarily in a weak adhara dominated by egoism, the egoism becomes enormously enhanced, the ignorant sadhaka thinking that he is the possessor & creator of these abnormal powers and a very great man indeed, (just as we find an abnormal egoism very frequent in the small poet and the half artist, for those who have a really great power, know well enough that the power is not theirs but a gift from God & feel that the power of God is using them & not they the power); so the sadhaka, misled by ahankāra goes running after these powers for their own sake and leaves following after God. The denial of the sceptic is justified by the credulity of ordinary men who regard these things as miracles & invent them where they do not exist, and by the weakness & egoism of the sadhakas themselves and of many who are not sadhakas; for if they catch even a glimpse of these things in themselves or others, they exaggerate, puff, distort & build around some petty & imperfect experiences all sorts of jargon, mysticism, charlatanism & bujruki of all kinds which are an offence & a stumbling block to the world. We must therefore keep in view very strictly certain fixed principles;—

1. That these powers are not miraculous, but powers of Nature, which manifest of themselves as soon as the vijnanapadma in us begins to open, & are no more a cause for bragging & vanity than the power of eating & breathing or anything else that is Nature’s.

2. That they can manifest fully only when we leave ego and offer up our petty separate being in the vastness of God’s being.

3 That when they manifest in the unpurified state, they are a dangerous ordeal to which God subjects us and we can only pass through it safely by keeping our minds clear of vanity, pride,
selfishness and by remembering continually that they are His gifts and not our acquirements.

4. That these powers are not to be pursued for their own sake, but developed or allowed to develop as part of the flower of divine perfection which is by God’s grace blossoming out in us.

Subject to these cautions, we have not to reject these powers when they come but accept them, to be used in us by God for His own purposes and not by us for ours, to be poured out by vyapti on humanity and not kept for our own use & pride.

Vijnana—

ज्ञान त्रिकालृद्धिर अस्थिति; समाधिरिति विज्ञानचतुष्ठयम्।

Jnanam, trikaldrishtir, ashtasiddhih, samadhir, iti vijnanachatus-thayam.

Jnana

By jnana is meant that power of direct and divine knowledge which works independently of the intellect & senses or uses them only as subordinate assistants. It perceives the things that are hidden from the ordinary man, helps us to cease seeing the world in the terms of our sense experiences and enables us to become sensitive to the great unseen forces, powers, impulses & tendencies which stand behind our material life and determine and govern it. To jnana the whole machinery of the world reveals itself in its hidden principles; the nature of Purusha, the workings of Prakriti, the principles of our being, God’s purpose in His world-workings, the harmony of His gunas, –Brahman, Iswara, Atman, man & beast & object, idea & name and form, reality & relation, all these show themselves to the eye that God has illuminated with the sun of His knowledge, jn´anadipena bhaswat´a.

ज्ञान त्रिकालृद्धिरम्: ज्ञृति: स्मृति: प्रतिबोध इति ज्ञानम्।

Jnana is of three kinds, jnana of thought, jnana of experience, (realisation or pratibodha) and jnana of action or satyadharma.

Jnana of thought consists of three powers,
1. Drishti, revelation or swayamprakasha
2. Sruti, inspiration.
3. Smriti, consisting of
   1. Intuition
   2. Viveka.

**Drishti**

Drishti is the faculty by which the ancient Rishis saw the truth of Veda, the direct vision of the truth without the need of observation of the object, reasoning, evidence, imagination, memory or any other of the faculties of the intellect. It is as when a man sees an object and knows what it is, even if, sometimes, he cannot put a name on it; it is pratyakshadarsana of the satyam.

**Sruti**

Sruti is the faculty by which we perceive as in a flash the truth hidden in a form of thought or in an object presented to our knowledge or in the word by which the thing is revealed. It is that faculty by which the meaning of the mantra dawns on the mind or on the being of the sadhaka, although when he first heard it, he did not know its meaning nor was it explained to him. It is as when a man hears the name of a thing and by the name itself, without seeing the thing, comes to know its nature. A special power of sruti is the revelation of truth through the right & perfect vak in the thought.

**Smriti**

Smriti is the faculty by which true knowledge hidden in the mind reveals itself to the judgment and is recognised at once as the truth. It is as when a man has forgotten something he knew to be the fact, but remembers it the moment it is mentioned to him.

**Intuition & viveka**

Intuition is the power which distinguishes the truth and suggests at once the right reasons for its being the truth; viveka the power which makes at once the necessary limitations and distinctions & prevents intellectual error from creeping in or an imperfect truth from being taken for the whole satyam.

The importance of viveka for the purposes of man's progress in his present stage, is supreme. At present in the greatest men the
powers of the vijnana act not in their own power, place & nature, but in the intellect; as helpers of the intellect & occasional guides. Directly we get an intuition or revelation, the intellect, memory, imagination, logical faculty seize hold of it & begin to disguise it in a garb of mingled truth & error, bringing down truth to the level of the nature, sanskaras and preferences of a man instead of purifying & elevating his nature & judgments to the level of the truth. Without viveka, these powers are as dangerous to man as they are helpful. The light they give is brighter than the light of the intellect, but the shadow which the intellect creates around them is often murkier than the mist of ignorance which surrounds ordinary intellectual knowledge. Thus men who use these powers ignorantly, often stumble much more than those who walk by the clear though limited light of the intellect. When these powers begin to work in us, we must be dhira and sthira and not be led away by our enthusiasm; we must give time for the viveka to seize on our thoughts & intuitions, arrange them, separate their intellectual from their vijnanamaya elements, correct their false extensions, false limitations, misapplications & assign them their right application, right extension, right limitation,—make, in the image of the Upanishads, the vyúha or just marshalling of the rays of the sun of knowledge, suryasya rashmayah. Knowledge is not for the hasty mind but only for the dhira, who can sit long accumulating & arranging his store and does not rush away with fragments like a crow darting off with the first morsel of food on which it can seize.

Realisation

Realisation or jnana of experience is the perception of things through bhava,—bhava of being or Sat, realising the truths of being, —bhava of Chit or knowledge, realising the truths of thought, bhava of tapas or force, realising the truths of force & action, bhava of love or ananda realising the truths of emotion & sensation and bliss.

Satyadharma

Satyadharma is the carrying out of the jnana in bhava and action.
Trikaladrishti

Trikaladrishti is a special faculty of jnana by which that general power is applied to the actuality of things, their details of event, tendency etc. in the past, present & future of the world as it exists, has existed & will exist in Time. It deals with particular fact, just as jnana deals with general truth. Trikaladrishti works in several ways;

1. Directly, without a means or excuse, by drishti, sruti & smriti.
2. By dwelling in concentration on the object,—that process which Patanjali calls sanyama on the object,—until the mind in observer & observed becoming one, we know what the object contains, whether past, present or future, just as we can know the contents of our own being.
3. By using as a means some external sign or some indicative science, such as samudrik, astrology, augury etc. These sciences are worth little, if not used by the higher vijnanamaya faculties; for the signs they use, are mostly indications of tendencies and to distinguish perfectly tendencies of possibility from actual eventualities cannot be done by following written shastra or by rule of thumb.
4. By the two powers of vyapti & prakamya which constitute what the Europeans call telepathy.

Ashtasiddhi

Vyaptih, prakamyam, aishwaryam, ishita, vashita, mahima, laghimam, animam, iti ashtasiddhih.

Ashtasiddhi is of three orders,

1. Two siddhis of knowledge,—vyapti and prakamya
2. Three siddhis of power,—aishwarya, ishita, vashita.
3. Three siddhis of the body,—mahima, laghima, anima.

Prakamya

By prakamya is meant the full prakasha of the senses and the manas, by which they surpass the ordinary limits of the body and become aware by sight[,] hearing, touch or, more usually and more easily, by mental sensation and awareness.
1. Of objects, scenes & events at a distance or hidden from the normal operation of the mind & senses.
2. Of objects, scenes & events belonging to other planes of existence.
3. Of objects, etc belonging to the past or future the images of which are contained in the object of our study.
4. Of the present states of mind, feeling, sensation etc of others or of their particular thoughts, feelings & sensations; or of such states or particular thoughts etc which they have had in the past & of which the impression remains in the chitta record or which they will have in the future & of which the image is already prepared in the prescient parts of the chitta.

Vyapti
To each form of prakamya there is a corresponding form of vyapti, ie reception or communication. By prakamya, for instance, we can have the perception of another's feelings; by vyapti these feelings are felt striking on our own consciousness or ours are thrown into another. Prakamya is the sight of one looking from a distance & seeing an object; vyapti is the sensation of that object coming towards us or into contact with us. It is possible by vyapti to communicate anything we have in our systems,—thought, feeling, power, etc,—to another and if he is able to seize and hold it, he can make it his own & use it. This can be done either by a sort of physical throwing of the thing in us into the other or by a will upon the Swabhava compelling it to effect the transfer. The teacher & the guru habitually use this power of vyapti which is far more effective than speech or writing but all men use or suffer it unconsciously. For every thought, feeling, sensation or other movement of consciousness in us creates a wave or current which carries it out into the world-consciousness around and there it enters into any adhara which is able and allowed to receive it. Half at least of our habitual thoughts and feelings are such unconscious borrowings.

Aishwarya
Aishwarya is effectiveness of the Will acting on object or event without the aid of physical means. It may work
1, by pressure or tapas of the chaitanya straight on the object that has to be affected
2, by pressure or tapas of chaitanya on the Prakriti (either the general world-Prakriti or Prakriti in the object itself) to bring about directly the result intended
3, by pressure on the Prakriti to bring about circumstances which will compel indirectly the result intended.
4, without pressure by mere thought that is will, the ajna or ajnanam of the Ishwara which Prakriti automatically obeys.

The last is the highest power of Aishwarya and its supreme siddhi; for here Chit & Tapas become one as in the Will of God Himself.

Ishita

Ishita is the same effectiveness of the will acting not as a command or through the thought, by ajnanam, but through the heart or temperament (chitta) in a perception of need or pure lipsa. Whatever the lipsa reaches out towards or even needs without conscious knowledge of the need, comes of itself to the man who possesses Ishita. Ishita also expresses itself either by pressure on the object or Prakriti or by simple perception automatically effective of its aim. The last is again the highest power of Ishita and its supreme siddhi.

Vashita

Vashita is the control of the object in its nature so that it is submissive to the spoken word, receptive of the thought conveyed or sensitive & effective of the action suggested. Vashita acts automatically through established control of one nature by another, or by the pouring of natural force into the word, thought or suggestion of action so as to produce an effect on the nature of others. The latter is the lower & ordinary siddhi, the former the supreme or entirely divine siddhi. Vyapti is one of the chief agents of Vashita.

The Conditions of Power

It should be noted that none of the Siddhis of power can act perfectly or freely so long as there is impurity of the chitta, egoism in the thought and temperament or domination of desire in the use
of the siddhi. Under such circumstances there may be occasional use & irregular effectivity of the power, -a thing not worth having in itself, but useful only in training the mind to give up its own sanskaras & habitual processes & accept the activity of the vijnanamayi shakti; or there may be a regular & effective use of limited powers by fixed Tantric processes (kriyas). The latter should be shunned by the sadhakas of the purna Yoga.

**The Conditions of Jnana**

It should also be noted that perfect jnana and trikālārthi are only possible by complete shuddhi of the antahkarana, especially the exclusion of desire and vishuddhi of the buddhi, absolute passivity of the manas and, finally, perfected action of the powers of the vijnana. An imperfect & irregular action of these higher powers is always possible & is possessed obscurely by many who are not Yogins or sadhakas.

**Physical Siddhis**

The physical powers, Mahima[,] Laghima, Anima, need not be considered at present, as, although belonging to the dharma of the vijnana, they act in the body and are strictly part of the physical siddhi.

**Samadhi**

Samadhi is the power by dwelling fixedly of the chaitanya on its object to extend the range of knowledge & consciousness through all the three states of waking, sleep & dream, to the realisation of those tattwas of the Brahman to which the ordinary waking consciousness is blind and to the experience, either in reflected images or in the things themselves, of other worlds and planes of consciousness than the material earth or this waking physical consciousness. The consideration of Samadhi may also be postponed for the present.
Sharira chatusthaya.

Sharirasiddhi
The sharirachatusthaya, likewise, need not be at present explained. Its four constituents are named below

आरोग्यमुनास्य दृष्ट्य विनाबान्य इति शरीरचतुष्टयम्।
Arogyam, utthapana, saundaryam, vividhananda iti sharirachatushtayam.

The three general chatushtayas
These are the four chatushtayas of the Adhara-siddhi. In addition there are three general chatushtayas—

5. Karmachatusthaya or Lilachatusthaya

कृष्णः काली कामः कर्मं कर्मचतुष्टयम्।
Krishnah, Kali, kamah, karma iti karmachatushtayam.

6. Brahmachatushtaya

सर्वमेऽनातां ज्ञातानां अनन्तं ज्ञानं अनंतं ब्रह्म, इति ब्रह्मचतुष्टयम्।
Sarvam Anantam Jnanam Anandam Brahma, iti Brahmachatushtayam.

7. Yoga chatushtaya or Sansiddhi chatushtaya.

शूद्धिर्मुक्तिर्मुक्तिः सिद्धिर्रित्य योगचतुष्टयम्।
Shuddhir, muktir, bhuktih, siddhir, iti yogachatushtayam.

The last or seventh is at once the means, the sum and the completion of all the rest. Its explanation is essential to the full understanding of the others and will be separately treated.
OUTLINE OF THE SEVEN CHATUSTHAYAS
(REVISED ORDER)

Yoganga —
   Sapta Chatusthaya —

1. Siddhichatusthaya —
   Shuddhi, Mukti, Bhukti, Siddhi.
2. Brahma Chatusthaya —
   Sarvam Anantam Jnanam Anandam Brahma.
3. Karma Chatusthaya —
   Krishna, Kali, Karma, Kama
4. Shanti Chatusthaya
   Samata, Shanti, Sukha, Hasya (Atmaprasada)
5. Shakti Chatusthaya
   Virya, Shakti, Chandibhava, Sraddha.
6. Vijnana Chatusthaya —
   Jnana, Trikaladrishti, Ashtasiddhi, Samadhi
7. Sharira Chatusthaya —
   Arogya, Urthapana, Saundarya, Vividhananda
INCOMPLETE NOTES ON THE FIRST CHATUSTHAYA

Shanti Chatusthaya

1. Samata is either negative or positive
   
   Negative Titiksha, Udasinata, Nati.
   Positive Sama rasa, Sama bhoga, Sama Ananda.

   Negative Samata

   *Titiksha.* The power to bear steadily & calmly all *sparshas* without any reaction in the centre of the being, whether they are pleasant or painful. The mind or body may desire or suffer, but the observing Purusha remains unattracted and unshaken, observing only as Sakshi and as Ishwara holding the system firmly together & calmly willing the passing of the dwandwas. It does not crave for or demand the pleasure. It does not reject the pain. Even when pleasure or pain are excessive, it wills that the mind and body should not shrink from or repel them, but bear firmly. It deals in the same way with all dwandwas, hunger & thirst, heat & cold, health & disease, failure & success, honour and obloquy etc. It neither welcomes & rejoices, nor grieves & avoids. It gets rid of all jugupsa, fear, shrinking, recoil, sorrow, depression etc, ie all the means by which Nature (bhutaprakriti) warns us [against] and tries to protect from all that is hostile. It does not encourage them, nor does it necessarily interfere with such means as may be necessary to get rid of the adverse touches; nor does it reject physically, except as a temporary discipline, the pleasant touches; but inwardly it presents an equal front of endurance to all.

   The result is udasinata or indifference.

1 MS again
Indifference may be of four kinds, tamasic, rajasic, sattwic & trigunatita. Tamasic indifference is associated with vairagya, disgust, disappointment, weariness of effort, unwillingness to make an effort. It is not really true udasinata, for it tries to avoid all as equally a cause of suffering, directly or indirectly; it is a generalisation of jugupsa and does not come from titiksha, but from its opposite. It is sometimes called rajasic, because although its nature is tamasic, its cause is rajasic, the disappointment of desire. Tamasic udasinata is useful to the Vairagi who wishes to get rid of the world by any means, but to the striver after perfection it is a stumbling-block. Its only use is to discourage the persistent rajoguna, and when it comes, it has to be admitted for that purpose. But it does almost as much harm as good, & so long as we cannot do without it, our progress is likely to be slow, a series of oscillations between rajasic eagerness and tamasic weariness born of disappointment, with tamasic udasinata as an occasional release from the wear & tear of these opposites. To rest finally in tamasic udasinata is fatal to perfection.

Rajasic udasinata is indifference enforced by effort, sustained by resolution, habitualised by long self-discipline. It is the indifference of the moral hero, of the stoic. This is more helpful than the tamasic, but if persisted in, has a hardening and narrowing effect on the soul which diminishes in flexibility & in capacity for delight. Rajasic udasinata if used, must always be surmounted. It is an instrument which may easily become an obstacle.

Sattwic udasinata is indifference born of knowledge. It comes with the perception of the world either as an illusion or a play and of all things as being equal in the Brahman. It is calm, luminous, free from effort, tolerant of all things, smilingly indifferent to all happenings, careful to reject rajasic & tamasic reactions. Sattwic indifference is a great help and a stage which is almost unavoidable. But it has its limitations. It stands apart from the world and is a preparation for moksha, for the withdrawal from the Lila. It is unsuitable as a final resting place for the sadhak of perfection.

Trigunatita udasinata is that which takes all things alike, making no difference between sattwic, rajasic & tamasic reactions, but
holding in soul aloof from all these movements & all the dwandwas, observing them first with an absolute impartiality & by constant refusal to participate in them getting rid of them out of the mind & the prana. It neither rejoices nor grieves at their coming & going, na sochati, na nandate. It regards all these things as the workings of Prakriti & their causes as the will of the Ishwara. This udasinata is the preparation for the third element of [samata].

Nati.

Nati is an equal submission to the will of the Ishwara. It regards all things as that will expressing itself and refuses to grieve or revolt inwardly at anything because it is hurt in its egoistic desires, opinions, preferences etc. Its whole attitude is based on the perception of God in all things & happenings. It accepts pleasure & pain, health & disease, bad fortune & good fortune, honour & disgrace, praise & blame, action & inaction, failure & victory; but attaches itself to none of them. Nati is not a tamasic acquiescence in inaction, a subjection to failure, an indifference to life. That is tamasic udasinata. Nati is active; it accepts life & effort as part of God’s will & His being, but it is prepared equally for all results. It has no longing for fruits, but works for the results pointed out to it as kartavya karma without rajasic straining or tamasic indifference.

Shanti

The fullness of negative samata is measured by the firm fixity of Shanti in the whole being. If there is an absolute calm or serenity in the heart & prana, no reactions of trouble, disturbance, yearning, grief, depression etc, then we may be sure that negative samata is complete. If there is any such disturbance, then it is a sign that there is some imperfection of titiksha, of udasinata or of nati. This imperfection may not be in the centre of the being, but only in its outer parts. There will then be a fixed calm in the centre, but some disturbance on the surface. These superficial disturbances may even be violent & veil the inner established shanti, but it always reemerges. Afterwards the disturbance becomes more & more thin.

2 MS udasinātā
in its density & feeble in its force. It ends in an occasional depression of the force & courage & faith & joy in the soul, negative & often without apparent cause, & then disappears entirely.

Negative samata & shanti are the necessary preparation of positive samata and ananda. Without this foundation ananda is always liable to be uncertain in its duration & imperfect in its even fullness. Therefore all these things—endurance of all contacts, indifference to all dualities, submission to all movements of the divine Will, perfect inner peace and tranquillity are the first step in perfection.

Negative samata & shanti are the result of shuddhi & the condition of mukti —

Positive Samata.

On the basis of Nati we proceed to the positive Samata, ie to say, to Sama Ananda. Its foundation is the Atmajnana or Brahma-jnana by which we perceive the whole universe as a perception of one Being that manifests itself in multitudinous forms and activities. This One is therefore the one Self of all beings, my Self as well as the self of all others, friend and enemy, saint and sinner, man, bird and beast, tree & stone,—and all things in the manifestation are the forms and activities of my Self. Moreover, this Self is again the Lord of the Cosmos, the Purushottama, the divine Vishnu, Shiva or Krishna, of whom every individual soul is a conscious centre, aware of its unity with Him in being and also of its difference in the universe; and the manifestation is a Lila or play of the Lord who is in His being all delight; the play, too, therefore, is not only a play of Existence and Consciousness, but also a play of delight. It is the dualities born of ego-sense in the heart, mind & body which creates grief and pain. We have to unite ourselves with this Self, Lord & One & with all things in Him, viewing them as our self, in order to get rid of pain & enjoy the divine Ananda. But, first, it is necessary that we should accept without revolt the Lila equally in all its details & happenings. This comes by Nati. Titiksha is the attitude of equal acceptance by the sense-mind & body, udasinata the attitude of equal acceptance by mind & heart, Nati the attitude
of equal acceptance by the soul. The soul accepts all things as the play of the all-Blissful Lord, the Will of the supreme self and Ishwara. It accepts action also & the results of action, without being attached to them. But, though not attached, it must learn to take delight in all things even as the Lord takes delight in them.

The first delight is that of the Sakshi or Witness, who looking upon the whole action of the universe & even his own action like one who is watching a play or a drama, takes the rasa or taste of the whole thing by the intellect, the sense and the aesthetic faculties. All things, all events are the manifestation of certain gunas or qualities in universal Being; God is Ananta guna, Infinite Qualities. The rose is a manifestation of form, colour, odour & other less obvious qualities, each stamped with a particular form of the rasa, divine Delight.
Part One

Diary Entries 1909–1912
17–25 JUNE 1909

17 Thursday.
Started (Amavasya Tryasparsha) for Barisal. The Amavasya is Kali’s day, so favourable to me. The Tryasparsha is the moment destined for a great advance in my Yoga. The ahankara was finally removed. Only faint remnants of it left. J. entered, but did not make herself manifest till next day.

In train to Khulna. Small Sun in centre of brilliant Swarupa

18 Friday.
On steamer to Barisal.

Afternoon. All liberty of bodily movement being steadily taken away. Second voice in brain. Sri K.’s voice once in heart. “I come to slay.” First voice sometimes rises from heart still to take its place in brain. First has personality, second none as yet.

Night. Bhava of Avesh in steamer shaking body; also in Kali-mandir and on way to lodging. Swarupa bright star on dark background. Thin Nil triangle with very sharp apex like old Hindu pinnacle, a bright golden line in the middle. River scenes—Thickly
17–25 June 1909

19 Saturday.

20 Sunday.
Unknown face. Bright yellow outside. Road on bank of stream. Adhar Drishti in trees imperfect but beyond rough stage. The grotesque still predominates. UR. Adhar Drishti much finer on wall.

21 Monday.

22 Tuesday.
Adhadrishi. (Tank with rocks & trees on one side reflected in water, also clouds. Small lake. Figures less rough but details still unexpressed.) Antardrishti of stool with circular patch in middle.
23 Wednesday.
Touch on body causes more & more ananda.

24 Thursday.
At night; woman in coloured dress; colours very vivid.

25 Friday.
Night. Strong utthapana, esp of lower limbs and upper part of trunk. Some prananyasas & tratak on floating colours. Rapid visualisations. 1. Ramchandra in Yogic asan. 2. Two English girls in bright red over tea table, one stooping as if busy with something.
3. Aluminium glass lying on its side. 4. Undetermined scene dashed with green colour, a figure stooping down to ground. 5. A copper bowl with brown & yellow substance half-filling it. 6. A brown brightly polished teapot, two white cups and other tea things. 7. A glass of water which I was in the act of drinking. 8. Water being poured from a brass drinking glass into a small earthen handi almost full of water. 9. Figures of small girls & others. 10. Usha dark & young-looking, a piece of toast in left hand. Others not so vivid, but rapid in succession. Suggestion that these are sukshma images of realities.
28 JANUARY – 17 FEBRUARY 1911

Physical

Feb 6th
1. Felt the sweet taste of the amrita in the throat and noticed the struggle ibidem of the impure rasa causing nausea with the amrita.
2. Physical, tivra, ananda—brief but definite.
3. All the physical anandas together, ahaituka, negative vaidyuta strongest, going to the head to base chidghana.

Feb 14th
4. Example of pure raudrananda without discomfort from the strong bite of an ant. Cf experience in jail & the scorpion bite.
5. Sweetness of amrita much stronger, denser and more frequent and continuous, the mixture of phlegm less frequent.

Communications.
2. Writing (not on paper). Prophesy that the trouble in the digestion would almost immediately pass away, by replacement of tejasic by akashic action. A few minutes subsequently it was fulfilled.
3. As I was walking outside the house, a large flower (fallen from the tree in the garden and ragged) was thrown to me from the direction of the opposite corner of the front. It traversed, as far as I could see, a distance of some five yards,—flew at the level of my head and fell almost beside me. There was no person near; the servant was out, having gone to the bazaar; of the four boys, three were lying down in their rooms, another shut up in his at the other end of the house. The gate was bolted & no one could enter, or, if he did, escape in a second. There was no bird in the air, and the flower was not dropped, or thrown to a slight distance as a bird might throw it but flew horizontally for some yards. The
only defect in this proof was that I did not see the starting of the flower in its course, but only noticed it in the air at the distance of some yards from me. This is the first clear instance, the others being merely pushes to the table & doors which were far from conclusive.—It appears that the flower is not of our tree, as it is deep red and a simul flower. The nearest tree of the kind is in a house in the street behind this house. It cannot have been thrown from there as it would have to cross 2 roofs and describe a high curve in the air descending not horizontally but by a high parabola.

4. Statement in sukshmasabda that the worst of Saurin’s illness was past justified by fact.

5. All statements about the Yoga daily justified. Too frequent for a record to be kept.

Vision of other worlds.

1. While doing tratak on the physical sun, I saw clearly with sthuladrishti the sun of the pranamay jagat and felt its warmth on my body. Feb 9th

Record of the Drishti.

from January 28th

1. Sthapatya on windowframe, of (a) a head, half Rakshasa, half animal with the Pisacha & Pramatha bhavas, one tusk (ekadanti), over the eyes sealed in meditation, is written “God”. (b) another, half Rakshasa, half-Asura, with a headdress half Egyptian half Semitic, of an intellectual and formidable type; over the eyes half-open on the world, is written “God”. I take it that in the former type God fulfils Himself, with the eyes of the soul blind; in the latter with the eyes half open; the first is without jnanam, the second with ardhajnanam.

2. A group of young Bengalis walking on a road, only the last clearly seen, two children sitting on a hillock at the side. All remarkable for beauty of figure and grace. Chitra tejas, in a fragment of the lining of a bird’s nest on the floor. Vision of future India

3. An elephant, initial crude condition on wall, ill-kept and spiritless; the same, feebly lifting its trunk to order. Symbol of the Indian people at the present moment. Seen at Chandannagar often, of
the past, charging furiously with lashing trunk. Also of the future, ibidem, controlled by a tender, disciplined and waiting for the order of movement.

4. A beautiful butterfly (dark colours) emerged for a moment from the jagrat chittakash into the sthula—chhayayukta.

5. In the akash, head and bust of Assyrian Pallas Athene helmeted over the sun—chhayamay Athene and tejoghana sun.

Jan 30th

6. 2 small birds on a branch, on the wall, chhaya. Seen sometime afterwards in life on the tree in the next garden.

7. A Ghose—a future signature on a cheque in a very different writing from my present handwriting.

8. A short nib—tejas in the akash. Revelation that I should have to write followed by the necessity of writing (a cheque) though I had no intention of writing today. It was written with a fountain-pen, while usually I write with an ordinary pen and a long thin nib.

10 Mountains in the sea. Scene of one of the swargabhumis. Sarvatragati.

11 A Madrasi house, tiled floor bare with an armchair.

January 31st

12 Chitra of my grandmother on the wall.

13 A pattern of many colours, (particoloured squares), varnamaya.

14 Sthapatya, tejas, in the leaves of a tree in the next garden, of R, in cap and gown.

Prophecy.

15 A. J. Balfour, head and bust only, chitra on wall, ill. The chitra seen in December in the sand showed a more advanced state of illness.

16 A god in heaven, vyaghracharma, not worn,—seated. Samadhi

17 A dog, descending the stairs to the terrace, not familiar. Samadhi
18. A bundle of carbon papers for typewriting, put down, not folded, but partly turned down. Samadhi.
19. Chhaya in Akash of Kali armed, followed by Chhaya of Kalki on horseback.

For Feb 4th & 5th see other book.¹

Feb 6th.
21. Tejomays of a collar of pearls and two others of Jogini standing and asleep.
22. Varnamay of a dog—brownish yellow—All in the 1st stage of the perfect condition and in samadhi.

Feb 9th.
23. Nalini, with big whiskers, an ochre-coloured coat and military belt, in a very martial attitude. Prophecy of distant future. Sv. [Svapna] Samadhi
28. Very clear chhaya (initial stage) of a butterfly flying across the corner of the room
29. Jalabindus round about the sun, also a network of the peculiar lines (ringlike curves) indicating the presence of jalam. The sun seen green again instead of blue or blue with a green tendency as yesterday.

Feb 14th
30. The face of a watch—chhaya & chhayaghan—pointing to 10.30, 8.25 and 7.20

¹ This “other book” has not survived.—Ed.
31 After tratak on sun A nib, with a bell behind it (jyoti & varna), indicative of the removal of the remaining obstacles to perfect writing. (This process to begin today). The three times indicated in the subsequent drishti of the watch seem to indicate times in this process on three successive days.
32 Behind the last a naked woman bending over it. Symbolic.
33 My eldest brother in a past state of health & vigour, chhaya-may in Samadhi. Indication that he will not recover that health or live long.

Feb 16th
34 An anchor (in samadhi) indicating that the dhairyam is now perfect.
36 The Rakshasi returning after sarvatragati.
37 The plant Yogini eats in flower.

Feb 17th
38 Myself as a baby of 1 or 2 — seen in Samadhi.
39 A baby of the future. — do.
40 The dog Yogini or one just like it licking the mouth of an upright soda water bottle.

Siddhis
Feb 9th
1 Aishwaryam on ant to give up its object and go back, done after a short persistence in the forward movement.
2 Ishita and aishwaryam for lessening of Saurin’s diarrhoea, fulfilled as soon as made.
3 Aishwaryam for rapid restoration of health and strength, repeated and fulfilled on the 10th

Feb 10th
4 Aishwaryam for M [Moni] to awake. Immediate success.

2 The reference is apparently to drishti 30, which here precedes the present drishti. Perhaps drishti 30 was seen subsequently in time. — Ed.
5. Aishwaryam for him to get up and give the tea. Succeeded after a slight resistance, lasting five to ten minutes.
6. Aishwaryam for the thought to begin (not begun in spite of struggle for many days). Begun.
7. Aishwaryam for the dog to shake off its heavy tamas and manifest the new soul. Rapidly successful, but the tamas still struggles to remain & the old bhava in the face and body persists. A renewed Aishwaryam on the 11th produces an immediate effect, the dog doing what it had never done before.

Feb 11th
8. Aishwaryam of restored health & strength to S.[Saurin] succeeds, even the time coming correct.
9. Aishwaryam of particular drishti. Succeeded
10. Aishwaryam of particular forms of siddhi. Partly succeeded.
11 Aishwaryam to stay nausea while eating. Immediately successful.
12. Aishwaryam to clear the stomach of disturbance and heaviness by working of akash. Successful.

Feb 13th or 14th
13. Ishitasiddhi for the dog to eat bread which it had always refused. Suddenly it began eating with relish after first refusing.
14. Ishita to refrain from large piece of bread given, but eat others. Persistently refrained even when it was broken into small pieces, except when induced to think it was not the same.

N.B. Previously many ishitas had succeeded, but were not noted down—especially with regard to vyapti of yogic states or realisations into others or to people coming or not coming.

Feb 16th
15. Aishwaryam of S’s regularity in the afternoon, immediately fulfilled.

Feb 17th
Same aishwaryam fulfilled in half an hour.
Feb 18

The same aishwaryam fulfilled under adverse circumstances (they sat down to cards at 4) within quarter of an hour.

Record of Ideal Cognitions from 28th January.
1. I saw the time by the watch in the sitting room to be 2-40, ideally cognized the time by my watch to be 2-43. Verified, exact to the minute
2. A little later after a chase of the opposite house-dog, having lost the intellectual idea of the time, I ideally cognised it to be just 2.50. Verified, exact to the second
3. All rooms being closed, I ideally perceived that all were asleep. Verified immediately afterwards by no one moving when the servant repeatedly banged for admission at the door.
4. Sortilege with cards. First, I took out cards making a sum of 21 (Jack, nine and ace) and dividing by three got seven-o-clock; then for the minutes, took out queen, ten and nine, making 31, and dividing by three got 10½. The cognition then gave the already prophesied ejection of the internal opposition to higher thought as the subject of the sortilege. I took it, by intellectual habit and inference, as meaning 7.10 pm. The incident actually occurred at ten minutes to seven.
5. Figure 3 in drishti. Interpreted as Rs 3 worth of books to be purchased. Subsequently (Feb 2d) selected a number of 6 annas books without calculating the price; found that it amounted to Rs 3.
6. Two people applied to see me at the door, not seen by me. Cognition that they were detectives. I heard immediately afterwards that they had asked for “[The Indian] Sociologist” and “Liberator”.
7. I had a cognition formerly that the man calling himself Ram Rao Yogi was a detective—independent of all inference. Learned on Feb 1 of a police report in which he is mentioned as watching the trains and taken for some time by the others as a Bande Mataram man.

Feb 10th
10. A man came calling outside. Immediate cognition by prakamya on seeing him and revelation acting in confirmation of each other that he was a detective. It turned out to be Ram Rao Yogi, the detective from Maharashtra side.
11 Trikaldrishti that S [Srinivasachari] etc would not come this evening. Confirmed.
12 Trikaldrishti that tomorrow S. [Saurin] will be restored to health. Already recovering it. Fully confirmed.3
13 Sukshma shabda of the dog under the table attended with strong prakamya of its presence and motion there. An image of the past.

Feb 11th
14 Confirmation of former cognition that M. [Moni] although apparently unconcerned, had really a touch in the prana about his brother’s death.—confirmed by his statement about dreams & weeping.
15. Cognition by prakamya trikaldrishti of evacuation in the afternoon. Confirmed

Feb 13th
16. Vyapti from Saurin of the idea of making the tea. Immediately after I heard him talk of it, & a minute after he came and made it.

Feb 14th
17. Memory by inspiration. The passages of Kalidasa written out & translated by me a year and a half ago, not since read or remembered, were again read two or three times in the morning without particular attention to the words except to one or two lines. Later on memory began to restore the whole thing, not by effort to remember, for that hampered it, but by inspiration. Lines

3 “Fully confirmed” was written after the original entry.—Ed.
came, framework or substance of thoughts were suggested, gaps filled up. Finally, the whole of the first passage with the mistake of द्वृत्तिक for त्वत्तिक, the whole of the second with no error, the last two lines of the third and two words with an error of the first line, and part of the second line in the fourth were remembered.

18. Cognition in reference to image of the watch that the final epic inspiration would begin from the time indicated, 10.30, fully confirmed by fact.

Feb 15th

19. Cognition that the third time indicated in the watch 4 7.20 would be fulfilled today by the final inspiration of the dramatic faculty, confirmed by fact.

20. Cognition from a drishti of the face of a watch, hands at 1.28 or 1.29 that at this time just after meals there would be a fresh advance in the siddhi. Finally, after some false speculation in other directions than the siddhi, the general poetical inspiration was fixed on. Fulfilled, since it began at 1.28 and was definite at 1.29.

Feb 16th

21. Cognition in reference to the image of the watch that the power of translation would begin today at the time indicated, 8.25; exactly fulfilled.

22. Cognition in the early afternoon of [?] accompanied by the recurring image of a revolver.

Feb 17th

23. The boy from the hotel brought a dish and was told by Bhedi meaning to use the dish to come at 3. He remained, not understanding Hindi. While I was expecting somebody to come & send him off, vyapti came that Bhedi had changed his mind and would return the dish. A minute or two afterwards the dish was brought and given to the boy.

4 See above, Record of the Drishti, numbers 30 and 31. — Ed.
13 JANUARY–8 FEBRUARY 1912

Record of the Yoga.

January 13th. 1912

10.15 a.m.

The last record covered the period from Dec 12th. 1911 to January 11th 1912. Liberated from anticipation, it was a pure record of fact and experience, but its correctness was sometimes vitiated by a misvaluation of the significance of the fact through over-appreciation or depreciation. It is intended that the present record should be free from this defect. Ananda has very fully established itself in the field of the indriyas. All sights, sounds, smells, tastes, touches, movements, actions, are now pleasurable or give pleasure; all carry with them the rasagranaha or appreciation of the beauty of the gunas which they are in expression, the joy of the vijnana in them (the basis of chidghana ananda), the joy of the heart in them (the basis of premananda), the joy of the body in them (the basis of the kamananda), the joy of the mind as indriya in them (the basis of the ahaituka ananda). All this joy is of the nature of bhoga from which the ananda is beginning to emerge. Joy of the spirit in the Ekam which expresses itself (the basis of shuddhananda, chidananda & sadananda together making kaivalyananda) is as yet obscure & involved in the lower anandas. Since yesterday, the ahaituka kamananda & today the sahaituka tivrananda are manifesting. Yesterday also the discomfort of heat & cold and pain were again exiled, though not entirely. Experiments made with the body show that below a certain intensity all pain now gives ananda of bhoga at the time of the feeling of pain, & pain beyond that degree brings it after the immediate acuteness has passed. Sometimes sahaituka raudrananda results. As I write

1 The Record entries for this period have not survived. — Ed.
ahaituka tivrananda, raudrananda & vaidyutananda (negative) are recommencing; also vishayananda sahaituka and ahaituka, begun yesterday, are becoming more definite. The bhoga of all these forms is already established. The greatest difficulty is found in the prolonged contact of intense heat with a sensitive part of the body, eg. the heated stone of the floor under the midday sun. The intensity of the heat to the sensation can be increased, lessened or inhibited by Will; the prolonged contact tends to remove the element of suffering unless the Will is made to increase or maintain it, or unless the stream of Will (chit-shakti) is kept tamasic suffering weakly the contact instead of meeting it. This daurbalyam has been created in order to bring about certain forms of intense ananda, chiefly viparita. It is possible, as is now clearly seen, to render it a great element of strong positive (not viparita) ananda, but in that case the daurbalyam must be merely a form of balam, in other words, it must be supported by dhairyam and anandadharanashakti. Ananda is now being extended to events. Even depression and sinking are met and claimed by a stream of ananda, and the place, necessity & delight of amangalam, its true mangalamaya nature is being impressed by the jnanam not only on the buddhi but on the sanskaras of the manas, chitta, prana and material body. Pure varna manifested this morning in a form, (dense crude), so that all the material and possible variation of material for the crude forms is, in a way, ready and regularised; only the perfect crude forms have to be subjected to the same process. Other siddhis are in comparative abeyance awaiting the movement of the ananda.

11.20 a.m.

The spiritual communications to the ear, this morning, revealed themselves as the communications of two kinds of spirits,—those who are merely of the buddha plane, manasic, and given over to error, and those who stand on the borders of the sukshma and the mahat, receiving knowledge from the vijnanam, expressing it in the sukshma. Some of the latter are farther, some nearer to the borderline, some stand upon it,—and according to the proximity is the soundness of the expression of the knowledge to the mind and the fullness and force of its substance. Besides these manasic beings, there are the voices of the Suryaloka and Janaloka who have already
manifested. The mere buddha voices are now very rare and weak. The siddhi has risen to the borders of the mahat and reached over into it, and none have power who are below its line of attainment. The thoughts, perceptions etc may also be classified as on the same levels; there is sometimes even a double movement of knowledge in the mahat echoed in the sukshma. The forward movement of the ananda is now being left to itself and another siddhi taken up, the relations of the Jiva (dasyam) with the Master of the Yoga and those whom he has chosen. All restraint by the mind or any other organ used by the Jiva is to be entirely abandoned. The Vani that announces appears as that of an Angel of God, controlling, but aware of the derivative nature of the control & allowing the vak to flow through her. The derivative control of the world by Angels, Powers, Gods, Mahatmas announced by this Vani preceded by a blowing of trumpets in the Anandaloka.

[Written] Next day. 10.20

The afternoon was begun with a suspension of definite progress in the siddhi and, afterwards, an attack on the siddhi of the ananda. The most important siddhi was the perfection of the articulate thought, which resumed rapidly all the characteristics of perfect vijnanamaya thought,—prakasha, asu, nischaya, inevitability (adequate, effective and effective illuminative) of the vak, truth of substance, nihshabdata. All these were perfected and delivered from breach or restraint, except the nihshabdata which is still pursued with shabda by the annamaya devatas; but the thought can no longer be strongly impeded or suspended by annamaya interference, only hampered in its speed. Fluency has been acquired, rapidity prepared and declared due at 8.22 a.m. on the morrow. A severe struggle was necessary with the shabda, the attack of the annam being obstinate and furious and added by the necessity of steering clear of the laya of vak in artha-bodha. Involved shabda in implicit vak, not involved vak in arthabodha is the rule of the expression of thought. Trikaldrishti was regularised in the interpretation both by perception and in expression of the

2 Sri Aurobindo generally omitted the “0” when writing the first nine minutes of the hour.—Ed.

www.holybooks.com
lipis, drishtis, shakunas, on the basis of right interpretation of the meaning, the fulfilment in the sthula being as yet not guaranteed. There was also perfect prakamya vyapti of the unseen movements of the servant carefully tested for about half an hour, only where inference interfered, was there an error. The Vani accompanied by the personal use of the relations established with the Master of the Yoga came to perfection. Exactness is entering into the pure trikaldrishti (subjective & self-existent without prakamya vyapti).

The time of several incidents in the Yoga was exactly indicated, also the exact minute when the evening meal would be given. All these siddhis, however, are subject to interruption and obstruction, though not of the old powerful character. Triple sanyama in samadhi has been established by involved process, occurring three times while walking, eg on the thought which [proceeded]\(^1\) undisturbed while the waking mind was unconscious, on the walk of the body or something in the immediate surroundings, on the fact of samadhi or an experience in the samadhi. External objects are, in this state, sensed not by the indriyas of the mind and body, but by the karana-indriya. Ananda sahaituka of raudra and pain with bhoga; the tendency in the morning to the whole kamabhoga was discontinued in the later part of the day.

January 14\(^{th}\).

10.45.

The rapidity of the thought, promised at 8.2, was effected at that moment. Afterwards the trikaldrishti was taken up and brought to a higher state of general efficiency, but there is an obstinate obstruction to the siddhi of exactness in time, place & circumstance. Time-drishti is more advanced than place, place than circumstance. The lipis 1.2.3.4.7 have been given and afterwards 5 and 15. 1 is the siddhi of thought perception which, in combination with 2, is to give perfect trikaldrishti. 3 is the lipi and drishti which are preparing a more vivid and vigorous activity; 4 the siddhis of power, which are sensibly growing in perfection and from today

\(^{1}\) MS preceded
are to develop rapidly and be perfect on the 21\textsuperscript{st}; 7, the Ananda; the ratna of the kamananda is becoming more frequent, the rati tending to regularise itself,—the discipline of pain continues. 5 is the visvagati (samadhi) which is assured of farther development today. 15 refers to tomorrow which is to be as marked a day of progress as the 13\textsuperscript{th}.

The rest of the record of January 14\textsuperscript{th} & the record of January 15\textsuperscript{th} is set down elsewhere in an accompanying memorandum commenced on the 12\textsuperscript{th}
Jan 14.

This script will be used always for all kinds of purposes. It stands on a different footing from other means of spiritual communication.

Now that the period of uninterrupted siddhi has begun, there will be no relaxation of the karma and the siddhi, the karma only waiting for the effectiveness of the power, the siddhi perfecting its force as the tapas increases in the body. Today, the typical perfection of the remaining elements of the jnanam throughout its whole range, the growth of lipi and drishti, the constant realisation of the Ishwara, the forward movement of the other siddhis.

Pain is being given in the body, so that the discomfort of pain may by the habit of bhoga pass away. Pain will continue to be given henceforth till this aim is effected.

There is no personality manifest behind this script, but this script belongs to the Master of the Yoga and proceeds from him through a passive channel.

There is a siege by the annamaya-chitta. It is allowed in order to get rid of it. Meanwhile the siddhis effected stand and those in preparation are being advanced. Today there will certainly be a partial siddhi of drishti and lipi, of the trikaladrishti with precision, of the ananda, the visvagati and the siddhis of power, not only in their general action, but in particular movement—

The siege will be over in ten minutes.

Lipi. “Efficient tapas”. Interpretation. —“commences from today.”

"European civilisation in extremis”.

21 years of strife before Indian civilisation is willingly accepted in its flawless perfection.

The siege is broken. From this moment the full unrest[ant].

---

4 The manuscript is torn and the number not certain. —Ed.
Although the siege is broken, it is renewed from time to time and broken until the whole force is broken up. There is still imperfect statement in this script and the imperfection will remain only so long as the trikaldrishti remains imperfect. The whole action of the consciousness on whatever level has to be made vijnanamaya and this is already being done with no farther regard for the hesitations in the chitta.

Until the old movements of the annam are entirely cast out, these obstructions will continue; the thought is free, but the thought perception, trikaldrishti and prakamya-vyapti are not free. Still less the lipi & drishti. These have to be liberated, but the full liberation cannot occur today. Only the perfection has been promised, not the freedom from obstruction, although that freedom will be much more rapidly effected than it could have been formerly.

Jan 15.

Yesterday’s promises have had a very meagre fulfilment, for they were made merely to whip into life the dying expectation of progress & finality. There has been only an increased persistence in the few drishtis that present themselves perfectly, the rest being mere blurs & smutches,—a revival of consecutive fluency in the lipi,—a deepening of the conscious samadhi,—an activity of the trikaldrishti which cannot be called perfect or new & is not yet proved in those parts which go beyond previous achievement,—some strengthening of the siddhis of power,—a constantly active relation with the personal Ishwara, a modification of the Jiva’s personality and the permanent (not continuous) consciousness of one Personality in all things & beings,—a preparation of constant rati of the general ananda,—some obscure movements of the arogya which seem to be retrograde rather than progressive,—an attempt of the elementary uthapana to recover lost ground,—and nothing else tangible. Yesterday’s was in fact a farther purificatory and preparatory activity.

Today’s is to be, if prediction can be trusted, an activity like the 13th’s. Too much need not be expected, but there will be a constant progress and firm establishment of positive siddhis.
Lipi 3. The first progress to be made in 3. Fulfilled by the activity of the lipi

Lipi 1.2. Thought has to take trikaldrishti into its province firmly. This had already begun, and the lipi is only an explanation. The trikaldrishti is prakamya and intuition of distant movements and is accepted subject to confirmation.

The Vani which was anandamaya of the Prema Natha (dasya-madhura), is this morning ananda-vijnanamaya of the Guru-sakha.

Lipi-drishi. 3 clear, 3 dim, 3 clearer but thick, 3 vivid, but thick. That is, first, the lipi in the chitra, perfectly vivid & stable, then, the lipi in the akasha dim & vague but just legible, then clearer but still not vivid, then stable, but not perfectly well defined. Immediately after the succession of predictive lipis, each of these stages was manifested in type.

Lipi. “Stability”, sufficiently clear, “steadiness” dim. That is, the akashaliipi is ready for a sufficiently clear stability, persistent in manifestation, not yet for a perfect steadiness in place. Immediately afterwards fulfilled.

“Satiety”. “safety”. “Therefore satiety has to be forgotten by the system, safety has yet to be perfected.” The lipi is now consecutive in manifestation, simultaneous in stability. It is legible & in a way clear, but all the letters are not at once clear, nor does the clearness amount to vividness.

The thought-perception without expression takes place now in the suksma, but expresses truth of vijnana; if it expresses anything but this truth, it will be inhibited or corrected or inhibited and corrected.

Lipi. “Knowledge.” earlier in the morning—fulfilled by the development of this increasing habit of right-perception in the thought. The possibilities of the lila are being included in this habit of right-perception; for the type & possibilities of the Yoga have long been fixed and are now being translated into actualities. The type of the lila has been fixed, the possibilities fixed in generality are now being fixed in minute detail,—a process that was unnecessary in the Yoga,—but the actualisation is still remote. Actuality can only be fixed after upalabdhi & the establishment of sraddha.

Sraddha is established with regard to the predictions of
progress in the Yoga by the correctness of the lipi; there is no 
sraddha with regard to predictions of eventualities in the lila.

Drishti. 8 & the tracing of the walls of a prison. That is, the 
uttapana is still detained in the prison of physical tamas.

There has been a strong revival of tejasic activity in visrishti 
which seemed likely to become not only momentarily effective to a 
limited extent, but victorious recovering its old force. In the moment 
of stress this was twice contradicted by the inspiration which proved 
to be correct. Prediction has therefore become effective with regard 
to the bodily movements of the Yoga.

The rati in all things (of the prema-ahaituka-chidghan anan-
das) is established though occasionally interrupted; the establish-
ment of the ratna has now begun. The rati is less forward in events, 
than in states & vishayas. The corresponding stages of the bhoga 
have been rapidly passed through without special notice because it 
is the ananda and not the bhoga that is intended to be the permanent 
form of the ananda.

According to prediction by the Vani there is a simultaneous 
movement of the jnanam, lipi, trikaldrishti covering the whole 
range attended by a general manifestation of rupadrishhti (akasha 
& chitra) rough, vague or blurred predicted by the lipis 3, (vague 
& indistinct), 2 & 1. The movement has begun by the activity of 
the inspiration and of the viveka rejecting false inspirations. By this 
means several successive movements of men & animals have been 
accurately though not completely predicted, a few suggestions of 
error being rejected in time. Some of the inspirations present them-

Collapse of the elementary utthapana with momentary disap-
pearance of the tejas bringing about a cessation of the siddhi about 
12.

Lipi. J.F. will be C.J.5

Afternoon.

Lipi 8. followed by some restoration of the elementary uttha-
pana sufficient for the resumption of the siddhi.

www.holybooks.com
Certain predictions of future events have been made which have to be justified by the event before they can be taken as the beginning of correct prediction of the future.

A suspension of active progress till after 4 pm. Preparation of the accurate & precise trikaldrishti by inspiration & revelatory perception.

The rest of the day was marked only by the [?intrusion] of ordinary thought, the under-current, in the new jnanam.
[Here resumes the notebook.]

Jan 16th

Nothing is as yet final in the sense of being unbreachable except sraddha in the Yoga minus the physical saundaryam, a certain fluency of the new thought, a general freedom from any pronounced contradiction of the first two chatusthayas (sraddha in the Adesha and the daivashakti excepted) and an imperfect activity, very meagre but constant, of the third chatusthaya.

Lipi. “satiety” several times repeated.

" God. Int[erpretation]. The divine personality will manifest not only behind the Vani, but in all the circumstances of the life and Yoga.

" Tonight . . delight . . safety. The Ananda and the confirmation of the conditions of outward action of the Yoga are to be among today’s siddhis.

10.15

The morning has been chiefly devoted to the taking entire possession by the personality of the Ishwara of the thought-expression and the removal of all restraints or government of the thought by the Shakti. The thought has also taken into itself the history of past ages, but is not yet as perfect in that province as in ordinary thought. The nature of the siddhi, as was recently more than once predicted by the Vani, approximates to the sadhan in the jail and is indeed in its nature the same sadhan, without its intensity, passing into siddhi. Sraddha is wanting or deficient. The lipi 8 has been frequent yesterday & was confirmed this morning. The elementary utthapana is once more triumphant over the denial of utthapana though still hampered by sukhsha klanti and a strong return of the denial of anima. Walking from 6.20 to 7.35 and again from 8.5 to 10.8. No weariness in the body, the attempts of weariness to return being successfully rejected, but stiffness in the lower limbs & negative electrical ache, sukhsha & slightly sthula, in the upper part of the body. The lipis 3 confirmed in the morning & 6 have also been frequent. Arogya is reasserting itself but not yet reestablished in possession of the body. The rupadrishī is still vague & blurred though often stable; perfect
images come, but, except the prakashamaya, do not wholly or stably materialise.

2.2 pm

Walking, from 10.45 to 11.40. Again from 12.25 to 2.2. Altogether 6 hours with three intervals of half an hour and three quarters of an hour—ie 6 hours out of 7½ hours. Result. Elementary utthapana was about to fail only once but was soon reinforced; in the other anima fails repeatedly, the last time entirely, but restores itself by a brief rest, the stiffness in the body & pain in the feet disappearing or reaching a minimum manifestation. The Ishwara is now master of all thought perceptions or expressed thought in the system and is laying his hold upon all feelings and sensations.

Walking from 2.35 to 3.45 . . The strain on the utthapana-shakti greater than before, but that on the anima slightly more sukshma; the latter is continuous, the former intermittent. Again from 4.15 to 6.15, making 9 hours out of 12. The force of utthapana has increased in the whole system and even at the end of these long trials acknowledges no weariness except in the outer material shell where an inclination to rest shows itself occasionally, but can be removed by a pause, standing, for a minute or a few minutes. The state of the anima varies, the denial sometimes increasing, sometimes diminishing or temporarily decreasing.

The power of aivaryam has greatly increased in the matters of siddhi, producing a much more rapid and spontaneous effect even in things physical than ever formerly. The satyadarshanam with regard to surrounding incidents, suspended for a time, has returned more powerful than when it was suspended but is still hampered by movements of buddha tapas, the one powerful obstacle now to the jnanam, but the power is that of soulless matter, inert and obstructive. A similar suspension of the clear rupadrishti & to some extent of the lipi has been also removed; the prakasha rupas are of great perfection, though not always vivid, and of all kinds and in answer to the aishwaryam is showing colours, red, violet, blue etc. Chhaya-prakasha is also often very perfect. Chhaya is becoming perfect, but still shows stability in imperfection, but some instability in perfection. Other rupas are rare and unstable. The mastery of
the system by the Ishwara is now almost complete, though still of a moderate intensity & force. The second chatusthaya & the nature & realisation of the Shakti Jiva, marked by the appearance of the lipi 11 (Kali), are growing more rounded and permanently real to the consciousness. Sraddha is increasing but falters before anupalabdhi. The movements of the \( \text{vani} \) & thought, which have become one, of the perceptions & the lipi & drishti seem now to be justified by the event and more & more precise and accurate.

Standing & walking 6.35 to 7.35. and again from 9.20 to 11.20. Altogether 12 hours out of 16. Sleep from 3.10 to 6.40. Ananda in all outward things and the established sense of the one Personality in all. Certain defects in the thought perception appeared towards the close of the day. Safety was confirmed to the trikaldrishti, not by events.

Jan. 17th

The progress of the siddhi today was greatly curbed by another attack of the asiddhi, but the asiddhi has no longer much power over the mind and feelings; all it can do is to affect the sraddha, obscure hamper or suspend the siddhis of the third chatusthaya and bring about some reaction in the fourth. During the morning remnants of sleep-tendency and some lowering of the elementary utthapana helped the asiddhi. Walking from 9 to 12.10. Samadhi in the afternoon, very deep and full of all kinds of drishti & lipi, but very confused and only towards the end sometimes helped by vijnana activity. Walked from 5.20 to 8.20. The utthapana does not fail, but is not intense and powerful as before. There is no positive weariness, but in the afternoon there was a general depression of activity. During the exertion pain & stiffness do not show themselves or very slightly, nor even afterwards, only when the exertion has been suspended for some time. Their hold even when manifest is not great. Occasionally they fill the sukshma body & manifest if there is a pause in the activity. Roga was strong today, nevertheless it yields to the aishwaryam without being removed entirely. The activity is excess of vayu with a slight element

\(^6\) MS the
of tejasic, jalamaya & parthiva action, but the results are dull and feeble compared with former manifestations. Other rogas can no longer make any impression on the system. Ananda of the nature of rati is becoming stable & permanent even in condition & event, as well as in all vishaya, action, movement etc. The personality is now habitually manifest in all things and persons; but is not always remembered. Trikaldrishti was largely inhibited, but reappeared towards the close of the day without recovering complete exactitude except occasionally. Assurance of safety given from outside. The most important development was the confirmation of raudrananda, pain being now invariably attended with pleasure. Formerly only the dull kinds of pain had this attribute, but now it has extended to those which are acute, although the intensity has not yet gone in experience beyond a certain degree. This development has been persistently predicted recently by the ever recurrent rupa of the bee, wasp or hornet. Rupas are now often distinct, stable & perfect on the background as well as in the akasha, but have not advanced otherwise. Sleep 11.45 to 6.45

Jan 18th

9.35

Defect of anima strongly felt on rising. Walking & standing from 7.20 to 9.30; the stiffness more insistent today. The utthapana has not recovered its force. Chhaya-rupas have still the tendency to vagueness & a blurred or imperfect form, but some are very distinct; these have a tendency to short stability or no stability at all. Momentary asaundaryam of guna, followed by a recovery and increased intensity of shuddha ananda in sarvasaundarya above guna; but this harmony is still imperfect.

The rest of the day has passed in the final purification of the system from all trace of rajas or sensibility of the system to rajasic impressions from outside. The sattwic remnants are also being removed, but the process is not yet complete. A relaxation of the elementary utthapana occupied the system. The roga that came, is being slowly eliminated. Its chief characteristic is a dull form of watery nausea, slight in substance but with some tamasic power of oppression. The prithivi, tejas & jala are very weak. Hunger
persists. Samadhi in the afternoon greatly improved, but not free of the tamas. Sleep 1.0 to 7. Signs of the raising of the objective siege.

Jan 19th. Friday

Sattwa & Tamas in their remnants are being removed; also the shadowy trace of desire from the lipsa, of ahankara from the buddhi, of self-activity from the thought and action. The control of the buddhi over the action has been eliminated & has now become mere imagination expressing itself outside the system. Sattwic activity is being eliminated from the vijnanamay trigunatita activity, but here the remnants are still not altogether void of obstructive substance. Letter from P.R. [Paul Richard] Safety assured though not absolute. The lipi & thought fulfilled. Walking & short standing from 7.45 to 10.45. No failure of utthapana, but the accumulative effect of adhogati is not yet removed and stiffness hangs about the lower body & in the sukshma as depression without actually occupying it, though strong touches are frequent. Farther exercise of the utthapana twice for an hour at a time. The final elimination of the sattwa approaches completion. There has been a simultaneous activity, insignificant in quantity & force, but pure in quality of all the members of the siddhi from 1–17, that is, the whole third, fourth, fifth & sixth chatusthayas. Some of the movements, however, were hardly more than preparatory.

Lipi. इति ब्रह्मचर्यायां योगास्त्रे श्रीकृत्याऽर्जुनसंवधे मीमांसयोः, indicating the completion of the moksha and the establishment of the perfect samata with its three attributes and consequences. Sleep seven hours.

Jan 20th.

Exercise of elementary utthapana from 6.50 to 12.0 noon. Interval of about 10 minutes at 7.30 – standing twice for reading the papers, once for two or three minutes conversation. Some attempt at failure of utthapana about 10.15 removed entirely by the three minutes standing, and again after 11. removed of itself. The body is ceasing to be affected with depression by the defect of anima, itself now much reduced in its stress, even after discontinuation of
activity. The lipi 8 is persistent and points to the early perfection of elementary utthapana by the removal of all nirveda, klanti or necessity of change of occupation for body or mind. The thought, expression & perception, are entirely liberated from interference of the mind or from watch by the mind except to a slight extent in the immediate trikaldrishti. Thought, trikaldrishti, vyaptiprakamya; all the elements of jnanam, now act freely & rapidly and with a predominant, though not perfect accuracy. Even the general thought in the minds of others is perceived frequently & has been repeatedly proved. Sraddha in the Yoga is acquiring tejas because now supported by the activity of the jnanam, but in the adesha is not yet existent, though prepared to emerge on the first decisive upalabdhi. Rati in all things except roga is now the rule, & is generally the rati of ananda. A dull nausea has been persistent all the morning, but does not interfere with the appetite or disturb the prana. More has been eaten today than ordinarily & with full rati of food. The lipi & rupas are preparing frequency. Sattwa has finally disappeared and now only touches from time to time as rajas did in its last stage. Tamas has been eliminated, except the asraddha, but still attacks though feebly & with a much diminished heaviness. False vijnanam persists, but is losing its insistence & activity.

Tamas, after a strong attack in the evening, was finally expelled, except in the body, and now survives only in ineffective touches; but the uncertainty of asraddha remains,—eliminated with regard to the Yoga, occasionally reviving with regard to the rapidity of the siddhi, easily sliding into actual sanshaya with regard to the adesha. Exercise of utthapana from 2.25 to 3.55 and from 6 to 7.30. The defect of anima gives trouble still after rest, but, although constantly recurrent, is deprived of continuous persistence. Sleep seven hours

Time of completion of cooking fixed at 8.45,—actually completed 8.47. Arrival of most of the four fixed at 7 to 7.20. Three arrived, two at 7.8, another about 7.15.
Jan 21st

The 21st has been fixed for the beginning of the perfected siddhis of power, the morning for the beginning of the frequency & stability of the rupa and the lipi. The latter prediction is being fulfilled, but the really vivid & perfect rupas are still prakasha or prakasha-chhaya or occasionally chhaya and there has been some retrogression in the vividness and perfection of lipi & of other rupas, except where the rupas are momentary. The trikaldrihithi of the immediate surroundings though of some perfection when left to itself, is still hampered by the activity of foreign suggestions. Exercise of elementary utthapana 7.35 to 10.35 a.m. No weariness but occasional touches of adhogati & stiffness. Relics of watery nausea—much water rising into the mouth. Touch of tejas and proof of jala at the time of visrishti, but no strong reaction or disturbance. Exercise of elementary utthapana from 2.20 to 5.5 and from 10 pm to 12.30 am. The siege of adhogati in the sukshma was in both cases strong but not overpowering. The perfect action of the siddhis of power commenced but slowly and on a very small scale. Sleep from 12.30 to 6.30.

Jan 22d

The morning was occupied by a strong attack of asiddhi in which even the finality of the first chatusthayha was denied. Advantage was taken with regard to an error by which the imperfect harmony of pravritti & prakash tending to an imperfect harmony of pravritti & shama was mistaken for persistence of sattwa, rajas & tamas. This error produced strong asraddha and a return of attack by the triguna. The attack came clearly from outside & did not arise in the adhara but was admitted into it by the consent of the Jiva. The harmonisation of prakash, pravritti & shama is proceeding. Meanwhile the particular siddhis are not definitely active except the physical. There was exercise of elementary utthapana for nearly seven hours from 6.30 to 1.30 with a break of eighteen minutes (12.12 to 12.30) for meals. During this time there were only three standing pauses of from two to ten minutes, but only one for rest (two minutes), the two others for reading the paper & bathing. The exercise was pursued in spite of an insufficient tapas in the physical
aura. It was followed at its close by a stronger denial of anima than usual, but this disappeared directly the exercise was resumed from 3.30 to 6.30 and during these three hours there was no failure of utthapana, no depression, no defect of tapas in the aura. The denial of anima became inoperative for practical purposes and the three hours minimum & six to seven hours maximum was established today as predicted yesterday. In the afternoon there was a strong attack of sleep which prevailed for one hour & more. In samadhi the occurrence of perfect continuous images & scenes (not so perfect) was reestablished.

Lipi indicating the death of Binod Gupta at an early date, fixed tentatively either on or by the 25th of the month. No verification of prediction about varta, money from expected source arriving by the 22nd. Rati of rasagrahana established but with viparita srotas of virakti impairing its fullness especially with regard to events. Sleep for 6 hours(?).

Jan 23rd.

Morning occupied by strong attack of duhkha; the rest of the day by reconstitution of the siddhi. The vak of thought rose to the level of the inspired illuminative. Tejas & tapas low. Over nine hours exercise of elementary utthapana, but not continuous. Money from the expected quarter arrived after all on the 22nd, but not the sum expected. There was, however, no prediction about the amount. Rati of bhoga and sarvasaundaryam established, chidghana and suddha strong, prema weak, ahatuka troubled, with a tendency to ratna of bhoga. Sahaituka sharirananda (vishaya and tivra) is establishing and generalising itself, raudra still subject to the limitation of intensity, vaidyuta & kama occasional and fitful. Attack on the health at the weak points still continues. Sleep 12.25 to 6.40 am. Sahitya was today resumed.

Jan 24th.

Lipi of death of Gupta fulfilled, but he died apparently on the day of the lipi, or possibly the next day, not on the 25th, of heart failure. There had been no previous news of illness etc. It is notable that the death of Sir J. Jenkins had been also foreseen, but
in that case there was first the news of his illness. Exercise of utthapana 6.55 to 11.40; strong attack of non-anima and temporary failure of utthapana. The tendency to ratna in the bhoga continues and there is occasional ratha. The nirananda is mostly in the physical element of the higher anandas where the indriyas are touched. Motions of contact are now commencing in which, starting with the vishaya and the tivra, all the five physical anandas manifest together raudra, vaidyuta and kama following each other or rather developing out of each other. The same ratna of bhoga is being applied to events and happenings and even to the circumstances of roga. Satiety and dharananyunata interfere with the full consummation, but are being subjected to the general law. This movement is connected with a rapid deepening of the dasyam through which the realisation of all motions mental and bodily being inspired, conducted and imposed by Prakriti is being confirmed not only to Chit in buddhi, but also to Chit in sensation, mental nervous and physical. The movements of the body are being liberated from the shadow of emotional or affective intention and choice. Adverse movements are chiefly of the order of roga, a sore throat having taken hold after an interval of several years, and of bodily slackness and failure of utthapana.

Jan 25th & 26th

Days of clouded progress, the revolt of the triguna against expulsion from the nature-environment and of attempted relapse. No record was kept. The chief progress in the third chatusthaya has been the effective clearing away of false vijnana so as to leave the perfecting of the vijnanam unhampered, the clearing of the sraddha, increase of the dasyam, the steady progress of the arogyam and the rapid advance of the Ananda. Utthapana & bhautasiddhi have been strongly denied. The Kalibhava is gaining in completeness, firmness and permanence.

Jan 27th.

Progress, unclouded resumed this morning. The results of the last few days, so far as yet ascertained, may now be summed up. The first chatusthaya, denied by the assault of the triguna, has gained
in strength by the ejection of the remnants of lower tejas; pravritti, prakasha & shama are arriving at a perfect harmony. The dasyam is being rendered firmer and firmer and combined with ananda is perfecting the shama and divesting it of all tamasic elements, perfecting also the pravritti and divesting it of all rajasic elements. The only tamas left is the physical and the asraddha of the Adesha, the latter the result of insufficient prakasha, the former of the imperfect conquest of the physical being by the vijnanam. The manifestation of the Kalibhava, harmonising the bala, raudra (karali) & shiva Kali, has perfected the second chatusthaya in all but intensity. The remnants of general asraddha in God & swashakti are disappearing and the only province of asraddha is the Adesha and the rapidity of the siddhi. This defect prevents the intensity of kalyanasraddha, and ishwarabhava etc. necessary to the perfection of the second chatusthaya. Jnanaprakasha is now strong and the mithyadharanas (asadgrahas) relating to the Yoga and Lila are disappearing. The Kalibhava and the realisation of self in all and all in the self are growing strong and persistent. The Master of the Yoga is more and more manifest in each detail of experience, but half-veiled by the Prakriti in the surroundings. Sahitya is once more hampered by the refusal of the annam to obey or even contain the vijnanamaya movements of the vak. On the other hand artha becomes more & more full and clear, powerful and luminous. Jnanam & Anandam Brahma are steadily deepening.

The chief struggle is over the third & fourth chatusthayas where the annamaya obstruction has concentrated the best of its strength. Ananda has risen from the ratha of rasagrahana to the ratna of bhoga with a frequent emergence of ratha, which is especially strong in the sahaituka vishayabhoga & tivra & is spreading to the kama etc. Ananda, even ratha of the kamananda, is beginning definitely to emerge. The other bhogas (chidghana, prema, ahaituka, shuddha) are involved in the sharira and emerge out of it. It is here that the contradictions of ananda are occasionally strong. Ratha of the bhoga of events, conditions etc is prevailing. The contradictions are being overborne; pain & discomfort of heat & cold, contact etc are being dominated. The other field of struggle is the arogya; the sore throat was ejected after a struggle by
siddhi. The rogas still capable of touching the surface of the system attack frequently, but cannot hold except for short intervals, coming, retiring, succeeding, failing without cause. The disturbances of assimilation are yielding perceptibly to the Arogya; when they come, they cannot hold or make only a brief & seldom violent visit. Three full days of avisrishti were attended with perfect ease and the remaining one and a half with only a vague tendency to disturbance. Two nominal visrishtis occurred on the fifth & sixth days, but with only parthiva pressure, no tejasic, vayavic or jalamaya. Only at the end of the sixth day (this morning) somewhat acute tejahkshobha produced a copious visrishti of the old type. The system, however, dismissed the kshobha in about fifteen minutes and it went leaving behind no acute results. The central arogya still advances slowly. Sarvasaundaryam is not yet continuously permanent.

Jnanam increases in force & exactness. The style of the vak rises to the inspired illuminative and is effective at its lowest level. The thought perception is now almost rid of false vijnanam in its material, but not in the arrangement of its material. Nevertheless accuracy of time is growing, accuracy of place has begun, accuracy of circumstance, chiefly, is defective—all this in the trikaldrishti. Prakamya & vyapti are strong and more continuous, less chequered by error. The internal motions of animals & to a less extent of men, the forces working on them, the ananda & tapas from above, even the explicit thoughts are being more and more observed and are usually justified by the attendant or subsequent action. The siddhis of power work well & perfectly, in harmony with the trikaldrishti, not so well when divorced from it. The physical tone of the system is recovering its elasticity & with it elementary utthapana and bhautasiddhi are reviving. Samadhi improves steadily, but is much hampered by sleep which has revived its force during these last three or four days.

Time-prophecy. Arrival from the match predicted after 11.30, a little before 11.45. Actual arrival 11.43. Sahityasiddhi is being finally prepared.
Jan 28th.

The control of the Ishwara, complete in the script and vani, has extended itself to the thought perceptions. Thought-expression attained by a rapid involved process the siddhi of absolute inevitability; the old slow movements are being progressively abandoned. In this case the effective and illuminative effective were the siddhi with a tendency to frequency of illuminative & inspired illuminative; but now the inspired emerged in a moment and took the place of these lower movements drawing them into itself and was itself drawn next moment into the [inevitable].\(^7\) A similarly rapid siddhi is being prepared in the lipi, but there is strong obstruction in the trikaldrishti and rupadrishti. Successful siddhiprayoga of power increases in frequency and perfection. The elementary ut-thapana is reviving (there was 3 hours exercise continuously with a minute or two of interval) but is still burdened with the bhauta asiddhi.

Jan 29th & 30th

Spent in the slow modulation of the annamaya mentality in the environment to the movements of the vijnanam. The annam of the body resists the working of the sahitya, the only karma that as yet seeks to proceed regularly, though bhasha, study and nirukta are pressing forward. A strong siege of tamas besets the physical brain. Knowledge floods it from the vijnanam, knowledge of type & possibility, but not yet of actuality; but the brain is unwilling to allow its expression, though willing to perceive & receive it. The third chatusthayaya progresses slowly towards regularisation. Rigveda has been resumed & is pursued slowly but regularly.

Jan 31st.

The lipi & rupa are now less fugitive & more firm in outlines, but not yet sufficiently or spontaneously vivid. In rupa prakasha still predominates. Thought expression is perfect but infrequent; the script bears the burden of the transformation of the remains of asatyam to satyam. Trikaldrishti improves but in things petty

\(^7\) MS inspired
& immediate; nevertheless distant movements are also becoming correct & proved, eg Lourdes' illness in its progressive stages. Today siddhis of power showed and advance in power of detail, but towards the end they were successfully resisted. There is no definite progress in bhutasiddhi or visvagati though there is some sign of preparation for regularity in the last. The vijnanam is slowly asserting itself in karma. At night according to a previous prediction swapna samadhi established its initial perfection in type, the recorded images being of an extraordinary minute perfection in vividness & multitudinous detail & sufficiently though not preeminently stable, eg a ship of another world. The images were mainly of the Bhuvar.

Feb 1st

The sahitya begins to extend itself to all types of prose, with freedom of flow and perfection of type but not yet rapidity of flow or perfection in every detail. The silence of the divine element in vani & script was broken & the siddhi moves swiftly. Saundarya bodha has been made finally the natural view of the mind & indriyas, only faint relics of the asundaram remaining in the physical consciousness. The last relics of asamata are finally disappearing, those of depression giving way to a settled tejas & tapas and the defects of the second chatusthaya are in course of removal. The old prediction about the duta was today fulfilled. Kamananda with the ratha recurs daily, but is not yet frequent or continuous. The lipi is proceeding towards finality, gaining in habit of vividness & maintaining the same relative stability of position; the akashic movement in which it occurs is settling down. The non-physical elements of the third chatusthaya increase slowly. The conquest of the roga in the stomach increases; tejasic excess fails to keep its hold, assimilation has a greater force & when visrishti occurs, it is so little as to be hardly worth reckoning. The akashic state is preparing. On the other [hand] bhutasiddhi, elementary utthapana and arogya of the centre are obstinately contradicted, and saundaryam makes indefinite advance. Sleep is once more strong and hampers the visvagati.
February 2d

After a long progressive advance the lipi has established finally by a sudden manifestation simultaneity, stability, legibility and is only hampered in spontaneous vividness. The unity of the sentence in the lipi is also broken by the superimposition of other sentences. These difficulties were removed in the afternoon and all that is now left is to eliminate the habit of imperfect lipi and strengthen the habit of perfect lipi. The exactitude of trikāldrishti has finally begun, but is strongly combated. Crude rupas are becoming clearer and of all kinds, but tejas, chhaya and prakāsha predominate. The visrishti broke out on this the seventh day, but tejasic excess only exerted itself, after and not before, for a short time. Subsequently vayavic excess remained for a long time. Today the samadhi was used persistently as a preparation for sahitya. At night perfect images are the rule, but stability & vividness are not yet the ordinary law of the vision. Farther progress of sahitya.

February 3d

Uttapana & bhauta siddhi seem to be recovering tone. 3 hours with a very slight reaction of defect of anima. The process of removal of jalavisrishti has begun, the frequent evacuation has been brought down to a limit of four times a day, not always copious. Little definite progress today.

February 4th.
The bhoga of the general (non-physical) ananda manifested once more in force with a tendency to the habit of the rātha, independent of saundaryabodha which emerges from the ananda. Firmness of the crude rupa established & the establishment of clearness conjoint with firmness and stability begun. The imperfect lipi predominates. The script as substitute for vani is revived. Thought manifests its absolute perfection but with a downward tendency to the inspired illuminative. Perfection of trikāldrishti is inhibited, but exactitude of effect of the aishwaryam is becoming more common. Elementary utthapana morning & afternoon, but with two hours, not three hours limit. Anandavani revived. Sahitya etc do not advance. The Kalibhava is more continuous.
February 5th

Personality of the Master in the vani more perfectly & continuously manifested. The Varahi in the Prakriti. The general ananda is liberated from nirananda in the common, expressionless and vulgar. Lipi predicting richness in rupas, finality of trikaldrishti not immediate; also visvagati. Sortilege. यथा त्वमा जगद्धथा जगद्धताति यो जगत। सोऽपि निद्रावर्जण नीतः कल्वो स्नोतुमिद्धिः \(\text{y} /\text{a} /\text{y} /\text{a} /\text{j} /\text{g} /\text{/ú/£A jg/(pAtAE/ yo jgt} \]

so/_Ep End

so/_Ep End

Feb 6th. (Tuesday)

Yesterday’s siddhi confirmed. Both liberty & prejudgment have ceased; passive activity is perfectly effected. The exactitude of satyadrishti is being effected in the lipi-drishhti, subjective perceptions (of the lower vijnanam) and prakamya is being displayed. It is not yet quite exact as applied to physical events. The siddhi of the vani is perfect. The distinguishing faculty in vivek acts frequently & perfectly but without intensity or strong illumination, excluding actual error; where it does not [act],\(^8\) there is uncertainty. This is especially with regard to the future (in the adesha and important events at a distance). Proofs of effective siddhi acting on the world at large are increasing, but the movements are still uncertain and comparatively rare. The rupa is increasing in frequency & richness of content.

Later on the Shakti in its downward descent entered a layer of the annamaya Patala which had not yet been coerced by the vijnanam; there was in consequence a disturbance,

\(^8\) MS exact
a cloud of the old sanskaras flying up and obstructing the siddhi. The finality of trikaldrishti seems to have begun.

Feb 7th.

Chiefly occupied with the annamaya disturbance. The sahitya-siddhi successfully invaded poetry, the epic & dramatic styles. The thought is working to establish the inspired instead of the effective as the persistent style of thought expression and to rise from it to absolute inevitability. It does not now sink below the effective. There has been farther trouble about the vani, the anandabuddha being misused; it now tends to be finally replaced by the anandamahat. Trikaldrishti is so far advanced that the turns of flight of a butterfly, or a bird can all be predicted during the flight, but there is a difficulty about the prediction of the next movement of an animal in a state of rest. It can be foretold but the action is capricious. Trikaldrishti of things unseen is hampered by diffidence, unless there is a knowledge of the actual occupation in which case the general stages, eg of the progress of cooking, can be told without any material data to go upon, by mere trikaldrishti. There is strong & almost perfect prakamya of inner movements, forces, intentions etc, but not yet of the determining force, movement or action. Visvagati revived in force; frequency of sight but not yet the stability. Sukshma smell has revived its activity, but is infrequent.

Feb 8th

The flight of some score of butterflies & many birds foretold in their turns, only two or three errors due to speculation or tejasic action. Usually siddhi of power & siddhi of knowledge seem to be one. Future movement of animals in rest can now be told with some exactitude, but error is easier because of stronger habit of tejasic speculation. Aishwarya & trikaldrishti have not yet been harmonised. Drishti of an eye, prakasha-chhaya-tejas, in the akasha, perfect but momentary,—an indication of the richer drishti (dense & developed) perfect but not yet capable of stability. This is already developing. The vani strongly anandamaya, first of the vijnanamaya ananda, then of the others, reappears full of the Vishnu or Pradyumna personality, taking into it Rudra (Balarama),
Shiva (Mahavira) and Aniruddha (Kama). The definite personality of the Master in his personal relations to this Yoga and the Jiva in the Yoga has to develop out of the laya; for Vishnu is the Ishwara who incarnates. The present method of the Yoga is a progressive replacement of buddha bhavas by vijnana & ananda bhavas, and of the lower of these by the higher. The firmness and clearness of the stable rupas is much interfered with by unsteady floating waves of the subtle-gross etheric material of which it is formed; these waves mix with the clear form and blur it by excess of material in the attempt to reinforce its distinctness. Perfect satisfaction has now been given to the Aniruddha element in the Jiva, so far as the Yoga is concerned, by the revelation of the scientific means & steady progress used in the siddhi, but the Balarama element awaits satisfaction. The Mahavira element has also been satisfied by the floods of knowledge that are being poured down, but the Pradyumna element awaits satisfaction. In the Adeshasiddhi there has as yet been no perfect satisfaction even to the Aniruddha element. Lipi (on Sultan's back, chitra formed by the hairs). Satisfaction to Brihaspati, not yet to the other deities. Satisfaction to Bala (due). N.B. Bala is the Titanic force from the Mahat which must eventually conquer & replace Rudra, though conquered by him in the Buddha, because descending into the Buddha he becomes a Daitya disturbing evolution by a premature effort towards perfection. The same is true of all the greater Daityas who are not Rakshasic in temper (Asurim Rakshasincaiva prakritim apaunah). Sahitya siddhi in ordinary poetical forms. Satiety of interest in what is old and familiar, “staleness”, is being overcome. Lipi “zoology” indicating a superior light on the science of life forms bringing zoology into harmony with the general satyam and getting rid of materialistic difficulties; immediately after while casually seeking a book to read, I picked up Haeckel, opened at the chapter on Worm forms ancestral to man and had the predicted illumination. Such detailed trikaldrishti is now becoming very frequent.
August, 1912, will complete the seventh year of my practice of Yoga. It has taken so long to complete a long record of wanderings, stumbles, gropings, experiments, — for Nature beginning in the dark to grope her way to the light — now an assured, but not yet a full lustre,— for the Master of the Yoga to quiet the restless individual will and the presumptuous individual intelligence so that the Truth might liberate itself from human possibilities & searchings and the Power emerge out of human weaknesses and limitations. The night of the thirtieth marked by a communication from the sahasradala, of the old type, sruti, but clear of the old confusions which used to rise around the higher Commands. It was clearly the Purushottama speaking and the Shakti receiving the command. Already the lipi had given warning of a new life beginning on the 1st July, — a new life, that is to say, a new type of action, starting with a temporarily complete realisation of novel Personality and the final inevitable seal on the dasyabhava. Not that anything was done abruptly. In this yoga at least nothing has been abrupt except the beginnings, — the consummations are always led up to by long preparation & development, continual ebb & flow, ceaseless struggling, falling & rising — a progress from imperfection through imperfections to imperfect and insecure perfections & only at last an absolute finality and security.

Even now the dasyam though complete in action, is not free of an intellectual questioning. But this last leaven of asraddha, of nastikya-buddhi, is confined to the truth or untruth of the Adesha given in the jail, the apprehension of certain forms of akalyana; it is not capable any longer of positiveness & even at its highest is unable to generalise itself. For the rest the triple dasyam of the
body is active beyond doubt, the last shadowy effigies of the double dasyam is fading away—in the mind and feelings there is not the same clearness; for the shadow of the double dasyam still persists by the strength of the asraddha, but the express thought, the vak of the divine communication, the experiences & feelings (all except the depression due to doubt) are ordinarily independent of the anumati. Only the perceptions present still a field to the unhappy independence of the soul, its triste liberty to doubt & revolt against God, and from this field the others are sometimes temporarily affected.

The three forms of dasyam are now distinct and well-marked. The simple dasyam is that obedience to the divine impulsion which is self-chosen & depends on the individual’s intelligence of God’s will and his consent, his readiness to obey. The Purusha is still karta & anumanta, a servant of God, not His slave. The great step bridging the transition from the simple to the double dasyam is the renouncement of the kartritwa abhimana, by which we perceive that Prakriti is the only doer of all our actions voluntary or involuntary from the most deliberately concerted endeavour even to the simplest trifle and, in consciousness, are aware of the impulse of Prakriti in every movement physical or mental. At first the consciousness tends to make a false division claiming the movement itself to be our own although the determining impulse is felt as a driving or a pressure proceeding from infinite Nature above or around us. The wearing away of this division marks a farther attenuation of servanthood and deepening towards the divine servitude. But so long as the anumanta keeps his abhimana and reserves his right of individual lordship (Ishwara) over Prakriti, we have not passed the stage of simple dasyam. For between the various impulses of Prakriti, we have the sense of choosing, of an active & constant freedom, & although we choose what we understand to be God’s will, it is still our choice that determines the action in the adhara & not His direct and imperative Will. In the double dasyam on the contrary there is no active & constant freedom, but only a general & ultimate freedom which is used little or only exceptionally. We are aware of ourselves as Ishwara & anumanta, the individual ruling & sanctioning authority, but, although we still have the power of refusing our sanction to any particular impulse of
Prakriti if we choose, we do not choose; we make no choice, we do not determine what is God’s will and act thereby or order Prakriti to act thereby, but leave everything to God to determine; the whole responsibility is His & a given impulse of Prakriti fulfils itself or not as He chooses without our interference. If the will is used, it is used by Prakriti. We are aware of it as being not our will, but the will in the adhar used by Prakriti. In the triple dasyam, even this potential freedom disappears. Whatever impulse of infinite Nature comes, we could not interfere with it if we wished, any more than the drifting leaf can deny itself to the storm or the engine to the force that works it. We are aware of our body as a whole & in its various parts being moved not by will in the body but by a will or force outside the body; our thoughts, feelings, will-power similarly. Each of these stands perfectly apart from the others & is worked separately by Nature. The will wills & has done; it does not try to determine action but leaves the action to happen or not as Nature pleases; the thought thinks & is done, it does not try to determine either the movement of the will or the movement of the action; the feelings equally live for themselves, atmatripta, not striving to compel action & emotion or thought & feeling to agree. What harmony is necessary is determined by the Para Shakti that drives us, which we feel always as a Force driving us. But this Force is itself only an instrument of a conscious Will driving it,—the Will or Anumati of the Purushottama, who is Parameshwara & universal Anumanta.

This consummation is also attended by a ripening realisation of the Divine Master. Formerly I realised the Impersonal God, Brahma or Sacchidan[an]dam separately from the Personal, Ishwara or Sacchidananda. Brahma has been thoroughly realised in its absolute infinity & as the material & informing presence of the world & each thing it contains, yat kincha jagatyam jagat. But the sense of the One has not been applicable utterly & constantly,—there have been lacunae in the unitarian consciousness, partly because the Personality has not been realised with equal thoroughness or as one with the Impersonality. Hence while dwelling on the Paratman, the mind, whenever the Jivatman manifested itself in the sarvam Brahma, has been unable to assimilate it to the predominant realisation and an
element of Dwaitabhava,—of Visishtadwaita has entered into its perception. Even when the assimilation is partly effected, the Jiva is felt as an individual & local manifestation of the impersonal Chaitanya and not as the individual manifestation of Chaitanya as universal Personality. On the other hand the universal Sri Krishna or Krishna-Kali in all things animate or inanimate has been realised entirely, but not with sufficient constancy & latterly with little frequency. The remedy is to unify the two realisations & towards this consummation I feel the Shakti to be now moving.

The action of this triple dasyam is now characterised by a harmony of shama & tapas. This harmony has been hitherto impossible owing to the excess of mental tejas which sought perpetually to energise the action & bring about a more rapid or a more perfect fruit, thus impairing the shama which consists in anarambha, shanti & the perfect realisation by the Jnata-Purusha of his own passivity. The state of action vacillated from tamasic vairagya or udasinata to rajasic heat & fervour of action. All this was an importation from outside, from the annamaya devatas, but a constant importation. With the greater perfection of the dasyam this pendulary vacillation between inertia & disturbance is sinking to rest and the hour of intense (chanda) activity in the Prakriti with perfect anarambha in the Purusha is drawing nearer. The third power of action, Prakasha, which is as a light on the path to the tapas, showing it its own works, is more & more active, but not perfect, although rounding towards perfection.

This prakasha has been for the most part vijnanamaya, of the nature of discriminative & selective knowledge, acting directly by discrimination & selection as the first process of thought. For instance, I see a bird flying & I discriminate & select the farther course of its flight by an act of determining illumination—I do not see the future flight with the self-vision as I see the present flight with the physical vision & so know about it. I see only the truth (ritam, satyam) about this flight, satyam of it, not sat, its truth of existence, not its existence. But this day I realised more certainly what I had previously perceived by fragmentary experience, that the basis of all knowledge is atmaprakasha of sat; by chit, that is to say, or sat luminous to itself. I began to see first the thing-in-itself
in the Brahman (whether thing objective or thing subjective) and as part of that vision idea or truth of the thing self-manifest.

The obstacles of vijnana-siddhi and of all subjective siddhi are no longer in myself but in the circumambient annamaya prakriti, not that attached to myself as an atmosphere by my past karma (for that is purified), but the general prakriti. It is from this besieging environment that imperfections expelled from myself reenter temporarily my system or the old regularised sanskaras of Nature which we miscall laws stand in the way of progress,—e.g. illness, unease, thirst, limitation of power or knowledge, inactivity of power or knowledge. I feel, for instance, no thirst in the body but a sense of dryness around me & besieging me, but not clinging as it does when in the karmadeha or personal environment; I have sometimes to drink in order to satisfy these devatas. When I feel no bodily chill or discomfort in exposure, sleeping out uncovered in the cold wind at night, yet around me there is an unease & a shrinking which I cannot yet ignore. The obstruction & limitation, however, are no longer jealous & malignant, but the voluntary or involuntary expression of the natural incompetence or unwillingness of the annamaya devatas to new movements to which they are unaccustomed & which hurt their ease & their egoism.

Notable Lipis today were these—

1. Fidelity to the duties laid down by the speech. (This lipi pronounces a principle of the new action which has already begun to be fulfilled).
2. The heart and nature of the child (including the animal), the strength of the Titan, the appetites of the old giants, the intellectuality of Gods.
3. Kindly in intention, tragic in result. (Dharma in the Kali).
4. Finality to the tejas. (One of the immediate siddhis to be expected in the yoga.[])
5. Rupadrishhti.
6. Thaumaturgy.

Yesterday, the 30th, there were four apposite sortileges which have an importance of the future and are besides worth noting for their entire appositeness to thought or circumstance.
Agni is the Tapas (Chit-tattwa in energy) & the activity of the tapas is the most important siddhi now in progress—an activity born of a fire purified from rajas. The disappearance of rajasic tendency is now being finally effected (the tamasic still lasts), even the last dust of it in the annamaya environment is being swept up and out. This purified tapas is that to be contained by the jnani in me. But in addition the tapas born of devotional self-dedication is needed, especially, by the karmi—the first belongs to the realisation of the nirgun sad Brahman, the second to the conception of universal Narayana. The first by itself makes for Sannyasa, the second for divine activity. The reference is to the passing away of the mere sannyasochita bhava in its last remnants at the end of June, the fulfilment of tyaga, the passing beyond the limitations of the sadhan of the Gita to the sadhan of the Veda. It is true this had already been effected in essence, but the last tendencies in the annamaya mind to the sanskaras of asceticism & mere renunciation have only now expired.

Uktham (prayer) is here the ishita and to show me that ishita (lipsa without bondage) is one with prayer, the latter rose again at night at the moment of the final establishment of the dasya and the Adeshavani. Ishita is the force of life creating things, raising up from weakness to strength, from nonbeing to being; by ishita the soul rises up in strength and climbs from this lower condition to the high divine condition & becomes no longer of this world where ishita weakens into wish & longing but of the world of the Isha and in touch with the conditions of that state of Swarajya in which the ishita is the natural state of the soul. The sortilege was an answer to the depression caused by asraddha and an assurance of fulfilment by ishita.

1 MS affected
The financial condition is now at its worst,—a debt of Rs 300, money almost at an end, all sources either denied or suspended & everybody who could help temporarily in a similar condition of destitution. The sortilege came as an answer to the anxiety in the annamaya mind about the sharirayatra.

(4) तत्कुलमात्रांस्य यौगिकानुवले भवति य एवं वेद य उ हैदरविदा स्थवर्ते-नुशुण्यत्वनुशुण्य हैद्रान्तो विश्रत हे भाद्रान्ते। Brihad Aranyaka. An answer to doubts about the activity of ill-wishers.

July 2\textsuperscript{d}

Nothing of decisive importance today. The vani is active. It seems that the faculty of rapid interpretation of the rupas, lipis etc is being finally established and there is greater firmness of the trikaldrishti. There is stress in the lipi on the word “prodigy”, which seems to be prophetic in its nature. The symbols of physical ananda have been determined and were repeatedly shown—a butterfly for kamananda, (this is of long standing), a wasp for raudrananda, a bee or honeyfly for tivrananda, the long Indian bee for vishayananda, a moth for vishayananda.\textsuperscript{2}

Lipi—25\textsuperscript{th} George—first end of existing state of destiny.

I may note that a former sortilege occurring after the Titanic disaster and pointing to fresh disasters in the struggle of machinery with Nature, which I had supposed to be false or falsely interpreted, is today vindicated. No less than four accidents (three fatal, one extensive) in two days in aviation! It is noteworthy that I was wondering only a day or two ago at the comparative freedom of Germany from these accidents—but these accidents (except one, I think) are in Germany.

8, 9 and 7 constantly reappear in the lipi. They indicate the chief points on which the struggle with the objective resistance is now concentrated. The secondary utthapana commenced feebly on the first attained on the night of the second some strength. There was perfect mahima & laghima (perfect in nature, not intensity) in the legs, but the defect of anima prevented sustainment for more

\textsuperscript{2} The first or, less likely, the second occurrence of “vishayananda” is a slip for “vaidyutananda”.—Ed.
than 15 minutes. In the arms it is general adhogati working through unease and general hostile physical sanskara that opposes; the special defect of anima is less prominent, though entirely absent only in one or two positions. Even in those the adhogati works through kala to recreate it.

July 3d.

The barrier offered in the annamaya prakriti to all decisive fulfilment of the vijnana-chatusthaya (the siddhis of knowledge & power incidental to the opening of the ideal faculty) [has] at last given way. The power of trikaldrishti in those movements which are nearest to the prakamya and vyapti (perception and reception of the truth about objects by sanyama on the objects or contact in consciousness with them), [has] triumphed over the obstruction. Instead of a difficult choice of the truth, past, present & future, about things & happenings, a choice hampered by a siege of false suggestions from the physical gods in the material environment, the suggestions themselves are coming to be automatically true. The vijnanam which is satyam ritam is conquering the last fields of mentality & imposing its satyadharma or law of self-existent truth which is necessary for perfect vision of things, satyadhar-maya drishtaye. The movement is not yet entirely triumphant, for the enemy returns to the charge and clouds the siddhi with the anritam, but in the siddhi now there is fixity &, though not perfect continuity, yet a prevailing persistence. The enemy cannot prevent the persistence. The condition of success appears to be perfect passivity. If there is any arambha, any setting about to know, mental activity with its tangled web of error starts again; Truth, the satyam, is idea true in itself, self-revealing[,] atmaprakasha, not acquired, not in any way arrived at. The mind with all its guessing, inferring, discovering can only reach a marred & mutilated truth inevitably companioned by error. This breaking of the barrier was presaged by the lipi. “The difficulty is conquered.”

3 MS have
4 MS have
The siddhis of power have also begun their decisive action but less perfectly than the trikaldrishti of prakamya and vyapti. There are four tendencies that prevent its proper action & effectuality; (1) the tendency to miss the object of the prayoga, as when Pallas Athene turns the shafts from the hero of her preference, so that the aishwarya or vashita does not act upon it at all; (2) the tendency because of habit, previous purpose or tendency or mere recalcitrance to a novel suggestion to pay no heed to it, to shake off the shaft of suggestion from the mental body & go on one’s way, if one is in motion or remain firm, if static, as if the suggestion had not reached; by the sukhshmadrishti or by some involuntary movement the hitting of the mark by the force aimed at it can be discerned; (3) the tendency to confusion in the mental current of suggestion & mechanical opposition in the body leading to delay of obedience or deviation from the time, place & circumstance enjoined; (4) the tendency for adverse circumstance to interfere & divert the faultless or generally successful fulfilment begun. However, the frequency of obedience & frequent exactness of the action show the emergence of the successful Shakti. It is notable that both these activities are confined in their success for the most part to the immediate happenings around me of a trifling nature. In the rest there is only a general pressure and ultimate success and a capricious success in details. The therapeutic power has evidently gained in force.

The vijnanamaya articulate thought had established its free activity regardless of all doubt & opposition in the mind, but it had not decisively proved its truth & vijnanamaya nature by unvarying result in the objective & subjective happenings of Yoga & life; but this movement of proof has now powerfully commenced. Drishti is also preparing a decisive movement both in lipi & in crude rupa.

The lipi “After dinner the siddhi will take a new turn”, came in the afternoon & was fulfilled duly like the script of the morning. The new turn proved to be the final establishment of the first chatusthaya where it was still weak (in the hasyam or active atmaprasada) and its independence even in the annamaya prakriti & its last outworks of favourable & unfavourable happening (mangalam & amangalam). There are a few recesses of environing material mind in which sensitiveness to the apriyam survives feebly, but
these touches have only a brief persistence. The second chatusthaya is preparing its liberation in the defective points (kalyanasraddha, faith in the adesha, ishwarabhava, etc), but as yet only the sraddha in the yoga siddhi is decisively fulfilled. The reason in the annamaya mind opposes the perfect sraddha, the damyam in the annamaya temperament opposes the ishwarabhava.

July 4th

The lipi is not yet entirely conquered by the Satyam. Especially when the doubt about the adesha siddhi rises, it gives or suggests false prophecies but the falsehood is usually noted, now, at the time & no longer deceives. Today’s notable lipis

1) Fullest satisfaction of the heart next after the fulfilment of the laughter (hasyam). It is notable that the fulfilment of hasyasiddhi has recently been predicted with great persistence by the lipi “laughter”, which I could not then understand. Cf the old lipi, “Safety”

2) Ekas tisthati viras tisthati.

3) Sadi Carnot.

4) Disorder – at once; yes.

The last script had reference to the prolonged attack on the first two chatushayas & also on the new siddhis of the third which had produced in the annam some disorder, mental activity & vague uneasiness; it predicted the immediate removal of the disorder by restoration of passivity & was at once fulfilled. The attack lasted or recurred throughout the day until this script appeared with its immediate fulfilment.

The vividness, frequency & simultaneity of the lipi have now been established in fixity, with continuity; but are not yet invariable or intense. Different forms of lipi, chhayamay, varnamaya are becoming more frequent (called in the prophetic script lipikaushalya). Along with this successful issue from a long & weary struggle the details of the lipi are becoming more & more independent of mental activity,—eg le resultat decisif where the annamaya mind had blunderingly suggested decisive; the words suggested by the mental thought voice are increasingly rejected and other unexpected words substituted even when the lipi appears progressively and not with an
unexpected spontaneity; etc. Automatic script recommenced today showed a greater truthfulness in the few statements made about the next movements of the yoga but is still capable of exaggeration. The vani has not yet entirely established its satyam to the mind. It is still taking up all imperative thought-voices suggestive of action & the articulate Thought is taking up all voices suggestive of knowledge. When this movement proceeds, there is a slight return to the old inefficiency of phrase, ambiguity of statement or exaggeration of suggestion; but these faults are only reproduced to be removed & not, as used to be the case, to have bhoga & be exhausted.

The siddhis of power progress steadily. One of the difficulties is now removed; the power hits its mark, & where unfavourable circumstances intervene, favourable circumstances have begun to appear to counteract them. But refusal, delay & perversion are still common. Those on whom the power is used for progress in Yoga (S. [Srinivasachari] Bh. [Bharati] Sn. [Saurin] Bj. [Bijoy]) give frequent proofs now of success of siddhi & especially of vyapti of the shakti & jnanam in my or of my thoughts, but this siddhi is not yet decisively regularised.

Mental bhukti is now complete (with the exception of adverse events where there is more of samata than bhukti) & is invariable in rasaghranam, usual in bhoga and, nowadays, occasional as ananda. But the shuddha ananda attended by the realisation of universal saundaryam often fails temporarily, owing to the loss of hold on the inner man and the dwelling on the physical appearance instead,—when this happens, and it happens only with regard to human faces, there is a fall in the general tone of the bhukti which tends to lose hold of the second & third intensities of bhoga (ratha & ratna) and descend to the rati or lowest intensity or else even to go back from bhoga to mere rasaghrana. But the lapse is never long sustained.

Physical bhukti of the indriyas is well established except for the occasional failure of chakshush ananda in the movement above described and a failure in certain tastes of the palate,—the latter exceptional. Sparshananda is still confined mainly to the low state of the rati, though well capable of the higher states, and is hampered by the persistence of discomfort by prolonged exposure to excessive
heat, exposure to cold above a certain degree in the state of sleep or after sleep when the nervous vitality is lowered, the intenser touches of pain or poisonous irritation. Thirst is being once more expelled, but hunger is again active. The five physical anandas occur occasionally sahaituka, but the ahaituka activities have for the time being been suspended along with progress in the other physical siddhis. Sleep is strong, also adhogati of weariness, denial of anima, refusal of the saundaryam, persistence of the stray survivals of the phantasm of illness-symptoms. These seem, however, to be losing all hold except on the stomach & central functions, where they are attempting to resist final eviction (fullness, tejasic unease, touches of nausea) or to prevent fixity of siddhi. Visrishti is stronger than it has been for a long time past. Uthapana of neck maintained for about 10 or 15 minutes, finally overcome by pressure of adhogati.

July 5th & 6th

A day of considerable and constant progress. Two predictions were made during its course of the progress apportioned to it, the first in script after an opening activity of telepathy and thought-reading, the second in thought and perception. The script ran, “More advance in vyapti & prakamya of thought; decisive effect in siddhi of rupadrishti. Progress in visvagati. Physical siddhi in 6. 7 & 8 (secondary)”. The prediction was fulfilled, but perfunctorily without any generosity or amplitude of effect. It was replaced by the second prediction which promised the beginning of a second totality of the third chatusthaya on a larger scale & with a stronger effectiveness heralded by the extension of trikaldrishti, prakamya, vyapti and the siddhis of power to things distant in place & time and a preparation of totality in the fourth & fifth chatusthayas.

There has long been a free & successful telepathy (vyapti) & reading (prakamya) of the characters, feelings & states of mind of others and for longer still an elementary perception & vyapti of their actions. But the thought contents of the minds of others have been hidden from me except occasionally or in abnormal states of my being when it was concentrated in anger, apprehension or sympathy. Or it would be truer to say that I have read & received
plentifully the thoughts of others, but as I now perceive without knowing their nature & origin,—because the discriminative faculty & the sraddha or shastra of the thing were absent. Today, however, the veil was lifted, the barrier finally broken. Not only did telepathy & thought-reading abound, but in a single day the proof of correctness began to be ample. Things distant in time & place have also begun to yield up the secret of their present, future & immediate past, even in the rough of their distant past. Proofs have simultaneously begun to be vouchsafed. Things have even been perceived, denied by the object of the drishti or by apparent events & then proved in spite of denial on more ample evidence. Nevertheless the action is not yet perfectly free; the power of obstruction in the annamaya nature can no longer entirely prevail, but the will persists. Trikaldrishti is still hampered by revivals of the lower movement, when incorrect suggestion resumes for a short time its sway. There are also elements of error in the successful movement, mostly of the nature of mithyagraha or mithyaropa,—misconception by which a tendency or passing thought is taken for an intention or an intention for the thing that will happen etc and misplacement by which the thought or action of one is taken for the thought or action of another or falsely placed in time, locality or order of circumstance.

The siddhis of power increase always in force and in frequency & accuracy of fulfilment, but are not yet as habitually successful as the siddhis of knowledge.

[Five blank pages intervene in the manuscript between the above entry and the one that follows.]
July 13th.

Experience of perfect unity of shamas, prakasha & tapas first in trikaldrishti, then in action. It was found that the sole error (of final result) in a particular drishti was owing to haste of mental tapas taking the main tendency or intention as the thing that was bound to happen. The right details were given by vyapti-prakamya of the immediate future, but were not accepted by the mind till they were fulfilled. The tapas is not yet chanda. A great & supreme passivity remains in which traigunyamaya utsaha and nirveda try to subsist discouraging as yet the tapas and prakasha. Only shamas is, as yet, entirely victorious. There is no longer any attempt by the manasa buddhi to forecast action; it recognises the impotence of speculation.

Ananda Mimansa begun last night; the first adhyaya completed this morning.

The proof of preparation of beauty in a very initial stage has during the last few days at last begun to appear.

Strongly increased intensity of kamananda and much more continuous and pronounced general tendency to that ananda with its concomitants. Sometimes the force that commences is the tivra. Premananda based on realisation of God as every separate existence animate or inanimate re-becomes, suddenly active and strong.

General trikaldrishti but without proper arrangement or nishchaya therefore groping & incorrect in detail is becoming normal. The Shakti has begun to move towards normality of correct detail. Power applied more perseveringly to the bodily siddhi seems to be producing more consistent results. The apana is being dominated, resistance to saundaryam relaxed, urdhwagati tending to recover from its prostration. Three longstanding aishwaryas were fulfilled yesterday & today in public events.

Continuity of record promises to become more common in the samadhi.

The first chatusthayya is now acting in its completeness by completeness of samata & the hasyam no longer depends on mangala upalabdhi. The body is also being possessed by samata & universal ananda even in what was formerly mere pain or discomfort.
Sahaituka vishayananda is resuming its old occasional strength which now promises to be normal. The others are also more common. Nirvisesha (ahaituka, but another term must be used) shuddhananda seems about to be established and it is asserted that it is established within and in the body.

Aishwarya about Pé [Poincaré] successful; it remains to be seen whether he keeps his seat.

Today’s predictions.

1. Passivity united with tapas and prakasha; removal of moral tamas and partially of mental tamas. Fulfilled; there is shamas, but no tamas except the uncertainty in the mind and a vague tendency to asraddha about the Adeshasiddhi & about the rapidity of the Yogasiddhi.

2. Ananda increased in the body; shuddhananda strengthened. Fulfilled

3. Health increased, linga and stomach strengthened in their chakras, apana dominated by prana.

4. Adhogati dominated by urdhwagati.

(In these two respects it remains to be seen whether the apparent improvement is real & permanent.)

5. Beauty prepared. (Fulfilled with the slightness proper to this stage)

6. Vijnanam strengthened in all its parts—beginnings of rupadrishti in dense & developed forms. (The latter is still doubtful)

7. Karmakama strengthened. (Not apparent.)

8. Kalikrishna strengthened. (Fulfilled)

The meaning & fulfilment of the last prediction are not apparent.

Lipi “Today physical siddhi begins”, fulfilled.

July 14th

Realisation of God in all attended by shuddhananda (in the state of bhoga like all the mental anandas) both nirvisesa and savishesa. These anandas (mental bhoga of all kinds & the physical
bhogas) seem to be finally established & incapable of overthrow or effective breach by the nirananda. They have an air of being pratisthita. Only the nirvisesha sharirika anandas are intermittent and obstructed. The nirvisesha shuddha & premabhoga are, however, still dependent on the perfect realisation of Sarvavastushu Ishwara.

There is strong tendency to deposit of prithivi & visrishti, & if the apana is dominated by the prana, it is as one who still successfully struggles with his assailant. The same is true of all the physical siddhis that have at all advanced, they are attacking, sometimes prevailing, sometimes in possession, but not yet masters except in the suddhi, bhukti & mukti (the latter most imperfect of the three).

Yesterday by a sudden opening of faculty Sanscrit prose, even of the Kadambari type, which was until the last reading difficult to understand, troublesome & wearying to the brain, has become perfectly easy & intelligible at the first reading without labour. A similar result is coming in Sanscrit poetry but more slowly. Prakasha & tapas in the brain have increased, tamas is passing away.

It is now apparent that kama was greatly strengthened yesterday & karma in bhava and power, but not, apparently, in actuality.

The experience of the afternoon shows that ananda is not yet beyond effective breach by the nirananda & that the samatahasyam, though now normal, can still be interrupted, the traigunya become once more active feebly in rajas & by the use of force on the Jiva in his system, but strongly in tamas & with the consent of the Jiva. The old device of insisting, against the Jiva’s will, on flattering statement & promise which no longer seems supported by experience, has again been used.

The exact trikaldrishti accurate in every detail or almost every detail seems to be becoming more normal, but is still very far from being habitual or even common; but it does not need so exceptional a movement of tapas as formerly; it comes, when it comes, easily & naturally.

The central chakra was stronger than ever before for a short time this morning & almost perfect in type, but collapsed under pressure. The force of arogya in the stomach has not yet removed
the bhautic symptoms & unease attendant on imperfect assimilation. Apana is active & dominant in the jalavisrishi.

The element of rajas in the daily written predictions is now clearly revealed by the extravagance of today’s predictions which run as follows.

1. General physical siddhi established, particularly health, urdhwagati & ananda, in their types, not yet in unbroken possession.

2. Physical mukti & bhukti become more apparent.

3. Vijnana liberated from its limitations, not entirely, but able to move towards the brihat.

4. Adeshasiddhi & totality of the fifth chatusthaya.

The bhashasiddhi of Sanscrit prose, tested, proved to be well established.

It is now suggested that the predictions were not in themselves intended to indicate the actual fulfilment during the day but the occupation of the shakti with these things during the day & afterwards. In this case it will be a general programme, rather than a prediction. But it was preceded by a phrase which fixed the understanding in the mind in a different sense.

The attack of asiddhi in the afternoon was not entirely lifted during the day, especially in the intelligence (buddhi) which remained under the control of the tamas. Rupadrishhti of ghana & developed form was active for a time, but the drishti still subject to the old defect, the vivid is unstable & the stable dim or ill-defined.

July 15th

This morning Samata is perfectly restored and there is a strong increase of the suddhananda with a manifestation of the faery element in the beauty of things, the sense of their beauty of ananda, the pleasure taken in them as visions of his weaving of God. This transcends or contains the beauty of guna proper to the vijnanam; it depends not on knowledge-perception of the separate guna & yatharthya of things, but on being-perception in chit of the universal ananda of things.
The written prediction today:—

1. Finality of shuddhananda.
2. Increase of sharira ananda.
3. Progress of health and utthapana (health in linga & stomach)
4. Preparation of saundaryam.
5. Kali Krishna (finality of mental dasyam and sraddha in the guidance,—not in the truth of everything stated.)
7. Trikaldrishti notably, powers less, samadhi somewhat developed.

The fifth has been immediately fulfilled; the personality of the balaka Krishna has taken possession of the sources of knowledge and communicates through the vani & vani script & even through the thought and the lipi; only the perceptions still belong to the Prakriti. The bala bhava (with a touch of the balaka) is established in the Shakti.

The general tendency to kamananda & sharirananda is increased & more persistent but does not yet pervade & hold the body, but only moves about it in brief & rapid wave-movements. The weakness of the nabhi chakra is the chief obstacle.

Rupadrishti increases and instances of perfect dense crude & dense developed have manifested, but the latter are without stability.

Shuddhananda is universal; questioned at first by the objection of physical ugliness, it has been liberated by the perception of the faery grotesque, the place of the crude, the unformed, the uncouth & the fantastic in the scheme of the universal beauty. The vulgar is the effaced and has the charm of that effacement.

The movement of the intellect in difficult Sanskrit poetry is much easier and stronger & sometimes the vijnanamay knowledge manifests (smarta sruti) with regard to the meaning of unknown words.

The primary utthapana is now active in removal of general weariness & alasyam, but still subject to the necessity of ample sleep & change of occupation. Health is dominating the defects still existent in the two chakras. Kama is more settled & the general
tendency to the ananda continues (afternoon).

In the trikaldrishti freedom of movement and the frequency of the sruti (which occupies at present all the means of knowledge along with the smriti) are now established, unhampered by the purely provisional nature of the sraddha conceded. This sraddha proceeds from the imagination, heart & general judgment but is refused by the buddhi which trusts only the smriti & drishti, where there is no prominence of sruti. Prakamya-vyapti is strong & frequently or even generally justified. The powers are not yet acting noticeably.

Lipi (earlier). “In four days trikaldrishti will be perfect.”

Trikaldrishti is being finally liberated from the tejasic movement which instead of waiting for knowledge & allowing it to come, tries to find out & fix the truth, preferring speculation to sight. The general correctness of the trikaldrishti was first made quite normal in those movements which closely follow the incident from step to step as it [proceeds], then in the prediction of the event before it begins; afterwards precise correctness of detail was brought to the level of a normal movement (not invariable, but natural, easy & frequent). Next the powers were applied to detail first of time, then of place, then of circumstance and precision of fulfilment was made normal; but the resistance here is greater & renders success less frequent.

By several lipis the extension of the siddhi to trailokyadrishhti was promised for the day, especially in samadhi. The first step was to attach a perception to rupas seen of their meaning & circumstances. Subsequently in samadhi a series of visions of Patala occurred, brief but some of them representing continuous incidents & scenes, eg, a ghat of many hundred steps descending to an abysmal river, small watersnakes darting through a river,—all the scenes in shadow or dimness.

Kama strong & the kamachakra tested. Primary utthapana & strength of the chakras was maintained throughout the day. In the evening the vani was active in the highest degree in the buddha. Tendency of sharira ananda was maintained, attended usually

5 MS precedes

www.holybooks.com
with continuous incipient ananda more or less pronounced, but not intense.

Siddhi in sharira mukti was promised & given by positive ananda in heat & cold, and also, so far [as] could be seen by a strong instance in pain. The ananda in cold was especially strong & unmixed; that in heat was qualified by the mildness of the heat inflicted. Farther experience is necessary.

Perfect dense & developed crude forms have at last effected their power of manifestation.

July 16th

Dasyam more strongly confirmed, by emphasis on all action being for Sri Krishna’s ananda & bhoga, not for the Shakti’s and by passive acceptance of the truth of the vani as superior to the apparent experience of the moment. Knowledge by sruti has begun to be proved & accepted. The process of finally manifesting the trikaladrishti in things distant has begun, the automatic unsought knowledge proving always truer than the mental opinions, inferences etc. The increased strength of the kamachakra strongly tested last night, has endured the test so far. Visrishti in the morning, but the bhautic symptoms were slight.

Programme.

1. Trikaladrishti confirmed & extended; trailokyadrishiti & rupadrishiti
2. Powers strengthened.
3. Samadhi largely developed
4. Utthapana & health carried forward—
5. Ananda established in an intenser movement.
6. Madhurabhava of Kali Krishna.
7. Karma & Kama strengthened.

It may be noted that the stranding of the Persia begins the fulfilment of a recorded sortilege which has since been believed to be false. There are numerous instances of such belated fulfilment of old lipis, predictions in the thought, declarations in the vani. The postponement seems to have had for its purpose the indulgence & final refutation of the asraddha so firmly seated in the logical intellect.
The day was given up to an attack in great force by the Asid-

dhi disturbing or veiling all the chatusthayas. The strength of the

kamachakra began to weaken in the morning & collapsed in the

evening. The utthapana persisted almost untouched and the health

though attacked held its own; the general ananda only waivered a

little in the evening except the inner ahaituka etc in events which

was entirely disturbed, but the sharira only came by intervals or

persisted as a faint tendency. In the evening, however, there was

a brief intense movement. After a violent struggle the powers pre-

vailed over resistance in the evening. Trikaldrishti, likewise. Both

attempted to move forward beyond normal action to invariability,

but after a time the attempt was suspended. Trailokyadrishti was

active, especially in the samadhi, rupadrishhti also, but in the chitra,

sthapatya & cruder forms and no advance was made. Samadhi

advanced considerably. Yesterday’s lipi, “story” explained at the

time as the connected tracing out of a story in the night in dream-

samadhi was fulfilled. One or more scenes are presented & the

thought traces the development of the connected incidents, often

beginning before the appearance of the scene, to the conclusion.

In the afternoon there was a struggle between sleep & swapna

samadhi, the latter prevailing for the greater part. At night a rapid

succession of brilliant visions presented to the eye scenes from

the swargabhumis generally, those of the ananda bhumi especially.

There is a strong tendency for the disconnected dream with its

incoherence & perverted memories to disappear. Sleep was reduced
to four hours in the night. The promise was given during the day
to confine it henceforth to a six hours maximum to be reduced
successively to 4, 2½ and nil. The Kalibhava was developed in the
terms of the second chatusthaya, Mahakali, Mahasaraswati with a
previous return to Maheshwari & Mahakali.

July 17th

Programme

1. Renewal of the force of the siddhi in the body
2. Forward movement of the vijnanam
3. Fifth chatusthaya prepared for life.

The force at work today in a state of depression, internal ananda
wanting. The siddhis were rather in a process of modification than
of advance, except the trikaldrishti which is becoming more & more
the normal action of the mind, but still chequered with the tejasic
habit of exaggerating or misplacing a perception. Speculation recurs
frequently. The tapas was depressed in order that the fifth cha-
tusthaya might be arranged for action & the tendency to personal
use of power in karma eliminated. The siddhis of power encoun-
tered a great resistance, but they were usually successful, though
not in the detail. Samadhi with visions of Anandaloka, the swarga-
bhumis, Earth & Swarga. Lipi about the King. Evidences of
preparation of saundaryam still slight and indecisive but no longer
doubtful. Sleep at night six hours & short sleep in daytime.

July 18th
Programme.
1 Preparation of karma (saahitya, bhasha, philosophy, nir-
ukta, prerana)
" of kama (knowledge, bhava, outflow)
Madhurabhava of dasyam in action.
2. Beauty prepared, health & utthapana maintained, physi-
cal ananda insisted on
3. Vijnanam made invariable, powers enforced in detail, samadhi extended.

Sahitya was resumed today, the Life Divine commenced; also
the systematic study of Magha, an orderly arrangement of material
(व धातु) for the Structure of Sanscrit Speech and a review of
past Prerana records begun. The insistence on physical ananda
was not strong, but health & utthapana were maintained & in
the evening the physical capacity of surfeit was, momentarily at
least, conquered. The realisation of action as movement of Shakti
enjoyed by Purusha came strongly in active dasya with arrangement
in knowledge of the kama. There was one remarkable instance of
outflow. Vijnanam is now acting invariably, spontaneously, not in
particular instances & by special tapas as formerly, but not yet
perfectly. The Powers overbore opposition & acted upon detail as
well as generally, with great frequency in the evening. Extension of
samadhi was not noticed in the swapna condition, but in the jagrat there was a temporary living in the pranayam jagat and a strong sensation of the vibrations of its earth & sense of its atmosphere. The annamaya self became finally trigunatita, indifferent to the action of the three gunas, not yet anantaguna. Tejas tapas is dead in action, feebly phantomlike & ineffective in knowledge, but tamas is still strong, though the depression of the annamaya system, persistent recently, has been modified. Internal ananda is yet weak & overshadowed; only the buddhi keeps its grasp on the Anandam Brahma. Sleep at night six hours, in daytime half an hour.

July 19th
Programme.
1. Continuation of karma (Bhasha, Sahitya, nirukta, prerana, kavya); preparation of kama with strong action of madhurabhava; Krishnakali finally realised in triple dasya.
2. Health & utthapana to move forward and the intenser ananda to become frequent & normal. Saundarya prepared
3. Vijnana action to be perfected, action of powers rendered invariable and swapna-samadhi completed in its deficient parts.

Morning—
The vijnanam has by a greater activity and extension arrived at a point when the truth underlying every impression & idea in the mind or visiting the mind can be & is perceived, but owing to a tamasic obstruction it cannot always reveal the proper source & placement at the time of the drishti; consequently the mind has still time to misplace the truth & by misplacement turn it into an error. This is especially the case in the trikaldrishti that is not of prakamya vyapti in its nature but independently revelatory. It is now proved beyond doubt that the mind invents nothing, but merely transmits, records and interprets, & interpretation not being its proper function is more liable to misinterpret than to understand correctly. The activity of vijnana is not yet perfect, but it has moved nearer to perfection. The powers are already more active, successful & frequent.
Karma—The Life Divine continued, Rigveda resumed, nirukta & prerana slightly, kavya touched, Bhasha proceeded with. The difficulty of understanding Magha now only persists, ordinarily, where the meaning of important words is unknown. Triple dasya was strongly confirmed in the mind in relation to the Krishnakali bhava. The health & utthapana appear to be a little stronger & the intenser ananda occurs normally in place of the old tendency with inceptual ananda but its frequency was not great & is still strongly resisted. Reading of lipi in samadhi which was deficient, has been confirmed, but continuity of record was not clearly established. The vijnana action is perfected in itself, but still weak in force and not always perfect in action owing to the emergence of yet another layer of unreformed annamaya personality. The reform of this layer proceeded yesterday. The weakness is especially in the fluctuation from ananda vani & vijnana thought to buddha vani. Sleep 6 hours at night; in daytime swapna & sushupta samadhi.

July 20th

Programme.

1. Karma (sahitya, kavya, bhasha, nirukta, prerana); kama strengthened, madhurabhava & triple dasya intensified.

2. Intenser ananda made invariable, health & utthapana strengthened.

3. Vijnana, powers & samadhi strengthened—continuous record developed.

The record from today resumes the character of a communication and includes a view of the future as well as of the present and past. Hitherto the programme has been carried out but often with a feeble & uncertain execution. This has to be changed. Especially, today, the force & joy of the soul has to be revived & the tamasic hue cast over it by the uncertainties of the tamasic intelligence removed. It is already too evident that the Yoga will be fulfilled for the tamasic intelligence to deny it any longer, but the denial is now of the rapidity of Yogasiddhi and of the certainty or probability of the Adeshasiddhi. Bhasha & the Life Divine have already been resumed.

Today, yesterday’s trikaldrishti that there would be news in
the paper today of a fresh Italian attack has been confirmed by the news of cannonade in the Dardanelles & of the ministerial difficulties in Turkey. In this connection it is evident that there is still a slight tejasic influence in the vani colouring the truth with the prepossessions. There is strong resistance to the therapeutic power. The promise of equipment does not materialise. The obstruction to the physical siddhi is stubborn. Even the vijnana is faltering & “mesquin” in its action although increasingly general in its truth & frequency. These are the main helps of the tamasic intelligence.

The trikaldrishti is already stronger in its action, though the confused method of working out the details from uncertainty to partly approximate partly complete correctness still continues. The siddhis of power are evidently much stronger & are overbearing in the field of exercise all the resistance brought against them; the only defect is that time is needed & if time is not given, the prayoga is apt to be fruitless. In the field of life there are plenty of instances of success, but the power of offering a strong & successful resistance still belongs to the annamaya prakriti. Ananda is restored & force is coming to the bhava & the action.

During the day the karma was strengthened—Rodogune revised, prerana liberated from its shackles, nirukta strongly brought forward (रoots), the RV proceeded with and, at night, the collection of materials for the R.V. Bhasha and Sahitya were continued. The triple dasyam & madhura continue to be intensified. Ananda was made invariable & intenser even in touches of discomfort, but the nirvisesha was only increased in frequency. The third chatusthaya strengthens slowly, but lipi & drishti are at present under a cloud. Five hours sleep at night, a little in daytime.

July 21st
Ananda has been restored, but certainty in the sraddha is at a low ebb & the tamasic intelligence finds still plenty of justification. Today the usual daily programme will not be given. The sixth chatusthaya will now be made permanently manifest in all its parts as a single whole, though not yet a perfect whole; still intensity alone will be wanting. The literary work will in all its parts be brought to a regular activity during the next few days. Outward
work will commence in the same interval. The third chatusthaya in the next three days will be liberated from pettiness & want of force, the fourth rise above the tamasic obstruction.

The doing of work in larger masses has begun this morning with the Rigveda. More of this collection of material will be done today, without interfering with other work.

The last suggestion was fulfilled. All the usual work has been done, but the collection of material replaced the usual comment on R.V. Prerana was intermitted. The sixth chatusthaya was rendered vivid & invariable, the fourfold Brahman being seen everywhere in the whole & in each object, very vividly, except when the mind is not free. There is a state in which the infinity of the mind is clouded by preoccupation with a particular idea or subject; the sense of freedom, prakash (transparent luminousness) & lightness is replaced by obscurity & a heavy contraction in the guna of narrowness. This is a remnant of the buddha condition. There is another in which there is a particular movement in mind (special occupation), but the mind itself is infinite[,] free & merely watches its own movement. This is mukti with particular tapas.

The second chatusthaya reemerged in the evening bringing with it a restoration of force & faith (not complete), but this reemergence was clouded afterwards. Health was much stronger, but perfect assimilation is still disputed by the apana, though the latter no longer produces distention of flatulence, but only tries to limit food-capacity, maintain the slowness of assimilation & restore the visrishti which has been discontinued for four days; the jalavisrishti is very strong and insistent. Nirvisesha kamananda in its intenser form, but not so intense as it was at times, is normal & frequent, but not long continued. The vyapti prakamya is becoming more decisive & intense. Samadhi is attacking the discontinuity & momentariness of the visible record,—thought record has already the power of continuity. Sleep for five & a half hours.—1 hour in the daytime.
July 22\textsuperscript{d}.

Lipi 22.23. indicating these two days as of special importance. Sleep at night, which is tamasic, increases denial of utthapana, moral tamas, strength of apana & all asiddhi; sleep by day, which is strongly charged with samadhi, refreshes & is inclined to be brief. It is evident that the sleep which attacks has its stronghold in the karmadeha and not in the actual body.

Saundaryabodha & Ananda in the outside world are now perfectly established, but relics of asamata remain and momentary tendencies of mental revolt touch the prana & chitta & sometimes the buddhi, ज्ञात्य चित्तीयते. Kalibhava is strong, but has not taken possession of the speech where the old sanskar is powerful. Krishna seems sometimes to remove himself and look out from behind a veil. This presence & absence in myself with its results reveals Christ's state of mind when he complained of being forsaken by God. This is salokya,—sayujya is when there is the same feeling of presence, but of God in contact with us or embracing the soul from outside, not of being in us & part of us, thought different—& yet the same. Sadharmya is well established, but not perfect because of insufficient Ishwarabhbha. The relation of Purushottama, Akshara Purusha and Kshara Purusha (Jivatma) is now constantly & vividly seen by me in others more than in myself, although just now it is manifesting in myself. In myself the Purushottama & Kshara Purusha are most vivid to me, in others the Jivatman & Akshara Purusha, while in the world at large (jagati), it is the Purushottama containing the other two in Himself & almost engulfing them—they seem to be merely movements of the Purushottama, parts, layers, aspects of His personality, as indeed they really are. This is because in the jagati & indeed in inanimate beings there is not the ahankara in the buddhi to create a sense of difference. Being more strongly aware of my own remnants of ahankara than that of others,—or, rather being more troubled by my awareness—the Akshara Purusha is less manifest to me than in others, in whom I see the ahankara only as a play of Srikrishna and am not disturbed by it.

The health of assimilation was strongly combated but in the end prevailed—distention, air-filled ether, is still the weapon of
offence; also a relic of skin-irritation, exceedingly superficial, but persistent has reappeared since day before yesterday. Sleep was reduced to four hours and a half at night, none in the day. Nirvīsēsha kamananda became insistent & long continuous in the evening & up till 11 pm, but its first intensity was not maintained. It has, however, always a tendency to thrill & chandata or tivrata which was absent to the inceptual manifestation. The general tendency is strong & persistent. The signs of development of saundaryam are becoming clearer and more decisive, but none is as yet victoriously emergent; though one or two are on the point of it.

Scenes of the future in samadhi are manifesting & nearer to the antardarshi jagrat condition which has long been deprived of all but very dim images. There is a frequent replacement of perception of sthula by perception of prana values—eg a strong, almost violent pranamaya oscillation (throbbing & swaying) physically felt in chair & table when the physical chair & table were only given a slight vibration by a gentle motion of one seated on the table. The chair although detached from the table & connected only through my body shared strongly in the pranamaya disturbance. The senses tend to confuse the two & feel the chair and table physically moving, but the viveka having taken possession of the manas prevent[s] the sensations from succumbing to the error of the physical sense.

The most important & decisive results were in the second and sixth chatusthayas. The Mahakali bhava in Mahasaraswati continent, after being clouded for some time, finally revealed itself as perfectly established and is developing the permanent ugrata, ishwarabhava etc; the ishwarabhava is tending to become independent of the results of activity & to consist in the force & confidence of the activity itself and of the personality manifesting. But also in the trikālakārthakāra sruti is insisting on self-justification and increasing the self-existent faith which is independent of the misleading twists & turns of immediate result & event. The Mahalakshmi bhava, hitherto absent, is now tending to appear. At first it replaced momentarily the Mahakali which it is intended only to colour without altering its character, afterwards it tended to bring the Mahalaxmi-Mahasaraswati combinations, but eventually it has subordinated itself to the proper Chandibhava. The Mahakali bhava tends to be
weakened, but no longer blotted out by the old sanskaras in conversation & after sleep; but it is no longer replaced by Maheshwari-Mahasaraswati, but by an improperly combined quadruple bhava. The Maheshwari (Gauri) pratistha is still too prominent, because the habit of exciting mental tapas, against which the pratistha is an insurance, still lingers, though weakly, as a habit that always revives with the advent of Mahakali. The permanent realisation of the fourfold Brahman is final. The activity of shuddhi, mukti, bhukti is now final in all their parts, though not yet consummate; only the siddhi remains and this is being rapidly brought forward. It is still chiefly hampered in the karma proper to Mahakali & in the outward fulfilment of kama.

July 23rd

Today is the day long fixed for the fullness of the third chatusthaya apart from the two later chatusthayas, in so far as its action can be complete without being entirely effective in kama, karma & the body. It is also the day when the movement towards that effectiveness begins. Siddhi of power today is working instantaneously & in detail & the action of all the powers is normal, regular, effective, invariably employed as the chief & proper instrument, but not yet entirely perfect in detail. Bhautasiddhi is working, but still overpowered by adhogati, nor likely to be free till general utthapanam overcomes adhogati. Samadhi is still deficient in continuity of visible record. It is supposed that it will round itself off today. The vijnana is now working with force & applying itself both in knowledge & shakti to things of moment. The physical siddhi is engaged in fighting down the tamasic obstruction. Yesterday only a little literary karma was done, as previously announced, nor will anything be done today. The activity of lipi & rupa, almost suspended for a time, is now reviving. In trailokyagati the mind seems to be standing on the doorstep of the pranamaya. Nirvisesha kama Ananda throughout the day was active & the general tendency continuous. The strength of the samadhi was increased & continuous coherent record established in the dream form, of speech, & communication with others on the plane of the Imagination, in the kalpanamayi prakriti of which are the heavens & hells of subjective
experience objectivised in sensation (to the sukshma indriyas) but not in annam.

July 24th
A day of reaction in the body, suspension of health in the stomach, activity of bhautic tejas, visrishti (all the results of excess in madya which the nabhichakra failed to bear), cessation of kamananda, failure of utthapan, return of tamasic sleep tendency. The rest of the siddhi proceeded slowly & indeterminately. Epic poetry resumed.

July 25th
Continuation & strong attack of asiddhi, bringing a repetition for an hour of the old tapasic anger, struggle & disturbance—the old confused & misleading voices. Bhasha in Rigveda strengthened, vijnana working normally.

*Fulfilled*¹

Oct 13
The siddhis of power have to be made more powerful and give more rapid and accurate results; the rupadrishthi in all its parts to conquer the obstruction finally. The defect of anima has to be minimised. Samadhi to develop rapidly. Ananda to begin to be stable.  

*Fulfilled.*

The physical akash is still rebellious to the lipi, rupa & other drishtis & to all the siddhis which at all depend on the annam. It only gives normally the minimum results and has to be subjected to pressure of the will in order to give all the results attained. Today, it must be made to give up this habit of inductility due to inertia. Today, Ananda stable, intense & constant; Samadhi increased in range & richness; defect of anima (stiffness, in lower limbs especially) disregarded & convinced of its own impotence; siddhis of power to increase in frequency of accurate success; rupa & other drishtis to gain upon the akasha.  

*Fulfilled*

Tomorrow the direct government will be continuous. Tonight there will be the Ananda of the actual embrace of the daughters of delight.  

*Fulfilled (last in sukshma)*

Oct 16th
Ananda intensified. Utthapana increased. Adhogati beaten down. Health to emerge

¹ Words italicised here and below were written in pencil after the original entry.—Ed.

www.holybooks.com
Oct. 18th

“C⁹ R.K” [Communication from Ramakrishna]

Make complete sannyasa of Karma
Make complete sannyasa of thought
Make complete sannyasa of feeling—
This is my last utterance.

Standing orders.
From Me. B.A.²
To believe everything, but put it in its place
To will everything, but only await the event & see where it has stumbled
To see everything, but force no drishti.

Oct. ³ 18th

The manomaya activity has to be cleared out before the final step is taken. Today the vijnana will recommence in the afternoon and all the siddhis with it.

Positive Ananda in all things has to be made habitual. From today it will be made complete and extended to the body, but attacks will continue to be made on it. The same with the removal of the manomaya.

From tonight no covering is to be used for the body. *From tomorrow walking in the sun will be steadily practised. This will finish the suddhi, mukti & bhukti.

Hunger & thirst are now only survivals, not imperative; they can be removed by the use of the will instead of by eating.

Fulfilled except the prediction marked *

Then the siddhi. Today the shanti has been disturbed and the shakti, because Mahakali had to draw back. From today this will be prevented or, if it comes, resisted & expelled. From tomorrow the third chatusthaya will begin to be absolutely final even in the siddhis of power, but not perfect till the end of the month. From today

² The significance of this abbreviation is not known. In the Record of 5 December 1912, these same “standing orders” are said to be from “the guiding source”. —Ed.
³ Date repeated in MS. —Ed.
the physical siddhi will begin to be effective in all its parts. From
today the fifth chatusthaya will begin to move towards general
progressiveness even in karma & kama.

Fulfilled

Oct 26—

Today the siddhi is being reconstituted with a surer basis for
the shuddhi & mukti, founded this time in dasyam & shamanvita
karma & not in dasyam & shama. Sortilege अन्वार्तितः कर्माकलं कार्यं
कर्म करोति ये। स सन्न्यासी च योगी च न निरिन्तनं चाविकं॥ There
was still an oscillation between imperfect tejasic action and
carmahin udasinata. This has now been expelled by associating
the Mahakali bhava with the karma.

The second chatusthay is imperfectly founded in sraddha; the
third yet insecure, deficient in sani; the fourth not yet established;
the fifth only incipient. The next movement of the siddhi will be to
bring “sani” into the third chatusthaya; to establish the fourth; to
develop the fifth.

Oct. 27th.

The tejas is the chief obstacle to the fulfilment in permanence
and completeness of the vijnana-siddhi. The confused remnants
of the tejas are being progressively expelled, & the trikaldrishti,
jnana and prakamya vyapti are growing—steadily & methodically,
but without enthusiasm or any positive ananda,—in precision, cor-
rectness & range. This misplacement of circumstance, due to the
tejasic attempt in the manas tattwa to fix things instead of seeing
them as they are, is diminishing in insistence & effect. In the body
tamas, not tejas is the chief enemy, as the nature of the annamaya
is tamasic, just as the nature of the manomaya is tejasic.

Anandasiddhi has been reconstituted, the shuddhi & mukti
& bhukti with the samata, but the perfection of the second cha-
tusthaya is still to seek. The reason is that although there is sraddha
now in the Yoga and in God, there is not sufficient sraddha in the
Lilamaya Purusha, & therefore none in the increasing rapidity of
the siddhi or in the inevitable and perfect fulfilment of the Adesha.
Nov 10th—
The Script is now liberated from imperfection. The trikaldrishti is only imperfect from confusion of details & broken relics of the old tejasic overhaste accompanied by suggestions from phantasms of the dead devatas. The shakti-prayog suffers only by the prematureness of the Mahakali kshiprakarita. The samadhi is only obscured by the imperfect dharanashakti of the material mind. The defect of anima is prolonged by the tamas in the body. These imperfections have to be eliminated.

The physical siddhi is yet subject to relapse & temporary dislocation.

The subjective foundations of the Adeshasiddhi are now complete, but not yet perfect in solidity, power & range. Its instruments are still imperfectly organised & insufficiently effective in application.

Samata siddhi, sraddha, virya, shakti, are perfect except for the defective spot in the Sraddha through which the asiddhi can still enter.

Nov 12th
A period of resistance & denial, ending in revolt, is over now (4.30 pm) & the dasya emerges from it perfected. The dasya being perfected, the internal ananda will become stable, subject only to depression by the imperfect sraddha, & the tejas permanently reestablish itself. Knowledge & Power will follow as the result of consistent tejas & saundaryam as the result of physical ananda. The whole will be summed up in Bhoga & Amritam.

The demand that Krishna should gratify the Nature, has disappeared in the last crisis & it was the only demand left,—the demand for satya & siddhi. The literary work is now being done, faultlessly in manner, faultlessly in substance, almost without fault in style.

www.holybooks.com
This perfection must be extended by the involved method to all other parts of the karma.

Nov 13.

The dasyam and internal ahaituka ananda being now permanently assured, the tejas has to be made equally firm and continuous. For this purpose the sraddha has to be perfectly restored—and this must first be done in the trikaldrishti, aishwarya & ishita. These must be made infallible. At present the perception of possibilities interferes with the perception of actualities which would otherwise be perfect. The aishwaryaprayoga is now free of false tejas & the only obstacle is the sluggishness of the Akasha. From today both trikaldrishti & shakti will become infallible, although there will be returns & survivals for a time of error & failure.

Nov 14

Yesterday the [infallibility] predicted commenced, but it works in a small field, with difficulty & subject to a certain groping uncertainty & confusion in handling its materials. It is contradicted from time to time, but reestablishes itself. The tejas has been added to ananda & dasyam, but when it seeks to act with speed & vigour, confusion is the result, except in the sahitya where only a slight tendency to defect is apparent as the result of rapid & unreflecting inspiration. Today the trikaldrishti & shakti will embrace definitely a larger field,—as it has already begun to do, but not yet with a triumphant infallibility; the lipi, drishti & samadhi will resume a steady progress and the physical siddhi once more move forward. The sahitya proceeds perfectly, although not always compassing an entirely flawless expression at the first thought. Rodogune, in its final form is completed & only needs a slight revision correcting an inconsiderable number of expressions. Today the Isha Upanishad will be resumed & steadily pursued till it is completed in a perfect form. Farther rewriting will be unnecessary.

4 MS infallibly
Nov 15

The fulfilment of yesterday’s predictions is not apparent. A contrary result & a return of udasinata, sattwatamasic, with strong asraddha, was the actual occurrence. There was a renewed activity of lipi, an emergence of the complete crude rupa in an instance or two & a first sign of bolder & more spontaneous lipi; the resumption of primary utthapana on a small scale & some tendency to physical siddhi; but the adverse results predominated, & both trikaldrishti & shakti were hopelessly inefficient—Promise of equipment unfulfilled.

Nov 16th—

There is an attack en masse of the Asiddhi in the Akasha on the whole totality of the siddhi. It has now been expelled from the immediate vicinity of the system, but fights from a distance and prevents the easy & pleasurable action of the siddhi. It is necessary to observe the following rules.

1. Pay no attention to outside voices, but only to the knowledge from above, the script, the vani, the prakamya-vyapti.
2. Keep firm hold on desirelessness & ananda; admit the tejas.
3. Yield on no point whatever; reject tamas whenever it comes.
4. Accept the supreme Vani which will now once more become active.

Nov 17th

None of these four directions have been fulfilled. There is an attempt to adhere to them, but it is combated always by the experience of asidhdi. The establishment of intellectual infallibility which seemed assured at one time by the fulfilment of the intellectual perceptions & the right placing, accompanied with definite proofs, of that which was misplaced has been followed by a strong disillusionment which challenges the whole foundation of the theory as a self-delusion. While the existence of a perfectly accurate trikaldrishti, perceiving truth past, present & future even to exact time, place & circumstance has been put beyond all dispute, the fact
that what seems to be precisely the same movement brings error & failure, clouds the whole issue & is being dwelt on in order to break down sraddha. For where is the use of trikaldrishti & aishwarya when one can never be certain whether a perception is trikaldrishti or false intuition, the perception of an actuality or a possibility, the perception of that which will be or the perception of something that someone else thinks of doing or looks at as a possibility, or whether an expense of will will bring a favourable or perverse result? The doubt comes to be one of God’s guidance & the reality of the Adesha. The science of Yoga is justified, but the idea of the personal mission seems to be convicted of essential falsity. Meanwhile the particular siddhis established maintain themselves ordinarily, but do not progress. Only the sahitya proceeds smoothly & seems to develop in security.

Nov 19th

The sahitya still improves in sustained quality under the stress of rapidity, but the physical brain cannot yet respond to an unlimited call upon its vital energy. In all else there is still the adverse force. Swapna in samadhi is improving & last night there was a long & clear swapna marred only by the confusion of the recording mind which mixed itself up with what it saw & produced a few incongruities.

The directions of the [16th] are more nearly observed, than before, but not yet perfectly. Dasyam is perfect, but not yet ananda because of the depression of asraddha. Shakti acts as a force which produces an effect & sometimes prevails, but cannot prevail at once, perfectly or even usually. Trikaldrishti is irregular, although there are signs of its improving.

Directions.

1. Passivity has to be maintained; no attempt must be made to know, to judge, to act, to will or to move the body by self-action, —nor has any attempt to be made to check or alter any knowledge, judgment & action, will or motion that comes of itself; so with all parts of the siddhi.

MS 15th (16 was written lightly over 15 in that entry.)
2. It will be found that then the siddhi will advance towards perfection of its own unaided motion.

3. Whatever happens, that seems to be adverse, must be accepted as a means towards success & fruition.

Nov 20th

The trikaldrishti, appearing at first false, is now on the way to be justified. It is only in the exact order of circumstances, time & place that there is real error. The rest is only a misplacement of prakamya & vyapti of intention & tendency in place of trikaldrishti. The Shakti is effective, but under the same limitations more heavily stressed. In both these respects the next three days will see a great change, but especially in the first & in lipi & rupa. Afterwards samadhi & shakti will develop into greatness.

The roga will begin finally to disappear after another three days. The sign will be the final establishment of Ananda, followed by utthapana & the breaking down of the obstacle to the saundaryam.
The predictions that follow, which overlap in date with the preceding entries, were written on a page of the notebook separated from those entries by several blanks, and upside down in relation to them.

Nov 19
A regular forward movement to begin from today.  Fulfilled.
The letter to be received today in spite of difficulties.  Fulfilled.
The rain to disperse early, – though not today.  Breaks during the day – A larger break next day – Dispersal 21st, but continuance of showers. All foreseen correctly in detail.
N & P to keep their places. Fulfilled during time contemplated, but N’s change gazetted.
Money to come within this fortnight from R. Fulfilled, but only half the sum expected.
Peace in the Balkans.  – not fulfilled. Fulfilled afterwards.
A & I [Austria & Italy?] to insist successfully on their points – signs of fulfilment
Letter to be written today.  Fulfilled
Lipi. “Break”, fulfilled

Nov 20
Lipi “Greeks & Servians together will dispose of the last efforts of Turkey in Macedonia” apparently fulfilled. (Several days ago)
Money from S in a day or two.  not fulfilled.

Nov 21
Perceptions about Turkish defeat at Monastir, which were contrary to the telegrams, precisely fulfilled (see telegrams of 27th)
Approximate time of return of D [dog] who had escaped, foreseen. (although improbable)
Approximate time of N. [Nolini] S. [Saurin] B. [Bijoy] & M’s [Moni’s] return & the order of their coming, all erroneous, but this confusion had been predicted in the lipi.
Pratijna becomes more & more satyapratijna.
Nov 22.
Rupa begins to organise itself with lipi as predicted
Trikaldrishti hampered by tejas & tamas in the speculative intellectual perception

Nov [26]
Everywhere in Europe the subjective fulfilment of the Will is evident, in the action of the Triple Alliance, the restored morale of the Turks, the stronger resistance in Macedonia, at Adrianople, the offensive at Chataldja, the course of events in England. But the material results are not attained.
In India there is, as yet, no substantial result.
Against roga there is often immediate temporary success, but the disease returns after being apparently cleared out. In other cases there is no success or only a struggle.
Part Two

Record of Yoga 1912–1920
26 NOVEMBER – 31 DECEMBER 1912

The regular record of the sadhana begins today, because now the perceptions are clear enough to render it of some real value and not merely a record of mistakes and overstatements. What has been effected with some finality & thoroughness, is the submission or dasyam. Certain lower strata of the personality surrounding the body in the atmosphere of the karmadeha, still vibrate with the old desires and attempt to act. But in the rest there is karmasannyasa. Prakriti drives the body, mind, heart & will without any interference from the Jiva, which only identifies itself now with the asraddha; for the identification with the activity, even if for a moment it seems to be restored, cannot stand for more than the moment & is not even then complete. The identification with the asraddha remains to be removed.

Negative samata is, in a way, complete. Active samata has yet to be perfectly established. There has been a reaction by which the bhukti has been clouded, though not entirely lost. It is still strongest in the indriyas, though sometimes breached. Sukham & hasyam are overclouded, but there is a negative shanti.

The second chatusthaya suffers from want of tejah, pravritti and sraddha in the swashakti. The third is active, but limited. Trikaldrishti works, though inaccurate in exact time, place & circumstance, but there is nothing but the result to distinguish the true from the false, because the vivek is clouded. Power works in preparing the subjective state of others & the world steadily but slowly & against a dull & heavy resistance; in objective result it is as yet poor & uncertain except in isolated details. A number of prayogas are fulfilled with exactness, some partially, others not at all. Samadhi does not progress, nor the bhutasiddhi. The physical siddhi is under the dominion of a reaction. Lipi & rupa establish their activity slowly.

The fifth chatusthaya depends on the Power & at present the
success is faulty & limited, in many directions nil. The sixth is clouded.

Nov. 26.

Today a number of prayogas seem to be in course of being fulfilled—eg. Chatalja; Turkish resistance in Macedonia; action of the Triple Alliance. Today also the trikaldrishti has been almost infallibly accurate. The cloud has disappeared, and the siddhi except in the body is once more active. In the karma evidence has been given of effectuality of prayoga where it seemed to have failed;—of ishita rather than of aishwarya, and not sufficient, but nevertheless effective. (R.50 from D).. Kama is beginning to revive. Ananda has been restored though not perfectly. Rupa is once more, but imperfectly effective; the Akasha still resists clearness & spontaneity & stability, but stability without spontaneity and spontaneity without stability have returned. The profuse stable lipi is being manifested, but the Akasha resists either legibility or stability. The karma deha is clear of the resistance in the sukshmapranavad annam, but not of that in the sthulapranavad annam where the remnants of the impure sukshmaprana have taken refuge. A good many of the predictions in the lipi past, recent & immediate are being justified by the event. Tejas & lipsa are being reestabl[ish]ed in the buddhi, chitta and prana; but the force of the sraddha is still insufficient. The Vani is once again active. The bodily condition is very low and the remnants of roga active.

Nov 27.

Today the following have been fulfilled

1. Foreseen, when the last long spell of rain was in progress & its vicissitudes & dispersion accurately foreseen, that there would be another spell of cloud & rain Nov–Dec. Fulfilled today.

2. Break & sunshine foreseen in the afternoon (seen at 8.am, though signs contrary; fulfilled..[)])

3. Lipi “Break”. ie. “It will be a break & not a final dispersion[”] fulfilled. The clouds gathered again in the evening.
4. Series.
   d. S will come at 8.5. Unfulfilled. S about this time was again thinking of coming.
   e. S will come at 8.25 corrected 8.35. S came at 8.33.
   f. M [Moni] will come after S, last of all, but before 9. pm. fixed at 8.55 exactly. M came at 8.54 or 8.55. just after I sat down to meals at 8.52.

Besides, the ideas of what will happen or is the case in little details of the occurrences in the house are usually correct, but not always. The trend is to the satyam—intellectual infallibility, for the direct vijnanamay action is still held back in order to allow the mind to contract the habit of correctness, ie of not disfiguring by misapplication the truth from the vijnana.

The rupadrishhti grows in strength and the bodily condition is turning towards improvement by lessening of the tamas of adhogati (sranti). The brain works at anything enjoined on it, but there is a disinclination in the karmadeha previous to the work or for a particular work. The fumes of tamas are strong in the brain, but do not prevent the luminosity working, although it is like the sun on a clouded day. Ananda is well restored to the regular point it had formerly reached except in kamananda and raudrananda. The tivrata is absent. But the general tendency of the siddhi is to take possession of this lower stratum also with its former circumstances. Roga however persists.

Nov 28

Clouds continue, fulfilling the trikaldrishti. Satyapratijna is now more common.

Instance of wrong circumstance. A crow comes to the verandah opposite the door and advances towards the door. Prediction. “He will turn sharp to the right & fly away.” First error, hasty idea of
immediate fulfilment,—at once put away by the viveka which saw that it would advance a little farther. Fulfilled. Second error. Idea, born of excess of energy, that it would fly away over the width of the verandah in the direction & line foreseen. It turned to the right & followed the exact line indicated, but hopping, not flying, reached the edge, stopped & then flew away.

At night there was once more confusion of the Trikaldrishti. The first arrival fixed at 7.57 took place at 7.57, but the rest, though ultimately foreseen, were confused by false indications. D’s [dog’s] going out at night, foreseen, happened in spite of all precautions and in the way foreseen.

Extension of power strongly opposed.

The Secret of Veda is now fixed & exact confirmations occur frequently.

Nov 29

The dispersion of the clouds foreseen yesterday morning as destined to happen today the first thing in the morning, took place suddenly at the time indicated, although the whole sky was dark & heavy till that moment. All yesterday the skies were heavily overcast but there was no rain. This also had been foreseen. The spell of entirely cloudy weather has lasted, allowing for one imperfect break, exactly the time predicted & foreseen some eight or ten days before, viz three days. There will be still flying clouds & temporary spells.

For some days there have been continual proofs of vyapti prakamya. eg the presence of an Austrian warship at Durazzo, the rumour of the Austrian consul being killed, etc. Yesterday there came in the mind the positive idea that Turkey had asked to be included in the Balkan Confederacy; today the same is given (in yesterday’s evening paper reaching here this morning), as a strange piece of news from Constantinople and Sofia. This is striking as there was neither data nor probability & the knowledge, of the fact or rumour, came suddenly without previous thinking in that direction. Vyapti & prakamya of precise thought has begun to be frequent & often confirmed by the speech or action of the person or animal in whom it is perceived. Formerly only feeling & general
thought used to come. Vyapti and prakamya are now abundant, continuous and almost perfect in arrangement, ie in assignment of its source & nature.

Fresh rain in the evening foreseen & also the stages by which the break was overcome; but in the interval there was much uncertainty owing to a fresh stratum of the karmadeha (sthulapranavad annam).

There is frequent unease & the equivalent of ashanti in the body & the anna-kosha & the chitta is clouded, but the mind is calm. (N.B The body is only the centralised part of the annakosha.) Power is still successfully resisted, but not so successfully as before. eg the motion of a kite through the sky followed by the trikaldrishti and each fresh movement seen; while steadily describing straight flight & minimum gyre (from right to left) in succession, thus § — — — — — — , willed that it should turn to the right in the middle of the gyre & resume the straight line. This was done in the next gyre, the bird hesitating for a moment before it obeyed, — — — .

At night, the first arrival was correctly predicted at 8.10 (8.11 was the actual time) but not, firmly, the person. There was much confusion, many guesses by the intellect about the order of the persons & the order finally fixed on, was entirely wrong. Only it was correctly seen that none would come before eight or after nine. An arrival was fixed at 8.22, but another occurrence took place at 8.22. In other words, the correct times are suggested to the very minute, but the wrong circumstances are frequently attached by the intellect. It is in the intellect striving to do the work of the vijnana, & not in or from the vijnana direct that these perceptions come; but in the intellect only so much can be done as has been already established by the vijnana, & it has not as yet established correctness of circumstance. Therefore the vijnana this night has been made once more active and is carrying on the siddhi. The separate activity of the intellect occurs, as before, only as an element of imperfection or in interregnal periods.

The ahaituka kamananda, with great difficulty, became again active at moments, but its continuance is strongly obstructed. The sahaituka physical anandas are once more tivra.
There is an entire disappearance in the prana of the tejasic sraddha, ie hasty & excessive belief which turns into exaggerated expectation, & a great strength of samata—even in the karmadeha, whence only a vague physical uneasiness comes into the subtle part of the body in place of the old disappointment and despondency in the manahkosha. The reaction of anger in the karmadeha is no longer violent, but only a subdued, though at times a strong irritation, which being no longer able to insist, soon disappears. The body, however, is disappointed & tamasic. There has been excessive sleep (7 hours or more) for the last three nights. It is predicted that from tomorrow Place as well as Time will begin to be accurate.

Nov 30.

Rapidity only in the Veda-jnana. The place is beginning to be accurate, but the arrangement is not yet perfect. eg. a bird flying is observed, all the turns of movement are accurately predicted, but not always in their proper order; one turn is omitted or another too soon expected etc. Occasionally a momentary impulse in the bird or in the force that is driving it, is taken for a destined movement, but this source of error, which used to be dominant, is now very weak in its incidence & occasional in its occurrence... B [Bijoy] is now responding rapidly to the suggestions of the Power in the siddhi-prayoga, but still needs too much the aid of speech. His purity & mukti from dwandwa is perfect except in the karmadeha & the preparation of mukti from ahankara is being completed. Vijnana in the intellect, jnanam, in him is very strong, but not yet turned towards trikaldrishti. Prakamya & vyapti are well developed but not perfect. The other siddhis in him work fitfully. Samadhi is being prepared through dream. He gets sometimes the first stages of ahaituka & chidghana ananda...

Strong perception that S. [Srinivasachari] Bh [Bharati] & A [Aiyar] would come in the evening, less strong about A than the others & only general; fulfilled. Other vyaptis fulfilled or proved, vyaptis of action, vyaptis of thought, vyaptis of feeling. Prakamya generally turns into a vyapti. Prakamya vyapti may now be said to be perfect,—as perfect as it can be without perfection of the
trikaldrishti. Clash of ahankaras over B; first sign of a fresh movement forward so far as he is concerned.

December

1st

Teja, tapas & prakasha are now coalescing into a harmony; power is increasing in small matters towards perfection of detail, but the movement is only in its initial stage. This initial movement was foreseen & the time fixed three days ago. The perception of the various & subtly shaded significance in lipi & rupa-symbol is perfected; but the rupadrishti itself is manifesting slowly. Images in the akasha are frequently perfect, but when perfect never stable except in very crude forms & that only because of the past strong development in crude images on the lines of perfection by effort which belonged to the initial & mediary stages of the sadhan. Comparative helplessness in the therapeutic power in certain directions, & always only a slow and gradual process.

This afternoon clear & vivid lipi finally emerged from the akasha and the rupa in the crude forms shows a tendency to established stability while the old forms of rupa, sthapatya, saurya, manasa are reemerging in their old perfection. Instantaneous developed rupa is becoming more frequent, but vanishes with the instant. Faith in the vani, lipi & rupa is established except for outside immediate events & the adesa siddhi, in which field faith in the trikaldrishti is not yet firm. Except in this field, tejasic will has separated itself from trikaldrishti & vyaptiprakamya of intention or tendency is no longer adopted as vyaptiprakamya of event or as trikaldrishti of the event. Therefore, if the unoccupied or rather ill-occupied field can be occupied, the perfection of trikaldrishti is within sight. Rapidity of progress promised in lipi & vani for some days past, is now beginning, not only in the Veda, but in the third chatusthaya also. Samata is perfect, tejas is establishing itself, jnana is full & active.
December 3d

Yesterday was a day of external suspension, almost of recoil. In the evening only the positive siddhi began to remanifest, but negatively the remnants of the impure tejasic elements in the karmadeha were [ ]1 farther eliminated & weakened. On the other hand, the new tejas has increased & grows on the buddhi which is admitting the subjective conditions of the adeshasiddhi, eg the Asura & Rakshasa bhavas of Mahakali, but not the probability of the siddhi itself in this life. Kamananda though it comes, has not overcome the opposition to its intensity & permanence. The higher material forms of lipi, in which vividness, simultaneity & amplitude are now gained, are beginning to manifest spontaneously. Only perfect spontaneity is lacking as yet to the perfected lipi. Rupadrishhti is still held back at the point of development it had reached. Unstable developed images, stable images of a great crudity occur. Swapna Samadhi, night before last, gained a greater frequency of single & grouped image, but is still unable to develop long continuity of one series of events, which only occurs in purified swapna. Fresh proofs of trikaldrishti come daily, but the habitual invariability of correctness is not yet attained. A mixed action is the ordinary level, unvarying correctness only happens when the vijnana is in full vigour. The sky is once more clouded. This renewal of clouded weather in December had been foreseen, but not its date or even its approximate time.

Sleep for two nights has been restricted, of its own motion, to six hours or a little over. The karmadeha is physically full of tamas and an effect is produced on the material body which is slow to work & does not easily respond to the demand for new siddhi; but the bhauta-siddhi is showing some signs of improvement and there is no actual collapse of the tapas, but only sluggishness in physical pravritti.

Rupadrishhti has emerged still farther. The Akasha today has been given the tendency to reject imperfect forms, & now in the sukhsha layer of this annakasha fairly stable perfect forms of birds have begun to appear in all the crude forms & some of the ghanas

1 MS were
and developed; but not yet the pronounced developed forms....
Certain contacts once painful are losing their discomfort in the
raudra vishayananda . . Kamananda appears in increasing force.
There are now only a few categories of events which create a mixed
ananda or recall the old reactions of depression & recoil.

The vani is being justified in all its immediate predictions, &
the script vani has disappeared. The morning’s news all go farther
in the direction of fulfilment. Shaktiprayoga in detail is still strongly
resisted, though it sometimes prevails partially or completely, but
not when there is a question of exact time & place or circumstance.
Trikaldrishti is hampered by the attempt in the environment at
infallibility of the mere intellect. This external intellectual suggestion
usually is the first thing that comes & is generally erroneous,
although, formerly, being specially guided it was often correct. This
applies almost entirely to the question of detail. In the broad idea
there is a greater correctness. It is now in the personal environment
and not in the karmadeha that the subjective asiddhi acts.

The following programme has been given in script, but it is
not yet certain that it is correct.

Vijnana Chatusthaya
1. Rupadrishhti farther developed today, the 3d, and confirmed
in stability tomorrow.
2  Spontaneity of Lipi tomorrow. A little tonight
3  Trikaldrishti will begin to work perfectly from tomorrow
4. The Power to overcome resistance in the next three days.
5. Samadhi to be regularised during December.

Sharira Chatusthaya
6. Intensity of ananda to precede permanence. Intensity from
3d to 10th, permanence from 10th to 31st.
7  Health in the last half of the month.
8. First successes of the saundarya 3d to 10th
9. Utthapana in the latter half of the month.

Adeshasiddhi.
10 “Equipment begins in the next week and is fulfilled in the
two weeks succeeding.”
So far as can be seen, 7–10 are not intended to be strongly or completely fulfilled.

The spontaneity of the vivid & simultaneous lipi has begun today, as predicted, both in Chitra and Akash. The step forward in [Rupa]² was only the appearance of chaya & tejas akashic crude forms on a background, strong in material and distinct but not sharp in outline. Kama Ananda increased in intensity & frequency.

Dec 4th
9.30 am.

There is a farther movement of exhaustion of the environment, but the tejasic movement hampering the trikāldrishti refuses to be evicted & it is still only by waiting that the trikāldrishti can be got right. Ambiguous and misleading combinations in vani & lipi (immediate) still occur, though as an exception. Frequency of Kamananda continues and tends to increase, but is not prolonged as it was once yesterday.

Death of S.A’s [Srinivasachari’s] child. It was brought to me on the 29th or 30th Nov. On the 1st I had the trikāldrishti of its death; this was repeated three times in Lipi, “death[”], and confirmed in Vani Script “The child will die.” On the 2d I got the vyapti of an improvement, confirmed by R [Ramaswamy], but at the same time the trikāldrishti that the improvement would be immediately followed by death. This has now been confirmed by the event. There was one imperfection, a suggestion from outside and a hope within, growing almost into confidence, that the trikāldrishti, in spite of so many confirmations, might not be true. Nevertheless, there came a warning not to indulge the hope, but wait the event.

Today there is to be final fulfilment of the spontaneity of the lipi. (Written on the 5th) This has been fulfilled, although at first the fulfilment was attended by a swift & violent obstruction first to the appearance of the lipi, next to its spontaneity[,] thirdly to its vividness, fourthly, to its completeness, fullness of sentence & separation of different lipis. The enemy tried to bring back or at least

² MS Lipi

www.holybooks.com
prolong all the old defects of confusion, fragmentariness, mixture of sentences, faintness, inability to appear, necessity of mental support & suggestion, illegibility etc. Outwardly, it seemed to succeed, but the Lipi showed itself through perfectly established and asserted its legibility, spontaneity, fullness, sequence & with some difficulty its vividness. Moreover, it is now moving towards the elimination of imperfect lipi altogether. At the same time the tejas has become constant & indifferent to failure, even to continued and persistent failure.

The opposition now comes not from the personal environment, but from the Dasyus in the outside world and they fight not close (anti), but dure, from a distance. Their effort is to preserve the obstruction, to prevent Ananda from establishing itself and to enforce Asraddha by defeating the Adeshasiddhi. As regards the Ananda they have now (the 4th night & 5th) definitely failed. There is ahaituka Ananda well-established, even in spite of asraddha. In other words, the depression caused by the withholding of the Adesha-siddhi is so reduced in effectiveness that it can only now limit the Ananda and not any longer prevent its manifestation.

Rupadrishti was confirmed only to the extent of other crude forms appearing in the Akasha and on the background. Trikaldrishti acts once more, after its temporary clouding, but the confusion of the avaraka tamas is not yet removed and the tejasic intellectual action maintained from outside by the enemy is not extruded. It is possible that perfect trikaldrishti may be beginning to evolve its normal as opposed to its exceptional action, but this cannot yet be confidently asserted.

Dec. 5th

Lipi. Today is the last day of the imperfect tejas.

It has been predicted that the scholastic work will be done in future not by the intellect but by the Vijnanam. This has begun to be fulfilled, and the remaining difficulties in the Veda are beginning to vanish. It has also been asserted that no work will in future be allowed which is confused in its impulse & subject to tamasic interruption. It appears from this morning’s action with regard to
the Veda, that this is about to be fulfilled, or its fulfilment is being prepared. Sraddha is increasing in the rapidity of the subjective-objective Yogasiddhi, but not yet, with stability, in that of the Adesh siddhi, except in literature.

Today’s news show a perfect action of the Shakti in detail on events of magnitude at a distance eg. the terms given to Turkey, the separation of Greece from the allies, the signing of the armistice, the attitude of the Powers. The pronounced defect, now, is in immediate & near events concerned with the actual Adeshasiddhi itself, rather than with the development of the necessary powers. The moulding of men proceeds subjectively, but not with accuracy of detail, except in occasional & unregulated fulfilments, nor is there yet any freedom & mastery. The equipment has, hitherto, entirely [failed] except for small, fortuitous & temporary successes, just preventing entire collapse.

The guidance from above seems now to be free from the necessity of any longer managing & giving rein to the forces of Anritam. Its final emergence from the action of the Mechanician, the Yantri, mending & testing His machine & self-revelation as that of the God of Truth & Love, began definitely to be worked out from 18th October, when the third & last message from Sri Ramakrishna was received. The first message was in Baroda, the “Arabindo, mandir karo, mandir karo”, & the parable of the snake Pravritti devouring herself. The second was given in Shankar Chetti’s house soon after the arrival in Pondicherry, & the words are lost, but it was a direction to form the higher being in the lower self coupled with a promise to speak once more when the sadhan was nearing its close. This is the third message (18 Oct 1912)

“Make complete sannyasa of Karma.
Make complete sannyasa of thought.
Make complete sannyasa of feeling.
This is my last utterance.”

Subsequently there have been several instructions from the guiding Source, which seemed at the time to be not at all or only momentarily fulfilled.

3 MS fulfilled
Oct. 18. To believe everything, but put it in its place
To will everything, but wait the event and see where the will has stumbled.
To see everything but force no drishti.
[In this trio the first is now being perfectly carried out and is resulting in a perfect trikaldrishti, perfect in the sense that every wrong suggestion is being corrected & put in its place either as a premature or misapplied truth or an ineffective or otherwise & otherwhere effective use of will. The second, beginning to be perfectly fulfilled, will lead to perfect effectiveness of the will. The third is being prepared for perfect fulfilment & will lead to perfect drishti].

Nov 15th.
1. Pay no attention to outside voices, but only to the knowledge from above, the script, the vani, the prakamya vyapti.
(Note. A subordinate rule for perfect trikaldrishti; but the script is now eliminated.)
2. Keep firm hold on desirelessness & ananda; admit the tejas.
(Note. The tejas was suspected because of the disturbance it brought; the direction is how to admit it & be free from disturbance. This is now being fulfilled automatically.)
3. Yield no point whatever, reject tamas whenever it comes.
(Note. For this action the crowning touch was given yesterday and the direction will operate perfectly from today)
4. Accept the supreme Vani which will now once more become active.
(Note. This vani had three forms, speech attended with or formulated in script; speech substituted for thought; speech of supreme command. The first is eliminated; the second is passing into thought; the third alone will remain.)

Nov. 19.
1. Passivity has to be maintained; no attempt must be made to know, to judge, to act, to will or to move the body by self-action, nor has any attempt to be made to check or alter any knowledge.

---

4 The square brackets are Sri Aurobindo’s. —Ed.
judgment, action, will or motion that comes of itself. So with all parts of the siddhi.

[Note. This is now fulfilled. Prakriti is in perfect charge of these things, the Jiva interferes only a little in judgment.]5

2. It will be found that then the siddhi will advance towards perfection of its own unaided motion.

3. Whatever happens that seems to be adverse, must be accepted as a means towards success & fruition.

(Note. This last direction is as yet very imperfectly fulfilled; the acceptance is there, but the outer mental parts are uneasy & cannot entirely resist the old reaction of distrust.)

The Avaranam from the trikaldrishti has been removed, & all its parts are again functioning as before & being continually proved. The Power is still obstructed.

4.45 pm.

Last night there was once more a dream of the higher order. The dream divided itself into two parts, images seen,—the record of an experience or vision in another world from which the spirit had returned & the intellectual effort of the mind to understand the record. The latter was, this time, absolutely perfect, a vision of a road along which I proceeded, met by men & women richly adorned & sumptuously clothed, a land where there was no ugliness or poverty, up to the meeting of this road by another at right angles to it from the left & between the two roads a great park with its gate near the crossways. The position of roads, gate & park was exactly that of the Baroda park, the Station or Racecourse Road & the Camp Road, but there was no other precise resemblance. There was even a vital difference, since I crossed a bridge before reaching the crossways, but the Baroda bridge over the Visvamitri is beyond the Park gates & not on this side. The mind, however, at once ran to the conclusion that this was Baroda. The speculation interrupted the vision. Afterwards the Park was again seen, but once more the reasonings of the mind interfered. Subsequently the mind became uncontrollably active & though Luxmi gave some clear records, it brought in so many cross ideas & images that at

5 The square brackets are Sri Aurobindo’s. —Ed.
last entire confusion & the cessation of the siddhi resulted. Nevertheless continuity of record in deep sleep has at last been established after a long period of failure. The frequent & perfect combination of hearing, touch, taste & smell with sight in samadhi & dream is still wanting; for at present there is only occasional, though clear & intense, combined sight & hearing or sight & touch or hearing & touch, seldom all three together. Taste & smell are very rare. Afterwards there must be the actual experience of the spirit’s wanderings & not as now only subsequent records of them. This I had a long time ago in one or two instances, eg the Chhayamayi vision in Patala; but since then it has been discontinued. Finally, there must be the actual leaving of the body in trance, wholly or partially.

There is a better & swifter subjective-objective response in others now to the vyapti & shakti prayoga; but it is still in its infant stages. Power is also telling on the bodies of others a little, eg. Bakhtyar’s sores heal almost at once; but this too is only in its commencement. Samata, shanti, sukha are perfect & only the nonfulfilment of Adesha-siddhi prevents freedom & fullness of the hasyam.

The pressure of the eye on the akasha for developing imperfect rupas is being abandoned. All the directions now are being faithfully followed. Trikāladrīṣṭī is extending itself once more into the distant future, being assured of a relative accuracy in the immediate. As yet, however, it lacks its proper pratistha in sraddha.

Sleep for the last two night[s] has again risen to 7 hours or over. There is a movement towards the expulsion of sensibility to cold, which, once forcibly expelled, has for some time past returned and held the body.

The habit in the akasha of the rupa disappearing if subjected to tratak is being eliminated; the more developed forms now appear and remain with some stability in the trataka, but their consistency is always crude and not firm & full. The perfect images appear commonly enough in the various akashas either before the physical eye or, more usually, outside its range of vision, to the side, above the brows or elsewhere, but they do not persist, although they recur & occasionally try to remain. They come spontaneously without the
aid of thought or tratak, but sometimes also, though undemanded, yet in response to a thought or mental image.

The thought-voices of the Shaktis have emerged in the Vani & alternate with the Master’s.

Dec 6th.

The obstruction continues, but cannot prevent the continued perfection & increasing range & sureness of the prakamya-vyapti. Only, it clouds the vijnana & then the trikaldrishti cannot act certainly; it obstructs the Shakti-prayoga and brings about variation of failure & success; & it tries to disturb the system & prevent the growth of the physical siddhi and the samadhi. Nevertheless, the perfect response of the mind to trikaldrishti is growing & the Power is recovering its tone in all immediate circumstances; neither of them act perfectly in detail. The ordinary bhautasiddhi is recovering its tone & defect of anima does not seem to have so strong a hold as before; arogyasiddhi is resisting the attacks upon it and the physical ananda persists in spite of obstruction. The body, however, is still sensitive to cold; the violent ejection of this sensitiveness has been predicted (yesterday in lipi), but the movement is not yet successful.

Last night sleep once again fell to six hours or possibly less. Swapna-samadhi grows in frequency & the combination of the vishayas is frequent & vivid, except in taste & smell, whose normal action in sleep is only being prepared. But the images & scenes are still fleeting & dream is disturbed in its continuity. The dream-images last night were of the old unreal kind & the air of unreality strong, but a connected series of events took place, coherent and reasonable, although unusual & only possible in a long past age with other manners. The events were correct, the images probably not all from the true record or free from present associations & figures, though there was no definite intrusion from the present. It was only the sense of self that belonged to the present. On the whole a considerable & steady progress.

It is predicted that today will be a day of full progress; but the morning’s indications are rather those of a half-successful obstruction. These, however, may be & often are misleading.

There is an evident movement towards the perfect arrangement
of circumstances in the trikaldrishti. Eg. A passing glance vaguely takes in the ridge of a distant roof & is aware of something on the ridge; the first suggestion is that it is a bird, but it is felt that it is not a bird; then the suggestion is that it is the ridge alone & the impression of something on it is a misreading by the mind in the eye; but it is felt that there is something which will not stay there more than a moment. The mind remains confused between this false problem of bird or no bird. Then the eye is turned a second time on the object, with fixity this time, & the object is seen to be a squirrel motionless on the ridge, which immediately after leaps down from it. The whole confusion rises from the habit the mind has of seeing birds rather than any other object on the roofs & trees; otherwise everything would have been correct and in order. Immediately after, a butterfly is seen flying towards a tree. It is to pass on the other side of the tree, but there is prakamya-vyapti of an intended motion actually begun but checked, to this side, & the false suggestion comes that this intended motion will be effected; the suggestion is immediately rejected but not without a vyapti of the intention carried out simultaneously with the perception of it, to return to & continue the first line of flight. There is trikaldrishti of the right event, but not free from the intrusion of falsity, & eventually not of so much value as it would have had if it were preliminary to & uninfluenced by the data of prakamya-vyapti.

Lipi. Today, the trikaldrishti is to escape from this obstruction entirely. Fulfilled almost immediately in a succession of instances, but yet to be confirmed & universalised. The obstacle is the pseudo-Shaktiprayoga which tries to determine the event without belonging to the system. This is being replaced by an effective prayoga belonging to the system, but still the time & order of circumstances is disturbed by its appearance without self-knowledge. The liberating force is the activity of the viveka, no longer separate, judging the revelation or inspiration (drishti or sruti), & distinguishing it from false intuition, but contained in the drishti or sruti and either simultaneous with it or emerging from it.

The prediction on the 3d that the Power will break through
the resistance is being fulfilled today, but this conquest cannot be entirely complete today, for it has yet to apply itself to the fulfilment of the adeshasiddhi. But in things of practice & in themselves of no importance to me, the Siddhi with a little difficulty is succeeding now in the majority of its prayogas, only the circumstance is not always correct, eg a turn is taken [by a bird] in the right direction, but not at the time or in the order given or else the right turn is taken, but by a wheel to the right into the proper position, where a wheel to the left was indicated by the Will.

Lipi. Page. (ie A particular page of the Veda will give a sortilege & there will be occasion for the page to be kept in memory.)

The page was 286.6 IV.28.1 [and 2] & opened, first, owing to interruption &, secondly, to necessity of record.

"By thee yoked to him, O Soma, in thy comradeship, Indra poured out that stream on the mind (or on the human being, the thinker); crushing the oppressor (Vritra) he set flowing the seven oceans ∧ and opened the doors that were shut. By thee yoked to him, O lord of delight, Indra by force straightway dug out the circle of the Sun." ie. [“]the Mind Force now in contact with Ananda will pour out upon the mentality the stream of the upper knowledge & joy; that which obstructs will be crushed out of existence, the full stream of being will be poured down on the system and the siddhis denied will be enforced; the full circle of vijnana will be made to emerge from its obscuration.”

The trikaldrishti is working still more effectively, not only without, but against data, eg. a bird on the opposite [roof] disinclined to stay, twice on the point of flying off & once making the starting motion, yet without any disturbance to the steady knowledge, always repeated at the critical moment, that it would remain.

7 This word was written above "streams", which was not cancelled. —Ed.
Afternoon. 3.45.

The Kamananda has been almost constant at a varying pitch of intensity since the morning except for one interval of an hour or so; constant not continuous entirely, for there are momentary breaks. The tendency, however, is to substitute temporary mitigation for the actual break... The physical struggle is obstinate, asiddhi bringing the imperfections of arogya, siddhi throwing them out. Adhogati returns constantly in the primary utthapana, but more in the shape of fatigue or the shadow of fatigue than denial of anima. Sleep is attempting to recover possession. There is as yet no decisive sign of the initial movement towards saundarya except in the overcoming of the first difficulty with regard to moulding the undercurve that took so long to develop. Elsewhere there is as yet nothing. Further fullness of progress is promised for the rest of the day—in power, rupadrishi, ananda & samadhi.

(Written 7th morning)

The promise has been fulfilled. The tejasic suggestion from the environment which interfered with the trikaldrishti, is now turning into power of vyapti; a bird in its flight, an ant in its turnings, feels the thought strike it and either obeys or is temporarily influenced in its immediate or subsequent action. Power is also increasing rapidly; the will is sometimes fulfilled at the very moment, almost with the act of going out; at other times more slowly, but still with far greater force & frequency than has ever been the case in the past; sometimes, however, with great delay & difficulty & in some cases not at all. A curious example shows how difficult the resistance now finds it to be effective; a crow sitting on a branch received the suggestion of going to the end of the branch, but the force in it was unwilling; it went a little way thence came rapidly back, & for some minutes began dancing on the branch this way & that, towards the end when the force was applied, away from it when it was relaxed, until it reached the point as if driven suddenly by physical force, seeming several times about to fall off the tree, & then fluttered off to another bough.

A long struggle for the rupadrishi, ended in a number of stable images attaining to the dense developed, far superior in consistency to last night’s forms, appearing straight before the vision, a great
frequency of absolutely perfect images which either avoid the eye
or only appear for a second before it, & a number of crude forms.
Colour, jyotih & tejah are now common in all forms. The objective
of the siddhi is to establish the habit of the perfect & stable image
placed full before the vision; the object of the enemy is to preserve
every possible imperfection & especially prevent stability. After
some hours cessation, physical ananda of a much greater intensity
was given for a short time, but not continued afterwards. Samadhi
progresses slowly; but the dreams at night almost got rid of the
element of dream-image & were only a series of mental images
& ideas woven into a connected series of speech & incident. The
elimination of dream image, is the first great desideratum, of inco-
herence in thought record the second. In addition to these siddhis
universal prema with the established chidghana & prema anan-
das, rising into the suddha, are being again superimposed on the
ahaituka. Tejas is now more powerful & continuous, the sraddha
established in everything except the Adeshasiddhi. Nine hours &
more of walking & standing during the day failed to bring fatigue,
but brought this time some amount of defect of anima. Sleep 6
hours and a half.

Dec 7th,
11.36 am.

Nothing fresh has been added this morning; except that perfect
forms of the crude variety are now more stable in the full line of
the vision & more varied, eg varnamaya, agnimaya & jyotirmaya,
but it is only the bird that so appears,—usually as on a former
occasion the redbreast. In the fleeting images some of which are of
an absolute perfection, various kinds of birds, flags, ink & other
bottles, books[,] matchboxes, cigarettes, cigarette packets etc, in a
word, the objects most commonly observed are commonest. In this
respect there is a strong contrast to the images seen in samadhi.
The power is now being applied to movements in the mass where a
number of agents are concerned. An effect is produced, especially at
the beginning, but afterwards the resistance stiffens and is success-
ful. Trikaldristi of exact time recommenced last night. There was
the usual error; the return of S. M & N [Saurin, Moni & Nolini]
was seen to be due after 9.30 (very unusual & even unprecedented for a long time past), later fixed at 9.38, but again unfixed & seen to be due nearer 10. At 9.38, exactly, R [Ramaswamy] came, not the others, who arrived at 9.53. Occasional physical Ananda is resumed, but not yet the intenser Ananda of last night. The combination of the subjective Anandas, sahaituka, is reestablished and almost perfect; but in one or two directions, eg ordure, massed sores & one or two kinds of events, jugupsa still comes in from the outside world & touches the external psychic nerves. There is also a persistence of hostile perception of ugliness which tries to take advantage of this or that object in order to deny the shuddhananda.

Afternoon.

The Power is now in small things fulfilling itself in exact circumstance of place & order of circumstance, in isolated cases, frequently, although always with a resistance, mechanical or willed, —either entirely ineffective or effective only to delay, or effective in one or two circumstances or, sometimes, wholly effective either to vary the act, eg to take to one tree instead of to another, or to prevent any tangible result. Ananda, resisted, is infrequent, without intensity & uncontinuous. Rupadrishti does not fulfill itself. In all these respects the resistance is strong & concentrated & even the trikaldrishti cannot act perfectly. Although there has been now five hours physical activity, there has been a frequent burden of fatigue in the legs due to defect of anima. Health is resisted in particular symptoms, with obstinacy of recurrence, but not with force; the asiddhi succeeds in materialising at these points & insisting for a short time, but has to retire. It is most obstinate in the process of digestive assimilation; for though it can no longer freely bring excess of vayu or frequent purisha visrishti (the last two intervals have been 3½ days and now 2 days) it insists successfully on the excess of jala, a vague hint of nausea without real nausea, & a recurrence of the sign of excess.

During the rest of the day there was a strong force of the obstruction and no progress. The attempt at exact trikaldrishti of time failed entirely; the Power also failed signally to act several times and only succeeded at close quarters. There fell from outside reflections of the old anger of impatience & to a less extent of tamasic tyaga

www.holybooks.com
almost amounting to depression. There was, however, no settled 
ashanti & no duhkha.

Sortilege—नकोपासा वर्गमामस्यांत्र धारणेति जिसमें समीची।
शावर्क्षमा रक्षों अंतर्ग्न भांति देवा अर्न्तं धारणस्तविदेशा॥
io. Both manifestation & non-manifestation contain the supreme 
force and in unison nourish the one child (Agni, Tapas); it shines out 
in various activity between pure mind and body, ie, in the vitalised 
mind, antariksha; and the gods then hold Agni, the pure tapas, 
& gain force & substance. This was given before the Nakta 
or period of non-manifestation in the later afternoon & evening, 
or when the manifestation was beginning to be replaced by the 
non-manifestation.

Dec. 8.
7.30 am.
The same condition. [Vyapti]8 & prakamya perfect; trikaldri- 
shtri uncertain; powers ineffective & inclined to be inactive. 
Misplaced power active as false trikaldrishti. Ananda vague. Yes-
terday 8 hours & a half of physical activity with fatigue decreasing 
as it went on; this morning dull fatigue & defect of anima, neither 
pronounced, but both effective.

Sortilege, हस्यस्तर्यमां तत्ततिति मनुष उदासन्ते। This purely gram-
matical formula is given a sense. In the defective alpa state (of 
the siddhi) the taking up of the mind into vijnana is being ef-
fected for the mental being (मनुष्क) by the ascending movements 
of thought constituting his mental activity. It is even suggested 
that उद्द & मनुष्क were actual words used in this sense in pre-Vedic 
Sanskrit.

Sleep yesterday seven hours. The dream images occurred, but 
they were scattered among pale chhayamaya images hardly distin-
guishable, except by the viveka, from dream images; a few were 
of the true taijasa kind. There was some confusion in the thought 
record of the experiences, but not excessive, nor such as to unhinge 
the general coherence. But the present sense of ego still overlays the 
personality in the dream thought.

8 MS Vyapta
The whole morning was given up to a growth of the first two chatusthayas. The premananda established yesterday with regard to persons & objects, was extended to events even the most adverse and thus establishes completely the positive samata, rasagrahanam, bhoga, ananda. Individual contradictions do not disturb the established force of samata. It is noticeable also that tamasic tyaga fails to establish itself and the pravritti persists in spite of continuous non-result or adverse result. The formula of tejo balam mahattvam pravrittih is fulfilled. At first the tejas was merely in the dhairya with occasional pravritti; then it extended itself to kshiprata & ugrata and established itself, today, in pravritti. Moreover, the second general formula of the shakti chatusthaya, — adinata kshiprata sthairyam ishwarabhava is establishing itself and along with it the Chandibhava. But the continued successful resistance to the continuous action & progress of the powers prevents the ishwarabhava & kshiprata from perfecting themselves; for these depend on sarvakarmasamarthya & sraddha swashaktyam. A working sraddha for the future is established, though the old questioning still lingers; but it is not a present & dominating faith in the immediate power or the early fulfilment.

The action of the powers was reduced to their lowest limit all the morning; both continuity & generality were denied, only the crudest forms or isolated successes allowed & old imperfections attended the majority of the manifestations. The trikaldrishti has now, (3.45 pm), reestablished its activity, but the power still waits. Fatigue was thrown off in the morning, & 3 hours continuously then, 2 hours now were done, but some shadow of the fatigue hangs over the karmadeha & seizes sometimes on the nervous system & then on the muscular instrument. It was perceived, in the morning, that all the contradictions of the physical siddhi, except the saundaryam, belong now to the karmadeha or, more often, to the personal environment, not to the body itself. From there they are reimposed on the body.

4.10

The Power is now working again, but not with invariability of impact or exactness of circumstance. On the other hand the trikaldrishti is exact and minute, though it does not coordinate the
circumstances. Various kinds of entirely perfect forms are appearing in the full focus of the eyes, but momentarily, without the least stability.

Written Dec. 9.

In the evening the Power & the rupadrishthi regained their former activity & siddhi; no advance was made towards a fuller or wider perfection. Sleep 7½ hours. There was a still more perfect swapna samadhi; marred only by a slight admixture of false thought in the watching mind, but the record of the thing seen was without a flaw & delivered from that tendency to overhaste in travelling through the scenes witnessed which shows an unsteady movement of the Apas in the mind. Everything was deliberate & slow as in the actual living of the scene. This was in deep samadhi. There were a greater number of visions, dim chhayamaya, in light samadhi, not continuous, but [?] in thought & subject. The actual dreams were at first perfectly free from present ego or suggestion of present associations, although the dream-images recurred faintly; but afterwards they became touched with present image & thought-association. Three ½ hours more physical activity, continuous, & another ½ hour making over nine hours; the result the same.

Dec. 9th.

The trikaldrishti is now working normally with a surprising regularity and perfection in immediate things; but the haste of intellectual decision & error of intellectual hesitation,—the Scylla & Charybdis of prophetic thought,—are not yet eliminated; they recur whenever the trikaldrishti has to be done, though absent when the trikaldrishti is merely happening. Parasara’s Suktas are being interpreted by the vijnana, but not yet perfectly, as the modern associations of the words still interfere. Historical trikaldrishti of the past is active. Both the trikaldrishti and the power (at first frustrated) have been acting for five or ten minutes in a host of instances with great & continual effectiveness. It is only now the minutiae that are wrong, & these are to be perfected; for sometimes

9 “Historical” was inserted after the sentence was completed; “of the past” was left uncancelled. —Ed.
the minutiae also are for a long time absolutely accurate. The guidance also is at present perfect in every detail, although it is that of one of the Shaktis, & not the Purushottama’s. There are three forms of the power, (1) one which works the object through the universal Prakriti, giving the suggestion to the Prakriti which transfers it to the swabhava of the object; (2) one which works the object by direct unspoken suggestion to the object, as in hypnotism; (3) one which applies the force of Prakriti physically to the object and drives the unwilling object. All three are now active & frequently, even ordinarily successful; but all three still need time to work effectively on the object. If they do not get time, an effect or movement is produced, but not always or even usually the actual accomplishment or the full effect.

During the rest of the day there was apparent suspension attended by loss of the Chandibhava, unreliability of the Vani and false suggestions through the outer swabhava. Health was also strongly attacked with great success in one detail and with temporary slight effect in others. The external suggestions are least effective at present in symptoms of phlegm & neuralgia which are obviously external, foreign to the system & unable to materialise in the sthula parts; they only affect the nerves with a suggestion of incipient cold or neuralgia. The struggle over the visrishti still proceeds & the frequency of jalavisrishti maintains itself. However, the assimilation, although marred by excess of jala, seems to be more perfect with respect to prithivi, even though the maximum interval has been diminished from seven days to three or four.

Sleep for nearly seven hours. The dream images were again mental images rather than actual figures; present associations affected the images and were comparatively ineffective on the thought except in one or two cases.

Dec 10th

In the morning there was an attack through the asraddha on the completed mukti, which produced an effect on the pranic atmosphere.

Strong proofs were given of the vyapti-prakamya of thought & feeling which were very minute, perfect & vivid, the subject
expressing in speech exactly the idea & emotion which had been immediately before seen in him by the sukshmadrishti. This power is so perfect that all such suggestions of the vyapti & prakamya, however vague, minute or unsupported by outward circumstance, can be accepted as true of the source from which they are seen to proceed, even though the subject be hundreds of miles away. Sometimes there is a little difficulty in fixing the subject & often, owing to the fragmentariness or isolation of the single perception, its real bearings & effectiveness cannot be rightly appreciated. This is now being remedied.

Lipi To destroy the asatyam by asraddha.

Lipi. Success at last. Perfection—followed immediately by the above development & the partial emergence of B [Bijoy] from the whirlpool in the karmadeha in which he has been plunged since the first of December.

The old defects of the trikaldrishti still recur and its limitations persist. The power is still more hampered & limited, even though its perfect action is frequent; but not on the body, nor in things belonging to the Karma.

The rain in December, long foreseen, came this morning; but it was, as expected, only a passing spell of cloud and rain. The development in rupadriskti predicted by the Vani yesterday (without any statement of time, but supposed to be due last evening) came instead today.

The trikaldrishti, power, knowledge, even special powers like bhasha, vyakarana etc are now progressing normally of themselves, without any sadhan or use of will-power for the purpose, the defects reoccurring, falling away, diminishing & thus passing out by a natural & quiet elimination,—the way in which the first two chatusthayas have been or are being finally perfected. It is only the rupadrishthi in the third chatusthaya that is still being pushed forward against an active resistance by the occasional use of the will-power. The real struggle has now passed to the fourth and fifth chatusthayas.

Yesterday there were nine and a half hours of physical activity out of the twenty four, today there have been ten. It is now fixed that there can be the erect position & walking for ten hours every day
without any binding reaction of fatigue. The fatigue that comes, is soon shaken off, as if alien to the body. It is noticeable that it is strongest after the night’s sleep, diminishes as the day progresses & the physical activity increases and is least able to assert itself in the evening when it is taken three or [four hours]\(^\text{10}\) at a time. The resistance, therefore, is still obstinate, but not powerful as it used to be.

Sleep for over seven hours. The visions in samadhi grow in richness and completeness, eg last night a vision of armies of different nationalities advancing successively along a road,—not seen consecutively without interruption but successively with intervals of avikalpa samadhi. Dream is still in the same stage, but last night present associations interfered less than before in spite of the insistence of the present ego sense. Dream images were, however, frequent.

Lipi is now being left to the Akash to hold in its perfection without any assistance from the Adhara except the assistance of intention. For this reason its manifestation is infrequent, not copious & often attended by difficulty & illegibility; but the lipi is in itself perfect, only the manifestation is obscured by the films in the akashic movement between the eyes & the object. Rupa is still delayed at the stage of unstable vividness in the perfect images, the resistance is not conquered.

The first part of the programme given on the 3\(^{d}\) has been fulfilled under limitations which are apparent in this record. As regards the rest, there is undoubtedly occasional intensity, not of the highest kind, in the Ananda, and the less intense Kama Ananda is common, but the resistance to its regularised activity is still unconquered and the permanence is still farther from accomplishment. The first successes in saundarya limit themselves to three—1\(^{st}\) the undercurves on the outer side have now become decided & indisputable, even comparatively deep; & the sidecurves have clearly declared themselves, although irregular in their formation & still slight;—the gain is a detail, but the important point is that the power of the will to change formations in the body has now been physically proved beyond doubt or dispute. 2d The gloss, softness
smoothness of the hair has been restored; 3rd the tendency to unnatural entanglement and profuse loss of hair has been steadily diminishing, though it is not yet nil & the hair is now exceedingly thin, shot with grey & threatening baldness above the temples. These signs of old age show no promise of reversal or dissolution. The equipment also does not appear to be near, since there is nothing beyond the already existing amount except a trifling sum sufficient to fill the remaining gap in this month’s equipment. It is true that next month’s has arrived unusually early along with this increase. So far the will has prevailed.

Health is strongly attacked. Visrishti again took place in the evening.

Dec 11th

The resistance is now to the fulfilment of the Adeshasiddhi, for if once a permanent power is manifested, in the control of the events immediately surrounding the adhara, all farther resistance will be convicted of inutility. This resistance, it is suggested, is now about to be overcome. The rupadrishhti is to be brought on a level with the rest of the vijnanachatusthaya in this week, the bhautasiddhi liberated from the pressure of the defect of anima, the samadhi from the refusal of continuity in the visional record. Meanwhile the trikaldrishti & powers will expand rapidly in their action. The physical resistance to the Power in the body of self & others will yield, although it will from time to time recur until it is eliminated; as a result arogya, ananda & primary utthapana will be brought into line with the vijnanachatusthaya. Only saundarya in the physical siddhi will be left as a field of battle. The resistance to karma in the moulding of minds & the giving of experience & power will also break, & the resistance to the equipment. The rest will easily follow within these two months.

5. pm

The rupadrishhti has advanced today; perfect crude forms now sit easily in the akasha, perfect crude dense & crude developed forms appear frequently & with some stability; absolutely perfect forms are more frequent, but not yet stable. The akasha is of itself bringing forward the lipi with more ease & force. The trikaldrishti
is normally perfect, except in arrangement & exact time, unless it is confused with the shaktiprayoga,—all that is perceived is seen to be correct, only all is not seen in its exact place. The range also is widening. Shaktiprayoga has now more force & normal effectiveness. The force of bhutasiddhi is also increasing, in the ordinary mahima & laghima. Intellectual infallibility is now seen to be a possibility & not far from realisation, at least where it can be immediately tested. Kama Ananda today was continuous for some minutes, though not of the greater intensity already achieved. Sukshma sparsha is increasing in force & keenness, but is still usually only a subtle physical sensation, except in touches of water, fire or electric atoms which have now a great sthula reality & linger on the body both in the solid sensation & in its physical-nervous effects. Other touches do not yet materialise. Sukshma gandha & gandha-rasa with sparsha is keen & powerful, but irregular in occurrence. Sravana & drishti of actual forms & voices as opposed to images & symbolic sounds are still behindhand. All these are now recognised as parts of samadhi or visvagati, the fifth member of the third chatusthaya. Health is still attacked, but dully, not with yesterday’s force.

Written Dec 12th

Later in the day the health was more strongly attacked in the process of digestion; it prevailed nowhere else, but on the contrary is being steadily extruded. The ananda of cold is growing but has not entirely extruded the returns of the discomfort which, even after its violent expulsion, returns from the environment. Sleep, nearly 7 hours. No advance in samadhi. Physical activity for twelve hours, four hours in the morning (1 + 3), two & three-quarters in the afternoon, the rest in the evening & night (5.15 pm to 9 & 9.20 to 11). There was no reaction to speak of in the morning & the fatigue that occasionally came was always easily thrown off. Kama Ananda is resisted, but tends to become the atmosphere of the physical experiences.

Dec 12th
11.5

This morning the action of the trikaldrishti took place purely
in the intellect with the result that there was a vivid & copious prakamya-vyapti & trikaldrishti of possibilities, but the actuality of the event could not be regularly seen. This was cured as soon as the vijnana began to act. The difficulty that remains is only the difficulty of preventing the active & almost perfectly complete perception of possibilities, tendencies, intentions confusing the quite separate perception of the actual circumstance fixed in the foreknowledge of Virat & Prajna. The Shakti acts as before subject to delay & resistance. Lipi in the Akasha is still resisted in legibility except when it is aided by the subjective perception. In all other respects it is perfect. Rupadrishti, this morning has not been active, except in occasional images. Sukshma sparsha is increasing in force & frequency, & is accompanied by perception of action & of feeling & intention but not by subtle perception of the image or sound. In the health the siddhi is again prevailing, though the attack continues. There has been five hours continual exertion this morning (walking almost all the time); fatigue was not effective, but denial of anima in the loins became insistent in the fifth hour. One or two utterances of the Shakti’s vani have been proved wrong in time or stress, but may still be fulfilled in fact.

3.55

Sortilege. युगो रज्जैति मूःमाय अचा. Your (the Aswins’) active forcefulnesses are nervous energies well-controlled—Tejas was first established permanently, tapas based on that tejas has now been firmly established, but it is apt to outrun the bounds of the ritam (अधाने यम्मान द्वन्द्रत्व); the permanent prakasha is now being added. But the result of the prakasha is to dominate unduly the tapas. Therefore Ananda of the Aswins (ever-youthful delight & strength) has to be added, so that these rajansi (activities of tapas) may be not only अचाः, which they must be if there is prakash, but अचाः, full of energy & therefore fit to draw the chariot of divine action. ([Written] Dec 13) There is already a movement towards the fulfilment.

Twelve hours again this day, five continuous in the morning; nearly 1½ in the afternoon; 4.10 to 10.20 with an interval of half an hour (between 8 & 9) for meals. The attacks on the anima were successfully thrown off without any trouble; but fatigue came
strongly about 7.30 and necessitated rest by standing for some time. A certain vague stiffness in the legs has been left behind this morning. Sleep for seven hours & more, as usual; the sense of present ego & present associations interfered little in the dream, but there was once more some confusion & mixture of different records, a defect which has been hardly at all in evidence recently. The pale chhayamaya images were extremely frequent & varied & those that were more vivid showed a greater tendency to combination and continuity.

Ananda (kama) increased in force. In saundaryam there was retrogression (in the hair, tendency to entanglement, loss & diminished softness). A nominal visrishti in the evening (after two days), but jala has again increased.

The trouble about the trikaldrihi (over insistence of possibilities) was strong throughout the day, but passed away in the evening, and the approximate time of events as well as the events themselves & their circumstances were correctly fixed. Many evidences of the power working on the siddhi of others were given, in B, & now in S (vijñana begins to work); there are, therefore, signs that the obstacles to the Shakti in this part of the karma will soon give way. A notable instance of delayed fulfilment occurred yesterday. When the flowers on the plant in the garden first appeared & proved all to be various shades of red & white, there was strong & repeated will for yellow flowers; but it failed & was abandoned a month ago. Now at last a solitary plant which used to give red or white flowers, has produced two yellow blossoms. The will at the time of the partial withering of the plants for fresh leaves on the withered part of the stalks, has also received a slight fulfilment on one of the plants.

Dec 13th.

Sortilege

Indra (mental power) filling the actions, master of the peoples, king of their deeds.

The first movement towards the fulfilment of this sortilege which took place in the morning ended in a misadventure. A rush of power was the first sign, which had two results, a new power
of direct powerful compulsion on living beings to act according to the Will in this adhar and another Tantric power of affecting the Akash physically so as to draw a line over which they could not pass. Both powers were at first of the nature of a physical pressure & compulsion on the objects, which struggled in vain to resist. In the first essays there was some momentary success in the resistance; a success which often supported itself on the first impulsion given against a new impulsion or reversion of the original command, but afterwards this success ceased and movement after movement was executed faithfully though unwillingly not only by individuals, but by numbers. Afterwards there was a violent rush of enemies from outside the circle to oppose & break this success. In the struggle the old ashanti rose and many of the conditions established in the siddhi seemed to be broken & the mukti & bhukti seriously contradicted. The trouble did not pass away till after three in the afternoon. In the final result, the power has increased, but acts under a frequently successful resistance and the akash is still troubled & occupied by hostile forces. Today’s experience has thrown a clear light on many expressions in the Veda especially in relation to Indra and the Rudras. There is a movement in the rupadrishhti, perfect life-images, eg a butterfly, a squirrel, indistinguishable to the eye from the real object, dashing into the full sthula akasha or being glimpsed leaping through it; but there is, as yet, no stability. The normal manifestation of lipi is still successfully resisted.

During the evening there was constant application of the attention to the lipi, but legibility only resulted with difficulty. Trikal-drishhti acted at a distance in detail of circumstance with a perfect correctness and approximate time was repeatedly fixed with great closeness.

In the morning stiffness became pronounced & it seemed that the primary utthapana would have to be relaxed; but the usual twelve hours was accomplished (1 + 2 in the morning, 3 in the afternoon, & from 5.15 to 11.40 with 25 minutes interval in the evening). It was only towards the close of the day that the defect of anima was overcome. Sleep 6 hours.
Dec 14th
2.25

Yesterday’s trouble returned, not so pronounced or obstinate,
but marked by a momentary return of the dukkha of asiddhi which
has left behind it depression & asraddha. The lipi became, of itself,
profusely active in the morning, but the old defects reappeared &
the akashalipi lost its triumphant habit of vividness even when it
reasserted legibility. Trikaldrishti is attempting to arrange circum-
stances perfectly in all cases, but does not yet command anything
like a consistent success. The same is true of the Power, which
sometimes enforces itself with great exactness of detail, sometimes
not at all. The Vani is once more deficient in authority & creates
false ideas in the mind, even though, so far as it goes, correct in
the letter. It now appears that those vanis which were thought to
be incorrect (see )\textsuperscript{11} were correct in the letter, as they are now
being fulfilled, but created an exaggerated idea in the mind about
the time and amount of fulfilment.

([Written] Dec 15th, 7.30)

A moderate visrishti in the evening. The dates have been 2\textsuperscript{d}
morning, 5\textsuperscript{th}, 7\textsuperscript{th}, 10\textsuperscript{th}, 14\textsuperscript{th} all in the evening; on the 12\textsuperscript{th} a nomi-
nal evacuation. None of these except the first has been copious; the
old freedom of evacuation is disappearing, the tendency to loose
stool seems to be eliminated, as even when the Apana is forceful &
insistent a moderate evacuation entirely parthiva is the result; the
disturbances attending this strenuous process of assimilation, (for
the food eaten has been increased rather than diminished) are less
frequent & less insistent. Vayu is rare, nausea only a suggestion,
tejaso-jalic ashanti only occasional, the sense of fullness easily dis-
missed & never so strong as to necessitate diminution of food, all
that remains in strength is the habit of strong parthiva & jalamaya
pressure which is now exaggerated and, in the parthiva pressure,
out of all proportion to its substantial cause. It remains to be seen
how far this progress is maintained. Hunger is less insistent, but
still persists with a modified intensity; it is, however, being subtly &
steadily replaced by the craving-free bubhuksa. As it is wintertime,
there is no occasion for thirst which even in mid summer only appeared under great stress and could be dismissed ordinarily by a sip or two of water or even by the Will unaided.

The trouble of depression lasted through the day & was attended with some confusion of knowledge especially on the point whether the vijnana chatusthaya could now be left to the unaided working of Prakriti, as had before seemed to be decided or needed more sadhan. It is notable that the rupadrisshti is developing without sadhan; perfect images grow steadily more frequent & have more hold on the akasha, the old imperfections tend to be eliminated, eg the persistent recurrence of a single image, in this case, the bird; other forms are now forcing their way into the akasha without any help from the system. Lipi has recovered vividness without losing its tendency to activity. Trikaldrishti develops greatly & it is noticeable that it is best when entirely spontaneous, almost indeed of an absolute & consistent perfection, —when, that is to say, there is no attempt in the system to determine the truth or arrive at the knowledge. Examples. The servant went out at 8.27. As he was going out, the knowledge came that someone was about to enter & would come in as soon as he was gone. R [Ramaswamy] came. Previously, there was vyapti that either S [Saurin] or N [Nolini] was returning. Now the knowledge came (in answer to a doubt whether the vyapti was not merely the vyapti of an intention) that he would come before 8.30. S came at 8.29. Subsequently, it was decided that 9.10 would be the exact moment to cease walking & have meals, & the knowledge came that M [Moni] would return at 9.10. N returned exactly at 9.10; exactly at 9.10 the meal was served (without any spoken order or mental suggestion) & the triple knowledge was fulfilled to the minute. In this way every little circumstance has to the time of writing proved exactly correct. This is, undoubtedly, the beginning of the consistent & invariable perfect drishti, but it is not to be supposed that it will establish itself even in this restricted sphere without farther opposition. The truth of telepathy is now thoroughly established; the proofs of its correctness when received from persons in the house or town
[occur] daily, as by it I know when one is coming from one room to another, what an animal is about to do, when someone is returning to the house & often who it is, (formerly, this knowledge was usual, but has temporarily diminished or been obscured). Also the proofs of it, when it comes from hundreds or thousands of miles away, are now coming in, eg. from M [Motilal] in Bengal that he intended to send more money, confirmed a few days afterward; the previous knowledge of the rumour that the Turks had asked to join the Balkan Confederacy, the knowledge of the Unionist conspiracy in Constantinople & a number of other instances relating to the Balkan war. This power, indeed, has been working for a long time, but it is only now regularised. It is, in fact, part of the vyapti. The proof of vyapti of express thoughts is also increasing in frequency; here, of course, the only proof is the expression of the thought immediately afterwards by the thinker. This now occurs.

Physical exertion twelve hours (morning one hour + two hours 9.15 to 11.15; afternoon, three hours & a half; evening 4.40 to 9.10 & 9.40 to 10.40). In the morning there was pain in the soles of the feet when rising, but no appreciable stiffness in the limbs. Fatigue of adhogati, in the evening, was more persistent than usual, although not intense or powerful. Sleep, nearly seven hours. The last two nights, there has been a retrogression in samadhi; the dreams are, besides, not remembered, but the incoherent dream seems to prevail.

The asiddhi in the hair, although much diminished, is not yet removed.

Dec 15.

The ahaituka & other subjective anandas seem now to be firmly established in the indriyas; the chidghana, prema & shuddha still lack regular intensity, nor can the intensity come till yesterday’s sortilege is fulfilled. Its fulfilment was disturbed & the system thrown back first into udasinata & then into the Maheshwari dhairyya, shama & calm. Ahaituka kamananda is frequent, daily, but is seldom intense & never long continued. The sahaituka anandas

12 MS occurs
(tivra, rudra, kama, vishaya) are there, but not always or even usually intense; vaidyuta is still undeveloped, although ahaituka vaidyuta is now, as I write, beginning to act with intensity. It comes as a blissful electric shock or current on the brain or other part of the nervous system & is of two kinds, positive or fiery & negative or cold, saurya or chanda, conveyed through the sun or conveyed through the moon. Formerly both these anandas used to come as sahaituka or ahaituka touches; the negative resembled the feeling of rheumatism turned into a form of physical pleasure, the positive the feeling of internal heat similarly converted, but their electric nature was always patent to the sensations. It is, probably, these two forms of sukshma vidyut that are the basis of the phenomena of heat & cold—such at least is the theory suggested to me in Alipur jail.

The trikaldrishti continues successfully, but the (involuntary) attempt to fix the truth brings the tendency to substitute a perception of force or tendency for a perception of result; nevertheless this error seems, now, to be usually corrected before it can seize on the mind. These remnants of false energy (anrita tejas) have to be entirely rooted out of the mental action.

Sensitiveness to cold after having been almost entirely extruded, except in the lowered night vitality between sleep & sleep, is now again attacking the system.

4 pm.

There is a pause in the siddhi today, a relaxation and resting; yet certain movements are being decided. The one defect in the subjective Ananda, the absence of a certain & victorious Ananda in asiddhi and amangalam is being finally remedied, the force of the sadhan is being turned on the physical siddhi & the final perfection of the dasya is being prepared. So far only five hours and a half have been given to the primary utthapana. The purely parthiva insistence of the Apana has been strong throughout the afternoon. It seems that both these physical siddhis have to be relaxed today. On the other hand the ahaituka kamananda is taking possession of the sukshmadeha and surrounding the nervous system of the physical body on which it impresses now prolonged & sometimes intense touches; continuity seems to be beginning.
(Written Dec 16)

Trikaldrishti in the evening. Return of someone, not fixed, between 7 & 7.30 (R. [Ramaswamy] returned); of N [Nolini], first, between 7.30 & 8 (N & M [Moni] returned); of S [Saurin] soon (seen at 8, S came about 8.10); of B [Bijoy] unusually late but before 8.30, (B came between 8.15 & 8.30). No exact time given; the two attempts to fix it, were rejected & the rejection justified by the event.

Visrishti (slight) in the evening, after the pressure of Apana had been got rid of by Will. Physical activity for 12 hours as usual. Sleep 6½ hours. Progress in Samadhi nil. Lipi successfully vivid & spontaneous (varnamaya) at night, thus getting rid of the difference which had been established between daytime & night, with regard to the Lipi. There is, however, this difference that at night it is usually varnamaya, by day usually chhayamaya of all kinds.

Dec 16.
10.33 a.m.

Defect of anima no longer materialises easily, but persists as a vague stiffness which, like the pain in the soles of the feet, does not restrict the primary utthapana, but helps to break & distress it by aiding the Adhogati & increasing its force. Physical activity 6.10 to 7.10 & 7.30 to 10.30 this morning.

The lipi has definitely conquered in the Akash, but its invariable success of vividness & legibility is not yet allowed. The jnanam has now an invariable correctness, but the trikaldrishti is still clouded by the relics of the twilit intellectual activity. Shakti of chitta & prana is now being finally perfected on the basis of the perfect samata, shanti, sukha & atmaprasada. Dasyam is taking entire possession of all the functions, attended by dasyabuddhi in the devatas, and the Master of the Yoga is now habitually manifest in his personal relation. The two sortileges are being progressively fulfilled. Physical activity – 10.45 to 11.45. Adhogati is strong and seeks to base itself on defect of anima. Pranic utthapana, complete in the pranakosha, is unable as yet to possess wholly the annakosha except in its pranic parts; hence, failure of mahima & a strong sense of weakness & incapacity in the karmadeha affecting the body.
Again from 12.10 . . 1.5 & from 3.5 to 4.10 in the afternoon.

The afternoon has passed under Vritra, the power slow to act, the trikaldrishti & jnana uncertain, the physical brain dull and overcast. The Maheshwari-Mahasaraswati shanti is giving place under such circumstances to the Mahasaraswati-Mahakali quietude based on a concealed Maheshwari pratistha. Nirukta is now acting under the rule of the vijnana normally & bhasha begins to follow suit; the intellect in the environment has recognised the necessity of passivity & the superior results of the vijnanamaya method. The frequency of Ananda (Kama) continues but is interrupted by Vritric periods.

The trikaldrishti has now (4.55) recovered possession and is acting with a considerable perfection in all its movements & entire perfection (except of right combination) in some of them—ie a movement or incident is seen in pieces of knowledge each of which would lead to an incorrect conclusion by itself, but taken together give a perfectly correct result. Their separate advent shows want of spontaneous combination in the knowledge; there is only collocation ending in combination. Power is still ineffective, except occasionally.

Physical activity, 5.5 to 11.30 with an interval of 25 minutes for meal; altogether over 13 hours. There was no fatigue during this period. Lipi very perfect for a while in the artificial light, afterwards the Akasha tired. Ananda continuous for a long time & when discontinued tends to return. Assimilation exceptionally strong & perfect. The sensitiveness to cold persists, but is being extruded. Sleep less than 6 hours. Some secondary utthapana.

Dec 17
4.40 pm

Today except Ananda & primary utthapana all other siddhis seem to be suspended in order that occasion may be given to the samata and ananda in amangalam & asiddhi to emphasise itself. Relics of the impatience remain or rather recur, but cannot find a lodging. On the other hand asraddha in the Adeshasiddhi is strong. It is evident also that the remnants of intellectual activity in the environment are being given free but ineffectual play, in order that
of themselves they may cease. The attempts at intellectual trikal-
udrishti & aishwarya fail invariably & it is only when the vijnana
acts occasionally that some results are obtained. Physical activity
from 6.15 to 4.25 with a break of 25 minutes for meal (12 to
12.25). It was only at the end that fatigue came, dull and not very
pronounced, but insistent. The vague stiffness does not entirely
disappear, but is ineffective. The dasya and personal relation of
the Master increase. The substitute for religious piety has been
established in the consciousness, viz the knowledge of the Para
Purusha, the sense of the power of the Ishwara & submission to it
attended with the appropriate bhava in the chitta & the personal
relation to the Lover.

([Written] Dec 18)

Immediately after writing the above, the trikaludrishti again
became active for a time, but was clouded later on. At the same time
the interpretation of lipi & rupa was re-manifested in perfection;
but there was a renewed cloud of confusion over the immaterial
drishti. Physical activity, resumed at 5.15 was continued till 12.15
with an interval of 25 minutes for meals. Today therefore gave a
total of 16 hours out of 18. Fatigue only dominated the system once
in the day, on the occasion already recorded. Sleep for 5½ hours.
Yesterday, in the samadhi, the old movement of a conscious exit
of the mental being from the material centre (not a complete exit,
not trance, but the usual swapnamaya departure) was resumed. It
has this defect still that too strong a trend of the consciousness
towards the body remains, so that the purusha is easily drawn
back to the body, leaving only his linga sharira in the place of
dream experience. Dream has definitely relapsed into incoherence.
Visrishti in excess of the usual quantity, nevertheless of an ordinary
kind & amount.

Dec 18th
4.40

Today the exercise of primary utthapana, commenced at 6.7
was continued till 4.18 with an interval of 20 minutes (11.55 to
12.15) for meals. There was no overpoweringly insistent fatigue,
like yesterday’s, but only a fatigue which came & went four or
five times, appealing to the vague defect of anima in the body, but disappearing when its appeal was rejected. This defect of anima in the mere annam continues, but has no real effect, because the pranakosha & the physical nervous system liberates itself more & more from the mere physical experiences & accepts more & more the law of the sukshma deha. Kamananda, though strongly attacked, continues in spite of long interruptions and these two siddhis (K. [Kamananda] and primary utthapana) may be considered as finally established, though still altogether imperfect, and bound now to develop irresistibly towards perfection. On the other hand, the arogya is still engaged in the struggle to expel its minor contradictions & the saundaryam, although one more striking sign has been given of willed modification of form, continues to be feeble & uncertain in its inchoate manifestations.

Trikaldrishti has been clouded throughout the morning; active in the afternoon, perfect in detail, but not very active. Power is for the most part denied. A great dullness reigns over the physical brain and the karmadeha, in the midst of which samata & dasya become always stronger & now tejas & tapas are beginning to establish their indifference to adverse result. They are seeking, that is to say, to be no longer deterred from action either by failure or even asraddha. The asraddha in the Yogasiddhi has now disappeared, but not the asraddha in the Adeshasiddhi. It appears that the Power is acting in certain broad and important matters, but it is resisted in trifles.

([Written] Dec 19)

Development of the rupadrishti in various directions; stability up to the dense developed; only the entirely lifelike forms do not yet acquire stability. There is now a consistent activity (charshanipra & suyama aswa) which disregards or overcomes adverse result & doubt. On the other hand cold and defect of anima reasserted themselves. Physical activity 5.3 to 11.38 with 25 minutes interval, but the last hour of the sixteen was maintained with difficulty; stiffness, pain in the shoulders & feet reasserted themselves. The kamananda was successfully inhibited by the enemy. Sleep also attacked the system. Sleep six hours and fifteen minutes.
8.10 am.

Physical activity 6.7 to 7.22. The defect of anima persists this morning; but the Kamananda after a short struggle reasserted itself. Trikaldrishti is acting regularly & correctly, but is still hampered by the dregs of the outer environmental intellectuality & rendered uncertain by the inability always to assign the vyapti & prakamya its proper place. The power is hampered & the opposition to the healing power is especially successful.

Sortilege युप्त सुबास: पप्रीति आतास: उ ब्रम्हामयिं जयमान:। तं भीरास: कवय उत्कर्षित स्वाभ्यो मनसा देवयतः। The reference is to the full manifestation of the Master of the Yoga which is approaching.

([Written] Dec. 20)

This was effected later in the day. The Master through the vani from above & by sukshma speech from outside began to manifest himself everywhere परित्यक्तः in a well-established stability सुभास: with the character of youth & strength युष्मा and as he manifests, the aspect of Love & Good Auspice manifests also ब्रम्हान्यत जयमान:। The first result has been a great increase in the satyam. The thought perception & trikaldrishti, as well as vani, became perfectly & minutely accurate for a time & continue to be so except, (1) in the more hasty perceptions, (2) in those which are still afflicted with doubt, (3) in the omission of important circumstances & their exact arrangement. When these are made perfectly effectual (and their survival in imperfection is a mere inert habit), the vijnana in its knowledge-side will be accomplished—only the range will remain to be widened. The haste must make no difference to the truth, doubt must make no difference, omission of circumstance must not lead to incorrect conclusion, arrangement must be exact so far as it goes. It is now evident also that the knowledge was still acting on the levels of potentiality, where the thing arranged can be disturbed, because it is the arrangement of the Manishi, not the Kavi. It was, however, one of the higher levels on which the Manishi is strong in will, clearsighted in perception, but not able to embrace enough in his view (mahan, urushansa). The knowledge is now rising to the levels of the vijnana proper,—becoming of the nature of vijnana and not only enlightened, helped or led by the vijnana. Power is
working in the field of the Yogic karma, moulding the thoughts & feelings of others precisely in the immediate vicinity, but is not yet dominant in that province. It is reasserting its hold on immediately surrounding trifles.

Physical activity, 4½ hours in the morning, 1½ hours in the afternoon & from 5 to 11.30 with half an hour’s interval in the evening & night, 12 hours in all. The violent insistence of defect of anima became ineffective in the last period, but is still present in a modified form on the morning of the 20th. Sleep 6 hours.

Dec 20th.

Ph. Act. [Physical Activity] 6 to 7.15 am. 8.45 to 12.20 & 12.45 to 1.50 — The Bhashya in Veda increases in force & the Vedantic interpretation is now almost entirely confirmed. Fresh emergence of lipi. The trikaldrishti has a prolonged and efficient activity; but the prakamya of thought, though proved in many instances, shows an imperfection in the readiness to accept incorrect outward suggestions without distinguishing them from true prakamya. The vyapti, on the other hand, shows no imperfection separate from the imperfection of the trikaldrishti.

Sortilege. (1) वि यत्व तिरो प्रभणमन्युत रजो अतिदैभो दिवः।
(2) तदस्मै नवरसमिग्रहितेत गुर्भा यदस्य प्रक्ष्य प्रश्वा उत्तरः॥
The second given yesterday points to a development in which the Master of the Yoga abandoning the part of the mere mechanician shows himself as Lord of Truth & Love so that the old powers & experiences in the jail & after may reemerge on a new basis of perfection. This movement has already begun. The first is a necessary part of it, viz the firm & unstumbling activity of the higher Pravritti & Ananda on a plane above that of mind, even of pure mind. Srikrishna standing on that level is giving this activity.

The sukshmadrishti has for the last two days been progressing. The gandhadrishti, which was always more pronounced than the others, has now overcome its two limitations, restriction of range to the smells most common in the immediate material experience and reliance on the material adhar; it is now admitting perfumes & other scents not within the physical range or usual experience. The rasadrishti, which was always prevented from manifesting till
lately & even then was confined to the gandharasa, the touch on the palate of things smelt, has suddenly rushed to the front and stands on a level with the gandha except in frequency of the experience & permanence; but intensity & materiality are perfect & the range is not limited as it includes the sweet, the bitter & the pungent as well as nondescript tastes. Sparsha is still confined to the habitual touches, rain, wind, insects, heat of the sukshma sun, fire, etc & the result rather than the actuality of certain subtle touches. In samadhi however sparsha is very vivid & the physical sensation remains after waking. The more developed touches (human) are only felt in the waking state through the subtle nervous system, but they are there often acute. Such touches as reach the sthula body without this veil increase in frequency & intensity. Finally, shabda is now beginning to disengage itself finally from the adhara. This sense which was the most acute & earliest to develop, is now the latest (rupa excepted) to perfect itself & the clear sounds of the jail do not repeat themselves. Finally, rupa is still confined to mere image, pratimurti, & does not give the murti or actual form of which there were some instances in the jail & afterwards, but none here.

The health is still attacked. Last night there was a violent and unprecedentedly obstinate attack of the pain in the breast which used sometimes to occur when there was suppressed indigestion, but this time it was seen to come from outside & to be forced on the body. Intolerable at first, it was finally attacked and partly possessed by the ananda. It persisted in a dull form throughout the day, but was mostly cast out by the Will in the evening.. An attempt was also made to revive the ailments of cold & a crude appearance of tendency to phlegm in the nose was for some minutes materialised. All these, however, were failures and only at the centre & in the stomach was any real effect produced; in the latter, moreover, it was foreign and not native to the system. A very slight visrishti allowed for nominal relief at 8.30 pm. The twelve hours limit was maintained. Sleep 6 hours; but its attack was more oppressive than it should be.

Dec 21.

It is to be noted that the programme suggested on the tenth was, as was then suspected, only a tejasic suggestion; it has not
been fulfilled, except partially in some details. It was a statement of tendency which came erroneously as a prediction. At present the tapas, & tejas, is being driven forward without much regard to the state of the adhara or the stumbles of the knowledge. Formerly, when the tapas became active, false tejas & tapas took possession of it and there had to be a return to nivritti, but now the intermixture of false tejas is not allowed to stop the pravritti, because, as it seems, this false tejas is not able to take possession. True tejas & prakasha are now in possession & the false is only an invading power which sometimes establishes a precarious foothold or which still occupies partially a part of the ground here & there. The siddhi of the second & third chatusthaya[s] (shakti & vijnana) is following therefore, but much more rapidly, the same process & line of development as the first. There was first the war to oust the enemy in possession, the calling in of the aid [ ]\(^{13}\) of doubtful friends & natural enemies, the carrying & loss of positions, the confused fighting, the slow & precarious progress; then the ill-assured possession, becoming more & more assured, then the possession subject to revolts & revolutions, then the entire possession subject to invasions by the ousted enemy, finally a complete possession with occasional vibrations of the memory of old troubles. In the case of the shanti & samata, the struggle has taken many years & gone through various stages, of which the last alone answers entirely to the above description. The other two were never regularly fought out, except in certain points, before the arrival at Pondicherry. Their final progress, owing to the victory of the samata, is proving much more easy and rapid.

Later in the day, a sudden revolt of impatience & unfaith, not grief or even actual anger, against the continual running after possibilities in the prana & trikaldrishti and a violent rejection of the resulting false trikaldrishti. This resulted in a cessation of the conditions of the siddhi. Physical activity, 4.40 hours [i.e. 4 hours, 40 minutes] in the morning, 3.35 in the afternoon, & from 4.55 to 8.55 & 9.35 to 10.20 in the evening & night, 13 hours in all. Sleep, 7 hours. Slight, almost nominal visrishti after meal.

\(^{13}\) MS of the aid
Dec 22. Normal conditions have not been entirely restored during the day. There is a steady rejection of fruitless tejas & pursuit of mere possibilities. Ananda which was yesterday almost entirely suspended, is vaguely or slightly persistent today, but there is nothing else definite. Asraddha in the adeshasiddhi is strong in spite of proofs of successful action of aishwarya & ishita in all spheres except the immediate work & equipment. Physical [activity]. 6.12 to 12.12, 1 to 4 [p.m.]\(^\text{14}\)

([Written] Dec 23)

Afterwards the trikaldrishti resumed suddenly a normal continuous action, which as far as could be tested in a great number of minute instances was perfectly & invariably accurate so far as it went. Thought & lipi have also resumed their activities. Proof of the successful activity of the Will outside is now frequently occurring, as also of the correctness of the trikaldrishti when applied to outside occurrences. On the other hand health was strongly attacked at night & with some success, a slight soreness of the throat being produced this morning without any apparent cause which has persisted throughout the day (23\(^\text{d}\)). Physical activity 5.30 to 7.20—afterwards other occupations prevented the continuation. Sleep 5\(\frac{1}{2}\) hours. There was some attempt in sleep to deal again with the dreams, but no success resulted.

Dec 23\(^\text{d}\).

Yesterday a special test was applied to the arogya in the stomach. There was an attempt at roga, but it failed & ended only in a copious visrishti this morning, the first of its kind after three weeks. Health was strongly attacked and a vague tendency to headache established for some hours & phlegm in the nose for some minutes. These were got rid of by Will, but the sore throat persists, although it is extremely slight. There are movements towards the perfect ananda of cold, but neither the mukti there nor the bhukti are finally confirmed,—the confirmation being postponed until the health in that respect is perfectly assured. Physical activity 4\(\frac{3}{4}\) in the morning; 2 hours in the afternoon. There is a certain tendency

\(^{14}\text{MS am.}\)
to lassitude today due probably to the diminution of sleep & the strain on the health. The improvement in the trikaldrishti has been confirmed and a corresponding generalisation of the Aishwarya has begun. Ishita is becoming very powerful & the hold of Aishwarya & Ishita on karma is gaining in all directions except the equipment, healing and immediate work. Other siddhis are still moving forward without establishing definitely a fresh advance, eg in the rupadrishhti stable ghana & developed forms of the lower intensity are becoming more frequent & today one perfect developed rupa was stable for a few seconds. Physical activity finally amounted to 11 hours only owing to interruptions. Sleep over 7 hours

Dec 24th.

Nothing of note. Trikaldrishti & Powers slowly progress. Samadhi is still [inhibited]\(^{15}\) and Adhogati seeks to bring back the failure of anima. The rupadrishhti cannot yet hold the Akasha nor Ananda the body, though both come and manifest themselves in detail. Health is unable to progress. Today the sore-throat lessened, but did not absolutely disappear, & there were strong efforts to develop cough etc so that it might go by the normal course. In spite, however, of disregard of all rules & continual exposure of throat & breast to cold, it is going without materialising either into cold or cough. Physical activity 11 hours; again other occupations prevented the full amount. Sleep 6 hours.

Dec 25.

The siddhi is in a depressed condition and unable to advance with rapidity, owing to the necessity of a farther transition of considerable magnitude consisting (1) in satyam, the cessation of all intellectual (manomaya) activity & its replacement by the karana, (2) the cessation of the relics of self-action & replacement by the divine action (dasya), (3) the cessation of the use of means in the yogasiddhi and its replacement by the self-fulfilment of the Para shakti working upon the lower. The public news (eg the attack on the Viceroy, the ill-success of the Turkish naval

\(^{15}\) MS inhabited
sortie) show that the Power is still ineffective to prevent adverse occurrences. ([Written] Dec 26.) During the rest of the day there was a struggle between the new system and the dregs of the old. The lipi became permanently active, but the old difficulty of manifestation or emergence in the sthula akasha is not yet overcome. At the same time interpreting power attending the lipi became swift and decisive and has so remained. Trikaldrishti in all its parts resumed its activity. The most important result is the final completion of the dasya & the disappearance of all questioning, revolts or self-action; for, whenever these try to manifest, they find no support in the Jiva. Even with regard to error, there is no revolt nor now any return to a tamasic udasinata. The siddhi now fulfils itself entirely by the divine action arranging the conflicting forces & the Jiva does not try to interfere or insist on a consistent method. By this the invading intellectual activity has become wholly discouraged and no longer insists on its own action. There is, however, a survival of manomaya suggestions representing themselves as vani & seeking to lay down the action, but as these are always falsified & the Jiva does not insist on them, they have no force of persistence. Health is undergoing a very serious assault. The sore-throat was flung off, but after a long struggle cough materialised for a very short time at night, & strenuous efforts are made to bring back cold. Tejasic disturbance in the stomach has returned & recurs, though it does not persist against the Will, & there was in the morning a copious visrishti quite of the old type. This is the result of copious eating & drinking without regard to satiety, which has been insisted on in order that [ ] the arogya may be established under more arduous conditions. Assimilation is powerful, but not enough to prevent a struggle & irregular workings of the asiddhi. There was no primary utthapana in the afternoon, so today's period amounted only to 10 hours—but there was 5 hours continuously from 4.30 to 9.35 without fatigue or subsequent reaction. Sleep 7 hours.

Dec 26.
Sortileges. (1) विखाम दशं बुजनं जीर्दानुं 16
As usual, the sortileges began at once to be fulfilled. The force described has established itself in the siddhi; effort, no longer self-effort, manifests itself as a force throwing itself on the enemy & breaking down all opposition. This struggle is the working of mental force (Indra) possessed by the Vijnana and filled with mental ananda (Soma). Whenever Indra is thus infused with Soma, opposition seems to disappear; it is only when Indra works without Soma, that the opposition has strength to prevail or at least to resist. Once more Soma is being felt physically in the sensation as of wine flowing through the system, but in the sukshma rather than in the sthula body. Trikaldrishti has been working with a consistent perfection, & aishwarya, at first entirely resisted, broke down opposition & is still busy with the struggle. Throughout the whole siddhi, a state of joyous battle & assured victory is replacing the old alternation between the joy of attainment & the pain of struggle & defeat. 6 continuous hours of primary utthapana from 6.15 to 12.13 and again from 12.35 to 1.35. It was only towards the end that there was some reaction. The replacement of intellect by vijnana continues.

Rupa is still developing, stable developed forms are more perfect, & the perfect transient forms show a greater tendency to stability. Primary utthapana again from 4.20 to 10.15 with the half-hour interval for meal. Today secondary utthapana was resumed, the laghima being perfect, but limited in duration by defect of anima. Sleep 7 hours. Nominal visrishti at night. The jala-visrishti was today less insistent.

Dec 27.

P.U. [Primary Utthapana] 6.15 to 7.30. . 8.55 to 1.15 (minus 25 minutes). . 2.30 to 3.15. . 4.10 to 8.25 & 8.55 to 10.5.

After this month the diary has to change its character & become mainly a record of trikaldrishti, aishwarya, samadhi-experience & work, literary & religious; at the same time a brief
note of the physical siddhi will be kept. The aishwarya-vyapti has had effects on purifying considerably the mentality of all in the house, & in the increase & definite development of trikaldrishti in S [Saurin], but his knowledge is still only fragmentarily active. The successful application of the power in immediate result is still successfully resisted except in individual cases; but yesterday groups of existences were made to obey the Will and even to obey it in exact circumstance. The attack on the health seems to be lessening in force; but last night the cough, which is however entirely superficial, returned with some vehemence after a hot sukshma touch on the sensitive spot in the throat. Kamananda is still in the same condition, but the sahaituka shariranandas seem to be once more at a high intensity.

The confused action of the intellect revived in some force and although the siddhis continued, certainty was for a time abrogated. The improvement in the Viceroy’s health took place in the direction willed, viz elimination of fever & pain. A period must now be fixed for entire recovery & it must be seen whether the element of time can be controlled. The Turkish business is also centring round the point willed, but the upshot is still in doubt. The cough tried to cling throughout the day, but disappeared by the evening, contrary to its action yesterday. Roga in its other symptoms clings, but cannot assert itself. Will acted with great accuracy in the matter of the returns in the evening, but the trikaldrishti was confused in details. Another failure as regards equipment. The failure was seen before it was known, by vyapti, but there was an attempt to mislead by false vyaptis. Sleep over 7½ hours. Samadhi at night is absent, but takes place in the daytime,—deep, the record confused with intervals of lucidity & coherence. There is a dull attack of defect of anima & mahima in the primary utthapana.

Dec 28th

St. [Sortilege] La guerre en Orient, meaning that the real struggle now is over the successful use of the will in equipment & Indian affairs. Aishwarya invariably successful this morning in small details; trikaldrishti seriously hampered, an intellectual movement being violently forced in when the vijnana tries to act. A period is
about to ensue in which these survivals have to be eliminated both
in the vijnana & the physical siddhi, as well as in the samata,
dasya & tejas, and the sahitya, bhasha & nirukta have to be
consolidated; the trikaldrishti of exact time & arrangement of
circumstance & the ritam in karma have to be well-established,—
and the obstacles in the saundarya, religious karma, Krishnanritya
and public affairs finally broken. This movement, which is being
prepared, must definitely begin today & will cover the greater part
of January.

Physical activity. 6.10 to 7.15 .. 8.20 to 10.40 .. 11.20 to
12.40 .. 1.40 to 2.10 .. 4.50 to 8.30 .. 8.55 to 11.0.

The drag of the vague defect of anima on the body still contin-
ues. A very slight visrishti in the afternoon; subsequently there was
a tendency to flatulence. The cough has not returned, but there is
a tendency to phlegm in the nostrils. The physical ananda tends to
recover its frequency & intensity. The aishwarya was strong today
& lipi frequent; but the trikaldrishti much disturbed, rupadrishhti
almost suspended; particular tejas acts, but general tejas is discour-
aged and faith depressed. The Nirukta progresses and has attained a
certain perfection of method, but not yet of vijnanamay substance,
since possibility still has its play. The great gain in the method of
work is renunciation of haste & a consequent thoroughness.

Sleep, nearly six hours.

Dec 29th.

Trikaldrishti & aishwarya are now irrevocably fixed in their
ordinary daily action; but not yet delivered from inaccuracy of
detail and arrangement, nor free to act perfectly in important or
public affairs. Vijnanamaya Thought is beginning to regularise itself
in relation to the vani. .

Physical activity. 5.10 to 7.10—8.40 to 11.10 .. 12.35 to
2.5 .. 3.25 to 4.28 .. 5.45 to 8.37 .. 8.52 to 11. Twelve hours.

There has been an attempt at securing the continuity of the
ahaituka Kamananda. It was almost constant through the morning
till 11, in fluctuating degrees of intensity, suspended in the afternoon
except for frequent touches, & now (4.30) again active. But it does
not as yet hold the system; it only takes partial possession of the
outworks of the nervous system & then retires. Sometimes it enters the brain or lower nervous centres, but cannot secure a continuous hold. Nothing is as yet changed in the rest of the siddhi.

Nirukta proceeds rapidly. . Strong discouragement in the evening in reviewing the little that has been done, the vast amount that remains and the strength of the obstacles, which is apparently incapable of exhaustion. Sleep 7 hours.

Dec. 30th

There is no farther need of a record such as has been kept during this month. There has been considerable progress, but upon lines which have now to be altered and soon to be abandoned. The programme proposed on the 3d December has as usual been fulfilled only in its beginnings & in one or two instances not at all. The stability of rupadrishhti is of little value in itself, since the perfect forms do not hold the akasha, & has been accomplished only in the sense that the forms accomplished appear habitually & the progress made has not to be continually lost & built up again, as used to be the case. Lipi is not yet habitually spontaneous in legibility & still needs usually the stimulus of the subjective perception to become perfectly legible, but it appears more usually without particular demand, though less frequently without any warning or the turning of the attention in that direction. It will only be perfect when it appears uncalled for as an ordinary habit of the akasha and is always immediately legible without any attention or trouble to the mind. Trikaldrishti works perfectly often, but not always, nor even yet as a rule, except in single incidents which present themselves to the mind, but where the perception is active rather than passive, there is usually much uncertainty & confusion of details. Nevertheless the more or less perfect trikaldrishti does occur daily with some frequency & in an imperfect state it is working throughout the day. The Power has so far overcome resistance as to work habitually like the Trikaldrishti, but it is even more hampered & outside a narrow field imperfectly, slowly or irregularly effective. Samadhi has not been regularised.

Ananda (kama) is occasionally intense on a moderate estimate of intensity. It is that is to say tivra, but not rudra, not even tivratar...
or tivratama. It occurs, tivra or kuntha, daily & often frequently in the day and is in that sense permanent. But it is not continuous in its permanence or constant in its intensity. Health in the last half of the month has been successfully resisted, rather than successfully progressive; cough, which had disappeared, has reappeared; the other fragments of roga, however vague, slight, blunted or disjointed, still persist & even when they seem to have finally disappeared, unexpectedly return. Nevertheless, they are losing force; but that is all that can be said. The saundarya has not progressed since the 10th, materially; its successes are the merest beginnings & in most directions the opposite tendency prevails. Primary utthapana has so far established itself that ten to twelve hours daily are passed, walking or standing, without any permanent reaction except a vague defect of anima which sometimes tends to materialise feebly and a moderate adhogati, also vague & dull, in the earlier part of the day. The prediction about equipment has been entirely falsified & the acuteness of the position has not been lightened. The literary & scholastic work has begun to take shape & proceed or prepare to proceed on its proper lines, but the necessary materials are deficient. The religious work is now being founded on a certain power over the sadhana of others, but this is as yet only rudimentary. The same is true of other activities. There is an effective pressure of power, but not the sovran control that is needed. The contact with the Master of the Yoga is being constantly dulled & obscured by the siege of Ego in the environment, false suggestion & inferior vani. Realisation of Atman & Brahman Nirguna & Saguna is always available & at once returns in fullness when the mind turns in that direction, but the nitya smarana is not there, because, perhaps, the realisation of the Ishwara is not equally well-established. The whole Yoga is still subject to clouding & temporary breaches even of those siddhis that have been most perfectly accomplished. Although these breaches are often slight, temporary & without power yet their recurrence shows that the whole system has not been placed perfectly under the right control.

The directions given on the 18th October, & 15th & 19th November have only been partially fulfilled through no fault of the
Jiva, but owing to the constant siege from outside of the discarded intellectual activity. They have to be fulfilled.

Trikaldrishti —

1. A squirrel on the roof-ridge descends the angle of the tiles, leaps on to the wall of the next house, runs along it & ascends its roof. The first motion seen in the squirrel’s mind (prakamya) before it is executed, the second d[itt]o, the third by trikaldrishti without any data objective or subjective.

2. The leaflike insect put yesterday on the smaller tree stated yesterday by S [Saurin] to be no longer on the tree, suggested that it was back among the bean-leaves. While searching for it with the eyes today, trikaldrishti that it was not in the bean plant & was, probably, still on the tree. No data. The certainty was absent. Half an hour later it was shown by N [Nolini] still on the tree.

3. A crow approaching the veranda—another upon it. The idea of coming on the verandah seen in the crow’s mind, but a suggestion of trikaldrishti that it would fly away to the wall on the left before reaching it. Uncertainty & false viveka mistaking the intention for the event. Suggestion at the last moment when the crow had paused just below the veranda to eat something, that something would happen to send it away — rejected obstinately by false viveka. The next moment the first crow flew away to the wall on the left & the object of observation followed it.

These three instances show the state of the trikaldrishti. Everything observed is the rendering in thought of a truth of tendency, intention, or event, but everything is not yet put easily in its correct place, & uncertainty about the actual event is the normal state of the mental being who cannot distinguish between the correct decision and a false choice. This stage has to be exceeded, before a clear & reliable trikaldrishti can be established.

Dec 31st

Yesterday, it seemed as if the rudimentary equipment of the immediate life in its bare necessities were acquired, with a lacuna,
with inconvenient effects of the past confusion, with a precarious source, but still if it is maintained, it stands as the first real triumph of the Power in overcoming this obstinate difficulty. Yesterday’s lipis indicated that tyaga (outward) must be entirely abandoned and bhoga fully accepted; “submission to desirability” or some equivalent phrase was used. Another lipi ran “violent purposes have to be justified” & is interpreted in the sense that, although hitherto all the more vehement uses of the aishwarya have been abortive and only moderate demands have been satisfied, the vehement Mahakali use of the aishwarya and ishita have not therefore to be abandoned, but must be insisted on till they succeed. Aniruddha and his Shakti Mahasaraswati have been satisfied; the Yogasiddhi has been justified & the Adeshasiddhi is beginning to be justified by slow, small and steadily progressive processes. This is Aniruddha’s method, the method of the patient intellectual seeker & the patient and laborious contriver who occupies knowledge & action inch by inch & step by step, covering minutely & progressively all the grounds, justifying himself by details and through the details arriving at the sum. But, if continued, this method would render success in this life impossible. The method chosen for preparation has been Mahasaraswati’s, but the method chosen for fulfilment is Mahakali’s in the Mahasaraswati mould. Mahakali’s method is vehemence, force & swiftness, attaining knowledge by swift intuitions, moving to success in action by forceful strides. It is vehemence in lipsa, violent in method, headlong in accomplishment. It seeks to attain the whole & then only returns upon the details. This vehemence, violence & precipitate rapidity has to be established in the prana, chitta and buddhi, so as to govern feeling, thought & action (there have been plenty of isolated instances & brief periods of it in the past of the sadhana) and justified by success; but the basis of hidden calm & self-possession in the Maheshwari-bhava of Mahasaraswati has to be maintained and all has to be in the [Mahasaraswati] mould which demands thoroughness, perfect [contrivance], faultless elaboration of detail in the consummate

17 MS Maheshwari
18 MS contrive
whole. The literary work, the subjective action on others, the outward physical speech and action have all to be done with this swift elaboration & violent minuteness. At first, the Maheshwari bhava will retain some prominence, but will afterwards become implicit only in its Mahasaraswati continent. The first necessity is, however, that the Mahakali method should be justified in the results so that the intellectual sceptic & critic in Mahasaraswati may be assured of the correctness of the instructions given.

Bhasha. Bh’s [Bharati’s] Panchali Sapatham taken up; in the first verse yesterday only a few words could be understood without reference to the dictionary & no connected sense has been made out from the sum of the vocable. Today, in the second verse, the difficulties of the Tamil way of writing (sandhi etc) were overcome by the intuition as well as some of the difficulties of the grammar, but the Bhashashakti which used formerly to give correctly the meaning of unknown words has not recovered its habit of action.

Trikaldrishti. This morning all the trikaldrishtis were correct, even when coupled in their action with aishwarya sometimes successful, sometimes unsuccessful. Formerly the aishwarya would represent itself as trikaldrishti, but this false action this morning occurred only three or four times & was immediately rejected; but in one or two cases the rejection was questioned for a while by false tejas.

Aishwarya mixed with trikaldrishti— On a bird alighting on a tree to move from one part of a branch to another & then from that branch to a neighbouring branch; carried out exactly; then to remain sitting where it was. This, too, was carried out. Afterwards, aishwarya on the same bird to move was resisted; but trikaldrishti came immediately that it would be resisted and that the bird would remain, not sitting quietly, but picking its feathers on the same spot until I had to go to drink tea. Also that two birds on another tree, making love, would so continue till the same moment. This was fulfilled exactly, although it was nearly ten minutes before I went away & the same birds had previously been restless, flown away once out of sight & come back, all foreseen by the drishti, except the return. Several instances of this kind happen daily.
Morning’s news. No breach of the negotiations in spite of the extravagant Turkish demands. Foreseen.

The Viceroy’s health is following exactly the movement of the Will which was that the pain should be relieved within Dec 31st and the healing of the wounds fulfilled in January. This morning’s news is that there is no longer any discomfort from the wounds, although the healing will take some weeks. It is also announced that there is still a piece of metal in the neck. This confirms the trikaldrishti of two or three days ago which suggested the fact when reading the description of the state of the wounds.

The Congress badly attended, considerably less than 200 members, & practically a fiasco, as foreseen, so also the other Conferences. ? Beginning of the end of the Age of Palaver in India.

Wrecks etc abound—belated fulfilment of the lipi about accidents on the sea given some time ago.

Afternoon. Blank. The attitude of distrust with regard to the equipment is very strong. The pratijna in mind is not yet entirely satyapratijna, for there was tejasic fixing of things to be done today, which were presented as things that would be done; eg there was quarter of an hour secondary utthapana of the arms in the morning and more was suggested for the afternoon, but the suggestion was left unexecuted.

Last night there was some swapna samadhi, but only one image survives in the memory,—a room or tent with a small table such as might be used in a tent & a sola hat on the table, seen for some time, but with a momentary eclipse after which it emerged again & then vanished, a scene without any incident or moving figure, although it was felt that there would have been either movement or incident, if the power of vision had been able to hold the scene. The background and atmosphere were very dim as is usually now the case with these visions.

Visrishti, neither slight, nor excessive, in the afternoon; the first real evacuation since the 25th—6 days.

Physical activity 10½ hours. Secondary utthapana of arms for half an hour; this time with ease, although earlier in the day there
had been difficulty in maintaining it for half an hour due to de-
flect of anima, resultant strain in the arms & pain of the negative
electric current. Sleep nearly 7 hours. Swapna samadhi with images
indistinguishable to the eye from dream images, distinguishable by
the viveka alone. The faculty of understanding the truth behind
the dream record and disentangling its confusions has once more
returned. Fresh proofs of the siddhis constantly occur, but there
are plenty of instances of misplaced perception and the siddhis
of power have as yet no assured mastery over results. Primary
utthapana continues in the same condition; it cannot be perfected
unless the secondary & tertiary are brought forward.

This day closes the year 1912. From its morrow a new
record begins in which the progress of the siddhi of Mahakali-
Mahasaraswati has to be recorded. At present there is no sign of
any rapid progress or of really great results. All is petty, hampered
& limited. A siddhi rapidly established becomes otiose for days
together. Continuity in the higher states seems as yet impossible,
and from accomplishment there is always a relapse into a condition
of partial asiddhi. The whole Yoga is continually beset with tamas
and uncertainty & seems unable to rise permanently into clearness
& perfect joy & assurance. There is no grief or acute trouble or
even anything that can really be called trouble, but a dull depression
never acute & a certain weariness & lack of interest has settled
down on the system and is only lifted for short intervals or replaced
by a mere ahaituka state of ambitionless content. The active force,
ananda etc established for a short period, have failed to hold their
own. The tejasic ideas of a joyous progress & of siddhi within a
given time have once more proved to be falsehoods.

On the other hand the theory of the Yoga has been proved. The
perfectibility of the human being, trikaldrishti, Power, the play of
the Divine Force in the individual, the existence of the other worlds,
& of extra-mental influences, even the possibility of the physical
siddhis are established facts—vijnana, the Vedic psychology, the
seven streams, everything is established. What is wanting is the
perfect application, free from the confusions of the anritam which
result from the play of mind. It has been seen that in repose, in
nivritti[,] in udasinata, perfect peace and ananda are possible; but
the thing the Yoga has set out to establish is the perfect harmony of Nivritti & Pravritti, of desirelessness & Lipsa, of Guna & Nirguna, complete Ananda, Tapas, Knowledge, Love, Power & Infinite Egoless Being, consummating in the full and vehement flow of the Pravritti. By the fulfilment or failure of this harmony the Yoga stands or falls. The siddhi has now reached a stage when the test of its positive worldward side has to be undertaken. Tyaga is finished; shama & shanti & udasinata have had their fulfilment; but in that resting place there can be no abiding. It is the starting point of the Lila, not its goal. Therefore during the next three months it has to be seen whether, the harmony in nivritti being definitely thrown aside, the harmony in pravritti, which has always been attacked & denied by the enemy, can be prepared or accomplished. Only then can there be a settled peace and a perfected action.
January 1st.

The first movements were unsatisfactory, tamas-besieged and arrested by a dull depression. In the evening, only, progress began.

1. Ananda of heat & cold have been confirmed, but the discomfort not yet entirely removed.

2. Kamananda occurs more frequently than before, but is not yet in possession of the body. The sahaituka physical anandas are reasserting their possession of the system. Ahaituka ananda, long clouded, has once more triumphed over its obstacles and is in possession even of the obstacle and the adverse event.

3. The health, still much afflicted, tends slowly to reassert itself. There are still no movements of roga outside the survivals of phlegm, occasional neuralgic touches, imperfect digestive assimilation, eruption, headache and defect of the chakra. All the symptoms are slight and fragmentary, but in some of them there is a strong persistence.

4. In the primary utthapana there is still the persistence of a vague defect of anima which sometimes grows in force for a while, but cannot hold the body, although it encourages the adhogati. Secondary utthapana is emerging.

5. Saundarya makes no apparent progress.
Trikaldrishti.

The removal of the metal piece in the Viceroy’s neck effected without trouble foreseen for yesterday; fulfilled.

A number of ordinary instances presenting no new feature—in the movement of birds, animals, persons etc.

Suggestions of the nature of vyapti or prophetic thought-communication are now extremely common . . eg. B [Bijoy] was asked to get two khatas of this type; suggested, he would bring small ones instead . . fulfilled. Ant. invited everybody this evening; suggested that the invitation was hastily made and, without being withdrawn, would not be zealously followed up . . fulfilled. Fulfilment of thought prakamya is fairly frequent, but the definite thought-vyapti is still dull & infrequent in its occurrence.

Aishwarya.

That P [Parthasarathi], after a long abstention of over a month, possibly two, should come to pay a visit . . fulfilled the same day.

The Aishwarya about the Insurance Act, long resisted, seems about to be fulfilled; there is every sign of the medical profession yielding. There are also signs of weakening in Ulster.

The ordinary aishwaryas, eg fulfilment of will by several birds at a time, exact movement in accordance with will, reception of vyapti & action in accordance, are all evidently established & ex-ampled daily, but their regular success is still resisted. Apparently, the knowledge has to be perfected first.

Samadhi.

Brilliant visions of sea, waters etc just before sleeping; but all were momentary. Such other visions as can be remembered, were all dark, chhayamaya and chhayavrita. Sleep, under 6 hours.

Lipi and rupa slowly increase upon the material akasha.

It is indicated in the lipi that “from tonight” the Master of the Yoga will exercise a perfect and apparent control over the subjectivity of the system in all its parts. The subjective-objectivity will still remain for some time imperfectly siddha & subject to a dual control of the old & new Prakriti, the old fading, the new increasing in force, brilliance and all-pervading sovereignty.
Jan 2\textsuperscript{d} 2.45 pm.

The promise has been made that there will be no farther interruption in the continuity of the siddhi. Since then (last night), considerable progress is being made.

Trikaldrishti. In the beginning there was a series of outward suggestions which fulfilled themselves rapidly & accurately, although the mind denied them admission and saw no probability of fulfilment. Subsequently, this element of external suggestion was put in its place as prophetic vyapti from the thought of supra-material beings that foresee; the jnanam was then perfected and afterwards the trikaldrishti in its entirety brought up to the level of the same perfection. The difference between this new siddhi and all that have preceded it is, 1, that the first idea proves to be correct and has not to be replaced by a second, at most it has to be amplified and modified or enriched with suggestions of the right time and place & arrangement, 2, that even when it manifests in the intellect without being seen to descend from the vijnana, it is habitually correct, 3, that mistaken suggestion[s], except in small details of time, place & circumstance, tend to be more & more rare and already form the infrequent exception. In the thought-perception there is no falsity, but only appearances of it which turn out to be not falsity but aprakasha.

News today that yesterday (the 31\textsuperscript{st}) the Viceroy was for the first time entirely without pain from his wounds, (the result of the last extraction). Thus the first aishwarya & drishti has been amply fulfilled. A rapid cure of the wounds must now be effected.

Trikaldrishti of the more distant future and of the far past is now taking place unhindered; it remains for the future siddhi to control its results whether for confirmation or rejection. In its application to the immediate future and the present it is evincing an astonishing accuracy.

*Primary Utthapana*

Yesterday nearly 12 hours were passed in walking or the erect position; this morning there was on rising the old pain in the soles of the feet, but it passed away at once; subsequently stiffness was felt for a minute or two in the thighs, but it passed away also and
was convinced of material falsity. Only the vague defect of anima, now, is a persistent reality.

Dasya.

Dasya is becoming absolute in the thought and feeling no less than in the action; doubt extends only to the adesh-siddhi and has, even in this field, only a dull activity of reserve and caveat; for it is growing evident that something will be done through this yantra in the field of life, although the material equipment seems to be entirely lacking. It is this lack of material equipment which is the real obstacle to perfect faith; the slowness of the physical siddhi is only an accessory cause of hesitation and would have no force if the equipment were given. These movements have still to be occasionally noted, so that the condition of the activity which is to form the substance of the record may be understood.

4 pm.

Aishwaryasiddhi promised; the first result was the fulfilment of the aishwarya made at 1.30 that M [Moni] should come to make the tea about 3.10 by the time of my watch. He came at 3.11. This is a rare instance, almost the first that is entirely clear and definite, of an aishwarya of exact time being perfectly fulfilled, although trikaldrishtis of exact time have been not infrequent. Usually indeed, such aishwaryas have not even been attempted,—only aishwaryas of approximate time, eg between 9 & 9.30. This success was followed by a series upon birds which one after another flew in the direction indicated to them, although they obviously started in a different direction. There was invariably some resistance, in the last two cases long & persistent, & in three cases failure; but the trikaldrishti was uniformly correct except as to time, although deficient in circumstance, eg not giving all the swerves of the flight. There were some casual instances of the old type of error, speedily corrected. Uncertainty is still not infrequent.

Final. (written Jan 3d.)

At night again some clouding. Aishwarya continued in the same stage of progress, sometimes unfulfilled although always with foreknowledge of nonfulfilment, sometimes fulfilled after resistance or partially, sometimes instantaneously and perfectly. This power of the Aishwarya covers only things of immediate occurrence. On
eventualities that need a longer space of time for their fulfilment, on settled stages of mind or body, its working, although often successful, is slow and laborious.

Lipi advanced in power, vividness and authority. The beginnings of lipi-kaushalya, especially varna-lipi, were promised in the lipi itself and exemplified; this morning fiery, luminous & coloured lipis have occurred, of a rich substance and brilliant vividness. Rupa is still in the same stage, although it increases in the frequency, normality and even stability of perfect images, sometimes in the sukshma-sthula and sometimes in the sthula akasha. In the samadhi the images were dim and inconstant.

Sleep 6\(\frac{1}{2}\) hours. Primary utthapana 11 hours. Kamananda frequent and more easily intense, with a tendency to continuity. Siddhi of aishwarya and kamananda are indicated & promised, as well as of the lipi. Karma received a setback already predicted two or three days ago in the lipi “Trouble in the entourage”, but its area & force are limited.

Jan 3\(\d\)

Aishwarya-ishita-vashita,—with vyapti; rupa; lipi; kamananda; widening trikaldrishti, are the immediate siddhis that have to be effected.

Aishwarya

Will on B [Bijoy] for vijnana to resume activity fulfilled with regard to vijnana. Viceroy’s wounds again give pain and fever, due to exertion of sitting,—only therefore, an indirect contradiction of aishwarya. Affairs in China adverse. On the other hand the Turkish peace negotiations appear to be moving to the point willed. Aishwarya this morning is hampered and largely unsuccessful, Trikaldrishti hampered, but successful.

The rest of the day was passed in a struggle with the difficulties of the aishwaryam.. Kamananda impeded in the evening. Temporary diminution of dasya.

Sleep 7 hours. Phy. act. [Physical activity] 9\(\frac{1}{2}\) hours.

The dreams remembered were confused in record, but intelligible. Image in swapnasamadhi is still afflicted.
Jan 4th.

Work (nirukta) has emerged from its hesitations & is being steadily done; incidentally much that was seen by intuition formerly is being proved by the data.

Trikaldrishti
- Pain in the V's [Viceroy's] wounds continues; foreseen.
- Peace negotiations at their critical stage.
- Most of the day spent in Nirukta.
- Some development of rupadrishti in the evening.
- P.A. [Physical Activity] nearly 9 hours. Sleep 7 hours. A little more force in the swapnasamadhi.
- Aishwarya entirely obstructed . . Trikaldrishti victorious in spite of opposition

Jan 5th

The persistence of tapas is now assured in spite of opposition; the action proceeds in the face of difficulties, disappointments & errors of method without flagging for more than a moment and is itself tejaswi even when the system loses hold of active tejas and falls back on shama or dhairya. The physical obstacle to continuous karma is overcome as well as the subjective obstacle, failure of physical dhairya as well as failure of mental tejas. Mental dhairya, physical dhairya & pranic tejas assured, mental tejas has to be rendered equally permanent and invincibly active so that the physical brain may not flag in its response to the stimulus from above. The quaternary, Tejo balam pravrittir mahattwam, will then be assured in all the parts of the system. Vijnana is now beginning to assert its constant activity, pausing only to test the state of the intellect; for when the intellect, even in its darkened or clouded state, refuses to rest in error and begins to respond only to the satya, then the pratistha in intellect of the vijnanamaya action will be assured. At present, it is so assured in all but the trikaldrishti,—the action of mind on the objective field, & this is so because the trikaldrishti itself is still limited in its ordinary action, though already perfect in its best moments & in its extraordinary movements. It has been decided yesterday that the development of the Knowledge must be left to the unaided action of the Prakriti, the Power to its own self-
development and the Samadhi, physical siddhi and Karma alone left for the present field of the stimulative action of the Will aiding Prakriti.

Trikaldrishti has to be liberated from the dregs of possibility; lipi from the remnants of the obstruction in the akasha; rupa from the denial of stability in the higher forms; prakamyavypati from the interference of elemental thought-images; samadhi from sleep & dream; power from the akashic obstruction to subjective reception and objective fulfilment; bhutasiddhi from defect of anima; primary utthapana from adhogati and the remnants of defect of anima; ananda from interruption and the obstruction by weaker nerve-elementals influencing the body; arogya from the habit of symptomatic recurrences. This field is almost conquered, subject to the last obstinate resistance.

Secondary utthapana of the neck, loins & legs was resumed this morning. It is growing stronger in the first, almost nil in the second, absent in the third.

The Unionist dissensions & the movement of the Ulster affair are now patently following the line of the aishwarya persisted in since the introduction of the Home Rule Bill & in the Insurance matter there is a perfect success. The relapse of the 1st in the V's health has had the consequences foreseen, but there may still be a rapid cure, if there is no farther premature exertion. It is suggested that his health will never be what it was formerly.

The Power is reasserting efficacy but with difficulty.

Trikaldrishti is now establishing itself on a wider basis: formerly it acted in isolated movements of knowledge on a basis either of error, of uncertainty or of passivity in the intellectual movements. It has now got rid of the third basis (nischeshtata of the mind), so important and so long sustained as a necessary movement of sadhana; admitting action, it allows the intellect to take in all that comes within its field and detecting its own misapplications to perceive the nature of the error, the actual truth misapplied and replace the former by the latter. At the same time, the separation of Power & Knowledge is being removed; they are acting simultaneously & the old form of error which took the will for the event, is being allowed play in order that it may be expelled by the viveka serving
the trikaldrishti & deciding the correct event among the various
tendencies, applied forces & possibilities.

The formed, articulate or vangmaya thought assumed sud-
ddenly its perfect and fluent activity in the evening; it has already all
the qualities of perfection which, at an earlier stage of the siddhi,
it was preparing, except that it has not a sure hold of its proper
locality & sometimes, ie when it deals with matter not formerly
included in the scope of the vangmaya thinking, descends from the
higher style proper to it into the lower inefficient vak; at such times
it tends to pass back from thought into inferior vani.

The watch being out of order, it was impossible to estimate
periods. Dreams were much more coherent, although there is still
the tendency to mixture of incidents & false forms due to the ap-
ppearance of the present ego with its associations. Swapnasamadhi
was stronger and dream images tend to pass into clear and living
chhayamaya forms.

Jan 6th

The morning there was a rapid movement forward in knowl-
edge. The progress of the trikaldrishti is tending to eliminate the
sources of intellectual error and the thought perception and vang-
maya thought between them are taking charge of all trikaldrishti
not appertaining to this immediate existence or in this life to the
progress of the siddhi. Perception of past & future lives of others
is reestablished. All these perceptions are necessarily beyond im-
mediate verification; the action of the vijnana is swayamprakasha.
Their intellectual justification rests upon the ample daily proof of
the soundness of the supra-intellectual faculty by which they are
received, and the only remaining cause of doubt is the remnant
of intellectual activity (external) and therefore of error which in-
terferes with the vijnana-perception. Vani, conducted by one of
the Shaktis, has asserted its authority and is proving its veridicity.
Lipi is preparing the final proof of its truthfulness. The faith in
the vani, thought & trikaldrishti is now ample except in the one
field unconquered. Yesterday’s lipi promising a change from steady
to energetic battle with the opposing forces, is being fulfilled; the
tejas is taking possession of the mentality & pouring itself out in
the struggle, without the rapid exhaustion which used formerly to
throw back the Adhara into udasinata or shama. The other lipi
“death of the difficulties”, has already begun to be fulfilled in the
siddhi of the knowledge.

There is a tendency in the rupa to develop groups and paintings
with their colours, but the obstruction in the akasha maintains itself
& prevents the efflorescence of the rupadrishti which is waiting,
perfect and richly-equipped, in the sukshma akasha for its hour
of manifestation. The images of the swapna samadhi were once
more of the richer & brighter kind, but the dreams were more
incoherent and ill-remembered. Kamananda is more persistent in
recurrence, but has not yet established continuity. The other parts of
the physical siddhi are heavily obstructed and do not move forward;
to a less extent the power; only knowledge, trikaldrishti and lipi
are moving forward irresistibly.

Jan 7th.

It is indicated that today is a turning-point in the immediate
movement that is being slowly effected. Dasya is already a fact in
all parts of the activity, but it is not yet direct enough; the control
through the Prakriti is felt rather than the direct impulse of the
Purushottama. There must be identification with the Prakriti, pos-
session of it and the sensation of its unimpeded use by the actual
touch of Krishna. The shadow of intellectual consideration and
hesitation over the act or the thought, the shadow of intellectual
determination of the act or thought, the shadow of reflection &
judgment over it when accomplished, or of the accompaniment or
mediation of the intellect in the moment of accomplishment, all
these glints of the lower humanity must be effaced from the move-
ment of the Waters, apasi swasr´in´am. They must be utterly replaced
by unchecked Force in the act and pure Sight in the vision, Sight
& Force simultaneous in their activity and one in their substance,
but not intermixed in their function. Then only will the Dasya be
of the true nature of the relation between the Jiva & the Ishwara.

The condition of the Viceroy answers to the trikaldrishti and
aishwarya, in the circumstances of a rapid improvement. The Turk-
ish affair is still uncertain but in several directions it is following the
line laid down by the Will. In several directions, in Indian affairs, similar signs are evident; but as yet there is nothing decided.

The only work done in the day was a grammatical commentary on the fifth hymn of the Rigveda. Here as in all the works of Knowledge, there is a double stream of action, the intuition which sees the truth and the speculative reason with its groping judgments, imaginations, memories, inferences which works towards truth through error. The script was once more resumed; its first movement was of the old type, perfunctory, hasty & exaggerated in suggestion, although not actually false in statement; its second, accurate in statement and suggestion, but marred by the tejasic response of the mind reading more into the words than the words themselves conveyed. The trikaldrishti, perfect in the earlier part of the day, became a confused and stumbling movement at night. Lipi increases in force constantly, but slowly. In the body the adverse tendency still reigns, and although the aishwarya often acts, it is successful with difficulty & in details unsuccessful. Sleep is still excessive, but the dreams were of a remarkable character; they had for their subject world-spaces and primal movements of the gods. There was a slight admixture of present associations, but not of present ego except as the watcher. The whole took place in Chhayamayi.

The day proved to be a turning-point in the dasya chiefly, not that the necessary change has been effected, but that it has been begun; but otherwise the indication has not been justified.

Jan 8th

The script is now showing a remarkable accuracy of prediction which it shares with the vani. Two of its predictions made this morning for the day have already been fulfilled; “The trikaldrishti today will throw off the doubt and judgment, but not yet the uncertainty left behind by them in the action of the faculty on the intellect,” and “Lipi will justify the prediction.” It had been predicted three days ago in the script that lipi today would perfect itself in the material akasha. This has now been fulfilled. The great remaining defects of the lipi were insufficient spontaneity and an uncertain vividness; it depended for emergence too much on the subjective stimulus & obeyed too much the intellectual suggestion. This difficulty has been
finally surmounted & even when the external mind suggests a word or form of words, the lipi pays no heed, but shapes its own word or sentence. All the other qualities needed, legibility, simultaneity, etc are now coexistent with the spontaneity, (formerly, one quality used to perfect itself at the expense of another,) and vividness though not invariable is now well established in the legible, spontaneous and simultaneous lipi. The legible simultaneity is not usually immediate, it is ordinarily the result of a consecutive appearance of the words; when the whole sentence starts at once into view, it is not always or usually legible. These slight deficiencies are not essential defects, but they have to be dismissed out of the siddhi & the perfection attained preserved and enriched by variety of the lipi-kaushalya. In trikaldrishti intellectual judgment & doubt have received their dismissal & the mind merely waits to see the result. In consequence, it is found that everything that enters the mind, is correct, although not always perfectly placed, & that it is the doubt & impatience of the intellect which is the source of error; for it cannot wait to see the suggestion placed & justified, but either catches at & overstresses it or rejects it by a premature haste of adverse judgment.

(Afternoon)
Trikaldrishti.

Pressure of Turkish Army for a change of ministry & command foreseen & fulfilled. Movements to put Shaukat (& Anwar) in command twice foreseen or felt by vyapti-prakamya & twice fulfilled. Foreseen day before yesterday at night that money would come within two days from R. Fulfilled today, but only Rs 10 came (no data).

The aishwarya is recovering its full force in many instances & has again begun to be fulfilled in detail & repeatedly, but the opposition is still to some extent master of the sthula akasha. The prediction in script is that today Rupa will at last emerge & Power overcome, for the last time, the general obstruction. There was some emergence of Rupa in the morning, but it did not last, nor did it effect the stability of perfect forms. Every time the opposition in the akasha throws itself on the forward movement & seems to

1 MS though
overbear it. At the same time there is a sensible movement of the Para Tapas to throw off the general obstruction and pursue steadily and powerfully the totality of the siddhi. Nirukta has been resumed today and is being well, but slowly done.

Rupa emerged in the afternoon and evening, not perfect, but with greater force than before, so that perfect forms more frequently come out into the sthula akasha and meet the physical eye direct instead of manifesting as formerly mostly in the sukshma akasha or, if in the sthula, then avoiding the gaze and affecting the physical eye through the subtle vision. Still the indirect method and the subtle field continue to be the most common. Crude shapes alone meet the eye full and these are now more usually stable and perfect. Lipi continues to increase on the akash. Power has begun to overcome the general obstruction, but its victory is as yet neither decisive nor assured. There was a great extension of swapna-samadhi at night & especially in the early morning, images of great frequency & perfection occurring & brief continuous scenes frequently manifesting with something, often, of their background. This is the one real difficulty in the swapna-samadhi, the continuous action in a fixed scene. Otherwise the swapna (not dream, but vision-record) is perfect enough & combined touch, hearing & sight are well enough established, though they do not come as a regular circumstance of the siddhi in its present working. The only prediction in script that seemed to be beside the mark was the statement that Ananda this day would again take hold, but even this was true if it is understood of the subjective Ananda and not the Kamananda.

Jan 9th.

Another slight clash seems to be passing away. Today’s telegrams all show the exact working of the Will except with regard to Adrianople, which is the one serious point of attack. Especially the action of the Powers, the situation at Constantinople and the opinion of the Triple Alliance with regard to the Aegean islands are in exact consonance with the line laid down by Will & prakamya vyapti. Today, the action of the vijnana is very much confused owing to the necessity of harmonising finally tejas & tapas with prakasha & dasya in the intellect. Always, the intellect & manas have been
the field of their discord and incompatibility, & though they now agree well enough in the higher ideal or idealised movements (vijnanamaya or vijnana yantrita), the manomaya movements which besiege the system from the external kshetra are still full of the old confusion. Yet the lipi has insisted on today as a period of rapid progression. Up till now, this does not appear.

Afternoon.

The siddhi of the visrishti & freedom from satiety long combated and diminished has momentarily collapsed. Kamananda, although its activity has not disappeared, has at present no hold on the body. The physical siddhi persists in its retrograde motion. The external tapas is now falling away again from the system and is giving place to tapas under control of the dasya-buddhi . . The samadhi has suddenly & without farther difficulty acquired siddhi in the vijnana & saviveka samadhi, corresponding to the savichara and savitarka of the intellectual classification. The thought, whether as perception or vangmaya, maintains itself on the vijnanamay level, the intellect in a state of perfect passivity, only receiving it, even in the deepest swapnasamadhi which amounts to a practical sushupti of the manas & its silence in the mahat. It was because the system was accustomed to fall into sushupti whenever the manas-buddhi became inert, that this siddhi could not formerly be accomplished. Now the mind becomes inert, sushupta, but activity proceeds on the vijnanamaya level on which the Purusha is now jagrat in the body, and that activity is received by the inert intellect. Nevertheless owing to the great inertia of the intellect at the time, the thought is sometimes caught with difficulty, hardly remembered on waking, or, if remembered, then soon afterwards lost to the recollection. The intellect catches it, but does not get a good grasp upon it. The vijnanamay memory must become active, if the thought & vision of samadhi are to be remembered. This higher memory is developing, not swe dame, but on the intellectual plane; things are now remembered permanently without committing them to heart, which formerly would not have been remembered even for a day if they had been even carefully learned by heart—eg the first verse of Bharati’s poem, in Tamil, not a line of which was understood without a laborious consultation of the dictionary. Yet
although an unknown tongue, although no particular attention was
paid to the words or their order everything remains in the mind
even after several days. Formerly even a verse of Latin, English,
Sanskrit carefully studied & committed to memory, would be lost
even in a shorter time. The siddhi of the vijnana samadhi shows
that the Purusha is now rising into the vijnana or preparing to
rise; the manomaya is becoming passive, the vijnanamaya Purusha,
so long secret & veiled by the hiranmaya patra of the buddhi,
is beginning to reveal himself, no longer indirectly, but face to
face with the lower man. An initial siddhi is also preparing in
script communication. As was predicted earlier in the day, the
sahitya-siddhi has extended itself to poetry this evening & the long
obstruction of the poetic faculty is passing away. The epic style has
been recovered and only the dramatic remains. Fluency in all will
come back during the month, spontaneous & immediate perfection
hereafter within these two months . . The lipi is now being freely
& naturally utilised for knowledge; there is no farther need of
any attention to its development or to the farther development of
the vani or script. Only the trikaldrishti & the Power still need
attention (apramattata), and the rupadrishti & samadhi still need
the help of the Will for their wider development or their more
perfect perfection.

The siddhi of the vijnana[na]maya level for the Thought in
samadhi does not extend to the vision; for this reason the dreams
are still intellectual records or attempts to record rather than
the actual vision of things and events, except when the dream
is replaced by vision. Even then it is often savikalpa rather than
sadarsha samadhi. The dreams last night (those remembered)
were again of consecutive & well connected records; this time
the present ego sense was carefully excluded and only once a
present association interfered with the accuracy of the record.
A rapid movement in trikaldrishti is promised and one in rupa
indicated.

Jan 10th.

Secondary utthapana of neck & legs this morning, but not for
long, as the adhogati succeeded in enforcing defect of anima . . The
morning began with a clouded state, in which however Bhasa & Nirukta [proceeded];\(^2\) in both the weariness of adhogati born of difficulty is being allowed to manifest according to its power & extruded. It is no longer able to prevent work or stop its continuity, but it can still limit the length of time which can be devoted to a single work & prevent any difficult work or drudgery being pursued unweariedly from day to day [without]\(^3\) intermission. The vijnana is now sufficiently developed for regular literary work to be resumed, but the physical adhogati & alasya has yet to be extruded. For this condition to be fulfilled, the reaction in the physical siddhi (health, utthapana, ananda) has to be got rid of & its forward march resumed. It is promised that this movement will begin today.

The obstacle to the trikaldrishti from the enemy which consisted in inability to decide on the event, is being removed & those movements which formerly presented themselves falsely and dimly as the event, are now revealed luminously as the thought in the person or the force or tendency moving it. Prakamya of the thoughts of others which so often came & went, in a half-clear half-confused movement, has by this success become clear & luminous & its objective sign in the corresponding movement, pause or \textit{ingita} is so clearly shown that even the intellect cannot doubt the truth and accuracy of the siddhi. There is still confusion as to the time, place & order of circumstance of the event foreseen.

The vani, script, lipi and thought are now being used normally & habitually for the life-purposes. The trikaldrishti and prakamya-vyapti, alone among the instruments of vijnanamaya knowledge, remain to be drawn into this normal movement. Apramattata is no longer necessary for the ordinary movement of the trikaldrishti, but is still necessary for the trikaldrishti of exact time, place and circumstance; in the prakamya-vyapti it is only necessary in order to prevent errors as to the source of the vyapti or the exact relations of the things perceived. This necessity will today be removed. The action of the power is beginning to be normal, although as yet very far from uniformly successful.

\(^2\) MS preceded
\(^3\) MS with
The clear shabdadrishthi, free from adhara, has now definitely begun. The persistent doubt suggested as to the sukshmatwa of the gandhadrishti has now been finally put at rest, for one smell, that of cheese, impossible of material occurrence here has been repeated strongly & persistently in order to dispel the hesitation of the intellect. Rasadrishthi is also extending its field, although not yet as vigorous as the gandhadrishti.

The necessity of apramattata has been removed from all the parts of the vijnanasiddhi except rupadrishti and samadhi; the rest will be accomplished henceforth by the unaided direct action of the Para Shakti. Rupa developed to a certain extent, but still fails to overcome its one remaining difficulty. Swapnasamadhi was absent; the dreams, though clear & consecutive, slightly confused by the mixing of historical names (not thought of for years past,) and one or two present associations with the actual chain of incidents. The present ego was also prominent in the central figure.

A violent struggle over the roga (digestive) began with success, passed through failure and ended again in success. There has been a strong reaction of asiddhi in the roga ending today in an attack of incipient diarrhoea, but the sense of health was persistent throughout & the whole system except the pure bodily part, remained unaffected by the attack. Even the body was free from any loss of strength or ananda; on the contrary the ahaituka ananda was strong not only in the mind but in the prana & the anna. Mukti therefore is almost perfect, although touches of the indriya-nirananda occasionally return.

Jan 11th

Contrary to past experience, trikaldrishti was active from the first this morning & its action had not to be resuscitated after the inaction of sleep; but the trikaldrishti of exact time, place & arrangement was in abeyance owing to the dullness of the vijnana in the physical brain. Lipi is also active from the first, but rupa and power in abeyance.

“Today the dasya in the third degree will be confirmed, the rupadrishti overcome its last obstacle, the samadhi develop in its deficient parts, the secondary utthapana progress. Kamananda will
reassert its control & the shadow that has materialised in the health be removed. The action of the Will will pass over entirely into the fourth chatusthayā, in which Power will establish its control. Trikālārthi will become more widely active."

Afternoon.

The samādhi is developing in its deficient parts, līpi in swapna-samādhi, shabdārthi in jagrāt, but the development is slow and impeded. Swapna-samādhi by flashes is frequent, but still fails to hold the viññānāmay level or to attain continuity. Secondary ut-thapana made slight progress before the prediction was written. The action of the Will is passing away from the rupārthi & the samādhi, but not yet passed. The Power is working on the body & has already diminished the abnormal insistence of the jalavisrāthi & got rid of the stress of the abnormal parthiā visrāthi. There is strong resistance to the fulfilment and the mental parts have been all day in a state of confused action. Nothing clear & decisive yet emerges.

The news today are the reverse of favourable, although in consonance with the trikālārthi, which expected the emergence of a yet stronger trend against Turkey. Aiswaryā in the karma is strongly hampered and to a certain extent baffled.

The subjective ananda took possession in full force this morn-
ing,—a harmony of sūddha, chidgāna, ahaituka, premananda & sahaituka sharirānanda, but the kamananda is resisted and the exclusion of the ananda from adverse events was successfully at-
temted by the enemy.

In the evening perfect forms directly under the eye became numerous and a number of them stable, but these were not of the most lifelike perfection, the defect being insufficiently developed material; the perfection was in the circumstances. Will has relinqu-
ished the rupārthi to the self-action of the Para Prakriti, and is only slightly active for the samādhi. Swapna-samādhi is attempting to develop continuity, but is obliged to have recourse to recur-
rence in order to stimulate the tendency, as the habit of the drishti withdrawing immediately from the thing once it is seen, still pre-
vails. Kamananda chiefly sahaituka was resumed, but not yet with a sustained frequency. Power began to control the bodily siddhi,
but not yet with entire success; the jalavisrishti at last revived its intensity and the relics of sensitiveness to cold with nirananda suddenly recovered intensity. Secondary utthapana, attempted, failed to progress sensibly; but the primary utthapana overcame easily an attempt to break it and continued strongly from about five to after half past eleven (walking all the time) with only a break for meals. Sleep at night fell from 7 or 8 hours to five. Trikaldrishti manifested a striking power and accuracy. The resistance to Power in the karma showed itself in a fresh outbreak of anaikya in the surroundings, known by trikaldrishti before it happened.

Jan 12th.

Today’s telegrams show remarkably the action of the Power & the vyapti-prakamyā, more especially

(1) In the Austro-Italian claim of Janina, Scutari and Prizrend for Albania; (2) in the threatened action of Roumania with regard to the Bulgarian territory; (3) in the firm attitude of the Turks & especially in their refusal to be intimidated by the threat of a naval demonstration; (4) in the comparatively mild action of the Powers with regard to Adrianople. All these are instances of the accurate action of ishita-vyapti-aishwarya in details; but the final result is still a matter of dispute between the siddhi and the asiddhi. An instance of perfect final result occurs today in the Insurance Act matter,—the completion of panels all over Great Britain and the enrolment of 15,000 doctors . . .

Yesterday’s prediction, although not unfulfilled, was pitched in a key too high for the actual sthula fulfilment. The rupadrishhti overcame its last obstacle but not perfectly; dasya in the third degree was confirmed, but not clearly & decisively, as the actions & thoughts are still confused,—it is dasya, but dasya without clearness about the command; samadhi developed in its deficient parts, slightly; secondary utthapana progressed in easy positions and for the rest more in the sukshma than the sthula; Kamananda reasserted itself rather than its control; the shadow in the health has been removed in the sukshma, but only diminished and almost extruded in the sthula, but it still clings; trikaldrishti has widened its activity & produced some striking results, but still works amid the suggestions.
of the intellectuality; power has relinquished the third chatusthaya & centred on the fourth, but some habitual action of will still lingers in the Samadhi. This high pitch, however, is intended, as these predictions are programmes or pratijnas rather than mere prediction, & the fulfilment has to rise to the pitch of the prediction, not the prediction fall to the pitch of the sthula fulfilment. 4

“Today the tertiary dasya will become decisive and prepare to pass into the fourth degree or supreme dasya; rupadrishthi & samadhi farther progress on yesterday’s lines; trikaldrishti become at once great (mahat) and striking. Health will farther extrude the relics of the old symptomatic survivals, subject to some farther struggle; secondary utthapana declare itself more clearly; kamananda overcome the obstacles still presented to it; the general bodily power greatly increase. Aishwarya after making itself felt in the rest of the physical siddhi, will throw itself on the saundarya and the karma, which will begin to develop larger proportions. But the chief movement will be the final emergence and justification of the Mahakali element in its shuddha Asuric bhava."

Afternoon

The tertiary dasya has become decisive, trikaldrishti continues to produce striking results, but its mahattwa is faulty when applied by the Mahakali movement. In samadhi the clearness, consecutiveness & frequency of lipi increases & the tendency to continuity continues, but today the Will was not used. The struggle in the health continues; jalavisrishti is virulent, the semi-tejasic parthiva visrishti dominated, but not yet entirely dislodged in tendency; other symptoms also cling. The Mahakali element has emerged but is not yet justified. Instances of opposition to the karma have abounded today, even in the midst of the preparation for a larger activity of the karma. Secondary utthapana has occurred, but is not more advanced than yesterday, although it is felt that it is gathering strength.

Final. 13th morning.

The tertiary dasya is complete, except for occasional attempts to revolt of the asatya dwesha; the supreme dasya is preparing. Rupadrishthi failed to progress in the direction of stable perfect

4 Here the manuscript has closing quotation marks. —Ed.
forms, but developed in the less perfect forms, not however decisively; samadhi proceeded no farther than in the afternoon. Trikaldrishti continues to be striking & has a wide range, but is variable & uncertain in its action. In health the movement of extrusion progressed with great difficulty, & although it seems to have succeeded, it is too early as yet to estimate the progress. Secondary utthapana progresses & the bodily power (tejo balam mahattwam pravrittih) greatly increases; but the kamananda did not overcome its obstacles, but rather manifested itself occasionally, especially in the sukshma body as madira, in spite of them. Aishwarya is applying itself more consistently to karma and saundarya. The Mahakali action is apparently established & sanctioned, but not yet justified by results.

Jan 13th.

Dasya is of four degrees,—first, the dasya of the servant who obeys of his own free will or for a hire and can always refuse obedience; secondly, the dasya of the lover who might disobey, but does not & in a way cannot; thirdly, the dasya of the yantra, which cannot disobey, but is worked mechanically through an intermediate impulsion of Prakriti; fourthly, the dasya of the supreme degree which obeys helplessly the direct impulse of the Master and combines in itself, yet exceeds, the other three. It is this dasya which has to become the normal form of activity from today. It will be the dasya of the Mahakali bhava in the Mahasaraswati Prakriti. Although not yet justified by results,—because of the old sanskara in the external nature which always reacted successfully against the asuddha Asuric force in the adhara,—it is sanctioned, established and compelled to work, & will now begin to be justified by results.

Programme.—The trikaldrishti to widen still farther previous to getting rid of its variability & uncertainty, rupadrishthi & samadhi to overcome the remnants of the obstacle still opposed to them, aishwarya to generalise success; health, secondary utthapana & kamananda to continue their struggle & prevail.

Record of domestic trikaldrishti.

11th Perception that none would return till ten or just before. All returned on the stroke of ten. Combined lipi &
perception, that a dispute would take place, before they returned. Confirmed by the event. Perception, that the mad boy was much improved & almost well. Confirmed by event. Perception that the dog was going out with the intention of not returning for the night—Confirmed by the event.

12th Trikaldriishti, (previous,) of a relapse in the mad patient. Confirmed . . d[jitt]o that he had been violent,—prakamya. Confirmed. D[jitt]o in the evening, that he had been worse, but there was some reason for a modified satisfaction. Confirmed; he had shown reason, in spite of relapse. Prakamya that B [Bijoy] had partly failed & partly succeeded in his experiment at cards. Confirmed . . Perception early in the evening that the dog would spend the night outside . . subsequent perception that it would manage to get out just before meals. Confirmed.

Sortilege देविक्षित्रभो देवी च महीरा त्यां महमादपने. Various ananda & madiramaya physical ananda, attended by the ananda-darshana. Fulfilled during the day in part, to be perfectly fulfilled by progressive increase of the force of the chitra ratih and the madira.

A sparrow on the ridge of the opposite roof, about to fly off; perception that it would remain for some time; confirmed: the same movement repeated and confirmed: the bird seemingly settled down; knowledge that it would fly off almost immediately; confirmed.

A moth on the wall; perception of the reasons for its movements, the pranic tendencies & the motion of the mentality, which is sensational, tamasic, obstinate in instinctive memory, tamasically attached to particular & limited experiences, slow in experiment, inconstant in the intentions which precede an action or resolution, but often tenaciously intent on the action when instituted or the resolution when formed; the thought merely a half-formalised reflection of the sensations; the jiva, however, thinks behind and is manomaya of the lower order. Several of the perceptions were confirmed by experiment, eg reason for closing or opening the wings, one for warmth & the other for acceptance of the sun, etc.

In Sanscrit अप्यनानान्, the meaning unknown. Without reflection, prerana suggested “curse”; the commentary consulted gave दृश्यन्त, but Apte gives also “cursing”.

www.holybooks.com
Such trikaldrishtis were constant throughout the morning and usually accurate, even when received without previous sanyama or suggested to the intellect. The exceptions resolve themselves (1) to exaggerated tapas & stress on true perceptions, & (2) unfulfilled volitions. For example, a kite flying, a particular line of change of flight was suggested & the tapas laid upon it, another occurred to the intellect, but received scant attention; the kite followed, first, the second line & then the first. Mere speculative possibility seems to have disappeared from the trikaldrishti and to be replaced by actuality & actual possibilities (eg actual intentions, tendencies) & by the volition of possibilities. The latter source of anritam has to be removed by the rejection of volitions that are not to be fulfilled & the fulfilment of tajasa trikaldrishti and this process has already commenced. Lipi, rupa, [vyapti-prakamya] are being used for the trikaldrishti swiftly & abundantly as well as normally, & the fertility of the trikaldrishti & fertility of the lipi promised in lipi have commenced. The habitual correctness of the mahati trikaldrishti is now assured and error is growing exceptional.

Bhasha.

कोलेन्यक. Meaning not known. By intuition “dog”.

वराटक. Prerana “berry”. Commentary gives कपड़क, dictionary either “cowrie” or “lotus seed-vessel”; probably the latter meaning.

The power of perceiving beforehand, while reading, what is immediately to follow, even without sufficient data, yet accurately, is also reviving & manifesting itself more decisively than before. Today the “Kadambari” was read, no longer with the ordinary (intellectually intuitive) linguistic faculties at their highest working, but with these faculties not so swift, yet aided by the extraordinary or vijnanamaya Bhashashakti, especially prerana, viveka & sahajadrishti. Moreover these three faculties have not only shown no diminution by their long inaction of many months in this field, but emerge with a clearer and more decisive action.

Samadhi, today, reenriched itself with drishti of the spoken shabda, ie to say human voices & words reaching the ear as if overheard and, in addition, memory of the thing seen reemerges. Three
shabdadrishis were distinct, a female voice saying “এথনি পরিকার করেো?”, another saying simultaneously in quite another scene “সে ত রাজীব হল!” and Ramaswamy’s voice, saying “I don’t know what”; a fourth, Ramaswamy’s voice again, said something which did not reach the supta ear clearly. Things seen were a darbar hall, the interior of an Indian house, a door in a river-steamer, a long railway-saloon, several figures; the rest are forgotten. Tamasic nidra could not be extruded from the swapna samadhi, which had finally to be abandoned.

In the trikaldrishti knowledge of the past, of past lives, of feelings, thoughts & motives of people in the past is becoming normally active. It has been suggested that Aishwarya should be renounced in the physical siddhi except saundarya; but owing to the persistence of physical asiddhi,—tejas in the assimilative process, virulent jalavisrishti, inhibition of kamananda (except in the form of madira and sukshma sahaituka kamananda), etc,—the mental shakti & its anucharas are unwilling to accept this suggestion as anything but a false & premature movement of withdrawal. The personality of the Master, long held back, remanifests in script.

Rupadrishhti still develops slowly,—a little more stability in the Akashic forms, the appearance of a momentarily stable perfect rupa in the daylight. The dreams at night were all about the relations in other lives with a single person and his surroundings, but the associations of the present were more insistent than they have been for some time past and confused the record. In swapna samadhi a certain initial continuity seems to have been established.

There is a strong attack of asiddhi in the karma. Prakamyavyapti with regard to the results of the cricket match were correct, but not very correct; about the mad patient entirely wrong. In both cases tejas tapas of volition interfered with the truth. The atmosphere of the house is full of the struggle and the opposition to the dharma of the satyayuga of which the assistants of the satyayuga are the chief instruments owing to their clinging to their egoism and small selfishnesses. The struggle in the body centres about the tejas in the assimilation which seeks to prolong its abnormal activity.
Jan 14th.

There is a growing passivity in the intelligence and the physical struggle is being made the instrument for the renunciation of intellectual judgment, the remnants of which are at present the chief obstacle to the possession of the whole system by the vijnana. Trikālādṛishti & jnana are taking possession of the script, the vanis, the thought perceptions as well as the vangmaya thought, but the process cannot be completed owing to the excessive tapas, tejasic or tamasic, on the thing seen which converts a truth into a falsehood by overstressing it & so overprolonging its applicability in time or place or exaggerating its results. The perception of the locality of things or people not seen or their personality or nature is becoming stronger, but not yet sufficiently precise; e.g. a thing not found, it is at once known whether it is in the room or not and vaguely indicated that it is in such a place or in a place of such and such a nature,—anyone knocking at the door, it is indicated who is at the door or else what class of person; in the morning, it is invariably indicated whether the girl is coming immediately, a little later or much later etc. If once the excess of tapas is removed, there is no reason why intellectual infallibility should not be established; for then the other obstacle of uncertainty will have nothing on which to feed its existence. The fulfilment of the powers of Knowledge & the accomplishment of the divine Satyam are therefore certain, although the time of fulfilment is not yet revealed; for after the general working of the power is established without defect, there will still remain its perfect application to Bhasha, Nirukta, Itihasa, Darshana, Kala, Dravyajnana etc. The powers of Force, Kriyāshakti, are less surely developed, although they are growing, & their success in particular instances is slow, often uncertain, in many things inoperative, especially in the objective world, but also in the subjective. It is this difficulty & opposition which has to be attacked in its centre by applying the Powers to the karma and to objective happenings and movements.

In yesterday’s programme, only the first item was thoroughly fulfilled. In the second, there was a progress; the samadhi overcame the obstacle to continuity, but the continuity attained was slight; the rupadrishti succeeded only in the barest possible manner, the
momentary stability of a perfect form, the longer stability of a form developed but not sufficient in material substance. Aishwarya began the movement towards generalising success, by trying to get rid of such willings as are not consonant with the central movement of the Supreme Will, but the process is not yet complete; the struggle continued in health, utthapana & kamananda, but they did not prevail, except in effecting an obscure, moderate & preparatory success & in strengthening the force of their sukshma vaja or subtle material substance, of which, however, shansa, the actual bringing out into material being has not yet been realised. Chitraratha and Madira still increase.

Programme—Trikaldrishti to widen still farther and begin to get rid of variability and uncertainty; rupadrishti & samadhi to overcome the remnants of the obstacle opposed to them, more potently; aishwarya to generalise success; kamananda to come forward in the sthula; health & secondary utthapana to continue their struggle & grow in strength.

The pitch of the programme has been slightly lowered in order to come into better conformity with the trikaldrishti; but this is preparatory to a rise.

Sortilege. एकतमनु जरशुवरस्तम्याधिन्दुव्योदनासैदिन -
हरिप्रियस्य: पिशिवाज्ञन इव विकुलद्रेण; पिशिवाज्ञानिः स्वस्तिप्रेषण तत्कले
समृद्धिमिव भ्रमन। A description of the self-indulgent Asura in S. [Saurin] which is in its nature a jarat shabara & still remains under the tree of the Yoga, pishitarthi, in search of material enjoyments and indulgences. It is his influence & vyapti which prevents the other two from advancing in their final purification. The sortilege, however, indicates that this is to be मूढ़तमिव, for a short time only.

On the other hand, the purification in B [Bijoy] on the main point seems to be all but complete, even in the karmadeha,—it has yet to be seen whether the circumferent swabhava is pure; the passive egoism remains.

It has been declared in the script that the Lipi must now be entirely left to itself to manifest or not manifest, free even from the stimulus of tapas in the attention. Movements have begun for the repossession of the body by the kamananda and for the combined action of aishwarya and trikaldrishti.
The main exception to the chitraratha is the discomfort of heat & cold, but for the last three days this defect has been in process of extrusion. The discomfort touches but is easily extruded by substituting the ananda of the discomfort. Discomfort of roga still exists when it is yielded to, but is attended always with ananda of the sensation or else with ananda of the discomfort, unless the opposite, nirananda, is encouraged. Discomfort of acute pain is still the one thing not yet really mastered by the Ananda, but that defect has been purposely left for gradual & later extrusion; even this discomfort is up to a certain point attended by ananda or replaced by ananda & overcomes, usually, only on the first sudden & unexpected attack when the Chit in the system is off its guard. There is also discomfort of adverse result & opposition but this too is being rapidly replaced by the ananda. There is a vague remnant of sanskara of discomfort in the vishayananda, but it is purely a mental sanskara & does not usually negative, though it often impairs the ananda of the physical indriya, eg there is a sensation of shrinking in the karmadeha’s mental sanskara from the first touch of very cold water, but the moment the water reaches the skin, ananda and not nirananda is the result. Kamananda this morning is extending itself as madiramay ananda and entering into the raudra and other anandas; as yet it does not hold the body, but affects it with a prolonged sparsha. The weakness of the kamachakra is the chief obstacle.

Dasya has already passed into the fourth degree, but there is a lingering sanskara of the tertiary dasya in some of the physical, mental & emotional activities—the stamp of the Master is not yet everywhere. But the lipi which has recently been promising the “death of the difficulties”, is being amply fulfilled in the three first chatusthayas and in the sixth and seventh. The increase of dasya is attended by an increase of prakasha and sraddha; but the doubt holds as to the time and the extent of the siddhi. If this difficulty is overcome, the first & second chatusthayas will attain their ultimate completeness, & only perfection of intensity will remain to be accomplished.

Prediction in lipi about K.G.G, place & event given, but no
exact time, also about S.N.B, B.N.S & P.M, all soon.\(^6\)

Afternoon

Several predictions have followed, but as they are experimental in their nature, they need not be recorded. Samadhi has been antardrishta jagrat with lipi and thought. There was proof of an increased bodily force and pravritti, but not yet of sufficient dharanasamarthym (dhriti, sthairyam) of a single occupation. Yet it is alleged that [two of the]\(^7\) essential requisites demanded before the literary work could be allowed to recommence, play of vijnana and sufficient primary utthapana both in body & brain, are already accomplished, though they have to be confirmed in the karma; but the third, — equipment, — is yet wanting. Aishwarya is generalising itself slowly, but has not yet got rid of the mere tapasic volition which can create a force or tendency, but not produce the required effect. The perfect aishwarya either produces an immediate particular effect, (that being the limit of the thing willed), or a final result, without regard to the immediate or intermediate steps, or produces a final result through or subsequent to certain particular steps which may constitute the whole or a part of the apparent nimitta (immediate karana) of the final effect (karya). The first form is already strong and frequent, the second works, but with great slowness and infrequency, the third is yet rare & undeveloped. Trikaldrishti is effecting its siddhi with regard (1) to place, (2) to ordinarily unforeseeable effect. Rupadrishti is developing, in the daylight, long stability of images complete and incomplete and variety of image, (tejas,—chhaya,—chhayamay, tejomay & agnimaya varna). Script is free and active. Consideration of kartavyam akartavyam is finally disappearing, in its remnants, out of the supreme dasya.

In the evening the rupadrishti began to develop variety of perfect forms, but did not advance in stability. Swapnasamadhi was scanty, but the tendency towards continuity persevered in its struggle with the escaping drishti. Sleep which has recently been

\(^6\) The last three sets of initials are probably those of Surendra Nath Banerjea, Baikuntha Nath Sen and Pherozshah Mehta, all prominent leaders of the Moderate party; K.G.G. may be the partly inverted initials of Gopal Krishna Gokale, another prominent Moderate. — Ed.

\(^7\) MS of the two
excessive, fell back to its normal level of six to seven hours. Kamananda, throughout the day, frequent & increasing in its hold on the body, has not yet recovered its tendency to continuity.

Jan 15th.

Yesterday's programme was amply fulfilled in the trikaldrishti and kamananda; rupadrishthi & samadhi advanced very little; aishwarya began to generalise itself; secondary utthapana increased in innate force but was less in duration; arohya continued with some success, but not complete success its struggle to exclude the symptomatic touches. Tejas in the assimilation is still the principal defect.

Programme—Trikaldrishti to widen entirely and get rid of variability, ie of its moments of reversion to the old activity of the intelligence, but not yet of uncertainty. Aishwarya to generalise its successful movement. Rupadrishthi and samadhi to prevail in their struggle. Kamananda to triumph. Secondary utthapana to generalise itself in its minor movement. Health to persevere in its successful struggle.

The general subjective ananda, after the test of several days experience, may be now considered permanently established & continuous in its shuddha, ahaituka and chidghana parts, about to be continuous in its prema part. In the sharira the sahaituka is established, although as yet without intensity or firm continuity, the ahaituka awaits the triumphant event of the kamananda. It exists, but is infrequent. The bhukti is nearing fulfilment.

Trikaldrishti is now, mainly, defective in audacity; the mind refuses to admit improbabilities or things not expected to happen. The movement is now towards the removal of this defect, which founds its strength upon past experience, by giving the opposite experience. Eg yesterday, there was the lipi “Journalism” & “Les journalistes”; the mind refused to admit any possible immediate application, but the same evening P [Parthasarathi] came with the proposal of a weekly or biweekly sheet. Today the trikaldrishti shows a general completeness of stuff, ie every suggestion is shown to be correct in itself, but there is confusion in the mental use of the stuff, ie in fixing the suggestion to its correct particular of person,
time & place. These two movements, firm establishment of ahaïtuka kamananda and full mahattwa of the trikālārāṣṭhi have to be effected and confirmed today & accompanied the one by the development of other ahaïtuka shariranandas, the other by the clearing away of the accompanying confusion.

Lipi, rupa & samadhi, the three allied movements necessary to visvagati have to be delivered from the obstruction surrounding their activity in the akasha. These three movements constitute the central part of today’s programme.

Afternoon

In the morning trikālārāṣṭhi passed rapidly through several stages, applying [itself] correctly with speed to a series of incidents, foreseeing a series of a single incident repeated beforehand, without any data and contrary to experience, assembling a mass of perceptions and arranging them with more or less accuracy. The process still continues. Aishwarya generalised success, but the success which comes slowly & with some effort, after some resistance. Rupārāṣṭhi was strengthened and kept in the akasha forms perfect in all respects except a certain tenuity of material & a certain aloofness from the front layer of the sthūla akasha. The strongest movements were in samadhi and kamananda. In the antardrishta jagrat samadhi lipi organised itself & stable crude rupa, perfect in outline, completeness, clearness, stability,—in all but steadiness of material & vividness,—was manifested, as well as crude rupa deficient only in firm vividness. Lipi is not yet sure of stability. In the swapna samadhi images abounded and some showed continuity or both combination & continuity, eg a shaggy dog, lean & miserable-looking, trotting up to a wall & smelling it, the wall returning & remaining after eclipse, crude,—the sound of a small silver piece falling & a stout man near a window looking for it & picking it up, the man becoming vague after eclipse, but the window remaining vivid. In both the rupa & lipi have today become organised for use, especially for trikālārāṣṭhi & the samadhi generally for jnana & trikālārāṣṭhi. In the antardrishta symbolic colours are again returning, eg S’s [aura], green brilliant, blue black

8 MS its
tending to be blue, but often dulled into grey, uncertain suffusion of red from a blood-red sun; also, symbolic images, eg, in the same connection an unhatched egg replaced by a crown. Kamananda was entirely triumphant flooding the sukshma deha, seizing the sukshma parts of the body & touching its sthula parts with an intenser ananda than has ever been experienced before, equal to the first movements of the actual maithuna ananda. In the morning this came repeatedly, thrice, with hardly any interval and was each time continued for some time, & in the afternoon the ananda has returned and although, not so intense, is more persistent. There are also touches of ahaituka rudrananda and ahaituka tivra, negative vaidyuta & vishaya. The ananda now comes & continues even when the mind is otherwise occupied.

Today’s telegrams. The Viceroy’s health almost answered to the Aishwarya as within the first fortnight of [January], the time fixed, he was able to go out for a drive; but the premature exertion has brought back a return of restlessness at night & neuritis in the arm. The trikaldrishti is fulfilled in both the favourable & adverse movements, only the Aishwarya is slightly baffled. As foreseen, there is no result from the two witnesses summoned. Again, as foreseen to be willed by the Ishwara only recently, there have been fresh aviation accidents, more storms & wrecks and a serious railway accident all in the news of a single day; all occurred in England, but this was not foreseen. The revolt of Nature against machinery continues.

The stage now reached by the trikaldrishti is one in which sraddha, blind faith, is demanded in all suggestions which are not corrected by the viveka. The mind is to question nothing & correct nothing. If this is done, then the faith will be justified by absolute truth being established. A similar faith is demanded for the fulfilment of aishwarya, ishita, vyapti, although the full justification will be a little slower in coming. In fact, this movement of faith has to cover the whole range of the vijnanamaya activity.

The first results of this movement of sraddha were adverse, as the enemy who now fight from a distance only in these matters,
sent in strong & persistent volitions of possibility like a cloud of arrows to confuse the knowledge & destroy the faith; afterwards the movement was righted with the result that the whole vijnana is now acting normally & uninterruptedly & variability in the instruments of knowledge & power need no longer be feared, except the minor variability of greater or less force & perfection. Trikaldrishti & aishwarya do not yet act with absolute perfection or unerring success, for volition of possibility is still active & exact time, place & circumstance are still the exception rather than the rule in both power & objective knowledge. The uncertainty therefore remains; but normally the trikaldrishti is roughly correct or often exactly correct even as regards place and circumstance, less so as regards time & order, & the fulfilment, normal or striking, slow or rapid, of the power is now more the normal movement than its entire or final failure.

Arogya is steadily reestablishing itself, but there are still one or two serious defects. The slow therapeutic power works except in particular cases, the swift therapeutic power which showed itself once or twice at an earlier stage, is conspicuously absent except in very minor movements or in cases in which little interest is taken or little power is used, for these the enemy do not think it worth while to oppose.

Rupa in the evening did not progress beyond its previous point of attainment, except in shabdadrishti where there was drishti of a tea canister and the clear sound of setting it down. Secondary utthapana was applied to the neck, back and legs and in all positions showed a great force of mahima, anima and laghima, but the anima fails and with it the mahima after a space of time varying from two to five minutes. Laghima is sufficient, if not contradicted by the defect of anima. The failure of mahima is due, essentially, to an element of physical tapas (muscular strain) which still adheres to the action; if this were not present, the insistence of defective anima would not be so powerful. Dream was for the first time entirely discharged of present ego, present associations and present images, except for one attempt to identify present custom in eating with the manners presented in the dream; there was, however, this deficiency that the dream consciousness followed the internal movements of
the central figure—one not myself—and only observed the external movements of others. This defect has to be remedied. Kamananda is persistent in the less intense form, but not always present.

Secondary utthapana and kamananda have entirely fulfilled the programme, also health; samadhi has prevailed, except in bringing about long continuity in the swapna and developed rupa in the antardrishta; rupadrishti has had only a slight success. Aishwarya and trikaldrishti have followed the lines laid down for them, but the movement is not yet complete.

Jan 16th.

Programme
1. Trikaldrishti has now to replace entirely the action of the intelligence; that is, nothing has to be done by judgment, logical reason, speculative imagination, sanskara born of memory; but even the most trifling and unimportant things have to be known by vijnana agencies. Where vijnana does not give light, there has to be no judgment, conclusion or even speculation. Aishwarya has to be utilised only where there is perception of the Divine Will behind; it has no longer to reflect in any way the movements of the manomaya Purusha or the manomaya Shakti. Lipi has to get rid of the obstacle in the Akasha which prevents it from manifesting with a successful and easy vividness. Rupa & Samadhi have to continue their struggle and progressively prevail. 2. Kamananda has now to move towards continuity of the more intense form and entire continuity of the less intense. Arogya has to expel the symptomatic survivals in the assimilation and kamachakra. Secondary utthapana, established in its generalised activity, has to increase the force of pure mahima and of anima. Saundarya must still struggle with its obstacle without as yet prevailing and the Aishwarya with the obstacle to the equipment.

Letter from Biren showing an improved mental state and a vague dawning of vyapti & speculative trikaldrishti. An instance of success in subjective-objective in its subtler or more subjective parts. The power of the aishwarya-vyapti in the subjective-objective field is now considerable and daily successful, but its compulsion on the objective action is still meagre. Today, as was foreseen, there is a
fresh instance of train collision in England and the perception that the Viceroy’s health would not be seriously affected, is justified.

The morning’s siddhi has been noted for the final separation of the volition of possibility from the perception of actuality, of kratu from ketu. All such volitions are at once set aside by vivek acting on the mind as unreliable, not trikaldrishti; the only difficulty left is that the perception itself, of an actual intention or tendency, is sometimes overstressed into an apparent perception of eventuality, but this is in course of being corrected. As a result, error is now very slight and rapidly corrected, usually before it is falsified by the event. Many true perceptions are still doubted or not sufficiently stressed for fear of error; but this defect can be remedied effectually as soon as the habit of over-stress itself is expelled. Aishwarya also is getting rid of false tapas and, when exercised, produces its effect. Lipi is strong in the sthula akash as chitralipi, but still uncertain as akashalipi.

Dasya of the fourth degree is now dominant; whenever the attention of the Chit follows the action, it is aware of the turiya dasyabuddhi,—whether in motion, speech, emotion or thought, except for a slight intermixture of merely Prakritic impulse in the thinking powers. This is true even of such involuntary motions as the closing or blinking of the eyelids, nimishannapi or the direction of the gaze. The sixth or Brahma chatusthaya is similarly established; the general (samena samavasthita) sarvam anantam jnanam anandam Brahma is seen everywhere, when the attention is awake. The nitya anusmaran is not established as yet, nor can it be established unless there is the capacity of multiple sanyama, ie naturally and normally dividing the tapas of the Chit between several things at a time. Kamananda tends to return dully or intensely with the smarana, but has not yesterday’s continuity, force and spontaneity. This afternoon it will recover its hold.

Afternoon

Kamananda has lasted through the afternoon, with slight intermissions, sometimes slight, sometimes intense, but more in the subtle than in the gross body. Secondary utthapana of the neck confirmed yesterday’s fulfilment as to time and force and added a purer mahima, but one of less duration; applied to one leg only,
perfect in laghima & almost perfect in pure mahima, it lasted for as long as one could count deliberately two thousand. Sthapatyalipi shows a movement of remanifestation. Samadhi was barren of any progress, but did not go backward.

In the evening Rupadrishti developed in the crudest forms a greater variety and completeness. Samadhi at night was barren & the dreams confused in record. Aishwarya showed a considerable increase in force and each exercise of will was successful. Vijnana became active, though not yet well-harmonised, in its various parts and lipi more in possession of the akasha, though still obliged to use an effort in order to manifest; there was a perfect intelligibility and appositeness in most of the lipis and a full play of interpretation of the various objective materials of trikaldrishti. The subjective powers of knowledge have passed their period of effort and difficulty; only the objective material is still unable to deploy itself easily & richly in the material akasha. Power is beginning to accomplish its firm mastery, although still hampered in the matter of equipment and slow in other provinces. There is fresh proof of its efficacy in karma.

Jan 17th.

The final development of Aishwarya has been definitely undertaken. Aishwarya in effect is of three kinds,—1, that which creates a tendency or produces an effect, but does not eventually or at all succeed; 2, that which produces the final effect, but slowly, with difficulty, against an effective resistance; 3, that which produces the final effect not as a combatant, but victoriously as a master. The first has to be eliminated from the siddhi henceforth; the second to be preserved for a time, the third to be continually strengthened until it replaces all the others.

Programme.

Yesterday’s programme has to be completed; trikaldrishti has to get rid of the remnants of false stress which constitute now its one remaining positive defect; aishwarya to illumine itself with knowledge of the Divine Will,—for up till now it has only got rid of the urgency which impelled it to employ itself blindly and merely for exercise. It has also to confirm the movement excluding ineffectual
applications. Lipi has attained to successful vividness; it has still to attain to easy vividness. Rupa & Samadhi must continue their struggle. Kamananda successful in the afternoon was slight and rare in the evening; it must expel the hesitation in the body which prevents it from domiciling itself in the sthula. Arogya, although much stronger, does not yet exclude the return of the symptoms which it has expelled; these affections must now be compelled to disappear. Secondary utthapana, which maintained in the afternoon and at night its efficiency except for a stronger attack of adhogati and defective anima, must increase the force of pure mahima in order to combat this deficiency.

The matter of the equipment has now been handed over to the passive Ishita; it is the one point of almost complete unsuccess which still prevents faith in the adeshasiddhi from attaining to self-confidence and fullness,—although the failure of the saundarya to emerge is a powerful auxiliary obstacle.

The news today confirms the trikaldrishti, especially vyapti-prakamya in a striking fashion—eg the hesitations in Constantinople, the fears of the Ministers about disruption and defeat, the want of real unanimity among the Powers, the easier state, yet continuance, of the Roumanian difficulty, fresh wrecks etc. One unexpected event is the murder at Comilla. The old trikaldrishti & sortilege about the frequency of wrecks is confirmed by today’s telegram giving the number lost in 1912 as 228 (82 British). The working of the aishwarya-vyapti-ishita in great matters is also very evident in the movement of the subjectivity everywhere and to a great extent in the movement of the subjective objectivity, but it is still very deficient in the objective results,—effective, but only partially effective. The basis of the adeshasiddhi & karmasiddhi is being erected; but it is not as yet sufficiently firm or sufficiently wide.

A larger movement of the vijnanasiddhi is commencing today, in which it will be unnecessary to note every minute advance. Perfect passivity is its basis; brihat, vast abundance will be its field; satyam its atmosphere; ritam its line of definiteness. Mechanical perfection will spontaneously emerge in its apas. Already the lipi has commenced; to compass abundance is its first action and to

www.holybooks.com
that end it is compelling the sthula akasha to admit lipi wherever the eyes are cast,—legible lipi, pale at first, then pale chequered by intense, finally, the intense. Rupa this morning has followed up the movement of the night in crude forms. In the afternoon it has remanifested frequent chitra rupa and sthapatyaa rupa; both of these forms have at once taken possession of their old perfection in single figures, groups and landscapes. Lipi in the afternoon has attained to easy vividness, although there is still a certain difficulty and malaise in its movement, coming and staying, though much less in the chitra & sthapatyaa than in akasha lipi. In trikaaldrishti the movement is towards the perfect correctness even of all the random external suggestions unverified by the viveka, but this is still subject to a certain inaccuracy of exact detail.

Rupa & swapna samadhi are now moving in the direction, first, of abundance, secondly, of the recovery of the old activities that have been lost by the action of the Vritras, thirdly, of the perfection of their materials. Dream at night was frequently confused. The physical siddhi suffered a slight reaction.

January 18th.

Trikaldrishti, that there would be news of an arrest today in Comilla; confirmed, but there were two arrests. Also, another wreck. Aishwarya successful & prakamya-vyapti justified in the attitude of the Triple Alliance, especially Italy, and the dropping of the Naval Demonstration.

Today has been a day of attack by the enemy and difficult survival of the gains of the siddhi, lipi maintaining itself, but manifesting with difficulty in the akash, trikaaldrishti chequered by false suggestion and aishwarya successfully resisted and almost entirely overcome. Rupadrishiti & samadhi have made no advance. The cause of the difficulty & the opportunity of the attack has been the necessity of finally establishing the harmony of pravritti with nivritti, tapas & tejas with shanti & dasya. The habit of the Na-ture acquired by long practice in the sadhana has been to insist on shanti, udasinata, & passivity as the condition of progress. It is now necessary to overlay & fill the shanti, udasinata, & passivity, the Maheshwari basis, with an active & even violent
& rapid tapas of Mahakali-Mahasaraswati; but the habitual reaction of failure caused by the irruption of false tejas & false tapas has first to be eliminated before the harmonisation can be managed.

Since the above was written, prediction in the script has been justified; “Successful struggle in vijnana during the rest of the day, triumph in the evening. Rupa develops brihat with difficult[y], not yet perfection except in single figures.” The struggle in the afternoon was successful in maintaining the minimum gains of the siddhi; in the evening the siddhi has triumphed, restored the akashalipi to its fullness, although it is still laboured, brought aishwarya forward, without as yet being able to get rid of ineffective aishwarya, developed a fair abundance of rupas (chitra, shhapatiya, akasha) but with perfection & stability in the akasha only for some crude forms & some crude dense & crude developed,—these, however, are entirely perfect,—and began to justify tejas & tapas in their results. It is now increasingly evident that the condition of success in the future is the broad and general activity of the vijnana including in itself all the members of the third chatusthaya and not any longer the separate development of each member by itself. Nothing fresh in the evening and night; activity of vijnana, rupadrishti, samadhi, but no definite progress.

Jan 19th.

This morning script became profuse and intimate and the old siddhis of aitihya lipi & janmantara drishti resumed their activity. The latter has never been entirely suspended, but it will now work normally. Trikaldrishti again justified by the fresh wreck and aishwarya by the election of Poincaré as Republican Candidate; trikaldrishti (vyapti-prakamya) by the release on bail of the Comilla suspect.

The main movement of trikaldrishti today is towards complete independence from its intellectual couch of data. Formerly its highest habitual movement was to contradict the deduction from data & the selection from possibilities based on the data, or to surpass

10 The script of January [1913] is reproduced on pages 1292–1300. —Ed.
them & dispense with them while still regarding them as modifying or attendant considerations, but the present movement acts without any eye in the data, sometimes without even an eye on the object, in the absolute self-existence (sat, satya) of the truth. Kamananda has been continuous in varying degrees of intensity from before noon till now (towards 5 o’clock in the afternoon) and promises to remain continuous throughout the day. The tendency of emergence in rupadrṣṭi is strong, but the habitual obstruction in the akasha does not yield finally except for chitra & sthapatyā.

Kamananda remained continuous as a tendency throughout the evening, but lost hold of the body, nor could rupadrṣṭi successfully emerge, owing to a return of the old struggle between the exaggerations of uninformed tejas in the mentality & the despacency & unfaith caused by asatya. Dream & swapna samadhi maintained their gains, but did not advance.

Jan 20th

It would seem today as if the exaggerated tejas of mentality were finally dismissed from action as a result of last night’s repetition of the old form of purificatory disturbance and crisis. Sthapatyā & chitra rupa now manifest with considerable perfection and frequency. There is a movement towards the expulsion of the fragmentary recurrence of discomfort in particular sights, sounds, touches, smells which mars the perfection of the vishayananda (bhoga) in the indriyas. Manas in physical prana & manas in psychical prana may still keep recurrences of discomfort for a time, so that discomfort of physical pain and discomfort of apiya event may for a while survive; but there is no farther justification for the persistence of discomfort of apiya vishaya to the senses. The day was mainly occupied with a struggle to enforce the freedom of the vijnana in all its parts. Rupa in chitra and sthapatyā became very abundant; aiswarya increased remarkably in force, & trikāldrṣṭi showed a tendency towards minute exactness. Kamananda was continuous in tendency, comparatively frequent in intensity, persistently recurrent in slighter manifestation. Arogya is increasing in force, but not yet victories over its obstacle; utthapana variable.
Jan 21st

Aishwarya-vyapti once more effective in subjective objectivity with a striking exactness; for the Turkish draft reply to the Note is couched in exactly the terms and contained exactly the reasons about Adrianople that had been suggested; even the modification about the Aegean islands, viz. the insistence on the coast islands alone, is the one that from the beginning was suggested & continually maintained by the thought and the ishita. Aishwarya also in Poincaré’s election which seems at one point to have been in jeopardy. The progress in the vijnana chatusthaya & the kamananda now continues like that of a creeping tide, throwing up waves always higher and seeming to retreat or rest for a moment, but in the result always advancing. Only in the physical siddhi other than ananda this movement as yet fails to establish itself. In the evening it took a much larger sweep and even the rupadrishti, which is the most sluggish of all the vijnana siddhis, began to manifest abundance. The lipi given a few days ago “rupas by the milliards”, is now being accomplished, as already in chitra & sthapatya images are coming multitudinously and the salamba chitrās & salamba rupas are beginning to follow suit. Crudeness, inconstancy & want of firm outline are the rule; on the other hand they have often great richness of colouring and not infrequent perfection of form, sometimes even of outline. The perfect developed or lifelike forms still occur, but rarely. In samadhi continuity of scene & action seem at last to be established, but only for the single act; still this minor continuity has occurred even in the jagrat antardrishta. The physical siddhi is obstinately disputed, especially health; even the kamananda is forcibly interrupted. Nevertheless this great change has been established in the sanskaras of the body that, while formerly it felt release from the continued ananda as a relief and as its normal condition of purity & freedom, now it feels continuity of it to be its normal condition and absence of it to be not purity but want, not freedom but a bondage.

Jan 22nd

In the morning a strong harmonised movement of the vijnana began & although attacked by the old asiddhi, it is not diminished,
only hampered & momentarily deprived of its full movement. The improvement in the swapna-samadhi maintains itself. The atmosphere of kamananda has been constant, under strong ordeals, throughout the day, except for slight interruptions. This siddhi is in future sure of its natural development. The stress of the ishita has passed on to the arogyasiddhi especially and in a less degree to the saundarya and karmasiddhi. Arogya, during the day, was greatly strengthened, but dull symptomatic survivals still remain to hamper it. Coherent dream-record with only a slight admixture of present ego, present association and consequent confusion seems to be now well established. Sometimes present ego is entirely absent, sometimes present association, sometimes the resulting confusion; at times one or other of these defects gains in stress. In rare instances all are absent and the only defects of the record are those of omission of details necessary for perfect understanding.

Jan 23d

Today the aishwarya & trikaldrishti suddenly developed an unprecedented force; while watching the movement of ants on the wall opposite, it was suddenly perceived that every slightest movement of the particular ant observed in each case followed the anticipatory observation; wherever my idea turned, there the ant, with but slight variations, immediately corrected, turned to follow it; when the forceful will was applied, there was sometimes a slight, but unavailing struggle. This observation covered some half hundred successive movements of various ants and was marred by only one actual & final failure. If this force can be rendered permanent & generalised so as to apply to all objects & subjects, then human omniscience & omnipotence in the field permitted by the Infinite are attained. It is a matter of time only; the perfectibility of knowledge & power have today been finally & irrevocably proved. There is, however, one defect, that if the movement willed be contrary to the stream of the apas in purpose or in nature, the obedience given is either slight or temporary or, even when it seems to be final, subject to a sudden return of the old unfulfilled impulse. During the rest of the day the power fluctuated in its force, but tends constantly to return to the point gained &
to extend it in the immediate surroundings. Kamananda is now constantly recurrent.

Jan 24th

The day’s news about the Turkish acceptance of the Powers’ Note is a success for the trikaldrishti (vyaptiprakamya) & for the Aishwarya for the conclusion of peace, but a violent defeat for the Aishwarya about the terms of peace which were either the coast islands should be retained and Adrianople either not ceded or ceded with dismantled fortifications or war. This morning kamananda of a great intensity continued for a long time and the ordinary level of intensity has also been raised; the ananda is still continuous at the time of writing. (afternoon.) Subsequently, the ananda increased to a yet greater intensity & gave the first definite hint of what it will be when it is firmly and uninterruptedly in possession of the sthula body. It subsided for a time at mealtime without actually disappearing, but, now, immediately after meals, is again active. It continues even when walking or absorbed in other work or thought, but is less firm then and does not attain to the full intensity. Lipi in the morning attained its full spontaneous materiality and is in the course of attaining its full freedom of profuse manifestation. Samadhi, deepest swapna, with fairly numerous images, scenes, a freer lipi, thought & vani sometimes quite coherent and one perfect & vivid varnamaya picture of a woman of high rank in some ancient age in a pillared room open upon a court having her toilette done by slaves. This is the first time that there has been a consistent jagrat condition of the manas in so profound a state of the swapnasamadhi; the defects that remain are the fleeting character of the images, a too rapid passing from one thought to another not connected with it and an occasional mixture of records and thoughts.

Abundance of rupa has begun definitely in addition to abundance of lipi. The chitra & sthapatya were already abundant and are now redeveloping an extraordinary minuteness of perfection; a bas-relief figure not so long as the thumbnail, is sometimes perfect in its details, eye, ear, beard, hat up to the buttons of the coat & frequently in the facial expression and bhava of the body.
Perfect landscapes, vivid groups are also frequent. Sketches are multitudinous. But now freedom & abundance are coming in the akasharupa along with vividness, variety & sufficient stability. The defects of blur, vagueness, inconstancy of outline, paucity & infirmness of material are being surmounted. Kamananda in continuity still persists (nearly 6 pm) & is attempting to establish a high degree of continuous intensity as its usual pitch. With one short interval of half an hour, it has now been continuous for nearly ten hours.

Akasha rupa developed freedom and vividness. Kamananda continued throughout the evening till retirement, but much diminished and sometimes quiescent. The drishtis (shabda etc) were delivered from the hesitations of the intellect by definite proof of sparsha other than the touch of rain and prakasha of the truth of the other drishtis,—subsequently sparshadrishti received a great increase of intensity and rain & wind of the other world were actually felt as in the jail not in touches but in a composite & well-materialised experience. At night dream remained stationary.

Jan 25th

Today’s news corrects yesterday’s failure. Recent trikaldrishtis have been that the Cabinet was hopeless of relieving Adrianople or of doing more than holding out at Tchataldja, that money was lacking and that the Russians were threatening an invasion of Asiatic Turkey; that Kiamil Pasha was hesitating whether to hold out or yield or resign; that in the Army & City there was profound dissatisfaction. All these have been justified. Aishwarya has been that the Note of the Powers should be rejected, but not cavalierly; that the Islands of the coast & Adrianople should be insisted on or else Kiamil resign; that there should be a change of military command and a Cabinet containing the chief Young Turks and, if possible, others determined to hold out, should come in. Today this Aishwarya has been in substance fulfilled. The situation is felt to be full of dangers (Abdulla Pacha, the Powers, Russia, lack of money, possible defeat,) but also there are possibilities if the Aishwarya can prevail (sympathy of Triple Alliance, at least Austria & Germany,
energy of the Young Turks, desire of the army for war, finally, the Aishwarya itself, which is growing stronger every day). No definite trikaldrishti of the result arrives, unless the lipi indications “Tchorlu. Lules Burgas”, belong to the present time.

The trikaldrishti is now in a state in which a throng of true perceptions constantly present themselves, but cannot yet be given their right value. E.g. yesterday, the crude rupa of a prawn suggested itself and the indication was that there would be prawns for the night’s meal; but the mind was afraid to accept the indication both from past experience of error in interpretation of lipi & rupa and because it was at the same time suggested that there would be fish for the night’s meal. At the same time it was suggested that the prawn would be for breakfast, this was again negatived in favour of bread for breakfast and prawns for the day’s meal; but there was no feeling of certainty. As it turned out, there were both prawns and fish for the night’s meal, bread for breakfast & prawns and fish again for the day’s meal. Certainty is unable to establish itself in the midst of this chaos. It is only when there is no attempt to decide or forecast, that the trikaldrishti is correct in all or most particulars. It is this uncertainty that is now being attacked; first, by distinguishing at the moment of its action the pseudo-trikaldrishti of volitional or creative perception, which may or may not be fulfilled, from the true trikaldrishti; secondly, by distinguishing the opposite or tamasic pseudo-trikaldrishti, overstressed perception of the possibilities of failure and adverse happening, which also may or may not occur, from the true trikaldrishti; thirdly, by the right arrangement of true perceptions so that their full sense may not be misinterpreted.

Rupa in the Akasha developed in the dense and developed forms, but not yet with perfect freedom and abundance. Secondary utthapana took a considerable step forward, mahima & laghima immensely increasing except in the back and defect of anima greatly decreasing except in the back & neck. Kamananda continuous throughout the day, was less frequently intense and its ordinary level raised beyond the former limit, but inferior to yesterday’s though more regular.
Jan 26th

The difficulties of the new Turkish Cabinet in regard to the Powers promise not to be so acute as they might have been; as was felt by vyapti prakamya, there have been some ebullitions of anger & excitement, so that the Abdulla difficulty remains yet [unconquered]. Every day gained is, at present, an advantage as the strength of the Aiswarya continually increases.

After a temporary obscuration and struggle between prakasha and confusion lasting till teatime in the afternoon, the siddhi was finally cleared of the relics of the old tapas and of physical pressure. The aishwarya henceforth to be used is the spontaneous chinmay aishwarya free from all element of struggle, in which force and pressure will only be present to stress the energy of the fulfilment & not for overcoming resistance. Judgment in the intellect, a great obstacle to the range and freedom of the trikaldrishti, is also finally dismissed and the higher perception is allowed untrammelled play with the viveka for its assistant, not its judge. This movement was already in progress, but was prevented from universalising itself by the insistence of the old volitional tapas which demanded survival and justification.

Kamananda, absent on rising, continuous but slight during the morning, recovered intensity in the afternoon. This intensity is persistently recurrent, rather than continuous, but its recurrence is spontaneous and forcible, no longer dependent on the attention, but commanding the attention. It persists even in swapna-samadhi and is found continuously persistent on waking from sleep. Only bodily activity curbs its intensity. Otherwise it yields to nothing except the bodily habit of intermittence. Rupa & lipi are struggling with the physical obstruction in the akasha for a larger fulfilment. In answer to the aishwarya forms of animals & objects are manifesting in the perfection of the chitra & sthapatya,—formerly the human figure & landscape were almost the only subjects. In akasharupa, on the contrary, animals & objects predominate.

11 MS unconquered
Jan 27th

Trikaldrishti made a final stride forward to its ultimate perfection by getting rid of the habit of tamasic denial which used to fasten on the least sign of amangala and asiddhi and hasten to accept adverse probability or even possibility as adverse certainty. In the place of this denial there is left a strong uncertainty chiefly with regard to those parts of the siddhi in which the sraddha has not yet been established by events, i.e., the saundarya and karmasiddhi. Aishwarya attained to perfection of detail and is now beginning to act automatically and without effort in its various fields, but is still resisted firmly in the karma in which there is a general attack on the siddhi which has been developing for some time past, as the opposition shifted more and more from the Yogasiddhi to the karmasiddhi, and is now at its height. The aishwarya has got rid of the remnants of tapasic stress and struggle which marred its perfection of method and has only to get rid of a remnant of tamasic anxiety & asraddha about its results. Vani, script etc are being more & more justified and whenever the trikaldrishti acts, it is justified and false trikaldrishti, i.e., misinterpretation of material, is being put in its proper place and turned into satyam. Therefore, the asraddha is being forced to its final collapse. Lipi is now free, vivid and spontaneous, but not always legible. Rupa has attained to activity in all kinds, but not yet free activity, & to more frequent stability in all but the developed perfect form; its force is daily increasing, but the progress is marked by the old gradual slowness & has not yet come into line with the new rapidity. Drishti of Samadhi & visvagati developed yesterday in force & stability, but has still an imperfect hold on the akasha. Kamananda has overcome all its difficulties, e.g., noncontinuity of intense ananda while walking etc, except the mere habit of intermission; this habit grew stronger yesterday, & there was much & frequent intermission. On the other hand the ananda pervades the system more perfectly & has not lost either in intensity or in ease of recurrence. It is growing more powerful in the raudra form. Arogya is increasing; strongly attacked yesterday, it overcame all difficulties except the weakness of the second chakra. There has been no parthiva visrishti, except nominal & infinitesimal relief, for these seven days, and it is now clear that this visrishti is no longer a
physical necessity, but a habit kept in survival by the imperfect speed and still faulty method of the assimilation which, instead of drawing the food at once into the akash by the power of the mukhyaprana, recurs partially to the old panchabhauta absorption & therefore leaves a deposit which has to be dematerialised, or else produces symptoms of tejasic & jalamaya irregularity before it completes its process. For this reason, jalavisrishti is still overfrequent and the demand of the Apana still continues. Secondary utthapana is progressing in strength of laghima and mahima and has begun to expel defect of anima into the outworks of the physical system, but this process is still in its initial stages. Only saundarya is slow to manifest; it does not yet succeed in getting rid of its positive contradictions, the signs of old age etc. The saundarya once in motion and the equipment to hand, the whole siddhi will be in simultaneous successful movement.

Jan 28th

Nothing definite today in the telegrams, except the pressure on China. The struggle has been transferred now to its proper field and the full force of the adverse powers is in evidence to bring about the destruction of the karma.

Today, according to promise, proofs of the action of Aishwarya-ishita-vyapti in the karmasiddhi are beginning to crowd in; incidentally, the trikaldrishti is being justified against the relics of tamasic hesitation at every step. Dream became perfect in type, though still imperfectly organised, on its way to conversion into memorative experience in samadhi. Rupa in swapnasamadhi is now much more stable, although continuous experience in vision and in the sukshmadeha, as distinguished from continuous dream experience & momentary experiences in the sukshmadeha, are still held back from manifestation. Secondary utthapana in the neck increased in mahima, (maintenance while counting 1000 deliberately is the test), but defect of anima is still strong here and it resists successfully, in the back, the extension of the utthapana. Laghima is in all parts of the body sufficient, mahima variable, anima weak except in certain positions of the arms and legs. In the arms in the primary position utthapana can easily be maintained for an
hour and, if necessary, for much longer. Arogya after a struggle gave proof of increasing force; there was the first real parthiva visrishti at the close of the seventh day, but even here the force of assimilation was proved by the absence of any serious reaction such as would have been inevitable a short while ago. Rupadrishhti in the jagrat still progresses slowly & is perfect only in a few types, but its stability increases.

Dasya finally shed the remnants of the tertiary stage, & the quaternary dasyabuddhi is now constant & invariable whenever there is any turning of the mind towards the nature of the action, whatever the action may be. The purnabrahmadrishti is also normalised &, whenever there is smarana, invariable, whatever the object. Along with this development, there is perfect objective vishayananda even in the bibhatsa and jugupsita; the same perfection is establishing itself in the subjective vishaya, bibhatsa, apriya, amangala, & there are only a few defects. Kamananda fell to a minimum, but now persists under all circumstances and is not suspended at night, but is always there subject to the anusmarana. It is growing again in intensity, with the intention of maintaining intensity in the constancy. It still tends to diminish, though not disappear, while walking, and to become involved or implicit by distraction of attention.

Jan 29th.

([Written] 30th)

Trikaldrishti justified. The second suspect in Comilla has been released on bail, proving the correctness of the perception that the wrong people had been arrested. The idea long held, but uncertainly, that there was some irritant substance in the Viceroy’s wound opposing the healing action, justified in today’s telegram (30th). There was during the 29th no conspicuous [advance], only a slight increase in the rupadrishhti, a movement towards exactness of detail in trikaldrishti and aishwarya, maintenance of the kamananda throughout the day, till nighttime, and preparation of the final subjective vishayananda. This, however, was attacked & impaired.

12 MS absence
as soon as it had been provisionally established, by evidence of a persistent and partially successful attack on the karmasiddhi. Health also is attacked & slightly impaired in certain directions.

Jan 30th.
Trikaldrishti of farther sea-accidents in the papers, of which the loss of a naval officer washed off his bridge, announced today, is a previous hint, showing the tendency still at work. The whole vijnana is now organising itself on the basis of the Sat-Tapas & the progress of this movement has been the principal siddhi of the day. In addition Ananda, reaching a higher intensity late in the morning, maintained it till the evening, diminished only when walking. This is now the normal pitch of the Kamananda when it occurs, in a state of activity; at the lower pitch it remains in a state of rest.

Jan 31st.
The transition which has been for some time in process of accomplishment, completes itself today. Formerly life was regarded as a thing to be worked upon and worked out, by active mental will and bodily means,—speech, writing, work etc. A thing written had to be composed. An intellectual difficulty had to be thought out, a conclusion fixed and edified. That which was undiscovered, had to be sought for by speculation, reasoning, experiment. That which was unattained, had to be constructed by labour, attempt, adaptation of means, careful manipulation of materials. The remnants of this way of seeing clung until now to the thought and action, but henceforth it is removed. Life is a great mass of existence, Sat, moulding itself through its own Tapas. All that has to be done is for the Jiva, the knowledge centre of this existence, to sit fast in his city, navadware pure, & allow the infinite Tapas to manifest through him, accepting it, sanctioning it, (anumati), giving the command to fulfil it to his helping devatas, (ishwara), holding up the whole system & its working, (bharta), and watching & enjoying the results. The Tapas may be with knowledge & then the results will be perfectly in accordance with what is intended, for what is intended, will be what is known to the mind as the thing that has to be done or is to happen, kartavyam karma; if
it is without knowledge or with imperfect knowledge, it will still be known as the thing which God intends the individual system to lay stress upon (tapyeta), therefore to be willed, and the result, whether in accordance with the Tapas, or adverse to it, chosen or not chosen (ishta, anishta, priya apriya), favourable or adverse (mangala, amangala,) success or failure, (siddhi asiddhi, jayajayau,) will be the unseen thing that all along had to be & towards which all tapas has been contributing, (adrishtam, bhavitavyam), therefore to be accepted with equality of mind and with equality of ananda. This must be the first principle of the new period of action.

The second principle, which has also been long preparing, is the renunciation of nigraha or as it used to be called, tapasyā. Not that the Tapas may not have to persist under difficulties, but no violence has to be done to the Prakriti. It has to work out its own defects. This is now possible, because of the growth of the supreme or quaternary dasya, by which the very thought & feeling comes only as things impelled by the divine hand of the Master & Sarathi. Absolute Samata & passivity are now possible.

Therefore in action there will be no planning, only seeing of the way the thing to be done will develop under the shaping of the divine Tapas whether through myself or others; in writing no composition, only the record of the vak as it flows down from above and forms itself in the Sat of Mind; in Yoga no sadhan, but only the acceptance of the self-organising movements of the anandamaya vijnanamaya Prakriti as it progressively takes entire possession of this inferior mental & physical kingdom.

Today’s news are mostly confirmative of the trikaldrishti or aiswaṛya; the running down of a sailing-vessel, confirming yesterday’s perception; the rumour of the Karachi bomb-find proving to be a fact and not a newspaper invention, though probably a police fraud; the fresh demands and threats of Roumania; the falsity of the Vienna rumour; the Moorish resistance in Marrakesh; the Suffragette recrudescence. Only in the Turkish War the trikaldrishti has not worked well; for the imminent denunciation of the armistice reported from Vienna is contrary to what was expected, viz that the Allies would wait for the Turkish reply. It has to be seen, however, whether the report is correct.
Today has been a day of considerable advance. The script has recovered accuracy of detail and added to it accuracy of suggestion. All the predictions made for the day have been fulfilled not only in substance, but in detail and in order of time and circumstance. Intensity of ananda has been greatly increased and the more intense pitch is now established as the normal to which the Ananda tends always to rise when not hampered either by deliberate obstruction or by the tamasic sanskar of dharane asamarthya impressed on the karmadeha from the outside swabhava and through the karmadeha affective of the body; otherwise it sinks to the subnormal,—the pitch attained yesterday,—or even to the implicit when it seems to be discontinued or existing only as a general tendency. The health is being purified slowly of the remnants of cold and eruption and is almost free of both, though still subject to momentary touches; visrishti has been a little thrown back, the assimilation for the last three days being less powerful; but today, although subjected to an unusually powerful tejasic stimulus, it has resisted much better than ever before since the final stage began and was disturbed only partially & very temporarily. The weakness of the chakra has been greatly exaggerated, but tends always when allowed to return to the former state of passive efficiency, dhairya & dharana. Secondary utthapana also suffers from a partially successful attack & apparently successful obstruction.

Samadhi took a great stride forward. It has begun to organise itself and images (visual, auditory, sensational, actional, tactual) came in a crowd, not yet well organised, but evolving their own organisation. Continuity of incident accompanied with perfect vividness was greater in one typical case than has yet happened and the tendency of image to survive into the antardarshi jagrat was strong and successful. Rupadrishthi in the jagrat is at last emerging definitively out of the prison of the sukshma, but the movement is not yet complete. Trikaldrishti and aishwarya are becoming more effective in details of the siddhi. The subjective tamas which returned partially for a short time, has been rejected and the physical is being expelled. In the chitra two fresh circumstances have reemerged, 1, chitra of objects, eg a sword, moneybag, spear etc, 2, chitra of familiar faces & scenes, eg the face of Gladstone & neck with collar.
The following lipis etc have been fulfilled or are in the course of fulfilment.

(1) She has to change her conception of life. (Sortilege, early in the morning; she being the Prakriti-Jiva; fulfilled at once.)

(2) En dépit de l’opposition le surhomme se dépeint dans l’homme actuel. (Lipi).

(3) 12. tejas, tapas, prakasha. (Lipi. ie the harmony of the three is now to be applied, imperfectly at first, to the karmasiddhi.[])

(4) Rupadrshhti besides samadhi. (Lipi. Rupadrshhti’s release had been promised, but this lipi indicates the previous release of samadhi. Fulfilled immediately.[])

The following have been given.

(5) More shipwrecks. (Lipi)

(6) It is impossible to defeat the Bulgarians at Tchataldja . . by the false tejas. It is hopeless to expect assistance from the Europeans . . Defeat of the Bulgarians . . Dissolution of the Confederacy. (Lipi).

(7) Songe. (Lipi, indicating some progress in Dream).

No 6. seems to mirror the struggle between tejas & tamas and cannot be confidently accepted as anything but a lipi of vyapti, ie expressing thoughts of men or devatas concerned in the struggle going on in the Balkans. It is probable that neither represent the ultimate event.

([Written] 1st Febr).

Later in the day the Ananda still farther increased and at night, for the first time, the development of waves of Ananda out of simple touches, eg. the contact of the feet with the soil, was imposed on the system. This happened while walking and continued for several minutes. It is the sign of a new stage of progress in the physical siddhi. Rupadrshhti was finally released from concealment in the subtle akasha; numerous images presented themselves, chitra of various kinds presented new developments of richness and a certain freedom was obtained in the akasharupa; but the perfect & developed forms are still momentary. Forms have once more begun to appear in the darkness. The improvement in samadhi was maintained, chitra especially of great richness and perfection appearing frequently, and in addition the commencement of the free
and niradhara shabdadrishi was indicated. Arogya, free in other respects, is yet attacked by the tejas in assimilation & by weakness of the chakra. In trikaldrishti there is a movement towards the enforcement of correctness in all mental motions; not only their proper arrangement and the perception of the truth to which each relates, but this movement has, as yet, only begun to emerge, although long promised. Considerable force had to be used to maintain the utthapana. Dream was active, sometimes entirely free & accurate, almost equal to actual experience, sometimes coloured with present associations. The attack on the karmasiddhi may now be considered as having failed, since the effects produced have been unimportant.

The siddhi at the end of January, stands in a condition of considerable advance accomplished, rapidity increasing, finality in sight.

(1) The shuddhi is complete except for the relics of intellectual action that impede the vijnana and the occasional impacts of the old movements from the outskirts of the external swabhava.

(2) Mukti is complete except for the same fragmentary survivals.

(3) Bhukti is complete except for some disturbing touches in the body and for the same fragmentary survivals.

(4) Siddhi is in its last stage of struggle with the opposing forces.

(5) Samata is complete with the same qualification

(6) Shakti is complete in dasya & the passive members of the second chatusthay, complete in all else except sraddha and intensity of tejas.

(7) Vijnana is complete in jnana, established & effective in trikalsiddhi but still imperfectly organised, established in power but still imperfect in effectiveness and organisation, established in lipi but still weak in the richer varieties and not completely organised, established in rupa, but still poor and manifested with difficulty, except in chitra & sthapatya, established in samadhi but still hampered in continuity, poor in antardrishta jagrat, ill-organised and in jagrat shabdadrishi etc elementary & infrequent, established & effective in prakamya vyapti, but imperfectly organised, established
in pranic mahima & laghima, but still resisted, deficient in anima.

(8) Ananda of the body is established, but not yet sovran. Arogya imperfect in assimilation and kamachakra, doubtful in phlegm centres & skin, otherwise established. Utthapana is established in the pranic basis, active in primary & secondary, but everywhere hampered by defect of anima; of tertiary there is as yet no sign. Saundarya is manifest only in the slow alteration of certain lines in the feet & the trunk and in its subjective basis of youthful feeling.

(9) Karmasiddhi is initially active in all points, but has not yet embarked on its triumphant progress. All is still struggle and preparation.

The great feature of the siddhi now is that the objective alone resists, and there the resistance is artificially entertained, in some cases without any real basis, in others by taking exaggerated advantage of old grooves in the Sat of matter or the vaja of forward acting mind.

The movement of the siddhi in the immediate future must be in the totality of the seven chatusthayas. Not that all its members are equally developed, or that a separate stress on some of them is not still needed, but by the end of February this stress must have ceased and the whole must be united for the activities of life which are to replace the activities of the sadhana. Such siddhi as remains will grow by life and action and not by abhyasa in the ways of Yogic practice. The stress that is still necessary is due to the survival of the old elemental opposition which stands in the way of the siddhi being effectively expressed in life. This opposition is now a tamasic obstruction and will rapidly lose the little that it still keeps of the faculty of aggressive assault. Above all, the basis of samata is now perfect and once the medium of tejas is perfected, the instrument, vijnana, will equally liberate itself from the obstruction and no farther opposition can then prevail against the ananda and the karmasiddhi, theapas and the lila.

January has been a period of strong increase and rooted establishment; February must be a period of perfect completion and faultless organisation, for in March, a new year begins.
1–14 FEBRUARY 1913

Record of the Yoga
1913
February

February.
1st
Sat or Substance is now everywhere vyakta, Tapas is in activity, Ananda emergent, Vijnana in process of organisation. The first day of February has been outwardly a day of retardation, almost of relapse; for the trikaldrishti once more lapsed into a state of murky obscurity shot with light and halflit with erring illuminations, misplaced energy worked more than satya tapas, the body was overtaken by exhaustion or weakness, Ananda failed in sustained intensity. As usual, however, the movement was one of preparation, not of relapse, for the expulsion of these remnants, not a concession to their extant force. The karmasiddhi which seemed to have been once more attacked, emerged perfectly victorious in the immediate surroundings. S’s [Saurin’s] interview with the Governor showed that the prakamyavyapti & the aishwarya were acting correctly; the news of the troubles of the opposition movement were still more strikingly in accord with the Will. A failure in the recurring problem was immediately corrected by the Will. The lipi “safety of the S.C.” was justified. In other directions of the karma a motion is visible. Although therefore there was no addition or definite increase in the siddhi, the current of preparation was perfectly visible. In addition, the most powerful tests & attacks failed to disturb the samata & shanti which can now be considered as established. The last general shadows of ashanti, duhkha and vishada may now
be considered as slain, although momentary touches are sure to recur.

2d.
The Telegrams today contain several fulfilments of the aishwarya & trikaldrishti 1. the appointment of Ijjat Pasha as Commander-in-Chief (lipi); 2. the passing of the Trades Unions Bill without Conservative opposition (aishwarya); 3. the loss of a boat and grounding of a ship, (lipi—more shipwrecks), and the storm & railway accidents in Germany (trikaldrishti); 4. the Nationalist success at Londonderry; 5. the trend of opinion about the Turkish note in Europe.

The morning began with an effective reorganisation of the trikaldrishti, but an unsuccessful attempt to bring in the strong and effective tejas & tapas disturbed the system, and brought back the unavailing struggle of false tapas to harmonise itself with knowledge & peace; the result was a return of the contradiction of samata, shanti, sukha & prasada, which although unable to possess the system, was able to overcome its outer activity by recurrent touches giving an impression of continuity. As usual, the contrariety started with impatience of asiddhi and was enforced by impatience of asatya. The result of the struggle has been to establish the satya tapas in knowledge; formerly, perfect trikaldrishti was only possible on condition of entire passivity, of a purely inert reception of true suggestions confirmed by the event or sanctioned by the illumination. The movement to introduce an active knowledge has hitherto had a chequered success and, if pushed too far, led always to false tapas and disturbance of truth and peace; but now the active knowledge has asserted its right to conjoint action with passive perception of the data. The elements of a well-organised trikaldrishti are, therefore, all of them present and the organisation will now be finally proceeded with and effected. In this organisation all the elements of error, which have so long troubled the intellect and the faith, will find their justification, for all of them are now revealed as essentially true processes of knowledge which only lead to error because their results are misunderstood by the stumbling and groping faculty of discrimination dignified with the name of
reason. The tamasic trikaldrishti, the tejasic volitional, the speculative, the inferential have all their place and portion in intuitive and revelatory knowledge. At the same time satya tapas is being finally established, not in the sense of being finally effective, but in the sense of being either (1) immediately effective or (2) ultimately effective or (3) effective of a force or tendency intended ultimately to modify the present type of action or nature. Thus the sense of failure, error and misuse of energy which used to discourage the Chandibhava and bring back the merely calm or the discouraged passivity, now disappears in its causes and the basic elements of the bhava may be considered well-established, ie sauryam ugrata and yuddhalipsa and even daya ishwarabhavah karmasamarthyam, although not perfect & all-embracing are at least in established action. The sraddha alone is still deficient and liable, even in some of its efficient parts, to be discouraged.

A fresh siddhi today is the finality of the Krishna-Kali relation in the personality; the personal activity of the Purushottam; the personal script; the personal vani; the personal guidance. The period of intermittent manifestation of guidance passed some time ago, its remnants are now deleted; only the remnants of the indirect guidance remain and these too are to be rapidly deleted, for the indirect guidance itself ceases from today. It has long been only a subordinate part of the guiding activity, always tending to be overruled or dominated in its suggestions, impulses and utterances.

The programme given today (in the morning) and already partly fulfilled, runs:

1. Ananda, increase and sovereignty of all states and all times
2. Trikaldrishti, not yet perfectly arranged, but efficiently organised.
3. Power extended and confirmed.
4. Rupa, lipi, samadhi active and growing.
5. Health emergent again in assimilation and in chakra
7. Fresh proofs of karmasiddhi.

The united action of tapas & trikaldrishti (formerly detrimental to each other) is now established in its harmony, although survivals of the past discord persist. The lipi, a little hampered
recently, has recovered its profuse action and easy self-revelation of significance. In the kamananda a double sanyama is developing & indeed, already active by which a part of the manas activity has detached itself to attend to the sensation of the ananda while the main energy is otherwise concerned. By this movement, which has yet to be perfected, the ananda has been enabled not only to possess, but to become sovereign of the body in both the states of physical activity and of mental abstraction; once this sovereignty is well established and emphasised, only the states of sleep and samadhi remain to be mastered. The state of samadhi is already open to the ananda, but its entrance there is still exceptional.

(Feb 3)

In accordance with the programme Ananda has taken sovereign possession of all states and has been continuous yesterday from the morning when it commenced, throughout the day, prevailed over several attempts to expel it in the evening, the time when it has usually declined, persisted throughout the night every time that the sleep was interrupted, recurred & held the body constantly in moments of samadhi and was often present in sleep. The only defect of the continuity was interruption by sleep and unevenness, — failure of continuous intensity; for twice in the evening it became almost implicit and in sleep it became involved in apparent cessation. Rupa and lipi were both active, & rupa commenced extending its range of stable developed images; the greatest progress, however, was in samadhi which finally triumphed and produced great, complex and continuous images and incidents in profusion, taking possession of dream, which is now passing into swapna-samadhi. Present association hardly occurred at all in a crowded succession of dreams and even present ego, though not entirely absent, became a practically negligible quantity. Only a slight tendency to inconstancy and rapid transition, not amounting to incoherency, marred this rapidly effected perfection. For the first time, the vision of the book with freely legible passages and sentences, became frequent and, if not yet fixedly stable, yet sufficiently stable in its rapid self-revelation for whole sentences & even several sentences at a time to be simultaneously read and understood. Ahaituka raudrananda also commenced to manifest more freely & continuously.
Trikaldrishti and Power are active in their organised movement. Proofs of karmasiddhi were given, especially the arrival of money in the full sum willed & more than had been probable or expected. There were slight indications of the emergent health and the elimination of positive asaundarya; here alone the fulfilment was meagre and unconvincing.

31

Today’s first movement has been the development of the authoritative direct guidance of the Master of the Yoga imposing itself on the mind even when there are no data for sraddha and, parallel with this movement, a strengthening of the pure revelatory movement,—independent of data, probability or actual fulfilment,—of the trikaldrishti and its materials, lipi, prakamya-vyapti and rupa. The purnabrahmadrishti has also been powerfully strengthened and is extruding the old outlook of mere Avidya. Otherwise the morning has been occupied chiefly with the removal of the remnants of certain old activities, eg, expectation, mental insistence, distrust etc. The process is not yet complete.

The rest of the day was occupied with action on the same lines and the removal of expectation & mental insistence was thoroughly tested; the latter has disappeared and is replaced by dhriti and tejas; expectation is inactive, but is not replaced yet by a settled faith, owing to the apparent contradiction given by events to some statements of the Vani which has revived the tendency of distrust. This distrust, however, can only hold its own in details and recur as a doubt with regard to saundarya and Adeshasiddhi. It does not any longer question the Yogasiddhi, but is only doubtful about its immediate incidents or its promised increase of rapidity. In any case samata seems to have been, at last, perfectly established. If so, it is the first fulfilment of the character predicted for the month of February,—a period of perfect completion and faultless organisation. This perfection of samata is subject, however, to an uneven distribution of tejas in the reception of impacts; but a superficial unevenness of ananda is apparently the intention of the siddhi; it is, therefore, not a defect of samata, but, so far as discomfort enters into the lower levels of the unevenly distributed tejas, a defect of
shakti which concerns the second chatusthaya—a defect, practically, of bhogasamarthya. Sahitya was resumed in the afternoon. (Soul in Art).

The struggle over the health still continues and for the last two evenings there has been feverish heat in the system and a limitation of the pranic energy; utthapana has been practically discontinued. The attempt to establish force in the chakra has failed. On the other hand, there has been no success in the endeavours of the enemy to reintroduce eruption or the affections of cold. Kamananda showed at times an increased intensity working on the body rather than seated in it, but at others was dull and even implicit. Rupa progresses with the old slowness; samadhi did not increase, nor lipi grow in richness. Trikaldrishti & power continued to work accurately; but without intensity or inspiration, & only in details. The day’s programme was not fulfilled in the sthula.

4th.

Telegrams—The Karachi bomb is now denounced as an informer’s hoax; naturally, it is not admitted to be an unsuccessful police fraud. Curiously enough, the prakamya which two days before the find suggested the existence of a plot against Lord Sydenham, still persists, though in a vaguer form. A farther case of marine accident reported today.

Lipi—eighth—suggesting Saturday Feb 8th as a decisive day, both for the yogasiddhi and for the karmasiddhi. Some decisive action or news in the Balkans is also suggested, as well as something in the matter of equipment. Today, Tuesday, has already been given as decisive for the immediate movement of the Yoga.

The second chatusthaya is now being arranged by the harmony of the dasya, tejas and general sraddha, (tapas, tejas, prakasha), but the uncertainty of the trikaldrishti continues and prevents assured sraddha in details of time, place & circumstance.

Strong persistence of fever, mainly in the sukshmadeha, but with fluctuating effects on the sthula, was the principal feature of the day. No change was made as to food, bathing etc, nor was physical exertion altogether suspended. The assimilative process continued in spite of the sanskaras that attempted to destroy it.
Attempts were made to restore the old symptomatic affections under cover of the fever, but hitherto they have failed. Neither could any impression be produced on the clear working of the brain nor was literary work prevented. The general sraddha & tejas stood firm and continued to grow in spite of the adverse experience. The activity of the vijnana and the utthapana chiefly suffered. Trikālādrīṣṭi was strongly obscured although it continued to act along with aishwarya in ordinary details. Ananda is not affected; there is ananda in the sensations of the fever. Samata is perfect.

Kamananda got rid of the tendency to fall into the implicit state. It subsides now at its lowest to a subdued ananda bordering on the implicit, but usually well manifest out of which the normal intensity emerges. Samadhi is now well established in variety, frequency and brief continued activity of scenes and images. Communication with the manasic world in the jagrat is now occurring; formerly there was drīṣṭi only of the pranajagat and the subtle Bhu.

Feb 5th.

Another shipwreck; the resumption of hostilities in the Balkans; the insufficient pressure of the Powers on the belligerents; the attitude of the Porte; the Roumano-Bulgarian tension continued; the police notification to the inhabitants of Delhi, are all indicative today either of successful aishwarya or correct trikālādrīṣṭi.

(6th Feb)

Another day of strong attack, but the health succeeded in expelling the impure heat in the system; during the night the attack succeeded in impressing itself on the throat in a sensation, never quite determinate, but often strong, of sore throat; this was thrown off; returned in the morning of the 6th, was thrown off again, although dahi was freely eaten; but the remnants still persist in returning. It has become perfectly clear that all these are false illness, formulated in symptom and not in root in the sukshma body and thence pressed upon the sthula; but it is also clear that the sthula body is still insecure against these attacks. Always, the movement is to repeat the last fragments of the last ailments that
were left unexpelled when the final movement of the siddhi began. Always, therefore, it is an attempt to keep in activity the almost dead physical sanskaras, the grooves of imperfect movement to which the body was finally accustomed.

Feb 6<sup>th</sup>. Thursday.

These two days have been of an old type long discontinued, in which the siddhi has been suspended almost entirely in all its imperfect parts and only those allowed to progress in which the attack could make no impression. In the present instance, it is the samata shanti sukha prasada which have stood a continued and violent test and emerged, as far as can be seen, entirely perfected. Shadows have fallen on the last two without being able to [affect] them substantially. Tejas of the nature of dhairyam and tapas of the Mahasaraswati type have also remained unaffected; there has been no sinking back into tamasic udasinata, although movements in that direction were attempted. Sraddha in the eventual Yogasiddhi has remained substantially unaffected, in spite of shadows, except that strong doubts have assailed the faith in the saundarya, the one member of the four chatusthayas for which there is as yet very meagre justification. On the other hand the Mahakali tapas has sunk into inactivity, after one strong battle in which it prevailed temporarily over the strongest resistance to the aishwarya. The vijnana siddhi has been pale and fitful; physical siddhi heavily attacked and for the most part interrupted, even the kamananda sinking back into the implicit state from which the others fluctuatingly manifested. Sraddha in the adeshasiddhi and the rapidity of the yogasiddhi sank to the lowest terms now possible to the general faith.

7<sup>th</sup> Friday —

Today the mists have begun to clear and show an advance,— principally, towards the final removal of the false tejas & tamas in the knowledge which though expelled from the system still besiege it from the environment and occupy the outgoing and incoming

<sup>1</sup> MS effect
paths of the thought perception. If the mind can be got to reject
these false visitors, then there is a source of knowledge independent
of all data which gives automatically the truth. That which learns
from data, is also misled by data; this wrong suggestion of data
has been for some time the besetting obstacle to the completion of
the trikaldrishti & jnana, the strong refuge of outgoing error. The
Personality of the Master is now occupying the life in place of the
more general personality of the Saguna Brahman. It is no longer
Ishwara or Bhagawan only, but Srikrishna-Narayana. At present,
however, it is only in the personal relations with the Master of the
Yoga that the substitution has been established.

During the rest of the day, the parts of the Yoga which had been
clouded, reemerged in full strength, with the exception of Rupa
and Samadhi which did not yet manifest their full former strength.
There are signs, however, in the swapna and jagrat samadhi of a
more perfect manifestation approaching.

Lipi — 8–9 27th February. 12.

8th February.

Passing of the Trades Union Bill in the Lords (Trikaldrishti
& Aishwarya). Bulgarian attack in Gallipoli & Turkish retreat
(Trikaldrishti, but contrary to Aishwarya). Withdrawal of charge
against two accused in Wari Arms Act Case (Trikaldrishti of Inference etc)

The tejas, tapas, prakasha united acted in harmony this
morning so that the perfect knowledge of trikaldrishti, exampled
once before while watching the movements of the ants on the
wall, reemerged and applied itself to all surrounding movements,
thoughts & feelings. This was in a state of comparative passivity.
When the active tejas once more emerged, there was some dis-
turbance by the volitional suggestions, but this action was feeble
and the prakasha soon readjusted itself. With regard to distant
movements, etc, the old incertitude still continues.

Yesterday, another signal proof of the power of Will to alter
the forms of the body, was finally proved. The left undercurve of
the foot, which was at first non-existent, that side being flat, and
afterwards very slight, is now deep and declared, and by a test was
found to be at least three times what it had been at the last time of testing. Similar proof has been recently given in the line of the waist, but this is not yet so striking and decisive. This success, after a long and obstinate resistance, justifies sraddha, not only in the saundarya, but in the ultimate emergence of the Adesha siddhi and the equipment; the justifiable doubt is about the extent of fulfilment and the timeliness.

In the afternoon exceeding[ly] brilliant swapnasamadhi at a great depth of dream-trance repeatedly occurred; the rupas were of the fleeting kind, but stable for two or three seconds, instead of, as usual, fleeting in the moment of appearance. At night also swapnasamadhi was rich and various at a great depth and perfectly stable scenes of entire vividness were at last developed, instead of the vivid stability of shifting panorama and dim stability which were formerly the highest attainment. The fleeting still predominates over the stable, the dim or pale over the vivid; but the disproportion is decreasing. Organisation, also, has not progressed and dream is once more imperfectly coherent.

Kamananda recovered intensity and confirmed the permanent stability of the subdued ananda. From today the intensity has become as natural and sustained in standing and walking as in the sitting and recumbent positions and is hardly less in pitch; but the abstraction of the attention has still the power of suspending the intense ananda. The movement now is to a greater continuity of the intense ananda.

Trikaldrishti grows in normal perfection of detail; but the other siddhis are still busy confirming their hold on the akash. Karmasiddhi has been thoroughly confirmed today in one direction by the retirement of the Pulinda into S's [Saurin's] karmadeha and outer swabhava; the chief obstacle in the house is therefore removed. The action of the tejas in physical pressure as a means of pushing the siddhi is removed, definitely, & everywhere the pure action of the Will on the akasha has been substituted. The second proof of the increasing saundarya is now more definite. A third is preparing, but still indefinite.
9th February.

Today is marked mainly by the continuation of the movements of the eighth; development of the Krishna Kali relation, progress of the instruments of knowledge, a more general force of the Powers, a more settled action of the rupadrishhti, a finally secure and easy action in the akash of the lipe, Kamananda constant in the intense or subdued forms throughout the day and part of the night,—though in the evening almost implicit,—and more frequent & powerful in the state of samadhi, slow progress of the swapnasamadhi, the physical siddhi struggling with the remnants of asiddhi which intend to return or persist, maintenance of the karmasiddhi. Except in the lipe nothing assuredly final and definite.

10th & 11th.

Days of crisis & transition, intended chiefly for the exclusion of the remnants of false tapas in the lipsa and the full replacement of the Aniruddha bhava by the Balaram-Aniruddha in the Master of the Yoga. Kamananda now possesses the whole day in the subdued form with the intense rising out of it; it is discontinued at night.

12th February. Wednesday.

The Balaram-Aniruddha Bhava suffused with Pradyumna and based on concealed Maheshwara now governs the Yoga; but in the Prakriti, the Maheshwara bhava is not yet concealed. In neither is there as yet a very powerful energy of the Balarama or Mahakali bhava. The vijnana has recovered its elasticity, the knowledge & sight of the sukshma world is increasing and the kamananda grows in intensity.

This movement continued throughout the day, ceased in the evening. The movement is towards the purification of error out of the trikaldrishti & aishwarya and dream, incoherence & insufficiency out of the samadhi. But the resistance in the akasha is still strong enough to prevent an unhampered rapidity of improvement. Health improves & grows stronger, yet the abnormal symptomatic affections, which have no longer any coherence or raison d’être, still recur or cling. Adhogati is persistent & prevents the established
utthapana from frequently manifesting. Saundarya is still limited to its one or two imperfect details. Karmasiddhi develops, but slowly & against a considerable obstruction.

13th February. Thursday.
A day of uncertain development. Swapna samadhi is slowly becoming more purposeful and developing a better organisation.

14th February. Friday.
Trikaldrishti improved and became normally free from the old sources of error except in matters of exact detail. Health strongly attacked.

15th February. Saturday.
[No entry]
1 AND 12 APRIL, 19 AND 21 MAY 1913

Record of Yoga—April.

There has been a gap of nearly two months in the record due to an attack of pronounced asiddhi, which lasted from the middle of February till late in March and seemed to reverse much that had already been accomplished and recorded. The asiddhi was mostly physical in its nature, but [accompanied] also with entire interruption and partial reversal in some of the other siddhis, a general tamasic prostration and ill-health. The one positive result has been to confirm the removal of rajasic tejas in all but a feeble shadow of its old material tendencies.

April 1st

The first chatusthaya is now beyond the danger of successful attack except in the positive samata; a few touches of asamata & ashanti come occasionally, but soon die away. The second chatusthaya is feeble and ill-organised owing to the trivial nature of the siddhi and the failure of everything which would strikingly prove the Adesha. There is a general action of the vijnana, but it is not yet extricated from falsehood and uncertainty, so that all that can be done is to watch results & see whether the perception is a truth or a misapplication. Rupadrishti is of the feeblest & samadhi fails to advance. Physical siddhi is only fragmentary & its progress successfully resisted. The sixth chatusthaya is present, but only when the attention is attracted to the Brahman. The fifth

1 MS accompanied
chatusthaya is also fragmentary and mingled with ill-success.

There has been a great activity of the poetical power which has acquired rapidity accompanied with forceful & effective inspiration, but not always with inevitable & illuminating inspiration. The attempt is now to maintain the invariability of the illuminated & inspired inevitability without diminishing the rapidity. This is in epic poetry. The foundations of a rapid & sure inevitability are being laid in other literary powers. Equipment (bare) for three months has been effected.

The two great disappointments of the aishwarya have been the fall of Janina & Adrianople & the outrages in Bengal; the aishwarya has failed to avoid these disasters. In Albania the line of the Aishwarya has been followed, but not in every respect, eg Djakovica seems to be lost to Albania. The continued frequency of great calamities confirms the trikaldrishti. In small matters trikaldrishti is now very usually correct, but limited in its range. Time, place & order of circumstance, oftener right than before have still the anrita tendency very pronounced. All the parts of knowledge in the third chatusthaya are in action, but they are neither perfect, vigorous, fruitful nor organised.

Power now acts frequently, but is much resisted. Effectiveness in religious & moral influence is frequent & steady, but imperfect. So political siddhi, but more in the world at large than in India.

April 12th.

After the note on the 1st the diary was discontinued owing to the uncertainties in which the siddhi was still enveloped. All that has happened in the last few days confirms the view then taken; the stage is one of partial and combated efficiency. Yet there are proofs of advance. Eg On the 8th night a swelling on the ankle & foot began, in the morning the whole of the left foot was attacked & it did not seem as if a speedy cure were possible. It was, however, indicated in the thought that it was merely an effect of impure rasa and not the disease common in these parts,\(^2\) would show no

\(^2\) *Filariasis (elephantiasis), endemic in Pondicherry.* — *Ed.*
improvement during the day, would begin to go on the morrow and practically be got rid of the day after, but the remnants would be left. This prediction was fulfilled to the letter. Moreover, the swelling healed exactly as the will was applied, the part most insisted on improving first, the others more slowly.

The great difficulty is the resistance in the physical akasha, first to the effective activity and, secondly, to the unmixed activity of the vijnana. If the mixture of the old intellectual activity can be got rid of, the effective vijnanamaya activity can be assured more rapidly. It is towards this end that the Power is now working. The immediate ends proposed are Brahman, Ananda external and internal, Arogya, effective Image in waking state & sleep and effective Trikaldrishti. The whole activity of the Yoga is being reconstituted. The rupas of all kinds appear though fitfully & with insufficient stability & frequency, in the waking state, & insufficient stability & continuity in sleep. The Brahmadrishi is now complete & less frequently forgotten & never lost. Kamananda, which had almost faded out, is reviving. The resistance in all directions still continues.

[Here all but two lines of a page left blank.]

19th May 1913.

The stable progress of the siddhi has been now established against the backward and downward tendencies; effects long produced fragmentarily and [in]securely are now firm and inalterable. Rapidity supervenes on the stability, but freedom from attack, superiority to resistance has yet to be effected.

The third or vijnana-chatusthaya has now been well planted in the soil of the lower kingdoms of the being. Their contradictions have still to be excluded, their defects corrected, their force strengthened and their range extended. The fourth or physical siddhi, long the subject of serious doubt, is now commenced in all its parts and in some of them appears to be firmly rooted. The third can now be left to develop; the fourth and fifth alone still present serious difficulties, admit of prolonged & sometimes effective resistance and demand some struggle.
Suggestions.

Today is the last day of the negative movements; from tomorrow pure progress commences. That change has to be prepared & completed this afternoon and evening.

[Here a quarter of a page left blank.]

21st May.

As is not unusual when a suggestion of strong and swift progress is made, the fulfilment, at first apparently complete, is interrupted by as powerful an opposite movement of non-fulfilment as the state of the siddhi will permit. The principle of pure progress is the perception of the end which all apparently adverse circumstances are intended to serve and the immediate conversion of the negative into a positive movement. Successfully established till 3 pm yesterday, it was then suddenly reversed and a negative movement induced of an obstinacy and completeness such as has been absent from the siddhi since last March. The object of the reverse was to get rid of the remnants of tejasic suggestion (asha, desire, over-stress, effort,) which still persist in the mental environment.

All the vijnana siddhis are now permanently active and effective, but with defects and limitations & subject to the continued mental activity of mixed truth & falsehood which is still successfully maintained in the mental environment by the opposing tendencies of Prakriti and successfully thrust upon the mind in the form of suggestions. The rupa & samadhi formerly deficient have now a petty but sufficient regular fertility, which can be rapidly enlarged & eventually perfected. They still lack some of their old felicities, but when these return, they will no longer be fitful, uncertainly held & willed as formerly, but natural, spontaneous and a permanent possession. The rupas are principally embarrassed by the persistence of a few dominant images which shut out the others or replace them when they attempt to manifest. Another difficulty is the resistance obstinately offered to the emergence from the prana akasha of the perfect, as distinguished from the representative images.

In the physical siddhi, Ananda is the most advanced. The vishayanandas of the senses are all perfected in type, seldom
contradicted, but as yet insufficient in intensity, except in the
taste, where even it is uneven. The higher mental anandas are
all present (prema, chidghana, shuddha), but as yet imperfectly
active. Ahaituka ananda is constant in shanti, but not yet in active
santosha. The sahaituka sharira anandas are established and grow-
ing; the ahaituka manifest but infrequent. Ahaituka kamananda is
alone well-established, and awakes whenever recalled, but is still
too much a matter of the will and not a self-acting dharma of
the body. It can manifest now in any state, jagrat or samadhistha.
Thirst has almost disappeared, though it made an appearance for
two or three days, mostly in a suppressed form; but does not now
occur even in the unusual heat of this summer. Hunger makes its
appearance fitfully and is never intense & seldom prolonged; it is
being rapidly replaced by hungerless bhojanánanda. Heat & cold
are still slightly effective on the body. Pain has turned into some
form of ananda except in extreme touches, eg burning by fire, blows
touching the bone, etc; but here it is only the immediate contact
that is painful, the after effect is always anandamaya; in some
touches, eg mosquito bite the habit of discomfort still continues,
but is now occasional and not a dharma of the body. Pain of events
is the one asamata of mind still persisting & then only as asamata
of failure; this too is occasional, largely artificial and no longer a
dharma of the mind.

Arogya is troubled now only by the vicissitudes of the visrishti-
visarjana which have much diminished and by the inefficiency of
vajra. The solid visrishti takes place now irregularly after five days
or three or more than five; it was preceded & is still accompanied or
followed usually by some action of excessive tejas in the jala bhuta;
but this is rapidly diminishing. Occasional trouble of vayavya or
tajasa jala has been frequent, but seems now to be moving towards
elimination. Jalavisrishti showed recently a tendency towards rapid
dimination & even disappearance; at present it is again restored,
but has no longer its former force and abundance. Touches of
eruption and fragments of phlegmatism (sneezing etc) still subsist,
but are effete and cannot materialise into roga.

Uthapana increases rapidly in force during this month. The
arms can maintain themselves now for two hours & more without
strain or reaction in the vertical position supine; for two hours & more with some but not an effective strain in the vertical position, sitting; only the horizontal position is yet unconquered. In the rest of the body the Shakti now aims at eliminating strain without excessive tapasya.

Saundarya has definitely begun, but the Will Power cannot alter the lines of the body except by a slow & tedious process & the bone still resists alteration of status; still the figure has definitely changed, & in the colour, hair, feet, etc there are slight but effective alterations. Some of the signs of old age, eg grey hairs, although no longer visibly increasing, still resist ejection.

The other chatusthayas have all been commenced, but the fifth is as yet active only in slow movements and petty degrees.
4–30 June 1913

Record

Trikaldrishti —
Aishwarya, ishita, vashita..
Drishti, samadhi.
accomplished, but subject to suspension and imperfect in arrangement, uncertain also in incidence & limited in penetration and force.

Ananda —
accomplished, but uncertain in continuity, insufficient in intensity.

Arogya —
unaccomplished, but on the verge of accomplishment.

Utthapana
unaccomplished, but in progress.

Saundarya,
feebly begun.

Krishna Kali
Accomplished, but not always nor perfectly manifest.

Karma
Commenced, but in its infancy and much obstructed

Kama
Embryonic.

Brahman.
Founded in all its parts, perfect only in sarvam & part of anantam[,] easily obscured in Ananda, less easily in jnana, inefficient in ananta tapas

*The record of June 1913 was kept in three separate sets of loose sheets, headed “Record”, “Script” and “Record of Details & Guidance”. These are reproduced here in this order.*

www.holybooks.com
First Chatusthaya.
Complete; subject to occasional successful attack.

Second Chatusthaya
Complete, but imperfect in sraddha,—deficient in tejas, veiled in attahasya. Liable to eclipse & obscuration

Shuddhi incomplete in body, almost complete in vijnana.
Mukti complete, except for relics of egoism in the environment.
Bhukti complete, but easily obscured.
Siddhi imperfect in all its parts.
All subject to obscuration & temporary invasion by their opposites.

June 4th 1913.¹

June ... to 12th

1. The defects of the first chatusthaya to [be eliminated]² with finality—ie to be no longer recurrent. Ineffective touches may yet come.

2. The defects of the second chatusthaya to disappear by the perfection of dasya & sraddha & jnana (including general trikal-drishhti). Invasion still possible.

3. Jnana to be finally active without obstruction or suspension in thought, trikaldrishti & prakamyavyapti, but not yet perfect in range & penetration

4. Aishwarya, ishita, vashita to become general, though still limited & subject to breach & obstruction

5. Samadhi to be delivered from obstruction, though not yet perfectly grasped.

6. Ananda to be continuous, arogya & utthapana strengthened; saundarya will still be obstructed.

7. Karma & kama to develop a greater & less occasional power & action. KrishnaKali to increase.

¹ Note that this is the date of the entry above.—Ed.
² MS damaged; words within brackets partly or wholly lost and not certain.—Ed.
8. The rest to progress to a less obstructed perfection.

---

June 5th

Morning

Thought, trikaldrishti, telepathy to be cleared of their obstructions & impurities. Aishwarya to spread. Samadhi to be arranged. Begun.

= Ananda to increase, utthapana recommence. Done
= Karma. Begun.

= The daiva karma is coming to a head in the house; there; but not in other places, where it has still to be enforced. It will take another fortnight for it to come entirely to a head here & there, a month for it to become sufficiently forceful outside. Daiva first, kriti next, sahitya third, kama fourth.

= June 6th—

Thought, trikaldrishti, telepathy to be farther cleared. Aishwarya to spread & strengthen. Samadhi to increase in force. Done
Rupadrishi to grow in clearness & stability. Not evident.
Ananda to increase. Utthapana to grow in anima. Done
Karma to grow in force. Not evident, except in sahitya.

= The attempt to establish the more ugra tejas has failed, owing to error of the vani and script—the latter in the prediction of the rupadrishi, in which there was no result corresponding to the prediction—

= June 7th

The same to continue. Partly fulfilled
Ananda, utthapana & arogya to grow. — Fulfilled

Karma to strengthen. — Not evident

Arogya suffered a violent break in the digestion; increased in another direction. Aishwarya now works from the centre of things & when it gets hold of the object can direct its movements against resistance. Samata & the general sraddha (in Yogasiddhi) are now strong & resist assault, except for certain tendencies of depression under strong pressure of asiddhi. Tejas exceeding dhriti has failed to effect its footing — the power & fulfilment are still insufficient, & the objective pressure still too successful[ly] hostile.

June 8th.

Ananda & utthapana to grow steadily; arogya with more resistance.

Karma to strengthen against resistance.

The vijnana chatusthaya to undergo a slight obscuration, before it emerges strengthened.

Today to be especially marked by physical siddhi & samadhi.

This is programme, not prediction. If not fulfilled today, it must be fulfilled subsequently, but in this the Shakti must persist till fulfilment —

Money to arrive in this month, beyond what is expected, in this month also all actual impediments to the kriti are to be cleared away. From the next week the wider movement is to begin — ie from the 8th to the fifteenth.

June 9th

Utthapana in leg, horizontal position, lying, 15 minutes (on 8th 10 & before 5), anima much stronger, but sharp strain on one muscle or sinew. In arms, horizontal position, one hour with relief
by change of position; ananima still a little heavy at shoulder &
near elbow (formerly 15 minutes or half an hour, though capable
of hour).

Ananda, the same, but habits of time & circumstance elimi-
nated; only habit of fluctuation & discontinuity obstructs.

Arogya gaining in k. [kamic] centre, but still resisted; troubled
by artificial jalamay tejas in assimilation.

Saundarya only in increased curling of hair & apparently
mukhasri. Falling of hair still profuse.

Vijnanasiddhi obscured & resisted; lipi & rupa rare; swapna-
samadhi progresses—

The same programme; but this time final reemergence of
thought processes & perfected trikaldrishti; also lipi.

June 10th

Thought process reemerged, but not yet lipi or perfected
trikaldrishti. Utthapana was quiescent, ananda dull, physical shakti
much depressed, also arogya. In the thought of trikaldrishti, the
vigour of false tejasic suggestion seems temporarily to have revived.
Only the samata retains its undiminished strength.

It is evident now that the trikaldrishti is reemergent in its more
perfect form, especially in prakamyavyapti, but the determinative
trikaldrishti is still uncertain and too narrow even when it acts
certainly, fastening on one circumstance rather than embracing the
whole.

Today rupadrishti will reemerge & move henceforward irre-
sistibly towards perfection. The siddhis of power also recover their
force from today & the samadhi moves forward.

June 11th

A day of baffled aiswaryasiddhi & mixed tejas & depression
of tejas & sraddha. Departure of Shatrughna. Ananda tends to
be continuous in manifestation, but failed at night. Rupadrishti
reemerged & lipi became freer. No evident progress in samadhi. The siddhis of power acted in small things with partial effectiveness, but failed in great. No definite progress of utthapana or arogya.

June 12th
Dasya of the body to be emphasised, sraddha & tejas restored, knowledge perfected in circumstance and samadhi with rupadrishhti strengthened. Aishwarya etc to become more effective.

Ananda to maintain its continuity, arogya & utthapana to justify the promise of increase, saundarya to begin definitely its march forward.
Karma chatusthaya to begin with greater power.

June 13th
As predicted, a day of relapse.
Results.
1. The defects of the first chatusthaya still recur in touches, transient or [lingering], effective for trouble, not effective for destruction of the siddhi or able to reach the centre of the being.
2. Tejas established, but for a time almost entirely breached & reduced to dhriti. Sraddha broken.
3. Jnana etc obstructed & suspended, but not entirely
4. Aishwarya powers momentarily breached
5. Samadhi obstructed; developing rupadrishhti entirely suspended in jagrat.
6. Ananda reduced to the matrix condition in continuity with occasional manifestation of subdued intensity.
7. Arogya resisted & strong relapse in assimilative process; utthapana slowly develops.
8. Fifth chatusthaya suspended.

3 MS lingerings
June 14th
Since last evening struggle of siddhi to reemerge. Strong	
tamas & scepticism of rapidity & of adeshasiddhi. Remnants of depression. Still it is apparent that behind the veil knowledge & power are increasing in force. There is no such appearance with regard to samadhi. Strong physical lassitude, revival of thirst, some discomfort.

14th to 23d
Restoration of the siddhi by the evening.

- Tejas, jnana, shakti to be perfected. (Partly fulfilled)
- Samadhi to be cured of its defects.
- Completion of secondary utthapana in type; continuity with intensity of ananda; new phase of arogya.
- Saundarya to make its first strong progress.
- Fifth & sixth chatusthayas to be prepared in perfection.

June 15th
The siddhi partially restored after a prolonged struggle. Process since yesterday afternoon.

Defects.
- Tejas not so strong & selfconfident as before the break.
- Sraddha in siddhi but not in rapidity or adesha.
- Thought still besieged & normal trikaldrishti yet imperfect & uncertain in circumstance
- Power sometimes perfect in force & accuracy, at others resisted or baffled.
- Samadhi still confused & rupadrishhti ineffective.
- Ananda moving towards continuity in a greater intensity.
- Arogya, resisted, but growing very slowly.
- Utthapana inactive awaiting restoration of bodily energy.
15th. 16th
1. Trikaldrishti & aiswarya both perfect in circumstance will develop & extrude gradually but rapidly the tendency to tejasic & tamasic misplacement.
2. Tejas & sraddha will return.
3. The natural vangmaya thought will resume its normal action.
4. The tendency to rupadrishth will be strengthened, samadhi become more effective.
5. Ananda will grow in intense continuity, action of utthapana reemerge, bodily energy be restored, arogya be better confirmed.
6. The tendency to saundarya will show farther signs of strength.

June 16—
1 – 4 & prediction of ananda confirmed by the actuality (15th), the rest not evident or even contrary. They are to be fulfilled today.

Vani, script & vangmaya have all been, apparently, delivered from the siege of their intrusive manomaya shadows. Only perception of actuality is still pursued by false suggestion of actuality. There is a strong & hitherto effective struggle to prevent Jnanam & Anandam Brahman from becoming the normal state of the consciousness. Henceforth this must be the object of the subjective siddhi. The Sarvam Brahman is already well-founded but must gain in power, depth, intensity & variety.

June 17th
The programme has been perfectly fulfilled. Lipi is now master of its akasha; rupadrishth is reemergent & needs only the union of a normal stability & clearness in all forms to be perfect. Jagrat samadhi (antardrishta) is still obstructed, but the swapnasamadhi is perfect in all but long continuity; it possesses now in thought, vishayas & even lipi an ordinary coherence & continuity.

Ananda is once more apparent in samadhi, & sleep alone has the power to effect its discontinuance.
The other physical siddhis are still obstructed, though slowly tending to prevail.

June 17th
1. Trikaldrishti & ordinary aishwarya to conclude their struggle with the tejasic misplacement.
2. Tejas & sraddha to be delivered from their reason for occasional & partial discouragement.
3. The vangmaya to effect normality of the inspired & illuminated inevitability.
4. Rupadrishhti in bahirdarshi jagrat to overcome its last barrier
5. Samadhi to proceed in coherence & continuity.
6. Increase of telepathy & vyapti.
7. Ananda to get a more perfect hold on the body.
8. Arogya to assert its superiority to resistance.
9. Utthapana to quell the defect of anima in the arms & legs
10. Saundarya to persist in its advance.
11. Kama to be well prepared in the body.
12. Anandam Brahma to become normal.

Results.
1. There is no longer any struggle. The tejasic placement is more & more justifying itself and ceasing to be a misplacement, although still frequently a misinterpreted placement. A deeper trikaldrishti independent of all data or of concentration on the object is now becoming normal without extruding the established trikaldrishti which perceives the subjective & objective data, watches the object & selects beforehand the action or result.
2. With the tejasic misplacement the reason for discouragement has disappeared. The sraddha is not complete, but so far as it extends, is untroubled & the tejas is as strong as the basis of sraddha will bear, but tends still to lapse from chanda into dhira or saumya tejas.
3. The inspired & illuminated inevitability is now the normal
tendency of the vangmaya, but not yet frequent or invariable. The annamaya brain still feels unwilling to bear the energy of this higher vangmaya.

4. Rupa in bahirdarsha is still obstructed. Clear forms of some stability are beginning to reappear, but the movement is still crude.

5. Coherence & continuity are now much stronger in the samadhi; several groups of circumstances are observed, however, there is little concentration on the single group or object as yet.

6. Telepathy & vyapti are assuming a larger activity.

7. Ananda of great intensity took hold, but this as yet is little prolonged; the continuity was less evident.

8. Arogya is becoming more imperative & self-assured; decisive results are yet awaited.

9. Utthapana in the legs (both simultaneously, lying) for an hour, with but slight defect of anima; it might have been continued considerably longer. Laghima very strong; mahima strong, but affected by subjective weakness in the prana. Utthapana of arms, horizontal position, only 20 minutes & much afflicted by ananima. Power in wrist yet weak, but improving.

10. Saundarya; no decisive proof of advance.

11. Preparation of kama in the body begun.

12. Anandam Brahman is now normal when smrita, and subjective bhukti is established. Certain specific defects of indriya bhukti have revived, but there is an increase of bhogasamarthya in the body.

In addition, dasya (subjective) is now much more complete; the guidance of the Master being from this day imperative.

---

June 18—

Yesterday’s fulfilment was defective only in rupa & in saundarya. The programme has to be more perfectly fulfilled today.

---

Communications

1. Telepathy is becoming more common & distinct.
2. Rupa emerged with some forms, but still with only an initial stability
3. Intense ananda more continuous.
4. Utthapana of arms (horizontal position) one hour, almost perfect in right arm, heavily resisted in the left.

June 19—
Programme
1. Receptive Telepathy of thought
2. Rupadrishti—medial stability; not yet full range.
   —
4. Ananda, intense & recurrent; continuous when recurrent
5. Utthapana, legs in horizontal position.
6. Arogya,—incomplete.
   —

Results.

The programme was hardly fulfilled at all except in 1. Rupadrishti was again obstructed, although inferior images appeared, rarely with any stability, & superior, rare also, without stability. Jagrat samadhi increased only in sukshma sparsha. Ananda was subdued & occasional, not continuous till the evening & then only for a time. Utthapana of the legs, horizontal, was effected with difficulty for 15 minutes. Arogya of assimilation was not pronounced & the karmic successes were slight. On the other hand trikaldrishti & aishwarya progressed,—especially telepathy. Articulate thought in the inevitable form was powerfully resumed.

June 20.
Results.
1. Aishwarya largely ineffective; trikaldrishti good, but not faultless, telepathy developing.
2. Samadhi steadily progresses in coherence & continuity of scene.
3. Rupadrishti still emergent & obstructed.
4. Vangmaya more frequent.
5. Cessation of straining in tejas, subjective ananda more undisturbed. Lilamaya upalabdhi stronger.
6. Arogya stronger; utthapana of neck, 50 minutes, with variations of pure utthapana & muscular strain; utthapana of legs, horizontal, reclined, 45 minutes, the last ten with difficulty because of the return of muscular strain.

June 21.
1. Aishwarya again partially effective, mainly through the Prakriti; trikaladrishhti good in the broad result, but wanting in certainty, inspiration & ananda; occasionally perfect in circumstance, but with the same defects.
2. Rupadrishti slightly emergent; samadhi without definite progress.
3. Vangmaya still resisted & interrupted; imperfect in vak.
4. Ananda, subjective, depressed by depressed sraddha.
5. Utthapana of left arm, half an hour, ananima still heavy but no longer the painful pressure from above on the muscles of the shoulder & elbow. Utthapana of neck, (sitting in armchair) 1½ hour. Some pressure of ananima but mainly at the end.
6. Arogya feeble; restoring itself after a collapse (in the morning) under exceptional circumstances. The same with physical ananda.
7. Some signs of Karmic success.
8. Saundarya — Improvement of hue in the leg (below the knee where it was blackish & clumsily glossy). Whiteness of teeth (especially lower row) with some relics of yellowness. This latter siddhi, once almost effected, had for a long time past retrograded & obstinately resisted the aishwarya.

June 22
1. Trikaldrishti & Aishwarya recovering force, rupadrishti slightly emergent, swapna coherent.
2. Vangmaya reached the pure inevitability & was well associated with perceptive thought. Initial vangmaya of trikaldrishti
3. Ananda almost in abeyance, utthapana likewise, arogya of penultimate chakra recovering force
4. Manifestation of personality by the Master of the Yoga.

June 23
Trikaldrishti steadily improving in detail, but troubled by uncertainty & a shifting stress. Aishwarya normally active & then entirely denied. Rupadrishhti still emergent, but not victorious. [Physical]⁴ siddhi almost dormant, but still small signs of a tendency to progress.

June 24th
Strong perception of imperfections of the siddhi. Complete arrestation of progress. Only the old siddhis continue, often in their inferior parts, eg rupa & lipi, ananda etc—Recoil in saundarya. Slow progress in sixth

June 27th—
Strong asiddhi in the morning, of first & second chatusthayas (sukha, sraddha especially). Arrested progress elsewhere.
A sudden finality in parts of the siddhi.
1. Subjective ananda; ahaituka alone was prominent before in the permanent constitution of the Ananda, prema, chidghana & shuddha are now firmly established on the ahaituka as a basis, and the whole subjective ananda stands in a saumya permanence with moments of intensity. Touches of the nirananda & tamasic depression seek to arrive, but are ineffective & at once repelled by the jnana.
2. Personality & personal relation of the Master with Ananda-vani & dasya; perfect guidance of the Yoga.
3. Immediate understanding of lipi & rupa,—not yet proof of their unvarying truth.

⁴ MS Physically
4. Complete sukham & atmaprasada; ananda of passivity—
5. Normal activity of right perceptive thought (jnana, not yet
trikaladrishti).

Besides these siddhis rupa is slowly developing & arrangement
of prakamya vyapti as a basis of pure vijnanamaya trikaladrishti is
approaching completion. Meanwhile vijnanadrishti is increasing
in its intervention as a guide & arbiter of the mental perceptions
in trikaladrishti. Vishaya bhoga is becoming more active & has
regained its old relative perfection.

June 28th
[No entry]
Script—

June 16th

Morning

Everything must be known; it is not enough to reject a falsehood, the truth from which it starts & which it veils must be perceived and put in its place & proper relation to other truths of tendency, potentiality or actuality.

Satiety is attempting to reassert its old jurisdiction over the pranic system. *After a short struggle the attempt will be discomfited.*

The aishwarya must be used with greater confidence & a more sovereign force,—with sraddha, tejas & ishwarabhāva. It is now bound always to produce an effect, though not always the entire or the accurate effect intended. There need be no regard, in using aishwarya, for the contradictory suggestions of the knowledge, since immediate failure in actuality may be intended by the Master as a step towards subsequent mastery.

The prediction about satiety has already been fulfilled in the particular instance at issue, but there must now be effected a general security in the siddhi. The satiety of struggle & failure which has long possessed the psychic prana must be expelled absolutely. Until it is expelled, struggle & failure will continue.

Aishwarya perfect in circumstance is now acting, although limited & besieged by the imperfection.

The right movement in the subjective siddhi has now been assured; but in action also there must be the right movement dependent entirely on dasya to the guidance, tapas & supreme pravritti. There must be no questioning or resistance.

The free & seated action, ordinarily effective even in detailed circumstance, of the trikaldrishti and aishwarya is now a thing permanent and ineffrangible. It must now become invariably effective & not only free but comprehensive. For this object it is necessary that the telepathy of thought & action should be developed & perfected—

The siddhi of aishwarya must now effect the rupadrishtha & samadhi, and then attack more exclusively the physical siddhi with a part of its action on the karma & kama. Till then the ishita will
take charge for the most part of the fourth & fifth chatushhayas.

There has been no definite progress in the afternoon. The power & light fell into a state of subintense normality. Kamananda is now continuous, except at night, but at a lower level of intensity than yesterday. The effusion of the beard has been resumed after a very long period.

Sortilege.

And let them be for lights in the firmament of the heaven to give light upon the earth, & it was so. (Satyam & Ananda, Sun & Moon)

June 17th

Yesterday’s programme is the first adequately fulfilled in all its details, although the saundarya seemed to take a step backward in one important detail.

The movement of the siddhi towards ejection of tejasic misplacement (sunless tejas) is being resisted by the asurya janah. It must be rigorously expelled & no trace of it left behind; every movement of the consciousness must be sûra & prakashamaya

Trikaldrishti of the immediate present & future in life, has now to be boldly ventured upon. There must be no yielding to the attack, no cessation of script or thought or knowledge or trikaldrishti[,] no recognition of absolute anritam, no abandonment of lipi or rupa or samadhi. The suggestion of the arrival of money & relief of the pecuniary insufficiency has been constant, but there has been no corresponding actuality. It must now be definitely asserted. June is the beginning of the more powerful kriti which is impossible without money. In June therefore a movement forward in the equipment is due & inevitable.

[Bharati] into a more effective surrender. Success with N [Nolini] & R [Ramaswamy].

A violent & successful attack on every part of the siddhi has persisted throughout the morning from eight to eleven and is not yet over. The question is now between the tejas of siddhi & the tejas of asiddhi. There will be no abandonment of the struggle till the habit of attack ceases. Something of the asiddhi has now gone, but the detailed trikaldrishti is still obstructed.

June 18th. Henceforward this is to be a record of trikaldrishti etc, not of general yoga.

4. Arrival of equipment. (Several minor amounts — not yet the great amount, but that is on its way).

5. Loss of friends cancelled & compensated.

These are general movements which will be effected by the more effective working of the tapas & ishita,

A complete denial of the apprehension suggested, nor are the facts stated correctly. The event suggested will take place in the space of a few days. The other in the space of a week.

The rupas have overcome the obstacle, but the obstacle is not destroyed. The destruction will be the main work of today. It is obvious that the perfect freedom of the rupa is not yet intended, but neither is the persistence of an entirely successful obstruction intended. Asraddha is not always a vehicle of true trikaldrishti.

Ananda will again possess the body today & utthapana advance; the latter not now, but at night & in the morning. Arogya of the assimilation, not yet of the penultimate centre.

No violent disturbance of the arogya need be apprehended, only minor touches; it will move forwards now towards final

---

5 This record of Script begun on 16 June. — Ed.
perfection, with a few minor reverses on the way. The last of
the rogas will begin definitely to overcome its chief adverse san-
skara from today & by the 23rd the movement will be definite &
unmistakeable, elevating the arogya into a victorious tendency.

Uttapana has yet to get rid of the more violent pressure of
ananima, to quell it, before it can move forward to the same stage.
This is the work that has been set down to be done by the 23rd.
The apparent denial of the result in one position of the arms
is one of those abnormal violences of the enemy which weaken
& exhaust their general power. This will be rectified tonight &
tomorrow.

In the saundarya the struggle is now mainly over the signs of
age. The preparatory movement towards their removal is all that
can be effected by the 23rd. This will be done, but not perfectly—

June 19th

By perfect passivity the deeper trikaldrishti to be perfected—

_Uttapana of the legs this morning, successful, though not at
first entirely successful._ It must be done for half an hour with strong
mahima & laghima, then its advance will be automatic.

(15 minutes, but not with ease)

Uttapana of the back after the 20th; meanwhile the utthapana
of the neck will be confirmed. _The arms tonight._ (only for \( \frac{1}{3} \) hour)

_Rupa thrice today._

_Beginning of regular Yogic teaching in literary form._

_1–5 will all take place in the period of a month._

_Three more proofs of karmic success today_ (very slight)

June 20th

_The book on Yoga will be continued._
Utthapana, in spite of resistance, in left arm, legs & neck

Rupa will continue to overcome the obstruction

Karmic success will become normal, though chequered still with failures. There will be periods of arrested success, but very brief.

Aishwarya will get a greater hold on the Akasha. (Not fulfilled; opposite movement)

The tejas of eruption will prove finally abortive.

Today is a day of positive advance, especially in the vijnana-siddhi, all parts of which will progress definitely. (Not fulfilled).

Ananda will again become active & continuous.

Arogya will increase in all its insufficient parts.

From today move forward with perfected sraddha & tejas
From today triumph.
From today be perfect in subjective ananda.

From today does not mean from this moment; what came was the full asiddhi. There will not be an immediate siddhi of the triumphant aishwarya. The usual means are being employed for the maintenance of the asiddhi. Nor will the siddhi revive immediately. It has not yet revived. But it will revive within the quarter hour.

The last of the three commands is already fulfilled, in spite of adverse touches. Perfected, means, first, purified.

Thought has progressed in vangmaya & in purification from tejasic insistence; trikaldrishti in naturalness & ease, though not in
certainty; samadhi in coherence & continuity; vyapti prakamya in fulness & frequency; aishwarya in purity.

June 21st

Tejas must be of the Mahasaraswati, not the Mahakali order with a clear intelligence even in its speed & fire. The rapidity of the siddhi cannot be of the meteoric speed, but still it must become rapid & unresisted. At present tamas possesses the sraddha & envelops the tejas. Doubt & uncertainty stand, if not victorious, yet largely justified. This state of things must be cleared away today —

Restoration of effective aishwarya & perfectly circumstanced trikaldrishti— (slight)

Emergence of rupadrishti, not yet complete — slight.

Progress of samadhi. No definite progress

Activity of the vijnana. In the evening only

Ananda, arogya, utthapana. Feeble, except the last.

There is a change proceeding in the vijnana-siddhi which must be effected by the 23d. Hence the suspension of the ordinary successful action of the powers of knowledge & force, prakasha & tapas. Arogya today, under strong provocation, has suffered from an unusually strong touch of bhauta tejas & a powerful visrishti. The nature of the reactions is on the lines of old habit, but their force & effectiveness have been far inferior to the former insistence & virulence. Nothing untoward will happen in the environment or in Bengal. Equipment will arrive in large quantities before any fresh necessity for money is felt.

June 22d.

The fall of the tejas & sraddha contradicts the promise of perfected tejas & sraddha from the 20th; so the difficulties of
the siddhi & the stains on the subjective ananda contradict the
two other promises. The natural conclusion is that they were false
predictions & they are so if taken in their literal sense; but what
was really intended, was the beginning of their emergence from
that data. This explanation also does not satisfy & is regarded by
the mind as a sophism & an afterthought. Let it stand recorded, &
afterwards the truth can be better judged by experience. .

1. The physical siddhi cannot be perfected at once.
2. The samata & sraddha depend on truth of guidance &
   truth of knowledge for their absolute finality. The mind cannot be
   satisfied with [. . . ] or falsehood.
3. The tejas depends upon sraddha.
4. The vijnana siddhi is not perfect & will take some time to
   be perfected.
5. All suggestions to the contrary must be distrusted as inap-
   plicable to the present conditions of the Yoga

These are the negative directions, and they stand; but positive
directions are also necessary.

1. Do not accept error or falsehood, but let them not disturb
   such faith as is established. They are permitted, not enjoined.
   Accept all error as a disguise of truth; penetrate the disguise.
2. Accept all failure as a link in the process of success; place
   the link.
3. Accept the rapidity of the siddhi as a certainty of the future
   & a growing certainty. Perceive all retardation as a help to the
   growth of the rapidity; fix the nature of the help.
4. Will pertinaciously whatever you are enjoined to will.
5. Believe in the absolute fulfilment of the adesha.

June 23d
Truth of guidance is established; truth of knowledge advances.
The first rule is now in application; the others are beginning.
June 24th

All else is founded. 5 is not founded. Trust to the knowledge to give you the nature of the disguise, the link & the help.

Today
1. Vijnana again active. Very poor activity
2. Preparation for beginning of kriti. Very poor preparation
3. Physical siddhi again reemergent. No real emergence

Tomorrow
1. Beginning of real rapidity.
2. Automatic action & progress of vijnana siddhis
3. Final stage of physical siddhi governed by aishwarya & mixed with tapasya.
4. Pursuance of all forms of karma regularly in their initial movement.

This is looking at one moment of resisted siddhi and not before or after, except so far as suits the inertia. It is true the triple promise or command has not been fulfilled. It is true it appears now to be the usual tejasic error of time. The conclusion to be drawn is that the fulfilment was not meant to be unchequered—

The Vani that guides in the script is largely a tejasic vani—the old tejas that seeks to justify errors & to exaggerate the siddhi. There have been clear falsehoods uttered. This record therefore ceases to have a real utility. At the same time it need not be destroyed, nor immediately discontinued. It may have a use for catharsis, but not for guidance.

The record is more and more convicted of tejasic exaggeration which towards the end, especially, becomes so great as to be actual falsity. It must be abandoned entirely.

---

The four predictions that follow are cancelled in the manuscript. See the entry of 25 June in the Record of Details & Guidance that follows.
June 25th

Today is a turning point. Beginning with a severe crisis of the old type, it prepares the results that were cancelled in a moment of irritation in the record now put by, viz.

1. Automatic action and progress of the vijnanasiddhi.
2. The preoccupation of the active tapas & tapasya with the physical siddhi, to the exclusion of the first three chatus-thayas.
3. The commencement of all forms of karma regularly pursued and no longer abandoned to long periods of inactivity.
4. The commencement of a more rapid progression.

The first stage of this movement will be transitional, still pursued by fragments of the former impulses & gradually eliminative of these relics.

5. Action of perfected tejas & sraddha.
6. " of perfected subjective ananda
7. " of a larger & less variable success.

Here also the movement is transitional.

The first stage will continue till the 30th June. The vijnanasiddhi will occupy till the 31st July, as also the tapasic attention to the physical siddhi

Old lipis to be fulfilled

1. Enthusiastic tejas & sraddha.
2. The daughters of delight (Ananda, sharira).
3 Sahityasiddhi.

Sahitya—

1. Essays in Yoga. 3. Ilion.
2. Upanishads

The least physical straining of the mental will must be avoided & all shadow of mere desire. Only the body will be for some time

7 The preceding record of Script ending with the entry of 24 June. — Ed.
indulged in some of its cravings born of thirst, weariness etc. There is no need of the straining in the mind to assist the siddhi.—

The consciously directed action of the siddhi is now confined to the fourth & fifth chatushayas & must therefore be arranged in the mind.
1. Sharira ananda is established but irregular. It must be regularised.
2. Indriya ananda must be given a flawless completeness.
3. Hunger & thirst must again be banished from the system.
4. The tapasya of heat & cold must be carried to its conclusion.
5. Ananda of pain must be carried yet farther forward.
6. Arogya must be enforced perfectly where there are fragments of opposition, more irresistibly where there is a block of resistance.
7. Utthapana has to be resumed & completed in the arms, strengthened in the legs & neck, brought into the loins.
8. The full force of the Shakti must be directed towards the saundarya, where the force of the opposition is still solid & unbroken, though no longer untouched.
9. Weariness of brain & body must be resisted, also of prana (satiety)

In Sahitya perfection & continuity have to be enforced;
In Daiva resistance to be broken entirely;
In Kriti, control of events, actions & things completely established.
In Kama, the subjective conditions & objective results created.

Result. Defects often prominent, but principle of advance strengthened.

June 26th
There must be no mental reflection either in thought or sahitya, but only effective & spontaneous vision & creation. Even the criticism must be unreflective & inspired. Reflection is a seeking of the
unpossessed; possession must be the mould of the consciousness, to comprehend & not to acquire. In place of reflection there must be for a time brooding chit-tapas, as free as possible from limited concentration & tending rather to wider & wider extension. Limited tapas fixes on one circumstance & ignores the rest; it is therefore a parent of much error. Mental tejas is impatient of the wideness of the mahat; it seeks to fasten on the alpam, the individual & possess it, & finds the process of possessing the individual through the universal too slow for its desire & too burdensome to its strength.

June 27th

Yesterday, the trikaldrishti became more comprehensively effective & minutely correct, but is still not sure of its grasp. Today the aishwarya is once more insistent on general result, result in mass & result in detail of circumstance. The possession of the Akasha is still in the hands of the Asiddhi; & siddhi is only a growing circumstance, or a troubled occupation maintained in a hostile country; not as in the first two chatusthayas an established occupation even when attacked & disturbed in its details—

A reaction breaking down the first chatusthaya has suspended progress for half the morning. This frequent return of duhkha & unease is imposed on the system from without, for purposes connected with the world, not with the individual. It belongs to the swabhava of things, not to the individual karma. It cannot immediately cease, assurances to the contrary notwithstanding. Yet till it ceases there can be no perfected ananda—

The finality of the first chatusthaya must be insisted on. This is the only way to [...............] 8

These two opposing statements are both correct. The finality will have yet a little time to establish in its perfection.

8 MS damaged, three or four words lost; “only way to” doubtful.—Ed.
June 27th
Results of 27th in the other record.  

June 28th. [Saturday]
So far (about 5 pm) apparently negative results with small advance. Yet Saturday was fixed for a great advance in trikaldrishti. It is apparent that a general activity of trikaldrishti has been attempted with the intention of finality, but tamasic asiddhi & confusion with vague straining of mental tejas has obscured the prakasha. Shanti & sukham & atmaprasad have been preserved in spite of touches of vague physical uneasiness trying to develop into their opposites. Hasya is for the most part absent. Aishwarya is active, forceful & persistent, but without self-confidence or enthusiasm & only with difficulty effective. Form in rupa is obstinately obstructed, & in lipi. Physical siddhi is still kept in comparative abeyance.

Three things seem to have been accomplished, in outline, not perfection.

1. Activity of trikaldrishti (perceptive thought) in interpreting its materials.
2. Superior activity of revelatory vijnana trikaldrishti watching & judging the mental impressions
3. Normal activity of the vijnanamaya perceptive thought in jnana.

In addition there was some lifting of the physical weakness & depression that for some time has possessed the system.

June 29th.
The day begins with a denial of the trikaldrishti & a suspension of the activity of the second chatusthaya. The first remains constant & resists all attacks. The obstinacy of the Will is assured, not its energy. Faith in the Adesha is still intermittent; the mind remains unconvinced, though admitting the possibility, it can give only a provisional faith to its actuality, dependent on the siddhi being rapidly fulfilled in the third, fourth & fifth chatusthayas.

9 See pages 258–59.
1. Lipi active, it is suggested, with finality.
2. Rupa more clearly emergent.
3. Proofs of strengthened aishwarya applied to kriti. Apollo-
nian shakti, but working slowly towards its results.
4. Stronger manifestation of the Lilamaya in the Saguna Brah-
man.

The first chatusthaya firmly holds, allowing only of momentary
physical touches in the prana (advertising manas through psychical
prana).

5. Stronger perceptions of pranamaya world.

June 30th

Text of lipi & interpretation of lipi are finally accomplished,
though capable of greater swiftness & extension, & the latter still
encumbered with initial gropings; but the lipi is not invariably
legible or vivid—

Expected results.
1. Lipi to grow in swiftness, extension & legibility.
2. Rupa to emerge more decidedly.
3. Finality of correct arrangement in trikaldrishti.
4. Increased force of aishwarya.
5. Revived progress of samadhi.
6. Finality of second chatusthaya.
7. Purification of physical prana from remnants of mental
ashanti.

The finality of second chatusthaya cannot yet include entire
sraddha in rapidity of siddhi or extent of adeshasiddhi; but the
fundamental sraddha will be final.

Actual results—
1. Fulfilled. The legibility is not immediate nor invariable,
but it is enforcing itself on the akasha.
2. Fulfilled, but the decisiveness is not yet final.
3. Fulfilled, but the old habit of confused perception tends
to persist in a feeble & disorganised movement.
4. Fulfilled, but not yet final
5. Fulfilled—in greater coherency.
7. Proceeding,—the touches are becoming more & more physical & less & less able to create even physical discomfort.
1–11 JULY 1913

July 1st

The record of June is written elsewhere.¹

The results up to date of the movement in May and in June are,—

1. Finality of the first chatusthaya in all subjective experience. The body is still subject to touches of asamata, to physical disturbance and discomfort and to bodily depression but these remnants of asiddhi are in process of elimination. Subjectively, all that remains are occasional touches on the physical prana which more & more are rendered in terms of physical pressure, not mental, & even this pressure is being steadily converted into a physical ananda which replaces the old discomfort and nirananda, mental & bodily, of grief, vexation, revolt, defeat, failure etc.

2. Finality, so far as can be seen, of dasya, tejas & activity,—although this is entirely manifest, only today. Here again the obstacle is the persistence of physical weakness & depression. The fourfold dharma of virya is at work, subject to ineffective physical touches of their opposites, but not yet energetically active. With the same qualification the fourfold state of shakti is well established, but still uncertain in the bodily force. Chandibhava is limited as yet by the saumya character of the tejas which is full of dhaireya and hatha, but not yet fierce & ardent except at intervals. Vali is there always, but Narasinha intermittently. This, however, is passing away & the Nārasinha tejas taking the lead. The conversion from saumya to chanda tejas seems definitive today; for the disturbing & depressing force, viz, failure of result, is now practically ineffective. Sraddha in God & self-force is complete, but the knowledge of time & extent in result being still embryonic sraddha in rapidity & in adesh-siddhi is still very moderate.

¹ With this entry, Sri Aurobindo returned to the notebook he had set aside on 21 May 1913.—Ed.
3. The vijnana chatusthaya is in complete, but not perfect, fertile or well-arranged activity.
4. The physical siddhi is still in the stage of formation.
5. The fifth chatusthaya is strong in Krishnakali, but only embryonic in karmakāma.
6. The Brahmachatusthaya is complete in extent, imperfect in detail; but the Saguna Brahman is still the basis; the Lilamaya only as yet strongly emergent from the Saguna.
7. The seventh chatusthaya is complete subjectively, though imperfect, especially in siddhi; but objectively it is still insecure.

During the day karmasiddhi of the sahitya (prose) strongly outlined itself, although the movement of the vak is not yet entirely sure of its detail. Work resumed. Natural and Supernatural Man; Aryan Origins; etc. The action of the vijnana was not strong & definite, though at no time suspended or inefficient; the remnant of asiddhi was strongly in evidence. Relapse took place in the processes of assimilation, although the roga of tejasic looseness is becoming more and more exclusively physical & imposed from outside on the system. The physical siddhi as a whole was mostly in abeyance, except in dehashakti which, for the most part, resisted the ordinary effects of these relapses. An attempt was made to revive the perishing rogas, but it succeeded only in manifesting scattered touches.

July 2d.

A sharp touch of yesterday’s roga on awaking; free visrishti of bad assimilation. The chanda tejas, not suspended, is somewhat quiescent. In the morning quiescence of siddhi. In the afternoon trikaldrishti recovered its force and a normal accuracy of vyapti prakamya with the inspired vichara and vidhana (arrangement and right assignment of perceptions) accompanied by a slow movement of the deciding vijnana (revelative intuition viveka). At the same time the shadow of uncertainty lingers and errors of placing and stress still continue. The thought (perceptive) is in a similar state of activity. Aishwarya still acts against a resistance sometimes
successful, sometimes partially successful[,] sometimes ineffective. Occasionally the resistance is non-existent or so slight as to be only just perceptible. Communicative involuntary vyapti & swift fulfilment of lipsa-thought in small details are not infrequent. Kamananda inactive yesterday has revived, but is still very occasional. The Chanda tejas recovers force progressively. (5.30 pm).

For the last two or three days the siddhi of self-preservation & whiteness in the teeth has been swiftly recovering its force. For some months past the asiddhi had returned and the yellow film returned and deepened; now the lower teeth are again white with only a faint suggestion of the yellow shade. In the upper teeth the film is there in blotches, not covering the whole surface, but is rapidly dissolving. N.B. It is now more than four years since any artificial means of preservation or cleansing (brush, powder etc) were last used. In other respects, there are some faint signs of advance in saundarya, but none of these are decisive.

July 3d.

Jnana and Trikaldrishti continue to grow in power and range, but are overshadowed by uncertainty. Revelatory knowledge is acting from above on the mind and the prakasha is not luminous. Aishwarya in the afternoon showed a considerable increase of force at the height of its action; but it easily falls back into a comparative quiescence. Kamananda more active & recovering its normal movement. Poetry (Ilion) was resumed; the power, though still sluggish and a little uncertain, seems freer from its baser & more inefficient elements.

July 4th.

The final purification of the system from the physical touches of Ashanti continues. In the morning there was only a rich and abundant rupadrishthi, very bright in colours and numerous in forms and groups, mostly crude, in the prana akasha; this was under stimulus. In the afternoon the depression of the tejas parted and the Krishna Kali emerged with the Rudra personality of Krishna; the kamananda more continuous & persistent while walking. There is a throwback in the saundarya. The continuity and intensity of sharira
ananda are predicted. Lipi “17” (Anandam Brahma) already fulfilled in the strong emergence of Ananda & the Anandamaya in the environing Brahman. The necessity of aishwarya-tapas for helping the sharirananda is now removed; it remains for the other three members of the physical siddhi, but is to be lessened shortly and then renounced for the arogya.

In the second half of the day there was continuity & intensity of the sharirananda and diminution of the jalavisrishti (about 8 am and 12 midnight).

July 5th

In the morning inscription of a programme for the day. Its seven heads & their results coincided with an unusual accuracy.

(1) Lipi; express, free, perfecting its own arrangement and spontaneity.

The spontaneity & arrangement are still in course of perfection, not yet perfect; the lipi is express & free only when it conquers the resistance, but this is now frequent. Otherwise it is pale in material and confused in sequence.

(2) Rupa emerging, shaping, sometimes clear & perfect, recurrent, not spontaneous.

(3) Trikaldrishti, overcoming mental confusion and misplacement.

(4) Aishwarya developing control.

(5) Ananda (shārira) regularising itself and preparing continuous action

(6) Arogya emerging in spite of obstinate opposition.

(7) Krishnakali possessing the whole range of the consciousness

None of these results are complete. In the trikaldrishti the movement is towards the exclusion of false stress & ascription of actuality in event by the mind and the accurate communication of event from vijnana to the mind. In Aishwarya the faculty of dictating several successive movements is accomplished and this is done instantaneously without resistance & in the majority of cases the force is successful; but in many it has to be used with great insistence & coercive pressure to bring about a single result, and short
periods of almost entire asiddhi occur, in which the force does not touch or hardly touches or touches ineffectively its various objects. The arogya that emerges is chiefly the assimilative power which in spite of denial of visrishti for four days[,] the jala visrishti being allowed only twice daily (yesterday 8-10 am & 8-20 pm), succeeds in throwing off all tendencies to assimilative disturbance except a fluctuating degree of flatulence which tends towards disappearance. The minor rogas (cold etc) which are being expelled still appear momentarily or in isolated touches as external intrusions appearing with or without provocation. Exposure to cold is still effective in assisting this kind of uneasiness. The Kali consciousness aware of Krishna as the Iswara attached itself to all the acts & experiences; but the Krishna personality was held back & the anna given over to other influences.

This last movement was the result of the attempt to execute with force of tejas a second programme, the attempt going through the usual stages. A violent attack of asiddhi, bringing confusion & sunlessness to all the vijnana siddhis & general nirananda of impatience & asraddha, occupied the outer parts of the system. The first chatusthaya remained constant in the system proper, but the physical parts of mind responded to strong though unstable & unpoignant touches of doubt, depression of faith, impatience of asatya & , to a less degree, of asiddhi. In the system proper positive hasyam was alone affected, but atmaprasada remained intact.

The programme non-effectualised contained three considerable items—

1. Second chatusthaya complete in faith and force, (the two elements still most imperfect) and the third complete in knowledge.
2. Ananda complete in continuity.
3. Arogya triumphant over obstacles.

Sleep, for the last two days, has diminished its hold; on the 4th, from 12 to 5.40 with two half hours of continuous nidravishta samadhi, the 5th from 12 to 4 (about), with half an hour & an hour of broken nidravishta samadhi. Dasya is growing more & more concrete in its hold on the system & the movements of the body no longer depend even partially on the will, but are often enforced contrary to the immediate will of the body or the will in revolt of the
Jiva; the latter circumstance is rare & came yesterday after a long interval of passive submission as a result of the sudden revival of asraddha & weariness of physical tapasya. The element of tapasya is now much reduced, but still persists in the physical siddhi. For the most part all action is now a passivity supporting more or less effective tapas, not tapasya. In Samadhi coherent sentences of lipi are now common, but in the mass the lipi is incoherent. Isolated figures or momentary groups still prevail. Antardrishta jagrat is confined to the most elementary crude forms and even these come with difficulty and rarely; antardrishta speedily passes into sushupta or swapna samadhi.

July 6th.

The morning has been a continuation of yesterday’s confused movement and obstruction, but with a fading stress of asiddhi. In the afternoon an almost perfect trikaldrishti has manifested, some twenty minute movements of the same object (a spider) being accurately predicted. The old defects,—overstress, intention or aishwarya mistaken for event,—still continue, but have less force and are much more infrequent. Chinmayaishwarya also increases rapidly in effectiveness.

As the result of the day’s programme an extensive & minute trikaldrishti defective only in a slight uncertainty, occasional misplacements and errors of detail and a tendency to fatigue, when the tamasic or sunless movement tries to resume its hold, is definitely achieved. Telepathy (prakamya vyapti of thought) is now beginning to advance towards self-regularisation & a freer movement & range. The difficulty is only in recognising the thought when it is seen; for it is usually taken as an idea in one’s own mind and not recognised as the thought of another, owing to our egoistic appropriation of whatever comes to us in our subjective experience. This difficulty once surmounted, aprakasha alone will remain to be overcome,—itself due to egoistic limitation of our subjective experience & attention to so much as interests or can be made useful to our own activity; an infinite openness & the ear of the mind alert for all shabda is required in order that these siddhis may be perfected.
Aishwarya increases considerably & rapidly in force & effectiveness, no longer in the old field of exercise mainly (movements of birds, beasts, insects, people around) but in the wider range of life. Certain remarkable instances occurred during the course of the day, eg the easy surmounting of the housing problem and the change in the temper of the intermediary. In the outside world events in the Balkans show a considerable increase in the particular effectiveness, but this is not entirely recent as it dates from the closing period of the war. Therapeutic power is on the increase, eg. Bharati’s hysteric patient not cured by him in spite of strong effort & personal contact and suggestion, cured after a distant & moderate application of Will by myself in two days; Lebian père given up as hopeless by the doctor, rid in less than two days of his worst symptoms (difficulty of breathing at once, difficulty of urination in a day), young Dutambey, regarded as a complicated case, cured of all but a slight residuary symptom after one brief relapse brought on by his own imprudence etc. The most desperate cases still offer a stronger resistance. The control of the will over my own bodily states has also increased.

Sleep 11.45 to 5.50.

Faith & tejas are growing in the second chatusthaya.

July 7th

The transference of the siddhi from the mental to the ideal plane is indicated in the lipi. For this transference to be entirely effective, three preliminary conditions are required.

(1) The perception of the truth underlying & contained in every subjective experience, thought, thought-suggestion, speculation etc, since all thought proceeds from the vijnana which is satyam & not asatyam.

(2) The acceptance of every act of will, effort, impulsion, effectuating movement as a step in some process of God’s effective tapas, the perception of the final object of the process & of the immediate object effected, and the rejection of the idea of failure, sterility & inutility as attached to anything that happens in God’s world; since all action, event & impulse proceed from the vijnana which is entirely ritam & failure & inutility would be anritam.
(3) The acceptance of every feeling & sensation as part of one divine thousand-faceted ananda without distinction of satisfaction or disappointment, right pleasure & perverse pleasure, comfort or discomfort, since all emotions & sensations proceed from the vijnana which is brihat & bhuma & duality belongs to the alpam & the bheda.

These conditions have been partially effected, but the lacunae & defects in their siddhi must be got rid of and corrected, finally, for the upward movement.

A second programme was given and partially effected
(1) Enthusiastic faith and tejas commenced.

There was the first commencement only followed by the interposition of strong obstacles to the growth of either; in the result a calm and firm faith and a strong & steady tejas easily expulsive of shadows of doubt and despondency was established. The continued uncertainty of result and confirmation due to the surviving imperfections of knowledge & force alone prevent the rudra tejas & the avegamaya sraddha from taking possession of the system. They occur in it from time to time, sometimes baffled, but no longer rebuked.

(2) Ananda overcomes the obstacle to continuity and then to intense continuity.

Ananda (sharira) was active throughout the day, continuous in spite of asmarana due to distraction of attention or absorption in thought or act, mildly intense sometimes, but towards the end of the day uncertain, interrupted and, finally, during the night, quiescent.

(3) The lacunae of knowledge begin to be filled up, the basis being already formed.

The improvement was chiefly in the more ordinary and spontaneous action of telepathy of idea, right perception of unseen fact, memory, sahityasmriti, acceptance of distant trikaldrishtis, etc. Scenes & incidents forgotten for decades begin to recur to the memory, isolated, not usually complete, but in the details restored quite vivid and precise.

(4) The arogya gets the better of its remaining difficulties.

There was constant proof of the power of the arogya, when
touched or attacked, to resist the attack and right itself swiftly after even strong touches. But the movement is as yet only in its initial stage of decisiveness, not yet wholly decisive.

(5) The lipi in its tertiary stage begins to take possession of the akasha. The tertiary stage has as its features, fixity, immediate legibility, spontaneity of long lipis, variety & lipikaushalya in forms, colours etc. The movement is still embryonic.

A beginning in the predominance of aishwarya was subsequently predicted and took the shape of prayogas initially successful, then successfully baffled by opposing forces of habitual resistance, then fulfilled by unexpected circumstances suddenly intervening & showing the direct hand of the Ishwara. Samadhi was once more active, but has not recovered normal coherency or long continuity of action. Sleep resumed its force, bringing one hour of nidravishta samadhi in the afternoon and more than seven hours sleep at night.

Saundarya generally is forcefully obstructed & makes no progress; but in one detail there has been unexpected and rapid progress,—a rounding off of the sharp angles of those fingers which were formerly square. This was noticed two or three days ago, but farther progress was sensible even in the course of a single day. In only two or three of the fingers are there still traces of the old sharp angles. This isolated rapidity is a strong contrast to the occasional slow & slight progress covering many months & the usual failure of all success in other attempts of the psychic body to alter by mental force the physical sheath into its own image.

July 8th

Programme.

(1) Aishwarya begins to reign.

For a time the power and the knowledge both seemed to have retrograded & the first to be almost annulled; in the evening aishwarya reemerged with an increased force and effectiveness, fulfilling with an unprecedented frequency & persistence.

(2) Ananda overcomes the obstacle.

Intense ananda continuous for long periods has commenced today to be the rule of the body, but it is varied by long periods
of subdued ananda and occasional lapses into quiescence. In the
night quiescence is still the rule, but is varied by strong touches of
activity.

(3) Lacunae of knowledge fill more completely.
Only a slight movement took place in this direction.
(4) Lipi takes stronger possession.
Formerly the ordinary rule of the lipi was the single word with
occasional brief phrases & rare extensions, the rule is now the word
or the brief phrase with a tendency to complete sentences. But the
legibility, vividness & spontaneity are still combated and restricted
by the obstinate resistance of the material akasha.
(5) Arogya yet stronger.
It resisted with general success, but not entire immunity, the
conditions which have in the past usually or invariably provoked a
retrograde movement.
(6) Obstacles to enthusiasm of faith & tejas remove[d].
The chief obstacle removed was dependence on favourable
result & success; but the tendency to temporary depression of force
from subjective causes is not yet altogether eliminated.
(7) Samadhi & rupa active.
Rupa (crude) was only briefly active in a few images, but these
evolved a perfection and stability in various circumstances (image
on background, crude image, group, developed image) not yet so
decisively combined. Samadhi recovered coherency & is developing
application to life. (eg Alpt carrying a cane chair through a veranda;
Bh. [Bharati] offering to Rg & another some food, three glasses on
a table & pieces of cocoanut (?)).
(8) Utthapana.
Utthapana of the arm in the horizontal position was enforced
for an hour and a half; during the later part of this period an
abnormal stiffness was produced and an artificial pressure from
above strove to depress the arm; nevertheless after three minutes
rest, it could again be continued, but in recumbent posture, for
another half hour. A slight stiffness in the shoulder is the only after
result. Typical utthapana of leg & neck were effected for half an
hour, in order to get rid of the habit of adhogati which had again
reasserted itself. The physical depression still continues.
(9) Saundarya.

No definite forward movement as yet distinguishable. In the teeth etc the movement is retrograde.

The articulate thought, long silent, manifested for a minute or two, but with an absolute perfection of style & substance, inevitable, with the full illumination & inspiration of phrase, even in the effective & adequate forms of the inevitability. This is a striking instance of involved siddhi, done without process or sadhan, behind the veil, illustrating the double action of Night & Dawn, naktoshásá swāsārá ekam shishum [dhāpayete].² There are also other instances, but these are slighter and less definite. Owing to the rush of the old inferior movements which used to rise whenever the avegamaya sraddha & tapas manifested, the trikaldrishti was clouded & disturbed, & the old tejasic misinterpretations abounded. But there was no disturbance, revolt or nirananda in the system & only the shadow of the old tamasic reaction.

July 9th.

The programme for the next three days is yesterday’s with additions. The utthapana and saundarya especially must move forward. Trikaldrishti has already reasserted itself, but is imperfect in circumstance; this imperfection will now disappear. Aishwarya is inconstant in its action & often effective only against resistance; the action must be regular & the effectiveness spontaneous. Lipi must get a complete hold on the akash and the difficulty of the stability in rupa, especially in lifelike rupa must at last disappear. Ananda delivered from interruption and arogya triumphant over attack must reach a more solid state of security (vājasātiḥ); utthapana recover itself and saundarya, now constantly obstructed and thrown back, share in the general victorious movement.

The 9th has been a day of failure & recoil. The attempt to establish the avegamaya tejas & sraddha without reaction has broken down; the avega became manomaya and resulted in confusion of knowledge, misplacement of tejas & final return of asamata,

² Blank left in the manuscript by Sri Aurobindo; cf. the sortilege of 7 December 1912 and other Vedic verses.—Ed.
ashanti, duhkha in strong & then violent touches (10th) which, at first violently expelled, again & successfully invaded the system, supported by the revolt of the Jiva against the asatya. The saundarya has broken down or gone back in the parts not irrevocably fixed & the violent return of asaundarya is successful everywhere. Aishwarya is not entirely ineffective, but subject to frequent failure & almost universal resistance. The touches of roga returned where they were on the point of evanescence and there has been some diminution in the force of continuity of the kamananda. The promises of finality held out to the mind in the first & second chatusthayas, as well as in some details of the third & fourth, have proved, as always, to be tejasic and deceptive. On the other side, there has been enforced a more general perception of the unity of all movements of the Prakriti and of the unity of the mover of the Prakriti & their unity also with the same Purusha & Prakriti in this adhara. The Jiva also is made to recognise its unity with the Prakriti, but not yet with the Purusha, except in occasional glimpses.

The rounding of the fingers still progresses; the only definite trace of the sharp angles is in one corner of the third finger of the left hand where it is represented by a horn of dried & callous skin empty of flesh; otherwise they appear only in the excessive fullness of the curves or in slight unevennesses representing the lost angle (especially on one side of the right thumb). This fullness appears in all except the first fingers which were always pointed & the lefthand little finger which is now of the full pointed variety to which the righthand little finger has also progressed more than others. No other decisive improvement is noticeable in the saundarya, although there is a similar tendency in the feet.

Samadhi is more vigorous & dream recovering continuous coherence, but the movement of samadhi towards long continuity of single incident is not yet effective. Lipi is pressing slowly upon the akasha for removal of its habitual defects.

July 10th

A stronger attack of asiddhi not removed till the evening; & then not entirely. The only siddhi which advanced during the
day was the lipi. The successful movement from manas to mahat predicted in the script as the result of the attack.3

July 11th
In accordance with the prediction the movement of the vijnana from action in the slight, petty & detailed to action in the satyam, ritam, brihat was commenced. At first the knowledge was merely brihat in manas, hundreds of perceptions coming without order or right direction; then the satyam in this infinity came to be revealed not the ritam; every perception was found to be true, but not always true at the time & in the place & order of circumstance indicated by the mind. Subsequently the ritam commenced, the trikaldrishti occurring with perfect accuracy even in the mental & sunless perceptions, but before it could be completed, other preoccupations commenced which filled the rest of the day (kriti). The movement of dasya, tejas, aishwarya, samadhi to mahattwa were similarly interrupted. Kamananda, only occasional the day before,

[This entry was left incomplete. Three blank pages follow.]

3 The last sentence of this entry appears to have been added on the eleventh. —Ed.
September 5. [written in pencil]

The rest of yesterday evening passed in a return to a former mental condition, with a background of udasina ananda held against touches of disquiet, an imperfect & clouded knowledge, an ineffective or only partially and slowly effective will, a poor & struggling lipi & rupa, an unprogressive & infrequent samadhi. The dasyabuddhi of the body, strong in the afternoon, was covered at night.

September 5. [written in ink]

In the evening and night the remnants of the day’s struggle and retrogression prevented progress. The mental suggestions still continued to be shot in from a distance and especially suggestions of unfaith, weariness and nirananda. All the powers of the vijnana were clouded and partially inoperative, the strong physical dasyabuddhi of the afternoon partially covered, kamananda declining and less frequent. The system reverted to the udasina ahaituka ananda of former times continually assailed by touches of strong & often angry disquiet. This is the first determined relapse into old conditions after many months of essential freedom from any true disturbance of the samata-shanti-sukham. This morning opens with the same conditions. It appears that for the first time in these few months a lower strain of the physical mind in the external swabhava yet surcharged with the anritam & avidya has been upheaved and its devatas let loose on the adhara.

The trikaldrishti labours for correctness of minute circumstance & unvarying correctness of actual result, but does not as yet go beyond amplitude of prakamya vyapti with frequency of the actual result and occasional correctness of minute circumstance. There is still the predominance of the perception of working mental forces in which the result intended & perceived is sometimes carried

www.holybooks.com
out, sometimes crossed by a successful counter-force, and often a result not intended, a force never meant to prevail, is foisted on the mind as the prearranged actuality. The latter result is especially frequent because the physical stratum upheaved is one inhabited by blind mechanical movements of the involved & unexpressed mind in matter which correspond in Nature to the subconscious physical stirrings in us of which our conscious mind takes no least cognizance in its normal & organised workings. Disregarded & unrecognised they pass without visible effect, although they must have some determining force & contribute to some result however slight of whose preparation we are unaware.

There has been no distinct advance in the daytime. The physical ananda persists when it is remembered or in the stillnesses of the body, but tends, as formerly, to retire in motion or when forgotten by the mental attention. Its intensity is rare and not extreme. Trikaladrishti is still haunted & baffled by blind and purposeless false suggestions proceeding & entering from some external point in a far distance; power is uncertain in its effect and always hampered. Lipi & rupa do not take hold of the akasha. Health is successfully resisted. Uthapana though growing is assailed by vague adhogati and an acute uneasiness of negative electricity which brings about or is attended by pains of contraction. The laghima alone is strong & keeps the limb in the air without any mental will or muscular effort. Saundarya makes no apparent advance.

There are constant tejasic suggestions of immediate progress, but the Jiva refuses to lend credit to them. The dasya, however, instead of being hampered seems to grow by this struggle; the merely Prakritic forces diminish in their hold on the system. Ashanti has attempted to be acute at times, but has not succeeded in fastening on the system.

In the evening lipi & rupa showed some signs of strengthening and the other siddhis attempted to liberate themselves, but nothing very definite has yet been accomplished. Some literary work was well accomplished. Dasya always increases.

Sept 6.

Instances of sukshma touch & smell increased yesterday and also of physical ananda; the touch of a fly on the palm of the hand creating a thrill of combined vishaya, tivra, vaidyuta & raudra which continued for more than a minute though not with entire continuity. Today the kamananda is more continuous, but not intense. Assimilation has strongly retrograded. Power manifests, but can be sustained only by the exertion of great force which tires the physical fibres and is always strongly resisted. Trikaldrishti is still baffled by the mental suggestions; it occurs frequently, but is in the highest degree uncertain and inconstant.

The suggestion has been made in the vani that purports to proceed from the master of the yoga – for the consciousness is crowded with many voices that confuse the mind—to proceed on the basis of positive affirmation and discovery of the precise truth & error in each suggestion and of positive faith in the march of the siddhi regardless of temporary failure & anritam. At first the trikaldrishti reemerged, only without the exactitude of detail, the actual event anticipated with omission of an intervening event or with denial of the coming event after it had been perceived instead of modification by the addition of the omitted circumstance or stress on intention as event; but for a time every perception was eventually justified by some result and later after a period of confusion, the old realisation, by which perception was shown to be the reflection in mind of a truth of tendency, intention or event & the nature of the truth shown & proved by some actual material movement, returned as the type of the siddhi. Beyond this point the siddhi of knowledge seems to be unable to advance except for brief occasional periods of a few minutes when absolute accuracy of event is temporarily effected. Willpower after proving eventually successful in all or almost all cases for a time is once more uncertain & chequered. There is the old tendency to a chaotic advance of mixed success & failure, imperfect & overstressed truth, unsatisfying siddhi. As it progresses correctness of knowledge & effectiveness of will tend to predominate over their opposites. It is not yet certain that this progress will become a fixed and uninterrupted tendency or produce results which will not be broken & need to be reconstituted.
Atris & Vrikas are still strong in the sadhana, even stronger than the Vritras & no siddhi is safe from them although all tend to recover themselves once the evil period is passed.

The siddhi reconstituted itself more strongly during the evening and night. Subjective ananda, including in itself defeat, imperfection & suffering, which has been baffled always when it attempted these inclusions, was more finally prepared. Rupadrishti became strong in the waking Chidakash & Chittakash. Knowledge & power resumed more successfully their process of selftransference into the vijnana.

Sept 7.

The morning began with a chequered movement. Afterwards, there came the lipi “First God & liberty, then telepathy.” The mind turned towards the perception of the Jnanam Anandam Brahma which has been increasing in force & persistence & perceived very powerfully the delight of Brahman in Avidya, limitation & suffering & the last knot of attachment to liberation was removed from the buddhi & the temperament. This liberation from mumukshutwa is the final step in mukti. It exists now in the buddhi & the soul, it has to be stamped firmly on the rest of the antahkaran. Afterwards, a very minute & brihat telepathy commenced—the realisation in practical mentality of the Sarvam Anantam Jnanam Brahma. All the perceptions do not yet come at the right time, some revealing themselves after the thing perceived has passed out of the mind of the object. Nevertheless the movements of men & animals are now perfectly understood, their hesitations & rejected or modified ideas & impulses as well as those which eventuate in action. It is evident, now, out of what a complex mental tangle the single clear & decisive act proceeds. In the animals it is sometimes an obscure & sudden suggestion which contradicts all the previous thinking & tendency & often half consciously forces the action. But often also in them an impulse abandoned and forgotten by the mind remains in & dominates the subconscious pranic energy and dominates a subsequent action. The same is true but in a less degree of man. In the insects the mind counts for much less than this pranic energy. Subsequently the basis of the telepathic trikaldrishti
was shown to reside in the perception of the movements of this pranic energy, Matariswan, which governs action, apo Matariswā dadhati. An ant was climbing up the wall in an upward stream of ants; there was no sign of its reversing its progress; but the trikāldrishti saw that the ant would turn & go down, not upwards. At first it made a movement of uncertainty, then proceeded upward, then suddenly left the stream and went steadily & swiftly downwards. Afterwards the source of the trikāldrishti was seen, a coming movement of pranic energy, prepared in the sat-Brahman, latent both to the waking consciousness of the ant & my own, but caught by the vijnanamaya drishti. In another instance the same movement of energy was perceived in another ant and followed by an indicative movement, but it was also perceived that this was not the eventual impulse, & as a matter of fact a strong contrary tension intervened & carried the insect upward. In all these cases, the perception of the impulse by prakāmya vyapti is not enough; the vijnana distinguishing the nature & fate of the tapas is required to constitute trikāldrishti. All error now consists in the absence of this distinguishing perception or in the false mental stress which tends to replace its unerring accuracy.

Sept 13—

During the last week a considerable quantity of ground has been covered. Ordinarily the condition of the system is a state of positive samata, sama ananda in all that occurs or is experienced, but there is still a tendency to asamata in the face of persistent bad result in Yoga accompanied by untruth in what seem to be the centres of knowledge. Usually the tendency only touches the system from outside and is repelled by the samata, but sometimes it actualises into a more or less prolonged state of unfaith, despondency and disquiet. The second chatusthaya has progressed greatly. Secondary dasya has given place to the first stage of tertiary; tejas & tapas have now become habitually active when the prakāsha is clouded by the partial nirananda & unfaith; the bhava of Mahakali on the Maheshwari pratistha has occupied permanently the Mahasaraswati continent without this time ploughing up the pratistha & continent by the tendency to drag
them also over to the rudrabhava. Faith is now almost complete &
grows in intensity; but it is still troubled by too much subservience
to the immediate actualities & cannot always look beyond to the
future actuality. Nevertheless the habit of perceiving the truth in
every perception, the force of fulfilment in every action or baulking
of action & the ananda in every sensation of heart & mind is
growing even upon the intellect.

The chief movement has been the development of the ideality,
its increasing hold on the rebellious & self-acting intellectuality in
the outer swabhava and the transfer of the mental activity to the
ideal plane. Telepathy has increased to a considerable extent and
embraces now the thoughts also, but is not always evenly active; in
the use of the trikaldrishti it has become something of a stumbling
block, as the rapid perception of the movements of impelling force,
intention & impulse impresses the still active intellectual devatas
with a false idea of actual result and tend[s] to shut out the event
from the perception. Nevertheless the vijnanamay determination
of the actual event even in detail begins to be more frequently
reflected in the intellectual parts and has some force but, usually,
little or no jotirmaya prakasha. Power varies, but has grown in
insistence, success & grip on the akasha. Vani & script are still
excessive in statement, but the inert element tends to pass out of
them. Lipi is now well-established in activity; but is more usually
perfect in chitra & sthapatya than in akasha where the old faults
of paleness, insufficient legibility & fragmentary manifestation are
still powerful. Incoherence has not yet been removed, but the power
to interpret lipi, coherent or incoherent, has grown immensely &
is only faulty, as a rule, when the vijnana is clouded by the aprakasha
& the intellect once more active. Rupa grows more fertile & is
once more rich & perfect or almost perfect in chitra & sthapatya,
(one defect is excess of human figures & defect of animal forms
& objects), but in akasha it cannot yet compass the union of vivid
clearness & stability. The obstruction here is still strong. Samadhi
has increased in habitual coherence & continuity; even the lipi in
sushupta swapna now tends to be coherent.

The physical siddhi is always resisted & put back in utthapana
& saundarya; in ananda & arogya it is progressive with occasional
retrogressions. Habituality of kamananda and frequency of the other physical anandas has considerably increased; also to a certain extent their intensity. A serious effort is being made to get rid of the obstinate fragments of eruption, headache, cold & stomach complaint which still recur needlessly in the system. Headache usually occurs only by vyapti from other adharas.

One great result of the week’s progress has been the completion & permanent possession in perception of the fourfold Brahman. The only defect is a tendency to fall back from the jnanam element, thereby losing the lilamaya personality of the Brahman. Otherwise vismriti is now only an inert & ineffective suspension of the siddhi, which has no longer to be reconstituted on resumption of the mind’s apramattata.

Intellectual work is now almost finally based, except for some defects in the poetical power, and all the various work fixed on is being pursued; but the regularity of brain-work on one subject & the simultaneity of brain work on different subjects is very deficient owing to the insubmission or incapacity of the physical brain. The former defect is being rapidly remedied. The force of kriti has a little increased, perceptibly in effectiveness.

Later in the day deeper perceptions of the vijnana were awak-ened, resulting in some remarkable effects of trikaldrishti; but these were afterwards confused by the invasion of external intellectual suggestions confusing, by falsity of stress, the ritam & the anritam. Nevertheless the faith in the vijnana perceptions not immediately justified by the physical actualities grows in force and persistence. The power of the aishwarya over immediate results in the body increases; but is still deficient in the rapidity of final results, though more effective than of old.

Sept 14th (written on 15th)

(Yesterday) [i.e. the 14th] An attack on the health (assimilation) brought about a suspension of the kamananda & attempt at asiddhi; dominated early in the afternoon. The tejas is now beginning to fulfil itself against the tamaś; its predictions being correct or corrected by the vijnanamaya prakasha. Lipi, rupa & samadhi continued steadily to gain in habitual force; but in the
latter two the akasha is not yet clarified of the main obstruction. Trikaldrishti is habitually correct even in rough detail & often in exact detail, but with an element of erroneous & perverting stress on the telepathic impressions and considerable gaps and lacunae. Utthapana somewhat weakly recommenced in arms, neck and legs. The struggle, successful on the whole, still continues with the remnants of the old slighter ailments, eruption & cold. The former has no tejas & there is usually the eruption without the irritation. The latter is losing tejas, but is persistent. Roga of the assimilation has still an occasional force as in the morning. In the saundarya the lower range teeth have retained their whiteness, only slightly stained at first with a shadow of yellow, for five days, (formerly one day could hardly be registered,) and the upper are getting clarified to an extent not yet experienced since the reaction began or even before it. There is as yet no sign of reaction. In other directions the reaction holds or allows only a slow and doubtful progress in one or two details. Sahitya steadily continues, but only in short flows of energy.

Sept 16th
On the 14th there was a combination of successful aishwarya with strong & obstinate resistance to the aishwarya; this morning it succeeded almost in 100 per cent of the cases of application, & what is quite a new feature, usually with instantaneous effect or else very rapidly after a slight and halfhearted resistance. Only in one case, the object, though obeying in minor details & long prevented from following its dominant impulse, obstinately & successfully resisted for many minutes the main command and finally executed an opposite movement.

The other principal movements were in lipi and samadhi. In lipi the various stages through which the etheric script has wavered backwards & forwards, indistinctness or paleness of script, illegibility, partial legibility, vividness of single words, vividness of short phrases, unspontaneity, partial spontaneity, incoherent richness, illegible vividness, legible vividness, etc have been passed through rapidly in a final movement and lipi is now fixed in the akasha as an abundant phenomenon both in the single word & the short
phrase, spontaneous, vivid, legible, simultaneous, authoritative, and is now extending to long phrases. The interpretation of lipi is still occasionally hesitating owing to the uncertainties of the trikaldrishti, but this hesitation has disappeared from the thought scripts. The full authority of the thought is necessary to the full authority of the lipi. Rupa has developed a final richness, variety, frequency & perfect grouping in all the chitra & sthapataya forms including the vision in transparent substances; it has developed occasional perfection in single crude forms of all kinds & even in gana, but is vague & indistinct in grouped images, & vivid but momentary in the lifelike developed or dense images. These are old difficulties. Samadhi last night attained again & more powerfully on the whole to richness, variety, grouping, vividness, continued action, shabda; but the continuity has to be swift and is limited to a very few successive movements owing to want of firm hold on the jagrat-swapna & jagrat-sushupta conditions. Only in dream is there long continuity; & dream is now, so far as remembered, usually connected & coherent, with only slight survivals of the old defects. Its images are more vivid & nearer to the forms of samadhi, but are still dream images. As yet they are not dreams of actuality, but scenes from past lives, sukshma experiences etc. The dreaminess has not departed out of them.

All the subjective anandas, especially prema & next to it shuddha have been finally fixed in the system; none of them are yet new in form, experience or intensity, but a tendency to greater generality of intense experience is visible. The perception of ugliness & ungainliness contradictory of beauty which had reemerged & long persisted is now sinking back into the shuddha & chidghan anandas. Kamananda was occasional & ceased to preserve continuity; it now stands that the ananda can no longer be successfully excluded for a single day, but it is not yet continuously permanent because it still visits the body and does not yet hold it as its natural dharma. Arogya improved, but is still struggling against difficulties. Utthapana increases in force slowly & with difficulty. The weakness of the body & its capacity for exhaustion struggle powerfully to keep their hold.
Sept 17th

Trikaldrishti & aishwarya went through a short period of confusion for the one, ineffectiveness for the other, but both have recovered their former activity, trikaldrishti accurate, often even in perfect detail, but with [deficiency] in mahattwa, aishwarya ordinarily effective after resistance. The tejasic powers tend to prevail over the tamasic, but have not yet an assured and perfect victory.

In the afternoon clear images of various kinds in the antardrishta jagrat, but all of the initial crudity of material. In the jagrat single clear images in the akasha come a little more frequently & lifelike images come before the eye, instead of avoiding it, but are not yet stable before the eye. Group images in the akasha are still imperfect in clearness.

In the evening there came the perfectly clear & stable image in the akasha, single and small group, but this was limited to the non-lifelike & to one or two figures, ie different kinds of birds & butterflies; but in that limit even the most developed figures occurred with some freedom; a third image, (a cat on a bough,) came without the clearness. This was in the full evening light outside the house, in the subdued light of evening in the house, the images were repeated but not with such ease & absolute clearness, & at night in the lamplight they failed still more to acquire the full vividness. The force of association here was evident. Certain habitual images appear with more power in the lamplight, but this was in a different manner of vaguely compacted definiteness—in a transition stage between the mere image & the lifelike image. Samadhi was again very powerful and this time short conversations occurred in some of which the speaker was visible as speaking,—an almost entirely new circumstance. Scent also has begun & the first hint of taste.

Trikaldrishti & will-power were again allowed to lapse into the pure intellectuality but this time a greater power to distinguish between the action of the two & consequently between true & false trikaldrishti was developed out of the confusion. Utthapana was contradicted by a great weariness and weakness. After six days of whiteness the upper teeth began again to become clouded and a
slight shade to fall on the lower, especially on those at the right side. Kamananda increased in intensity. The personal lilamaya relation with the Master of the Yoga emerged, still feebly hampered by the old tapomaya & manomaya movements.

Sept 18th

The day passed largely in a struggle ending in disturbance & reaction, owing to the old insistence of the mental tejas, which had been suffered to act, on over-stress & exaggeration and a blind undiscriminating belief; but the disturbance was not acute nor very prolonged nor the reaction very obstinate or far-reaching. The chief loss was the enthusiasm & reach of the faith which returned to its normal belief in final success with an added disposition to accept the truth of a steady & increasingly rapid success in the Yoga, as distinct from the life-work. As usual circumstances apparent & real crowded to justify the element of unfaith, but also there were some that supported the faith. The balance was more even than formerly. Trikaldrishti continues to deal with the old intellectualities which still persist in external suggestion; it is usually correct when the mind is not in haste; the suggestions of the external mind are often precise & correct but are so interspersed, like most of the other movements of knowledge, with overstressed & misapplied truths, that uncertainty still reigns. Power grows in effectiveness. The rupa failed to preserve in the daytime the sudden advance made last evening. Rupas were non-lifelike, crude or dense of the crude tendency &, seldom, developed tendency, limited to a few forms and did not come easily & spontaneously or effect an assured union of clearness & stability. Lipi, on the other hand, after [having] become hesitating & infertile, recovered almost all its previous force and more than its previous frequency of comparative perfection. It is almost always intelligible, not always easily or perfectly legible. The reaction in the teeth grows in force. Saundarya makes no progress and weakness of the body continues. Dasya of the body has been perfected in the secondary stage of tertiary dasya, in which all physical action is done under visible compulsion of Krishna, but of Krishna through Prakriti, not direct. This dasya is extending to the mind & feelings. The progress of the personal relation has been
troubled by false and simulative vani. Kamananda has been usually intense, & fairly continuous in intensity or subdued force, but not entirely continuous. Telepathy of thought etc has been much in abeyance in favour of telepathy of impulse & tendency. There is no certain progress in arogya. Sahitya has been for these two days suspended.

Neither the faith nor the energy recovered its tone during the evening and night. Still, progress was made. Something like the full bhava of the personal relation was manifested, and the relation itself is now permanent and secured against successful attack. The simulative vanis attempt to persist, but they cannot prevail, endure or pervert. The bhavas permanently manifest are those of conqueror and master, playmate and guide & instructor. There was also progress in the samadhi, smell & touch manifesting vividly, both combined with sight & action &c, in the latter case, with sound; but the attempt to confirm & extend continuity failed. Dream manifested again full ihabhava of form & association, which could not, however, disturb the continuity & intelligibility of the series of incidents portrayed. Both in samadhi & jagrat perfect intelligibility of even fragmentary, confused or ill-decipherable lipi was firmly & suddenly established; undecipherable lipi still offers a difficulty to the thought perception. Telepathy flowered freely, but is not yet perfect in range or precision. Kamananda reached a high intensity, but was suspended, as commonly, during the night. Roga showed some reaction, & the physical siddhi generally is passing through a stage of persistent & concentrated obstruction.

Sept 19th

The teeth this morning have recovered their whiteness though some shadow of the yellow tinge hangs over them & its actuality is a little heavy, comparatively, in the side teeth. The reaction in the upper range has lightened. Kamananda continues but with suspensions & with a varying intensity. Inspired speech of the second order (illuminaive-effective-inspired) took possession of the thought with very little trouble, but is now silent (9 am) and thought perception is once more active, mixed intellectual & ideal governed by vijnana-perceptions. This time the Master of the Yoga has rejected shama
definitely as the agent of rehabilitation and enforced that function on pravritti which discharges it still with a hampered power owing to the siege of mental tapas. Script has been taken possession of by the governing force.

Today, the disturbance created yesterday continued in its after effects, chiefly in want of faith. Finally, calm and ananda returned and the control of the divine guidance manifested. Kamananda was less intense, trikaldrishti & aishwarya very broken & the siege of the external intellect persistent and heavy. Samadhi made no progress, rupa only in the arrival of akasha rupa on a background, but lipi recovered & increased its force.

Sept 20th 21st

During these two days there has been a rapid and liberal efflorescence of the siddhi. Faith at once fixed & enthusiastic has been established which surmounts all immediate contradictions because it has knowledge of the truth beyond. This illumined, firm & enthusiastic faith is being cured of its deficiencies and prepared for energy and action on a scale suitable to the life work. The process involves the display of the obstacles to the faith,—defect of perfect practical trikaldrishti, defect of effectiveness in will-power,—adverse experience with regard to rapidity in Yoga and large foundation & development in the adeshasiddhi. Sraddha & energy of tapas are developing, not yet grown to their full vigour. The Mahakali bhava has therefore tended without effacing itself to draw back, no longer into its Maheshwari pratistha,—this is the difference,—but upon rather than into its Mahasaraswati continent.

Trikaldrishti after displaying yesterday a great wideness & freedom of the satya is now removing the remnants of anritam, ordering the ritam in the ordinary practical trikaldrishti. The surviving defects are being remedied by a habitual illumination of the mental suggestions,—when an intention or impulse tends to be falsely stressed as event to be, a corrective illumination increasingly comes either along with the suggestion or immediately behind it; the mental suggestions themselves now, more often than not, justify themselves either in the immediate event or, if baffled immediately, in subsequent event. Telepathy of the object & its environment is
rich & abundant. Reliable telepathy of distant & unseen objects has begun. Will power grows in force & is usually successful in whole or in part when associated with trikaldrishti, often even when it is not. Its rapid & exact effect is frequent on things in motion, less frequent on things in rest where the opposition has time to take cognisance and make itself felt. Lipi continues to grow in frequency of legibility; for this purpose the immediate intelligibility (even of the undecipherable script, for that too is gained) has been suspended somewhat from its activity. Akasha rupa is now fairly constant in all forms of unlife image, but chiefly in the crude, more often & clearly in single figure than in the group. The old defects of instability, remoteness in the prana akash, indistinctness in the blur of the material tend to depart, but strive yet successfully to remain & be frequent. The perfect rupa strengthens itself but does not stabilise in its clear forms to the direct vision. A few rupas (bird, butterfly, moth, horse, horseman, etc) predominate & recur with unwearied reiteration, but the drishti is no longer confined to them. In the antardrishta jagrat independent manifestation has begun; one or two perfect images have shown themselves & variety is freer than in the bahirdarshi jagrat. Swapna Samadhi grows slowly, but is stationary in the parts resisted, inconstantly organised in those established. Chitra & sthapatya grow in brilliance, richness & variety, rapidly & spontaneously, unaired even by the immediate will – beyond a usually passive ishita.

Kamananda, usually intense only in isolated touches more or less rapidly repeated, became yesterday intense to the point of maithunananda with continuously repeated touches, but owing to the fear of effusion, it was stayed before it could develop. Nevertheless the habitual intensity is now much greater & keener than formerly, but varies in continuity. The inner anandas have well established themselves & work whenever there is smarana, as does also the consciousness of the Brahman in all objects which grows always in strength, intense universality & richness. The remaining symptomatic rogas are being steadily extruded, but are violent or obstinate before their outgoing. Utthapana & saundaryya do not yet prosper; the shade over the teeth after an at first unsuccessful struggle & partial withdrawal has succeeded to some extent in returning.
The outward work, except in the struggle with the disease of others, is suspended, — except for the involuntary & unplanned beginning of the Eclogue in hexameter on which there has long been insistence in the lipi. The relation with the Ishwara is now well revealed & active even when it is apparently clouded by other vanis; these can no longer dupe the intellect though they keep the mind sometimes in forgetfulness of their undivine origin. They become more & more truthful with the growth of the trikaldrishti, but also voice the deficient drishti & the remnants of false stress.

In the night rupa expanded greatly commanding a plentiful variety in the crude forms, a limited movement in other non-lifelike forms & a few stabilised lifelike forms, not of the more vivid order, direct before the vision. Swapna-Samadhi recovered its frequency and variety of experiences but not their combination & organisation which had been begun but not steadily continued. Health moved forward a little, but not yet decisively.
Sept 22d. 1913.

The siddhi has now firm standing in knowledge, in spite of lapses & lacunae, and the guiding Script can be invested in a definite form. The guiding Script orders & indicates, it does not predict. Its movement must be entirely liberated from the shadow of control by the mind's vigilance, suggestive & distrustful, which still subsists in the environmental outlook. The trikaldrishti has been reconstituted and needs only a greater illumination & decisiveness to get rid of the one positive defect that still clogs it from perfection, false distribution of stress by the masquerading of mental will-suggestions in the guise of knowledge-perceptions. That once cured, the range of practical knowledge will automatically increase. The willpower is as yet unable to act without a Prakritic resistance in the physical akasha. This habit of resistance must steadily be overborne and eliminated. It is especially active when continuous & detailed movements are dictated by the willpower to external objects, but this resistance has been overborne before and must now be overborne habitually. Finally, the actuality of the lipi, rupa & samadhi must prevail over the blind and inert, but stubborn refusal of the physical ether. This is the immediate work that yet remains in the third chatusthaya.

In the fourth, it is now evident that what is being prepared by the apparent reaction towards asiddhi of continuity in the ka-mananda, is the ability of the body to bear the high intensity of maithunananda without emission and its distribution as ananda throughout the body. A stronger force of natural health and a more perfect habit of assimilation is being prepared by the suspension of the imperfect siddhi in arogya. Similar movements account for the long obstruction or renewed obstruction in utthapana & saundarya as in the samadhi and the adesha-siddhi. These movements must be helped by the will to work out more rapidly.
Sept 25.

The apparent movement of reaction has ended, even more than usual, in a strong advance. The basis of samata has been strengthened and widely confirmed in the fixed perception of all things as true & all events as destined and helpful; if asamata now comes, it must be a purely mechanical movement of memory in the physical parts, unless knowledge is forcibly taken away. This in future will not be allowed. With samata dasya, tejas, sraddha have attained a more perfect security. All that is now needed is the expulsion of the physical memory of adasya & nistejas and the perfection of effective tapas in the knowledge & the power to establish the sraddha of the Ishwari in the Prakriti; the mere human sraddha is now well founded except in the adeshasiddhi. The faith in rapidity is really part of the faith in the adeshsiddhi, its condition and foundation. The relics of the egoistic outlook & inlook in the physical mind have also to be expelled.

The basis of effectiveness in knowledge has been laid, the centre of true sight, ritam in satyam, has been revealed in action perfectly removing anrita suggestions, suggesting and approving the ritam. The basis of effectiveness in action has not been revealed. This will now have to be done.

Sept 29th

Asamata still comes in the physical brain; therefore it is sometimes thought that it is possessing the mind & heart, but it only touches the outskirts & departs. Even this remnant is taking too long to expel owing to the liability of the physical brain to be clouded which prevents the vijnana from fixing itself on the whole being except in & through the intellectuality. The finality of accuracy in detail of time, place & circumstance must now be well established.

The time has come to distinguish always between truth and error, even in the trikaldrishti. It will not be done perfectly at once, but finally in itself and, for the rest, in its application progressively.

The time has also come to apply finally though not yet invariably, the perfect aishwarya, ishita, vashita of Mahakali in Mahasaraswati. This is not it; that is Mahasaraswati-Maheswari used by
Mahakali. That is done. Now it has to be lifted into the ritam.

Sept 30th.

The perfect establishment of invincible udasinata & firmly founded faith yesterday in the bhava of Mahakali assures a free course to the siddhi; in order that it may be rapid the defect in the subjective objectivity of the Bhuvan has to be removed, the attempt to hamper, obstruct, limit or even deny the tejas, tapas & prakasha. The trikaldrishti is now firm & acts with comparative ease, but not sufficiently swift & spontaneous and it is besieged and limited in its range, perfect only in the completeness of its intellectual apparatus. The habit of confused suggestions between which the vijnana has to distinguish, must be eliminated; the revelation & inspiration replace the vivek as the most frequent & important activities of the vijnana. The aishwarya etc are not yet lifted into the ritam.

These things however will now inevitably fulfil themselves. The barrier to the rupadrishti has also at last been broken & the remaining difficulties in that & in the swapna-samadhi will now follow suit. The concentration of the tapas is now in the physical siddhi and in the physical siddhi it must be on the saundarya especially, for all else is prepared for progress, even the secondary utthapanas is now again under way. Only in the saundaryam is Vritra really powerful, & to a certain extent in the adesh-siddhi.
11 Nov 1913.

Routine

Lipi . Rupa . Samadhi .

Trikaldrishti, telepathy, jnana + aishwarya-ishita . vashita

Sukham, Hasyam, Shanti Samatá

Shariránanda . Arogya . Utthápaná

Details

These things have to be fulfilled; the lines represent their immediate strength. They have to be raised to the next superior strength—four lines representing consummation.

Shariránanda still needs the aid of the sankalpa, but not of the aishwarya. Arogya still needs the aid of the tapas; utthápaná not only of tapas, but also of some tapasyá. Saundarya is still imprisoned in the Adri. This is the physical sadhana.

The samatá-chatusthaya is established, but allowed to be disturbed superficially. All that is needed is to get rid of the shadow of mangalámangala, siddhyasiddhi.

The shakti chatusthaya is defective in faith & force. Both depend on the growth of the vijnana in the actuality.

The vijnánachatusthaya is now the chief subject of the sādhana, strong in knowledge, growing towards strength in power, deficient in range of being. The first two must grow by abhyasa alone; lipli needs some abhyasa still, but is on the point of a greater perfection; rupa & samadhi still need some tapas & much abhyása.
Third Chatusthaya

Now the necessary brihadbhava & satyam are there, only the ritam remains to be perfected. The condition demanded is a perfect passivity of the intellect.

Self-perfection of the trikaldrishti and telepathy; self-perfection of the lipi; development of rupa and samadhi.

General

The dasyabuddhi has become a little blurred. It must be restored to its former energy. At present, the aishwarya working in the intellect is fitfully effective & with a struggle, the aishwarya must come out of the ideality & act freely & without responsibility. In this way & in no other the ideal powers will manifest themselves. More has yet to be done with the rupa and samadhi today.

Telepathy has now to be encouraged & indulged to the full; the brihadbhava must first be carried to its utmost present capacity. Distant telepathies must be accepted and traced to their right source and place.

12th

Trikaldrishti

The errors still made are due to the old imperfection of the mind seizing on a partial truth. The fear entertained is groundless.

Samata

The samata is now subjectively perfected except for vague occasional touches, but stronger in titiksha, udasinata, & nati than in rasah, pritih and ananda-bhoga. The rasah is there, however, & will today be well-established along with the pritih. It is indeed already established, but has to be rendered immune from adverse touches.

Bhukti

Sarvasaundaryabodha with the shuddhananda, chidghanānanda, ahaituka and prema anandas has been reestablished on a firmer basis. Only a few old sanskaras combat it and bring the mind
down to the level of the old dualities. There will be a farther ad-

Ananda

Samatā . bhukti . Anandam Brahma. These are the three
stages of the Ananda. The ananda in the Lilamaya had already
been realised, the Ananda in the Brahman is now realised. It was
there in an indeterminate perception before; now it is determinate.

Once more the Mahakali tapas, tejas & shakti have to be combined
& harmonised with the samata, & also with the action of the third
chatusthaya. It is clear that only after a somewhat prolonged strug-
gle can the third chatusthaya be entirely effected. The resistance of
the tamas in the objectivity is still too obstinate, too constantly re-
inforced to admit of an immediate conquest; nevertheless a greater
rapidity is now possible.

The aham of the karta, jnata, bhoktā, bhartā has been dis-
solved in the outer swabhava; only the aham of the sakshi is left and
that is on the point of dissolution. The difficulty is now once more
transferred to the field of the siddhi in the third chatusthaya. The
ishwarabhāva and full faith & abhayam depend on the perception
of the truth of the Adesha & the fullness & rapidity of its fulfilment.
This will now be accomplished by the right ordering, the ritam of
the knowledge and the power.

Third Chatusthaya.

Today the telepathy, trikaldrishti, aishwarya have to be finally
reconciled, in type & in dominant action; but the full range &
invariability of this typical & dominant action cannot yet manifest,
without provoking a strong relapse.

Abhankara-Mukti-Siddhi

The aham karta is now replaced by the kartri brahma, so the
aham jnata by the jnatri, the aham bhokta by the bhoktri, the aham
bhartā by the bhartri, the aham sakshi by the sakshi brahma. What
is left of the aham is a kendra of action, a kendra of knowledge, a
kendra of vision, a kendra of enjoyment. In this kendra Kali receives
the will of God, thinks it out in the idea, fulfils it in action, watches its fulfilment and sends up the bhoga to God, becoming herself the will, the action, the vision, the bhoga, the knowledge. The two have now to be harmonised, the Kalibhava & the Krishnabhava in the one Brahman. The dissolution of the sakshi aham into the sakshi Brahma has rendered this possible at last in its finality and completeness.

Faith Ishwarabhava. Abhayam. Premakāma

This represents the immediate strength of the second chatusthaya as the result of the last two days’ activity. The next superior strength has to be effected.

Sukham, Hasyam Shanti Samata

This represents the immediate strength of the first chatusthaya subjectively in all parts except the body. When it is completed in the body, then the quadruple line will be closed up & perfection secured.

Hasyam is increasing & will soon deserve the fourth line.

The Mahakali tapas is there in essence, but has to be tempered a little during the process of harmonisation of the two first chatusthayas.

Subjective shuddhi, mukti, bhukti are now, in a way, complete, but not yet fully perfected

Shuddhi Mukti Bhukti Siddhi

This is the state of the seventh chatusthaya.

The ritam in the jnana is now assured. It must spread to telepathy & trikaldrishti

In the Ananda (bhukti) the pure discomfort of harsh sounds & ugly faces etc is removed; smell, taste, touch are all come into line, taste a little forward & possessing a superior perfection; only pain beyond a certain degree is empty of the ananda, although even sharp pain leaves behind it ananda as its physical result. Strong & persistent touches of hot & cold also create discomfort. This is the defect of the bhukti which prevents the addition of the third line.
13th November 1913

Relapse

A tendency to relapse in the morning; impatience of non-result & slow process attempts again to manifest, in connection with the continued error of trikaldrishti.

Telepathy

The first necessity is to recognise unfalteringly that all intellectual suggestions, however void of support in the appearances of actuality, however contradicted by evidence are satyam, — prakamya or vyapti of actual intentions, tendencies, impulses etc in the world and connected with the objects or subjects in regard to which they occur to the mind. The next is to get rid of misplacement and assign these suggestions to their cause in fact. This has first to be done in the way of correction of error after the event, next, by correction of error before the event, last, by cessation of error & the immediate & essential right assignment and definition of the vyapti or the prakamya. At present, the movement is towards passing from the first to the second stage of the process.

Time-idea

The time idea is still obstructed and prevented from regulating itself. Today it has to break through the obstruction. The non-telepathic pure trikaldrishti has also to become more active.

Jnana

The jnana is now perfectly established in the intellect. All the thoughts are perceived to be true and are assigned, oftenest initially, but sometimes by a corrective movement to their right place & form. The corrective movement itself is not so much purgative of error as adjustive of an incomplete or crooked placement. As soon as this corrective movement ceases to be necessary, the jnana can be entirely lifted into the ideality and the fourth line, soon to be added to the jnana, invested with the sign of completion.

Telepathy

The telepathy now only needs to be given a fuller & quicker perception of the contents of the mind & intellect, in order to
be complete. The prakamya-vyapti of the contents of the heart is returning; that of the intellect is being added.

Faith. Ishwarabhava. Abhayam. Premakama

Faith.
The present state of the second chatusthaya. The Ishwarabhava has temporarily gone back to its less developed stage. The faith is now strong in the Yoga siddhi and established as to its rapidity, but not with regard to the Adesh. The temporary setback in the Ishwarabhava is due to the inactivity of the Aishwarya. It will now rapidly develop to the third power along with the Abhayam & Premakama.

Bhukti
The discomfort of cold & heat is rapidly becoming ananda. The element of discomfort has to be eliminated. Pain alone will remain, then, as a negative element in the bhukti. The discomfort of roga is intermediary between pain & physical discomfort of the nervous system.

Dehasuddhi
In the physical siddhi, shuddhi of the body is almost complete. It consists of three parts, rasashuddhi, pranasuddhi, bhutasuddhi. The rasas are on the verge of complete purity; the panchapráñas are withdrawing from their separateness into the state of differentiated activities of the mukhya prana,—that is their purity; but the movement is not yet completed. The pancha bhutas are also falling into line as movements & states of the akasha; but this last movement is still obstructed seriously. Its imperfection is the excuse for the continuance of roga in the processes of assimilation, as the panchaprapaṇa cannot work perfectly in the present state of the panchabhuta; that imperfection of the pránas is again the cause of excessive & defective action of the rasas, causing slight eruption on the skin & indeterminate tendencies of cough & cold. The two last are, however, on the verge of destruction.

rasashuddhi panchapraṇa panchabhuta
Amrita—
A clear distinction must now be made between the vidya-avidya-siddhi which is constituted by the seven chatusthayas & the higher Amrita in which all limitation is removed & Death, etc entirely cease. Only the first will in this life be entirely accomplished.

1st & 2d Ch.

<tabular text=""Faith | Iswarabhava | Abhayam | Premakama | Hasyam"

This is the condition now being established

Mukti Bhukti
Discomfort of sensation is now being brought forward in order to be removed. All the indriyas are now free as well as pure, only the manas, or sensational mind remains; it has yet priyam & apriyam in the sensation. As for the thought-mind, mangalam & amangalam, siddhi & asiddhi are now becoming for it two sides only of mangala & siddhi respectively. Failure is from God's standpoint siddhi, since it is intended to be brought about as a step to some surer, higher or more complete success.

Sraddha
Faith now exists in the Adesha siddhi, but is ill-informed as to measure & detail, & is only firm in the first four members of the adesha—political, religious, literary & social. The other four are only higher terms of the political & social or the first means. When this defect is removed faith will be complete, & only faith in all details of knowledge etc is needed to perfect the chatusthaya. The stage already outlined is now fulfilled of the faith, abhaya etc.

The farther development of the second chatusthaya, so far as it cannot come by its own force, depends now on the third & fourth chatusthayas. To these therefore the apramatta attention of the Shakti must be directed.

There is as yet no advance in the third & fourth chatusthayas. The obstruction there has concentrated itself. It will rapidly break down even in the rupa and the samadhi, not so soon in the saundarya.
The mind need not always take an anticipatory part in the script. It is enough that it should receive and follow. At present the old habit of unintelligent pranic reception & suggestion has once more a dominant play in the outer swabhava. The vijnana in the trikaldrishti is apt to be quiescent.

Discomfort of sensation suddenly revived in a high degree takes possession of the annakosha, & the progress is for the rest of the day arrested except for a slight movement in telepathy & trikaldrishti & aishwarya.

A tendency to freer rupadrishthi in the evening.

14th November.

The overpowering siege of the sensational discomfort, which is evidently abnormal and brought forward for a particular purpose, still obsesses the sanjnâna and tends to bring back the old tamasic bhava. In this attempt it has not been successful, except to suspend the Mahakali tapas and lower the tone of the faith. The system refuses to lose its hold on the samata shanti sukh hasya & therefore suffering is transferred from the subjective to the physical parts.

Today is to be a day of rapid progress in the third chatusthaya and the preparation of rapid progress in the fourth. The vijnâna once active again, will clear out the anritam. It is from tomorrow, not today that the karma has to be resumed.

There is now a natural tendency to discover the sense & the actuality even of the most random thoughts, that wandering through the dishah, strike on the inner sravana. The telepathy increases constantly in range & success and commands confidence from the mentality.

The pranic suggestions, false as eventual actuality, are now entirely seen to be truths in actuality of force & tendency, and are finally accepted. It is true that their activity is puzzling to the mind which misinterprets, more often than not, the truth suggested. But the mind is now disciplined and will soon be able to receive the light of the vijnana perfectly, even in the outer swabhava where alone it has, now, any real activity.
Arogya

The rasa & prana are now shuddha, though not siddha; the bhutas are however passing through a period of violent disturbance, marked chiefly by excess of tejas with a tendency of reaction from tejas to excessive vayu.

| Rasa | Prana | Bhuta |

Third Ch.

This record is now established in the satyam ritam, as is all script. The same authority must attach to lipi, telepathy, trikal-drishti. To the jnana it already attaches. First, lipi and telepathy. Both are recognised as satyam; right interpretation must confirm them in ritam.

do

The vani will be found to be already established in ritam not less than in satyam. The interpretation given by the mind has to be carefully watched and censured; hence the appearance of anritam.

do

The essential satyam is now well founded in all instruments of the knowledge; only the ritam of arrangement in time, place & circumstance remains to be effected, and afterwards the range widened. The fullness of the essential satyam contains and implies an essential ritam. The ritam of arrangement is a relational truth of things.

Second Ch.

The Mahakali tapas is once more active in the adhar and adverse result is no longer effective to disestablish its activity. With two days more of this progress the Ishwarabhava which alone is positively defective in the second chatusthaya will rise to the proper intensity.

There is a movement which has often been presaged, but never succeeded in locating itself; the movement of the higher rudra intensity of knowledge, action, ananda. Now that the Mahakali tapas is finally seated in the adhara, this loftier movement of the life & Yoga may with security establish its initial activities. Rapidity of
the rest of the siddhi is an essential factor in the rudra movement. During the rest of the month the siddhi of this rudra tapatya must be the principal aim of the Shakti.

Nov 15th. 1913.

The movement of the siddhi now is more obstructed, the struggle more intense in the Akasha, because the conquest has been less thoroughly prepared. The later chatusthayas have been reserved for a swifter movement and a more powerful divine action. At present there is no sign of any new swiftness or power. The Mahakali Tapas is being farther strengthened and confirmed by the test of adverse experience.

Dakshina Maghoni, the discernment in its fullness, is now at work; it is evident that all the suggestions given to the mind are satyam & ritam; only the exact ritam of arrangement is still wanting. Time is apprehended confusedly by the intellectual parts, circumstance is ill-arranged, though beginning to be well divined.

Aishwarya-ishitá is at present effective by long pressure, not by an immediate movement; by struggle, not anarvá. It is this imperfection which the Shakti will presently remove. Also it is efficient in the general idea, in the gross, not in particular detail of time, place & circumstance. When this defect is removed, the Power will be perfect, like the Knowledge.

The karmasiddhi will now begin—in sahitya, dharma, kriti, sri, not yet káma.

Sabitya —
Rig-Veda — reading only —
Vedanta— Isha Upanishad Commentary (The Life Divine) 
Brihad Aranyaka, translation.
Origins of Aryan Speech.
Poetry Ilión.
Eric.
Idylls of Earth & Heaven.
Bhasha — Sanscrit, French, Bengali.
Rupadrishhti has advanced a stage in the stability with comparative clearness of certain forms of developed image.

Nov 16th

The Saundarya-buddhi is recovering its universality. The main defect in rupa & lipi is the inability of the Akash to get rid of the long successful obstruction to a swift & forceful vividness. Everything else is gained, including the intelligibility, authority and spontaneity of lipi and rupa.

The tapas of action alternates with the tamas. The elimination of the tamas, both aprakasha and apravritti, has already begun.

This morning, trikaladrshhti, power, rupa lipi.
This evening the same.

Dharma & Kriti have to advance with particular rapidity; first of all, only the necessary arrangements. There is a perfect guidance.

One thing has been omitted, the Sri. The routine of Sahitya, Dharma & Kriti have been fixed; the routine of Sri has also to be fixed. Routine is ritam & necessary for karma, only it must be ritam of the brihat, part of the infinite, not narrow & rigid, a flexible instrument, not a stiff & unpliant bondage.

Nov 17th

The new movement of the Siddhi is strongly obstructed. The chief difficulty is not in the power, but in the final arrangement of the ritam. There are the relics of the old mental stress in the tapas & tapatya; there is the obstinacy of the habit of anritam in the physical akash. The ritam of knowledge has no longer to be separated from the ritam of power; each has to enforce or illumine the other.

From now forward the organisation of the ritam will proceed steadily on the basis of the satyam brihat with a determining superior faculty which will eliminate the anritam & exalt the intellectual movements into the ideality.

Physical Ananda, more & more obstructed and suppressed during the past few days, will now recover its activity. Health is still undergoing its ordeal, but it has surmounted the severer tests, and although still very defective, is reaching out again towards
self-perfection. Its four main defects have all shown themselves in exaggerated sensations out of all proportion to the reality of the roga behind. This is always a sign of failing power & approaching exhaustion; for the hostile forces, conscious of the failure, gather up & exhaust in an illegitimate endeavour all the forces which, properly used, might last for a longer season than that actually allotted to them. The Maheshwari patience is still needed to support these tyrannies,—samata, dhairyam.

Mahakali tapas begins to break through the habitual restrictions of the Mahasaraswati bhava.

Nov 18th

The second chatusthaya is still capable of check and thin cloudings, owing to the non-fulfilment of tapas and prakasha. But this defect does not belong to itself; it is a reflex action from the violently obstinate obstruction to the vijnana. The yuddhalipsa and ananda in check and obstruction must be perfected in order to overcome this reactionary tendency. They will henceforward be insisted upon till they are secure from attack.

The force of the vijnana is once more clouded, but it is only for a short time.

The doubt & inertia are in error, not the tejas and tapas. It is true that the siddhi is successfully obstructed in the three positive chatusthayas, but the obstruction is itself a means for a greater siddhi. The mere physical impact on the prana, giving an impression of doubt, discouragement or asamata, is of no essential importance for the mind refuses to receive the impression & even the psychical prana rejects it quickly. The one thing that still affects the mind is doubt. The faith in the Adesh and in the rapidity of the siddhi is now about to establish itself beyond serious clouding in the light of Surya. It will take a few days to eliminate the causes of doubt, but they will produce no effect when they come.

The knowledge is once more satyam brihat with a more untrammelled & well combined brihat & a nearer approach to the perfect ritam. Moreover the rapid use of the faculties for ritam has now commenced. Formerly, the rule was that the first perceptions were confused & wrong and a slow & deliberate sanyama on the
object was necessary for the satyaparaksha. Now, though it is not yet the rule that the first perceptions should be the correct perceptions, yet that is the tendency established and it is more often the attempts of doubt to correct the first perceptions that go wrong.

The rapid effectuality of the tapas is being prepared.

Yuddhalipsa is well-established. Ananda in the check is still unable to take firm possession of the prana, but it is there in the rest of the system. Owing to its weakness in the prana, it comes oftener retrospectively after the event than simultaneously with the event.

The tendency of the ritam has already increased to a powerful extent; it is only combated by the doubt & the twilight false stress on a misapplied perception.

Physical siddhi will be strongly resumed from today.

The bodily samata has now reached, in prolonged exposure to strong heat, the fixed stage of udasinata and nati, the former predominating, with touches of discomfort which are met & expelled by the titiksha. The ananda of heat is not yet strong & firm like the ananda of cold. Long exposure to strong cold has yet to be tested.

The kamananda is once more only occasional, but the Shakti will now attempt the firm foundation of the panchavidha shari-rananda — kama, vishaya, tivra, raudra & vaidyuta.

Lipi is in itself entirely perfect except in the immediate spontaneity of manifestation, but the old indistinct lipis, intelligible but not legible, continue to recur from the old force of habit in the material ákāsha, a habit artificially maintained long after all real justification for it has ceased. With this exception all that has to be added is the free & varied play of the lipi unbroken by intervals of non-manifestation.

Ananda of defeat has been reestablished by the revival of the brihat activity of the Vijnāna. It will not again be allowed to be broken. But it must be assimilated with the Mahakali tapas; it must be not the acquiescent ananda of Mahasaraswati, but the temporary acceptance of Mahakali who takes defeat only as a step on the way to victory & presses forward immediately to the siddhi and yashahprápti.
There remains the removal of doubt and the physical depression habitually resulting from doubt.

The intensity of the physical dasyabuddhi has now revived without stimulation from the Aishwarya.

The positive samata of the sight is established in rasagrahana and bhoga of the bhukti; the ananda varies. Taste & sight are now well established and touch in all but strong painful touches or touches of persistent discomfort. The Bhoga of the ear is not yet perfect. Smell is well-established although still liable to be taken by surprise by the old sanskara. Ananda of the senses has now to develop perfectly. Sensation has also to perfect bhukti

The gunas of daya, naishturyam & krauryam are now well-developed; they have yet to be harmonised. The Pashu, Pishacha, Pramatha, Rakshasa have all now taken their seat; they have to be harmonised & subjected to the Deva-Asura who will give them the bali.

The Ananda of defeat is now right in temperament and well-established. The doubts of the Mahasaraswati vibhuti have not yet been set at rest; they persist and find their justification in the falterings of the siddhi and the continued success of the obstruction.

The authority of the trikaldrishti and of the tapas are about to be finally established.

Ananda begun in all the vishayas, really deficient only in the sravana & in some sensations, but this difficulty will be removed this evening. The nirananda will only remain for a while in the swabhava environment.

20\textsuperscript{1}

Nov 19\textsuperscript{th}

The intellectual tapas in the trikaldrishti has still to be eliminated; it represents the old stress of desire and speculation and intellectual or pranic preference. Nevertheless, what has been suggested in the thought, will be found to be justified. In the next two or three days the vijnanasiddhi in all its parts will have arranged itself in the ritam.

\textsuperscript{1} Perhaps this indicates that the entry for the nineteenth was written on the twentieth. — Ed.
Vishayananda is firmly based. It has now to be developed out of its covering shell into the initial intensity. The shell is merely the mass of the old sanskara of ashubham and asundaram

Intelligent faith in the intellectuality is still doubtful of the Adesha and of the rapidity of the siddhi. The doubt has three foundations,—the non-development of akasha rupa etc, the slowness of the physical siddhi and its present impotence in arogya, saundarya and utthapana and the denial of the equipment and the outer shakti. Ideal faith seeks to establish itself without any wide basis in the intelligence, but sinks back every time into the perception of a double possibility.

Premananda reestablished on a basis of firm finality; only the shadow of the negative bhava, udasinatā, affects its completeness, by denying it to men, especially of the strong Kali-type. On objects, children, animals, women etc it is fixed. The source of this denial is the old virakti with the mean & the sordid. This must now disappear.

The action of the vijnana in details must hereafter be recorded.

1. Yesterday’s sortilege—promise of fulfilment of mental sankalpa

2. Today’s—promise of fulfilment of third chatusthaya on the basis of the ananda

Ideal faith established, but without precision, the intellect consenting with the reservation of an adverse possibility, which, it considers, must be accepted in case of definite, strong & persistent amangalam. Full faith in eventual Yogasiddhi, but only a provisional faith in a relative rapidity.

3. Given at the time when the chitrarupa was again manifesting after a long eclipse of inactivity.

Chitrarupa of groups, landscapes, human figures once more manifested freely as a result of aishwarya tapas. There is still some difficulty in forming of animals and isolated objects not being human figures. The old rare fixed perfection of Alipur jail is replaced by a great freedom & multiplicity with less fixity of the figures.
in some of the images & with a tendency of shifting & too rapid replacement of one chitra by another.

Faith has now to be established in the detail by the development of truth & effectuality.

The opposition to the firm continuity of the vijnana is the immediate obstacle to be overcome. This once done, the vijnana chatusthaya will of its own motion perfect itself rapidly.

The physical ananda is once more active in kama, vishaya, tivra & raudra sahaituka & ahaituka. The vaidyuta is still ill-established.

_Drishti in its five parts is now about to be organised_

4 Drishti of the tejobhuta
5 Sparsha of sukshmajala.

Ananda is now established in all the vishayas, including sra-vana. The covering nirananda in the environing swabhava is not yet eliminated, but it is in itself insignificant in force.

There is a stronger obstruction to the permanent & continuous Brahmabodha.

Lipi—Ego ready. ie the divine Aham or chaitanyakendra is about to perfect itself.

All the five parts of the drishti are now active, although the sabda is still feeble. Vaidyuta ananda has confirmed itself in the vaidyuta.

Lipi—The arrangement of the lipi.

Since the prediction, the lipi has begun spontaneously to arrange itself in the akasha.

Power is now working out its results against a background of knowledge, not without resistance, but with increasing force. Telepathy is once more powerful and arranging its ritam. But both power & knowledge are still subject to confusion & ineffectiveness in the arrangement of exact time, place and circumstance. Only the large general results are secured & the main movements of things known. The knowledge (trikaldrishti & telepathy) is more advanced in power of detail than the Aishwarya.

The final transfer of intellectual activities to the ideality is now in rapid progress.

Rupa in akasha is once more manifesting successfully; all types of the three orders of image, crude, dense, developed, are
manifesting, but still in low values & with one or two typical forms. The human form in the crude image is now beginning to manifest. Lifelike images also are reappearing but in flashes & without even a momentary stability. The animal form is now beginning to appear perfectly & more freely in the chitra, as also perfect forms of isolated objects.

The vijnana is not yet arranged, but being arranged.

Akasharupa appeared roughly, but clearly in the lifelike image, imperfectly against the background, amidst a very strong but confused activity of crude material.

Nov 20th
Growth of Akasharupa
Slackening of the knowledge and opposition to the power.
The day was chiefly occupied in writing the seven chatusthayas.  

Nov 21st Friday
The progress of the third chatusthaya was slightly interrupted yesterday. The lipi 2¹⁄₂ refers immediately to the first two chatusthayas which are fulfilled, in spite of some imperfections in the second, and the third which is now half fulfilled. Today, the third chatusthaya will open out yet farther. (already fulfilled by 10.30 am).

There is a general attack, as usual, on the siddhis attained, which shows a few signs of success in the obstruction of the faith, knowledge and power, but is chiefly effective in the fourth and fifth chatusthayas.

The trikaldrishti is increasing in power and accuracy of circumstance, but still stumbles over the fixing of some of its perceptions and therefore suffers from uncertainty when, as often, the power of illumination is not sufficiently decisive.

Ritam of the aishwarya is preparing to arrange itself on a sounder base. The satyam of the tejas & tapas is now showing

---

2 See pages 3–24. — Ed.

www.holybooks.com
itself like the satyam of the prakasha,—a satyam not yet arranged; each output of power is shown to have its purpose & effect; but not always or even often the precise purpose & effect intended by the personal mind.

The satyam brihat & initial ritam of the Power is now established and active in type. The perfect knowledge & power have to be universalised, released from defect of detail & from attack & harmoniously combined. The first necessity is to increase its power over matter and over life. In the general play on the subject (oneself & others) it will soon perfect itself automatically.

Ananda remains firm, except in the sharirananda which is subject to much variation and interruption.

The application of the lipi 2\(\frac{1}{2}\) to the sharirachatusthaya must now proceed. Ananda must be made permanent, arogya perfected & secured from attack, utthapana restored to its lost activity & effectiveness. Meanwhile the obstruction to saundarya must be steadily destroyed.

Nov 22d.

The touches on the second chatusthaya still continue, but have no power or permanence—except in the imperfection of the faith and the consequent quiescence of the Chandibhava—.

On the whole, the first chatusthaya is finally secure; the second & in the third jnana & prakamyavyapti are firm in spite of waverings & temporary eclipses, to a less extent the trikaldrishti; similarly the lipi; rupa and samadhi are secure in their beginnings but fitful in their activity. Subjective ananda is perfect, but for occasional half obscurations. The powers are perfect in type, uncertain in application.

No definite advance during the day

Nov 23d.

Trikaldrishti once more confused in ritam and full of falsely-applied prakamic suggestions. Opposition to the third chatusthaya strong & massive, possessing the akasha & successful usually wherever it applies itself. Ananda & samata attacked though not overborne. Faith in Yogasiddhi and in a relative rapidity reemerges
always but is troubled with a strong uncertainty about the Adesha-

siddhi

The truth of the prakamya has been signally proved, but the truth of the pure trikaldrishti remains yet to be perfectly proved.

The struggle over the trikaldrishti continues; the success of the pure trikaldrishti is now much more common, but still marred by the false suggestions of hostile agencies. Sahitya is for the time entirely discontinued. Rupa has fallen back into its crude conditions, only two or three habitual forms appearing with any perfection. Lifelike images have once more failed to establish themselves.

The whole of the past asiddhi is being now thrown violently on the system, but cannot keep its footing there or even establish a footing. The samata has at last been touched owing to a false use of rajasic tejas, but the touch could not produce its after effects in the system. All this is really occurring in the swabhava environment. Nov 20 to 23rd may be taken as an adverse period of which this is the crowning movement. Although the resistance to the third chatusthaya will continue for a time, it will collapse and give place to a more rapid siddhi.

The apprehensions of immediate failure in the kriti are unfounded.

The struggle is over the absolute & detailed correctness of the various instruments of knowledge & effectuality of the instruments of Power. This struggle will not be over today. It will begin to decide itself in favour of the siddhi from this evening. The superficial restlessness, ashanti, vexation (there is no duhkha) are the old impure form of the rejection, the necessary rejection of an unjustifiably repeated & prolonged asiddhi & anrita.
Nov 24th

The record between 11th & 23 Nov. entered on separate sheets. The record was discontinued after the 20th September,¹ as often before, because it was found that the habit of miscalculation still persisted, temporary success being mistaken for final fixity etc. None of the siddhis are yet finally perfect. Even the first which is nearest to absolute finality has been disturbed yesterday & has not yet recovered its balance. It is firm in the mass, but not on the surface of the mentality. In the second a temporary perfection, deficient only in faith, abhayam, ishwarabhava, was broken, it is indicated, in order that the dasatya & tapatya buddhi might be combined, taking the place of the old alternation between passive and udasina dasya-buddhi and active egoistic tapas; the combination represents the right Mahakali tapas. As a result the Maheshwari pratistha is more covered than before, & the relapse from rajasic excitement to udasina shanti is no longer entirely permitted. Faith in the rapidity of the Yogasiddhi and in the adeshasiddhi has been shaken by yesterday's movement; even the faith in the Yogasiddhi was temporarily tarnished, though not entirely suspended. The Akasharupa after a half-successful or initially successful attempt to recover its former activity, has fallen back into the crude, rudimentary & disorganised condition from which it was trying to emerge. Lipi is obstructed and only exceptionally legible, though generally intelligible to the perceptions by an imperfect legibility. The faculties of knowledge & power are once more in a state of confusion and the samadhi still unable to organise itself or manifest permanently its previous realisations. The fourth chatusthaya is still in the state of

¹ This and the following entries were written in the notebook last used on 20/21 September. The entries of 22–30 September were written in a different notebook. They appear to have been forgotten, or else were not counted as "Record".—Ed.
asiddhi. Saundaryabodha is once more obstructed, but rasa, priti & bhoga of the subjective Ananda in outward things seem to hold their own. Internal Ananda is superficially broken up, though still sound at the core.

The guiding vani has now begun to descend consistently from above and manifest in the vijnanabuddhi. Manifestation in the manasabuddhi is henceforth to be discouraged,—not only of the vani, but of the knowledge & power movements. The script is also assuming consistently the same character. This is no new movement, but the culmination of a movement that has long been in progress.

1. Lipi—*Intellectual kinesis*—ie to be finally discontinued.

2. The samata has now to be based no longer on udasinata but on nati with chanda samānanda (Vani); the sukham is not to be shanta sukham, but chanda sukham, centred therefore in Chandibhava of Mahakali, not in its own chatusthaya, nor on the Maheshwari pratistha. (thought-perception sruti-smriti).

Last night the vijnana-buddhi made a preliminary self-arrange-ment, which has been disturbed this morning & gives glimpses of itself only through clouds. This vijnanabuddhi has now to arrange its movements in the surya jyotis.

Kamananda has to recover its recurrent activity.

The tapas, active in the lower estate of being in front of a veiled Chit and blind to it or to all but a few illuminations from it mostly ill-directed by the gropings of the manas in the twilight of the manasa buddhi, is in the higher estate of being and must therefore be in this siddhi, first a selected activity of the Chit on the background of the luminous Chit and ultimately a reproduction or cumulative result of the Chit. Henceforward therefore the tapas and the faculties of power, aishwarya, ishita, vashita must be habituated to act on the background of the knowledge, first as the selected activity, then as the cumulative result. Knowledge of the general state of being & of the forces at work in any given Apas is now fairly perfect in wideness (brihat) & in satyam; but the defect of the ritam arises in the attempt of manasabuddhi either as stress of speculation, mental knowledge tapas, (manasasmriti, judgment, imagination, memory working on observation & by inference) or
Record of Yoga

as stress of mental will-tapas to select the event or the decisive force out of the Sat & the Tapas. Henceforth the tapas must act on the basis of the vijnanabuddhi eliminating the remnants of mental tapas of will & knowledge.

The full asamata is once more manifest in the system, with duhkhham, and the authority of the sources of knowledge is denied; conflicting assertions are once more proceeding from the vani.

Afternoon. The old form of samata with dhairyam & persis-tency in the tapas, but with no faith or pure ananda in the upper layer of the mentality, has been established; the Mahakali tapas is in abeyance. The present occasion therefore presents all the features of the old relapses into asiddhi. The only things that have hitherto held firm are some of the incomplete siddhis, eg vyaptiprakamya, physical ananda etc.

Sarvasaundaryabodha struggles to reestablish itself, but is only partially successful. On the other hand there is complete rasagra-hana &, except with regard to human faces, rasapriti & rasabhoga of physical vishayas. Sravana has been a little lowered in the surety & completeness of its bhoga, but not substantially.

The Shakti is now strengthening the yuddhananda and para-jayananda in the system, as it was through the insufficiency of this ananda that the collapse of these two days was effected. The Mahakali tapas is once more repossessing the system.

In the evening strong akasharupa of all types, but in one rupa (cards), the lifelike forms instantaneous & unstable. Strong aish-warya. Exact trikaldrishti more frequent than formerly and error less extensive.

Nov 25th

Faith is not yet restored, nor is the disorder in the system yet righted; touches of lighter asamata continue. On the other hand the siddhis persist, though in a state of imperfection and alternating or mixed with [asiddhi]. Vijnanabuddhi is not yet established. Shanta udasinata mixed with active movements of ananda is the prevailing condition.

2 MS siddhi
The news in the papers today seems to indicate, if entirely true, the samula vinasha of the Europeanised revolutionary movement in India. If that is a true indication, it is a step in the right direction; but appearances are so deceitful that future events must be watched before the indication can be trusted. The old confidence in the selective trikāldrishti as opposed to the trikāldrishti of tendencies & possibilities has been too much undermined for me to accept any longer even the most obvious suggestions, especially where the mind interprets events in the sense of my own desires.

Trikāldrishti, it is evident, is still only fitfully correct in its selective & determinative activity, but increasingly perfect in the pure perceptive. This however acts within a very small range.

Rupa (Akasharupa & chitra) is now growing stronger. Clear human figures in the akasha are becoming frequent. Communication of Yoga by vyapti to those practising in the immediate vicinity is also becoming stronger.

Aishwarya is no longer an occasional output of will working upon an obstinate plastic material, but a powerful Shakti struggling with another powerful Shakti. The opposing force is still habitually the occupant of the Akasha and successful when not overborne by a strong & persistent pressure. The weakness of this movement, although it is capable of bringing about sudden powerful results, is that it establishes only a momentary force in the Akasha, instead of a permanently growing Power of Nature in the material ether which will form a dominant centre of Kali always responsive to the Purusha in this Adhara. It is noticeable that when this Shakti fails in its effort, the object after executing a contrary or different movement, returns to fulfil the original will when the struggle is over. This seems to show that the adverse Power in the akasha is also not a native of the Akasha & therefore has little more staying power than the Shakti of this Adhara. It is stronger only by use of the previously existing natural obstruction in the ether considered as a plastic material. It is also noticeable that when the object sits tight in its resistance, circumstances often arrive which compel it to execute the willed movement. None of these features are new; they date from the commencement of this sadhana (of the vijnana) three years ago (in 1910 on first coming to Pondicherry).
they have seemed to be on the point of being corrected in the sense of a perfect siddhi (within a very limited range) & so it was more than once confidently recorded; but now the same features occur in a much wider range of activity. This is apparently what is immediately intended by a recent lipi, “It is useless to distinguish life from Yogasiddhi.” It remains to be seen whether, as is suggested, these limitations are so powerfully brought forward, because they are on the point of being removed. The last defect is the tendency to create only a temporary result, then relapse, then succeed, & so slowly move to some kind of final success. Unless this defect is removed the rapidity so often promised cannot come.

The Brahmadrishti is now well-regulated, but still depends on smarana, the Sarva, Ananta & Ananda are more prominent than the Jnana Brahman.

Nov 26th

The force of the Aishwarya is now showing itself in a well-established generality of efficacy, but not either of invariable or of ordinarily complete efficacy. There are exceptions in which there seems to be no effect, or only a slight temporary impulse or movement.

Today utthapana has been firmly resumed, after some futile beginnings in the past month, with the horizontal position of the arms; the force of laghima and mahima has greatly increased in the interval of non-practice, the defect of anima diminished. At the first attempt (6 am) either arm maintained itself easily for 17 minutes or 15 with only a slight defect of anima, more in the left arm than the right, and a pressure of adhogati that only became pronounced at the end. Kamananda is again increasing on the body. The Will has resumed its pressure on the body for saundarya.

Utthapana of the left arm (horizontal position) resumed & continued from 10-49 to 11-49, one hour, the adhogati asserting itself with some force, but much less than formerly, during the last ten minutes. Strong pain given to the system (burning in the eyelids by the flaming tip of a match, and muscular pain of indigestion in the breast & back) showed that the sparshas habitual[ly] causing pain can no longer entirely shut out ananda, even when they are very
powerful, but can temporarily overpower them. In all cases there is rasagrahana, but not pritih or ananda. Pritih is only beginning. Kamananda is resuming its former maithuna intensity.

An extension of the jnanam Brahma has brought into play a rich action of the telepathic trikaldrishti. Hitherto what was seen were the immediate forces of possibility & actuality in operation outside the living objects which act, pranad ejad, proceeding from elemental or other powers who people the universe; inside the living object were seen the mental states, feelings, impulses, tendencies, thoughts, nervous & physical states, proper to the conscious waking mind; now a fresh element enters with the clear perception of the dominant idea in the superconscious dream-mind (manomaya purusha), which dictates usually the ultimate action. Beyond this is the non-telepathic trikaldrishti which can alone perceive what is the unalterable eventuality actually destined. This perception is contained in the sleep mind of the manomaya purusha, where all beings know the past, present & future. The rest is a matter of range, arrangement & proper action of the knowledge. The perception is now goagram aswapeshasam.

Utthapana of the neck, raised position, maintained for a quarter of an hour; not yet at ease; laghima & mahima partially manifest, anima defective.

Swapnasamadhi in the afternoon; fragmentary conversations (“dialogue”, lipi predicted before sleep) of two persons accompanied with images but no complete group (eg Kedar Das Gupta, long forgotten), combination of image, shabda & action, etc, attempt also at continued action; but all in chhayamayi.

Power & knowledge are once more returning to the satyam, ritam & brihat, but ritam is very largely retrospective. Dasyam is fixed & powerful in the body, not yet usually intense. Swapnasamadhi is becoming once more brihat, but there is little of the ritam; in dream proper the associations of present ego & its images are still potent & prevent right vision, but incoherence is now slight.

Utthapana of the left arm again for 17 minutes; the reminiscent muscular pain exercised its pressure with varying force but not so much as to make adhogati successful. Utthapana of the legs, simultaneously, was unsuccessful.
Nov 27th

Uthapana of the left arm for one hour. Some heaviness of the muscles at the beginning developing into muscular pain of a slight character and pressure of the adhogati but at no time sufficient to menace overcoming of the utthapana. At the end capacity still left for half an hour’s utthapana.

General ritam of the knowledge, including trikaldrishti, grows rapidly, general ritam of the power is only preparing. Interpretation of the lipi is moving to the state of general ritam.

Kamananda, again manifest chiefly or wholly in the states of rest of the body, sitting or lying, now again tends towards manifestation in the postures of exertion, standing or walking.

Ananda is now confirming itself in all that hitherto kept anything of the nature of apriyam in the subjective & the objective being; it has also begun to fill up inequalities, beginning with the taste.

Uthapana of the neck only for 9 and 12 minutes; adhogati powerful; of the leg (middle position) for 22 minutes; the force of the urdhwagati not pronounced, pressure of adhogati on the muscle.

Nov 28th

Uthapana of the neck for half an hour; Mahima & laghima were strong though not yet entirely perfect, but Anima very defective; strong & troublesome pressure on the nerves & veins of the neck and back of the head, but not an overpowering pressure. Uthapana of the right leg for 7 minutes only in the middle position, Anima & Mahima very weak, laghima satisfactory; of either leg successfully in the horizontal position for 5 and 6 minutes, Mahima insufficient, Anima very weak. The morning chiefly spent in Veda & Life Divine. Subjective siddhis dull owing to flagging of the Vijnanabuddhi. In this reactionary state Ananda is dull in the purely physico-vital parts of the indriyas though strong in the mental and intelligent parts, the other siddhis sink to a low intensity and show whatever imperfections are still defectively purged out of them. Mahasaraswati tapas with the Maheshwari basis sometimes covered, sometimes visible through a thin veil of Mahasaraswati bhava.

Recurrence on a small scale of the crisis of asiddhi in the
first twochatusthayas centred in asraddha. After repeating the stereotyped movements, it gradually disappeared, leaving however a diminished faith and tapas.

Nov 29th

Utthapana of the neck in middle position for 15 minutes with great difficulty owing to violent An-anima; laghima at first weak afterwards strong enough to fill the place of a deficient mahima. Utthapana of both legs, middle position, for 5 minutes only, very defective. Utthapana of back, higher position, for 3 minutes; laghima & mahima a little stronger than formerly. The subjective siddhis not yet advanced. Kamananda sometimes intense, sometimes suppressed or subdued; general atmosphere of violent suppression. The assimilation has been resumed & is more in the control of the tapas; tendency to constipation diminished; free evacuation after 4 days, slight evacuations on the second and third. Health has been greatly strengthened

Discomfort of cold and heat is being extruded from the body, but recurs, especially when it is of the nature of a surprise, eg the sudden touch of cold water in a chilly atmosphere, and the Shakti in the physical nerve system has not time to send a sufficient force of Chittapas to meet & assimilate the sparsha.

Kamananda now comes without the smarana; it is more frequent and has a more constant tendency towards intensity.

Nov 30th.

Utthapana of the left leg, horizontal position lying on the side, half an hour. Laghima strong, mahima sufficient, violent an-anima in the sinew or nerve; of the right leg, horizontal position, lying on the back, ten minutes; urdhwagati deficient; of the neck, middle position, 20 minutes, difficulty of an-anima much reduced. In the afternoon utthapana of the right leg, lying on the side, 10 minutes, violent an-anima in the sinew compelled cessation, although laghima and mahima were sufficient.

Kamananda established itself in standing & walking.

Chitra of animal & inanimate forms suddenly strengthened; there is, however, still some resistance.
In the evening jnana of perception & jnana of vangmaya were reorganised with finality as well as lipi in all but material legibility. A movement was made to the same end in the rest of the vijnana, especially in swapnasamadhi where all the obstinate defects of the past broke down initially in type. Poetry resumed

Dec 1st

The whole day has been devoted to a struggle, attended by revived asiddhi & relapse into all the circumstances of mentality, to establish the organisation of the ritam in trikaldrishti, telepathy etc on the basis of entire Brahmabodha including especially the jnanam Brahma. The one positive result is the intensity of the Brahma bodha. Subjective ananda has ceased in the prema, except occasionally; the chidghana is assailed by obstructions which prevent the secure possession of its bhoga, & even in some habitual features of the ideal rasagrahana and priti.

Utthapana of the right arm for half an hour without difficulty in the horizontal position, and after an interval of three minutes for another half hour against an increasing pressure of an-anima. Advantage was taken of the muscular stress to confirm the ananda (rasa, priti & bhoga) of strong & insistent muscular pain.

Kamananda at night began to recur in the state of samadhi

Dec 2nd

Utthapana of the legs, horizontal position, successively, a failure due to entire defect of anima and for the most part of mahima. Like the Brahmabuddhi yesterday, the Brahmaprema today was universalised and raised to a high intensity, bringing with it entire premananda on men, animals, objects & events. The movement now is to confirm all the anandas, except the physical, & the subjective siddhi generally, prema, kama, shama in the Ekam Brahma, so assuring it on the bahu, & no longer perfected by application through the Avidya to each object separately. So far as that movement was necessary, it has been accomplished, but it can only be finally safeguarded from interruption & relapse by being secured in the ekatwadrishti of buddhi, heart, indriyas & sanjna generally. The vani & script yesterday were confirmed in their proper nature
as proceeding from the ananda & involving the vijnana. Faith also has been established in the truth of the instruments of knowledge; the satyam brihat is entirely confirmed & the truth of misapplied satyam is habitually perceived either before, with or after the event. The ritam however is yet defective, although its hold on the active consciousness increases & there is still uncertainty about the Adeshasiddhi & consequently about the entire rapidity of the physical siddhi & karmasiddhi. The rest is felt to be assured, since all the members are rapidly growing [in] force. There is constant pressure of the will on the asaundarya, but its compact resistance is yet far from being broken.

In the afternoon the resistance to the Will had entirely the upper hand and a period of Asiddhi began, with its usual circumstances. This movement has continued since and such siddhi as manifests, appears with difficulty and as from behind a veil. The successful contradiction in all the Chatusthayas continues, although hitherto it has not been so acute as in the more successful invasions.

Swapnasamadhi continues to grow in strength, especially in initial continuity of scenic action and coherence & intelligibility of lipi. Akasharupa is not yet able to confirm itself in the Akasha, but it manifests with an imperfect & fragmentary persistence. The frequency of vivid lipi is much obstructed.

The attempt in the Brahmabodha to unify the upalabdhi of the Atman & of the Ishwara with the upalabdhi of the Brahman has begun, but is not yet successful. Separately, they are all well developed. The sadhana of pleasure in pain continues and the success is general, but not yet complete in the intenser touches.

Dec 3d.

3 No entry was made under this date. One and a half pages were left blank before the next entry in this notebook, that of 12 December.—Ed.
Dec 1.

1. The slow strengthening of the Occidental and Oriental States which have been indicated as selected nations—Persia, Turkey, Egypt, & for a time China & Japan; Ireland, France, Italy, Mexico, Brazil, Chile & Peru,—the discouragement of the shakti of the others.

2. In India, (1) the amalgamation of all powers under a single control
(2) the provision of equipment & means for their work
(3) their protection in the period of growth.

All this has to be done not by material means, but by tapas of the ideality through Aishwarya, Ishita, Vashita. The single control is God’s own, not any intermediary’s. During the peripeties a certain number of untoward incidents are inevitable; they must be minimised and finally obviated.

3. The strengthening of the centre, not only in self, but in outward reputation, means & power, so as to render it intangible.

The first necessity is perfect vijnanabuddhi and Brahmabuddhi. Neither of these are unprogressive, but neither are allowed to establish themselves firmly in the system owing to the constant successful invasion of the asiddhi, which no longer confines itself to this or that particularity, but seeks to cover the whole field. Nevertheless, the nodus of the asiddhi is unfaith based on uncertainty as to whether the central theory of the Yoga, namely the Apas, Tapas & Adesha is not a falsehood and a self-delusion. Much more than the doubt
about the rapidity, is this the root of the whole disorder. No part of the siddhi has been allowed to remain free from the successful attack of the Asiddhi. If any part were firmly acquired, the rapid addition of the rest could not be resisted with any hope of success. As it is, the siddhi progresses & even progresses rapidly but with a broken & resisted rapidity.

Much was expected of yesterday’s movement, but it has been followed up by a struggle, not a victory. The intensifying of the Brahmabuddhi is the one positive gain, & to this may be added the firm extension of the brihat in the jnana with the mixed satya & anrita of trikaldrishti & telepathy. The difficulty is in the insufficient strengthening of the decisive viveka & the insufficient finality of the transfer of the intellectual movements to the vijnanabuddhi. The lipi announcing the finality of the transfer referred only to the completion of the process, not to the security of the results attained. The attack has destroyed the conditions of the vijnana manifestation and they have to be reconstituted in the active consciousness. There is as yet no finality of settled truth or settled effectiveness.

This is one side of the truth; the other is that the transfer has been finally secured, since it is only in appearance that the ideality has been disintegrated in the active consciousness. The disintegration is real to the intellectual judgment, not to the viveka.

Dec. 2.

The Adesha-siddhi is seen to be more possible than before, but not yet certain in fact, still less in time and extent. The confirmation of the faculties of knowledge in certainty, the confirmation of the faculties of power in effectiveness are the means by which the faith in the Adesha-siddhi will be established. At present both of these are effectively resisted in the outer swabhava; while the first two chatusthayas are effectively resisted only by invasion from the outer world-environment. This confirmation need not at first extend to invariable certainty & effectiveness, but to the exclusion of general uncertainty & general ineffectiveness. At present it is seen that the power can produce given particular effects, but its control of the final effect is still poor, & so long as this is so, it cannot be held to
be siddha. Nevertheless, the hold on the final effect is increasing in force.

Dec. 3

There has been a relapse, as powerful as the combined forces of the outer world could make it. The attack on the samata has been furious and has had some superficial success, but the dhana, the parvata remains unmoved & intact. The second chatusthay has been successfully inhibited from its full & arranged action, but here too the success is superficial. The third has been partially affected in knowledge, entirely in the unfinished parts of power; not at all in samadhi. The rest has been obstructed, not really affected. The fourth & fifth have been obstructed & to a certain extent injured.

The first thing, as always, is to restore the anandamaya action of the vijnanabuddhi and Brahmabuddhi. This after a long interval is being done. Dispelling & expelling of the intellectual & emotional activity forced again on the system is the indispensable preliminary, and this is often difficult because it entangles itself, by habit or of deliberate purpose, with the legitimate action. Absolute passivity, absolute sraddha in the Master of All, is the means. There is no other means. It is essential that all should be recognised as the being & action of the Ishwara and yet that the two agencies Arya & Anarya should be distinguished.

Dec 4.

The passivity & sraddha are being established, first, without any demand, but always with the udasina lipsa. The tapas is not yet pure of the temperamental stress left by desire & preference. There is still a preference, but of tapas purely, not of Ananda. The full Mahakali Mahasaraswati Tapas cannot manifest without a greater power of vijnana. There must now emerge the determinative knowledge & the determinative aishwarya, forming the ritam of the jnana & tejas, satyapaternity, satyadrishti.

Henceforth the tamas will be steadily eliminated from the pranic system & the body. The perceptions are real in themselves, not right in the mental impression produced.
Dec 5—

There must be the full activity of the kriti; only the means must first come. No more action without means. Therefore a period of repose is necessary; for self-collection & for emergence. The opposite tendency belongs to the intellectual tejas.

The action of the intellectual tejas is still habitual as an involuntary accompaniment to internal & external activity. Its removal is the condition of perfect vijnana. There must be no straining after truth of knowledge or efficacy of power, but natural prakasha and tapas.

The freedom of the mind from intellectual speculation is being restored. The asiddhi that has come is assisting the reestablishment of the second chatusthaya on the basis of a perfected nati and samata. The positive ananda, sraddha and Mahakali tapas have now to be restored. There was a slight disturbance, but it has righted itself; only the result is the tapas without the sraddha. As for the ananda, it is there & will now be entirely confirmed.

There is the beginning of the satya tejas & satya tapas, but only as yet the beginning.

Dec 6—

The pressure of the old tejas has been removed from the central system, but it still surrounds the nature. When that is dispelled then the present difficulties will disappear. At present it seems that the intellectuality is justified in certain of its conclusions; but on the contrary it is the ideality. The clearance of the doubt has only begun. All that may be true, yet the ideality may be justified.

Dec 7.

No appearance of failure should be allowed to affect the fundamental faith. It is true that the defect of overstress in the knowledge has not been cured, the struggle to establish the ritam seems to have failed, the Vani seems once more to have misled; but all this will be cleared as soon as this siege of the environment is lifted.

It is now clear that the brihat satyam of telepathy & telepathic trikaldrishti is perfect in all but thought & even, though more obstructed, in the thought. It is clear also that the positive trikaldrishti
which decides & arranges or is itself naturally the ritam is on the
point of perfection, but prevented from consistently manifesting.
The satya tejas & satya tapas have first to be perfectly manifested.

Now the satyam, brihat & an imperfect ritam of the tapas
in aishwarya, ishita [&] vashita, have been manifested in a series
of movements. This siddhi also is liable to interruption and ob-
scuration, but for the future it stands & will always emerge from
the obscuration & overcome the interruption. The confirmation of
these powers in the Yoga, the life, the body is awaited.

The instances of successful tapas are becoming more frequent,
as predicted in the lipi, & are on the point of generality. The lipi
“ruler of the subjectivity of others” is also being justified. What has
now to be done is to break down the remaining resistance, whether
near or at a distance, whether in subjectivity or objectivity, whether
in sadhana or life. Although it is not apparent, this can be done
rapidly.

Finally, the success of the siddhi in knowledge is now well
founded. The ritam has begun to be well-established & increasingly
powerful everywhere. It is now being developed & fixed in the
tejasic touches, at the side, in the lipi & the telepathy of thought. It
is already dominant in the central viveka & the general telepathy.
The foundation has been laid for the final transfer of the thought
& knowledge from the vijnanabuddhi to the vijnana.

The powers of Tapas increase in their dominance & insistence.
Samadhi, manifesting from time to time, shows always a little more
progress. Only the rupa is now strongly obstructed.

Dec 8.

The Tapas having confirmed its general force in particular
actions, seeks now to get at the centre of the Bhuh-Prakriti and
command final result. The movement in saundarya is still positively
adverse & in the rest stationary with a tendency to relapse.

The script has been justified; it will therefore continue to deal
with future as well as present; but all instruments are still weak in
exactness of time & place & order. The distant future is also not
yet included in the range of their proper action, except in isolated
examples. Today, that will begin to be remedied.
The physical siddhi will revive from today, beginning with the Anandas. The health & utthapana will rapidly follow in the next two or three days. Already physical ananda (kama) is becoming common in samadhi & dream & seeks to prolong itself there. It needs now only fixity in continuity & intensity.

The physical ananda has already begun its battle for fixity with a series of initial successes. These are now confirmed by an outbreak of ahaituka maithunananda unparalleled as yet in its prolonged continuity & intensity. The continuity & intensity are now being constantly repeated, though the ahaituka maithunananda is still rare.

Dec 9.

The growth of ananda & preparation of health are being fulfilled. Utthapana remains.

There has once more been a storm in the subjective ananda due to the siege of egoistic mentality from the environment centred in the intellectuality. This will now pass away & the finally perfected knowledge & power prevail steadily & swiftly over the ajnana.

The second chatusthaya has once more been reestablished on the basis of the Mahakali Tapas & the nati, not yet of the perfect sraddha:

There must be utthapana this afternoon & evening, basing, although at first imperfectly, the rapid development of the perfect secondary utthapana. The primary is well developed, but as yet imperfect & subject to interruption; but it soon recovers itself.

The teeth are once more after a long eclipse recovering the tendency to perfect whiteness. This is a sign of saundarya struggling to overcome the strong block of asaundarya.

Uttapana of both arms from 1.34 to 4.34—first hour and a half medial or half-medial position, second hour & half vertical position; some spasmodic efforts at active ananima ineffective, they only gave trouble for a few minutes during the third half hour, then disappeared. Reflex strain in the back, but gave no trouble. The whole, except for two quarter hours of sitting, done while walking. Primary utthapana perfected. For the arms only the horizontal position has now to be fully tested. Therefore utthapana of the left arm...
in the horizontal position was continued from 4.34 to 5.4. Violent ananima applied from above as an actual downward pressure of pain on the muscle, but the mahima & laghima defied the strain, which finally began to lose its acuteness while increasing in a dull & heavy pressure. This is the first time the utthapana has been so prolonged; the longest previous period even for the vertical position, lying down, which has long been entirely conquered, was 3 hours.

Ananda has been persistent, except for discontinuance at night & early this morning, but it has been more in the suppressed & subdued forms than in the intensity.

Uthapana of the left leg, medial position, for half an hour. Mahima insufficient; no pronounced ananima.

Dec 10.
The same break in the physical Ananda. Health is strengthening itself, but not yet established. There is also a disturbance in the third chatusthaya owing to the outbreak of excessive stress usually associated with the Mahakali Tapas. There is, however, no reaction. The tapas is fixed & indeed the whole second chatusthaya except the sraddha in the Adeshasiddhi.

Today the basis of the faith has to be soundly laid. The renewed attack on the health must be pushed away and arogya founded, though not yet perfected, in the deficient parts. Only the kamachakra remains for a slower process. Uthapana has to be prepared in the other parts of the body. Rupa develops more perfectly.

Uthapana of the neck for 20 minutes. Laghima & Mahima deficient except at the end; the an-anima was strong at first but afterwards diminished. Its effects remained in the muscles of the neck.

Uthapana of the right leg failed in mahima; first for 5 minutes, then fifteen; in the back also it failed. There was a general lassitude in the body as the result of yesterday’s tapasya.

Rupa more perfect in one or two occasional forms or flashes, but no more decisively advanced than yesterday.

Dec. 11—
The Mahakali tapas persists in spite of attack & pressure, but feels the pressure & tends to relapse more in personality than tapas.
towards the Mahasaraswati form. The ugrata of the faith & tapas
has abated in obedience to ill-result aided by the quieting effects of
relief from the immediate amangala.

Rupa grows stronger, but cannot stabilise in the Akasha.
Kamananda interrupted at night, but resumed in the morning
with less difficulty than on the previous days of its interruption.
The new attack on the health seems to have been repulsed, but
old fragments of roga still prevail by a dull obstinacy of persistence.
Uthapana of the right leg, medial position, for half an hour;
some difficulty owing to artificial pressure from above taking ad-
vantage of insufficient laghima & mahima; of the left, horizontal,
for ten minutes, with great difficulty. Mahima very insufficient;
ananima strong. Uthapana of the left, medial position, reclining
in arm-chair, for hour and quarter; laghima very strong, mahima
involved in laghima, ananima expelled, but sometimes recurrent

Strong attack on the first three chatusthayas, successful in dis-
trubing samata & clouding sraddha, but resultant in confirmation
of the Mahakali-Mahasaraswati form of the personality & the
growth of the ugrata. Vijnana very full & active in jnana in the
morning, disturbed for the rest of the day.

Dec 12—
The strong confusion of the thought perceptions caused by a
violent attack of the Evil in mind now takes the form of distorted
interpretations involved in right perceptions which are seized, ex-
aggerated & by exaggeration & overstress falsified in the mortal
mind. The kamananda yesterday was persistent & of the initial
intensity, but not continuous; as usual it was forcibly suspended
at night & recovered, this time on waking, also by force, but its
firm recovery combated for a while. The struggle over arogya
continues, undecided, although at present arogya is stronger than
the attack. The siddhi of Power has been thrown back & there
must be a struggle fought out once more to expel the asiddhi from
the Akasha. Kamananda this morning persistent, intense and in-
sistent on growth; it is still obstructed in its attempt to pervade &
possess the body.
Dec 12th.

The developments of the Yoga from the 1st to the 12th have been noted on separate sheets; this interruption is a concession to the transitional disturbances that result from the constant and almost unintermitting siege of the world-environment. In future it is intended to disregard the siege in its results, merely noting its recurrence, except where its results are positive & produced in the yet unestablished movements of the siddhi.

The faith in the eventual Yogasiddhi can no longer be interrupted; for, even when the opposite suggestion is made & supported by the rationally irrational intellect of infinite possibility, the unfaith is rejected & thrown back into its proper element. The faith in the rapidity of the Yogasiddhi is also positive in its substance, except with regard to saundaryam & karma, but varies in its intensity and incidence. Only the faith in the Adeshasiddhi is still in the inchoate condition.

The transfer of the perceptive & determinative intellectuality to the ideal plane has been violently & artificially retarded for the last two or three days by rushes of cloud & confusion, by a constant hammering of apparent refutation & ill-result at the sraddha. Nevertheless it is still being steadily pursued under all difficulties and is now about to be extended to the movements of tapas & tejas, which like the prakasha, must be made entirely satyam & ritam in the brihat. In the prakasha it is the perceptions of actuality & especially of determinative event in the actuality which are the remaining centre of deficiency and their imperfection is intimately connected with the common action of asatya tejas & asatya tapas in the Will powers & Will-states. Chitra & samadhi, obstinately obstructed, progress with a hampered slowness which cannot yet convert itself into rapidity.

Arogya struggles towards finality; kamananda grows &
persists, stimulating from time to time other anandas; utthapana has definitely entered on its final uninterrupted progression; saundaryam alone remains ineffective & unaffected.

Karmasiddhi awaits the faith in the Adeshasiddhi.

Kamananda throughout the day was active, insistent except for intervals of forcible obstruction, recurrent when not continuous; but in the sitting or lying position, estopped for the time in the erect or in ambulation.

The siege was allowed to prevail in the evening so far as temporarily to interrupt the faith & knowledge & produce old & long discontinued movements.

Uthapana throughout the day was unsuccessful.

Akasharupa is still in the same condition, manifesting, but unable to possess & hold the Akash, an intruder & not a resident.

Arogya still struggles, on the whole with a qualified success, against the fragmentarily recurrent or persistently recurrent denials of arogya. These denials are fragmentarily recurrent in the phlegm, cough & neuralgia (& in itch—except one spot,) & unable to fasten on the body, persistent, without itch, in the eruption, persistently recurrent in the slighter ailments of the digestion. The tendency of urination has been much reduced during the last three or four days.

Dec 13th

The siege has, today, been lifted, but the full vijnana is not yet manifest. At present the siddhis of power are being allowed to manifest through the Bhuvar tapas or the Swar-tapas on the objectivity. Manifesting through the Bhuvar tapas the Will tends to produce powerfully immediate results & more intermittently, often by indirect means & after much tergiversation, final results; manifesting through the Swar tapas it fastens more often on general than on particular effectualities or seizes only on the general effect & some of the effectuating movements. When the pure Chittapas manifests in vijnanabuddhi & manasabuddhi, there is a more consistent simultaneous & sometimes identical knowledge & effectuality, but the manasabuddhi is constitutionally averse or unable to hold for a long time the continuous activity of the Chittapas. When this Power is thus active through vijnanabuddhi & manasabuddhi,
the knowledge also tends to lapse back from the ideality to these organs. It is now especially at home in vijnabuddhi, where it perceives all or most of the forces at work, the possibilities, many of the immediate actualities & sometimes the eventual actuality. The movement is now towards a levelling up of the siddhis of Power & siddhis of knowledge. Script & vani have been made manifest to the mind in such a way that the real script & real vani can be distinguished from their secondary reproductions & from false simulations. Egoistic activity has been once more expelled and driven back into the world-environment. The Jiva is now only a secondary ishwara, bhokta, bharta & jnata receiving all things as a centre of enjoyment & lordship for the Purushottama.

Kamananda is once more active in the erect position and during movement of the body, but intermittently, not with continuity. There is an initial movement towards its recovered action at night and in samadhi.

Trikaldrishti of telepathy has once more manifested; it has two movements, one purely receptive, in which the movements past, present & future of an object reach the mind, but there is no active knowledge or discrimination of their actuality & relations till after the event, and a second both receptive & discriminative in which the future eventuality is correctly known before the event. In both cases but especially the first any tapasic stress on the intention, tendency, thought or impulse of the object as indicative of the eventual movement, leads to error; the same is true, if there is any attempt to infer intellectually the result from past or present data. Self-active non-telepathic trikaldrishti is at present more of the skylight than of the direct variety. This is not, however, always the case.

The just telepathy of thought which has hitherto been very poor in range and uncertain, is now in frequent play, eg in watching cardplay to know the idea in the mind of the player, but it has not yet its full exactness, only a general truth. It is showing itself from the beginning to be more reliable than the words & signs of the thinker, from which often false inferences are drawn. Right interpretation of lipi and rupa are also prevailing over the intellectual, imaginative and speculative interpretations.
The tapas has greatly increased in effectiveness without being yet master of the akasha.

In the afternoon there was a relapse to intellectuality and ineffectiveness with a lowering of the Mahakali tapas. The system took refuge in subjective inertia.

The animal form which for a long time was excluded from the Chitra, is now of frequent occurrence and a rich perfection & variety, though not as yet on a level with the human form & the landscape. The separate inanimate object and groups of objects have also begun to manifest. The tapas is working on the Akasharupa, but it still fails to hold the physical ether; nevertheless it tends towards a more lingering transience than its former entirely fugitive display. Shabda & other drishtis are still very rare & poor in range &c, usually, in force. Tivananda is acquiring intensity in its sukshma touches.

Utthapana of the left arm, horizontal position, commenced while recumbent on the right side, was visited at once with a violent pain of ananima; after some minutes changed to the sitting position & walking, the ananima diminished, & the utthapana was maintained with increasing force for an hour & a half, but the ananima finally returned & terminated it. The right arm continued for an hour; then ananima grew suddenly upon it. It is noticeable that when held out rigidly, the ananima takes the form of strong muscular pain in the shoulder muscle; when held easily & slightly crooked, the ananima comes after a long time & takes the form rather of uneasiness. In both cases there is no pull of gravitation from below, the laghima of the arms being perfect, but a pressure of gravity from above, oppressing the mahima through ananima. Utthapana of the back persisted for nearly 5 minutes with intervals of varying pressure & growing urdhwagati. Other utthapanas were unsuccessful.

In the afternoon & evening the vijnana was again successfully clouded. It is noticeable that the trikaldrishti of exact time is growing in frequency, eg the return of B. [Bijoy] the other day at 7.55, the return of N [Nolini] & Br. [Biren] today by 7.

There is a growing strength of Samadhi; shabda & sparsha returned & were combined with rupa & action; distinct & coherent lipis occurred; the actions seen were more prolonged and better organised. The organisation however, as well as the prolongation, is still rudimentary. Kamananda was this time successfully established in the night, but is only occasional in sleep or samadhi. The body is still unable to maintain it with perfect continuity; although the relapse is now a habit forcibly maintained, and not at all a necessary relief or respite. Akasharupa maintains the same character of persistent pressure on the Akasha without possession or any real stability.

Arogya in the digestive faculties seems now to be tending away from the struggle between health & the petty fragments of digestive ailments (for nausea, constipation[,] diarrhoea etc have for some time been absent from the system except in touches of looseness, obstruction, nauseative tendency) to the old struggle between abnormal assimilation of food & normal or abnormal waste. For the last two days waste has been abnormal. Waste has to become subnormal without disturbing the digestive processes. Kamananda is now fixed,—either recurrent or continuous,—in all states except that of sleep & samadhi. Sukshma tivrananda is rapidly developing ubiquity & intensity. All the sahaituka physical anandas are now constant in the body, except vaidyuta which is yet rare and occasional. Ahaituka tivrananda is now becoming spontaneous although usually with some aid from smarana.

The subjective anandas, although well-established, are liable to clouding especially by the loss of the sense of beauty in the adaptation of form to guna. If the Brahman is seen in the guna of a face that is mean or ugly, the meanness or ugliness becomes itself beautiful to the inner eye & through the inner eye to the outer vision; but, this failing, the shuddha & premanandas fail by temporary loss of the chidghana. Premananda is also attacked by old sanskaras of relation & non-relation. Normally, however, chidghana, ahaituka & suddha are permanently manifest; prema is there usually in the priti, not so commonly in the bhoga.

Arrangement of lipi has been well-established both in chitra
and akasha. The struggle now is between the slowly growing intensity & vividness of the letters & the old tendency to vagueness, dimness & illegibility. This intensity & vividness was formerly perfect, but exceptional, it is now imperfect, but tends to be normal. The lipi is usually intelligible even when imperfectly legible, but its interpretation by the ideality is often obstructed; eg the lipi Pyrotechnics on the Kart[t]ik Purnima. Owing to the mind’s ignorance of the fact that it was Karttiik Purnima or that here it is usual to have fireworks on that tithi, the lipi remained unintelligible in its main purpose until the evening when the fireworks began.

Utthapana of the right leg, medial position, for half an hour with but slight ananima,—discontinued owing to deficiency of established laghima and mahima. Subsequently utthapana of the back attempted without success, owing partly to commencement with the medial position, attempted again and successfully maintained for 15 minutes; increasing laghima & mahima made the utthapana easier & easier, instead of its becoming more difficult by long continuance, and at the end only a slight dull pain of ananima in the hips and vepathu survived out of the first strong asiddhi. The back was then lowered to the medial position & could have been maintained owing to strong laghima, but there was violent vepathu; the utthapana was discontinued owing to an external occurrence, otherwise it might have been maintained for an indefinitely longer period. This is the first time utthapana of the back has been established.

Confusion of the first & second chatusthaya, due to confusion of the third, again occurred. The difficulty in distinguishing the Personality of the Master of the Yoga, owing to the interference of inferior personalities, is now a main cause of unfaith & discontent. In the afternoon the confusion was cleared from the first & second chatusthaya, though still left in the third, in order that there might be no farther premature demand & therefore reaction of disappointment & discontent; the main agent in the clearance has been the final subtle but perfect distinction in the vivek between the supreme vani & script (not yet active) & the minor, secondary & immediately active & directive vani & script which are henceforth
leading the siddhi forward. A similar distinction is being made but not yet perfected between ideal & un-ideal stresses of tapas & prakasha. At the same time the final transfer of the remnants of intellectuality to the ideal plane through the vijnana buddhi has begun to be completed. Dasya is on the verge of fullness, the ego remaining only in the sakshi and in some emotional remnants; the rest of the individual being lives now a secondary life as a conscious becoming of the one Being.

Raudrananda, ahaituka & sukshma (materialised), has for some time been established in the system; vishayananda today has received similar rights in the physical body & vaidyuta is beginning to be regularised, although at present it is more often negative than positive. The five sharira anandas now usually occur together, involved in the main bliss-touch or explicit & accompanying it; this concomitance, however, is not invariable. Premananda is once more generally active & in individual touches intense. Subjective vishayananda is shaking off its occasional obscurations.

Sraddha has once more been firmly established even for the sceptical intellectuality in the whole range of the siddhi except karma; there the sraddha is still [not] vijnanamaya & questioned by the surviving intellectual activities. The sraddha of rapidity is not yet similarly extensive.

During the evening & night there was a cessation of the siddhi; the vijnana, the Mahakali tapas etc were kept in abeyance, the kamananda suspended. Only samata & the fullness of the first chatusthaya, especially of anandamaya nati remained. The intellect attempted to be active in trikaldrishti, but was almost invariably [convicted]\(^1\) of error,—false stress, false understanding. Rheum tried to materialise.

**Dec 15**

The final condition of yesterday was continued in the morning with some modification; receptive telepathy was allowed to recover its activity & a sort of vijnanamaya thought-perception allowed. The object seems to be to stamp on the manasa parts of the being

\(^1\) MS committed
the realisation that all is intended, even what is most adverse & least understood, as a step in the siddhi, all brought about by the Master of existence, even when seeming to be brought about by inimical Powers, & all therefore to be received with submission. This state of realisation, however, can only be final if it persists when the Mahakali tapas is active.

The Ananda of cold is being increased by repeated & continued exposure to cold wind with the bare body. Only an almost subliminal part of the nervous system persists in the sanskara of discomfort & the reaction of rheum in the nose. This rheum just succeeds, so far, in materialising itself, but is unable to lay hold on the system. The discomfort of exposure to solar heat is also sinking down towards the subliminal Prakriti.

Kamananda today, though intense at times, was much interrupted. Akasha rupa & samadhi steadily increase.

Dec 16
The condition of the last two days has fulfilled its purpose of establishing firmly the anandamaya nati; all adverse movements are now recognised throughout the whole nature as the divine will and accepted with negative, when not with positive, ananda; their purpose is perceived or, when not perceived, taken for granted. Disappointment & despondency, when they offer themselves, are immediately or almost immediately rejected. These conditions persist even though the Mahakali tapas has been re-manifested even though with small intensity. The Mahasaraswati nature with the Mahakali tapas has accepted entirely the full dasya.

Faith is now imposed on the intellect even in the saundaryasiddhi as the result of two or three slight but noticeable effects of the will on the body which establish in type the possibility &, to the reason arguing from experience, the divine intention of the siddhi. Only faith in karmasiddhi is still wanting in the intellectual parts of the general (non-personal) nature. The vijnana is transforming all thought & perception into the type of the vijnanabuddhi.

\[ \text{MS being} \]
Uttapana of the neck for half an hour in raised & medial positions. After twenty minutes the inferior position, without support for the back, was attempted, but brought on strong pain of ananima. The utthapana of the leg was abandoned after ten minutes owing to unsatisfactory nature of the laghima and mahima, although it could have been continued longer.

The full force of the Mahakali tapas & personality was allowed to take possession of the adhara in the evening, but as usual brought on activity of the lower tapas and reaction.

Dec 17
Telepathy confirmed afresh today, but under circumstances which brought on a brief attack of the intellectuality. The transfer of the intellectuality in its remnants to the ideality, the regularisation of the higher ideality and the extension of the vijnana continued. The greater force of Mahakali tapas is being attempted & persisted in in spite of untoward results. Vividness & legibility of lipi is becoming more common. Akasha rupa of the vivid kinds usually now dwells a little in the akasha & often before the eyes before vanishing, but not yet long enough to constitute stability. Kamananda is persistent & often intense, but interrupted & seldom continuous. Health in all its parts is striving to get rid of the recurrent touches of fragmentary roga & where the recurrence is persistent & prolonged to reduce it to the fragmentary condition.

Dec 18.
The result of the last three days’ movement has been to transfer all the movements of mind normally to the ideality, to establish the truth (satyam) of all telepathies & arrange for the ritam, to increase the strength of the telepathic trikaldrishti & justify all movements of tejas & tapas as satyam, but not as ritam. The ritam is especially uncertain in essential trikaldrishti & this uncertainty leads to frequent relapse and an occasional & fragmentary play of the intellect. Power is greatly increased & always produces some kind of effect, even often the exact effect, but owing to the surviving strength of the resistance fails often of its specific purpose, is insufficient in finality and, even producing specific & final effects,
does it with effort, waverings in the object, variations from the
settled arrangement. This is the case even in the field of experiment
& in the karma of life these defects are much more pronounced;
there also the trikaldrishti is still rudimentary. As a result sraddha
in the karmasiddhi has failed to establish itself. There is faith in
the rapidity of the vijnanasiddhi, especially now that the rupa &
 samadhi grow with an increasing pressure on the objective akash
& the physical system; faith in the physical siddhi, but not a
settled faith in its rapidity; no faith, except the ideal sraddha, in
the most important part of the karmasiddhi on which all the rest
depends.

Uttapana of the neck raised & medial position, with support
for the back, one hour; the last half way with pressure of ananima
on the muscles of the neck. Uttapana of the left leg, horizontal,
side position, fifteen minutes, with stress of ananima on the sinew
kept out by the Will.

Crisis due to the attempt of the Shakti to raise the siddhi from
the ideality of the vijnanabuddhi with subordinate action of manasa
ketu, to the vijnana with subordinate action of the manasabuddhi.

Dec. 19

A confused condition of the vijnanabuddhi, in which there is
sometimes action of the vijnana with reaction of the vijnanabuddhi,
sometimes of the vijnanabuddhi with reaction of the manasa per-
ception, sometimes the old action of the unillumined or confusedly
illumined intellect, sometimes a mixture of these three functions.
The attempt at finality of perfect samata & Mahakali tapas has
failed once more. The sraddha established is once more interrupted
and only fitfully recurrent.

The combination of the ananda, samata & knowledge with the
effective Mahakali tapas in the Mahakali-Mahasaraswati person-
ality was again effected, but the Mahasaraswati element predomi-
nates & the stronger movements of the tapas are only occasionally
active. Sraddha in the kriti is wanting, & sraddha in the rapidity has
been modified. Health & final effectiveness are being successfully
resisted.

Uttapana of the neck for one hour. After forty minutes the
ananima, till then apparent only as muscular sanskara or reminiscence became suddenly violent & effective & could only be resisted by physical means.

Dec 20

Abandonment of personal tapas and lipsa. Unprecedented strength of dasya, udasinata, sometimes with vairagya, sometimes with positive ananda of samata. Kamananda active

Another struggle to reinforce the combination of the first two chatusthayas, of passivity and tapas. The third chatusthaya began to reemerge from the successful siege of the manas tattwa. Samadhi was especially powerful, combining the more important drishtis, rupa, shabda, sparsha, karma, especially in groups of human beings speaking & acting & brief but perfect continuity of action was manifested. All the other elements of vijnana recommenced, but against a siege & in a cloud of mental perceptions. Exact trikaldrishthi even manifested, but pursued by doubt & speculation & a disturbance of the view of right arrangement. Nevertheless one of the most powerful attacks of asiddhi has been overcome & defeated & finality definitely arrived at in the first chatusthaya.
Dec 22d Monday. 1913.

The 21st Dec marks the close of a period. The first chatusthaya, hitherto always subject to apparent & superficial relapse by adhyaropa & intrusion of trouble, asamata & nirananda from outside, is now superior, by reason of the final repulsion of desire and recognition of the conditions of the Yoga, to these intrusions, although a minor adhyaropa is still possible. The second is firm, under the surface and often on the surface, in all except sraddha, firm in itself, but not complete in its range or all its circumstances. Sraddha in the Yoga siddhi has been accepted by the intellect, but not sraddha in the kriti. There the surviving intellectuality demands certain objective proofs before assenting to the ideal faith as anything more than a possibility or probability justified by the general nature of past experience. The doubt resolves itself into a deficiency in the sraddha Bhagavati. The Allpowerful Master of the Yoga is accepted as the Master & Lover of the Jiva and there is faith in His grace for the Yoga, but not in His grace for the life, nor in His ritam, nor in His Adesha. For this reason the swashaktyam sraddha is also overcast by doubt and limited in its range, because it is thoroughly experienced and accepted that own-Power can do nothing without the divine sanction and grace. The third chatustaya is in all, but rupadrishti, so far established in self-expansive force & inevitability of self perfection that its entire fulfilment remains only a matter of time. Physical siddhi is moving towards that stage, but has not reached it. Brahma-siddhi is now deficient only in nityasmarana and
depth. Karmasiddhi remains now as the sole nexus of the asiddhi.

The third chatusthaya is chiefly advanced in vangmaya thought, in general jnana where jnana does not pass into telepathy (prakamya-vyapti). The main difficulty lies in the defects of the interpretative power, daksha & ketu, which, although transferred in type to the ideality whether of vijnanabuddhi or vijnana, alternates practically between vijnana, vijnanabuddhi and those parts of manasabuddhi which are either pseudo-intuitional in the nature of their activity or else attempt to preserve the fragments of the old intellectual reasoning or of the undercurrent of habitual mentality.

This defect is now being steadily mended; ideal interpretation is being applied to the material of telepathy, lipi, rupa, samadhi etc; but until this process is complete, the positive defects of knowledge, as opposed to mere occasional inactivity, incompleteness or limitation of range, must continue. Meanwhile the range has begun to be extended. Occasional inactivity of knowledge will remain & be used for ananda & uddeshya, the purposes of life & the joy of life.

Power acts with frequency, but not with full mastery; nevertheless it is now often rapid, instantaneous[,] effortless & persistent in its efficacy. Lipi is organising itself materially, but lacks habituality of vividness & spontaneous fullness in the akasha. Chitra & sthapatya of rupa is now almost perfect, the human figure, animal, landscape & group being rich, various & perfect in all; the isolated object or object group is still obstructed, but is moving towards the same variety & richness. Perfection is already not uncommon. Akasharupa is now persistent in manifestation, but cannot yet acquire a free stability. The vishayadrishtis have all an occasional perfect action, but are limited to a few habitual forms. Samadhi is still deficient in free combination and prolonged continuity of vision and experience.

Kamananda is now fixed in the body as of frequent daily occurrence, but only sometimes (on some days, that is to say) continuous or intense in its frequency. Ahaituka tirvananda has acquired a great intensity & some persistence; raudra has intensity. Vishaya & still more vaidyuta are only occasional & still imperfectly developed. Health is strongly combated, utthapana likewise; but both have now begun a settled movement of struggle towards progress.
and in no feature yield for long to positive reaction. Saundarya is successfully obstructed; it is only rudimentary in a few features & still subject in a few to successful positive reactions.

Karma is established but of slow progress in Sahitya, Veda & Bhashatattwa; obstructed in dharma, rudimentary in kriti.

The last three chatusthayas are in the state of sure foundation, unfulfilled superstructure. Kali and Krishna are manifest, but not in their full power and being, and because they are not manifest in a sufficiently full power and being, therefore kama and karma linger. The fourfold Brahman, on which that manifestation rests, is realised subjectively, but not yet, except initially, in its objective effects. Shuddhi, mukti, bhukti are perfect except in the body & except in a few subjective terms, eg the imperfect exclusion of the active mentality, & even in the body are approaching that critical point of their progress after which completion becomes not only possible but easy; but siddhi is still kept back in parts, although it has now begun its finalities.

Dec 23d

The forward movement of trikaldrishti, yesterday & this morning, received its seal of final and speedy inevitability; the positive defects that remain are occasional overstress on a telepathic perception marring the satyam and imperfect light of detail and arrangement limiting the ritam. Nevertheless even in the unillumined secondhand perceptions of mind the ritam is at last prevailing and the satyam is now dominant.

*Lipi. Effective fertility of the lipi; delight: utility of the lipi to the trikaldrishti.

In the drishtis full drishti of gandha is now accomplished, although still infrequent. Sparsha-drishti is strong, but not usually sufficiently materialised except in minor touches, eg touch of sukshma winds, insects, etc. Since writing the above gandha has founded its frequency; at first taking advantage of slight unnoticeable or distant physical gandha it has emphasised for the indriya to a

1 *The asterisk is Sri Aurobindo’s; its significance is not known.* — Ed.
violent intensity their psychical counterparts and taking advantage of
the memory in the indriya it has established in it the capacity of
receiving sukshmagandha without the aid of a physical suggestion.
Finally, it has established the pure sukshma gandha in intensity &
frequency.

Vishayananda is now finally generating itself subjectively in the
mind's reception of all actions, sights, sounds, touches etc,—
a few touches of pain & discomfort in the body alone resisting,—
and objectively in the physical response to all experiences. It is
now manifest in the other ananda touches, raudra, tivra, kama,
vaidyuta; it is becoming frequent by itself in touches which ordi-
inarly bring other anandas; but objectively, it is not yet usually
either intense or prolonged in ahaituka touches. This defect has now
begun to be remedied. In type it has already been remedied, and
the movement has been extended by concentrated process to the
positive vaidyutananda. Negative vaidyuta had already intensity
and prolongation, though usually associated with raudra. It is now
being manifested separately.

Lipi—sunlit tapas and tapatya.

This has already (immediately after the lipi) been exemplified by
certain movements of the aishwarya in which illumination of
telepathy & trikaldrishti were perfectly combined with effective,
though not immediately effective force of the will; both are still
deficient in arrangement of ritam, but both work freely in particu-
lar effect. The resistance to the aishwarya, though still offered and
often with obstinacy, is much weaker & less effective than formerly.

Rasadrishti is remanifesting combined usually with sparsha
of the object, but as yet it is usually indistinct and insufficiently
materialised. Shabda is also once more manifest, clear only in a few
elementary sounds, strong but vague & remote in others, such as
music, human voices etc. Neither has yet advanced beyond the stage
arrived at long ago when these experiences were discontinued.

Rasa subsequently manifested great intensity and persistence
in the bitter and bitter sour; the other tastes appear from time
to time but without intensity or persistence, usually imperfectly
materialised. Madhura is still involved in the sthula touches.

The siddhi descended again to the intellectuality to mould the
mental pratistha more entirely to the passive reception of the vi-
jnanamaya movements. In these descents jnana tends to keep its
force & accuracy, receptive telepathy persists and sraddha in the
yogasiddhi along with a provisional faith in the karma, recently im-
posed on the intellect. But trikaldrishti proper is much interrupted,
& faith in the rapidity of the siddhi tends to be diminished, impaired
or to disappear. Power increases without attaining at any time to
definite mastery. Akasharupa cannot advance, being overmastered
by the obstruction. Lipi grows in effective fertility, utility & just
interpretation and is more often legible & vivid than before, but
has not made the full material conquest of the Akasha. Samadhi
keeps its gains, but fluctuates in its unestablished features.

Dec 24

It is indicated that the chief defect of the tapas in the yogasiddhi
is the use of the physical insistence of the Will which is now out
of date, though not ineffective, where direct physical tapasya has
not to be used. Most of the reaction of asiddhi comes from the
use of this force. On the other hand in the karmasiddhi, it has a
permanent part to play, although always a subordinate part.

Yesterday’s descent into the intellectuality gave an opportunity
for an attack of the mortal mind which reproduced briefly & by a
sort of violence certain features of the old asamata and duhkhham
connected with the asraddha. The effects were entirely physical
and mechanical and had no psychological reality or importance
or any just causality. They seem to be a physical adjunct always
possible by mechanical revival of old sanskara when dwelling on
the plane of mortal mind or in any condition exposed to shadows
from the martya manas in the world. They are in the nature of the
minor adhyaropa of the asiddhi to which the first chatusthaya is
still liable.

Rasadrishti continues to develop. Many tastes manifest, mostly
on the verge of sufficient materialisation, some just over it, a few
depending on some material help and masquing behind an eatable
object of quite different taste, eg sour behind pungent, or the mem-
ory of an eatable formerly eaten, either a little while ago or a few
hours before or the last day. Sound quiescent since yesterday is
again manifesting. The other drishtis are as yet stationary (touch) or imprisoned (satyarupa & hearing).

As the result of the recent struggle correct trikaldrishti is beginning to manifest in the intellectual response to the veiled vijnana.

Samadhi preserves its characteristics, but does not yet advance to a higher perfection. The satya of presentation is returning to the manasa swapna, but it still tends to reproduce more or less present personality & sanskara; occasionally however it is quite pure except for a feeble hardly noticeable touch of perversion. Today in the jagrat antardrishta the transfer of intellectual movements to the ideality has definitely begun.

Throughout the rest of the day, there were constant attacks of asiddhi, but the relapse into the Mahasaraswati form of udasina ananda could not again be enforced. The siddhi here appears to be complete. The only positive damage done by the attack was a partial bringing back of touches of physical discomfort disturbing the ananda of the indriyas in all touches & all sounds & restoring certain old sanskaras of unpleasant shrillness in sound or of dissatisfaction in the quality & effect of touch. The sensation however was confined to the physical organ & its nervous currents; the mind held its own.

Dream was ineffective.

Dec 25.

In the morning the full siddhi reasserted itself. There is a preparation, as was predicted yesterday in the lipi, for the transfer of the knowledge to a higher ideality by enforcing more perfectly on the mortal & finite mind the brihat & compelling it to see the truth behind all suggestions even those apparently the most false. Constantly the mind is illumined in all its perceptions except those of the trikaldrishti, where it is only sure that all its perceptions represent actual truth of fact conveyed by prakamya vyapti, but cannot perceive consistently decisive event or true order. It is now being shown, more convincingly than before, that all false arrangements are true arrangements elsewhere, in other space or time or both, but here effective as only true type of a potential or actual possibility working as one of the forces of conscious knowledge in the world.
which determine partially the actual event in its preparation, its
intermediate effectuation or its decisive finality. But the mind still
revolts against even the actual possibility being enforced on it as
or even instead of the actuality. This demand still strives to disturb
the ananda of struggle & defeat & victory proper to the Mahakali
tapas and temperament.

The tapas-siddhi, clouded and interrupted yesterday, again
manifests in a series of aishwaryaprayogas (with vashita) in which
there was no instance of failure, but always some element of re-
sistance. There are three forms of resistance; 1, the will is exactly
fulfilled in all its successive dictates, but there is an involved &
concealed resistance not betrayed by any action or movement but
obvious to the prakamya-vyapti which would or might have mani-
fested itself if the action of the will had been farther pursued; 2, the
will is fulfilled with a slight delay or a slight deflection of detail or
both; 3, the will is fulfilled with a longer delay or a greater deflection
of details or both, or with constant alternations of failure & success
leading to an ultimate victory. If the will were jatavedas, attended
with a constant & perfect knowledge or identical with knowledge
in the divine identity of Chit-Tapas, these difficulties would not
occur; but, before that consummation can be allowed, will force in
mind has to be educated to the necessary force & firmness. First,
eventual failure in the particular event has to be eliminated then
failure in process, then limitation of success to the particular event
& its extension to series of events constituting finally one grand
result.

The tapas siddhi shows signs of entering on a new stage. From
the movements of this stage it is evident that there are four forms
of arrangement of Chit-Tapas which enter into the eventuality of
things; first; arrangement of potential possibilities and their event,
proper to the imagination, which may be eventually fulfilled but
usually are not, except in quite another space or time or under
quite other circumstances; 2, arrangement of actual possibilities
and their reasonable event, proper to the judgment & reasoning
intelligence, which often are fulfilled, but quite as often frustrated
by forces behind the scene or impossible to be properly estimated
by logic & mental reason; 3, arrangement of actualities on the
basis of actual forces in operation seen or unseen, perceptible by
mind or inferable, proper to the telepathic & intuitional mind,
vijnanabuddhi, which are usually fulfilled & always more or less,
but need not be, or, if fulfilled, need not continue to be fulfilled;
4, arrangement of absolute actuality, proper to the pure vijnana,
which is invariably fulfilled, being equivalent to the intentions
of Fate and Providence. A great obstacle to the development of
Power has been the desistence from its use when an event seemed
fixed either in a favourable or hostile sense on the strength of the
telepathic drsti or even of the reasoning perceptions. The latter
difficulty is beginning to disappear with the transference of knowl-
edge to the vijnanabuddhi, & the disappearance of the reasoning
intellect, but the former persists & is likely to persist until the
knowledge has been transferred from the intuitional mind to the
pure vijnana. This is being done with jnana; it has yet to be done
with trikaldrishti.

Lipi satyatejas is being fulfilled. All the powers are gaining in
strength; aishwarya with vashita, not invariably successful in event,
yet succeeds now far oftener than it fails, at any rate in the sadhan-
khshetra; ishita is less powerful, but exercises a visible pressure &
often fulfils itself; aishwarya with ishita stands between the two
in effectiveness; both aishwarya & [vashita]² have also a field of
exercise involved in ishita. But ill-ordered as is still the action of the
Power, it is now recognised as satyatejas, always either producing
some kind of effect or motion, if not the exact effect intended, and,
if not at the time, in the object, under the circumstances intended,
then at another time or place, or in another object or under other
circumstances. There is delay, there is deflection, there is even final
frustration, but never entire inutility. The ritam yet remains to be
brought into this disordered mass of satyam.

Kamananda has been seeking for the last three days to impose
itself on the body, not as a circumstance, but as a law of its activities.
It is this afternoon stronger in essential continuity than it has been
in the past.

² MS ishita
Dec 26.

The remnants of anritam are now being persistently attacked & dominated in the telepathy & telepathic trikaldrishti; often even the unillumined mental movements constitute perfect ritam not only in telepathy but in trikaldrishti & when they are not so, they are always a full satyam with an imperfect ritam, an arrangement struggling to be right & attaining a half rightness, not as before entirely confused. Power grows, the sraddha of perfect power is taking possession of the mentality and preparing the eventual ritam of the tapas. The object can now be forced very often to the action it never intended contrary to its actual intention and endeavour, but this in living beings is effected through the mind & temperament by introducing a minor, weaker or side impulse which triumphs over the major, main or dominant impulses. Hence, usually, a long resistance occurs before the action is effected and often the object succeeds in getting away from the field of the vashikarana.

The Personality of the Ishwara & His relation with the Jiva are becoming more & more determined and frequent in action. Today there was a descent into the adhar of the Aniruddha-Balarama balakabhava, powerful in temperament & using life & action as a boy’s game,—the seat being not as formerly the mind & buddhi, but the intuitional mind and the temperament.

Kamananda is now in possession of the physical system so far as to make itself always felt either in intensity, in subdued action or in a suppressed action effective on the body in secondary sensation, so that the system is not allowed to forget the ananda or to imagine its essential absence.

The Mahakali tapas has developed so far that now no defeat is taken as even temporarily final,—except in temporary particulars,—no nirananda is accepted, but at once converted wholly or partially into ananda, every suggestion of impossibility is rejected. Even the spirit of postponement of results is losing strength & the sraddha of immediate effect & rapidity is growing. These things, however, have not yet conquered the whole field, and a reserve still holds its own in the karma-sraddha & the sraddha of immediate actuality.

After a prolonged struggle with the fragmentary elfin agencies
of the Manoloka there was a fresh emergence of a more perfect ideality.

Kamananda was almost entirely suspended as a result of physical expenditure in the second half of the day; only the faintest form of its suppressed existence subsisted.

Dec 27.

Telepathic drishti aided by the intuition arranged a kind of trikaldrishti perfect in all but exact detail of perspective. A more settled ideality, intolerant of intellectual tapas and manasic stress, now holds all the forms and instruments of knowledge and is extending itself to the Tapas. The mind in ketu is still active, but only for more perfect training in passive receptivity of the vijnana; this manasa ketu is almost entirely void of intellectuality, at most there is sometimes a vague involved reasoning in the perception or, more often, a fantasy of stress upon remote or frail possibilities not properly connected with the actualities of the life or its proper mass of creative effort & forecast. The transformation of this manasic perception is now one of the main movements of the siddhi.

Kamananda is again recovering its force; tivrananda, for some time a little discouraged, is regularising its action and local arrangement; the rest are still irregular in their manifestation. Subjective ananda is being exposed to a revival of discomfort in its parts of physical nerve-organism, mainly in the sravana, in order that ananda even in the most effective forms of physical discomfort may be more firmly stamped on the nervous system, first psychically, then physically. The doubt about the sukshma character of the gandhadrishti,—the idea, that is to say, that the abnormal perception of objective scents was being mistaken for sukshmadrishti,—revived, but has once more been removed by still more unmistakable examples. The physical prakamya exists & will grow, but accounts for only a small part of the phenomena. Eg the smell of food at midnight, in a shut room, under the bed-clothes cannot be physical gandhadrishti.

All the physical (ahaituka) anandas are now firm in the body; vaidyuta is still comparatively rare, vishaya seldom intense or prolonged, but all five are repeatedly present, kama & tivra both

www.holybooks.com
22 December 1913 – 15 January 1914

intense & prolonged, raudra sufficiently intense & somewhat prolonged. Tivra is generalising itself locally, kamananda has begun the generalisation in type, raudra is normally general; none, however, at any time cover the whole surface of the body, but are localised in their particular contacts. Kama is most self-diffusive in its single touches. All are steadily increasing themselves & their hold on the sthula body.

Telepathy is now entirely justified to the intellectual sraddha; it is seen now that every telepathic suggestion is true, all are being except for slight perversions correctly placed and only in their exaggeration by tapas into trikaldrishti is there any serious error or distortion. So also the wisdom & kalyanechcha of the Master of the Yoga are justified in every detail of priya apriya, mangala amangala, the exact use & intention even being now generally evident either vaguely or precisely to the mental perception aided by the ideality. The absolute power over the Yoga is also evident, but the absolute power over the world is still a matter of ideal faith & to the mind, of inferential faith, not of intellectual pratyaksha. So also the personal Love (prema & not kama) is not entirely justified to the perceptive manas & the prana, although justified to the heart.

In the evening a shroud was drawn over the siddhi which seemed in great parts of it to become inactive or ineffective. At the same time it was evident that a process of purification of the old ideas & sanskaras formed in the course of the sadhan & no longer suited to the actual state or future course of the siddhi was in process.

Dec 28.

Recently the lipi appeared “Do not judge by the telepathy”. This command to the nature is now being brought home to the mind by the continual demonstration of the uselessness of the telepathy unsupported by viveka & intuition for the decision of actual eventualities. Telepathy only brings to the knowledge actual forces, thoughts, states, tendencies, intentions etc; when it goes beyond and gives the event, as it can & does give, it is only [temporarily]³

³ MS temporarily
fulfilling a function beyond itself and merging into revelation & inspiration. But when it does so in intuitional mind, it assists the manasa ketu to make mistakes of overstress by accustomed it to expect such monitions usually & not exceptionally from prakamya vyapti, so that it comes to take any & every vyapti & prakamya as an indication of actual event, in which case it falls into numberless errors, or as at least possible or probable event, in which case it flounders amid a chaos of uncertainties. The mind is now convinced of the proper limitations of telepathy & the intuitional mind as it was formerly of the insufficiency, proper limitations in the past & future uselessness of the intellect.

The telepathy is now beginning to work again in harmony with the pure vijnana, and, more important, the tapas of effectuality is beginning to distinguish itself from the tapas of knowledge, while at the same time looking forward to a higher fulfilment in which the two again become one. Forces are now perceived at work long before they are fulfilled and the old tendency to insist on their immediate or rapid fulfilment and in default of that satisfaction to dismiss the perception of them as error or the forces themselves as futile, is passing away. It is now seen that all forces are effectual and must produce their result; until that result is seen & determined, they must not be dismissed from consideration, nor from use. The Will therefore is now working with this knowledge of the forces as its medium, making use of those that are favourable to its intention, discouraging those that are adverse. In this working it is generally successful, sooner or later, except when the object passes out of the field of operation & the idea or hope of bringing it back or distinguishing it if it returns is abandoned. The ritam or right working of the power is not yet advanced beyond its former stage of initial & inchoate development. It is also now seen by the duller parts of manas that a force which seems to be prevailing & its victory inevitable & intended, need not prevail at all; some other force may intervene or the will of God may strike the object and drive it towards other ends; the movement of the once dominant force then takes its place in the history of the total motion & final event as one of the forces of variation that modified or advanced the course of their fulfilment. The way is therefore clear for the
entire perception of Ananta Brahman (guna, constituent forces and determining force or will), for its union in the Sarvam Brahma with the Jnanam Brahma and for its perfection in the sarvam samam anandam Brahma.

Vishayananda (ahaituka) now manifests sufficient intensity & continuity when it enters the physical system in company with the other physical anandas. When it comes by itself, involving in itself the others, it tends, if the intensity is too sthula or prolongs itself, to pass into the others, especially raudra and tivra. For the rest, this conjunction of all the anandas is intended as the normal state of ecstasy, except in its more particular movements of vishesha-radhas. Vishaya is in its nature a saumya ananda, the rest in their nature chanda anandas; hence states of chandata tend naturally to pass out of vishaya into its fiercer fellows. It is noticeable also that the other anandas obstructed or denied tend more & more, instead of at once extinguishing themselves in avyaktam, to pass into the raudra. This circumstance throws a considerable light on the true nature of pain.

Sortilege. RV I. 93 अर्थशास्त्रमात्रान्तरं यू में श्रूंभरं वृक्षणं हृदं। प्रातिष्ठ
वृक्षाणि हुन्तं भवतं शरणं नमः॥ O Agni (lord of divine Tapas) and Soma (lord of Ananda), hear perfectly my call, take joy in the things perfectly expressed in me, become Ananda to the giver (of the sacrifice of action). This expresses the next necessity of the siddhi. Hitherto the full Anandamay state (Soma) has been associated with shama; tapas has always brought either partial Ananda or disturbance. The siddhi is now ripe for the perfect combination. It is noticeable that the sortilege has for some time been illuminated by the pure vijnana; the lipi as yet is not free from the pursuit of the manasa ketu and has often to be interpreted through the vijnana-buddhi; this is still more the case with rupa. Now, however, the ideality is steadily pressing on all the instruments of knowledge to take them over into its own domain, swe dame.

The lipi in the samadhi is still fragmentary except in rare short sentences, sometimes even incoherent in the single word. eg “In the bath of men voltithaire impressionably” where voltithaire represents primarily Voltaire’s Theatre (dramas) and the expressions “in the bath”, “of men” “Voltaire’s theatre” “impressionably”,

www.holybooks.com
although separate, are run together as if forming one sentence. A less confused instance runs “demain matin (one of the illustrators in Paris ... country.” In jagrat samadhi antardrishta a series of clear and stable images have manifested, but they are all crude in nature and struggle out of the old long-standing obstruction and obscurity.

A movement has now taken place which marks the final liberation of the jiva from the fragments of dwandwa ragadwesha in the outward world-consciousness (priya-apriya, mangala-amangala) by the disappearance of the kartavya-akartavya, aptavya-anaptavya. These things exist in the knowledge, but no longer in the emotional consciousness. The shadow of the old touches will fall for some time on the outer jada prakriti, but they will not be accepted by the organised consciousness of the jiva. Universal ananda is now hampered only by deficient physical mukti.

Clear & stable rupa is now establishing itself again with greater freedom in the Akasha, but as yet nothing entirely decisive has been attained. Perfect rupas are still transitory & rare, developed rare &, though not always transitory, fleeting in their momentary stability; in the stable forms the crude predominate & even the ghana is infrequent & less stable, nor are these stable crude forms plentiful in their variety.

The resistance to tapas is becoming less prolonged, its success less successful. There are exceptions, but these are principally in particular detail or to less constant aishwarya. Ishita is still insufficient. Will was successful in recalling lines of verse entirely forgotten. They welled up from passive or concealed memory immediately in answer to the touch after long vain striving by mental pressure.

In the samadhi, as a result of ishita, the supreme type of image, eg a city on the hills, once more recurred, but the prolonged continuous experience of these images and of continued movements & occurrences in the scene they represent, formerly not infrequent though imperfect either in prolongation or in continuity, do not yet recur. The type is still only a complete isolated incident in a limited scene rapidly represented or a momentary cinematographic glimpse on a more extended scale, eg a street and its movements etc.
Dec 29.

The Shakti is busy extending the subjective & pranic ananda in objective touches which are still uncomfortable, eg heat in the entrails, nausea, tejas effective of discharge of purisha etc and purging out all tendencies to return of asantosha in ill-effect. Increasing premananda, shuddha, chidghana are still debating the ground with the fragmentary relics of the lower jaghanya or bibhatsa virati; ahaituka is firm but sometimes touched by the clouding of the others.

Tapas still grows in power, but its hold is still insufficient because not yet automatically effective, except occasionally; it is effective, usually, only by overcoming the resistance of the bhúmayi prakriti, a resistance which still fights, if no longer every inch of ground, yet all possible terrain and is still liable to revive even where it has been partially & seems to be entirely conquered. Its faculty of resistance is, however, visibly dwindling.

The sthula human touch is today being felt in addition to other touches but still in an initial & sukshma form, although it has passed the stage when it could only be felt perfectly in the pranakosha & its effects alone reached the annakosha. Certain forms of the prana jagat, rain, cloud, insects, etc are nowadays once again commonly visible though still vague & more often seen in their image or chhaya than in their proper bodies. Shabdadrishtri is still behindhand & remains except for an occasional elementary or distant sound in the avyakta. It is however tending to gain strength.

Akasharupa laboured strongly to generalise itself; rupas seen in one form or state now tend more easily to be seen in others, eg, antardrishta jagrat in bahirdrishta, rupa on background in akasha & vice versa, & even swapna rupas in antardarshi jagrat, but this is as yet only after awakening & in the more ghana states of the antardrishta. Stability in the swapna rupas progresses by a gradual tendency. Very rich images, as in former times, now manifest in the mental akasha and half appear on the borders of the sthula. Swapnasamadhi is rich & varied.

The chief activity of the siddhi is now to prepare the thirteenth siddhi in the adhara subjectively and physically; all that is deficient subjectively is the survival of certain old sanskaras of unalterable
cause & effect, physical possibility & impossibility. These removed
the physical siddhi will be facilitated. The other main activity is
the manifestation of the personal Shaktis of the Alipur sadhana in
the anandatattwa of the mind, the explanation & justification of
many dubious features and abandoned assertions of that sadhana,
the justification of the mental tejas against the mental inertia, the
extension of the dasya by submission to those chosen & allowed
by the Ishwara, the removal of the fragments of straining, desire,
nirananda, doubt of siddhi etc in the jada prakriti.

Dec. 30.
The mental ideas & suggestions are now usually justified in
their substance; but at the same time their wanderings from the
ritam in time, place, patra & placement of circumstance are often
so much exaggerated that the unaided mind stumbles & cannot get
a fixed conviction. The sraddha in the guidance grows, however,
firmer & firmer behind and even through the perplexity, for the
vijnana constantly returns and lightens up what had been dark or
confused. There is now no unfriendly struggle in the vijnana cha-
tusthaya, but only the clashes that attend natural growth & progres-
se adjustment. The struggle is now keenest in health & ananda;
uttapana is in abeyance. Occasionally karmasiddhi of sahitya &
dharma is taken in hand, but the serious pursuit is deferred, till the
vijnana is essentially perfected and the sraddha justified. A certain
amount of physical siddhi (mainly arogya & general utthapana) is
also essential before the karma can be powerfully pursued.

For some time pure vijnana has been quiescent, vijnanabuddhi
subordinately active & a free play given to the anandatattwa of
the manas. The object & so far the result has been to secure entire
passivity in the mental parts of the mortality, both knowledge &
tejas and a purification of the jada nirananda. The jada Bharata
stage has again been realised and emphasised. The Sat & Tapas
of the manas has been manifested so far as they can be with a
complete absence of initial vijnana, and it has been shown both
how the thing to be manifested rises out of the indeterminate Sat,
how the Tapas selects & moves towards mental vijnana, what place
is filled by sraddha & asraddha, rajas & tamas & how the birth of
ananda & nirananda born of their play effects the dwandwas. The movement is now towards reactivity & fulfilment of vijnana. The preparation of the thirteenth siddhi continues.

The attempt to rise out of the jada passivity resulted immediately in a relapse of parts of the mortal mind into the old forms of tejas & dwandwa and a struggle of these elements to force themselves again on the jada prakriti as the law of its activity. Although this endeavour has been repelled, it is only by a cessation of all activity to which the Vritras seek to bind the system. It is after a long time that this faculty of Vritra has been restored & enabled it to estop entirely both active knowledge & active ananda. The tapas has also temporarily drawn back into the old successfully resisted mental tapas.

The indeterminate position continued through the rest of the day, prolonged by the jada tendency in the Manas to attempt its own fulfilment without referring always or being lifted up into the Vijnana.

Dec 31.

Tapas now fulfils itself with great frequency in a perfect manner, instantaneously or almost instantaneously, sometimes without use of force in the will or pressure on the object, sometimes with slight force or a little pressure. The old ineffectuality, however, remains in all its outward types & recurs sufficiently often; this ineffectuality is especially strong where an impetus has already been given to another action or there is a powerful adverse bent in the object or when the attention of the Asiddhi has been called to it by a success of the will. These, however, are only the survival of a habit in the physical parts of the swabhava in the Bhumayi Prakriti.

Yesterday utthapana was resumed—utthapana of the neck for half an hour without effort or difficulty and with only an ineffective & moderate an-anima. Today there came utthapana of both legs in the medial position for quarter of an hour, with difficulty because of defect of mahima which finally induced abandonment, although there were signs that the asiddhi would diminish if the attempt were prolonged. Afterwards the left leg was supported in the horizontal position (reclining on the side) for an hour by a perfectly sufficient laghima & mahima & at the end could have been maintained for
an indefinitely longer period. The pain of the sinews peculiar to this position was recurrent, but had no longer its old force; nevertheless it prevented the maintenance in a single position straight or crooked, change of position giving relief. Except when the mahima is withheld, the utthapana now can always be maintained owing to the great accomplished force of laghima in the body. An-anima is now the only substantial opponent. It is noticeable that physical tapasya has been greatly diminished & seems on the point of abandonment in favour of pure Tapas of willpower. The utthapana of the back & loins has, however, still to be tried; hitherto it has only once succeeded. The time for the horizontal position of the legs has not before been equalled, but the alteration of the method & the disappearance of true opposition is now the real siddhi, time only a test of its completeness or a circumstance. Vepathu remains, but it is now seen as the sign of a helpful agent which increases mahima & diminishes both muscular stress & muscular pain and strain; it is the sign of the pranashakti at work improving an unfit adhara.

In the afternoon there was a strong effort to reidealise the whole consciousness as well as the activity which succeeded with the thought but only partially with the trikaldrishti. In the evening there was, after a short struggle in which the trikaldrishti was almost unerring but the tapas only partially & defensively effective, an unprecedented sequent faultlessness of the effective will and, with one or two slight deflections, of the perceptive knowledge, but all this was in the manasa ketu and not in the daivya. So far it was a success for the manasa element which seeks to use the vijnana for its own development while refusing to the vijnana the possession & enjoyment of the system. The results however failed to give satisfaction to the Jiva or to the system which now demands vijnana and rejects the manasa perceptions whether true or false. This virati is the security that the attempt of the lower to use & dominate the higher cannot eventually succeed.

In the night for the first time there was entire success of the stability of rupa in the swapna samadhi, one scene, a street & the exterior of a house & its environment, lasting in spite of attempts of the asiddhi for many seconds before first one or two details became inconstant and then a swift shifting series of similar scenes
was substituted for the one stable scene. Like the vision of the city on the hill some days ago, this was an unique instance & a success only in type, but it is an assurance of success in the near future.

Uthapana of the right leg, horizontal position, recumbent on the back, could be maintained only for 9 or 10 minutes; the ananima was strong & the mahima, though present, defective.

The principal work of the [year] 1913 has been the reduction of asiddhi to a survival in the external environmental swabhava, the purification of that swabhava from the contradictions of the first & second chatusthayas, the sure foundation of the siddhi in the third, fourth & sixth & its preparation in the fifth. The finality of the first chatusthaya is perfect in itself, though not yet entirely absolute, touches still surviving as an occasional insistence from the outer nature. Fierce trouble & distress is obsolete, distress itself & even impatience only an occasional & momentary memorial return, but temporary discouragement & distrust with a tendency to indifference & weariness are still able to make a superficial impression. This insecurity of the sraddha & tejas & their incomplete hold in regard to the karmasiddhi & the necessary rapidity of Yogasiddhi prevents a complete & forcible finality of the shakti, retains the excess of the Mahasaraswati-Maheswari combination in the Mahakali Mahasaraswati temperament and hampers the expression & activity of the Mahakali tapas. The third chatusthaya is founded in all its parts, but insecure in the jnana, unfinished in the trikaldrishti, wide & secure but still uncertain & variable in vyaptiprakamya, both imperfect & uncertain in the parts of Tapas and ill-developed in samadhi; nevertheless it is now powerfully & inevitably progressive. The fourth chatusthaya is somewhat advanced but insecure in physical ananda, growing persistently in arogya but obstinately haunted by the old mechanical recurrence of fragmentary defects, growing in secondary utthapana, merely initial & without force of progression in saundarya. The fifth is still in a state of preparation, seed-sowing & crude initial consistencies. The sixth is well advanced, but unable to hold its own without smarana except in the sarvam Brahma. The seventh is well advanced except in certain parts of the siddhi, especially in ritam.

विष्णुवंतामृताविख्यातं दुरोद्वैरस्यः

Let the divine doors swing wide open for him who is not attached, who increases in himself the Truth.

Jan 1.

The day was chiefly occupied with the struggle of the manasaketu to survive as an active factor in the consciousness instead of a passive unreacting recipient. At first, all the justifications that could still be advanced for its survival had to be allowed to rise in order that they might be refuted & destroyed. Subsequently, the manasa element in the tapas had to be rejected. As a result the action of the Mahakali tapas has been cleared of its besetting difficulty and a coordination of vijnanamaya knowledge and vijnanamaya tapas is being prepared. The manasaketu remains as an otiose but habitually recurring survival which cannot yet be entirely expelled.

Kamananda again became active; ahaituka tivrananda showed in its recurrence a considerable increase of generality and of force. The pure unaccompanied or unaided ahaituka vishaya is slowly emerging, but still usually stifled by the other anandas. Stability is growing firmer in the rupas of the swapna samadhi.

Jan 2.

The pure vijnanamaya trikaldrishti is once more disengaging itself from the telepathic basis over which it has to stand. Revelation & inspiration (drishti sruti) now take a leading part in the vijnana and intuition & viveka (smriti) are subordinate & secondary to them. The struggle is now definitely proceeding between the new tapas & the old prakriti for the expulsion of those elements which insist on the old slow & meticulous progress & prevent great results & rapid effectivity.
The vijnana gained throughout the day and finally reestablished the decisive general trikaldrishti which selects discriminatively the right event out of several telepathic perceptions of the actual forces at work, their varying strengths and possible eventualities. At the same time the aishwarya & vashita recovered and, especially the former, increased their dominance over the objects of the Bhumaya Akasha. Hitherto aishwarya has usually had to take the help of vashita; this dependence is now disappearing. Ishita is still slow & uncertain in its results.

The freedom of crude akasharupa greatly increased, & the tendency to take the use of the pranic pressure on the akasha in determining them has now taken a secondary place. More & more it is the pure mind that determines successfully results in the objective existence. For the rest this is the lipi that has already been given, “Subject control & perfect objects.”

Dasya & tapas, samata and aishwarya are now being more successfully & perfectly combined in the total swabhava.

Jan 3.

Above the discriminative (vivekamaya) & intuitional trikaldrishti the revelatory trikaldrishti is remanifesting itself. The manasic perceptions are now being used in their very confusion for the assertion of the liberty of this revelatory knowledge and its disregard of the false limitations of present and outward appearances. The same liberty is being asserted also for the Will and its instruments. The ananda of temporary defeat & the perception of God’s purpose in it is now being finally imposed on the rebellious pranic element in the outer swabhava. This perception precludes the conception of ultimate defeat for the Jiva,—there can be no ultimate defeat except where God’s will & man’s are at variance. The utility of the recent relapse & crisis now appears; the transfer of the intellectuality to the ideality had been burdened by the continued activity of manasa ketu and the supporting idea of the anandamaya pranic manas that the fulfilment of this infallible manasic activity using the vijnana as a referee was a main part of the siddhi. The main chaitanya had to come back into the manas as a referee was a main part of the siddhi. The main chaitanya had to come back into the manas in order to convince them, first, that the mind cannot be infallible except as a
mere echo of the manifest or veiled vijnana and, secondly, that this
fulfilment of an echo could not be the main intention of the Yoga.

The aishwarya-vashita which triumphs over the fixed intention
of the object is now manifesting clearly & powerfully.

Shabdadrishhti of the daivya turi (horn), indicating victory, &
subsequently of divine music,—first heard (with long continuity)
only in the left ear when closed by the hand to earthly shabda, but
afterwards when the hand was removed. The whole sukshmobodha
is now extending its sense-perceptions to the mental & pranic heav-
ens as well as to the mental & pranic koshas of the material world.
This movement initiates the completion of the trailokyadrishhti first
indicated in the Alipur jail. It marks also the growing emergence of
the sukshma shabdadrishhti in the sthula hearing.

In the tapas the mental energies of will at the side which were
formerly confused by the mental tejas with the energies of knowl-
dedge, are now being devoted to their proper object, the development
of vashita; aishwarya, vashita, ishita properly divided & combined
are preparing the fullness of the Tapas.

Jan 4. Sunday.

Stability of the rupa background & continuity of a single com-
plete event on the stable background seem now to be confirmed
in the swapna samadhi & are seeking to extend themselves to the
antardrishta jagrat; but transient scenes & figures still predominate
in the swapna, while the stability in the jagrat lacks freedom and
perfection. Kamananda is now well assured; nothing is able to break
down its daily frequent manifestation and its tendency to persis-
tence which promises before long to be victorious. Sparshadrishhti
hitherto confined to touches is adding continuity to frequency.
Shabdadrishhti also last night suddenly manifested in one sound,
(flute-whistle,) an absolute clearness, vividness & continuity near
the ear but entirely in the sthula akasha. Hitherto, however, this is
an isolated incident.

The Shakti is now bringing forward the ishita, ishita-vashita &
effective vyapta and it is immediately found that in actual inherent
power, vaja, all these are as strong as the other parts of tapas, but
owing to the akasha being less habituated to their impact not so
readily or accurately effective as the vashita, aishwarya-vashita or even the pure aishwarya. Nevertheless the accuracy & readiness are already prepared and glimpsed in the action; they will soon develop in the mobile actuality.

The vijnanabuddhi is now acting with full brihat of satyam and the incipient brihat of ritam taking up all the obscure or half illumined movements of the manasaketu & putting them in their place even in the trikalahadrihti; this movement covers the perception & vangmayya thought and the script. The vani is now anandamaya, but like the pure vijnana it works either in the manasaketu or in the vijnanabuddhi after traversing to the consciousness the Sat, Tapas & ananda of the manas tattwa. This movement often wakes a transient pain of dissatisfaction in the mortal mind of the outer swabhava, but that habitual reaction is being removed.

The higher anandamaya vani has once more manifested, deploying and overpowering the old sanskaras which hampered its fullness and possession, personality and delight. It is not yet settled in possession of the whole vani.

In the swapna samadhi large combined images like the city are now occurring and appear also dimly in the antardrishta jagrat, but as they pass the borders between the swapna and antardrishta, tend to disappear or fade into a more unsubstantial dimness.

Jan 5—

The struggle over the ritam and the finality of the vijnana and ananda continues. The manas tattwa struggles, successfully so far, for survival and seizes hold of its own errors to discredit the vijnana & justify its own survival as a means for judging the vijnana. Health is once more strongly attacked, even cold and fever being threatened. The combination of dasatya & tapas continues to progress with the growth of the bhagavati sraddha.

Jan 6—

The struggle over the arogya continues, the symptoms of fever & cold spending themselves in the sukshma parts without being able to materialise firmly in the body in spite of the opportunities given. The mind is assailed with suggestions of illness, but resists
& expels them while the bodily parts which have now learned to
look up to the mind for light & impulse, are only slightly affected
& chiefly in their subtle parts. The whole psychic mechanism of
illness is now evident to the understanding.

Full light and ananda are being steadily combined, but their
arrangement is hampered by the imperfect finality of the decisive or
higher trikaldrishti which is largely held in abeyance. Meanwhile
the sraddha in Yogasiddhi & in the guidance & kalyana of the
Master of the Yoga has been firmly generalised, and the recurrence
of touches of distress & disheartenment are becoming more &
more fragile & momentary. Faith in rapidity & adeshasiddhi is
still withheld from the manasaketu which only admits them by an
indirect & wavering deduction. For this reason the tapas is unable
to maintain ugrata & swiftness.

Jan 7—
Mainly occupied with the struggle in the body over the arogya.

Jan 8—
During the last two or three days samata & ananda have un-
dergone a prolonged ordeal. Titiksha is absolutely firm except for
slight & momentary failings in the body, udasinata & nati equally
firm except for similar slight failings, a little more pronounced in
the body than the failures of titiksha; sama ananda is firm in the
core & the mass of the chaitanya, less firm on the surface, but
its failings are now negative & do not, except in a very slight
degree, amount to positive distress or even, to a sensible extent, to
positive discomfort, except in the body where suffering still has its
hold. It is on this point that the bodily attack has been principally
determined. In certain points the attack has failed; the fragments of
the tendency to slight itch & eruption after showing a false activity
have retired weakened, the attempt to reestablish cold & fever has
so far failed, but disorder of the assimilative functions amounting
to flatulence, dull pain & heaviness in the region of the liver, &
looseness of purisha, but not diarrhoea, has again appeared, con-
tradicting the temporary siddhi of arogya which had exiled all pain
& positive disorder, leaving only discomfort of ill-regulated apana
and unrealised tendencies of alternate constipation & looseness. It is found, however, that the body has learned to retain its vital force & working energy, recovering elastically even from the brief after result of fever in the pranakosha. Kamananda continues obstinately though as yet unable to establish uninterrupted continuity in the body. The other physical anandas are occasional; tivra continues to grow in intensity and spontaneity. Subjective ananda is now seated & complete, including sakama prema. Hitherto the universal prema even when directed towards the material form was in the heart only; it has now extended to the whole system including the body. However the kamic element is not yet always automatically present. Vijnana has been dull and clouded for the last two or three days. Sraddha in the guidance remains firm, though sometimes darkened & bewildered in knowledge; sraddha in the Yogasiddhi persists against all attack. The sahityasiddhi (Veda, Bhashatattwa, Darshana) is now growing in steady working & with it the sraddha in this part of the karma; but the sraddha in the rest still awaits objective proof for its entire stability & is distrustful of the proposed extent of the karma.

At night dream became, for the most part, entirely coherent and at times identical with swapna samadhi in its chhayamaya movements. Swapnasamadhi also in its chhayamaya movement initiated long & coherent continuity & a greater stability of forms. These movements were repeated frequently & for a long time, fluctuating between the two conditions of dream and vision. At the end in the deeper tamomaya nidra the old incoherence of the lower fragmentary mind dominated by present impressions & associations reasserted its presence, but, although it persists, its hold and potency is greatly weakened.

Jan 9.

The attack on the health is steadily weakening and vijnana reasserting its activity, not yet the pure vijnana, but the vijnana-buddhi, even in trikaldrishti. It takes, assumes to itself, explains and often distinguishes in eventuality the perceptions of the manasaketu, which, as a consequence, is now working more passively & with less selfwill and obstinacy. Distress continues to fade steadily
out of the conscious experience even in the outer nature; distrust & discouragement still recur.

Subsequently, the higher tapas of the mind, first sakama, then indifferent, then anandamaya emerged again after long struggle, failure & eclipse. It is now the tapas of Sacchidananda in the mind, although it still awakens usually the tapas of the mortal mind as its accompaniment or medium of manifestation or partially effective agent. To get rid of the agent it is necessary first to perfect it as a medium and passive channel of communication for the daivya tapas working on the world. It must for that purpose become entirely sanmaya (shanta) & anandamaya without losing its chinmaya & tapomaya activity.

Cold failed to reassert itself; but the fragmentary skin affection has once more manifested. The struggle continues in the assimilation, etc.

Jan 10.

The Tapas has at last effected firmly its combination with dasya, although the dasyabuddhi is not always at the surface of the consciousness in its action; it has now to be combined perfectly with sraddha. For that purpose the vijnana is once more becoming active in the vijnanabuddhi governed and informed by the pure vijnana. The telepathic mind or manasaketu is being trained not only to recognise the satyam in the telepathies it receives (when the buddhi is active, it is now only a few suggestions the justification of which cannot be eventually perceived or is wrongly placed), but to distinguish immediately the ritam and anritam. To this end the various sorts of lower truth, truth of potential fact, truth of actual developing or developed fact, truth of developing & struggling force, truth of actualising force, truth of eventuality have to be rapidly & automatically distinguished and the exact power & meaning of each & all in time[,] place & circumstance properly seen. Telepathy of thought which was hitherto limited by unwillingness to accept unverifiable suggestions or uncertainty & confusion in their acceptance or the inability to place conflicting vyaptis is now being brought forward, determined & arranged. The lower perceptions are being taught to yield without self-judgment

www.holybooks.com
or questioning to the pure vijnana & leave the latter to distinguish between truth & error. Ananda in the tapas, in struggle, in failure as a step towards success have been strengthened and discouragement is being eliminated like distress, though both return in momentary & often causeless stresses or touches. Distrust remains in its usual field, rapidity & adeshasiddhi, but the latter is now centred in the kriti from which by an inferential process it returns on the other parts of the karma. Once exiled thence by objective proof, its hold will be finally & effectually destroyed.

There is the attempt now firmly to establish the ugrata & shaurya, to banish the last traces of the dependence on fruits, phalahetu not the phalakanksha which is already disappearing while preserving the lipsa and the kaushalam, the one to be established free from kama, the other to be used when the perfected tapas is ready. The activity of the vijnana has revived, but is not yet universal or firmly stable. The other siddhis are mostly preparing behind the veil of Night. The nature of the difficulty in telepathy,—the mutual confusion of the retrospective, prospective, near present & distant present in addition to errors of placement in pātra, desha, kala etc is now being fully displayed & worked out without disturbing the sraddha of Yogatattwa & Yogasiddhi.

Jan 11 Sunday.

The vishayadrishtis are beginning slowly to regularise themselves. The one or two clear symbol shabdas (watch, flute, horn etc) are now coming more often & quite unmistakably sukshma. The rupa, apart from image, is confined to a few forms already familiar to the eye, rain etc. Touch has not yet passed beyond its former limits although it is more common & spontaneous; but taste & smell are increasing in force & frequency, especially in the sadharadrishti, eg the violent, intense, almost acridly intense & long continued taste in the mouth of the sweetness of sugar or molasses after the first puff of a cigarette, the smell amounting to nasikya aswada of the same sweet substance in the end of a cigarette thrown aside & smoking itself out, smell of strong perfumes etc on the basis of an unperfumed object or a slightly perfumed object at a great distance. The taste of madhura rasa is now well established.
All ordinary discomfort has now been invested with the ananda. Only the strong touches of pain remain to be conquered. Here dull pain even if strong & persistent offers little difficulty; acute pain beyond a certain degree still exceeds the titiksha & therefore passes beyond the scale of ananda.

Sahityasiddhi has for some time been developing, tamasi, and is now coming forward. For some days the work at the Veda has been continuing with great force & persistence & overcoming the tamasic reactions, even the bodily, which used formerly to hamper long continued intensity of labour. The brain still becomes a little dull at times, but usually recovers itself rapidly & is always capable at its worst of an intermittent luminosity.

Jan 15—

The siddhi of the last few days has been directed mainly towards the removal in the natural mind of the obstacles to the right activity of the vijnana especially in trikaldrishti & the preparation of the general effective vijnanamaya tapas. The vijnanamaya action in the buddhi is now generalised, tending always, except for short intervals of relapse, to take the place of manasic perception, and by its very activity diminishing steadily, though it has not yet removed, the persistent recurrence of the manasic false response and distortion of vijnanamaya messages. In the light of this self-perfecting jnana all the past vicissitudes of the sadhana are seen in their right light, their reasons, necessity, utility, essential cause & teleological purpose; for better impression on the natural mind, they recur in slight & fleeting instances, repeat their old action[,] are understood and dissolve themselves. This process, perfected in the jnana, is being applied more & more powerfully & steadily to Veda, sahitya, trikaldrishti, telepathy. The mechanism of the tapas, its defects, causes, working & the teleological purpose of the defects arising from their essential causes, is also being exposed, the first effect being to remove the last remaining obstacles to faultless subjective persistence in the tapas even when it fails & is or seems hopeless of its purpose (the objective persistence is limited by physical fatigue or incapacity), and, secondly, to the ugrata of the tapas. It was formerly the mind’s habit to take failure
as a sign of God’s adverse will & cease from effort, & as ugra tapas usually failed of its immediate purpose, unless very persistent & furious, it was thought ugra tapas was forbidden. The failure, however, was due to the immixture of effort & desire & anishata generally & the mental nature of the tapas and these again to the necessities, essential & teleological, of the process of the transition from the mental to the ideal being. The second chatusthaya is, therefore, nearing full completion, the third preparing it; the first now only suffers momentarily in samata by passing depressions & in ananda by general limitation of the second; the third is delayed by insufficiency of tapas in the second, the second held back in sraddha & tapas by insufficient light & effectuality in the third. These two chatusthayas must therefore for a little time longer move forward together helping each other’s fullness until the still watching intellect in the outer nature is sufficiently assured of its ground to allow fullness of tapas & sraddha. Samadhi has not moved forward except in the fullness & comparative frequency of the spontaneous sukshma ghrana & the increasing tendency of the other sukshma indriyas. The rupa drishti still struggles with the opposition in the material akasha to its combined perfection & stability; both perfection & stability have been carried separately in the jagrat to a high efficiency, but they cannot yet combine their forces. There are occasional images in which they meet, eg the reel of cotton thread, (1st degree), the card of d[itt]o (3rd degree), the playing card in the ghana & developed forms (2nd degree of stability); but this combined siddhi cannot yet generalise itself or even establish either frequency in the habitual forms or an initial freedom & variety of the higher forms. It is only in the crude forms that there is an initial freedom & variety accompanied with some stability. The physical siddhi has been for some time badly afflicted & depressed; the signs of progress are more subliminal than supraliminal. Karmasiddhi progresses rapidly in sahitya where the body alone is now a real obstacle, but is obstructed or attacked in dharma & kriti; especially in the latter there is violent negation & menace of destruction, eg, in the therapeutic pressure on N. [Nolini] etc.
12 MARCH – 14 APRIL 1914

Record of Yoga. March. April.

1914.

12th March 1914—

Lipi (today first spontaneous & clear in long connected phrases)

1. *St Joseph’s College . . St James’ Gazette*—Continually recurrent since the beginning of the abundant record period: meaning, nature or purpose never yet fixed beyond doubt.

2. *Jollity—festivity— & then absolute jollity, festivity*—also of frequent recurrence & generally confirmed in fact, often unexpectedly on the very day. No data.

3. *St. Stephen’s—Hyslop’s College . . system.* These are also old lipis. The addition of the word *system* seems to mean that this & 1 all belong to the same system and are connected in sense.

4. *It is a sort of school for the intellectuality of ideality of interpretation of the lipi.* Sentence formed with much difficulty.

Telepathic Trikaldrishti & Ishita etc

1. Yesterday ishita & trikaldrishti of result of other than ordinary food, confirmed an hour or so afterwards by arrival of Ulysses who dined here & arrangements were made suddenly all without suggestion or interference on my part.

2. Successive movements of birds & ants etc can now often be determined for some minutes together with less resistance than formerly & fewer deviations, but in the end the object escapes from control, often however with an after effect inducing the sudden
fulfilment of unfulfilled aishwaryas when the actual pressure was withdrawn.

3. Sudden memory (intuitive) of long forgotten names & scenes of childhood in England,—spoiled & suspended by the attempts of intellectual memory to decide points of doubt.

Lipi

5 Lipi “suffering” several times repeated. This lipi is associated always with the return of subjective discomfort & nirānanda. Such nirānanda has for a long time been successfully expelled from the system & even extraneous touches had ceased to come. It returned, although [ ] not expected today even after the lipi, but has been unable to do more than momentarily stain the surface of the psychic prāna, even the after effect being rapidly effaced.

6. “Subjective suffering is entirely due to the (phantasy) fancy in the intellect together with desire.” Sentence formed with difficulty, & with the aid of some subjective suggestion from outside.

Trikaldrishti.

Today, for the most part, unluminous but untelepathic & sound in general substance, occurring by force in a cloud of intellectual error suggested from outside, doubted & questioned by external intellect and seized & distorted as to exact time & place by the same deflecting agent. Attack of intellect of unusual obstinacy & intensity, due to its remnants being disowned & refused credit. This movement was heralded & predicted by the lipi “Alienate the intellectual helpers” this morning.

13th March. Friday.

The painful struggle of the intellectual elements to survive & get rid [ ] of delight & faith continues,—pre-indicated by a repetition of the lipi “suffering”. Lipi is frequent, but varies in ease of coming & vivid presentation. The malignance of hostility in the alienated helpers is very pronounced. Vijnana is clouded at every step by the veil of the manasic action which seeks, since it cannot enjoy, to replace it while imitating sunlessly its radiant action. It

1 MS though
2 MS delight
cannot however prevent truth from being the dominant tendency, but it suspends certainty and timely arrangement. Place, time, order are still very defective.

Lipi. The beginning of delight—i.e Physical Kamananda, which was reduced almost to zero in its action, is to resume its advance. Intensive—extensive (the two lipis replacing each other.)—i.e It is to be first an intensive action, resuming & increasing the former normal intensity, then extensive, increasing its durability & pervasiveness. The action has now already begun, but is not yet very powerful.

Samadhi (swapna)—yesterday resisted, hampered & confused, is today still resisted, but not so often confused. There have been admirable scenes of brief movement, with vivid lifelike figures in full detail, & combinations of figure, speech and action with the beginnings of coherent conversation.

Lipi
1. Lifeless . . September. This year in September. (successively, the first then again repeated)
2. Tonight . . light. (the second word replacing light). 3

The physical ananda of pain (heat) has suddenly been taken away by the Dasyu and its place is taken by imperfect titiksha.

Lipi
3. In antardrishta. I am formless and thoughtless in my essentiality, but personality is my real (being) and my essentiality is only the initial status of things.

Samadhi.

In antardrishta all sorts of forms are beginning to appear, but they are in the last degree crude, shifting, usually ill-formed except in parts and rapidly dissolving.

14th March—

The knowledge has temporarily gone back to the chaitanya in the heart, prana & body whose motions are now taken up into the vijnana-buddhi and there enlightened or more often now

3 See below, second paragraph under 14 March. It would appear that the lipi was “light . . tonight”, “tonight” being “the second word replacing light”.—Ed.

www.holybooks.com
manifested at once as intuitionally luminous from the beginning. The higher or true vijnana is now only active through the vijnana buddhi.

Lipi

The lipi—Light tonight was justified by the return of this qualified luminosity & the re-idealising of the system & also by some new light on the world problem in the script re the 14 Manus.

Script

Resumption of script yesterday. First movements unsatisfactory & repetition of old false & trivial script, finally there came a movement that started from the best of the old script & passed beyond it; the mind tried to control but was outrun & seemed evidently in communication with another mind that did not depend on it for the suggestion of thought or even entirely of vak.

Telepathic Trikaldrishti

2 typical instances—

1. A crow seated on iron support of balcony; pranic impulse seen to be flight downward in a given direction, resisted by tamasic hesitation of mind and body. Trikaldrishti that in spite of all delay & resistance the contemplated movement would be executed. Doubt due to perception of adverse influences & tendencies, movement of bird away from line, arrival of finch tending to alter thought & standing partly in the line marked; still persistent affirmation. Ultimately the movement foreseen effected. Subsequent movements of both birds correctly seen but with errors of exact line of flight; general directions & turns correctly pre-indicated. This, however, is now very common. It is exactitude & freedom from error due to false stress & overdefinition of subordinate or understatement of definitive force, intention or tendency that have to be secured.

2. A shabby boy in a splendid & richly varnished Victoria push-push. Doubt whether he was not coachman’s boy put up in carriage. Intuition, son of well-to-do Indian Christian (latter detail inferential from dress—short trousers—and not intuitional) & carriage newly varnished; shabbiness due to carelessness in these matters. Revelatory intuition, child belonging to Indian Christian in the house just behind this, Venumani. Sceptical intellect challenged
intuition. Went to verify. The carriage stopped opposite V’s house & the boy went in leaving the coachman to follow.

The theory that all is satyam & error comes from false stress, false valuation & false application by the mind is now established. Eg idea of coachman’s son came from satya perception of semi-paternal bhava of aged servant to the boy in the carriage.

The old power of receiving the emotional & sense idea content of others’ minds is now active; the vyapti prakamya of formed thought is still infrequent, doubtful or sluggish, or when none of these, then insufficiently precise.

Samadhi—
Two typical antardrishta visions. 1. A heavily polished door half open showing part of a room carpeted with a clean white cloth, but apparently empty of furniture. Very vivid in the pradiv behind the outer chittakasha (ether of the pranic manas as pradiv is of the prano-manasic buddhi), but dim in the chitrakasha & remote from it. 2 An atmosphere, not of earthly air, but of apas full of rolling & shifting clouds of colour strong but not very bright. In the apas jala & floating tejas (also leaping but not actively); a star seen at first but afterwards lost in the clouds of colour.

Lipi—
1. Chitra lipi
   fuel...is upward...July 13th

   July 13th spacious. These images are evidently the Vedic.
   The fuel of Agni, the divine Tapas is already heaped, समिद्र आग्न, its tendency is upward ऊँचा नर, by July 13th it will be already spacious, बहुव्याप्त, विशाल —ie in two months exactly. (Note—there was nothing in the mind to suggest this lipi; it is an instance of absolute spontaneity[])

3. Jollity. Once more emphatically repeated.

4 Tuesday (no precise indication, except of some progress in the siddhi,—the allusion is probably to the trikaldrishti).
15th March. Sunday.

Lipi

1. Tuesday
2. Ideal thinking the result of spirituality; thoughtless before the unity of the spirit in all things. This refers to the necessity in the sadhan for a passive & empty mind (the empty cup which has then to be filled by a vijnanamaya activity[)].

Sanadhi

1. Sukshma taste still comes rare but vivid, usually sadhara, eg strong taste & smell of a sweet wine while smoking a cigarette. The difficulty of the sadhara vishaya is the doubt in the mind whether the vishaya is not really a strong perception of sthula, & not at all sukshma.

2. Varnamaya image on the wall; India, Bengal a vivid blue, the rest a bright & beautiful green, the whole floating in a haze of strong golden colour. Blue spirituality, green divine karma, golden knowledge. India is now shedding knowledge rather than in conscious possession of it.

Trikaldrishti

Idea of the rapid completion of the seventh book of Ilion (first of war.) (Not yet fulfilled 31st March)4

Lipi

The Lipi of “festivity” unexpectedly fulfilled.

Note

The vijnana clouded during the day & the intellect in the environment active.

16th March.

Today the vijnana of knowledge became almost perfect on the level of the vijnanabuddhi illumined from the vijnana before; then an outburst from the higher reaches of the vijnana, in which the buddhi became a tertiary & quite passive agent, was again followed by obscuration & activity of the clouding intellect.

4 This phrase was added between the lines on the thirty-first. — Ed.
Lipis—
1. *Largest delight*—referring to the Ananda that came with the activity of the higher vijnana.
2. *Jollity, festivity*—first often, then always.
3. *Sunday . . settled . . .* The allusion seems to be to the arrangement of the trikaldrishti

17th March. Tuesday

The Lipi Tuesday, (14th March) is to some extent justified, as today the ritam in the jnana seems to be firmly founded in the vijnana-buddhi by a[n] affirmative and discriminative action of the higher vijnana on the fallible mind. An attempt is being made to extend this advance to the trikaldrishti which is not yet entirely successful, as the overstress of the telepathic drishti continues in the environmental nature & prevents accuracy at the centre. Nevertheless the ritam is becoming remarkably powerful, even though unequal & false in its mental incidence in the trikaldrishti.

Veda is now taking a clear form & the objections to it breaking down; the definite interpretation has begun.

Kamánanda, often obstructed and suspended, always return[s]; ahaituka tivra has established itself as a recurrent intensity, like ahaituka kamananda; ahaituka rudra now promises to do the same. Rupa is infrequent & crude in the jagrat. Samadhi is still attempting to organise itself, but the definite movement has not taken place. Lipi, though easily active if supported by the will, is otherwise subject to fluctuations from a state of intense, free & rapid to a state of dull & infrequent activity, although chitra is always freer than akasha & hardly at all suspended, though its ease & frequency vary. Aishwarya grows in strength and insistence, but is not yet in real possession of its field.

Lipi
1. *Finish*. It is suggested, with the knowledge side of the vijnana in its foundations.
2. *Lipi will (is about to) destroy its obstacles.*
3. *Field of authority of the lipi.*
4. *Perfect authority of the lipi.*
12 March – 14 April 1914

5 Suffer disasters systematic
6 Distinguish between lipi of tendency & lipi of actuality.

18th March

Lipi.

1 Finish joyfully with the difficulties in the acceptance by
   the intellect of the ideality.
2. Beyond light delight.
3 Satisfaction of the faith in its still tottering elements

Trikaldrishti –

All that has been effected on “Tuesday” is to complete the
illuminated perception of the forces at play behind events & their
intentions & movements & to a certain extent of the motions in
the object itself; but this latter, though correct, is not always illu-
mined. The trikaldrishti of eventual actuality is still obscured &
successfully deflected or veiled by false suggestions except in the
better moments of the sadhana. Today vijnana obscured.

The illuminated action in Veda continues but is usually associ-
ated with the written vak; the perceptual thought is still disputed
by the intellect. In other words, the Sruti is effected, both in writing
& thought, but the Drishti is yet inefficient.

Rupadrishti –

After many years the drishti of wind seen in the Alipore jail &
often afterwards was again manifested, in this instance in connec-
tion with sukshma rain.

Chitra of the brilliant rays of Surya. Indicative of the reemerg-
ce of the higher vijnana in a greater brilliance (?)

Jonakis, stars and dark living spots very frequent. (N.B the
firefly, the star, the wind are given in Swet. Up [Swetaswatara
Upanishad]—along with others, moon, sun, fire etc, as signs of
Yogasiddhi.)

19th March.

Dullness of vijnana continues. Remarkable instance of Aish-
warya, Caillaux-Calmeth, & resignation of Caillaux, but not direct,
nor of the same kind as the former, followed by the fall of the last
Caillaux Cabinet in two days.
Lipi
1. **Typical effect of ishita, indirectly of aishwarya.**
2. **Distrust the inertia; knowledge is perfect, if it is perfectly utilised.**
3. **Always.** (in reference to partial effect of Will)

Vijnana is now revived. It is applying itself to the trikaldrishti, & is always roughly right, but not always or at all finely in detail & for that reason is confused about the eventual eventuality. Aishwarya & ishita are now more powerful, although still resisted by a less intrinsically powerful opposition, less powerful even when, by a greater exertion, it produces the same result of failure. There are also striking results of immediate effectuality by vashita & effective vyapti in awaking Yogic realisations & psychological changes in those around me. In the aishwarya, the servant bháva, having no separate personal interest in the result but only the Master's interest, is now becoming finally powerful. Ananda of the kama is now extending itself at a greater pitch of intensity than formerly, but still stands in necessity of smarana. Tivra is common; the other physical anandás (ahaituka) rare.

**Vashita & Aishwarya**

1. Following on explanation of oneness & vyapti & aishwarya for Brahmadrishti, B. [Bijoy] got vision of Sat & Chit samudras with all beings as kendras & the body no longer a barrier to the vision. 2. Aishwarya on Bharati to get lipi. Result, saw for first time lipi with open eyes, “Being. We.” & a green sun. (Brahman, the Purushas & nishkama karma).

Strong & violent tivra from hetu of pain; strong kama & tivra from touch of vishaya on parts of the body not directly connected with kamachakra, (left arm near shoulder).

Lipis—

4. 3. = some movement in the rupa.
5. **Dispensability of Inertia.** Inertia ie Tamas was formerly necessary to correct the errors of Rajas, but is no longer needed except in some fragmentary movements.

6. **Fallibility of inertia**

Kamananda in samadhi is now becoming frequent, but tends to break the samadhi either at once or more often by a gradual
return to less & less profound states of the sleep.

The eye no longer seeks to force imperfect rupas to assume a perfect outline by aishwaryamaya tratak, but awaits a spontaneous perfection. Meanwhile the mind takes cognizance of the meaning & circumstances of obscure rupas by telepathic reading of the bhava in the rupa or by vijnanamay perception.

20th March   Friday.

It is now evident by continual experience that the telepathic trikaldrishtis which fail, are perceptions of real tendencies or intentions or outside acting forces which either modify or tend to modify immediate action & always remain as latent forces in Prakriti & the individual which may determine future event or action in that or in other vessels of the Shakti which come within the zone of Nature affected. The determinative stress in the knowledge is still erratic & the final action of the true vijnana in trikaldrishti is still withheld at ordinary times.

The pure ahaituka kamananda at any point of the body has begun an occasional action, usually associated with other forms of bhoga.

Lipi.

1. Tonight telepathy

2. Blessings in disguise — ie there will now be full & habitual perception of the mangala in the apparent amangala.

3. Passive telepathy . . try. That is, telepathy is now almost entirely of the nature of vyapti; try now & prakamya will become equally active.

4. Distinguish disciples. Authority. (ie Authority of the trikaldrishti)

5. Set fire to Bol. Aishwarya. (Chitra-lipi).

6. Flexibility of the intellectuality is replaced by flexibility of the ideality

7. Threatening intelligence. ie news seeming to threaten but not really dangerous. This was fulfilled immediately afterwards, such intelligence being given at night but told in the morning re—J. Ayar, Chudamani & S.R.

Note. 1. 2. 3. 4. 6. 7. were all fulfilled or began to be fulfilled.
Script was active throughout the day; it has become satya. Prakamya which has long been overshadowed by a free & powerful vyapti has begun to develop the same freedom & power; at the same [time] telepathy of thought, formerly only occasional or secondary in reception, is now direct & enlarging its activity. Sortilege is also coming again freely & of itself & justifying its contents & utility. In the body (vital) wine of ananda is once more physically felt, but curiously enough in movements of pain as well as of ananda. Rupa of varna, crude, is becoming brilliant & perfect in a few forms.

**Rupas**

1. Small green sun, brilliant, in the antariksha; followed by a balloon of reddish orange. N.B. Orange is psychical sight or power & red is pravritti & karma.

2. In room, a leaping red flame of a lamp, now visible, now extinguished. Symbolic like 1—referring to the nature of much of the activity, due to inefficiency of the body.

The nirananda of pain seems to have reasserted itself partially on ground conquered for the Ananda. The shakti is now driving it out again from these positions.

On the whole there is a great activity of the siddhi, the net result being the firm generalisation of vijnanamaya knowledge, vijnanamaya power & sraddha. But as yet positive imperfection still remains & recurs even in the knowledge and the power is still met by resistance which, though with difficulty, still very often succeeds especially in things of the body etc.

21st March.

**Lipi—**

1. *Joyful liberation from the intellectuality*  
   (partially fulfilled. May 21st)

2. *Perfectly established in the essentiality of the objectivity*  
   (ie the lipi)  
   fulfilled May 21st

   fulfilled. (May 21st)

---

5 As usual, these notations of fulfilment were written after the original entry. — Ed.
4 The externality of the destiny (only begun & uncertain May 21st)

5 The Times . . God . . right. settled . . swiftly

The lipi is now manifesting itself against all material resistance in the akasha with great frequency & authority, nor is it possible to keep a record of all the lipis that fulfil themselves. It is still, however, resisted and only visible usually after an effort, therefore, not always with perfect legibility, nor with invariable fullness, consecutiveness or coherence. The power of interpretation with viveka is there to mend the verbal incoherence & supply the lacunae of the form.

Sortilege is now frequent, although often needing a very figurative & even fanciful interpretation. The following are typical instances.

1. A case presenting itself in which a form of tapasya was necessary (jalarodha) & there being a doubt in the intellect of its permissibility, the eye glanced across involuntarily at a manuscript on the table & saw the sentence "That is the system". Involuntary purposeful sortilege.

2. A sortilege being sought with no particular subject, need or purpose, except the testing of the theory of sortilege, another MS gave "Vowel stems of the 3rd form the accusative vocative. ["] This had to be interpreted, 3rd = 3rd chatusthaya, vowel stems, = subtle parts ie parts of knowledge in their beginnings & superstructure, the flower being yet to come, form the accusative, = regularise their objective action based on prakamya in the actuality, & vocative = their subjective action based on vyapti in the actuality. This movement as a matter of fact began immediately afterwards. Voluntary objectless sortilege.

Certainty in the trikaldrishti has at last begun to be frequent though far from invariable in the active perception as well as in the passive reception. Tapas as was predicted yesterday in the script has begun to assert itself with a greater & more habitual power both in ishita & aishwarya. At the same time sraddha is becoming firmer, more obstinate against disappointment & though this is less prominent as yet, more anandamaya & savesha (enthusiastic). But, as yet, it is imperfectly applied to the kriti & physical siddhi in spite
of better & sometimes positive & striking successes, eg Caillaux’ resignation, etc.

Rupa now evolves obscure figures of all kinds, fourfooted animals included, on the background & in the akasha & a few more clear, though none perfect. Samadhi is attempting to expel the incoherence of tamasic nidra. Pictures are now very common, especially old Indian pictures in crowded groups & very brilliant colours, but also others without colours.

Lipi.

6. Thirteenth—destroy the obstacles. Chitra in chimney of lamp.

7. Scholastic study of Scriptures. (Repeated often recently)

Clear, brilliant & perfectly combined Rupas in samadhi, but not yet the requisite stability.

22d March. Sunday.

Certainty in the trikaldrishti is more powerful than yesterday, but still needs concentration (samadhi, samahitabhava) of the tapas to be assured of itself, as otherwise either the perception of conflicting possibilities tends to destroy certainty or overstress misplaces & defeats it.

Uttapana of the neck maintained for 45 minutes without any serious stress, but with an increasing strain of heaviness in the last 20 or 25 minutes; of the right leg, medial position for 15 minutes,—heaviness only, no muscular pain. Uttapana of left leg later in the day for 20 minutes.

The siddhi since yesterday evening is being continually attacked by upsurgings of the semi-intellectual activities of the joint vijnanabuddhi & manas. The greater effectiveness gained in aishwarya-ishita has also been suspended & the rupa fails to stabilise itself in clear forms. Lipi occurs but with less power & frequency. Variations throughout the day.

In the evening for a few minutes the formal material of the trikaldrishti achieved a condensed [form] for a short time. eg.

1. ὁσποτας Varsity. Stage (Chitralipi in the clouds).

2. Images in the clouds. A nib (literature), a fish, (travel), a ring, a bracelet; then, a low comedian; a mother (European &
golden-haired) with a child climbing on her neck. All these were close together, connected in sense, & the first four closely connected in sense. They must be taken as indications about European womanhood in the future earth-destiny.

3. Also in the clouds. Certain scenes of a pursuit in the early Manwantaras of a race of divinised Pashus by Barbarians. Also, animals & arms of other ages. (The latter are common).

The whole of 3, which is recorded elsewhere, was an instance expressly given of the way in which the Theosophists arrive at their results & shows both their sincerity & the possibilities and pitfalls of their method.

4 Three sortileges. Katha Upanishad (Apte’s edition)

This has to be interpreted in connection with the present stage of the siddhi, = “Vijnana is active, but also the sense mind & the intellect. Only the vijnana is desired. How is that sole action of vijnana to be secured? By receiving the sense life also through the vijnana and not through the mind & senses. Then nothing is left; for the sense world becomes a vijnanamaya world, etad vai tat, & is rendered in the terms of Truth.[”]

Incidentally touches, if not of grief, yet of dissatisfaction still assail the Adhara even though Paramatman has been realised, owing to the Brahman being identified with the ego-world in the environmental intellect. This is due to the persistence of Avidya, there, that is of the sense life & the imperfect activity of the Vijnana.. Conscious[ness] reflected in the sense life is subject to ignorance & unrest which may become grief. This sortilege must be taken in connection with lipis which came at the same time.

eg. Destroy self.

ie. The relics of the ego attitude remain in the outskirts of the

consciousness & try to return & recover the centre. These remnants must be destroyed.

(3) p. 112 सच्चिदेश बोधु शक्ति सच्चिदेश चेन्जानाति तदा मुख्यत एवंति संबेदः। नत इत्यस्य भवार्थायनमात्वरथातिः। परमात्मायामाय यवः कार्य इत्युक्तमुपांत्रति।

Since the entire Oneness can be realised here & it is only by that complete realisation of God in everything in this world that absolute Liberty is possible,—for the idea of Him as something separate manifesting here is an error,—therefore the final word is that an effort must be made to realise God the Spirit here absolutely, so that nothing else may be seen, felt, smelt, heard, tasted.

Mar. 23.
Sortilege. Idem. p 76.
1. सच्चिदेश भवार्थायन तारामंयेन सीक्ष्यमुपांद्वति स्थूलेन्द्रियिना।

In the application of the three sortileges already found, the experience of error still continuing, a doubt occurred as to their completeness. The impulse to consult was given & the mind assured that the sortilege would meet the doubt. The above was the response, & proves entirely the reality of the Sortilege system & its veridicity & capacity of direct response.

Interpretation. The vijnana is being perfected in the physical, vital & mental worlds according to their characteristic differences; at present the mental knowledge is being idealised to perfection by the idealising (rendering perfectly & spontaneously true & luminous) of the sense perceptions, the pranic impulses, the bodily movements & all connected therewith. Error is brought into play in order to be converted into its underlying truth.

2. तारामंयेन by itself is also a sortilege & means that by assigning each subjective perception of the body, nerves & mind to its right place, object & time vijnana will be progressively & finally perfected.

N.B. It is a curious fact that the physical knowledge received by the body through the annamaya Atman & the pranakosha is often truer, if at all illumined, than the mental knowledge; on the other hand the responses of the prana to knowledge are more erratic than those of the mind.
Other sortileges confirming the sense of those already given.

Images connected with yesterday’s 3.7 (1) An open country with a hill in the distance, representing the unoccupied land taken by the civilised invaders from the barbarian; (2) a fortified city on a plateau with great terraces cut in the slope in the background, in front level spaces leading to a great river with a vast ghaut at one place in the bank; (3) the same river; a hut large & spacious with a great door open,—afterwards, appear in the hut opposite the doorway a priest & a child; after a while the priest turns away lifting his hands as if shocked & despairing. All these in the chimney of the lamp. (4) not connected, a chitra on a rough envelope (inside torn open), very distinct in every detail (even more than the others,) two flights of step[s], with a rough, sculptured wall at the angle; a woman, young, beautiful, with a bonnet and a walking stick in her right hand held away from her body & supported on the stairs, very elegantly dressed; below her on the steps a crown, bracelet & cloth. These images are chitra; the akasha images are still vague & present seldom any clear details.

Trikaldrishti still continues to generalise itself without being able to expel error. Samadhi is now being utilised, but does not yet improve in its material. All the materials of trikaldrishti are in fact being utilised for all three times without any of them yet being entirely perfect. Tapas varies in effectiveness.

Mar 24. Tuesday

Saguna Brahmadrishti has now practically taken the place of the Nirguna which is now perceived only as a foundation for the action of the Saguna. It is seen that the Sarvam Brahma is prominent when the Tapas of mental Chaitanya is fixed on Matter, all else being felt as undifferentiated consciousness & Matter alone as real to the mind, unreal to the drishti; Sarvam Anantam is felt when the Tapas is fixed on Matter & Life, all else being felt to be a sea of consciousness out of which Life & Matter proceed; Sarvam Anantam Jnanam when the Tapas is fixed on Life, Matter & Mind with

7 See “The Evolutionary Scale”, pages 1328–30, for a detailed description and interpretation of the images that follow. —Ed.
Vijnanam felt behind vaguely as the source of Mind; but when the Jnanam increases & is sun-illumined, then the Anandam also appears & the Saguna Brahman becomes the Lilamaya Para Purusha. The Anantam has also two bhavas one in which the Infinite Force acts as if it were a mechanical entity, knowledge standing back from it, the other in which Life Force & Knowledge act together & the Infinite Force is an intelligent or at least a conscious force.

Hitherto the position of the Tapas has been that when strongly exerted, it has come to produce an effect against resistance, sometimes the full effect, sometimes a partial effect, sometimes a modified or temporary effect, sometimes a postponed effect, sometimes merely a struggle physical or mental towards the desired effect. In things physical & in things of the karma, the smaller effects are more common, full effect rare. When simply exerted, the force has often failed entirely, sometimes succeeded fully & at once, sometimes partly or with resistance, sometimes for a time only wholly or partially; sometimes only by producing a tendency or mental movement. Now the simply exerted will is becoming more effective, often perfectly effective, with no resistance or brief resistance or ineffective resistance. A month has been given in the trikaldrishti for the progress of this movement.

In the trikaldrishti a qualified authority is now enjoyed by the lipi, the written script, the articulate thought, & from today by the Vani & the unwritten Script; the perceptive thought is struggling towards this authority, but still hampered by inert & by tapasic suggestions which overstress a perception or which overshoot their mark. Today a more powerful movement of the perceptive thought, more readily, widely & accurately perceptive of the complex truth of forces & their results. If this tendency prevails, the lipi “Tuesday” & its interpretation will be amply justified. In any case, the claim of the tapasic devatas to be rendered effective before the knowledge is effective as knowledge, is from today rejected. As yet knowledge & force cannot become identical. Another attempt is also being made to cast out the relics of self from the environmental will. It is now evident that the whole difficulty which refuses to be still evicted,
is the persistent survival of [Bhuvarmaya]\(^8\) Tapas and its attempt
to profit by the vijnana instead of allowing the Swarvati Shakti to
illumine itself in a pure desirelessness from the Mahas. Lipsa has
been the excuse for this persistence & its distinction from Kama.
But the lipsa must be a samalipsa ready entirely to take defeat as
well as success and not choosing its will but leaving that to a higher
Shakti than the Bhuvarmaya or manomayi. The whole trikaldriishhti
is still regulated by the idea of success & failure & therefore cannot
free itself from overstress. The reason is that man is at present
the Asura Rakshasa & seeks from the buddhi the satisfaction of
the heart & senses. Therefore this particular nodus is so hard to
unloose; because it is always this Asura Rakshasa who has to be
liberated & fulfilled & the difficulty cannot be solved by casting him
out & rising entirely into a higher principle. The Devasura variety
of the Asura Rakshasa has to be established, not the pure Deva or
even the pure Devasura. The crux is here, in the right solution of
this complexity. There is a pull which would carry too high, there
is a pull which would keep too low. Both have to be avoided.

Sortilege (1) हृदयचिरंते (2) बलाकाजातीय:। दीपिकीयः। सितवषयंह्य-प्रण:। अवन्नमि।।

बलाकाजातिरियुक्तद्वाह्मस्तरेकल्वः। (3) दमकुमार-चरितं।

That is, the Ten Kumaras = the ten Purushas from Pashu to
Siddhadeva. The present that is drawing to an end is the Rakshasa,
whose type is that of हृदय not अवन्नमि। It is the हृदय वालाकि species,
long necked = eager, purified in body, mahat in the prana element,
therefore with a mind that listens in the ananta dasha dishah for the
sruti from the vijnana. The other that is coming is Anandamaya,
born of the full enjoyment of the Prakriti, ie the Devasura. Balaká
also means in the sortilege the young unfulfilled Prakriti. The
Anandamaya Devasura has been prepared in the Rakshasa by the
Gandharva type of Rakshasa who is also गाणिकेलजः। born not of
Prakriti's full act of enjoyment, but of her full mood of enjoyment
(the Gandharvi bhava in Mahasaraswati).

The thought-telepathy is now coming more freely; sometimes
it is seen as a thought with impulse & proved by the immediately
subsequent act; sometimes it is entertained by the mind not as a
perception of thought in another’s mind, but as an impression registered as a thought in one’s own mind, yet vaguely but uncertainly associated, perhaps as a speculation of the other’s conduct, with another mind. Eg. B [Bijoy] brings tea. Mind thinks of B. looking for a cigarette, seeing none & possibly bringing one. There is no such look or action in B’s body, but only a vague idea of such a thought, possibly, in his mind. The next minute B brings a cigarette & looks to see whether or not there were any left, showing that this had actually been in his mind & he was now verifying by his senses an idea the mind had arrived at in thought only. At the same time it is possible that the thought went from my mind to his & produced the action or went to another’s who gave the cigarette to be placed there & then only B looked to see if there were no cigarettes already. In the latter case the thought was an effective vyapti from my mind to his or another’s; in the former a srutavid vyapti from his to mine. Other cases were clear cases of prakamya; eg the perception of the thought & impulse in his mind & body to take the carbolic lotion, followed the next second by his action in taking it, etc.

Lipi.

1. Healthy system—effigies of the unhealthy system still resists the healthy
2. Healthy system established not in actuality but type of actuality.
3. “Sister” or “siskos” very frequent
5. 13. This lipi comes daily & often. 13 = Kama, last member of the 5th chatusthay
6. Sortilege. Indicating necessity of resort to sortilege. Directional lipi

Sortilege.

"स्त्रोत सनवंस्तः भग सिवा वर्त्तेपि अर्जयाः परं आप आयो: Destroy not or afflict not my desire as

9 MS 138.
it acquires the Mahadbhav; may I taste all (fruits & enjoyments) throughout all the waters of being.

This sortilege gives full sanction to the ideal of the liberated Asura Rakshasa.

2 मृत्यू सार्बब्रह्म रूपयक: ie the value of the siddhi of knowledge is now the full faculty of jnana & half the fullness (8 a[n]nas) of trikaldrishthi. This is an exact description of the ordinary action of the illumined vijnanabuddhi at the present stage of the siddhi. 1½ has long been in the lipi the sign of perfect jnana & imperfect trikaldristhi, jnana being symbolised by 1, trikaldristi by 2, Rupa by 3, Tapas by 4, Samadhi by 5, Health by 6, Ananda by 7, Utthapana by 8, Saundarya by 9, Kali by 10, Krishna by 11, Karma by 12, Kama by 13; so in succession with the 4 members of the Brahmacatusthaya & the 4 of the Siddhi Chatusthaya making 21 in all.

3 पौड़ो भिक्षारम्य: संजयं यथानुभववर्धनेन. This refers to the persistent doubts of the sceptical intellect re the Karmasiddhi & points to increasing authority of the divine Vani, अनन्त: being Kali the Prakriti & the speaker the Deva or Purusha, Krishna, Master of the Yoga. It appears, however, that the doubts as to dehasiddhi, rapidity, exact fulfilment of knowledge & power are also included.

Images
1. A mirror (back view) with a woman behind looking at herself in it. Fact & symbol.
2. The same, front view. Both Akasha, crude.
3. Bird. crude (a sign that none of the old effects already produced are lost to the siddhi, the bird being the ordinary figure in the crude form)
4. Human figure mounting an incline; a fish; a net; bird varnamaya; all crude, clear, but mostly fleeting. Lipi 7. Insufficient stability.¹⁰
5. Lipi.
6. Flexibility of the intellectuality ie brought about now in a greater degree by the discouragement of the stress on the tapas

¹⁰ This is the seventh in the series of lipis beginning before the sortileges and images above, and continuing below. — Ed.
& inertia; with this change has come a greater perfection both of jnana \& trikaldrishti.

9. *The disgust of the asiddhi*—has to be got rid of entirely.

10. *The political siddhi . . destroy*—ie the putting an end to the present anarchical activity is necessary for the return to political life \& must be attempted henceforth. Inaction in this respect must cease. Only there need be no haste[,] no anxiety. At the present the means of action are not to hand. They must be found out or created or both.

11 *Type of the trikaldrishti . . telepathy perfect in detail.* *Perfect telepathy \& trikaldrishti.* That is the type has now to be well formed \& extended to the exclusion of speculation \& overstressed perception.

The difficulty formerly experienced in thought-telepathy was that there was a full or almost full perception, whenever there was even slight sanyama, of the chitta-mould of the living object and of his sensation mind in its status \& acquired form accompanied with a clear perception of the contents of the temperament \& character, also of the waves of feeling \& sensation that arose in the manas \& chitta \& to a less degree of the thought sensations that arose in the manas, but not of the buddhi, except in its vague mould \& acquired status, its outer shell only,—not of either its general contents or of the particular ideas arising in it. These powers were gained long ago,—early in the Pondicherry stay,—\& to some extent always existed in an inchoate form as they exist probably in all men; but they had to be discontinued for a long time; now with the growth of the jnanam Brahma this difficulty is being overcome by the perception of the contents of the buddhi \& the waves of idea that rise in it. This evening the old powers arose in a much more powerful \& vivid form than before. This revival was heralded by a note in the lipi referring to the former intensity of the powers for a short period as between Bj \& myself; but the full intention of the lipi was not understood; it was not realised that the revival of that intensity this very day was intended. Therefore the lipi was not recorded. There is still much to be done, but the foundations of complete knowledge, trikaldrishti \& prakamya-vyapti are now being very firmly and very bountifully laid.

www.holybooks.com
Proofs of the idea-perception are being multiplied; eg, a quarrel between two cats on the opposite terrace, a black tom & a white pet cat; almost all the movements could be followed & predicted; 1st the intention of the black to leap on the parapet of the stairs where the white had taken refuge, then, partly from discretion, partly in obedience to aishwarya, its slow departure,—but this was not actually foreseen, the emotions of its retreat,—sullen anger, pride, fear of attack (this was proved by the frequent look back, yet not too frequent, from pride), the half idea of returning & pursuing the quarrel, always abandoned, the intention to come on to our kitchen roof, the turning aside for the direct descent, (here there was a doubt whether the reading of the intention was correct, probably caused by a hesitation in the cat himself whether he should not deviate to another side[,]), the final descent before the doubt could be solved.

Incidentally, the doubt as to exact fulfilment of knowledge is being removed as predicted in the [sortilege]11 मित्र-मेंमक्षमानुभवकथितम्. There is still doubt as to the rapidity—except of individual movements of progression where the rapidity is undoubted,—owing to the past experience of invariable relapse & suspension of siddhis, although these relapses & suspensions are now, owing partly to the stronger foundation, either less prolonged or not thorough. There is doubt also as to the rapid effectivity of the tapas. Neither knowledge nor tapas are yet active with any force with regard either (1) to the actual past of individuals or their future, (2) to the karmasiddhi, (3) to things at a distance, (4) to details of the thought, such as names etc, ((5))12 to exact time & place (ie the minute, the spot). Some siddhi in all these respects there is, but it is still fragmentary. The largeness of the field unoccupied is another ground for doubt of a generally effective rapidity.

Images. Chitra in the lamp.13

1. A river with a masonry bridge built across, arched doors (one only seen) in the bridge for the river to pass through; on the bridge, first one man, then others passing across, the first hastening,

11 MS lipi (see the last sortilege above)  
12 MS (4)  
13 See “The Evolutionary Scale”, pages 1332–34. —Ed.
the others slow; beyond the bridge on the river a girl & a man crossing the river in a sort of raft; [a] lamppostlike erection in the river, the nature & object of which are not clear yet. Beyond a hill with houses upon it. Connected with the Pashu-episodes. The type is no longer the Gandharva-Pashu, although a substratum of that type remains in the new race; the new type is distinctly coarser, one seen the other day after the Image, barbarously coarse; these seen today are of a higher kind, but all have a slightly Teutonic cast in the character-mould only half refined into an intelligent quiescence.

2. A low type of the Kali Pashu, 1st Manwantara,—in appearance hatted, bearded & visaged like a common type west country American.

3. A part of a hill with a house upon it roofed like a modern Church.

4. A very wide road climbing up a steep incline. Trees on one side showing the great width of the road.

5. Animals of the first chaturyuga. A huge seal-like water animal. A land-animal also exceedingly huge with red & yellow bands, a long rough projecting snouted face lifted up to roar; ferocious in appearance, harmless in fact. Suggestion, that these belonged to the animal chaturyuga before man appeared.

Akasha.

Two leaves, crude, first transparent, then tejas-chhaya, clear & stable, but not vivid. N.B It had been indicated that a clear & stable form would appear; but it came with difficulty & all that followed were clear but incomplete & rapidly changing half figures of animals.

Mar. 25.

Perceptive thought still fails to attain authority, though it presses towards authority. Telepathy of thought is still rough & wanting in fineness & firmness; it is also crossed by the perception of ideas from the pranamaya, manomaya & bhurmaya beings which besiege our activities. There are movements in the bodily self

14 MS an
& our vital self, blind, instinctive thoughts, impulses, memories, like those of the animal, eg the horse mechanically taking an accustomed turning; these are now vividly seen, more vividly often than those of the active mind & confuse the thought-perception. False perceptions, however, always turn out to be true perceptions, true in essence, false in incidence. Eg (1) a dog paused in the middle of the road, three tendencies were seen, one in the direction it was originally [taking] became a vain effort of the pranamaya to persist & was soon forgotten by the dog, but remained in its subconscious mind and might, with favourable fate, have been revived & fulfilled in subsequent action; another, to the left, was disbelieved in by the perceptive thought which indicated a turn to the right as its eventual action, & the dog did turn its head immediately afterwards in that direction,—but it went to the left, not the right. The idea of a movement to the right was immediately dismissed by the intellect as a falsehood, but as a matter of fact, a few seconds afterwards, the dog returned & fulfilled the identical line to the right, to the very spot, that had been indicated. So a child about to turn the corner was seen as intending to turn into the house just round the corner; its course & thought after turning was away from the house, but a moment afterwards it went in at the door indicated. There were no less than four incidents of this kind with this door in the course of half an hour. When, however, there is no illumination, the source of the misdirected perception is not seen & the intellect labours under the idea of an absolute, originless & unjustifiable asatyam, which does not exist in this world. Satyam is established; it is the anritam which still gives trouble.

Lipis.

1. Federation of love
2. Exiled dynasties . . tapas. In reference especially to France, but not exclusively
3. I—indicating that the Deva, Krishna, Master of the Yoga, is taking more & more direct charge of the activities.

Drishti of the panchabhuta is now common & of wind in the panchabhuta, but not of wind in the ordinary akasha. Images of

15 MS taken
insects, birds are seen in the prana-akasha (bhuvra), but not usually the flying forms themselves; when seen, these are not clear to the eye.

Lipis

4. Request. Yes. I don't intend to satisfy it immediately, but to satisfy it after the necessary delays in its due time. ie the lipsa

5 Tuesday—blaze. ie The ideality founded yesterday will by next Tuesday have burst into a blaze.

The forms of the birds etc seen in the pranakasha are now beginning to be clear for a moment, but they disappear at once into the pranajagat. The explanation is that the pranakash ordinarily seen is the pranakasha envelope of bhu in which only the images of these creatures are seen & they themselves are in the akasha of the pranajagat, not the real Bhuvra but the Bhuvra of Bhu. It is these worlds that must first be seen & felt; the others can at present [ ] only be entered in Samadhi.

The perception of the one Jnanam Brahma in all is today very strong; but its grades & positions are still unstably harmonised, eg the general Manomaya Purusha in the Manastattwa taking the ananda of the various egos who know not themselves to be He, the same in the Anandatattwa of the Manas, the individual Manomaya Purusha watching the egoistic manas as the observing mind of an actor might watch his active mind on the stage, the Manomaya Purushottama in the cosmos & the same in the individual, the ego unconscious of its true self, the wider Manomaya aham conscious of it, yet differentiated. The Anandam Brahma is now beginning to be seen in the individual more frequently & vividly.

The restlessness & impatience & weariness of the environmental Prana with the contradictions, confusions & resistances that persist in the siddhi, still forces itself at times on the system, especially when the exiled intellectual devatas besiege & attack the city, no longer hoping to recover sway but to delay the perfect siddhi & revenge themselves for their expulsion.

16 MS can
This siege & attack developed in the afternoon into a violent crisis, characterised by all the old movements except absolute obstruction & intended to break down the growing siddhi & destroy the authority of the lipi and other instruments of the vijnana. It is noticeable that in spite of confusion, anger, pain & unfaith, the activity of the vijnana & the principles of sraddha laid down in the pre-existent siddhi could not be entirely silenced, but applied themselves persistently to the confused thoughts, vanis, lipis, that came without being deterred by the chaos of errors & half truths that was raised. An immense but ill-coordinated activity of thought, lipi, telepathy etc accompanied the attack; the attack & the defense disputed possession of this outburst of activity & tried to make it the instrument of error & truth, confusion & a better coordination respectively. Nevertheless, the deficiencies of the previous vijnana siddhi have been accentuated by the disturbance and a manifest confusion now reigns, instead of the orderly advance which was being developed; nor does the mind know which suggestion it is to believe or which to reject as error & misplacement.

Ananda of physical pain has once more commenced; it is noticeable that pain of burning, pain of blows, nervous or muscular pain of disease, even pain of pressure are associated up to a certain degree with ananda simultaneous or subsequent in manifestation, but pain of wounds, touches on the raw flesh etc is less amenable & except in the ant’s bite is as yet entirely divorced from ananda.

Image (1) The same stairs as seen in a former image . . a doll on the lower steps; a little child coming down some way above. The sculptures on the walls are clearer, some grotesque, some accurate & graceful, but unimaginative reproductions of daily life.

(2) Animal scene from the 2d Manwantara.  

(3) Three scenes from the first [Manwantara], regarding the personage described in the lipi as “Iarlaus”.

Uthapana of neck & leg for 15 minutes, not maintained longer, because of the successful intrusion of muscular effort in

place of the natural mahima. Laghima was strong, mahima defective.

Mar 26 Thursday.

Sortilege. (1) विरुद्धांतेऽऽर्थमेवव्याव्यायं दुविशेषं बेदात्मा कर्णं ताहि प्रण्डं —
tथ्यां युज्यन्तं स्थ्यास्त्याः स्वाभावज्ञानां—स्मिविनिवृत्ति. Kathak Upanishad, p [54.] 19

Referring to the difficulty noted yesterday of the ill-harmonised perceptions of the various bhavas, Manomaya etc., & also to the difficulties of the many various movements in the vani, etc.; the rule is given that all must be seen as Paramatman & Para Purushah, Krishna, in the two states of status & dynamis, rest & motion.

(2) Are all mere representatives & agents of the Standard. Story of Trusts (Collins) p. 106

This is a very remarkable instance of the sortilege; for there is no connection between the Kathakopanishad & the Story of Trusts, yet a sortilege immediately taken from the latter after the interpretation of one from the former completes it & supplies precisely the thought needed for rounding off its unfinished suggestion. All the words are the exact words needed—“All” “mere” “representatives” “agents” “Standard.” It is so, that all things in the world are now to be regarded in relation to the standard Being, the Sarva Ananta Jnana Ananda Krishna. Note that before taking the second sortilege, the book was pointed out & the indication given that the second sortilege would supply something still needed. All this shows an intelligent, omniscient & all-combining Mind at work which uses everything in the world as its instrument & is superior to the system of relations & connections already fixed in this world. It can use the most incoherent things harmoniously for one purpose. Nor is this an isolated instance & therefore classable as a mere coincidence,—instances & proofs are now crowding on the mind.

Lipi is now again developing kaushalya; instances of tejomaya, jyotirmaya, varnamaya have suddenly come & are or tend to be, unlike the former rare instances, at once clear & stable.

19 MS 74.
Lipis.
1. Tardy results—isolated results.
2. Joyfully exhaust the intellectuality.
3. Degeneration of telepathy.

Trikaldrishti is now being developed on the principle of affirmation, ie everything is accepted as a fact, only the precise incidence & value of the fact has to be disengaged from the rude & inaccurate impression on the sensational mind. The importance of the unfulfilled tendency, intention or impulse physical, vital, mental or supramental, conscious, subconscious or super-conscious, is being emphasised—its indispensable importance both in determining the eventual action or result, in fixing its efficient value and chances of permanence or finality & in influencing future eventuality. It is now proved beyond doubt that the mental perception of these unfulfilled energies is not an error, proved by the constant unexpected fulfilment of those that had been put aside as errors; the vulgar test of reality, viz bodily fulfilment, is no longer needed by the mind for sraddha. The perfect trikaldrishti of eventuality will, it is supposed, emerge out of this mahadbhava of the telepathic mind, by the freer play of the higher vijnana in its fourfold quality. At present it is the telepathic trikaldrishti that is active and this, though it has been proved capable of sustained, detailed & complex accuracy, is not firm, but easily descends from the correct appraisement of event & tendency, to a mere mahat perception of tendencies open to false stress & false selection of the event.

Images (In the Clouds).
1. Yesterday & today—of a Pramatha Rakshasa (5th or 6th Manwantara) war[,] men hastening to battle, men fighting, a war-chariot & fighter, a youth giving news to his sister on the way to battle,—the same face, a modern Teutonic face reappearing always as one of the leaders, recognisable especially by the helmet, moustache & small aquiline face (middle-aged). Period Kaliyuga; a war of great historic importance.

2. A dancing girl of the same age, strong aquiline face, in loose transparent draperies. This seems to be a Roman period of the Kali. A handsome & imperial race, but already weakening in type. The bhava is that of men doomed to defeat.
3. Images of the opposite nation, a man & a woman, ugly, strong, fierce, Pisacha-Pramatha in type; the face expresses a diabolical cruelty & hunger. It is intimated that in this war the young Romanic leader in the war-chariot is victorious, but the eventual victory is to a modified race mixed of these two races, which overthrows the Empire.

4 Fantastic images of animals, a lion with an impossibly slender body, a cock face on a fourfooted animal,—belonging to the idea-world of the Manus where types are evolved & varied before they are fixed in the sthula.

In the same way as in the trikaldrishti, so in the rest of the siddhi & the lipi affirmation is being enforced. Every feeling & movement, even those that are apparently wrong or futile, has to be accepted temporarily as a factor in the eventual intention,—so also every event, however hostile. The habit of right stress will evolve hereafter & produce the right harmony.

In the afternoon return of yesterday’s asiddhi, the ashanti less violent, though sufficiently acute, but the asiddhi more complete. The chaos lasted throughout the afternoon well into the evening. Contradiction in fact of the former lipis “Joyful exhaustion of the intellectuality etc.”

Images—in Lamp

(1) Yesterday—the girl of the first image grown up to womanhood & another (n)²⁰
(2) Today—Three of the same crossing a river by some rude kind of plank or tree bridge—three (n)
(3) Horses of that aeon—clumsy in build, long-eared. One on the bank of a river listening with head turned & ears pricked to some noise on the opposite bank.

Ananda of vishayas is growing in smell, sight & hearing. Beauty is manifesting in all faces & forms, but this janamaya drishti of the shuddhananda is still resisted & laboriously contradicted from time to time & lowered piecemeal to the chidghana or ahaituka perceptions. Today ananda of the painful touch on exposed flesh began, but did not go very far.

²⁰ The meaning of this letter is not known. —Ed.
Subjectively the Ananda of the pure mind, Swar, has been constantly manifest, & except in the attacks of asiddhi, dominant; the separate activities of the ananda of bhuvah are being expelled or discouraged. Today the anandamay Tapas of the Swar is being revealed; hitherto the Tapas of mind has always been of Bhuvah & not the anandamay Tapas of bhuvah, but the pranamaya rajasic, unquiet, full of desire or effort, nibhrishta-tavishi. This now afflicts from outside the system only. Vani has also once manifested from the Ananda of Jana.

The ostensible object of the movement of disturbance is to get rid of the intellectual interference and destroy the obstruction to a permanent ascent beyond the vijnanabuddhi. The chief feature has been a total destruction of the reliability of the telepathic trikal-drishhti; only the mere telepathic perceptions of present tendency remain accurate & valid. As yet, however, the mind can put no fixed confidence, in the midst of the confusion, in any indication given. It is evident, at any rate, that the disintegration of the present faculty & inefficient telepathic trikaldrishti is intended and is being hastened by the Power that directs the Yoga.

Lipis.
1. Assist the degeneration of the telepathy — twice repeated.  
2. (Much later) Affirm the ideality against the intellectuality  
3. Tuesday . . thyself — 4. Dictionary (Tuesday refers also to this lipi).

The last thing at night the higher ideality, not the highest, — the intuitional not the revelational began to be affirmed in script & vani & fluent vangmaya thought, but could not be enforced in the perceptive thought. The manifestation of the Deva in the Adhara seems to have commenced.

Mar 27.

The mental powers of the higher Bhuvah expelled from control of the thought & perception & deprived of support from the higher Swar are now acting as a strong obstructional power and attempt to intercept and denaturalise every suggestion from the vijnana to the Swarvati buddhi. For this reason the jnana & trikaldrishti in the thought are not able to manifest themselves & even the
telepathy is much hampered. The Vani & Script, however, seem now to be beyond attack or obscuration. The Lipi suffers by its right (vijnanamaya) interpretation being intercepted or seized & distorted; this disability is shared by the rupa. Pseudo-vani still occurs, but is easily detected & carries with it no authority.

The truth of intuitional vijnana has now begun to be enforced & the task of discouraging & excluding the habit of mental interception or interpretation has been taken in hand. The mind is to be a passive recipient & channel, not an active rational & perceptual agent.

**Dasya — Tertiary**

_Dasyabhava_ has now taken a new form & is being reconstituted as obedience to the Master in the adhara, with Prakritic agencies as mere distributory functionaries of the Tapas of action & eventually of the Tapas of thought. Up till now the dasya was either obedience to a distant Master in the Cosmos or at least, when not distant external to the Adhara, & to Prakritic agencies who were often sahankara & opposed the direct command from the Master. Dasya was first primary, that is a free subjection of the Will on the basis of a potential independence, secondly, secondary, that is, a mechanical subjection of the adhara independent of the personal Will to the Prakriti, last, tertiary, a complete subjection, mechanical & volitional to the Ishwara with the Prakriti only as a channel or jada agent. The tertiary has also its three stages, one in which the volition was dominant in the consciousness not as free, but as accompanying & approving the movement which, though at first mechanically compulsory, might be suspended if the volition long opposed it, a second in which the Prakritic control was dominant though as a compelled & compulsory agent of a remote or veiled Ishwara and a third, now finally emerging, in which the assent of the Jiva is given compulsorily & independently of any freedom of choice in the Sakshi, the Prakriti is purely a jada channel & not an agent, & the compulsion from the Ishwara direct, omnipresent and immanent. The bhava of the dasya tends to its right relation of the bandini dasi with the characteristic madhur bhava of that relation, —a relation already familiar & frequent to the Prakriti or Devi in the system, but not yet permanent in the consciousness.
Vijnana
The referential action of the vijnana by which a suggestion first manifests deflected or overstressed in the buddhi & is then referred to the vijnana for right interpretation, is being constantly shown & condemned. It stimulates the mahadbhava of the satyam, but is unable to arrive at the ritam. It might arrive at a sort of secondary ritam after a long struggle & development, but that is not now intended, although it must be done at a later stage of the human advance in this age. At present it must be confined only to those who are incapable of the primary vijnana action.

Rupa
Formerly all kinds of rupa used to be manifested spasmodically, even to the most perfectly developed. That siddhi has by an increasing pressure of asiddhi been disintegrated in the jagrat, & has now to be reconstituted on a surer and more natural foundation. Rupa is of two kinds.

(1) Seen in the personal consciousness as image of a remote reality either in the mental akashas or the physical (prana & anna) akashas.

(2) Seen as actual form of things in the jagat or as linga image of the actual form or body.

The first is of two kinds according to perfection of manifestation

(1) inchoate (2) complete
of three according to fullness of material—

(1) crude—consisting only of the crude material (saptarchi of Agni)[], ie. 1 prakasha. 2. fire. 3. vidyut or varna 4 jyoti— 5 tejas 6 dhuma. 7 chhaya.

(2) dense—consisting of material developed into substance of consistency

(3) developed—when the substance has developed lifelike appearance of reality

of two according to circumstance of manifestation—

(1) reflection of form seen in sthula, whether real or image

(2) spontaneous, with no stimulation from any other form.

and finally either (1) stable or (2) unstable.

The perception of linga images & actual forms in the prana-
jagat [has] now become entirely complete, definite & developed, but is as yet of a momentary stability & usually stimulated rather than spontaneous, ie of birds, insects etc seen in the sthula akasha. The flight of kites & crows is constantly watched for the telepathy & trikaldrishti; therefore, the image of kite & crow are frequent; actual forms however, are more often of other birds not usually seen or watched.

In the rupa of image, all is being rebuilt again in the attempt to evolve a habitual combination of perfect complete clear & developed spontaneous form with a firm stability in the akasha. For chitra rupas have now a confirmed perfection & stability, although all are not complete; the inchoate form still persists in cloud forms etc where the material is unstable, but even there the complete form is sufficiently frequent. Today rupas, individuals & groups, are occurring in the akasha which are complete but not clearcut, momentarily stable but not with a useful & durable stability. Moreover they are all crude with the extreme crudity. Other rupas in the akasha are fleeting & though clearcut, seldom complete. Clearcut & complete crude rupas of a dense or developed crudity occur, but are also fleeting. Here there is as yet nothing that can be called an assured advance, as all this has happened before, been exceeded & then again destroyed. In samadhi there is retrogression & an old oft-repeated process of laborious rebuilding, the articulate thought in the jagrat prolongs itself into the swapna or sushupta of the mind & attempts to evolve a savijnana samadhi full of perceptive & vangmaya savijnana thought, sight etc in place of the present savikalpa samadhi. In the process a shadow of the old discontinued savichara & savitarka movements tends to recur, but is rejected & has no power or vitality. Images occur which have a kind of broken continuity & show part of the scene vividly, eg objects & action, but not the actor; this continuity is sometimes of action & mental rupa after loss of the bodily drishti. Tivra & kama occur in samadhi & continue after waking. None of these are new circumstances. There is therefore as yet no real advance. The confusions of the savikalpa continue. Antardrishta jagrat imitates at a distance the bahirdrishta.

21 MS have
Animal forms are now coming freely & with some perfection in the chitra, but not so freely as the human or as landscape. They are more frequent than others in the antardarshi. Inanimate objects are still limited in their variety & freedom of occurrence.

In the afternoon there was again an automatic recurrence of the confusion, ashanti & revolt of the last few days; it revived as a result of anritam in the savikalpa samadhi and persisted for some two hours or more while recurrent nirananda and sensitiveness to asiddhi & asatya and the absence of the assured & sunlit jnana have been left behind as a deposit of this thrice repeated disturbance. The anger & revolt of the Prakriti at any pronounced & successful disturbance of finality in the first chatusthaya are caused by a sense of the total externality and want of justification in this wanton movement. It is no longer asatyam or other asiddhi that is the true cause of the self-identification by the Jiva with this movement of revolt. Ananda is being reestablished in the general bhavas, but continually contradicted & opposed in the detail; the nirananda is supported by the Jiva & hence lingers.

Morning Lipis. (Mostly Akasha)²²

1. African . . rapidity  (Really, two separate lipis)
2. Jollity—festivity.  (From yesterday, often repeated — unexpectedly fulfilled this evening)
3. Intellectuality . . type of the intellectualities.  (Current lipis)
4. Fortnightly . . twilight.  Subsequently suggested that every fortnight shows a fresh growth of intensity in the ideality.
5. The benefit of the totality
6. Deathless intensity
7. Disengaging itself  (In reference to the rupa)
8. Joyful exhaustion—disintegration of the self-intellectual-ity. (This is often repeated in various forms & temporarily established in fact only to be broken again)

²² In the following list items 8 and 7, 19 and 18 were written in the manuscript in the order listed. — Ed.
9. Ghose. (Reference to Dr. K. D. Ghose)
10. Finality telepathy & trikaldrishti.  ie firmly begun—fulfilled (May 21st)
   (Said to be all connected in sense. All occurred near each other in chitra. Fish refers to the rupa.)
12. Catholiques . . brahmaniques  (beginning to be fulfilled—May 21st)
13. Disengage the siddhi from the asiddhi first in the telepathy.  
   (Direction to Shakti)
14. Ꙃ—(Guj [Gujarati] letters = When. Time to be fixed in the trikaldrishti)
15. The intensity of the lipe . . legibility.  (ie growing towards perfection).
16. Small . . faith . . eager.  (ie the eager faith belongs to the alpa not the mahat)
17. Already suggestions are of the ideality.
18. Tuesday is fixed for the perfection of the blaze.  (Finality is not suggested)
19. It is against the systematic legistic temperament that the spirituality is directed.
20. The situation in England will develop with surprising rapidity.  
   (fulfilled)
22. Transition period . . (To be read with 19)
23. Suffer  (twice—fulfilled in the afternoon)
24. St Joseph’s College—(daily & frequent)—refers to far future.
25. Les Meilleures dispositions
26. Joyfully exhaust struggle.  (Direction to Shakti)
27. Suffer always, changed to Suffer always delight to all eternity
28. Suffering is always present (as delight) to all eternity. (The words in brackets were afterwards added)
29. Saturday to Tuesday. Said to be days of unbroken advance.

23 The first of the rupas listed below. —Ed.
Trikaldrishtis.

(1) Continuance for some time of the struggle between soil & purity in the teeth. (In the sense given not fulfilled, for the teeth which are at present the field of the shiftings changed to a pure white, in accordance with an opposite suggestion not then believed or recorded)

(2) Image & form in pranajagat will now acquire a motional stability. (There were two or three initial movements of fulfilment)

(3) Rupa is still to develop slowly,—some stable clearness of form today. (Slight fulfilment noted in the body of the record).

(4) Trikaldrishti will not firmly emerge today. (Amply fulfilled)

(5) The trikaldrishti of exact time & place will now begin to generalise itself.

Rupas. **Symbolic.**

*Eye—fish.* The eye is vision; the fish travel.

*Sophic*

K.B.J [Khaserao B. Jadhav] in Pisacha period (Samadhi)

Mar. 28. **Opening sortilege**

(1) मिति नो वर्धय इदुसु इन्द्रेन्द्रो बुधा विग्न।

िर्धा राजमणि इर्दी भवमर्ति न विदविति।

Indra = pure Mind. Indu = Ananda. *Ishtaye* = for sacrifice or for wish fulfilled or for impulse or force of action. *Vrisha* = as master or strongly or abundantly. *िर्धा राजमणि* = going straight up or ahead.

The sortilege indicates the control of buddhi by the Ananda-tattwa of mind in its full force & abundance for thought, emotion & action and the forward & upward movement of the Yoga free from internal enemies. This movement begins decidedly today & progressively frees itself from the relics of the old movement of battle & struggling advance. Hitherto the movement was only being prepared. Now it is ready.

(2) तल्लिमान्ना वेद्या गिरो य एक्षंपर्यौऽऽ। अनू स्वर्गः यमुन्यत यः सः न चुँम्म्पुतः।

ie the Srutis of the Vijnana are to be established by Ananda in Vijnana Buddhi which governs all the lower actions; the self-fixity
of the higher Nature in its law of works is to be sown as a seed in all the nature of the vijnana buddhi and perfected as corn is perfected by the rains & cleared of chaff on the threshing floor.

This will take a longer time to fulfill than the first sortilege

Trikaldrishti

The ashatru movement is now possible in the knowledge because the intellect is now purified of any wish to dominate the system and use the ideality for its own purposes. The *baudhā narah* still from habit intercept or misrender or try to anticipate the vijnana suggestions, but it is done unintentionally and mechanically and the movement corrected as soon as its [illegitimacy] is perceived. Trikaldrishti is once more acting above the telepathic trikaldrishti, a little obscurely, but correctly; except when it leaves the telepathic overstress to figure as trikaldrishti, it is already able to indicate the immediate event in seen objects & occurrences & even a little beyond the immediate event.

It is only, however, from internal enemies that the movement is free; the external are still there though they work from a more remote station, *dure not anti*. Here the Ananda is attempting to regard their opposition as from God, as a means of progress & by that constant impression on the intellect to prevent the return of suffering & permit the steadily joyful exhaustion of the struggle & of the active intellectuality itself. But for this the mind is not yet prepared owing to insufficient faith in divine protection and aid throughout, this defect permits the outer enemy to cloud the mind entirely from time to time so that the nirananda may have free play on the basis of unfaith. Nor does the Jiva at present wish to renounce the unfaith, owing to the persistent experience of self-delusion in the past & the determination not to be a willing party to self-delusion in the future. To everything therefore that is not yet proved by experience, there is only a provisional faith given if any, ie a mixture of faith & scepticism, an “It may be” or at most “It may well be” or “It probably is so.”

24 MS off
25 MS legitimacy
There is now a double movement; the first, to replace the undefended intuitional ideality by an intuitional ideality defended by viveka; for it is found that when viveka is combined with the intuition (Daksha with Sarama), then there is less chance of the intellect misinterpreting or interfering with the truth. The second movement is to develop behind the higher or intuitional ideality an assistant revelatory (highest) ideality on a larger scale than any that has yet been manifested. Both, however, are on the lower rather than on the higher levels of their respective planes.

The difficulty now felt by the intellect with regard to the tapas, is why there should be insistence by the tapas on a movement not willed by God. So long as there is ignorance, the tapas may be exercised in the confidence that it is a means of God's workings even when the event is to be the opposite of the result attempted; but in the present stage this rule no longer satisfies as a rule of action. It is evident that there is a movement towards the renunciation of preferential Tapas not in accordance with knowledge. It is not likely however that this movement will be seriously effective for some time to come. Still, from henceforth, intellectual tapas in action must be renounced, like intellectual tapas in knowledge.

The vangmaya is now re-ascending to the inspirational form & it appears that it will act for some time indifferently in the higher & lower vijnanas & vijnana buddhi, but always with a tendency to finish rapidly its work in the vijnana buddhi & confine itself to the pure vijnana. A more general movement of the subjective thought-trikaldrishti is being attempted as opposed to the objective trikaldrishti which follows the movement of an extant object or present event. In the former the difficulty of the intellectual belief is that there is no means of physical verification or contradiction except when it is applied to history or the past of living men; in the second the telepathic difficulty (of misplacement & overstress) is yet unannulled & really unconquered in the normal perception, even if partially dominated when the siddhi is active.

The symbolic rupa of the fish & the eye has been fulfilled or begun to be fulfilled this afternoon, in images & vijnana definitions of the images. There have also been new symbolic and other images.
1. In antardarshi—

The golden Kali four-armed & weaponed, destroying the Asuras; a young man rushes at & throws his arms around her in filial love not hatred; he is spared & lifted up & carried away in her arms no longer as a young man but as a boy. Symbolic of the process of conversion from the Asuro-Rakshasic mind to the divine balabhava by the embrace of Kali. The visitation of Kali seems to be intended to save him from his Asura environment now turned hostile to him as to Prahlada. Qy. [Query] Was it in this way that the legends of the Puranas were formed? Jyotirmay Images.

2. Image of the Pashu-raid. A woman more mature of body & face than the other, fleeing with her two children. In the second image she has abandoned her children, but is seized by the hair by the younger Barbarian & is falling backward into his grasp.

The antardarshi, it is to be noted, no longer merely follows the Bahirdarshi, but is active in its own way & on its own lines. Akasha images continue to develop stability & clearness in the Bahirdrishta, but the progress made each day is infinitesimal.

Later in the afternoon the rupa disengaged itself more clearly from the veil of the asiddhi; instances occurred, other than the jyotirmaya & varnamaya bird, of crude rupa clear & yet stable for a second or two with a slight interval or tendency to interval of momentary obscuration, eg a shadowy hand clear, though not complete in detail, with a coat-sleeve & white cuff, figures of women, men on horseback, some of them entirely complete & clear.

Gandha & rasadrishti once more emerged, stronger & freer than before.

_Gandhas_

1. Of wine (no wine anywhere near)
2. Of cooked food in the room near the nose or rather in the pranakasha
3. Of bread warm from the oven.
4. Immediately afterwards of stale bread
5. Of eggs, salt & butter—Repeated later in the evening
6. Of salad, of vinegar & fragrant vegetables, of raw onion

{long continued}
7. Vague & subtle, of flowers.
8. Of tobacco.

Taste
1. Taste of butter, first vague & subtle in other akasha, then in sthula palate, very long continued.
2. Taste of toast, with similar stages.

All these were without adhara sensible or visible; they can no longer be referred to a distant gandha keenly felt or any physical cause.

3 [no notation]

There is an attempt of the trikaldrishti finally to reemerge after being veiled in the afternoon. In accordance with the Script, “There will be no such return of suffering tomorrow, although there may be attempts and touches,” there was no repetition of the last three days’ crisis, only in the morning some heavy but passing touches, & in the afternoon & evening one or two quite fleeting attempts.

Lipis
Referee. ie the referential process has still to be used for some time until the external intellectuality can be dissipated

Orange Kingdom—jyotirmaya lipi—orange is the symbol of psychic knowledge & power

The tapatya . . the glory
Infinite telepathy
Rupa. Symbolic

Momentary incomplete tejas-surya followed by krishna-surya.

Mar 29.
Opening Sortilege.

(1)a. अनानुदो बृहीं जगिमराह्ये निहत्ता शरुं पूजनायु सासिद्।
अथ सत्य ऋणया ज्ञानार्नवत उपस्य सिद्ध दीपिता वीजुर्विन:।
अदेवन मनसा यो रिष्णदित आत्मनुयो मन्यमानो जिज्ञासित।
वृहत्यया उत पुष्करस्य नो वैभवो नि कर्म मन्यु तुरियस्य शर्मत:।

Applied both subjectively & objectively—अनानुदो—without the tejasic egoism of aggression—ऋणया in forward action internal & external—रिष्णदित—seeks divine knowledge & power.

(1)b. त्यथा बृह्मुण्डम् धीमहि यथा बृहत्यया पत्रिणा संख्यना युज्य।
In the morning the vijnana was held back & the intellect in the external swabhava allowed a free play; it is still able to occupy the outer mind (ज्ञानं मन्योऽन त्यक्तं) but not with intensity or with any great or exultant power of pervasion (ugra, viduharshin); still it seeks with unillumined mind to seize on knowledge & power (अदेशं मनसं विशेष्यति)

Lipi

1. *After telepathy, trikālādrishti.* Telepathy is already infinite in its movement, but not yet sure. Trikālādrishti is hampered even in its mahattwa. Telepathy cannot be sure without trikālādrishti either telepathic or pure vijnanamaya.

2. Telepathic Trikālādrishti (Intensely vivid lipi, varnamaya)

There are now three forms of trikālādrishti working, the telepathic which is extraordinarily accurate when not besieged by the telepathic overstress, the intuitional which acts but is rather blurred & indistinct & uncertain, the revelatory which is veiled and revealed only in the buddhi, therefore especially open to misinterpretation. At the same time with the diminution of the intellectual tapas, the daiyya tapas manifests more & more & introduces often the most sudden & decisive movements in the object of the will, e.g. Biren's fever expelled in less than an hour, the frequent cessation of disorder in the long-disordered washtap immediately on or soon after aishwarya, the repeated alteration by birds of their slow opposite or wheeling flight into a sudden & long-continued rush in the direction imposed. Still the atmosphere & habit of resistance still remains.

The afternoon & evening taken up by R's [Richard's] visit, Bh's [Bharati's] & translation of Rigveda II. 23 & 24. Bh. has fresh Yogic experiences, this time of the voice of God & miraculous cure. Aiswarya operated today consecutively & with small resistance in the flight of the bird. This has happened before, but then as an exceptional circumstance. The value of the present siddhi is that it is a part of a general and pervading advance. Rupa maintains itself but has not appreciably advanced. Vijnana is exceedingly powerful in Veda.
Bj. [Bijoy] gets the vision of the colour-body with regard to R—behind the physical body—yellow in blue, then red, red in black, again red and once more yellow in blue.

Today with the Veda, the literary work of the Dharma has definitely begun; proof is given of the general successful pressure of the spiritual power for the works of the Dharma in others; but it is not yet regularised. In Kriti & Samaja the power is not yet ripe for organised action.

Veda II. 23, 24, 25, 26—completed today. This shows a great advance in sustained energy.

Sortilege

En Préparation. Les Dieux. ie the Devas of the Ritam, Agni, Soma, Brihaspati, Varuna are being settled & manifested at last in the system (griha; sadanam).

Mar. 30.

Mahadbhava of the trikaldrishti is asserting itself, but being often still confused with the telepathy it is mixed with the trikaldrishti of possibilities & is therefore still impure (asuddha, sankara).

Opening Sortilege.

अर्नन्दमाँकियम् स मे श्रणं चूषणा हुयं।
प्रति सकांति हुयंतं भवते रागभ नायः॥

ie Forces of Action & Delight are to be combined and constitute the Ananda of perfect self-expressions in the material life.

Trikaldrishti of Time is beginning vaguely to arrange itself, eg Richard's arrival on the 29th, not as had been arranged on the 28th, his visit on the same day, & less clearly in the afternoon. But the mind has as yet no confidence in this action of the trikaldrishti. Moreover exact time is now seldom right; the former siddhi is still dormant.

The day again was mostly passed in Kriti. Veda [II.] 27.

Mar 31. Tuesday.

After a struggle the freer action of the higher vijnana has begun in preparation for its becoming the full action & absorbing all other activities into itself. A signal example of its minute action in tapas.
has been given in the action of a wasp which was guided to a narrow hole in the glass & out contrary to all probability, as it had to abandon five or six other natural lines of action to go direct to this exit. The aishwarya began with resistance & crooked movement (hvara) & ended in the straight & spontaneous action (riju). This is a sign of the course that will be followed with the tapas. As yet, however, the action of the higher vijnana is in the vijnana buddhi instead of being in the vijnana & on the vijnana buddhi; unless it is in the vijnana there cannot be the blaze predicted in the lipi for Tuesday.

Opening Sortilege

(1) एतज्जुध्ये यदि मन्यसं वर्षृणीय विलं चिरजीविकां च।
महाभुभीं नविकेतल्वमेधी कामाणां तथा कामभारं करोमी॥

The suggestion of worldly life in this sortilege having raised spiritual doubts, the solution was promised in a second sortilege

(2) सप्ताल्सं श्रुतोक तदसं, उपाध्ववशीलदेहवत्वस्य जीवेत
संसारित्वादिदुहस्मां कोरुका पोरिखा योगादिव्यांकं विरुद्धमत्ववस्यपापिति -
बंधनवल्ववाहिकेऽ स किषिदुपप्राणित्वाह॥

This justification leaving still some doubt as to the working justification, a complete & decisive justification was promised in the third sortilege

(3) यस्तु विज्ञानवा भवति युक्तेन मनस्सा सदा।
तस्यविद्वाराणि प्रमाणिः सर्वा इव सारधे॥

Therefore it is a vijnanamaya muktabhoga arranged in the ritam that is suggested.

Strong opposition in the kriti. Struggle between old discouragement & passivity & new tendency of even tapas.

April 1.

Opening Sortilege

तव ते अर्जुन अर्चयो मंझ गृहं प्रायंत वाजिनः।
ये पवित्रमिन श्रवणं छोटा भुरंग गोजियमि ख्रोहुदुः आ भर।
तव नो अर्जुन आ भर ख्रोहुदुः सुक्ष्मवीरिषिः।
ते ख्रोहुदु य आनुवृत्तान्तावं दूर्दोषे।
उँ च मुख्यं सर्विन्ह दवं श्रीणीपु आलित॥

That is the movement of the panic forces of tapas increasing must reach & become prakashamay & firmly established luminous
impulsions; both minds becoming one movement in Tapas.

Very clear rupas are now manifest with some stability on a background or more rarely in the Akasha. The process of disengaging the crude rupa may be said to be on the point of completion. Power works more constantly in the ordinary field of its activities, & vijnana seeks to extend itself to the direction of power. Here there are two movements, one seeking to guide the action without insisting on knowledge, because knowledge is now only knowledge of tendencies, and one seeking to know not only tendencies but eventualities & to guide the action towards & through the eventualities. As yet nothing clear has emerged.

April 2.

Doubt as to R’s [Richard’s] theories which are assailing the mind, eg. theory of kama and ego as the seed of the world. Promise of a sortilege in reply.

Sortilege.

(1) महसौष्ठमात्रस्य वेषः नानाश्चिन्तिषः किंचि।
    मूलयोऽपि न दृष्ट्यो भवेदन गच्छति।

(2) यदहावति युवाः अस्मि यत्र च गच्छति।
    ते देवा: तस्मै अपिनातात्मा नाते गतचिति कथन।
    यदर्थः तदस्मै यदमुः तदस्यवहू।
    मूलयोः: etc.

Perfect Rupas (indistinguishable in appearance from reality, only in bhava) eg a bell, scent bottle are now again manifesting, but only for a fleeting fraction of a second. Telepathic drishti continues to widen & become surer & surer in its better moments, but relapses back into confusion & false stress. The higher vijnana emerges from time to time out of the telepathic mind or behind it or above it.

Rupa developed in the evening, according to prediction one or two forms of less crude rupa & even of dense.

April 3.

The blaze of the vijnana only temporary on Tuesday became steadier & took possession of the knowledge in the form of the revelatory vijnana which has hitherto been veiled except in exceptional
movements. For the most part this vijnana acts on the lower levels direct upon, in or close to the vijnanabuddhi. It has not yet taken firm possession of the trikaldrishti.

Dense & developed rupa increasingly manifests but has not got hold on the akasha. The action of the tapas varies & is still exceedingly uncertain, but it has always a greater volume of effectiveness. Telepathy grows in power & efficiency. Sahitya has been for some time suspended. Utthapana was resumed, but without any advance.

April 4. Saturday.

Opening sortilege

वेद सम्भावित विद्यानि एवं देवानि ज्ञान सत्तरा च विपि।
झुँझुँ मर्त्यसूर्यजना च पत्यजनि वर्षे सुरों अर्थ एवान्त॥

ie—When the soul is illumined & knows the three kinds of knowledge of these gods (ie Swar, Bhuvar, Bhur) & their eternal birth from the Divine Parapurusha, Surya of the vijnana, sees in mortals the straight & the crooked and illumines in his fulfilling power of upward movement their goings. This indicates a promise that the action shall before long be illumined & guided by the revelatory vijnana. In fact this has already begun this morning.

Saturday was fixed in the lipi (on Tuesday) for the fulfilment of the movement begun on Tuesday. It has also been fixed in the thought for the beginning of a new period in the siddhi, when the Yoga is to be applied fully to life; for it is the fourth anniversary of my arrival in Pondicherry.

Lipis

1. The faith of love.
2. The faith . . destiny (yesterday)
3. Tuesday (yesterday) 5 Efficient telepathy (yesterday)
4. Thursday 6. Death of the difficulty . . filled with God (do)

The whole difficulty of the knowledge is now the difficulty of manifesting the ritam in time with regard to the trikaldrishti, for the brihat & the satyam of the revelatory vijnana are established, even in the trikaldrishti; but because there is defect of the ritam, the siddhi slides back frequently to an inferior level where this knowledge can be obstructed.
5. Imagination . . that is a form of desire
6. The glory of the ideality (is already manifested in the Thought & is extending itself to the trikaldrishti).
7. Exhaustion of the difficulty . . the fulfilment of the glory of the ideality . . the glory of the lipi.

Owing to the efflorescence of the revelatory faculty, Agni & Soma, the Ananda & the Tapas are now taking united & harmonious possession of the mind; obstacles are taking their right place in the knowledge as means and managements for the accomplishment of the decreed end. The Ananda of obstacles & defeats is therefore now increasing & possible in perfection, because it is no longer a tamasic ananda bringing with it cessation of Tapas. Thus a development long ago insisted on & always obstructed is now being fulfilled, the view of the obstacle & defeat as a step towards victory & the ananda on that basis, not on the basis of tamasic submission (nati) in the idea that defeat is the will of God. The sortilege of March 30 is now fulfilled. Agni & Soma together have become dasushe mayas. This involves the fulfilment of the sortilege of the 29th. Ni karma manyum durevasya shardhatah. That of the 1st April & today’s must follow. Only Tuesday’s still remains doubtful.

Notable fulfilments of the aishwarya now occur, eg in regard to Home Rule & the increasing tendency to settle it by agreement between the two parties.

Lipi—

8. The delight of the ideal responsibility—(ie the renunciation of the personal responsibility of the ego & the acceptance of the universal responsibility of the Prakriti to fulfil the commands of the Ishwara)
9. It is still . . tonight (ie still resisted in the trikaldrishti—tonight success)
10. Today . . the illumination in the trikaldrishti.

It was perceived that the Ananda Brahman long increasing

---

26 Numbered in sequence to the four lipis near the margin; those numbered 5 and 6 were apparently not noticed. —Ed.
upon the active consciousness would today find its permanent base and then continue to possess the whole akasha of the being. The process has actually begun both within & without. The general physical bhukti is also remanifesting with a firmer grip on the body. In both cases discomfort & pain are included in the Anandabodha which is mild & tepid, not chanda and not either saumya. Trikaldrishti is assuming the revelatory method, but the process is only at its commencement.

April 5.

A strenuous & sustained attempt since yesterday evening to bring back by all the old devices the old nir´ananda. Hitherto there has been no success except in the external touches. The nearest approach to success has been secured by the return to the old tapatya & struggle with adverse forces to bring about the Aishwarya; this is always attended by confusion of knowledge & then by nirananda, physical discomfort of the struggle in the mind and the failure leading to emotional pain & revolt.

Sortileges—

(1) Comme une partie de la famille
(2) इन्द्रियाँने बुध्दि विद्या . असज्जित न सिद्धिसि
(3) प्रायाणव तत्वद्ध जर्जमे गुरङ्ग गुर्गं निधिमतमन्मच्छू
    प्रभुबले बिने उल्लभामा इत्येव हुम्हा जन्मा पुरुषा।
(4) सोमसुप्रयो जनना र्वीणा जनना दिवो जनना पुष्ट्या
    जाती विश्वस्य भूलजन्य गोपी देवा अकृत्यभूलजन्य नाभिमा।

ie Knowledge & Ananda, creators of the various possessions & felicities, creators of the purified heaven of mind are also to be creators of a purified & blissful body & become protectors of all that has been created in the being; the gods have made them the navel, central support, of the divine & immortal nature. For that it is necessary that the full abundance of Ananda (Indo vrisha) should be maintained in the system & the opposition should be regarded as belonging to the operations of the favouring Shakti. Then the Aswins are to enjoy the object pressing the Soma out of it like stones of the distilling, to hasten to enjoyment like kites to their nest, to take enjoyments & actions as delightful offerings to the gods & to do all this as soul powers expressing the thing desired
in the knowledge, not in the ignorance. The Aswins are the gods of vital Strength & Joy.

Veridical Rupa

Rupa of the ear—(karna = Sruti); interpreted, Sruti, inspira-
tional knowledge has to act so as to lead back the environmental
nature to drishti in the trikaldrishti. This very soon began to be
fulfilled.

The Srauta vijnana is now combating the return of error &
evolving the finality of the certain & decisive trikaldrishti. Mean-
while the final purification & illumination of the tapas is being
prepared.

There was a perfectly vivid & unbroken continuity of single
movement in several images of swapna-samadhi along with lifelike
perfection of the scene. But fixity does not yet establish itself.

April 6.

There is an attempt to break the violently pronounced tamas
of the body which has prevented all work recently. Today there
was sahitya (Veda II. 28); yesterday some utthapana. But the tamas
persists. There is also inactivity, for the most part, of vijnana, lipi
& rupa; only the Aishwarya makes slow progress.

Ananda Brahma is now an established element of the Brahma-
bodha, but it is not perfectly manifest in the mortal object, only as
something possessing & enjoying it so that grief, discomfort etc,
while keeping their nature, are yet movements of Ananda. But the
personal Anandamaya Purusha is only occasionally manifest.

April 7.

The Anandamaya Saguna becomes more & more immanent
in all objects, & what is more difficult in all beings, to the con-
scious vision. The vision of all movements of sensation as forms &
vikaras of Ananda-Chit-Sat is now fixed, as also the comprehensive
Ananda-Akasha in which all things move, & of actions as vikaras
of Ananda-Tapas.

Today also the Mahakali Tapas seems to have been perma-
nently fixed in the system free from all accompaniment of rajasic
ego or of straining, unquiet, eagerness, in full harmony with the

www.holybooks.com
first chatusthaya. Only faith in the destiny is needed to assure & complete the undisturbed entirety of the second chatusthaya.

The third has been largely inhibited, except for its indirect action in the vijnanabuddhi, for the last few days, although great results have fixed themselves in the actuality even in the midst of this period of suspense, reserve & comparatively unprogressive balance. The issue now is as to the relations of the Maheshwari and Mahakali forces. The Maheshwari pratistha has to be covered over entirely by the Mahakali contents of the Mahasaraswati bhava & that again to inform itself with the colouring of the Mahalakshmi bhava (love, madhurya). All these results are preparing, but largely dosha, in the avyakta.

April 8th

Dream this night, after a long struggle, recovered a sufficient coherence, not perfect,—for two separate dreams, connected in purpose or thought but diverse in time & surroundings, were falsely linked and there was false adhyaropa of personal & present ego in the principal personage,—but sufficient for the vijnana to work and disengage truth from error. There is a tendency also to recovered activity of coherent & thought-governed swapna-samadhi.

Lipis

1. Self-existent trikaldrishti
2. Disengage the faith from its obstacles
3. Authority of the lipi—exaltation of the lipi

1. Telepathy is now self-existent; trikaldrishti is to become the same. This has now begun to be fulfilled in the telepathic parts of the trikaldrishti which are revealing everywhere their satyam, but not yet their ritam, for the latter is hampered by the false action of sense-mind in interpreting the vijnana as well as the telepathic perceptions. The self-existent vijnana trikaldrishti is also occurring at times, imperfect, but fairly consecutive.

2. The mechanism & principles of working, the object of apparent retardations & relapses, deviations, errors, failures, are now becoming so apparent that the faith in the purposeful guidance of the Ishwara is on the point of being perfected. Faith in the ultimate fulfilment is only contradicted or held in suspense, (1) as to the
physical siddhi in times of great obscurity, (2) as to the destiny, at all times, except moments of strong force & enthusiastic sraddha. There is now restored faith in the perfect particular satyam of the telepathy & its imperfect ritam; the same is incipient with regard to the particular movements of the trikaldrishti where they are not challenged by doubt or corrective intimations of other possibility in the mind. There is deficient faith in the effective particular aishwarya or in the general rapidity, though particular rapidity is admitted, as also relative rapidity except in the fourth & fifth chatusthayas.

_Lipi_

4 _Aishwarya_. 5. _astral . . astral_ (referring to a tendency to consider favourably the bases of European & Theosophical mysticism)

5. _Exulting_ (effective aishwarya)

6. _Liberty_ (now complete except in the body)

7. _Exit insistent tapas_—(ie physically insistent with the stress of external desire).

Physical Ananda (Kama), constantly combated & at last almost entirely suspended, is now again attempting to reestablish its constant recurrence. Its intensity remains constant & has not to be rebuilt, in spite of lower touches, but its extension has been suspended & is not yet remanifested. For one day, at least, there was a practical suspension of all kamananda (maithuna) except, possibly, in obscurer or suppressed movements.

Ritam of trikaldrishti is still successful[ly] resisted, although it is more frequent than it was when the forward movement was suspended. It is, however, progressively purifying itself of error. Aishwarya & ishita are also becoming more & more effective & exultantly effective, in accordance with the morning’s lipi; for the bar or prohibition against exultation is now withdrawn, because harsha of the lower mind (joy of fulfilled desire) is now being replaced by chanda saumyata of the anandamaya observation in the desireless sakshi. Formerly, will always created immediately a reactive opposition which brought about, and more often than not with either immediate or eventual effectuality, different or reverse movements. Now this principle of resistance is less frequent, less
confident or not at all confident, tired and seldom eventually effective except in the pure physical object or in things of the karma & even there its power is slowly but steadily waning. The triumphant immediate force with which it acted, is almost dead; when a ghost of it revives, it is almost immediately tired, & if it persists, persists with difficulty.

The Anandamaya Lilamaya Saguna is now being established in the conscious observation of persons & objects, although the Anandamaya Saguna is the usual bodha & there is a tendency of relapse to the mere Jnanamaya Saguna, but this is comparatively rare. Anandamaya Saguna tends to be the assured level (sanu) of the Brahmadarshana from which there is a steady tendency to rise to the Lilamaya. Formerly the sense of the Lilamaya Krishna or Narayana used to blot out the Jiva and, also, it used to be isolated without the background & continent of the Sarva Brahman or the pervasive content of the Sarva Ananta Jnana Brahman,—it was divine Anandamaya personality concentrated in a single individual being. All the suspensions, relapses & retardations of the Brahmadarshana during the last few years have had for their object the removal of these & other defects and the development & harmonious unification of its various aspects, Saguna & Nirguna, Purusha-Prakriti, Ishwara-Shakti, Prajna-Hiranya-Virat, Sarva with Ananta, Sarva-Ananta with Jnana, Sarva-Ananta-Jnana with Ananda etc. The unification seems now to be approaching completion.

The interpretation of the lipi is also now acquiring a firmer sureness and quickness & with this movement there keeps pace a growing authority of the lipi. All intimations of knowledge are now accepted not only in theory & faith but in practice & perception as satya, & both the tendency of the mind & its capacity for discovering the true source & nature of all suggestions is increasing. Only the primary error of estimation & its subsequent uncertainties have to be got rid of, in order firmly to base the ritam.

April 9th Thursday.

Tuesday & Thursday were fixed in the lipi as the dates of a definite result in the siddhi. Tuesday was fruitful openly only in the second chatusthaya, but this proved to be the starting-point
of a strong siddhi in the third. Today, the aishwarya-ishita-vashita show a strong perfection which amounts in its best movements, & these are frequent, to a control only checked by a slight ineffective resistance or rather passive inertia & unwillingness in the material world. This is marked in the lipi by the figure sixty. Originally the values of the siddhi of power used to be 1, 6 & 10. Afterwards the lipi showed 20, 30 & 40. At 40, which is now tending to be the normal pitch, there is an ordinary effectiveness, subject to variations of completeness & definiteness, attended by a constant, but not ultimately successful resistance. At 60 the resistance is only initial and not maintained. At 80 the resistance will be only a memory of inertia. At 100 there will be a complete mastery. Moreover this power is not confined to the joint action of aishwarya-ishita, aishwarya vashita or vashita-ishita, but is attaching itself to their separate action as well. The old levels of efficiency & dull resistance still continue to manifest, especially in massed actions & in the resistance of finalities, but even here their strength is much diminished. Instances of swift & decisive siddhi are accumulating rapidly eg the rapid denouement of the Army crisis, the non-resistance of the Unionists in East Fife, the relaxation of the Ulster difficulty, the growth of the idea of Federal Home Rule, the South African solution, events in Bengal, tendencies in Pondicherry etc. Even in physical things the power increases, eg the stoppage of the disordered pipe twice in two minutes after it had been running persistently for three or four days & was at the moment in a violent state of disorder. Exact fulfilment also is now approaching the point of establishment.

Today the Lilamaya Purusha is manifesting itself in the Lilamaya Saguna as the normal perception; the other still remains as the lower or foundational level to which the pratibodha goes back when it is not samāhita.

Trikaldrishti of time, place & arrangement is now growing as self-existent knowledge, but exactness of minute, day, spot, precise line, precise succession are still in an indeterminate condition or manifest as the less frequent rather than the more frequent circumstance of the vision.

As a result of today’s & yesterday’s movement an incipient faith in the destiny is coming to be established, but it is still resisted
by the sceptical intellect in Nature which demands more direct, decisive & personal proofs. These, it is intimated, will not long be wanting.

Sortileges

(1) Obtenir le prestige par la victoire (Kriti)
(2) Vouloir (exclusivement) la délivrance de ses vassaux. ie of the inferior Devas— but exclusively means simply to the exclusion of other ideas of justice, injustice, merit, demerit, good karma, bad karma. (Dharma & Kriti)
(3) M. réservait ses forces essentielles pour l’unique but de conquérir les plus hautes initiations. Maintenant il lui fallait se soustraire à ses magnanimes ambitions, vouloir etc.

Kamananda continues to recur, but has not yet recovered its old force. The nirananda unaccompanied by ananda still clings to a few touches of discomfort and some degrees of pain, but otherwise the liberty of the body from the dwandwa of pleasure & pain through their unity or companionship is now well established.

April 10th.

Dream last night was triumphantly clear, rational & coherent & free from all present personality & present associations; the dreamer was entirely absent in person from the dream & confined to the most diminished rôle of the sakshi,—viz an undefined sentience that watched, (not even a sentient person,) & was not even aware of itself at the time, but only remembered itself after the dream was over. On the other hand swapnasamadhi is back in the stage of obscure stability.

Today Mahakali personality of Mahasaraswati with the Mahalaxmi colouring has manifested & the Maheshwari element has lost its conscious place in the personality & been reduced to a base of calm sentience seen physically as a pedestal of level consciousness from which the personality rises. Also the universal pure kama has re-manifested contradicted only in the fibres of external being with regard to a limited number of personalities. Thus the lipi 13 which has been constant recently but seemed unjustified by anything definite in the current experience has been fully vindicated. It was being prepared dosha not ushasi. Now it is manifest, formed, ushasi.
Relation with Mṛga at last defined in the spiritual & psychological experience. Mṛga (Vayu) liberated from his Kali formation. The result has been the manifestation of Vayu in the heart—the first Devata to personalise himself in the present consciousness.

Tertiary dasya has suddenly been restored, first in its secondary phase, then in its tertiary fullness.

The Lilamaya Narayana bhava has now been withdrawn; the Anandamaya Saguna Brahman is constant, with occasional manifestations of the Lilamaya Krishna.

Lipi

1. *Falsehood of the intellectuality— inert.* (The inert denial is now being thrown away as convicted of falsehood & inutility)
2. *Descend—* (the devatas, the Deva).
3. *Στήνετε* 6. [no notation]
4. *Society objectivise*
5. *Intensity of the ecstasy.*

Farther Samadhi resulted in the remanifestation of almost all the past siddhi, and in one image clearness & a sufficiently long stability were at last combined.

Samadhi

1. A voice. “One archevêque plus.”
2. Symbolic image. A revolving disc, an arm coming out of it to seize Le Vaillant who, wading waist deep in mist, bends down as if to hide himself in the mist, without reaching it, and looks back at the arm.
3. Chhaya of Tilak.

Rupa, after several days’ quiescence, has been restored to its former activity & attempts to advance but does not yet advance beyond the point already reached. More samadhi with remanifestation of thought in the sushupta state of manas; the thought occurs consecutively above the sleeping manas in the vijnana (esha jagarti supteshu).

Today the old murti of the Kāli-Deva descended for a while into the bodily consciousness & also the old image of the Christ consciousness. Linga shariras & influences of Indra & Agni have also manifested & of the Aswins, the former in the mental rupadrishti.
The trikaldrishti & effectiveness were today entirely obstructed & the karmasiddhi suffered, as the result apparently of My’s liberation releasing his adverse tendencies from control & hesitation in the Nature & throwing them in the personality upon my mind.

April 11th Saturday.

Dreams many & for the most part perfectly coherent; only the last two or three were affected by present personality & associations, but not by present images. The incidents & forms were real & coherent, & the incoherence existed only in the thought of the sakshi fixed by adhyaropa on the central images,—rupa & karma were correct, nama only confused,—eg the Salle de Lecture of Pondicherry adhyaropita on a small but efficient & nobly built library, the Baroda College or a place of education in the same locality, London, brother, sister etc being brought in & fixed on forms & places entirely different. There was also a tendency to run different dreams into each other. In Samadhi thought has become fluent, coherent & self-possessed above the sushupta mind, lipi is clear & frequent, writing or print struggles to be coherently legible, forms & incidents are still in the stage of obstructed progress towards stability.

The difficulty now is to harmonise the chanda action of the Mahakali personality with the luminous effectiveness of the vijnana, as it has been harmonised with the internal purity, liberty & bhukti. For the luminous & effective vijnana has hitherto been the privilege of Maheswari-Mahasaraswati, & the Mahakali bhava has been always accompanied by false action, false tejas, false knowledge due to eagerness, hope, desire & preference. The old association has revived in the environmental nature owing to the liberation of the asiddha vayavic forces in the surroundings.

Lipi

1. *It is finished*—ie the transitional movement of harmonisation between the first two & the third chatusthaya.

2. *Transit . . believe. It is still difficult to believe*—referring to the same movement.

3. *Foothold . . nothings*  ie—These old asiddhis are now
nothings; for even if they are given a strong foothold, they cannot keep it.

4 telepathy

The Narayana-drishti, which had been withdrawn, is now established in the Sagunabodha and seeks to be confirmed. The Krishna-darshana is, in its turn, withdrawn. In the Darshana, however, Nara is prominent, Narayana in the background.

As the vijnana began to remanifest & harmonise with the ugrata of the Mahakali bhava, the inimical forces made a violent attempt to bring back the nirananda & ashanti of the asiddha Kalibhava in the Prakriti; the attempt was partially successful in the outer layers of the personality & although rejected, returned. The harmony, therefore, of the first two chatusthayas has been temporarily disturbed, although not in the mass of the consciousness, but only on its outskirts. In fulfilment of 4 telepathy & telepathic trikaldrishti manifested with complete satyam & almost complete ritam for a while. The struggle continued till 2 in the afternoon. Samadhi still strives for perfection, with very slow success, but it is plunging into greater profundities of slumber.

Lipi.

1. Do not accept the telepathy as trikaldrishti

2. Liberation .. θανωστης — ie from the posthumous action of the old dead Prakriti.

The 3rd lipi of the group has been interpreted in Script as a direction to apply the fourfold Brahma-darshana to the things of life through the Sarvam Jnanam Brahma, — & the systematic application has actually begun in the form of the brihat satya telepathy & trikaldrishti which was given in type this morning. But in this type the ritam is still hesitating & uncertain. Tapas which has been almost ineffective throughout yesterday & today, is once more active. It is the aim of the new personality to get rid of the gradual process, generalise the concentrated or even the involved & so ensure a triumphant rapidity; also to get rid of all the old ascetic conditions of Siddhi and Ananda.

Even violent & prolonged pain as well as violent & prolonged discomfort are now capable of Ananda; but this siddhi has yet to be
generalised. If generalised it will be the first effectuality of the physical mukti. The other liberations are from the three tamsic dohas, weariness, sleep and physical depression; from the two rajasic, hunger & thirst, from the three cosmic, disease, death & physical limitation (e.g. gravitation etc). Of these only thirst is well advanced towards preparation of liberty, the others nearest being disease & physical depression which persist only from tamsic dhriti. Hunger has a less sure hold than in the average body. The rest are yet in full or almost full possession, except for the imperfect primary & secondary utthapana.

At night the Mahakalibhava asserted entirely the liberation from want of harmony which had been manifested in the morning and veiled afterwards, but did not yet assert its positive harmony with the first & third chatusthayas at once.

April 12th
Dream was less free & less firmly coherent. To the rupa & samadhi the obstruction is still great & prevents a rapid & firm result. In the vijnana the siddhi has returned to the method of affirmation & no longer seeks to reject, but to rectify error. The result is not yet the complete ritam, but a progressive liberation from the habit of dwelling on the telepathic perception of tendency & taking its demand & power of self-fulfilment for the eventual act. In a certain sense this is a recoil to a less advanced stage than had been reached a few days ago and has been necessitated by the fresh forces liberated by the dissolution of the Vayuputra.

Kamananda continues to recover its former frequency & hold on the system, but is still held back by the pranic deficiencies which result in exhaustion & roga.

The Brahmadarshan fluctuates between the Krishna, Krishna Narayana, Narayana, Nara Narayana, Nara in Saguna Brahman & mere Saguna bhavas. The two former predominate in children, the young & the beautiful, the Narayana & Nara Narayana in others; the Nara & mere Saguna are survivals from former states of perception. The Nara comes whenever the mind concentrates on the ego in the object of perception.
Sortilege

विषयिते भनिते स्वर्गिते सबृजिते गृजिते उर्जिते।
अमरिते गोरिैते अक्षिते मधुराय सोमेय यज्ञाय हृषेतेः।

Ananda is to be given up into Indra's hands for the action of the Lila (यज्ञाय).

The sortilege of the 1st April is now almost fulfilled, but for its completeness it wants the completeness of the indication of the 4th.

Today's & that of Mar 31st go together.

Lipi

1. Organise the will.  2. It is the energy . . it is the terrestrial energy

In obedience to the lipi the Will acting as a terrestrial energy was exercised on numbers of different objects in succession,—between 20 & 30. In all cases, except in a few in which a moving object passed out of range before the will could be effective,—the movement willed took place without resistance or after greater or less resistance. All three forms, vashita, aishwarya, ishita were tried; at first there was a difference, ishita seeming the least effective of the three, vashita most effective against active resistance, aishwarya against the passive obstruction of tamasic nature; but eventually all seemed to be equalised. Once, notably, aishwarya effected three successive exact & immediate movements in two flying birds with more than the sixtyfold power, but ishita also produced a similar result as well as one against resistance of the 50 value. Vashita also manifested the 50º, but not a higher value; that, however, it has done on previous occasions. All these effectivities were in particular movements and there does not seem to be yet the same effect upon persistent tendencies, established powers, material objects etc.

Kamananda today recovered something of its power of prolonged intensity & tendency to perpetuate itself in the system. At the same time subjective ananda is resuming its old intensities and attempting finally to get rid of the faint prano-manasic impressions of ugliness, unattractiveness etc which prevent the full & sama delight and are relics in the consciousness of mortal jugupsa. Universal prema & kama are also seeking final & confirmed possession of the consciousness in its parts of hridaya. The eka anandamaya Purusha also manifests in the Saguna Brahman with the ego as
a circumstance in His possession of the individual body, but these things are not yet perfectly assured. Ananda of acute pain has again been tested with favourable results.

April 13th

Last night & this morning were a period of arrested motion in which the enemy were allowed to attack the results achieved. Mahakalibhava and tertiary dasya of the body remained firm, but the first chatusthaya was touched with the external asamata, ashanti & even momentary duhkha. The Brahmadarshan wavers between the Anandamaya Purusha, Nara in the Anandamaya Sagna & the generalised Nara-Narayana. The sense of universal beauty has been successfully interrupted & denied in the Indriya, the face being as usual the fortress of the Asundara. There is also a continual driving down of the thought from the vijnina into the mind where it takes up the old forms of error.

The reading of R’s [Richard’s] book “Les Dieux” has brought up the question of the Master & the Adesha, whether it is a God or God and the adesha an arbitrary impulsion or the voice of supreme Truth & Power. The faith is persistently attacked by suggestions which mask as friendly voices or are declared enemies. In answer there have come these sortileges.

1. यत् द्वितीयो विज्ञानवानविज्ञानसारधूपत् र्हीव विज्ञानित्येत्।
   युक्तमभ: समन्तः सन एव सदा शूचि: स तु तत्वदार्पणी।
   यस्मात्तत्त्वादधूपस्य: सन्ध भूम: पुनर्वास जायते संसारे —

2. यथोक्त शृङ्खुऽ शुद्धमानिनं तात्त्विक भवति।
   एवं मूलविज्ञानत आत्म भवति गीतम —

ie — The failures & variations of the mental impressions & actions are due to imperfection of the vijnan, not imperfection of the Master who is the pure Vijnanavan Deva issuing from the Absolute.

3 यथं ब्रह्म च श्रवः च उभे भवत ओऽवः।
   मृणुर्यययोऽसंघर्षे के इत्या वेद यथे स:॥

The doubt not being satisfied, a more pointed & clear reply was promised in the third sortilege. It explains the origin of the difficulty. It is impossible for the Asamāhita Ashanta-mānusha (which R is) to know God by mere intellectuality or intellectual intuition. Only the pure vijnānamaya can do it; he does not insist on the God of
pity & sorrow or the necessity of continual rebirth.

In answer to a doubt about the Ananda in the body

therefore the long processes used have to be suffered so that it may be firmly imprinted on all the motions of the body before it is fully manifested.

Subsequently, the Master of the Yoga manifested as the vijnanasarathyupeta Rathi vidvan, the Deva, whose manifestation depends on the manifestation of the Devi; it therefore awaited the firm manifestation of the Mahakali personality before basing permanently in the vijnana its own manifestation. This was indicated earlier in the day by the lipi, changing in 11 without disappearing, thus 10.

_Rupa symbolic_

In jagrat samadhi of an eye figured in jyoti changing into a sun, then into a chhayamaya eye (terrestrial vijnanamaya knowledge emerging out of pure vijnana-chakshu) at a little distance from which the sun manifested (the terrestrial organ of vijnana illumined by the divine truth, ritam jyoti), but both sun & eye were veiled by clouds of pale luminousness (vijnana diffused in unformed intuitive mentality), from which the eye again emerged. This symbolises the present movement in the siddhi.

In the afternoon as predicted siddhi has returned. Narayana darshana is now unprecedentedly strong & spontaneously pervasive; Ananda of battle & defeat are attempting to fix themselves in the Mahakali sense; Sundara & Asundara are coalescing in a qualified chidghana ahaityuka ananda.

_Sortilege_

In the samadhi coherence of writing & of speech as well as lipi is at last establishing itself; even a long coherent sentence has been manifested & read in a fairly deep state of samadhi. This siddhi has been prepared by the continuity of vangmaya thought in the sushupta swapna. The speech, however, is of the more sukshma
kind & nearer to thought, not the entirely objective sthula shabda.

Ananda of battle & defeat established firmly in its generality, no longer in type or particular instance.

Strong & continued oppressive pain between the lungs & navel as of approaching death, continued for nearly an hour. Borne at first with passive ananda, it became at last nirananda & had to be expelled by a constant pressure of the Will accompanied by rapid breathing and swallowing of amrita in the saliva. Not the element of pain, but the element of discomfort overpowered the ananda for the reason that the element of pain appeals only to the body & the mind can accept or reject it easily; but the element of discomfort working direct on the prana & obstructing it troubles the mind in prana & dissociation is less easy.

April 14. Tuesday

Power now is easily effective where the object is passive & not occupied by an opposite law of action; partially or ultimately effective where there is, to combat it, only an immediate intention or preoccupation (for it either changes or modifies the intention or acts when that is gone); slowly effective, & often after long continued failure, when there is, to combat it, a habit, trait of character or fixed & customary intention. It fails in immediate purpose when an active force works against it which is too strong & obstinate to be overpowered even after battle, because there is still in the nature the easygoing weakness of Mahasaraswati which is unwilling to face the necessity of ugrata & tapasya. It fails also as yet in changing easily fixed habits of working in the annamaya prakriti. The Ananda of battle has to be increased (this is the meaning of the lipi “battle” constantly given in the last few days) and the habit of physical weariness, lassitude & renunciation of effort eliminated. At the same time it is not the rajasic shakti which must dispel it, but the pure ugrapravritti of the trigunatita shakti.

Last night, the symbol rupa was shown in bahirdarshi of a red sun changing into a rosy sun followed by a blue-green sun, ie the ugrapravritti of Mahakali developing love (Mahalakshmi) and pouring itself into beneficence governed by spiritual temperament and knowledge (the Sun is always vijnana). Afterwards the universal
prema settled itself in the system as a part of the temperament and the temper of doing all things as paropakāra, even apparent injury being done for an ultimate good to the individual & the world.

As the Ananda of defeat, of the asundara, of the ashiva is insisted on, there begins to be finally settled in the knowledge & mental consciousness a more luminous sense of the necessity & meaning of the adverse movements in the siddhi & the life. The whole environmental nature is therewith assuming a more perfect & all-pervading anandamaya nati to the Ishwara. Last night prayer, to which the nature has been long much opposed & then indifferent, was twice used to the Rudra-Vishnu as the helper & healer & yet the cause of the affliction.

In the afternoon there was again trouble owing to the obstinate obstruction of the vijnana & the attempt of the unillumined pranic movements of knowledge in the environment to justify themselves without waiting for illumination. The process of conversion of all pranic movements into jyotirmaya movements (Agner bhrajante archayah) is covered & delayed by this obstruction; meanwhile the action of knowledge & power seems to be suspended or confused & fragmentary, as these elements of asiddhi are given free & continued play. It is true at the same time that deeper movements of trikal-drishhti are being prepared & fragmentarily emerge, as tendencies reveal themselves which are frustrated at the moment but intended to be fulfilled in the future, sometimes the distant future. These movements, however, are at present either obscure or dhuminah not bhraja[n]tah.

The Brahmadarshan has been interrupted in its higher parts in order, apparently, to extend the bodha of Narayana into the whole consciousness of the Nara instead of keeping it as a thing apart & containing & informing, but not identical with the Nara. In the descent there is a frequent relapse into the mere saguna.

The whole consciousness has been driven down into the manas & prana, apparently in order that their more obscure movements may learn to become satyam, brihat & ritam no less in the Anna-maya & Pranamaya Purusha & Prakriti than in the Manomaya. It is promised that as a result of the apparent relapse a greater, firmer & vaster siddhi will emerge.
April 15th Wednesday.

Today the siddhi is beginning to reemerge decidedly from its obscurcation. The same movement, however, continues. Mahakali personality & dasya resist all attempts at disturbance; but the former is diminished in force by being confined to personality and barred from control over the bhava and the action in which the other three vary their combinations. Prema & kama of Mahasaraswati (the Sudrani) generalise themselves more & more & with them grows the dasya to individuals arising out of the dasya to God as well as the general dasyalipsa. This is today confirmed in universal atmasamarpana. The Brahmanic basis of Maheswari grows in force with the growth of the third chatusthaya, but its harmony with the kshatratejas is disturbed by the obstruction to the Chandibhava and the force of divine Tapas. All the old harmonies have been disturbed to make place for a new & greater arrangement of the same rhythm. As always, there is in the process some disturbance of samata, sukham, pras´ada, but it is nothing compared with former disturbances; its movements are dull, brief & external, tamasic, not rajasic, of the nature of depression & [ ?weak ] uneasiness with very little, if anything, of the nature of revolt.

In the manas & prana panic suggestions, even though illumined at a great distance from the vijnana or not illumined or with a smoky & murky light, are tending more & more to an automatic correctness; but the stumbling buddhi of the Annamaya
being interferes with its own sources of error & misplacement. Tapas is back at the stage of always resisted, variable & insecure effectiveness.

Dharma & kriti act fragmentarily with a hampered & baffled movement. Sahitya is almost entirely obstructed by bodily tamas.

Since the morning Sahitya has again revived and the “Life Divine”, long suspended owing to the confused & overcrowded action of the mental Sruti, has been resumed with a greater clearness & regular proportion in its argument. The physical lassitude & divided purpose still resist sustained writing.

The action of the trikaldrishti on the pranic & manasic telepathies is now resuming its movement, but owing to the indecisive dimness of its illumination, a great delicacy of action is needed as the least overstress or understress falsifies or disturbs the arrangement of the details & may lead to a wrong ultimate conclusion.

The impersonality of the human consciousness is now everywhere perceived as the Srikrishna Narayana chaitanya diffused in the mental & sensational being with the ego centre as a circumstance of mind relating back to the ultimate cosmic personality of God in the universe.

Sortilege—referring to this Eg.

Subsequently the Srikrishnadarshan took the Narayan bodha into itself and manifested in persons and objects with considerable vividness and power.

Farther proof was given of the partial effectiveness of Tapas in kriti, but the real effectiveness, the immediate mastery of events, seems as far off as ever.

Strenuous efforts are being made by the enemy to get rid of the tertiary dasya in the body, but so far it has only been impaired in vividness, not in essence & stability.

Lipi
1. First effectuality of the trikaldrishti on the largest scale.
2. Tomorrow—ie a considerable stage of advance on Thursday.
April 16th

The Narayanadarshana is now definitely put aside and the consciousness seen in the world varies between the Saguna Brahman usually Lilamaya which is the basis & the Lilamaya personal impersonality Existence-Existent, Krishna, which is here the consummation. Only, as the present Lila has to be changed, there is a double aspect of the Krishnadarshana, Krishna that is, seen in the adult, & Krishna that is to be, seen more readily in children & the young. In women it is the Kalidarshana that prevails.

Power is now attempting to proceed from the experience of the 12th & 14th to a more puissant action. It is seen today by experience that a powerful & persistent vashita will bring about results that to the telepathic vision of working forces seem impossible, but there is a limit of effectiveness which the power is not yet able to overpass. It is suggested that the power now is in its use hampered by the Maheshwari-Mahasaraswati temperament of slow and regular unhasting pressure & has not yet sufficient ugrata in the asu poured into it. Mahasaraswati’s habit of giving way to the immediate event or the most powerful pressure & going round the obstacle or slowly undermining it must be renounced for a more stern & direct pressure on the opposing forces. This is supported by strong partial successes. On the other hand the opposite suggestion is that force is useless until the early forces have been slowly prepared for the higher vijnana to manifest.

Lipi

1. The first largeness of the trikaldrishti. (as distinct from the telepathy)
2. Terribly exercise destiny
3. 13. 12.
4. জায়লভ
5. *It is the intellectuality in the telepathy that resists.* ie the devatas who watch & are guided by immediate forces are unwilling to allow the force & the vision to go beyond them. They approve the siddhi of Maheshwari-Mahasaraswati, but are opposed to the siddhi of Mahakali-Mahasaraswati.

The whole struggle in the siddhi now is between the present & the future, between the telepathic knowledge that sees & admits the present & the vijnanamaya that reaches beyond to the future, between the force that admits & manipulates present forces & the force that aims at annulling & replacing or transforming them rapidly into the image of their vijnanamaya & anandamaya equivalents, between the present NaraNarayana in men & the future Krishna who incarnated himself in Brindavana & Dwarka.

After a farther brief struggle the Mahakali bhava & tapas, as well as the personality, have been finally accepted in the bauddha parts of the consciousness. They have now to be imposed on all the sensations & impulses without diminishing the completeness of the other three elements in the being. At the same time the entire & rapid idealisation of the lower consciousness has to be resumed.

The Kamananda is still in the same uncertain condition wavering between cessation & continuance; but there are tendencies of advance in the physical ananda generally. Eg. the tivra after sahaituka (water-pipe) lasted long after the cessation of application of the physical cause; the three forms of vaidyuta tend to declare themselves, ie positive, negative & neutral; ahaituka raudra tries to disengage itself from the association of its usual internal physical causes, such as disease, etc.

Strong renewal of the Parabrahmadarshana of two years ago. In dream a single subject persisted through many dreams. Prolonged discomfort in forms usually obstinate to amelioration were turned into ananda.

April 17th.

Srikrishnadarshana is now generalising itself in objects, qualities, vishayas, persons of all kinds without distinction. The only defect is that it is not always the primary vision; for the namarupa or the Brahman come often in front.
Lipi.

1. The perfect entirety of the trikaldrishti. God. 

   Šrīnātmemō. 

   (Practical instances of entirety given immediately afterwards)

2. Distinguish telepathy. ie this is now the only real difficulty.

4. Rapid

5. Enthusiastic faith. It is the telepathies that have disagreed. 

   (through not being well-placed & harmonised).

   Today there is a prolonged attack producing indeed none of 
   the old violent results in the contradiction of the samata, but a 
   clouding of the faith, confusion of the vijnana & return of the old 
   forms of external intellectuality. Kamananda is recovering strength 
   of persistence. 

   A day of arrestation & confusions. Only at night there was a 
   slight resumption of half-veiled progress. Dreams again presented 
   the phenomenon of recurrence to a single subject.

April 18th

   Srikrishnadarshana has now definitely established itself as the 
   normal vision when the sight is full, but the Saguna Brahman with 
   or without the Nara tends to persist or recur. 

   The health is again attempting to establish itself and although 
   not yet pure of the roga, Arogya is once again the dominant faculty 
   speedily rectifying or having the tendency to rectify any particular 
   variations in the sense of old morbid symptom which may recur in 
   the body. Roga is now in all but one respect a recurrent mechanical 
   system and not either a seated element of the physical nature nor a 
   positive recurrent force. 

   Ananda struggles towards permanence. Karmasiddhi is once 
   more active.

April 19th

   Today the sense of the Ishwara is making itself felt in move- 
   ments which were formerly dismissed as unwilled by Him or op- 
   posite to the siddhi, eg vanis of the physical mental world etc. 
   The siddhi is seen in movements of asiddhi. For some time the 
   sense of the parabhava of Srikrishna has been withdrawn & the
darshana tends to form in the Narabhava, the human personality, in the lowest stage of Avidya; this was in order that [ ] the Srikrishnadarshana might be established even in the lowest world of consciousness unenlightened or supported by the sense of the vidvan Deva above & around it. So also for some days the sense of the universal beauty in things has been withdrawn so that Srikrishna may be seen in all without the vision being dependent on the idea or vision of the Sarvasundara in all. So also He is being seen in the human Pishacha & for that purpose the realisation of the Immortal Being, the Ananda & the Love were separated & the buddha Bhava of the Pisacha in his coldest atrocities alone manifested. All these objects are being fulfilled today. The Truth in falsehood & error is becoming more & more visible.

*Lipi.*

1. *Intellectuality has prevented the siddhi.* (the result)
2. *Intellectualities have prevented the asiddhi* (the method).
3. *Liberty of the trikaldrishti*
4. *Try phantasy.* i.e. the truth in all things, even errors, being seen, the play of the imagination should now be tried on the same basis.
5. *It is the dangerous active intellectuality*—which causes the truth of fantasy to be interpreted in the terms of immediate actuality.
7. *Telepathy—fantasy ideality*

The Vani, acting now in the mind and dominated by mental personality, is proving its truth wherever its affirmations can be verified. The source of many errors is now perceived in the incapacity of mental devatas of a certain class to judge, except by the senses, the fulfilment in matter of results already obtained in the sukshma. These form a mental equivalent who give impulses to our bodies for immediate fulfilment which cannot be immediately fulfilled but have to be worked out afterwards. In both cases it is an error not of fact but of placement. On a trial of the play of fantasy according

---

1 MS there might be
to lipi 4 it is found that the same truth of sukshma, of tendency, of intention, of actual possibility & past or future eventuality is behind the play of the imagination.

The power is once more beginning to act at the values of 50 & 60; but its action is chequered by the old successful resistances.

After these perceptions came a period of confusion, withdrawal of all authority from the instruments of knowledge, sense of positive falsehood, of entire absence of definite and enduring truth in trikaldrishti, of the impossibility of any finality in the siddhi & of the old resentment at relapse & deception. Afterwards the indications supposed to be false began to vindicate themselves. Nevertheless confusion & inefficacy remained throughout the afternoon.

In the later part of the afternoon an attack of fever. In the morning a touch of headache was felt in the pranakosha which afterwards attempted to materialise, a tendency of cough, as also a touch of chill, but all were expelled. In the afternoon the fever suddenly manifested without being heralded by any other previous symptoms. There was then a struggle between the Arogyashakti in the pranic system & the Roga from outside; the latter seeking by an appeal to the habitual memory in the bodily molecules to overpower the mind of the body & compel it to accept the “laws” of fever, the former refusing. Rice was eaten, the body exposed to draught; the fever ejected rapidly left behind it an intermittent heat, a sense of feverish pain in the back, though much more in the nervous body than in the physical, a trouble in that body & therefore a corresponding trouble in the physical nervous system & a sense of weakness, as also a certain sensitiveness of the nerve-currents to cold. In a subdued form these remained in the night. Before the fever there was some activity of antardrishta rupa which was, as usual, stimulated by the feverish excitement. There was also a tendency to constipation.

April 20th.

The fever was expelled in the morning & nervous strength reasserted in the body, but the rogashakti still besieges & hopes to renew itself in the afternoon or even earlier by the help of the
constipation which is not yet dispelled. For some time the Arogya-shakti has been busy dispelling one by one the old habitual & mechanical forms of roga which still survived as unreasoned recurrences. The fever seems to be a revolt of the old physical nature intended for breaking down of the results obtained & the recovery of the system by the forces of disorder.

The disorder in the subjective being has once more disappeared & universal ananda, including the ananda of battle & defeat, has remanifested itself; the object of particular asiddhis is also once more self-apparent. In the Tapas there has been a repeated effective Will for the favourable forces in the physical Swabhava to increase in strength. Formerly, these forces were sluggish & weak & to produce a decided result the will had to be constantly applied to the object & its movement, otherwise the result was either frustrated or manifested itself slowly, imperfectly or to other ultimate purposes than were intended. Now, the physical swabhava often takes up the will once cast out and carries it out suddenly, puissantly & with fixed determination. At other times, however, this force does not act or, after commencing action, flags and needs the support of a fresh application of the Vashita or Aishwarya.

A great efflorescence of sthapatyadrishti, all sorts of human figures variously dressed, scenes, landscapes, fields, plains, hedges, trees, lakes, cities, birds, beasts etc being seen crowded in a small space of foliage. The figures of beasts were at first obstinately prevented from manifesting & are still in all forms of drishti less free & frequent than the others. Known figures & heads sometimes occur, but known faces in detail are usually obstructed from manifesting except in the swapna samadhi & sometimes in the chitra.

In the afternoon fever again got the upper hand & remained with less pronounced [symptoms]² but more persistence all night. Karmasiddhi is now resisted & baffled in its masses & only successful in isolated & inconclusive movements.

B’s [Bijoy’s] spasmodic utthapana occurred for the second time.

² MS systems
April 21st

Fever continues slightly, but there is vital force in the body maintaining itself & contradicted only when the tamas gets the upper hand or by a more rapid exhaustion than usual, but even that exhaustion is speedily repaired with a novel persistence & swiftness. There is no disposition in the pranakosha to yield to the fever & take to the bed.

Rapid effectiveness in isolated aishwarya or vashita is becoming more frequent. The trikaldrishti is acting mentally only & without sureness or illumination. The aishwarya or vashita is now more frequently assisted by an effective force in the material Prakriti.

The trikaldrishti is now attempting to separate itself entirely from the telepathy & is so separated in bhava, but not yet entirely in practice.

In the afternoon the fever after failing to master the body & fluctuating several times left control of the system. The pranakosha established hunger, vital energy etc even in the midst of the fever, but is still susceptible in the body to feverish heat & cold & to suggestions of weakness & limitation of energy by illness.

April 22nd

Fever non-existent in the morning, but broken suggestions of heat & illness float round the body & sometimes touch it. Power this morning is exceedingly active & always succeeds except in instances where there is not time to overcome the immediate resistance. Telepathy is also active & well-justified, but void of the intelligent ritam. The siege of the mental sat is, however, growing thinner & the reemergence of the vijnanamaya jyoti may be expected.

Another signal instance of kriti more complete than on either of the last two occasions, but in the Mexican matter owing to the withdrawal of the aishwarya & vashita long delayed contrary movements, successfully resisted till now or else minimised, are fulfilling themselves.

In the evening adverse forces declared themselves. Fever suddenly returned at 10 & remained all night, though without any
serious pressure except in heat & a sleep slightly broken. Rupa in swapna samadhi has attained to a certain initial stability.

April 23rd

Violent negation in kriti. Feverish heat still remains in the system in spite of free evacuation.

Later on the fever, by a farther resolute denial of its causes & effects, was expelled at its usual time for increased incidence under strong exposure to chill etc. Relics of it still remain in tendencies of headache etc. Better kriti today.

April 24th

Kamananda which has persisted in spite of fever is especially strong yesterday and today. The vijnana is not yet released from its envelope.

Fever returned at 8; expelled after 20 minutes again at 11 & lasted till three in the morning leaving behind a substratum of heat. Constipation & evacuation have no longer any ostensible connection with the malady.

Vijnana acted again but more in power than knowledge & then not for long in its first perfection.

April 25.

Kamananda continues with some steadiness, though at first checked by the fever. In the swapnasamadhi the collective city-vision again occurred after a long period of detached scenes & isolated figures & actions.

Sortilege

1. स्वप्नदृष्टिमिहं स्वप्ने भावानां स्वप्नं कालेवानां मन्दुक्योपनिषदं।
   My. Up [Mandukya Upanishad (commentary)] p. 76. (given while reflecting on the swapnasamadhi).
   ie the contracted form of vision in the swapnasiddhi (limited in scope, momentary etc[]) is already established &c, in a way, perfected. The rest is yet to come.

2. केतुण्य स्वप्नदृष्टिमहं अस्तिस्मीयाम: —
   ie Dream is a distortion, swapnasamadhi only gives truth of swapna, true dream can only be vision of samadhi,
& it is to prepare vision of samadhi, not sanvrita but vivrita, that long connected dream is being slowly established. Even symbolic dream must become symbolic vision.

3. সংহারিকী শ্রীঅথিবিলয় দত্ত i.e Swarat—cosmic sarvananda (soma) given

Lipi.
1. Fidelity to the ideality. (an often repeated lipi) Necessary for advance, intellectual doubt leads to nothing
2. philology. 3 fortnightly result ideality.

The fever attempted to return in the evening but was expelled.

April 26th

Trikaldrishti still in the struggle to emerge; but there is as yet only the large movement[,] no definite certainty of ritam. No fever during the day or night.

Fairly long-continued action seen & felt in the Samadhi—the rabbit-skin. This is the first instance of a drishti so well sustained. There were also many swift visions of groups & crowds; but the dreams were somewhat incoherent & distorted & coloured by present associations.

April 27th

Aishwarya in connection with the elections has been successful in all except the central point—the vote for R[d] [Richard] where it has failed entirely. Knowledge has been clouded owing to the subservience to the suggestions of others.

Lipis
1. Apoplexy—epilogue 3 Brilliant idealities (immediate application & future)
2. Distinguish the ideality 4 Startling results (future)
3. Battle faith tapas destiny—ie through battle the siddhi proceeds for the establishing of faith so that through sraddhamaya tapas the destiny may be worked out.
6. Growing a little stronger ideality
7. figure of the truth
8 sophistries of the faith (must be got rid of, ie of the dishonest faith which, eager to believe, tries to ignore or explain away disappointments & difficulties)

9 tapas faith battle converse of 5—By effective tapas faith must be increased so that the battle may be fought out to a victory; but faith must not be eager to outrun the effectiveness of the tapas.

10. Firstly, the faith in the ideality, then in the actuality—This lipi is intended to correct the mental impression produced by the last, which applies only to details, not to the general lines laid down by the vijnana, to the daily effectiveness, not to the final aim.

11 intelligent ideality is obliterated by (n)3 the faith, therefore the faith must be perfected, brilliant ideality is strengthened in the faith. ie vijnanabuddhi replaced by brilliant vijnana with faith as an instrument & medium of the change, faith quelling intellectual judgment not in his own interests, but to replace it by luminous discrimination.

12. suffer. twice.

Lipi has now firmly established habitual vividness of its lettering in the akasha, but there it does not always or usually come with so quick a spontaneity as in chitra or sthapatya lipi.

April 28th.

The struggle over the faith continues, but the Mahakali tapas is sufficiently harmonised & strong in harmony to carry on the action in spite of temporary suspensions. The struggle is now generally over (1) faith + vijnana, (2) the body, (3) karma (especially kriti). In all karma the difficulties are over (1) sustained work, (2) sustained effectiveness (3) equipment; but the latter does not apply so much to other karma as to kriti.

At night the dreams were once more coherent but suffered from distortion by present ego & association; it is notable that when coherent dream is strong, swapna samadhi is temporarily suspended. This is due to the unsettled movement for the replacement

3 The meaning of this letter is not known.—Ed.
of incoherent dream by coherent & coherent dream by swapna-samadhi. Rupa in the jagrat cannot yet be established, although the movement of expansion is now persistent in its insistence on the akasha; initially stable densities are common, but they avoid the straight gaze of the physical eye & appear to the subtle vision in the physical eye at the side or to the absent gaze in which the sanskaras of the physical gaze are not dominant.

Persistent recurrence of Kamananda has surmounted all the old particular difficulties & has now only against it the general ahaituka difficulty of the former habit of non-occurrence or rather of suspended recurrence. Persistent continuity is not yet possible except for short periods.

There is a struggle between the ascetic tendency which the circumstances seem to demand & the Janaka ideal which has hitherto been imposed.

Although the fever was unable to enforce return, yet in more than one direction roga temporarily triumphed, especially in the flatulent pain, at night & was dispelled with some difficulty by the aishwarya & vashita. Cough of a kind has manifested in a loose & external fashion for the last few days without being able to hold the system.

At night swapna samadhi was active, but without any freedom or richness. In the daytime there was continuous swapna samadhi interrupted by a-swapna, but not by sleep. Dense rupa occurred in the antardrishta.

Krishnadarsana in the separate bhuta is establishing itself persistently in place of the old forms of the Brahmadrishti, but it is still interrupted by the denial of vision of the Divine Personality.

Lipis
1. Sylhet . . disturb faith of thousand disciples.
2. Sylhet prophet . . physical disappearance.
3. Suggestions disturb ideality by distinguishing false the ideality; jostle, the intellectual distinctions jostle the ideal distinctions.
4. north-east knowledge distinct certain infallible
5. youth seat. distinct infallible positive
6. 22 entirely effective destiny
9. Matter is ordinarily only thing that publishes the true God
dignity of the telepathy.

11. subjectivities

12. joyful lipsa  13. ellipsis  14. joyful ellipsis . . eclipse

Rupa of watch at 11.42. Interpreted first as time of fresh
progress in subjectivities (lipi 11), afterwards as time of calling
to bathe or going to bathe. B. called at 11.40 & it took two
minutes more to get ready. This also marks the resumption of
trikaldrishti of exact time. There was a vaguer instance in the after-
noon.

Vani, script, articulate thought, vijnanamaya perception etc
are being resumed finally. The movement, it is suggested, will take
up to the 1st May.

April 29th

Some movement forward of the rupa, though as yet noth-
ing rich or pronounced. In the lipi for some time past kaushalya
has been growing—ever since a prediction to that effect in the
lipe. Roga, forced out as fever, insisted as cough etc; but the ar-
ogya no longer gives up the struggle to establish itself firmly &
the morbid symptoms have always to struggle in order to maintain
themselves. Incoherence of lipi in swapna samadhi again declared
itself.

April 30th

Correct trikaldrishti independent of telepathy is now mechan-
ically occurring, but without luminousness; overstress of telepathy
is losing force & with but slight attention can always be detected,
but actional stress still continues to confuse the mind. Aishwarya
e etc are now being liberated from the traces of egoism & used as
an instrument of the divine power without preferential choice of
result, insistence on knowledge of the result or, if known, on its
perfection or continuance. Moreover, the thing ideally right is be-
ing willed without regard to the immediate actuality of possible

---

4 Sri Aurobindo first wrote “eclipses” and then altered this to “ellipsis”; perhaps both
words were seen. — Ed.
or eventual outcome & success. Often also there is the move-
ment of the trikaldrishti identical with the movement of power,
—a sign of the gradual manifestation of pure Chitshakti in the
mind.

Lipi
1. Suffer relaxation of the tapas—fulfilled in the afternoon
2 Something still resists in the intellectuality—relaxation of
the tapas
3 Sobriety
4 Selfless activity of the tapas
5 Abolish the obstacles of the tapas
6. There is still the opposition to the equipment . . it has to
be abolished
7. Silhouettes

Subjective Ananda once more asserted itself with some fixity
in the intensity of the delight. Krishnadarshana is now well fixed in
the attentive consciousness; it has still to be fixed in the inattentive
half-regarding consciousness.

May 1st
Kamananda, comparatively feeble & intermittent for the last
two days, is once more active & intense.

Lipis
1 Last reign of the sobriety
2 Result of the ideality in the intellectuality
3 Solely tapatya, tapatya is still deficient
4 Self-established tapas of the righteousness
5 Suffering
6. Tapas-siddhi
7 Subjectivities of the tapas-siddhi— ie t-s must be fixed in
the perception & impulse of action before it is fulfilled in
the objective means & results.
8. Suffering fulfilled in a slight ashanti & loss of faith
9 fixed theory of the two idealities—ie the lower & higher
vijana; in that the siddhi has to proceed.
10. Results of the telepathy—to be vindicated as basis of
trikaldrishti
the terrible authority  not yet given in result of particular action, but to be given, already given in general result of distinctive aishwarya.

12 signs of the audition— ie sukshma sravana.

The intellectuality in the whole adhara has finally accepted subjection of the lower prakriti to the ideal nature; only it awaits light of perfect discrimination in the nervous & tapasic parts of the being (श्रजा भूरत गोभान). The external intellectuality on the contrary made a violent attack on the whole system, partly obscuring the Krishnadarshana, disturbing samata a little occasionally, shaking the faith especially in the bodily siddhi, but not prevailing against the dasya & Mahakali tapas. It is evident therefore that the era of successful relapse in the siddhi is drawing to a close & the safety of the gains (satir dhanānām) is more & more assured. Obstruction of progress is as yet still potent.

The 1st seems to have been the prefixed date for the following results. (1) the final subjective rejection of the intellectuality in favour of the ideality; (2) the removal of the obstacle to the constant manifestation of perceptive vijnanamaya thought, articulate vijnanamaya thought, free anandamaya vani, conversion of tapasic into luminous movements; (3) the definite faith in the power of dharma-karma; (4) the cessation of the dominance of relapse in the subjectivity, examples Br. [Biren,] Richard, X⁵ etc.

Trikaldrishti—

(Script) 1. Inevitably tomorrow sahitya will be resumed, afterwards it will be arranged.

2. Work in the evening will be resumed

Continued action & tendency of stability persist in the swapna samadhi, but progress is not made in the dream or the long coherent vision. This & akasharupa are alone in the vijnana severely obstructed.

The subjectivities of the tapas-siddhi are being arranged.

Lipi-kaushalya slowly but steadily increases.

Cough disappeared for a time, but not permanently. There was no trace of tendency to fever.

⁵ This “X” was added between the lines after the first writing.—Ed.
The following results are indicated today.

(1) Sustained activity of the vijnana, especially in its parts of knowledge.

(2) Sustained subjective progress daily without relapse, henceforth.

(3) Growth of or towards permanence in the kamananda.

Sortilege—

अर्थं म होता यो हिन्दुमत विश्वा द्वे वायायिणि श्रवया।
मन्वी यो अम्मे मुलुकी ददाग।

The process of transformation by which the blind or smoky movements of force, aswā—patwabhīḥ śaphānām, had to become luminous movements (ढोंगा भुंरत गोतम) is now approaching completion. The impulses are usually luminous & know to a certain extent, spontaneously, their own purpose & nature; the telepathic movements are habitually right except when the intellect tries to fix or arrange from old habit. The certain decisive discriminating trikāldrīṣṭhi has still to be naturalised & perfected; but the vijñanamaya perception & vangmaya thought, vani & script are now moving forward freely & normally in all else but the trikālādrīṣṭi. These are “the results of the telepathy that are being manifested.”
