Now that there is the combination of complete dasya subjective & objective with samata & ananda (sutuko dadāsha), the fulfilment of the vijnana in its completeness (visvā váryāni sravasyā) is assured, for Deva Agni is manifest in both the parardha & aparardha.

Attempts are made by the roga to return; fever, in spite of favourable circumstances failed to effect an entry; cough, exaggerated in the morning was willed out in the afternoon & evening, but is not yet eradicated; constipation established itself & persists. Shuddha kama insists & seeks to overbear the insufficiency of its instrument so as to establish perfectly the kamananda.

6. Thirteenth
7. self-intellectuality—ie the lower working is of the thought
   that does not reason on exterior facts, but still is in its
   spontaneous nature a working of mind on the basis of
   externalities.
8. stereoscope
9. ghee—indicating use in food in the morning (not usual,
   nor willed nor asked for) & fulfilled, but afterwards re-
   peated symbolically in the sense of the Vedic ghritam,
   the clear richness & fullness of the chitta in thought
   movement.
10. interesting travel stone—ie the ananda once established,
   the progress & delays of the siddhi cease to be trou-
   blesome & become interesting like a journey, of which
   successive milestones mark the stages.
11. D.S. dasya & sraddha are being combined.
12. thirty fifty indicating the present variations of the tapas-
   shakti.

The combination of dasya & sraddha does not yet extend
beyond a general faith in the divine control by which the system is
enslaved.

In the afternoon there was a failing or cessation of the constant
activity of the vijnana—“Life Divine” resumed.

May 3d

Unable to bring back the Brahmadarshana to the mere Saguna
or Sarva Brahma, the Asiddhi now presses on the NaraNarayana
as a lower substitute for the Lilamaya Krishna. Meanwhile the
perception of the Ananta Brahma is growing in intensity & fullness,
but the contents of the Jnana Brahma are somewhat veiled. This
defect aids the evolution of the Pranic steeds into luminous herds
of enlightened conscious powers, but that evolution can only be
complete when the contents of the Jnana Brahma become also full
& intense to the consciousness.

11. joy. glorious destiny

The principal siddhi of the day was the continuous kamananda flowing through the body from the kamachakra & no longer confined to the chakra.

May 5th

The siddhi of the kamananda proceeds with great, almost unexampled rapidity. Yesterday there was a struggle of the roga to make it an excuse for the return of fever etc on the ground that the body is still unfit, but this was repelled. Today there is constant, continuous ananda, always recurrent, first only when seated, then while walking; it is also now beginning to recur even when the attention is withdrawn from the body. The ananda was at first not intense in the sthula body, only in the half-vyakta action of the pranakosha; & the capacity of the body to bear continual unintense pervading ananda was established. Now, while sitting, continuous intense ananda is being given, with dharanashakti behind in the mental body supporting the pranakosha in this activity. Thus, rapidly, the lipi “death of the difficulties” daily repeated (not recorded) is being fulfilled in this important siddhi by a sort of concentrated process emerging out of the most rapid gradual progress. It is now decided that the vijnana siddhi shall also get rid rapidly of its difficulties,
so that the faith from now in the Yoga-siddhi (not yet in karma, kama, saundarya & utthapana) may extend to the long-promised rapidities of the siddhi.

The vijnanamaya instruments of knowledge (thought articulate & perceptive, script etc) are undertaking at last the expression of the triikaldrishti and no longer leave it entirely to their intellectual equivalents. The conversion of the intellectualities is being steadily begun.

Lipis
1. Not yet destruction of intellectuality
2. disgusted — that is the limited physical devatas are disgusted with the continuance of the kamananda & seek to escape from it.

Sortilege (involuntary)

The siege has passed. Once again the ugrata of the chandibhava.

The old imperfect chandibhava rose again and repeated its habitual circumstances but this time without any force of persistence or even of possession.

The continuity of the kamananda was interrupted, but its brief recurrences continued with only a brief lapse due to relaxation of the kamachakric elements in the body. This is now the chief difficulty in the way of continuous intensity of the Ananda. Arogya is the next physical necessity.

May 6th

Kamananda is less potent today, but has a greater tendency to intensity approaching at times to the maithuna intensity; for a time it reached it, but was discontinued. Trikaldrishti is hampered by the activity of the false tejasic perception shot in by the pranic devatas from outside.

In the afternoon & evening kamananda was again spontaneously active.

Except a certain tendency to sahitya no definite subjective progress was visible during the day. Rather the vijnana in all its parts is hampered & obstructed. Even therefore if the first indication of May 2d be considered to be feebly commenced in execution,
the second seems as yet far from fulfilment. Only the third has been definitely fulfilled. Especially sraddha has relapsed into its old movements.

May 7th

Everything in the morning under the influence of the asiddhi, as formerly, although not with the same intensity. The vijnana continues to act, but with an inferior force in the plane of nervous mind, not even in the vijnanabuddhi. This is represented to be a necessary process in the idealisation of the lower laws of the nervous mind. There is still there the old defect of the gross over-stressing of sensory perceptions in the manas used as a sixth sense. The idealisation leads as yet to no more than a renewed perception of the satyam behind the nervous suggestions & their true or false valuations in the mind. In the afternoon the certainty of the decisive trikaldrishti manifested but was hampered by perception of possibilities chiefly suggested by telepathy from the minds of others.

Kamananda is now more spontaneously recurrent & continuous than it was ever before. It is now indeed only in the kamananda that the principle of rapid progress is manifesting.

Lipis

1. Bhakti 3. Tall talk of the spies — referring to the rumours of a pending fabrication by the spies on basis of inquiries about “name of any street in Chandannagar”.

2 Shakti — on basis of inquiries about “name of any street in Chandannagar”.

Bhakti entered into the Krishnadarshana suddenly, after the lipi, & seems to be established there, but the darshana is not yet of universal application except by smarana.

At night connected dream, but constant interference of present associations. Initial stability of vision seems to be established.

May 8th

Kamananda fluctuates. The Arogya is visibly growing in strength but not yet definitive. Karmasiddhi is being now attacked by a resurgence of old difficulties, all of them wearing the semblance of a power strong enough to destroy the little siddhi yet effected; it
is not yet clear how many of these are merely phantoms or whether any of them have a strength capable of endangering or retarding the progress begun.

Trikaldrishti is again attempting to establish the reign of the free certain & non-telepathic vision. Power once more revived its higher movements, greater in volume, but not in quality than before. Rupa also revived some of the former movements, but is not yet definitive in the sense of a free & assured efflorescence. The struggle over the faith, the subjective-objective Ananda & the Krishnadarshana continues.

Lipis—

12. after the battle is over (chitra) entirety of the ideality in the tapas siddhi (akasha)
Unintelligible lipis
1. Leo. Yorkshire.  2. Shakespeare—often repeated
3 any other elsewhere  4. Falstaff.

Silhouettes occurred again on the wall (clear—or vague-clear), —a woman standing on a square carpet, a lady well-dressed with flounced skirts, & in the akasha, figures of women. At night dense images or dense developed. Dense images & developed now continually come into the field of sthula vision, but they do not present themselves direct to the physical eye, but rather to the sukshma vision in the sthula akasha; or if they present themselves to the sthula eye, they are unstable. At night the dense images were stable, but they had not the freedom, compact material & vividness of the others.

Lipi kaushalya is now fixed in the akasha. eg “that is transition” in a pale green colour, not very decided.

Physical Nirananda declared itself, but could not last very long void of the ananda.

Tapas-siddhi.
1. Doves flying along the roof & past were made to turn towards it, but alighted on the edge not on the ridge to which they were directed; at first resisting & meditating a downward flight, they turned suddenly & flew on to the spot indicated.
2. A crow on the staff of the Governor’s house, immediately dislodged.
3. A man seated on the kerbstone, willed to depart, at first made no motion, a second man rather came, sat down & entered into conversation, then both suddenly got up and crossed the road.
4. A second crow on the staff similarly dislodged, but by the second aishwarya.
5. Two small birds flying in the akasha turned several times by the will, but with much resistance.
6. The spy near the corner willed to go to the corner & turn it, went & stood at the turn & looked down the other road but then sat down near it.
7. Two birds were compelled to turn in their paths, although flying with a definite will in a definite direction, but the later

www.holybooks.com
attempts were failures, although there was always a struggle, generally physical, sometimes only subjective.

The following decisions in the nature of trikāl-drśhti rising out of telepathies were registered for observation of success or failure.

1. Both will come — ie Richard & Madame Richard.
N.B. Madame Richard was ill; moreover the Governor visited them at the time of their usual visit here; but they both came subsequently at 6 pm, 2 hours later than the regular time.

2. The house will be found with a little more difficulty.

3. The Society will arrange itself after a few difficulties.

4. The money question will be arranged by a developing siddhi.

5. Henceforth absolute samata & abhyasa — as the method of the siddhi.

6. The difficulty of the rupa & samadhi is about to break down

N.B. there are movements; the length of continuity in the samadhi is beginning to increase.

7. The gradual process has to pass now into the concentrated.

May 9th

The kamananda continues, typically free from all its old limitations, but awaiting the strength of the kamic chakra & the full adaptation of the body before it can materialise its freedom. The improvement in the arogya continues, but the strong pressure of tāmas on the body for the last few weeks is not yet lifted. The higher tapas works in the midst of a continual heavy cloud. Continuity of vijnana, invariable action of the tapas-siddhi & the harmonised action of trikāl-drśhti & telepathy, the former often corrective of errors in the latter, were manifested throughout the morning, but could not maintain their activity through the rest of the day. Faith in the Yoga-siddhi is firm; faith in an eventual rapidity is growing, but as yet can find no secure basis in the actuality. Faith in the adeshasiddhi fluctuates, but the conception of it has now been greatly minimised.
Lipis—
1. playground—the world. 3 nature. Phoenix the system of manifestation
2 sedition
4. It is the last journey
5. It is the last journey in the intellectuality

The action of the tapas-siddhi is now revealed in three forms, the nervous with the play of forces, action & reaction, resistance etc, the mental, with perceptions realising themselves if vijnanamaya, acting as forces, if pranamaya, & the ideal working by the swabhava. The fourth is not yet manifest.

The improvement in the samadhi maintains itself & for the first time there was an instance of the merging of dream in swapnasamadhi towards which the swapnasiddhi is driving, but the hold of the siddhi is not yet a mastery, nor sufficient in force & quality.

Veda. VIII

May 10th

During the day there was attack & cloud constantly till the afternoon. The siddhi so far as it progresses behind the veil. The Arogya suffered something of a relapse. Rupadrishhti progressed.

Veda VIII

May 11th.

The chief work done was in the karma, ie translation of Veda VIII, several movements towards the fulfilment of the predictions 2. 3. 4 of the 8th May, some indications of progress in the rupa, resumption of brief connected colloquies in swapnasamadhi, coherence in swapna; but all this happens still in a disorganised fashion subject to shiftings & collapse. Prediction 7 is still far from fulfilment.

Kamananda flagged during the day & the stress of Roga on the Arogyasiddhi continued. Heat heavily felt & thirst revived.

May 12th

The secret of the continued struggle long understood is now fully revealed to the experience in knowledge & sensation. It is
a struggle between certain parts of the universal-personal Nature which are anandamaya of the mentality & attached to the slow, gradual & pleasant development of the siddhi through mental ananda & samata & others which are tapomaya of the sat in the mentality & aspire to the rapid, powerful & chanda development of the siddhi through vijnana. The former were at the centre of the action & personality, but are now displaced. In order to maintain or recover their hold, they have struggled to maintain the former gradual progress & favoured even relapse & obstruction as helpful to the retardation. As a result they see asiddhi & chaos threatening to establish themselves in the general failure of the Yoga. For this reason the principle of relapse has been allowed once again to become powerful in the subjective siddhi. Many of these parts are now repentant of their obstruction, others half-convinced, others uncertain & inclined to persevere.

The general result has not been favourable to a rapid siddhi. In the vijnana, the intellect is now forced to a more general & unquestioning acceptance of the satyam & brihat in the knowledge & of the value of personal tapas as a force in the determination of results; but the knowledge has receded in ritam & the power in actual effectivity as a result of the violent & obstinate pressure of the anandamaya mental devatas of the Mahasaraswati Prakriti.

Rupa advances slowly. There are now rare figures of all kinds of an initial stability that present themselves directly to the sthula vision; but for the most part the formlessness of the stable rupas (now even exaggerated) & the instability of formed rupas is still the rule of the jagrad drishti. In Samadhi the stability acquired is maintained but does not progress; swapna fluctuates between coherence & incoherence.

In the physical siddhi kamananda continues to recur with a brief intensity, but its continuity is discontinued, in order, it is suggested, that the physical nature may now take it up & develop spontaneously its higher permanence. In Arogya, although there is still the strong tendency of siddhi behind, the actuality presents rather acute symptoms of asiddhi. Thirst is fully revived in the exterior nervous parts, but the discomfort of heat is being expelled.
along with other physical discomfort. The revival of full subjective ananda is being attempted, but on the old basis.

In Karma there are strong effects of dharma, but these are isolated & not organised, nor subject to the vijnanamaya will. Veda continues (3 hymns in the day) & the residue of actual unillumination is slight. The rest of the sahitya is discontinued for the present. Kriti is active in the old way, unsatisfactorily, fragmentarily & confusedly. The general result at the moment is the triumph of the retarded gradual movement against the forces making for organisation & rapidity.

May 13th

In vijnana brihat ritam with imperfections & limited ritam with perfection; also reversion to inferential error. In power, the condition of struggle, but with a tendency for mental tapas to replace nervous tapas & to guide even such nervous tapas as persists.

There is a steady movement towards the expulsion of the oppressive tamas from the brain & the body. The old ananda in mere passivity regarding a progress determined almost independently by the forces of the trailokya maya Prakriti, is now definitely rejected. The assertion of the luminous mastering Tapas is made finally in the inner nature & awaits the progress of the siddhi there to become effective in the outer world.

May 14th.

The most important result of the day was the progress in the expulsion of the tamas from the body. Veda IX. 1 – 5, 11 to 53, were read & annotated in less than 3 hours (the first five taking one hour) without any more than a slight eventual fatigue of the bodily parts, but no failure of the rapid & luminous faculty in the brain. The continuance of this force & pravritti has now to be assured.

For some time past there has been a fixed movement towards minimising evacuation, limited to twice in the day for the jala; for the other, there is no fixed time or proportion, but the movement is yet imperfect. The Arogya seems to be partially asserting itself in the most external parts of the body & prana where the roga had recently asserted itself with some force & great obstinacy.
May 15th
The Anandamaya Lilamaya is now making itself normal in the Brahmadarshana.

Veda. Veda [IX.] 54 to 60 completed on the 14th. Today 61 – 75. (long hymns)
The recurrent continuity of the vijnanamaya instruments seems now to have set in. Effectivity of tapas vindicates itself unexpectedly from time to time even in the kriti. Rupa is active in the chidakash in antardrishta; the forms complete & perfect, but unchanged in the chittakasha. Samadhi continues as before. Rupa in jagrat bahirdarshi is now perfect except in freedom & a stable stability.

May 16th.
Evacuation, comparatively slight & normal, after 6 days (ie on the 7th day)—no noticeable reaction. Last time was after 4 days, copious & there was slight momentary reaction & sign of imperfect assimilation. The body attempts to get weary with the stress of work, but is compelled to revive & the weariness disappears during the next spell of work; there is a slight tamas from time to time in the physical brain. Ritam is still fluctuating in the trikaldrishti.

Veda IX. 76 – 114 minus 86. 96. 97. 107 – 110.

May 17th
Disturbance in the progress of the assimilation; moderate evacuation. Arogya still resisted at the same point.

Veda IX. 86. 96. 97. 107 – 110. The ninth book completed in 4 days; the tapas always resisting the old forms of weariness.

May 18th
The intensity of subjective ananda is once more attempting to reassert its universal domination & equality & this time with greater chances of success, for it is intimately associated with the growing sense of the Anandamaya Lila & the integral dasya of the being. The satyam & brihat grow continually & take larger possession of the perceptive attitude towards the world; the ritam still fluctuates, because the truth & largeness are of the mental realm, not of the ideal consciousness; the mind receives the truths
of being in action, but because it separates itself from the vijnana is unable to place them with spontaneous correctness. When it applies itself, it can place them correctly, if it rises beyond the duel of tapas & tamas neither of which can entirely justify itself or entirely refute the other. The physical siddhi fluctuates continually.

Uttapana resumed, but feebly. The three basic siddhis are eclipsed in the body; but laghima easily emerged & mahima to some extent. Anima is less active than formerly.

The force of continuity of swapnasamadhi very slightly increased after several nights of suspension of progress. Rupa still progresses by the same infinitesimal degrees, as also the other parts of the vijnana.

May 19th

The difficulty now felt with the vijnana is to raise the mind out of the sphere of the vijnanabuddhi turned towards form of force & form of matter & their movements. The Tapas cannot be easily effective because in the realm of nervous force every force put forward has a greater or less authority to persist &c, if possible, conquer & every perception turns into a force which has a right to exert itself & persist. It is only by rising beyond to vijnana itself that the vijnanabuddhi can be liberated from the subservience to truth of possibility by freedom of ultimate law in the ritam. But there are two ritams, one that follows & adapts the possibilities, another that controls sovranly the possibilities & it depends on which plane the consciousness adopts whether the knowledge & power will be of the higher controlling kind or the lower self-adapting kind.

The chief source of ashanti & asamata in their recurrence was hitherto the unilluminated action of the nervous force in battle with the resistance in the activity. This is now being moulded to the samata by a double process of sama action without ashanti unilluminated except by the indirect or chandra tejas & of illumination leading to ananda of struggle, victory & defeat. The other source,
absence of sufficient faith & sahasa, is being dealt with by a more gradual process.

Uttapana continued; one position of the neck, 15 minutes; horizontal & medial of the leg 15 minutes each; the waist & back, one minute. The right basis is not yet successfully established. The vertical position of the arms, in the recumbent state of the body, which could formerly be continued for 3 hours without strain, except a slight & hardly appreciable reaction at the end, now resulted in a very appreciable strain at the end of half an hour. There is in other respects also a noticeable relapse in the physical shakti.

As yet, the principle of relapse maintains itself everywhere; the second intimation of the 2d May has not been fulfilled except that the relapse is no longer definitive, no part of the purely subjective siddhi being lost so that it has to be rebuilt, but only concealed so that it has to be remanifested. The Atris & Vrikas are no longer powerful, but the Coverers, Vritras, still retain their strength. In the less subjective parts of the vijnana, the Atris seem to persist, but they swallow without digesting & the siddhi eventually comes out again with a slight appearance of re-growth rather than of reconstruction. In the physical siddhi & the kriti the Vrikas seem yet to have power.

Assimilation is once more thrown back to its old condition of parthiva & jalamaya obstruction, but the tejomaya has not recovered its power. For some days there has been a daily manifestation for half an hour in the evening of slight feverish heat, but its strength & period is diminishing & it has no after-effect on the body.

Veda X. 5 to 15 read. The rest of the work intermitted.

Lipi

1 S [Saurin] is about to understand.
2 Death of the difficulty in the society (samaja) —not immediate, but to be prepared.
3. KS. —fulfilled as usual, but unexpectedly —KS coming after long absence to invite others.

There is a suggestion that kriti of a definite kind will now begin, not at first decisive, but constantly growing in force & power. At present separate aishwaryas in this direction are fulfilled wholly or
May 21st

The fluctuations of personality have been resumed & continue, but the Mahakali nature tends always to return. The lapse is no longer determined by any subjective cause, but by a sort of subsidence in the physical & nervous energy.

Lipi (20th)

Enjoy—selfish (self-regarding) ideality.

Sortileges (20th)

1. अनिसानि: शुचिभवततम: शुचिविवश: शुचि: कथि:।
   शुचीरोपत्वात्राहुत:।।
   उत्तमा भौतिको मम गिरो कथातुविष्कार।
   अथवे सम्मस्व कोपङ्ग।।

ie. the Divine Force (Tapas) has now to become entirely pure in its action, pure in the mental illuminations, pure in the idealities, pure in the sacrificial offering of all the energies to Krishna. So all the thoughts & their expressions in internal & external speech have to increase into an universal activity. It has also to open out in the personal relation with Krishna.

2 अतिसोमा परज्ञेस्व अस्मे भारत्तेन रसि॥

The combined Tapas & Ananda of the mind have now to be reshaped in an ideal substance of consciousness and to hold the divine felicity firmly.

May 22nd

Sortileges—recorded in the last khata & their indications

1) Mar 28. Penetration of the mental being by the mental delight, Indra by Soma, fulfilled gradually in two months & now approaching perfection.

2) Mar 29. Destruction of the tapasic rajas impulses disturbing the system—Fulfilled.

3) do. Rejection of control by the Vrikas—Fulfilled in the pure subjectivity.

4) Union of Tapas & mental Ananda & growth into pure
Ananda—(Mar 30). First part fulfilled, is being perfected; the second is being prepared.

(5) April 1—Illumination of the nervous impulses & coordination of mind & prana. Fulfilled, now approaching perfection.

(6) April 4.—Knowledge of the three lower worlds within, discriminatory perception of the impulses & distinction between the true & the false. Fulfilled, to be perfected.

(7) April 12th. See explanation. In course of fulfilment.

The sortilege of Mar 31 remains unfulfilled even in its beginnings.

Isha Upanishad translated with notes.

A period of progressive fulfilment has been indicated from day before yesterday. There are some signs of its fulfilment. The basis of the triloka has been formed. In the knowledge the mind perceives the forces of the bhuvar & is no longer easily led away by the tapasic stress; where there is error, it is more swift to correct it even before the event; where there is uncertainty it is more willing to recognise it. There is a more illumined action of the mental telepathy. The decisive trikaldrishti reemerges & is more amply justified.

Kamananda recovered & increased its persistence yesterday; it is once more attempting a continuous permanence. With the smarana it is usually active, except when the contrary nervous forces put out a strong effort to oppress it; its capacity for acting without the smarana is steadily increasing, but as yet it is not dominant.

The main obstacle now to progress is the imperfection of that layer in the koshas of the being which represents the meeting-place of the prana & the anna in the most physical action of the former principle. This imperfection exaggerated not only insists on the habitual symptoms of roga, but it is a channel for the perpetuation of the previous habits of the mentality. It is aided by the tamasic ananda in the mind which enjoys & seeks to materialise all suggestions of inertia, defeat, collapse etc. Eg. it being noted that the tejasic difficulties of the assimilation could not reestablish themselves, this tamasic mentality at once sought to restore them & succeeded in rendering them once more active.
Lipis—

(1) 21.  (2) 31.  (3) 13. These are the points in which the siddhi is still more behindhand than in others.

(4) Teleology—ie the purpose of the various mental & nervous movements favourable or adverse now reveals itself to the mind & the self-revelation has today begun to be habitual.

(5) Together—ie the immediate trikaldrishti & the distant must act together, although the mind seeks to reject the latter, because it cannot be verified—eg it disbelieves in lipi (2) entirely, [ ] in lipi 3 partially or mostly, in (1) to a slight extent.

(6) Suspicion in the intellectuality of the ideality, especially the lipi—referring to the last point noted & previous to the thought which it suggested.

(7) Teleology of the lipi—ie the lipi, as serving certain useful purposes in the life & progress, must be understood in its right purpose.

(8) Shilleto. Auchulos. An instance of this teleology. The first, often repeated in the last few days was fixed in its intention by the second, & has now served to recall a number of minute facts of the life in England which had rested entirely forgotten during the last twenty years, thus assisting one difficult & obscure motion of the siddhi which has been much resisted.

Kamananda recurrent, but much obstructed throughout the day.

Swapnasamadhi thrown back in lipi into a false coherence & in dream into the old confusion; the rupa does not yet advance at all sensibly but keeps its gains in continuity. It is, however, confined to the dim chhayamaya proper to that low physical nervosity now dominant & typified in some systems in Patala & the astral worlds. The luminous visions occur rarely, & those which come are usually of a gross pranic & trivial kind.

6 MS (3)
The translation of experience into terms of vijnanabuddhi continues with a dull steadiness, without intense ananda, but without nirananda. Occasionally the Prana & nervous mind indicate a slight impatience or sense of depression. Apparently these have to be eliminated before the tamasic pressure will be entirely removed.

Uthapana is practically discontinued for the last two or three days.

Veda VIII. 101. translated with notes.

May 23rd

Veda I. 90—translated with notes; settling several doubtful points, owing to the brilliance of the illuminations acting on the external proof. Kena Upanishad I Kh[anda] translated with notes. Also Ved I. 91. others prepared.

Lipis.

1. P. tenth 2. Soul-kinship (reference to the Rs [Richards]).
3. *Effort to deflect the siddhi*—ie into another spirit & other aims than those throughout intended, so as to deprive it of its leverage & its fullness. This attempt, long suffered, is now being defeated.
4. *signed authority of the lipi* with regard to trikaldrishti of the Kamananda which is now to progress inevitably subject to a more purely physical resistance.
5. *simplex, duplex.* Eka, Dwita?
6. *Tejas in the desire has to be changed into self-regarding ideality*

Indications

1. The jnanam Brahma & Anandam Brahma will not be held continuously in the full active consciousness for some time yet.
2. The same with the fullness of activity of the vijnanamayaka knowledge & power. There is much development yet to be done.

The cloud of tamas began to be rent & drift apart after a sortilege from the Veda. वेदके तामस वै तामस वैवर्ज्य—ie Soma, the mental Ananda. During the rest of the day there was a struggle in which the Tamas receded without much difficulty. The vibrations of the mental Ananda are becoming more powerful & are being
accorded with energy in the Tapas & prakasha in the Knowledge. The trilok of the physical consciousness is being subjected to the liberated trilok of the nervous consciousness with that of the pure mental behind but not purohita.

Kamananda persists in recurrence, but is oppressed from outside. Rupa has for two or three [days] ceased its slow, but steady progress except in the antardarshi where it is manifesting occasional perfect images in a cloud of darkness.

May 24th

Veda I. 92. Fresh proofs of efficiency in Dharma.
No sensible change from previous condition except increase of force & activity

May 25th

The Idea of the Veda begun as an introduction to translations. The energy is becoming more rapid & intense in intellectual action that takes an outward form eg writing & speech, where prakasha, tapas & shama are uniting into a single entity; but not as yet in thought & action where there are only movements of tapas afterwards discontinued. The script, also, is more effective than the articulate thought & the articulate thought more effective than the perceptive.

Speech is once more active and less governed or prompted by the lower intellectual functions.
At night there was once more dream coherent, pure of present ego & apparently commemorative of past truth; only some of the circumstances were borrowed from the present or else resembled the present.

May 26th

Veda I. 170 translated with commentary for the review.
Veda III. 37 . . 40 – rendered with notes.

The siddhi is now in a state of outward inactivity in all but the sahitya. There is no decisive relapse in the subjectivity, but also no decisive progress, except in the second chatusthaya.

www.holybooks.com
May 27th

Veda III. 41–50. Translation & Commentary on I. 1 commenced [ ].

The shuddhananda & sense of Supreme Beauty in all things is growing with the growth of the Mahalakshmi bhava, but it is not, as formerly, overpowering & intolerant of the perception of differences in gunas in the mentality. It perceives the vulgar as vulgar, the common as common & yet as divine & uncommon in that which it expresses.

The consciousness now lives chiefly in the Bhuvār lower & higher, but not actively in the Pradiv or Swar. It has to raise itself to these altitudes.

The tamas is steadily receding into the most external parts of the bodily system; there it does not prevent activity, but it prevents progress in the physical siddhi.

May 28th

There is now an attempt to apply the same constant tapas to Yogasiddhi as to literary & scholastic work. The first result is useful coherent lipi in samadhi & the resumption of coherent conversation in the same with clear sthula shabda. The lipi ran “All is Agni. All is He too. OM Agnih.” with words that could not be read before they disappeared.

Lipi.

1 Tonight.
2 Tuesday
3 Bluysen deputy till death destroys—a continuation apparently of the lipi that was persistent during the past four years that B. would be deputy again.

The satyam in the nervous mind is now much strengthened & carries with it a growing force of ritam. There is occasional action of the deciding ritam in pradiv (pure mind in relation with nervous) which exceeds the nervous telepathic indications & indicates

---

7 MS in translation. [This phrase was not cancelled after “Translation &” was added between the lines. —Ed.]
a result not contained in the outer or intermediary conscious[ness] of the object.

It is now sufficiently enforced on the material intellect by experience that all the nervous movements of thought & action are justified, all have an utility and behind that utility a truth of fact in being. Without abandoning the nervous consciousness the siddhi may now on a securer basis again enlarge itself in the intermediate mental activities.

The faith is visibly growing stronger in the full Yogasiddhi (except saundarya), & in a part of the karma, ie sahitya & a certain amount of dharma.

May 29th

The siddhi is now returning to the intermediate mentality, the pradiva & seeks to perceive the contents of other mentalities as well as the contents of their nervous & affective parts & to develop again &c more perfectly the mental trikaldrishti. Power, rupa, samadhi are still in the stage of struggle, samarana, against the Vala & Vritra opposition.

The mental perceptions, as distinguished from the nervous, have begun again to act, but as yet there is not the renewal of the general mental illumination which is necessary to their free activity. The decisive mental perception in trikaldrishti is increasing in force.

The second of the predictions on the 8th May has been fulfilled after a lapse of precisely three weeks due to a small difficulty which was not overcome owing to a want of energy in the search. The fourth has begun to fulfil itself with regard to the personal necessities, Rs 400 due paid[,] Rs 500 available, Rs 200 possible; with another Rs 250 there will be enough for bare necessities for a year from July 1914 to end of June 1915. By that time other resources will be found. The third prediction is still in process of fulfilment. The fifth is being carried out, but the samata is sometimes slightly & momentarily disturbed, the abhyasa is still hampered in its action & slow in result. The sixth & seventh are yet to be properly fulfilled.

The stability & continuity of rupa increased to some extent in the swapnasamadhi & tends to increase (in stability) in the jagrat.
May 30th

Faith is still deficient in kriti, samaja & saundarya as lacking entirely or almost entirely any ground in the actuality. In the dharma & sahitya it is increasing, but insufficient.

A letter from S[aurin] showing power of Dharma acting at a distance through communicative vyapti. Continuance of the work on the Veda (The Secret of the Veda). In the progress of the internal siddhi a period of slight retardation. The physical siddhi is also obstructed. There are nevertheless overt movements towards progress.

May 31st

Dharma shows increasing effectivity. In French elections one main line of Aishwarya fulfilled, the others operative but only slightly effectual, as being in some details inconsistent & opposed to each other. Obstruction strong. Isha Up. translation & notes recast finally. Ritam in governing idea of the philosophical work.

June 1st

The formulated & steady activity for the regulation of the third chatusthaya is apparently to begin today & a separate detailed record of the results has been commenced. The outward physical system today is much oppressed by heat & thirst while the inner is free & tends to have the ananda. Powerful tamas in the body; continued from many days. A great deal of walking was done & produced at first strong tamasic fatigue, but afterwards the fatigue was driven into the thin exterior shell of the physical consciousness & the rest of it was filled with a pranashakti untouched by tamas.

Lipis.

1. *Lady of delight*—ie the one of the sapta hoträḥ who directs Ananda of the Manas is to take charge. Fulfilled

---

8 This separate record has not been found.—Ed.

9 This and the fulfilments that follow (the last indicated by ditto marks) were written after the entry was completed.—Ed.
2. Perfect efflorescence of the siddhi—ie of the already accomplished siddhi now veiled by the tamas—fulfilled except in Power & Body.

3 Light . . delight—remanifestation

4 Tegument unripe—referring to the exterior physical shell over which the siddhi seems to have no power.

5. J.F.\textsuperscript{10}

Typical instance of communicative vyapti

The idea came to ask Mme. R. [Richard] how soon they would go into the new house, but the question was asked only in the mind; in 15 or 20 seconds she answered, “In one or two days perhaps we shall go into the house.”

Thought perception is now being regularised, but the false interpretations of mental content have still to be eliminated. The movement towards pure mental trikaldrishti and ritam persists. The sense of the general Ananda Brahman (ananda akasha) long covered over is now reviving.

Sort.

\textit{अपरिपार्यायदेह अव प्रकानासमा सन्त भूयमा—अवतारयिक्षाैगुंराविति भूयम्—अर्थ लोकस्वतःमें प्रविन्दो नुःप्रविन्दो:} ie. the Divine Force at work manifesting in luminous activity is to take possession of the whole subjective consciousness internal & external in this world; having already extended in the nervous consciousness it has to take possession of the rest.

June 10th
Sortilege

The Pure Mind & the Sense-Pleasure borne up together by the Ananda are to be full of the sense-delight & so carried & wedded to the Inspired Thought in the Vijnana, ie known & taken cognizance of by it. In the streams of conscious being they are to form in an universal fashion the planes of activity of the siddhi & to remove from the “heart” of the vijnanamaya being the obscurations that still remain.

Script.
The lines of the subjective siddhi have now been fixed.
1. Ananda as the base, free & joyous Tapas & Prakasha as the special instruments.
2. The universal sense of the Anandamaya Lilamaya Krishna in the Brahmadrishti as the continent of all the conscious activity
3. The principle of Affirmation to replace the principle of rejection & denial.
4. Ritam to develop no longer only in isolated or combined details, but in the undivided brihat of the satyam with truth of detail & combination as a play of the ritam satyam brihat.

The statement is not complete; [there]¹ are three others & then

¹ MS they
two more to be added making in all nine affirmations, stomah, of the developing God.

Lipi
1. literal . . intensity (chitra)
2. despite resistance of the intellectuality tapas exists (chitra fixed)
3. northeast, southeast; still to begin in the (rest)
   ie the Dharma or Yoga.
4. suspension of the activities (akasha, sadhara)
   only for stronger resumption
5. 13. (chitra)
6. Typical of the lipi. authority
7. 31 chitra.

Script.
The three other affirmations
5. The Personality of the Ishwara, Krishna, to be present in the consciousness, governing all the activities
6. Dasya of madhura to be the personal relation of the Jiva with Krishna—the dasya to be tertiary with the most intense consciousness of passive yantrabhava in the whole system.
7. Acceptance of all bhoga as a slave & instrument of the Lover to be the principle of the madhura.

Ananda
Recurrence of intense kamananda is now becoming persistent and common. Only continuity is insufficient.

Subjective ananda is almost perfect as positive samata, but not in intensity of positive ecstasy (rabhas, radhas).

Generality of objective ananda is now being restored; but intensities of physical pain still escape the grasp of the Ananda.

Later, an initial continuity of intense kamananda was manifested, but under certain conditions of will, smarana, hetu & state (eg the sitting posture). These conditions have to be surmounted & the continuity rendered ahaituka & unconditional

Intensity of subjective ananda through the indriyas (Kutsa) is
again growing on the system; it alternates with the condition of shanta samata, the latter often tinged in the more subconscient parts with udasinata.

Aishwarya in Kriti
1. Immediate fulfilment in one detail of the suffragette movement
2. Final fulfilment in the S. African difficulty.

Lipi
1. Ideality of light together ideality in tapas.
2. Intense ideality.

Rigveda II. 10.

Script
For the intense kamananda will should no longer be used; only smarana & involuntary hetu.

The power of rupa & samadhi is really growing. Suspension of its activity is being used in order to break down limiting habits formed by the material Prakriti in the ether and allow larger forms of fulfilment to manifest out of the Avyakta.

At night there was an attempt in the swapna at organising itself, but it did not go very far.

June 11th

Sortilege—

Script.
There is still an activity of the illuminated mind in its middle ascent, not dependent on nervous consciousness, not yet in harmony with the ritam, but only satyam & brihat. It is full of true & active possibilities out of which the actuality is determined. This is the reason why it is neither ritam nor anritam. It is truth of being, but not truth of eventuality.
Lipi.
1. It is the bygone attention to the spirit of the intellectuality (Akasha, with difficulty).
2. Turpitude—to be fought & expelled from the environment (chitra)
3. Energy Trikaldrishti (antardrishta)
4. Nature Trikaldrishti
5. 13
6. 31.

Trikaldrishtis fulfilled.
1. J.F. seen in lipi 9th, fulfilled 10th by independent action of N.
2. Action of Suffragettes in injuring pacture. N.B. This peculiar feature of the campaign was foreseen before it began.
3. Lipi of the 10th (1) fulfilled by the rapid growth of intensity in the Ananda.

Ananda
The kamananda is now, in subdued action, continuous without smarana, intense with smarana in asana. It has to become intense without suggestive smarana.

Subjective Ananda is gradually increasing the Kutsa intensity.
Tivra is trying to generalise itself in ahaituka. It now comes in intense particular touches or subdued & general without as well as with smarana.

Kamananda is now present, both subdued & intense, in all positions, lying, sitting, standing or walking, with or without the stimulus of smarana or of hetu. It is therefore free of condition in essence, but it comes more often with the helping conditions than without & more easily. The free continuity & recurrence has to be generalised & its activity in samadhi, which has once recurred, must be manifested & also generalised. All this has been done by the concentrated method

The only obstacle now is the physical vessel, तन, which does not yet admit of the continuous Ananda because of the part of the physical consciousness behind it which has not sraddha in its possibility. That consciousness must be purified & enlightened in order that the body also may change its faith & its habits.
Veda—

The perception of the Gods, (Vayu, Agni, Indra etc) which was formerly occasional, is now regularising itself, all the gods being seen as Krishna, & again as personalities of the Four who throw themselves out in all.

There was some loss of faith later in the day owing to adverse pressure in the body & in the kriti & the failure of confirmed decisive results in the third chatusthaya.

The ritam has ceased to develop & the thought & action are of the brihat of the mental activity.

Rig Veda II 5 to 8

June 12.

S. [Sortilege] इन्द्रायत्थः वृहत्स रघुन रामीरित आ वहृतं सुपररा:

Script.

There has been, as predicted in the lipi, a suspension of the effective activity, the activity in the sense of the sevenfold affirmations. The object is to develop the brihat of the mentality, the barhih, as a base for the activity of the gods. This leads to the remaining two affirmations not yet formulated

8. Siddhi must be on the basis of the largeness in the five worlds & not a selective & limited siddhi.

9. Time must be no longer a determinative, but only an instrumental factor in the siddhi. So also with Space & Circumstance.

These affirmations will take some time in working out, there will be resistance & temporarily successful resistance to their conquest of the field of action, whether the internal or the external field. Such delay or such episodes do not mean the triumph of the resistance or the falsity of the principles.

The sense of the sortilege of the 11th is that the realised action internal or external can never be an equivalent of the Infinite, it can only be a selection, as a rhythm or formation chosen out of infinite sound or infinite substance. This must be recognised. Only a part of what is perceived can be made effectual in action, can be justified by the event. All the rest must be seen in being & force, swāhā & swadāhā.
Ananda

Kamananda has persisted in the will of the sukshma body, but was only occasional yesterday in the sthula because the physical body failed to react against habit & satisfy the test to which it was put. It is now attempting to recover continuity as well as frequent & intense recurrence.

In this attempt it will rapidly succeed.

Subjective ananda has been upset to a slight extent by the failure of faith, but is now recovering itself independently of the faith. It is ceasing to depend on belief in success & outward justification. This is necessary. Ananda must be entirely self-existent. To this rule there can be no exception or modification.

The ananda of adverse impact or result is always felt, but sometimes in immediate retrospect only. At the moment of the impact or the perception of result it is often more or less veiled by the external pranic reaction of discontent or discomfort. This will now go on being steadily rectified.

As a result, the vāmiḥ suvirā isbah will be rid of one obstacle to their action. But there must also be prakasha & effectivity of the tapas. Both ideas are conveyed in the expression suvirah; it is not only delight that is intended, but also light & power. But delight first, since Sat & Tapas have to be realised through Ananda.

Vijnana.

With a more energetic tapas the action of the ritam in trium-drishṭi has revived, but it is still at the same stage, chequered by a sub-activity of the deductive inferential & speculative intellect transformed into ill-ordered intuitive reasoning which falsifies the truth of actuality by false distribution of stress. This great & long-standing stumbling block has been changed in its method of action, has risen out of the lower into the mediary mind activity, has diminished in its force & dominance, but still holds a place in the consciousness which baffles the attempt at a final siddhi of the vijnana.

The attempt to carry the ritam farther is for the present entirely baffled by the forces that seek to remain in the intuitive reason & develop it to the exclusion of the descending Ideal Mind.
Ananda—

The kamananda has only recovered an occasional continuity in two asanas with an inferior intensity & a recurrence baffled in the attempt at frequent & strong possession by the sense of physical inability (avira) which is obstinately imposed on the system from outside. The will in the system is opposed by a will outside which affects the system.

Subjective ananda is, by the same force, being prevented from excluding mechanical asamata.

The consciousness is now forced down to a level where all ideas & mental forces are projected into a false light where they seem all luminous, definitive, equal & cannot be seen in their relative play & right proportion. Here the nervous action seems to be dark & false because they do not fulfil the mental projections, instead of being seen as a necessary medium & modifying force necessary for the right realisation of the thing destined upon the physical plane. The strength of this plane of consciousness is external to the system even while in possession of it by abhisti, by ābhava; it belongs to others & not to the personal experience or temperament which has always had an orientation towards intuition of vijnana or to intuition of chitta, but not to the mediary or to the swapnamayā intelligence.

Trikaldrishtis fulfilled

1. That in the afternoon there would be no definite progress.
2. For the day, all the inertia perceptions (tamasic) denying the successes predicted by the egoistic faith of the tapasic mentality.

Lipi—

1. जिसके जरूरी और ऐसे 
2. egoistic faith entirely killed—ie the egoistic faith in the external consciousness that is still able to affect the internal being must be entirely destroyed before the vijnana can take possession of the mind.

3. 31
4. 13
The inertia perceptions are now being disproved as definitive eventualities, but affirmed as themselves forces that help in determining the eventuality & as perception of such forces in the action of the Prakriti. By this repeated realisation of affirmative & negative perceptions as truths that are forces & forces that are truths, the knowledge is not advanced, but only confirmed with an ever increasing sense of brihat. The Ritam does not gain by the repetition of the process.

The affirmation has recommenced, but only partially in the terms of the vijnana. The mental terms must steadily be replaced by ideal values.

June 13.
St. [Sortilege]

1. देव नर: महितार: विश्रा यथः: मूपश्चिमः। नमस्यति भवेषिन्या;

ie the illumined Powers of the nature, impelled by the Understanding, submit to the Ideality in sacrificial actions where all is clearly distinguished & put in its place.

This describes the movement that is now, against opposition, in course of being effected.

Lipi.

1. unripe — ie the mediary intelligence for full ideal action
2. first fruits of the ideality in the intelligence
3. food of the ideality — ie the bright full intelligence is offered up as food to the Vijnana.

Script

The Seven Affirmations have now to be entirely reaffirmed in the conscious experience. It is evident that aishwarya-vashita & ishita-vashita are growing in the satyam brihat. The pure ishita, aishwarya & vashita have to be equally asserted.

The true hinge of the seven affirmations is not the principle of affirmation, but the personal relation with the Ishwara & its triple rule of pervasive presence (avas), dasya madhura relation and universal bhoga result.
Sort.

2 Ordinany . . Clari. ie the sense of the Lilamaya in every person & object must be made the ordinary perception in a clarified consciousness.

Script.

The labour of the illuminated Intelligence is being constantly justified and again falsified, as was done formerly with the logical intellect, in order that the submission to the Ideality may be enforced on these powerful forces, — in order that they may see that they are not yet pure & cannot be pure of the nervous force that is not illumined, unless they give up the attempt at self-action. They are only there as the food of the Vijnana.

All attempts at permanently excluding obscuring confusion from the Tapas & the Light fail the moment they seem to have almost succeeded. It is no proof of false guidance by the Ishwara, but only of a false state in the Prakriti, a state of unaccomplished harmony. Nor is it a proof of non-guidance but merely that the goal has not been reached.

The error is in throwing force on the detail to the exclusion of the Brihat.

Kamananda

The action & intensity of the kamananda has been restored in all asanas after a prolonged struggle of 24 hours duration between the will in the mind & prana & the adverse external Will which uses the deficiencies of the body.

Subjective intensity of Ananda, after attack & clouding, has been easily restored in the senses. It is only in the mental reception of event that it is still subject to violent negations.

Tapas

Aishwarya is now acting with the 60-fold power in consecutive movements, but only where there is no strong opposite intention or passive hostile force against it. It is also producing circumstance to rectify passive hostile force; but there is as yet no predominant power of success.
Script

Knowledge will manifest perfectly enough if the habit of nervous stress independent of light can be removed. For this reason all perceptions not proceeding from the centre above must be passive & indifferent, until the conversion into ideality is complete.

It is evident that all definitive perceptions of event now are perceptions of an active possibility, that is a possibility that is to be fulfilled or would be fulfilled but for the intervention of another force. Some are more remote being only intentions in the subconscious being that are kept from emergence by the overt nervous & mental activity or thoughts which cannot fulfil themselves in the actual state of the Prakriti.

Sort

3. बुधदेव विद्वेष्य युविरा

Distant Vyapti—

1 The scene in the Alipur Court, presented to the thought day before yesterday, but as an idea not a fact, down to the retirement of Counsel.

Samadhi.

The Swapnasamadhi was once more somewhat active. Rupa shows some signs of a tendency to develop.

June 14th Sunday.

अभिनवभोमियं सूर्य में शुभं वर्णण हृदयं।
प्रति युक्तज हुयते भवते दाशुण यथं।

The force & the mental Ananda have to enforce joy in the right thoughts & right forms of being & change in them into divine
Ananda. All that is not sukta must be made sukta

Lipi.

1. *The society of the Satyayuga, then rightly begin.*
2. *After the destruction of the intelligent activity.* ie the ideal can develop.

Script.

The Law of submission, namas, to Krishna revealed in the gods, is now accepted by the Jiva in all parts of the system. The law of affirmation is also being accepted & this implies a perfect faith in the guidance, but not yet in the result. The passivity of the critical intelligence, its surrender in favour of the Viveka is equally accepted. These things are now sukha and have to be generally enforced by Agni & Soma in the terms of Ananda. It is at present being done in the interests of Indra, who is King of Swar, in the supreme heaven of the mind within the triple system.

The siddhi of the Vijnana will now proceed regularly by self-action as the siddhi of the first & second chatusthayas have proceeded. It can do so because every motion, even the most adverse, is accepted as a step in the necessary process guided & imposed by the supreme Wisdom, Love & Power. This is the namas of the Prakriti to the Purusha. Till now it was only the submission of the Jiva to the Ishwara, & could not be perfectly effective because the exterior Prakriti was still rebellious. The next step must be the entire submission of the intelligence to the ideality.

The instances of effectiveness in dharma continue.

In kriti there is a severe setback, eg. Irish Volunteer quarrel, French Cabinet instability, in public matters; the difficulties in organising the personal life are rather obstructions than adverse movements.

In the body the Tapas is still ineffective except in some details.

The day has been otiose in karma & in siddhi, except for the movement in the morning.
Kamananda is infrequent in occurrence, but not limited by any condition when it does recur.

Premananda continues to grow but is not in its activity as yet the normal movement of the chitta. The same limitation holds of the other anandas & of the Krishnadrishti. Only the shanti, sukha, prasada of the first chatusthaya are entirely in possession of their seats; Samata also except in certain physical touches. In the second chatusthaya dasya is normal, but not the continuous active dasyabuddhi. The rest of the second chatusthaya is dependent for its activity on smarana.

Rupa has now an almost full abundance & spontaneous activity in Chitra; in akasha on a background & in antardrishta clear forms emerge out of a confused abundance of vague incomplete images & remain for the briefest moment or emerge complete[,] vivid & clear but without more than the moment’s stability.

Impulses of activity are abundant & even powerful, but are not able to emerge into coordinated work. They have chandra ananda, but are not fully illumined in their energy.

June 15th

When thou hast drunk of this, O thou of the hundred activities, thou becomest the smiter of the Vritras, and protectest man in the fullness of his plenty —

Script.

That is to say, the Ananda is the condition, the fullness of the Prema, Ahaituka, Chidghana & Shuddha resulting in the Chidananda & Sadananda —

The forward movement of the Rupa today is the preparation for a final efflorescence & prepares in its turn a forward movement of the Samadhi which is dimly adumbrated. There is some strain of the Tapas; it is unnecessary & will fall away. But it prepares & represents the intensity of the Mahakali energy, involving also after purification an energy of the light & joy, which is to replace the
calm Maheshwari-Mahasaraswati passivity of the empty vessel.

These things are not to be done slowly, gradually & with difficulty, but rapidly, victoriously and without relapse. The point at which this will be possible, is not yet reached, but is being rapidly approached.

Already affirmation is the dominant note of the thought-perception, the ketu. The base of Ananda will soon also be “normal”, as indicated in the constant symbol-word, “Ordinary” read on the box. Tapas & Prakasha are being assured more & more of their freedom. Only the uncertainty in the faith holds them back, & this obstacle is now being removed by the removal of the Maheshwari restraint. Mahakali left to herself can now work out her own salvation.

The Anandamaya Drishti, the constant sense of the Ishwara, the dasya-madhura & bhoga are also almost ready.

The large siddhi has also been accepted in the sankalpa & the method of working. It awaits only the ritam of the vijnana in thought & tapas.

Time is the last enemy to be conquered & enslaved. That too depends on the ritam of the tapas.

Crude Rupa is now clear against a background, but with some difficulty, except for a few easily spontaneous forms, & without stability. Clearness has begun also in the antardrishta. An attempt is being made to introduce mobile forms in the jagrat, bahirdarshi & [antardarshi], as owing to the rule of instability in the jagrat, a complex continuous action cannot be seen in the swapna-samadhi, except behind a veil of non-seeing by the eye of the supta chaitanya. This veil is growing thin & the chaitanya, jagrat in swapna, can now see a continued action, but not with the figure clear before the Chakshush.

In rupa sadhara, there appear to be three preliminary stages. First, chitra is formed from the material provided by the background, by the mental eye acting through the material & taking advantage of marks & physical helps; then the material is used

2 MS antardarsha
for the substance of the picture, but the outlines are arbitrarily
determined by the mental eye; then emerges the sadhara which is
created not from the background, but from the akash & thrown on
the background to help the distinctness; finally, the clear sadhara
detaching itself from the background & practically equivalent to
akasharupa.

Lipi

1. Soul-tejas; सूल-तेजस्
2. the real intensity of the delight (has only to reveal itself
   by seizure, in the mind, of the central & comprehensive
   Ananda)
3. itself it is distinguishing itself — i.e. the ideality in the move-
   ments of the intelligence
4. joyful progress — often repeated, almost daily

The subjective Ananda, the Krishnadrishiti & Drishti of the
Jnana & Ananda Brahman, the confirmation & enlargement of the
Satyam Brihat, the strengthening of the principle of Ananda are all
now proceeding automatically towards their completion. So also
the acceptance of all bhoga and the dasya. Only an unsistent but
sustained attention is needed for their generalised activity. For the
generalised activity of the madhura relation with the personal Ish-
vara, smarana also is necessary; there is not the automatic smarana.
The automatic generality of the ritam & the conquest of Time are
as yet only envisaged.

Samadhi is progressing in stability. Dream was extremely co-
herent, free from ego but deformed by present associations.

June 16th

St. Raw materials (Fr. D.).

Script. It is the raw materials (áma) that are now being brought
forward for pachana. This exactly describes the defect in the siddhi
of the mental consciousness which was being strongly felt all the
morning & especially at the moment of the sortilege.

Neuralgia with a struggle in the consciousness between dis-
comfort of pain & raudrananda. Followed by intensification of pain & repetition in two places. An equally intense pain in the chest added. There the titiksha was deficient & the pressure was diminished & intermitted. In all cases except the last mental suggestion preceded the production of the pain. Afterwards the pains were renewed but with less simultaneity; the titiksha & element of ananda & physical udasinata increased, but could not rise to the right intensity. At last the pressure became too great and determined will had to be used to remove the pains. In this experience there was a conscious struggle between two Powers or sets of Powers, one exulting in the pain & desiring to use it for the abhyasa of Raudrananda, the other rejecting & opposing them as contrary to the Arogya siddhi.

For the moment the anritam seems to be strengthened. The samata, shanti, sukha, hasya are growing continually in positive force as well as the dasya and faith in the guidance & resist all attacks.

Lipi
1. youth destiny (chitra).
2. enthusiastic faith in the ideality
3. referee.

The clouded ideality is again emerging into overt action.
For some time the spirit of the ideal society seems in a crude form to be growing among a certain number. This fulfils the repeated lipi 13.

Cold has once more manifested (in the head) but with a slight effectiveness. It recurred, however, throughout the day, the will only availing to prevent its continuity.

June 17th
S3 intimating the destruction of the sollicitude.3
There is persistent clouding of the knowledge in order to annul the affirmations, maintain the principle of relapse and destroy the

3 So spelled in the manuscript here and below; it is the French spelling.—Ed.
faith established & the shanti. It is always the method of the Vritra that is used, except in the fourth & fifth chatusthayas.

Script.
The Ananda must be positively affirmed in all activities & experiences without regard to consequences. The governing Power will arrange the necessary affirmations & rejections.

Commencement of the Tablet of Vedanta.
The Affirmations remain. They are resisted in their conscious & perfect application. They have yet to be finally disengaged from that resistance.

The first chapter of the Secret of Veda completed. The power of swift writing & the joy & force of inspiration have been entirely recovered; but cannot be used with sufficient continuity as yet, because of the obstructive tamas in the physical consciousness. The shadow of Vritra still remains on the Adri.

Intimations—
1. The first chapter of the Life Divine & of the Synthesis of Yoga will be immediately begun & rapidly completed.
2. The physical siddhi will be extended into utthapana.
3. The literary activity having been organised, the activity of Dharma will be organised as the second outward fulfilment.

The physical siddhi is now the chief subject of active struggle between the Tapasya of Siddhi & the remaining strength of Asiddhi. As yet the Asiddhi predominates in the actualised existence, almost entirely in the Saundarya, effectively in objective utthapana, as a powerful obstruction in Arogya, as a habit of discontinuity in physical Ananda.

Kriti does not yet progress beyond rudiments; Dharma is only effective, for the rest with a great variability, in individuals; Samaja is only seen in indications of initial tendency.
St. refers back to the raw materials, the destruction of the
sollicitude, the “soul-tejas.”

There is an apparent period of obstruction or even of relapse
in the Vijnana & faith. As usual, it has an object connected with the
next advance in the siddhi. That object is to get rid of the remnants
of sollicitude & faltering faith and affirm the active tapas that will
ripen the raw materials of the siddhi.

Lipi
1. Suspensibility of the ideality

It is found that in the state of passivity the suggestions of the
brihat tend to arrange themselves in the terms of ritam, correcting
automatically the false stresses with a greater power of self-existent
truth than formerly; but activity of the tapas tends to reinforce false
stress and deform the ritam. Therefore the old gulf between the
passive udasina effectivity & the active joyous or sahasya seeking
after effectivity, is not yet bridged.

Aishwarya etc are for the most part ineffective for the last two
days.

The obstruction of Vritra has succeeded this morning in trou-
bling the faith & the first chatusthaya.

The ritam in the state of passive recipiency is an unillumined
or obscurely illumined ritam.

The Brahmadarshana varies between the Krishna & Narayan
Bhava & the impersonal Brahman in which Sarva predominates &
Ananta & Jnana are insufficient. It is only the Krishnadarshan that
brings the Ananda.

The obscurcation being effected, the full ananda of the senses
is also affected with jugupsa.

Script.
These inroads in the siddhi will now be ejected & the damage
done repaired. It is really the remnants of the egoistic faith that have been attacked & the other has been veiled in order that the attack might have effect. The suspensibility of the ideality is drawing to an end & with its removal, the principle of relapse will be removed from the emotional & nervous subjectivity.

The Affirmations are once more manifesting, but not in their entirety. They are pursued by a question that materialises in negation, partial or suspensive of the fullness of the affirmations. Especially, the affirmations of personal relation are still ineffective & without them the rest cannot keep their footing.

The full affirmation of the satyam brihat is no longer resisted, but the complete affirmation of the ritam is constantly attacked & broken when it seems to be on the point of perfect fulfilment. There is always an element of deviation, potential or actualised, or of potency of relapse which is made effectual, usually immediately after any instance of effective or perfect play of the ritam. It is always in the intelligence luminous or unillumined that the ritam acts.

Study has to be arranged with the same force & order that is almost accomplished in the writing. It has to be confined at present to Veda and philology. In both perfection & not rapidity must be the first consideration, but rapidity will come hand in hand with perfection.

Study of Veda.

June 19th

Samadhi showed a greater tendency of habitual stability in form & continuity of process than has hitherto been reached. Nevertheless the stability is not fundamental as yet, the pratistha, that is to say, is insufficiently firm & thus gives room for suspension & relapse.
Lipi.
(Chitra) 1. glorious energy — imprisoned & trying to emerge.

Akasha 2. the result of the energy is still obstructed.

" 3 sunlit energy — the sunlight in the energy is instructive & enveloped in the theory of the intellect.

4 in the delight there is light, it is slight as yet in the tapas

5. 31. 13 (daily repeated)

Script.

The sollicitude is now destroyed in its centre; in its application it has to be destroyed by substitution of the free, joyous & unillumined Tapas proceeding direct from the Ishwara.

The raw material is being progressively turned into ripe & utilisable forms. This is evident in the knowledge in which the most apparently false suggestions are being reduced to terms of the Truth even in the difficult processes of the trikaldrishti. It is proceeding also, at a less advanced stage, in the Tapas. It has begun in the rupa & samadhi.

Force of soul-tejas has to be substituted for the sense of want & the straining in the sollicitude. This process also is under way.

Study of Veda is beginning to take its proper form.

The Synthesis of Yoga commenced.

Aishwaryas fulfilled

1. Agreement about Irish National Volunteers & their growth

2. The formation of the French Ministry

3. The recent course of the Mexican War.

4. The action of Turkey in the Greek quarrel.

5. The undisturbed progress of the S. African solution.

Against —

1. The hitch in the Niagara Mediations.
Today the negations have been expelled, but they still surround the progress at a little distance.

Especially, the dasyabuddhi is greatly strengthened, & the Tapas. Physical alasya still persists & resists the pranic utthapana, but it is being constantly overborne. Mental utthapana is almost complete, ie the uninterrupted energy of the mind for action, pranic utthapana is only resisted by the défaillances of the body. The two are now moving towards a continuous variable energy; change of activity is used more often than rest as a means of relieving the strain on the unfit body. For some time sleep has been allowed in large quantities.

Lipi.

6. The sleeping & suspended energies again in activity.
   (chitra)
7. something of fidelity to the ideality emerging, intellectuality losing its tejas of resistance to the ideality.
8. the exchange of intellectuality for ideality in the sea god (Varuna).
9. return of friends.

Rupa in jagrad antardarshi is now showing stable groups including men, objects & animals together, crude, & with movement. But there is a deficiency of body & vividness. Shabda is trying to emerge into the jagrat.

Samadhi.

Strong & often brilliant activity of vision in swapnasamadhi & deepening of the solidity in the degree of stable continuity already achieved.

June 20th
St. Straining & anxiety must cease.

Script.

The entire fulfilment of the progress in motion since the 10th June is hampered by certain negations which cannot break down
the progress but seek to limit & occasionally to suspend it. The
Nidab are stronger than the Vritras, & this in itself is a significant
indication of progress. Vritra, however, is still strong in the fourth
& fifth chatusthaya[s] &c., to a much less extent, in the sixth &
seventh.

The intimations of the seventeenth are as yet being fulfilled
only in the first & even that is subject to qualifications of the
time-symbols then assumed by the mind.

The day has chiefly passed in karma.

Synthesis of Yoga takes its final form; the first Book of the Life
Divine begun (the Vedantic Affirmations).

Lipi
1. death of hope
2 sister energy —to replace & already replacing hope,
nishkama anandamaya tapas.

The touches of sollicitude from the external Nature now take
the form of a passive doubt with a tendency to repining, more often
than the sense of anxiety & effort.

Lipi
3. The repining is in the intellectuality
4. energy of bliss (to remove the repining).

Script.

There should be no struggle to do anything, know anything
or effect anything, but only the readiness to be an active & blissful
instrument in whatever is intended.

This does not mean that there is to be no passion & force in the
action or that all is to be saumya, easy, pliant. On the contrary; for
it is the action of Mahakali that is intended. That action is already
pleasant in the impulse & joy of the sahitya, its isha & radhas—
combined as the ratha, the chariot of the soul in its action. The
same rudra energy will be extended everywhere; but it must result
from the bhoga of the passive Prakriti enjoyed by the Ishwara.
It must be extended first to the vijnanasiddhi[,] to the thought, 
vak, script, lipi, sense-perception, power, vision,—afterwards to the 
body & the outward action. Not only is this to be done, but it is 
about to be done. It has already extended itself to the script & is 
preparing to extend itself to lipi & rupa & to the senses.

The change to the rudra ananda of Mahakali is already being 
effected, organically & organised-ly— it has extended itself to all 
experiences & activities, but is hampered by the sense of a discord 
& the discomfort of the discord. This discomfort can be well per-
ceived as a form of ananda out of order & its source as the egoism 
of a standard erected by the individual mind and a demand that 
all should conform to it. The standard remains & the demand, 
but it must be the standard of God’s tendency & the demand of 
God’s tapas, so that the discord may also bring a joy of progressive 
fulfilment & of strenuousness in the progress, not the discomfort 
of a baffled struggle.

The use of error is to suggest or to maintain a truth of being 
which would otherwise be shut out by the limited precision of 
the truth of actuality. What we call truth is always an equivalence 
between a partial truth of fact & the perception in the human 
mind. If too rigidly insisted upon it is itself an error,— as if a tract 
of ground brilliantly lighted were to be taken for the whole earth & 
the vastnesses left in obscurity excluded as if they were non-existent. 
This rigidity is the ordinary method of truth-seekers. Necessary to 
the limited human mind, it yet prevents comprehensive vision. We 
deny or forego the infinities of Truth in order that we may securely 
grasp some of her fragments,— the broken bread of verity.

June 21!

The Ananda holds firm. The sortileges of June 10th, 12th & 14th 
are fulfilled; & since safety of the gains is assured, whatever inter-
ruptions or cloudings there may be, the Ananda is a dhana which 
is in possession now once for all. It has only to be progressively 
intensified & cast more & more into the Mahakalibhava. It still
keeps too much of the Maheshwari-Mahasaraswati bhava.

St. Sayana Bhur—ie the physical consciousness has now to be solarised (moulded into the ideality).

N.B. Before seeing, it was intimated to the thought-perception that today’s sortilege would be a repetition & confirmation of those of the 13th. A glance was given at an old rejected MS. (Secret of Veda) with the above result which was first read Sight & Bhima. This was at once a prediction & an illustration of the thing predicted; for the perception came in the physical consciousness and was not first made luminous above in the Drishti.

The sortileges of the thirteenth are first to be fulfilled & then Sight & Rudrashakti are to be harmonised.

The body resists & attempts to keep its tamas, incited by the memory & habit of old reactions. It has to be given, when too insistent, a change of activity

Intervals of intense bodily passivity & inner calm still arrive, as this night, which belong to Maheshwari rather than to Mahakali-Mahasaraswati. They are used for the ever increasing fullness & force of the pratistha which is always the Maheshwari pratistha.

Great stability has been achieved in the rupa of swapna-samadhi & lipi there seems also to be growing [in] coherence, but these effectivities have not yet been generalised.

Annotated translation of Isha Up. corrected and copied.

June 22d.

There is a yet unconquered opposition to the vijnanamay fulfilment. The Ananda holds firm in spite of many trials.

St. The action & intensity of the kamananda restored in all asanas—

ie the kamananda has been sluggish & intermittent, it is now time for restoration of its activities.
The action is being restored, but the intensity is intermittent except in the seated position which does not help to disperse the nervous energies that concentrate in the self-expression of the kamananda. Smarana is, temporarily, again a condition for continuity.

The vijnana of knowledge progresses in the mass and through the mass the ritam is evolving, but when the mind concentrates on individual detail, the old disorder is apt to recur. This, however, is not invariable; for often in the individual detail there is correct order. But when the final result is forecast without a mental perception of the forces at work, there error in mind is more frequent than the correct reception of the truth from above. The latter occurs rarely; nor are the perceptions as a rule illumined, but belong to the physical consciousness. The sortilege of the 21th, Sayana Bhur is being fulfilled as the preparation for those of the 13th. The ṣuṣṭrūṅk is going on in the physical consciousness which is being prepared as the lowest layer of the barhis.

In Tapas, the two difficulties are, on the one hand, to reject all willings that are not in harmony with the Divine Will & on the other to avoid mistaking the immediately dominant force for the eventual Divine Will.

Samadhi

The instances of prolonged action of rupa & stable status of rupa in swapnasamadhi are becoming more frequent, as well as coherence in dream, but as yet the insecurity & remoteness of the whole world of dream & vision are not removed.

Karma. Life Divine. Secret of Veda (improved & copied)

June 23th
Lipi

1. prophecy — has now to be made utilisable
2. brothers —
3. it is successfully arrested . . delight (in its increase but not abrogated or concealed)
4. eloquence

www.holybooks.com
5. it is possible for it is everywhere successful (ie the turning of all things into delight,—in immediate answer to a half-doubt in the mind)

6 battle

The lipis doubly underlined refer to a later fulfilment which is now being prepared behind the outer actuality of things.

Script.
The governance of all thought & action by the Ishwara is becoming more & more general & apparent, but is still followed on separate converging lines and is not brought into an overtly common & harmonised action from the one centre. Prakriti in her new activity is still being prepared & organised. But the preparation is now rapidly drawing to a head & the relations of the diverse activities begin to be seen.
The main complaint is smallness, insufficiency, want of mass in the ritam. These are the things that have now to be remedied.

==

Vijnana

The ritam increases but always in the unillumined physical consciousness and always with an element of blindly striking consciousness that fails to hit the mark, or to get the right pitch & accent. [This] element in its activities is being steadily put into its right place, but still persists.

==

Reference to Veda for indicative Vak.

Intimation that this Sutra which had long baffled the mind, would this time yield up its whole secret. Immediately fulfilled, with a constant play of the illumined ideality in its fourfold powers.

Work to be done.

A Society to be formed like the Theosophical Society which will support & popularise the Knowledge & the writings which express it.

4 MS These
This is to be done by two means, the Will & Vyapti spreading the impulse to know & calling silently its supporters & the growth & manifestation of the Yogic powers attracting inquirers & convincing doubters.

==

Vijnana

The Knowledge after attaining a fair amount of Ritam in the Satyam Brihat, gave place to an attempt to establish the Aishwarya-Vashita-Ishita in a greater mastery, but here the Tapas is only one force among many, sometimes prevailing or partly prevailing, sometimes or partly failing & the Knowledge falls back to that level & reflects the struggle of forces & no longer the vijnanamaya knowledge of its eventualities. It becomes again the satyam brihat without the ritam, especially if failure reawakens the old struggle between egoistic faith & rajasic revolt of disappointment.

==

Uttapana

The utthapana (physical) has been renewed. So far all movements of the body in that direction have been a failure. Today, however, the medial asana of the legs was renewed & maintained for 15 minutes in each case with varying degrees of pranic mahima & laghima. Anima was intermittent, but on the whole defective, the cessation being due to the defect. In the right, the pressure was greater than in the left.

==

Karma

Recopying & correction of Secret of Veda Chapter I completed.

Jun 24th

St 1. We have to be content
2. स्थितिपद्यन्यथाको बाज बाध्यरो वा अविष्णवति —
That is effort is either inert & otiose at this stage of the Yoga or turns into Akshepa, that is grief, complaint or revolt.

Script.

These examples are being given to show beyond the least doubt that a great Intelligence is guiding the Yoga. The main feature of
the moment in the Yoga is the attempt of sollicitude & effort to revive with their usual consequences of dissatisfaction, trouble, complaint & revolt. The first thing done therefore was to make the eye glance back & fall on the previous “significant words” recorded. “Straining & anxiety must cease” & “Raw Material”,—the latter explains the difficulties of the process which has led to the shadow of dissatisfaction & sollicitude. The eye then glanced back at all the sortileges recorded & at once reinforced the corresponding activities & judged their state of progress at the present moment. Afterwards it glanced first at the paper Mahratta opposite where it got the first “significant word” & secondly, into the commentary in verse on the Isha Upanishad where it got the second. The agreement of these two entirely unconnected sources taken at random, seen in the light of previous “coincidences” shows that these are not coincidences, but the combinations of an Intelligence for which no method is too small to bring about the greatest ends or too great to be used for bringing about the smallest.

Thought
Despise not, O thinker, the things that seem to thee negligible or the thoughts that seem to thee only childish. Thou mayst miss by that neglect the little stone upon which rests all this mighty universe.

Aishwarya
There are still three movements in the effectivity of Tapas
1. The Tapas is successfully resisted by strong powers of obstruction that are either in possession or take possession of the field of activity. The successes are then fragmentary & partial.
2. The Tapas acts resisted, but irresistible, in the power 60, sweeping away the resistance & realising an immediate success. This success may be either in one detail or in successive details but has not yet been generalised.
3. A mixed movement struggling towards general effectivity in which each act of tapas is satyam, but there is insufficient brihat and only a fragmentary ritam.
Script.

The difficulties of the Vijnana ought not to discourage the Tapas. This is still the defect that the actuality of unsuccess brings unfaith not only in the immediate success but in the whole theory of the karma.

The unfaith in Yoga siddhi is only a shadow; the unfaith in karma is still a reality. It has a liberal & ample ground of justification, but also good reasons for self-distrust. If the Yoga siddhi is entirely fulfilled, so will [be] the karma. The question then is of time, of power & of good faith on the part of the Master of the Lila.

The doubt of good faith rests on the idea that this may be one of his deceptions by which he helps his purpose in the world, but deceives & breaks his instrument or satisfies his hopes only in a slight degree.

The doubt of power rests on the idea that the Master is not Krishna, but another who represents himself as Krishna or has taken advantage from the beginning of that belief in the mind, or that Krishna is only a god among gods & not the supreme Deity.

The doubt of time rests upon immediate disappointment & argues from that to eventual disappointment.

The first step is to set right the Tapas.

1. The Tapas, if applied with concentration, determines each series of movements in the sense of satyam brihat with a considerable but uncertain ritam.

2. This movement is baffled by an inhibition of the Will through partial knowledge which perceives a predominant possibility of unsuccess as a fate of unsuccess & helps the possibility to realise itself so that it seems justified as the fate.

3. This movement takes advantage of the uncertainty in the ritam, of the fact that knowledge is more correct when not coupled with action of Will on the result & of the weariness which comes on the physical self by expenditure of concentrated tapas.

It is necessary

1. That the satyam brihat should prevail also when there is automatic Aishwarya Vashita Ishita without Tapas.
2. That the idea of unsuccess should be recognised as a perception of strong or dominant possibility & removed from the central action which seeks the ritam of things in the Apas.

3 That Will & Knowledge should harmonise & coincide & the disparity between Chit of Knowledge & Chit of Tapas be resolved into a unity.

For this purpose two principles have to be observed.
1. The combination always of Will & Knowledge
2. The substitution of self acting for concentrated Tapas.

Asiddhi

Lipi battle repeated from yesterday justified. It is notable that this struggle always comes when there is in the consciousness a stress towards finality or rapid advance & is always to the advantage of the forces that obstruct.

—

Kamananda

It is suggested that the action & intensity of the kamananda is now established beyond recall in all asanas; but the continuity & freedom from necessity of smarana are not yet sufficiently established & are therefore [liable]\(^5\) to more serious interruption.

—

Lipi
1. battle
2. egoistic faith to be discharged of egoism & justified
3. totality . intelligence —ie the subject of the battle
4. fifteenth —ie Anantam Brahma now inseparable from Sarvam.
5. intensity of the delight —a greater subjective intensity is already normal.

Kamananda

In essence the smarana is no longer indispensable, but is still utilised to stimulate the Ananda activities and shorten the periods of interruption, intervals of discontinuity.

Continuity therefore is the one siddhi in real defect.

\(^5\) MS liability
Script.

1. The egoistic faith is already being justified; for it is the reflection of a higher tapas and ritam. The totality of the intelligence is being justified in all the thoughts, for they are being shown to be satyam brihat. The ritam alone is still reserved for imperfection.

2. The intensity of the delight will now be increased in the subjectivity, asserted in the physical ananda. The latter movement has already been recommenced.

3. It is true that the method still belongs to the old method of alternation between Night & Dawn, progression & apparent retrogression. The Nature is too much besieged as yet by the mental Mayavin to admit of the total exclusion of this inchoate & inferior vrijina movement.

4. The satyam has now been sufficiently established in the brihat. The ritam also has to cease to assert itself only in separate detail or small groups and must establish itself in the brihat. This movement also has been prepared, but it must be finally asserted & established.

5. The vijnana of Knowledge & Power is the crux. So long as it is not entirely justified, the perfect finality of Samata & Shakti in the adhar & its environment is not possible. For Error & Defect mean persistence of the vrana in the active Brahman & where there is a wound there will be suffering. The only other escape is into the shantam Brahma in Mind where activity ceases in a silent & impartial Delight that does not fulfil, but only escapes from the necessity of harmony. It is only in the ritam that the Shantam becomes the Active & Nivritti & Pravritti are perfectly reconciled.

6. Ananda is not yet sufficiently asserted in all the activities. The Mayavin of the Manomaya opposes & has hardened his heart against the Light. He has to be expelled, not fostered.

7. His opposition is to both the Swarajya & Samrajya, but the denial of the latter is his instrument. Aiswarya-Ishita is therefore the key to the perfection of the rest of the siddhi.

Samadhi.

Coherent & vivid swapna converted itself at times into vision
—only shadows of present association.

Shabda attempts to manifest itself in the jagrat.

Utthapana of arms, horizontal asan, for 15 minutes. Anima defective; strong pranic laghima.

June 25th

Lipi—

1. clear buddhi
2. vestiges of the intellectuality
3. the intellectuality greatly extinguished.
4. egoistic faith is to be farther justified

Aishwaryas fulfilled—

1 Greco-Turkish arrangement.
2. Progress of Home Rule & Irish N.V. [National Volunteers]
3 Delay of rupture, Mexico.

Script

The Intimations of the 17th were of the old type & are not being rapidly fulfilled—they expressed powerful tendencies, not actual eventualities. All of them must in the nature of things be executed, sooner or later, & therefore there was no value in the intimation, since the suggestion of rapidity has not been fulfilled. They are indications, rather than intimations and as indications had a full value, if by rapidly is understood rapidity of composition & not of completion.

Karma.

The first chapter of the Life Divine completed with great illumination in the thought & rapidity in its expression.

Idea of a publication “The Divine Victory” or the “Conquest of Immortality” ie the Hymns of Vamadeva translated into English in their psychological sense; suggested by the rendering of verses to be prefixed to the first Chapter of the Life Divine.

Ananda

The chandananda is now extending itself to thought perception
& vangmaya thought; it is stronger in the unwritten script.

Samadhi

The consecutive event in rupa (handling & turning the pages of a book) became much more stable & persistent in continuity than before, but was divided between jagrat & swapna & broken by one or two intervals of non-sight. The book was opened & the general nature of the contents perceived; one or two separate words even were read & retained (stores . . provided).

Materialised sukshma taste strong & stable on the physical tongue (bitter) for upward of a minute.

Vijnana.

Perceptive thought is now assuming the largeness of the ritam.

Utthapana

The asana of the arms horizontal in the recumbent position. This asana, in which the siddhi came suddenly at Alipur after ten minutes of moderate struggle & extended to two hours of perfect & effortless laghima, was in Pondi. assailed (1) by a slight but ineffective unwillingness of the physical prana to persist in this attitude in spite of the absence of any physical obstacle. (2) by a slight but ineffective attack on the anima during the asan. (3) by a reaction after 3 hours of the asana manifesting in a subsequent tendency to stiffness in the shoulder muscles. Today it [continued] for 1 hour 9 minutes with occasional manifestations, none of them serious, of these difficulties.

Asana of right leg, medial, first 6 minutes, then 15 after a long interval (20 minutes); the left, 21 minutes. In the right laghima seemed to draw back & give the place to mahima which supported the utthapana. In the left laghima was agent & mahima supplementary. Defect of anima was intermittent in spite of great pressure on the right, until the close of the asana. Asana of left horizontal, first in position of body recumbent on the side (15 minutes) then on the back (5 minutes).

6 MS contained
The cause of the relapse & long suspension of utthapana seems to be that the pranic siddhis were never really extended to the outermost shells of the physical prana. Their deficiencies were supplied by an exceptional force of Tapasya which afterwards retired, not being natural to the body.

Lipi

5. Do not resist the intelligence
6. The bliss of God finite, yet infinite
7. Getting right.

Script.

The element of ritam in the thought perception is immensely increased in the ordinary movements, even those of the nature of trikaldrishti. All telepathy & trikaldrishti must now be dominated by the ritam.

That higher movement of ideality long presaged & prepared has yet to begin on a general scale. It demands for its success the entire passivity of the intellect.

Karma

The first instalment of Yogic Synthesis recommenced & rapidly completed. What was written before, is reserved for the second instalment.

Samadhi

Dream disorderly & confused. Rupa maintained, but chhaya-maya. Stability frequent, not long continuity.

June 26th

Karma.

Translation of IV. 13. R.V. also 15 & 25

Doubt of kriti strong in the morning; Ananda & Ritam disputed, but not very forcibly. Intensity of subjective Ananda immediately restored. The whole being is now really subject to Ananda[,] even the ananda of asiddhi, there is only a part of the outer prana which forms a weak point by which the subjective asiddhi is able to affect & reappear in the system, & the nirananda of unfaith & asiddhi is its means of entry.
Jnanam Brahma is now adding itself to Sarva & Ananta as a constant manifestation in the consciousness. Ananda is behind.

Sat Brahman is always the base, but Ananta manifests normally in the Sat, Jnana now manifests less actively, but still normally in the Ananta. The Asat Brahma is behind & varies between Anandamay Asat in its purity, which is always anandamay, & the Negation of things in the mind & prana which is udasina or niranandamaya. The Asat in the body is Death.

Script.
The weak point in the Prana has to be made entirely strong; for that the unbroken stability of the Light is necessary.

Ritam increases, but is not yet in possession. Effective Tapas also increases in the mass, but is baffled in the details. At its best it controls, but does not possess the Akasha.

Lipi.
1. After the intellectuality, rapidity of the ideality in its entirety.

Lipi
This lipi manifested in the akasha in two parts showed a stability & a strength of material hitherto unprecedented in lipis of the first instance

Long lipis are yet of a shifting & unstable character, only single words & small phrases are yet capable of stability.

2. it is to distinguish the ideality . . to forget the right of the ideality (ie the habit of the intellectuality; it seeks to judge for itself[)].

3. the tyranny of the Gods has to be destroyed.

4 they apologise . . paralogise.

Script.
However hopeless the outlook may seem in the Kriti, yet it is sure that the work will be done, but the intelligent Powers give too large a place to the immediate process. This stage is the tyranny of the gods and must be overcome.

==

3. 13. repeated daily
4. the perfection of the lipi first manifests itself

Tapas—
A great change is now manifesting in the Vijnana of Power. There is a visibly growing tendency in the Prakriti, to aid, favour & accomplish the thoughts & will-movements & the previous tendency to contradict them at once is now more intermittent, more artificial & when it prevails, prevails with more difficulty. The old rule, however, still holds good in the body & in Kriti.

The tendency in the Mind to select & favour a particular thought or will as against others without knowing it to be the Truth or the divine Will is the chief subjective obstacle to the rapid progress of effectivity in the Vijnana.

Aishwarya
1. Prolongation of conference at Niagara
2. Events in Mexico, imperfectly
4. Irish. N.V
   In Dharma there is strong opposition.

Script.
It is necessary in the Kriti & in the body to substitute the brihat will for the alpa, and subordinate the pranic movement to the pure mental, so that the Prakriti may develop there the powers of 50 & 60. In the Dharma the same necessity enforces itself.

Karma
Life Divine — Chapter I recopied & corrected.
The obstacle to free & joyous Tapas & Prakasha is the disparity between the Tapas of aspiration & the effective Tapas. It resides therefore in a defective Prakasha of eventual actuality or a defective force of that Prakasha in its dealings with immediate actuality.

Strong revival of the sukshma gandha, but in isolated experiences.

June 28th

St. *ordinary psychological workings*—ie the process is to make the higher nature the ordinary nature, but the physical consciousness has to be progressively transformed to that end.

Script.

There is a need of increasing affirmation.

The Vijnana has only to be made more swift & spontaneous in the discriminative ritam. Instead of the perceptions being admitted & afterwards put in their relation, they must be in their right relation even in the act of entry—not a confused troop that arranges itself in the reception chamber, but an orderly band each entering with the right precedence & grouping. So much is still defective.

The Tapas has only to increase in its hold on the executive agencies & bring all its workings to the degree of 50 & 60.

In the Rupa & Samadhi, there is a last obstruction to be overcome in order that all may expand irresistibly & rapidly.

The Affirmation of the Jnana Brahma is now sufficiently normal to provide a secure basis for the Ananda Brahman. Only it is the one Anandamaya in all who must be perceived constantly, not the Narayana imprisoned in the form. That must be only a subordinate movement in the One.

The fullness of the first four affirmations depends upon the second triad. That must now be made habitual to the consciousness.
and part of its “ordinary psychological workings”. It is now being done.

Transfer the centre of the active consciousness from the mind to the supermind. The supermind is the seat of the superman.

See all forces as personalities in their action. That is Veda. See all personalities as the supreme Purusha, Krishna; that is Vedanta.

Samadhi
Strong manifestations of perfect rupa in the jagrat bahirdarshi, but as yet without stability.
Intense & stable lipi in words & small phrases

Intimations
1. Today Jnanam Brahma becomes permanently normal
2. Today Ananda Brahman commences normality
3. Lipi stabilises itself today in longer phrases.
4. Rupa takes today a permanent step forward.

Script.
The seven affirmations are now forming into their normal movement. Their deficiency is due to the lingering tendency of the consciousness towards formulation on the lower level of dividing mind.

Utthapana.
Medial asana of left leg, 20 minutes. Mahima defective, more than anima.

The Intimations
The Anandam Brahma seems to be confirmed as the normal experience and its contradiction has suddenly become the exception. Jnanam Brahma is perfectly established. Lipi has now the capacity for stabilisation in longer phrases of variable intensity & legibility. Rupa has acquired a firmer tendency towards stability & efflorescence & a beginning of greater stability, chiefly in perfect dense forms.
June 29—

Sort. The supreme human aspiration lifting itself towards that which is at once the apparent contradiction and secret reality of our being.

(ie Krishna Kali).

Script.

All is realised that was promised yesterday. It is the definite beginning of the precise ideality, as was predicted yesterday in an unrecorded lipi. Today the movement will become much more powerful.

Lipi

1. Authority of the lipi. (increasing & to be made definitive)
2. Yourself
3. 13. constantly repeated.

Samadhi

In the morning there was an enormous advance of coherence in a sort of imageless dream (conversation & bhava only), in lipi of swapna samadhi & in lipi of antardrishta jagrat. Rupa of swapna & antardrishta jagrat is still stationary.

Aishwarya

In the morning after a momentary ineffectivity there was, in a certain field, constant play of the 40, 50 & 60 power, but chiefly of the two former. 30 & 35 were rare, but still present in an active potentiality.

Trikaldrishti.

In the satyam brihat with a growing ritam, but the fullness seems to be awaiting the growth of the Tapas.

Faith.

Faith grows & is sometimes enthusiastic faith but still waits on the actuality in the body & in karma.

Intimations

1. Today the universal premakama with their subjective ananda in its intensity of self-content.
2. The veil finally removed from the constant presence of the Ishwara; consequent intense tertiary dasya & madhura. The latter will still be insufficiently brihat in its scope.

3. The rapidity of the ideality already realised will grow in force & certainty of its power.

Four other intimations are to be given.

==

Script—

The first intimation is already being fulfilled & the second prepared. The third has now to follow.

The intense perception of Krishna in all beings has begun but it is combated sometimes by the strong perception of the ego; in objects it is combated by the sanskara of the objective inconscience. Both these obstacles have to be rapidly removed.

==

Lipi.

4. It is already established in the trikaldrishti.

5. 3—ie lipi & rupa to be perfect, the latter in the crude & dense.

6. The full joyous sensibility to the knowledge of the divine personality. (antard.)

7. before the light the fulfilment of the tapas independent of the obstacle of time

8. the superiority of the perfect ideality to the intelligent ideality

9. it is the perfect business capacities that are about to be active.

10 besiege the faith—immediately fulfilled

11 the intellectuality still struggles to besiege the faith

12 disaster

Script

The three intimations now are all being fulfilled but can still be denied and interrupted. That capacity in the lower prakriti must be rapidly removed.

Lipi grows continually in perfection & kaushalya is trying to manifest. There must be no relaxation of the rapidity of the movement.
Rupa is still overconscious of its difficulties.

Lipi
13. death of the false tapas.
14. rupees before September
15. it is for the last time that the long struggle is to take place (in the physical siddhi & parts of the karma).

Intimations—
5. Rupa to break down the difficulty that has so long prevented its perfect efflorescence.
6. Samadhi to effect the same advance.
7. Trikaldrishti & Aishwarya-Ishita to prepare their final possession of the Akasha.

Rupa & Samadhi are attempting a greater efflorescence. In Samadhi, rupa & action of eating food, intense acid taste breaking down the limitation which confined the action of the indriyas chiefly to sight, hearing & touch. The organisation of coherent lipi in swapna samadhi continues. The rest, while not positively advancing, is becoming more free & insistent in its action.

Rupa in jagrat antard. is also frequent & varied in crudeness, but instable & ill-defined in outline except at its best. Both in antar & bahirdarshi vision in the mental akasha is manifesting itself.

For some days the typical sounds (flute, bells, cricket ticking etc) have been loud, constant & uninterrupted for minutes together in the closed ear. Today they achieved the same manifestation to the open ear.

Asiddhi
The attack is now delivered on the body & on the faith through denial of the knowledge & power attained & their reduction to their now lowest possible terms. The faith remained firm; the body yielded, but not to any very marked degree.
Lipi
16 disaster . slight disaster in the activities of the subjectivity. fulfilled.
17 perfect physical delight. to be now affirmed
18 believe in the irresistibility of the tapas
19 prologue 20 profitable telepathy
20 faith in the potentiality is to change into faith in the actuality.

Tapas
Effective vyapti is increasing to a great extent, but has large & puissant results mostly in those who are close in mind & person to the centre of the vyapti.
Trikaldrishti & aishwarya are more frequent in their right activity, but do not yet possess the akasha.

On the whole the intimations have been fulfilled, but the results attained are not yet perfect and the old habits of the consciousness can still by a struggle reassert themselves temporarily in a clouded mentality.

Tapas is attempting with a frequent success, but with more frequent failure to assert itself in the compulsion of the object towards the exact movement willed. Lipi 18 which was immediately justified by a succession of unexpected results was given in order to introduce this movement. Its success will progressively develop the fulfilment of Lipi 21.

June 30 –
St. Brume . Pondicherry

Script.
That which was organised yesterday has now to be continuously asserted & affirmed in the experience. The habit of subsidence in the evening & night & of partial suspension by other absorbing
activities have to be deprived of their power of recurrence.

As yet there is no definite forward activity — only the persistence in manifestation, in spite of persistent assault, of the gains of yesterday.

Karma.
Final draft of Synthesis of Yoga begun.
Veda IV. 1 completed & IV. 2. partly translated.

Vijnana
There is as yet no certainty in the trikaldrishti except in unusual movements.

Lipi
1. telephonics.
2. telescopy
3. flattery
4. fulfilment of the egoistic faith

The one siddhi that seems to go on steadily is the perfection of the lipi. The rest progresses but with a hampered movement, flashes of affirmation in an exterior mass of denial. The effort is to throw back the movement into the old alternation of Dawn & Night.
July 1st

Script

The lines of development suggested in the Vachansi and in the affirmations have reached a stage when they are all in movement & in progressive & victorious movement, but still denied, by force, by those interested in their defeat, the Arya & Dasa enemies, but more now by the outdistanced Aryas than the Dasas. The month of June has closed on this note of imperfect success.

The renewal of the struggle between the Siddhi and the powers of limitation has assumed a new aspect; it is no longer, fundamentally, a question of the extent of the siddhi, still less of its entire denial. That is now recognised on all hands to be impossible. It is a question of the rapidity, of the continuance or cessation of the method of gradual development and of the habit of relapse & intermission by which the gradation was farther retarded. There may be devious hopes that the fullness of the physical siddhi can be sufficiently retarded to be practically denied or that by this retardation & other obstacles the necessary time may be denied to the karmasiddhi or even its fulfilment negatived by untoward events which will render it impossible; but these are failing powers of negation. Only in the last adverse tendency is there yet any serious strength for anything but retardation.

Therefore the Force is now being applied to the body. It has been proved that mental power can be applied to the modification of the lines of the figure or of particular parts of the body, to the hair etc; but the working has been slow, intermittent & except in one or two directions only partial in result. The features & the signs of age have defied the insistence of the Will. It has been proved also that secondary utthapana is possible in all parts of the body & that a certain amount of primary utthapana can be temporarily
affirmed; but tertiary utthapana has been unable to emerge out of the panic into the physical being & the other forms have been successfully attacked & thrown back into a state of weakness & arrested working. Arogya after reaching a certain point labours without making any definite general advance. At most there are signs of a slow, just perceptible progress.

Faith in this siddhi & energy of its fulfilment has to be restored to the body.

Finally, in the kriti especially & in dharma a more vigorous action has to be introduced which will dissipate the adverse movements & initiate a puissant tide of success. These are the results that have to be initiated in the first fortnight of July.

Tapas & samadhi continue to be active; but vijnana is now without illumination in most of its movements. The brihat is active rather than the satyam or ritam.

The siege of the siddhi by the Asiddhi continues.
Series of successful tapatya is now not infrequent, but the series does not yet extend beyond five or six successive movements.

There is no real relapse of siddhi, but there is suspension or rather intermittency of new results.

Trikaldrishti is active again & easy in its imperfect state of ritam when rigidly separated from Tapas.

Script—

Although the mental Prakriti has reasserted itself, the relapse must only be regarded as a temporary & partial eclipse. The Asiddhi itself is evidence of an advance in the siddhi.

Ananda.

Tivra is become more spontaneous with a more general strength.

Samadhi

Sukshmarasa has recurred in the swapna samadhi. There has been combination of action, sight, sound & touch, as well as of action, sight & taste.

There has also been vivid tivrananda in samadhi.
In other respects the advance is slow & labours against a strong obstruction.

July 2\textsuperscript{d}

St. विष्णुदृष्टिः सत्त्वे रातिरित अवस्ये अदभो होता

Script.

This Vachas indicates anandamaya vijnana & irresistible success by undiscouraged offering of all the activities to God, sole Being & Master of all becomings.

The movement now being imposed on the mind is to associate always Tapas & Prakasha. Every perception must be envisaged as a force applied in the mind, every force as a perception energised.

In this way by rectification in ritam the unity of Chit & Tapas will be reestablished.

\textit{Brahman}

The position now is that the fourfold Brahman in the type of Narayana is seen everywhere, but the perception of the Ananda being stronger in the perception of the One than in that of the Many, the Lilamaya Krishna is seen in the universe, but not always or at once in the individual.

\textit{Aishwarya—}

1. Irish officers joining I.N.V. [Irish National Volunteers]
2. Movement towards the arrangement of funds.
3. Affairs in Mexico. Retreat of Villa & quarrel with Carranza.
5. Progress towards peace between Greece & Turkey.

\textit{Samadhi}

The force of organised vision & experience has increased. Dream is always more firm, vivid & coherent, but still haunted by the confusions of present sanskara and personality.
Uttapana—
Of the arms, vertical asana; for five & a half minutes; strong defect of anima.
Of the arms, horizontal; for 30 minutes; strong laghima & involved mahima; anima defective chiefly in the shoulder-muscles. An-anima not effective to contradict or suspend utthapana.

Brahmadrishti
The Narayanabodha has given place to the general Krishna-drishti, but the latter is still deficient in closeness & intensity, except in individuals, and pervades rather than occupies the object.

July 3rd
वायु जम्बं दृश्यां च विश्ववं चो शक्त्यायां प्रकृतिः कर्म न तथा सत्यं कर्म न तथा सत्यं प्रकृतिः
O Vayu, energise thy hundred of illumined forces that ask for their increase, or let it be the movement even of thee in thy thousandfold fullness that comes to us in the impulse of a collected strength.

Krishna Drishti
Full Krishnadrishti is promised for today. At present all is Ananda Brahman in a general bright mentality but the Krishna Drishti is implied in it, not yet entirely possessed of it.

Asiddhi.
The force of the Asiddhi continues.

Uttapana—
Of the arms, vertical position, 30 minutes; an-anima present, but ineffective. Followed without break by horizontal position, 30 minutes; an-anima stronger than yesterday, but ineffective & not present at the end of the period. Laghima is exceedingly strong & the involved mahima increases despite fluctuations.
There is still a part of the physical shell which keeps the sense of the asiddhi.
In the afternoon utthapana of the arms, lowest asana, for 30 minutes. Laghima is extremely strong & but for the strain left
behind in the shoulder & back muscles, the siddhi would in this part of the body be easily accomplished.

Ananda —
Electric, raudra & vishaya (ahaituka) promised for today & begun.
Subjective Ananda is once more affirmed.
Prema & kama are well established in their universality, but not always active.
The promise has been given, whenever the nirananda is suggested, to give the knowledge that counteracts it. If this is steadily done, the contradiction of Samata must necessarily disappear.
So far the promise is being observed, but the touches of the nirananda, though immediately disappeared, recur owing to the deficient faith in the kriti &, sometimes, in the physical siddhi.

Kriti
Kriti, if strongly resisted, yet disappoints the unfaith as well as the faith. Today sure promise, if not yet realisation, of a group of subscriptions to the review & Rs 100 in hand.

July 4th
St. Introduction
Utthapana
Of the right leg, horizontal asana, for 40 minutes. An-anima ineffective and, as in other asanas, decreases instead of increasing with the continuation of the position. This means that the element of tapasya is passing out of the secondary utthapana.
The external shell of the annakosha continues to feel the after-effects.

Krishna Drishti
It is now in possession of all forms, including the subtle, eg sounds, actions, but not yet ordinarily intense.
Ananda
In addition to tivra & kama, vaidyuta, vishaya & raudra are now well established. Kama is once more active in all asanas.

Samadhi
The brihat of the jagrat sukshmavishayas is in preparation.

Lipi.
1. a vast movement of the trikaldrishti.
2. playground of the telepathy. the world is preparing to become this, overtly.
3. [no notation]

Intimations —
1. The health will now come under the control of the Tapas. Afterwards, the saundarya.
2. Intense Krishnadrishti will begin to prevail from today.
3. Finalities of the first two chatusthayas.

Script —
The physical siddhi is now prevailing in Ananda & Utthapan. Its extension into Arogya & Saundarya will complete this movement & remove all ground for unfaith.

There remains only the faith in kriti, which is intimately bound up with the faith in rapidity. There, there are the two important questions of equipment & result of Tapas. The solution will not be long delayed.

Krishnadrishti is now more intense & general, but not yet invariable in the form; it is possessed of all forms only when the centre of the buddhi is in direct relation with the Ananda Brahman.

July 5th
St. Samadhi

Ananda —
Ahaituka strong & universal, but not central.
Samata—Dasya
With the ahaityuka ananda the first chatusthaya is perfect. The second still awaits the entire faith.

The first four intimations are now well prepared for final universality. Once the third is free from the defects of vijnanamaya suvrikti, they can be perfectly affirmed.

The next three have now begun to be prepared for their absolute assertion. The centre of the buddhi is still besieged & sometimes occupied by the mediary mind; this defect removed there will be no farther difficulty.

Lipi—
Lipi Kaushalya is now manifesting. Perfect stable lipis of jyotirmaya, chhayamaya, tejomaya, agnimaya & varnamaya aksharas (green, blue) manifest freely; only prakashamaya & dhurramaya are absent. The latter has been omitted from the rupa materials in the observation.

Script—
The first seven affirmations will today be completed. Also the finalities of the second chatusthaya, with the exception of faith in the kriti & saundarya.

A strong attack of asiddhi has failed to break the samata, but it has prevented the other finalities. Its assault is especially directed against the entirety of the principle of affirmation.

Karma—
1 Proof of Yogic progress in the brothers H & R.
2 Vyapti effective in Bengal in S. [Saurin]
3 Greco-Turkish peace.

Script
The seven affirmations have been now well-founded. That they are not always prominently active is immaterial. The foundation once well-made, the rest comes of itself.

As for the finalities of the second chatusthaya, they are in fact completed, with the one exception given. Only that exception
prevents them from being steady & uninterrupted in their action.

July 6th
St. The seven affirmations

Script.

To enforce the seven affirmations is the chief work for today. The second is to bring forward the vijnana chatusthaya to the same level as the samata & shakti chatusthayas.

The apparent contradiction & refusal of the ritam is a relapse into brihat & marks, no longer an insufficient preparation in the mind, but the continued power of irresponsible Mind to continue in the persistence of old sanskaras after the cause of them has been removed.

The Devatas must be more & more convinced of the inutility of their retardatory efforts.

 Already the affirmations are being strengthened, but there is always an element which comes from the external Nature & seeks to stand between the Master of the Yoga & the Adhara, asserting a different statement of the universal Ego, seeking to replace the personal ahankara by another & more general ahankara. This has to be transformed, not eliminated. Elimination could be easily done and if this were the object, the perpetual insistence of the excentric ego would not be permitted. It persists & insists because, knowingly or unknowingly, it seeks transformation.

Vijnana.

The satyam is being restored in the brihat by force of right affirmation.

Tapas vacillates between a greater & a lesser, a more organised & a less organised efficacy.

Sanadhi.

Lipi in swapnasamadhi gains always in coherence & meaning. Rupa has still the same difficulty in passing a limit once set and its progress is of the most gradual slowness.
Utthapana

Yesterday utthapana of the left leg, horizontal asana, recumbent on side, could not, because of an-anima endure for more than 15 minutes. Today the attack of an-anima was more violent, but laghima from the first developed great power & afterwards mahima overcame the pressure. Nevertheless in the first quarter-hour the position recumbent on side had to be changed for some seven minutes to recumbent on back in order to relieve the pain of the nerves. Eventually the asana continued for 45 minutes altogether in spite of frequent lesser repetitions of the attack. Kampana was pronounced.

Arogya

The general force of Arogya has increased, but the particular denials of it which have been so persistent, resist expulsion & even make inroads on the siddhi.

Jalavisrishti for the last two days has been easily limited to twice a day, once at 8 or 9 am & once in the afternoon. There is an effort today to persuade the body to postpone the second occasion till 9 or 10 pm, as at night it is suspended easily for 15 hours or even 16.

Script.

The seven affirmations are now in principle entirely regnant and are being more & more enforced in the active consciousness. It remains to bring forward the second part of the programme, the vijnana.

Ananda—

Great intensity of universal Anandabhoga through chidghana in the evening.

Arogya

Jalavisrishti twice at 7.30 am & 12 midnight.
The Ananda having been affirmed & perfected for enjoyment by the illuminations of the vijnana must become the means of attaining to the final siddhi & be the working material of the divine powers.

Script.
The affirmation of vijnana is intermittent; it must be continuous and organised.

Arogya—
The attempt of the siddhi now is to reduce the evacuation without any reaction. Formerly it used to postpone for six, seven & up to 12 days any serious evacuation, but suffered at the end from reactions of consolidation & excessive rejection. Now the daily evacuation has been reaccepted, but is usually slight, with occasional ephemeral reactions. A step in advance is indicated.

Utthapana
Of the legs attempted, left medial position for five minutes, discontinued for an-anima & lack of mahima; subsequently (5 minutes afterwards) resumed, mahima improved, 15 minutes utthapana. Utthapana of both together recommenced.

Script—
The vijnana is being brought forward all along the line in the knowledge, but without the illumination & independence in the error-besieged brihat. Hence it appears as if there were no certain progress.

Lipis
1. Ecstasy – Love – God
2. flimsy (obstacles)
3  sunlight. (ritam jyotih).

Script.
The slackening in the speed of the progress takes the place
of the old principle of relapse. No part of the progress is now
denied, except to a slight degree in the physical siddhi, but there
are slackenings, suspensions, attempts to force back. These are the
last struggles of the old rhythm to survive. The suspensions, the at-
ttempts to force back must be got rid of definitely, but the alternate
quickenings & slackenings of speed must continue to operate so
long as the physical resistance is not abolished.

It is now evident that the Mahakali bhava has come to stay
& that it is only the faith in the kriti and certain intensities, eg the
tertiary dasya, that are really denied in the second chatusthaya. In
the first the physical clouding of the prasada in the prana is the one
defect & that proceeds from a defect in the second element of the
shakti-chatusthaya.

These fluctuations in the second chatusthaya have to be rapidly
eliminated. There is faith in the physical siddhi, an elementary faith
even in the saundarya, although there are one or two lacunae. The
faith in the kriti resolves itself in a defect of faith in the rapidity &
completeness of the power-results & of the Kamasiddhi.

Uttapana fluctuates, but not seriously. It is assured. Arogya
is resisted, but assured.

Rapidity of progress & generality of the luminous vijnana
(sunlight) has now to be redeveloped on a broader foundation. The
obstacles are much flimsier than they seem.

The two final affirmations are now being prepared in their
initial steps.

Love . . ecstasy . . God is the formula of fulfilment of the sec-
ond group of affirmations.

Anandam Brahma all-embracing in a continuous experience,
—the fourfold Brahman complete in a strong, yet normalised reali-
sation.

Tertiary dasya is being resumed on a larger scale, in its full
complexity.

Tomorrow the full continuity—
July 8th

Samadhi.

Increasing coherence and purposefulness of lipi in the swapnasamadhi.

Lipi

1. Expense of intensity attended by increase of the intensity.
2. Authorise intensity.
3. It is in the district of Sylhet that the intensity will first manifest.
4. The intensity of the delight & the emotional affectivity effectual of the delight.
5. Effectuality of the delight depends upon perfect liberty.
6. The responsibility for the effectuality of delight is transferred to the ideality.
7. It is delight that effects righteousness
8. Delight depends upon liberty, not constraint
9. Righteousness by constraint is a partial righteousness deflected from its ends.
10. Earth is delivered to delight
11. Finality.
12. It is egoism that obstructs delight
13. Desire is the badge of egoistic delight
14. It is the edge of egoistic delight that opens the soul to self-torture.
15. Self-torture is the sense of all pain.
16. All pain is the deflection of delight; suffering of delight is translated into suffering of self-torture.
17. It is the capacity of suffering that determines the capacity of delight.
18. It is the suggestibility of the body to the dualistic sensations that is to be abolished
19. It is the eternal fact of youth, the truth of delight, the joys of liberty that the eternal powers seek to effect.
20. It is the bodily instruments that are the obstacles.
21. It is the delight that shall deliver the physical instruments.
Record of Yoga

Arogya
Jalavisrishti yesterday 10.45 am & 9.45 pm; this morning 9. am.

Purisha increased for the last two days as a result of the restriction in mutra.

The struggle of Arogya to impose itself on the body under conditions ordinarily producing physical disorders, continues to gain slow ground in spite of a resistance as powerful as the Confiners can now present.

V.V

Tertiary dasya has been restored and is now generalised; only the shadow of the egoistic devatas falls on the mind & still tries to obscure the presence & constant control of the Master.

Tapas
Aishwarya, ishita, vashita, vyapti are now acting in exact fulfilsments, but cannot ordinarily prevail because of the massed resistance in the swabhava.

Aishwarya —
1. The second reading of the Amending Bill in the House of Lords.
2. The Komagata Maru — & the fight to the finish.
3. [no notation]

Krishnadarshana
Strong sukshma-physical perception at meals of the universal bhokta, Bala Krishna, behind all taking the bhoga of the ego for himself without the knowledge of the ego —

In the consciousness of the Ananda Brahman it is once again the first & second intensities of the perception of the Lilamaya in persons as in objects.
Typical aishwarya

Materials—the house & shop at the distant corner, the door of the house in one street, the door of the shop in the other. A child of about four going round the corner from the house to the shop. Two bamboo mats at the corner of the pavement. Aishwarya for the child not to go to the shop, but turn aside to the mats.

The child first turned the corner, took two paces, then stopped dead under the influence of the aishwarya, uncertain for a time whether to go on or return. Then it drew back to the corner & stayed there fronting the shop. After a while one of the mats was blown on to the road by the wind, but this was not observed by the child, as its eyes were turned elsewhere. (Contributory circumstance created by pressure of Aishwarya on Prakriti). It finally turned the corner & went some way to the house then paused & turned again in the direction of the mats, but without observing them. It was seen that it would go into the house, not to the mats.

Sent vyapti to suggest to the mind the idea of the mats. The vyapti had effect; the child observed the mats & began to get the idea that they were not in the right place. After a long hesitation it went on towards the house in obedience to the prior impulse & then, overcome by fresh aishwarya, turned, went to the mats & brought them one by one to the door of the house.

This movement is typical of the Tapas working against the obstacles of a tamasically resistant physical Prakriti.

It was followed by a fresh instance (kite on roof taking after some resistance an unusual movement & walking from its place to the edge of the parapet) intended to demonstrate that these movements are no coincidences, but the effect of the siddhis.

This demonstration, useless to the reason which has been convinced by thousands of successful experiments, was meant for some obscure elements in the physical brain and has had the result of extending the normal faith over the whole field of the Yoga and part of the Kriti—

Faith.

Two questions now restrict the faith, 1st, whether the siddhi will extend so far as to form matter without any physical operation
(saundarya in teeth etc), 2d whether the kriti will actually be fulfilled in the form & to the extent suggested to the mind. There is always the third question of rapidity.

Samadhi

Thought in samadhi in the form of ritam perceiving & interpreting the vijnanamaya sense of all forms of thought-suggestion or speech-suggestion.

Arogya—

Jv. [Jalavisrishti] yesterday at 4. pm, this morning at 5 am. Pressure increased.

Siddhi

Samata & Tertiary dasya maintained; but the faith & Mahakali bhava are sometimes overlaid.

Rupa

Strong perfect rupa in antardrishta & bahirdarshita but not sufficiently in the sthula akasha.

July 9th

St. Les Dieux—

Samadhi.

Dream is now repeatedly of the nature of Vision except in the vividness of its forms; but the old incoherences still haunt it in a minor degree.

All forms of swapnasamadhi active, but the stability is still of the initial secondary stage—only dream is coherent & continuous.

Script—

Nevertheless swapnasamadhi in spite of apparent obstruction and suspension advances steadily towards organised perfection. Rupa is now showing a tendency to overlap the denial so long opposed to it. Vijnana & Tapas are active, but insufficiently organised. The vijnana chatusthaya is therefore on its way to equality with the first two chatusthayas.

The over-assertions of the tapomaya devatas have continued
to falsify the ritam, with the result that they are no longer believed.

The denials of the inert devatas are no more entitled to credence than their correlative opposites.

Ritam & ritam alone has to be asserted, not its false interpretations.

Samadhi

Coherent dream is attempting to change its forms into the forms of swapnasamadhi.

Asiddhi.

A strong wave of asiddhi is acting in the kriti. The Dharma shows some signs of moving forward, but only in particulars.

Arogya

Visrishti (jala) at 11 am & 11 pm as well as earlier in the morning. This breaks the twice a day rule.

July 10th

V.V. Les Dieux.

Script.

The struggle continues with the powers governing the unprogressive mentality. They are forms of the Gods, which seek to maintain their hold on the consciousness even when the divine Reality is passing out of them. Their tyranny has to be dissolved, before the siddhi can advance.

Lipi.
1. The last revolt of the objectivity
2. belief in the affirmations.
3 intensity of the delight        4  Beauty

Ananda

Kamananda is now much more persistent in its recurrence, though the persistency is most intense when seated, least when standing or walking. Absorption of the mind tends to cause its suspension.
Today, a fresh advance begins, in vijnana, in sharira, in kriti. The first two chatusthayas are assured, except in the defect of faith.

The advance in the sharira & kriti will be at first less rapid than in the vijnana.

Today a marked improvement in the physical Ananda.

Vijnana

The ritam is reemerging in the satyam brihat, & is more powerful than before the eclipse of the sunlight, or rather its clouding.

Rupa is growing in strength, especially in the perception of forms in the Prana akasha. The other sukshma vishayas manifest rarely but with more intensity than formerly, except sparsha which is both intense & frequent, but limited in its forms, eg touch of water, fire, insects. In other forms it is yet remote or, if close, then subtle.

Tapas is still subject to the reinforced denial of the limiting devatas. It has always an effect, but seldom a complete success & sometimes is immediately overpowered by a contrary reaction.

Kriti

The physical obstacle in the body is once more opposed to the sahitya & although it can no longer suspend, it retards & slightly obscures its activity.

Tapas

The Tapas is once more beginning to act with power & effect, & this time it does not confuse the knowledge.

Script.

The conflict between the devatas & the Self has now taken its right form as a balance of force between the future godhead & the past, all taking place in the beginning of the Anandamaya & presided over by the Lilamaya Krishna.

The Bala Krishna will now emerge as the Master of the Yoga. The difficulty that opposes this perfect development of the
three affirmations will disappear like that which opposed the full-ness of the first four.

Ananda.

Indriya Ananda (Sahaituka vishaya) is once again intense in all its parts, especially in the first developed, Taste. Hearing & Sight follow. If there is any defect it is in general touch, pranic, as affected by heat & cold or by keen touches of pain. But here also the jugupsa has diminished & titiksha is less necessary as the Ananda becomes more spontaneous.

Tivrananda is now sometimes both intense & continuous; all its touches have the character of intensity, but all have not yet attained to continuity in their recurrence.

Raudrananda is beginning to be easy & spontaneous, it has not yet much continuity in intensity, but that also is beginning.

Vishaya is yet a little obstructed, & vaidyuta.

Vijnana.

Trikaldrishti has returned to its old movement; the opposition is now to exactitude of the ritam & to the perception of things where there is no object & therefore telepathic prevision or postvision has no sure point d’appui & has to work in the vast.

This working in the Vast is now beginning to manifest itself, sometimes with the object for a departing point, sometimes without an object. But it is still pursued by telepathic errors.

Script.

Certainty & exactitude in a luminous ritam will henceforth develop & possess the knowledge, justifying the spirit of affirmation. But there is yet a residue of justifiable denial to be converted into right affirmation.

Tapas will also proceed to overcome its difficulties.

Rupa will effect stability in the jagrat & greater stability in swapna. The Trailokyadrishti will break its limits.

A rapid finality in the Vijnana is intended.
July 11th
Script.

The threefold affirmation will be perfectly confirmed today. In fact, it has been immediately confirmed, only it has to be delivered from the asmarana.

Samata & dasya are now secure; faith has to be similar[ly] secured. The great increase in the Tapas has to be changed into definite mastery & extended to the sharira & the kriti. With mastery assured, faith & shakti will be able to act instead of remaining hedged within limits. It would have been perfectly possible to proceed with a limited faith & hampered shakti, but that has not been the will of the Master.

Aishwarya.
1. Arrival of garden money (foreseen by telepathy)
2. Increase of appreciation of J.C.B. [Jagdish Chandra Bose]
3. Readiness of Huerta to resign
4. Slight amelioration in position of Govt.

Otherwise adverse wave in Mexico & England continues.

Tapas.

In a continuous succession of tapatyas (vashita) all succeeded except some in which the object passed out of view before obeying the command. Those on stationary objects invariably succeeded, but with a resistance in almost all cases. The majority of tapatyas on moving objects now succeed. Therefore a difficult mastery has been founded.

It is notable that in some cases the object returned to its original station or intention after obedience. This is at once a proof of the power and a sign of limitation.

Exact obedience, or else almost exact, is now becoming common.

It is notable that the first impulse of the object or often the first movement of the object is to obey; but sooner or later resistance is applied which has varying degrees of persistence & effectuality. At present the persistence is common & strong.

Invariability of obedience, unresisting obedience & finality of obedience are the three wanting requisites. All depend on the
removal of resistance, ie the mastery of the general Prakriti and the mastery of the subjectivity in all beings—

Script.

The Devatas are resisting once more the final elevation into the sunlight; but by this struggle they are confirming throughout the nature the ananda of battle and the right ananda of defeat as enjoyable in itself in the samata, but in the activity to be viewed & enjoyed in the light of a step towards victory. In reality the prakasha is there, but it is not yet evenly distributed & pervasive.

The equipment has begun; there will be enough for one year from this July onward for bare expenses. This step gained is only an initial step and the whole viewpoint will have to be changed before long. The means will be Brahminic, danagrahana, Vaisya, literary & commercial, & afterwards, Kshatriya. All these must be done on a large scale, but the Brahminic first. Of these things there is at present no apparent sign.

Samadhi

In swapnasamadhi clear but stationary rupas & scenes of great stability.

Abdul Baha, stable, repeatedly, the face only. “The time is coming” in Hindi.

In jagrat bahirdarshi the rupas are exceedingly vivid & have sometimes the first initial stability; only crude images have the longer stability. Reflected images are far more vivid & beautiful, whether of men or things, than their material counterparts.

Lipi kaushalya continues to manifest. Spontaneous stability is again difficult.

Script.

The progress in samadhi is gradual & step by step, not because it is difficult, but because of the immense mass of resistance opposed to it.

The attempts to prevent the triple affirmation are only temporarily successful as the price of great effort; the siddhi always reasserts itself.
The final double affirmation is visibly preparing behind the obstinate denial opposed to it.

Lipi.
1. *It is the egoistic faith that is to be dispelled.*
2. *It is the perfect light that is to dispel the egoistic faith in the gods in the intellectuality.*
3. *It is the intellectuality that is to accept delight of the ideality.*

*Script*

The egoistic faith now belongs to the devatas who oppose, not to the Jiva which accepts the entire mastery of Krishna. The shadow of their ego falls on the system, but even the system rejects it. That which was ego, is now only personality.

*Ananda*

Vaidyuta & vishaya are now developed though not to the intensity of the three other forms. Vaidyuta occurs with full spontaneity.

Tivra is developing a prolonged & acute intensity of the after effect of the sparsha which continues for several seconds even when the touch is removed.

Full intensity of the kama is now occurring with entire spontaneity.

Vishaya also has now attained full spontaneity.

Lipi.
4. *shortly faith*
5. *faith in the rapidity*
6. *entirety of the faith*
7. *faith in the entirety of the rapidity*

(four stages)
8. *joyful progression to the ideality* (in the external swabhava)
9. *in the intellectuality the delight.*

*Script.*

Faith in the Yoga is gaining on those powers that resisted
it; faith in the rapidity is almost accomplished, but it is not entire.

Also, there is faith in the kriti & saundarya, but no faith yet in their rapidity. The struggle must first finish in the sense of the siddhi. At present it is only in the physical Ananda that the siddhi is entirely victorious & the faith also entire. In the Arogya faith in the rapidity is yet feeble & in the utthapana. In the saundarya, it does not exist, only the possibility of rapidity is seen.

Tonight, as indicated in the lipi, there will be a fresh advance in the siddhi. Vijnana will organise itself and prepare the organisation of the samadhi.

Ananda will now progress from day to day both in the subjectivity & in the body.

Lipi
10 dasyata
11. subjectivity of the dasyata
12. dasyata objectivity is still to be realised.

(That is the dasyabuddhi is almost perfect in its generality, but in the particular act it is not always intensely felt. Every tapatya must be felt as a dasatya).

Arogya
Jalavisrishti twice.

July 12th
V.V. शत्रुग्ममन्नंमविन्यते पित्रोहुपथे।

Vijnana.

The organisation of Vijnana commenced last night and is proceeding rapidly. There is far from being perfect ritam, but a rapid arrangement & correction of all perceptions, reducing them to their right proportions & relations & in exquisitely minute telepathic perception. It is the final or determining perception that is still defective owing to the persistence of the hurried & overstressed nervous energies, which seize on some nervous will to fulfil & mistake it for the eventuality.

There is now a clear perception of the various levels of
consciousness in the trailokya of Buh & their brihat consciousness; but not of the divine worlds.

Tapas increases in force, but is persistently obstructed in spite of an occasional freedom.

_Script_

The obscuration of the sunlight is the cause. Always there must be the will for the illumination of the lower consciousness. Otherwise the devatas will persist in trying to perfect the Avidya apart from the Vidya. They accept, as a lipi yesterday indicated, the light in the intellectuality, but wish to use it in the manner of the intellectuality. Their method of purification is to raise darkness & dissipate it; this can lead to no finality—

_Lipi._
1. _dynasty_
2. _definitely against ideality_ (certain forces, now separated from the Intelligences)
3. 13

_Script_

The attack is on the central Ananda in the subjectivity. It is already passing.

The obscuration is helping the dasatya to manifest; even when the movement seems to be dictated by other forces in the Prakriti, it is really impelled by the Master. Even when it seems to be indirect, it is really direct. The apparent intervention of the Devatas, is really an association.

_Asiddhi._

Violent momentary attack of nirananda & revolt in the physical Prana.

_Ananda_

The electric ananda is increasing in frequency & intensity.

It is suggested that certain customary tivras which had an undercurrent of discomfort, for the rest anandamaya will now be penetrated by the vishaya—
This is in fact being done, both in the armpits & even in the neck.

Vishaya is, in fact, growing stronger everywhere, but manifests more in connection with other anandas than separately, except in the sahaituka. This is indeed its natural tendency, since it is the sense-ananda preeminently.

All the physical anandas are now established in spontaneity, frequency & intensity.

Script.

The violence of the attack made today coupled with the barrenness of its results shows that in the subjective field the Asiddhi has no longer any power. It is about to be driven from the subjective-objective, ie the Vijnana where its remaining power to obstruct has only an illusory strength, & its sole real field now is the sharira & the kriti. Even there it lives only by abnormal exaggeration & persistence of its vestiges.

Today, this will be clearly seen in the vijnana; not that it will yet be removed, but that there will be a definite commencement of the removal.

The Sahitya has been resumed; it will be pursued now steadily by the ordering of the activities & the denial of the physical tamas; from tomorrow.

This promise will be maintained in spite of the attempts of the Asiddhi to falsify it. At the same time there will be days of intermission & repose.

The asiddhi in the shape of obstruction still holds, yet the organisation of the vijnana proceeds.

Arogya.

Jala 3 times, 7 am, 2 pm, 12.30 am; but the last time not indispensable
July 13th

V.V. results.

**Samadhi**

The thought in the swapna samadhi now entirely arranges itself along with the Vani; it is satyam ritam although not always vijnanamaya in the vak. Dream continues to be coherent, but remains dream & the present personality persists. Lipi continues to grow in largeness of coherence.

**Script.**

It is not yet clear to the mind how there has been a definite commencement of the removal indicated yesterday. Telepathy of thought is becoming more manifest & the vijnana of knowledge is organising itself, but there does not seem to be any new departure.

On the contrary there is a distinct tendency for the Intelligence on a higher level of its secondary stage (sanu) to predominate, illuminated by vijnana, but always referring downwards, for the Mahasaraswati bhava to revive & replace or modify the Mahakali bhava & for the faith in rapidity to be replaced by the faith in a slow & gradual process. The persistence of these tendencies would mean the triumph of the old over the new & of the lower over the higher.

At the same time the vijnana proceeds with its organisation in knowledge, the telepathy is ever more comprehensive, telepathy of thought more & more justifies itself in spite of errors of reception, the sense of the triloka in Bhu becomes more & more ordinary & dominant. Tapas is attempting to change from the half-free, half-nervous method to a purer form of power; in the process its effectivity seems to have decreased or sometimes to be almost suspended. Rupa is still in the same condition of slow, arrested labour to advance.

**Krishnadrishti**

This also has descended to the perception of the Lilamaya in the Jiva which is in the divine Lilamaya & reflects Him, but not, except in special perception, identical with him. The Master is once more a little remote & the Manomaya Purusha half veils the Vijnanamaya. There is continual advance & progress but on the
old planes at a higher level & not on the new planes which seemed to have been permanently gained for the siddhi.

It is not precisely asiddhi that has conquered, but for the time being, a lower form of siddhi.

Ananda.

The electric & other anandas grow constantly in intensity.

Arogya.

Jala twice 10 am & 10 pm.

Saundarya

The Will has shown its strength in the alteration of the lines of the foot & the figure more than anywhere else; it has definitely created first the deep pronounced curve of the sole, 2\textsuperscript{dly} a comparatively slight but distinct under curve where formerly it was flat with the soil, 3\textsuperscript{dly} – the commencement of curve of the outer edges of the feet formerly non-existent. So also the waist has been compressed & a tolerable figure created. But all this has been done by a slow pressure lasting over some two or three years. It proves the possibility of a conscious action by the Will on the formed body in the same sense as in natural Evolution; but the power is too slow & insufficient.

Karma –

Sahitya resumed.

July 14\textsuperscript{th}

The two sortileges of the 12 & 13\textsuperscript{th} are yet unfulfilled. Therefore none is added today.

Aishwarya.

There is still the adverse movement in the kriti; there are results of past aishwaryas which oppose the action of the present.

1. Approach to peace in Mexico by resignation of Huerta.

Vijnana.

The gradual organisation of knowledge in the unillumined or half-illumined mentality continues.
There is now the clear vision of the living atoms & also of the smaller creatures in the prana akasha.

Kamananda has begun to recur in samadhi.

Perfect rupa manifests in antardarshi but in the chidakasha & not in the chittakasha.

The obstacle to stability of clear images persists in the Akasha.

Script—
The wall of the Restrainers is beginning to break down again. Nor is it, as before, the wall of Vala shutting out the light, still less the veil of Vritra preventing the activities.

Anima Agni is now manifesting in all the seven planes of consciousness of the physical being with a reference back to the mental plane.

Persist in the will for perfection; give no consent to an imperfect fullness.

Ananda.
The persistence of ahaituka tivra increased greatly today, but the vishaya had somewhat receded from its prolonged movement.

Vijnana.
Clear Rupa of all kinds becomes more & more frequent, but stability is unaccomplished.

Tapas, inhibited, showed some signs of recovery.

Karma—
Veda—I. 4 two translations & Commentary.
Notes for Review.
Veda VIII. Some hymns studied.

Arogya
Strong reaction; copious jala four times.
July 15th

Script

Agni has all the seven rays & in this sense is not deficient, but he is not yet fully displayed. It is necessary that the Vijnana (Surya) should rise on the Mind which is now active & full in inspiration—

This is begun today. When completed, the “results” will also be complete.

The struggle now proceeding may be thus analysed.

1. The Restrainers seek in the Vijnana to negate entirely the effective Will, to prevent the Telepathy of thought from organising itself, to limit the Trikaldrishti to the passive reception of telepathic satyam.

2. Their aim is also to destroy the subjective Ananda of struggle & victory.

3. They wish to fix the siddhi in the gradual & mechanical process & prevent the divine Rapidity.

4. Their desire is to destroy entirely the active Faith.

In all these points they are, for the present, prevailing. Only the physical Ananda & the telepathic trikaldrishti are visibly & irresistibly advancing. The denial & apparent falsification of the truth of Script is part of their plan of operations.

The result is that the seven affirmations seem to be denied & equally the progress towards the ninth.

There need be no attempt to break up their success. It is that very success which will destroy them.

Lipi.

1. *It is the efficacy of the telepathy that is destroying their operations.* (Indra is srutāmagha. He is also to be naryāpas & so astāra.)

2. *dasatya intentional.* (Success has been intentionally given to the Nidah in order that the dasatya may become more complete.)

7 MS छट
Now the system is ready to accept the most contrary impulses in both mind & body as the working of Krishna through the powers of the swabhava & the sense of being the living yantra is being rendered absolute. The Tapas will not by this movement be impaired. The passive & the active tapas will be managed until they are reconciled in the full Mahakali-Mahasaraswati bhava.]

The tapasic element of the external Ego is still sulky & dissatisfied, but the centre of the being is once more restored to the right activity, of affirmation, brihat, Ananda Brahman, prakashamayata tapas. Prema, kama, dasyalipsa, atmasamarpana are there perfect, so are the Brahmin & Vaishya qualities, but because the Kshatriya is not active, therefore they also are restrained. Nothing is wanting but that perfect faith over which the battle is now raging between siddhi & asiddhi. That is the nodus of finality in the first two chatusthayas.

The Krishna drishti is really established, but there is a thin semi-transparent veil, the remnants of the old littleness, tucchyena abhwapihita, not now tad ekam, but sa ekah. The three affirmations have reemerged from the battle strengthened & intensified.

It is less Krishna than Kali who is now manifest in all beings & things, but that is as it should be. Otherwise, the Krishnadarshana itself would be incomplete.

Vijnana

Aishwarya & Vashita are once again active; the fierce pressure on the object will not be repeated; but the spontaneous effectivity once established, it will become chanda & not saumya in its action.

The decisive trikaldrishti is again being organised.

Karma

The rest of the siddhi is now a question of the greater or less rapidity & therefore of the greater or less work to be done.
That again is a question not of Time, but of Tapas,—tapaso mahina.

Half July is over, & the great tide of success is not yet, in appearance, initiated except in the subjectivity. But really it is already beginning in the subjective objectivity.

Ananda—
There is now more frequent intensity of the kamananda while walking. The tivra grows always in force, generality & duration. The other anandas are more intermittent.

Vijnana
The vangmaya thought is already organised, but it seems to wait for the organisation of the decisive trikaldrishti and distant telepathy.

Arogya
Jala 3 times. Pressure still heavy.

July 16th
[Blank line in the manuscript]

Script
The truth of yesterday’s statement about the subjective objectivity is now becoming apparent. The organisation of telepathy at a distance, of rupa, of the higher effects of samadhi has begun.

Samadhi.
Continued tivra in swapnasamadhi.
Freer movement of rupa in antardrishta.
The continuity of moving & stability of fixed rupa in swapnasamadhi has suddenly increased in duration.
Rupa in bahirdarshi is attempting to form stability & clearness.

Vijnana.
Distant telepathy is active & is being continually justified.
Aishwarya & vashita, pure of effort, [are]8 now beginning to

8 MS is (the words “& vashita” were added after the first writing)
act effectively again, as well as ishita; the effectivity of the forceful tapas is still suspended.

The higher vijnana acts from time to time, but is not yet able to dispel the obscuration of the ideality by the intelligence.

Lipi—
1. *The little ideality is to be replaced by the ideality of the great.*
2. *totality all together*  (of the vijnana)
3. *suffering in the body.*
4. *scholastic intellectuality*  (to be replaced by intuition)

Ananda

Raudra is now being applied to intense & prolonged continuities of what would formerly have been pain.

Script.

Vishaya & Vaidyuta ananda must now be brought up to the full body & intensity of the three others. Frequency & even spontaneity is not sufficient without intensity.

Rupa has to be finally delivered & samadhi perfected.

The sukshmavishayas have to be normalised & perfected

These three movements will complete the totality of the vijnana.

Rupa is already showing an initial activity of perfect developed forms in the bahirdrishta. Its stabilities are becoming more various within the limits of the crude—

The vishayas are again beginning to act. Touch is developing the long withheld human sparsha. The voice is not yet sthula & even the sukshma voice has for two or three days been silent except in samadhi.

Jala

4 times in the first half of the day. Reaction also in Purisha—

Karma

Secret of Veda
July 17th

V.V.

Continuity & stability of moving & fixed combined and increased. Free reading of sentences of lipi in a deeper samadhi. Dream incoherent.

Script.

Therefore the perfection of rupa and samadhi is being steadily pursued.

The general contradiction of the vijnana & faith this morning, is only the weariness of the old secondary intelligence which stood in the way of the luminous vijnana.

It is now yielding again progressively to the vijnana. There is no need to prepare the primary luminous intelligence; that is always perfect and ready.

The vijnana is steadily preparing its finalities. There is finality of the vangmaya, finality of the vani, finality of the jnana, finality of the two scripts. Finality of trikaldrishti & telepathy, of tapas, of rupa & samadhi is begun, but there is the question of rapidity, of process, of time, ie whether process & time are necessary or whether the involved & concentrated processes cannot now prevail in the subjective objectivity.

After the obscuration the triple Affirmation has reemerged thrice as powerful as it was before the obscuration.

It is true that the knowledge does not work steadily, but is constantly overpowered by the reemergence of the inferior mentality.

These are evolutions necessary for the last stage of the vijnana and necessary even in the interests of the rapidity.

Vijnana—

Today excellent script with R. [Richard] & Madame R. 

---

9 This may refer to one or more of the automatic writings reproduced in Part Five.
Dense & developed stable rupa appeared at night, but none were perfect; perfect rupas are still unstable.

**Script**

The totality of the vijnana therefore advances, but is not yet in possession of the lower system or the physical akasha.

**Arogya**

Jala 3 times.

**Karma**

The Secret of Veda, Commentary, copied and corrected.

---

**July 18th**

Script.

Although the siddhi is advancing, the obstruction of the *Nidab* is still insisted upon, & the actuality of non result made a reason for denying progress.

The centre of the resistance is in the Kriti; for the body is slowly beginning to respond to the Will. In the environment, the denial of Tapas is once more beginning to break down, but immediate siddhi, invariable siddhi, siddhi without resistance is denied.

In the Tapas, a difference is made in the result according to the material movement in the physical ether. This distinction must be abolished. The physical ether must cease to be a dense obstacle to the thought that is will. It must entirely & spontaneously fulfil it.

---

**Vijnana**

Aishwarya-vashita are once more active, but as yet within the old limits & with a residue of the generally successful power of resistance which was formulated during the last few days.

The absence of ritam in the Power continues to disturb the ritam in the Knowledge. The Ananda of defeat is denied because it is not associated with the faith in ultimate victory. All these defects are reversions to old movements which mark the temporary success of the Asiddhi.

The battle is now to assert the necessity of Tapatya-siddhi even in the face of a strong adverse impulse & the power of regulating
freely all movements of the object, free even from the necessity of
the last impulse given by the Power itself.

**Samadhi—**

Movement towards organisation of *swapnasamadhi*. Rupas.
1. A girl with a Bengali book, title Kusumanjali in gold letters
   (jyotirmaya), the title clear & stable after waking
2. A Bengali with characteristic face & beard first expressing
   negation & then making namaskara.

**Rupa**

Stable dense rupa, imperfect, is trying to manifest in the day-
light.

**Script**

The denial of finality in the samata of the physical mind, that
is its continued response to touches forcibly imposed upon it from
outside, is the constant triumph of the Asiddhi. It is evident how
artificial, how little really penetrative are these touches, but they
have no right to exist even in the semblance, & henceforth they will
be steadily eliminated, by the elimination of the false tapas which
is made their justification.

The real Tapas must continue & not yield to rajasik udasinata—

At present the Tapas is frequently successful even in continuous
movements, but is not essentially more advanced than before the
period of asiddhi.

The whole forces of the pure rational mind are striving their
hardest to prevent the vijnana[maya] Assumption.

There must be a final desistence of the lower Tapas before there
can be a desistence of the rational Mind.

**Arogya**

Jala 3 times.

**Rupa**—
The dense stable at night, but not so free as the night before.
Karma
Dharma effective on R & Madame R, but more in mentality & prana than for illumination.
Analysis of Upanishad begun.

Vijnana
Steady recovery of vijnanamaya activity in the sense of the seven affirmations.

Vishayas occasionally active; rasagandha now active sometimes, but rarely in samadhi.

July 19th

Script.
The total action of the Vijnana has now been realised in its first general effectualities; we may now cast an eye back on the period of partial Asiddhi.

The directing Vachah here were those of the 17th, 15th, 13th, 12th, 9th & 10th, 8th & 6th July.

The 17th indicated the breaking of the forces that tended to wear away the results by the luminous Intelligence without use of the vehement nervous Tapas, ahiten chid arvata, & the manifestation of the Anandamaya Vijnanamaya Brahman in the activities of the creature, with the consequent felicitous delights of the luminous energies as they prepare their great & full activities. This is precisely & to the letter what has been clearly commenced yesterday and is now accomplished. This was the great result promised yesterday.

The 15th indicated the state of Indra of which the action prescribed on the 17th is the means. In the actual result the intelligence is full of the inspired action; but the revelatory is not yet entire. The strong effectivity of the light is now acting, but not yet manifest because it is arranging its method. It is getting rid of the violent nervous Tapas. Until that is done it cannot be Astara

The 13th indicated that the period of results was now approaching, the total effectivity of the divine Power. This is becoming
clear to the discrimination, Daksha, & through Daksha to the intellect.

But its fullness is dependent on that full sevenfold activity of Agni in the Purusha & Prakriti indicated on the 12\textsuperscript{th}. That is begun, not completed.

The obstacle is that the gods cannot reveal themselves (9\textsuperscript{th} & 10\textsuperscript{th}) because of the Nidab who take advantage of the lower forms of the gods to veil the higher forms.

Samata is the fundamental means by which the defects taken advantage of by the Censurers are to be removed. (8\textsuperscript{th}).

The seven affirmations completed will be the sign of the perfect siddhi of the foundation, after which the divine action can manifest.

Samadhi—

Brihat & satyam in swapnasamadhi. Firm & frequent combination of speech, form & action. Taste repeated, also tivrananda. Long stability is not yet active.

There is a quickening in antardarshi & very perfect crude figures as well as the beginning of quadrupeds etc; but there is not yet freedom; nor is there stability of the dense & developed rupas.

Ananda

Frequency of spontaneous electric ananda and initial extension of the entirely spontaneous tivra.

Arogya—

Continued reaction. Tejas in both visrishtis. Jala four times.

July 20\textsuperscript{th}

V. [Vachas]

This movement has already begun, but on a small scale.

What is now being done is to convert finally the thoughts of the trikaldrishti into vijnana & remove the tapasic suggestions, putting them in their place & depriving their miscalculations of all credence.

The finality of the trikaldrishti will be founded today.
Afterwards the finalities of the rupa, samadhi, Tapas in their more perfect manifestations.

Brahmadarshan

The lowest power now possible is the Jnanam Brahma; but the normal vision is the second intensity of the Krishnadarshan. Jnanam with Ananda involved, Ananda without Krishna & the first intensity of the Krishnadarshana sometimes manifest, but are not static. The siddhi has rushed rapidly from the long-standing Sarvam & Sarvam Anantam through the Jnanam & leaped almost at once to the second intensity making the Ananda & the first intensity stepping stones lightly touched on only for a moment in the leaping. This is the concentrated method, with only a touch of the gradual left in it. The second intensity will now become the lowest power possible & the third intensity normal.

Vijnana.

Sukshmagandha is repeatedly manifesting itself but is generally sadhara & cast in the habitual moulds.

The gods Agni, Indra, Vayu are, since yesterday, manifesting constantly sometimes in their divine & sometimes in their manasic parts. Occasionally two or three of them form one deity. Surya, Usha, the four and Brihaspati seem about to manifest. All the rest are behind

Trikaldrishti of reference & pure trikaldrishti are active, but the latter is not luminous.

Tapas usually acts to some extent, sometimes altogether, but is more often finally ineffective.

Script

A rush of siddhi is now intended in Vijnana.

The asiddhi of the temperament (the Four) is being steadily reduced in its recurrent fullness & intensity. It is now not a denial, but a relaxation especially of the energy, less of the light, less still of the bhoga, (Aryama, Varuna, Bhaga). Love (Mitra) is not now denied, but is sometimes veiled or inactive. It is the tamas of blank passivity, not the positive tamas that now forms the asiddhi. The
body recoils from the strain of the intensity, i.e. not the body itself, but its physical atmosphere.

\[ \text{Vijnana} \]

Tapas is now acting more strongly & successfully, but against powerful resistance

There is now firm fixity in the finality of anandamaya vani & vijnanamaya thought of the inevitable word. The mere effectivity & adequacy have given place to an inspired inevitability with effectivity & adequacy as its prominent characteristics & illuminativeness as its atmosphere. This has been done by the concentrated method preparing the involved.

Vani is sometimes of the gods, sometimes of Krishna. There is external vani of others, but in all cases they are reduced to the terms of truth & Krishnahood. The gods are Krishna in his separate personalities.

\[ \text{Darshana} \]

Now varies between an advanced second intensity & the third. The Jnanam Brahma, whenever it occurs, is immediately occupied by Krishna.

There is an immense extension of the satyam brihat by which all thoughts are seen as true & all forces & impulses as justified, useful & effective. At the same time things are seen not only in the terms of the physical universe, but in those of the nervous, mental & vijnanamaya & by implication in those of the three higher worlds.

All things are now sensed as Darshan by the indriyas & all sensations & thoughts as Krishna by the mind & the manasik buddhi. All events also, every thing is seen to be wisely & perfectly guided. It is the apocalypse in the triple world & especially in the triple heaven.

Sat, Chit & Ananda are separate in the material minds & because separate, their opposites are possible.

Every act is felt as a dasatya, or so perceived in self & others.
Script

The immediate rush of the siddhi has therefore taken place. But the earlier predictions are not, apparently, fulfilled. But these are preparing.

There is now a confused trikaldrishti representing the chaotic action of all the movements already realised including the referential & the pure. By this chaos dispelled, the luminous ritam will establish itself.

Asiddhi

Strong obstacles to Kriti. A general sense of the material hopelessness of the ideal. Siddhi in vijnana, physical ananda etc is felt to be certain & probable in saundarya but not certain. The faith in Kriti is still insistent on proof in the actuality.

Arogya—

Jala 3 times.

July 21st

That is the active effective side of the Divine Mind must be made manifest in the mental activities. The pure subjective illumination is already there. Therefore now the subjective-objectivity must be perfected & the sharira & kriti lifted beyond doubt & reproach.

Lipi

1. subjectivity accepted.
2. Teneriffe (an often repeated lipi)
3. Youngusband (another)
4. Reality of God's existence demonstrated—
   (the Brahman is already demonstrated & the gods. The omnipotent & omniscient God, not limited by laws, has yet to be practically proved).
5. finality of the subjectivity in objectivity
6  God’s ideality intense
7. College— (a frequent lipi)

N.B. 2. 3. 7 seem to be lipis of practical trikaldrishti in
the kriti.

Script
The ritam of the trikaldrishti was founded yesterday. Today it
will be developed.

The second intensity of Krishnadarshana is already established
fully as the normal perception; the third will now replace it.

The final normality of effective Tapas will today be estab-
lished.

Krishnadarshana
The second intensity is now so powerful that the first & the
Ananda Brahman which sometimes manifest cannot persist except
by a deliberate holding back of the normal perception. Jnanam
Brahma appears by glimpses & disappears into Anandamaya.

The third intensity is now manifesting more frequently, but
with a power of impersonality & formlessness which makes the
man appear as a mask of God.

The other gods—up to the present Surya, Varuna, Usha, Bhaga,
Aryaman, Mitra, Aranyak are manifest in their forms & activi-
ties. They have now been followed rapidly by the others; Prithivi
revealing herself as Aditi, Rudra manifest in the chanda form
of all the gods etc. But these manifestations are not so close or
so dominant as those of Indra, Agni & Vayu. It is the Vedic
gods who so manifest. The others were known before. The gods
of other systems also reveal themselves in a grand general unity
& diversity with the Vedic & Puranic deities. All are manifesta-
tions of the one Vishnu who is Krishna & as Krishna, Rudra &
Brahma.

==

Script
This is the rapidly proceeding completion of the subjective
siddhi which is now hampered only by the remnants of the old nega-
tions supported by the incompleteness of the subjective-objective
siddhi.
Here the trikaldrishti & the effective Will are manifesting together in a still hampered progress.

In the subjective Time is now recognised as an instrument of God, not an obstacle to fulfilment or a determining factor. In the other it is still a determining factor & therefore an obstacle to practical omnipotence,—a fetter willingly worn by God in the mind, imposed on God in the prana & body.

**Darshana**

The third intensity is now established as the normal perception, with the personality. The impersonal form of it & the idea of the mask, which offered themselves as a necessary resting place for the siddhi, have been dispensed with in that character and now take their place among the past approximative perceptions which the exterior mentality after its fashion has a habit of emphasising with a temporary exclusiveness & therefore erecting as an obstacle to farther progress, thus increasing, if not creating, the despotism of Time.

The idea of the mask was due to an excessive separation of the form from the reality.

**Vijnana.**

Tapas is now showing a marked effectivity, for the resistance is less invariable & less effective, but it persists.

The Tapas shows a tendency to extend again to the utthapanas and to the kritis. In the former the pranic denial which has caused the long interruption is still powerful. In the latter the obstruction has spent its best power.

Necessarily the ritam in tapas & knowledge will not be complete today, but it is already persistently powerful & will become still more puissant.

**Script.**

The struggle of the Asiddhi, which is once more attacking, is to get rid of, if possible, or at least deny for a time the perfect result of the sixth chatusthaya in its subjective parts. For that result if pursued means first the perfect knowledge of character, feeling & thought, secondly, a perfect mastery.
The struggle is vain; their best efforts are therefore transferred to the obstruction of the vijnana by insistence on the defects of the siddhi.

==

Darshana.

Self-manifestation of the Apsaras, & the Cherubim of the various spheres (Gundharvas, Venas) & the Seraphim (Angirasas & Bhrigus)

==

Vijnana

Telepathy is now becoming continually active & useful.

Rupa first of fish, then of cat, crude, in the Akasha; this is the triumph of the Will against the obstruction which has always fixed on the denial of the four-footed animal form except in the chitra, since the former rupasiddhi was destroyed or withdrawn. Both were sudden manifestations. The cat was followed by a squirrel, but this was not so clear, next by a horse.

In the morning in the antardarshi the sky of a luminous mental world with images of all kinds, gods etc, emerging momentarily out of a brilliant chaos of unformed figures. A farther sign that the earthy obstacle is about to give way.

Raudra in swapna samadhi

Script

The affirmation of the Ishwara means the affirmation of an omniscient & omnipotent Mind & Power. It includes, therefore, these three affirmations—

(1) The fulfilment of the Kriti involving the use of a divine power & knowledge divinely displayed in human affairs, is possible to the Master of the Yoga, Yogeshwara Hari.

(2) As he does nothing in vain & is Premamaya, the fulfilment is inevitable.

(3) The fulfilment involves the use of the involved process, because that alone expresses His freedom & mastery over Nature & that alone is equal to the accomplishment of the Work in one or even in two or three generations.

Therefore these supplementary or explanatory Affirmations

www.holybooks.com
have to be made. The nine are all now established, have swadha & are sure to fulfil themselves automatically by the law of their own nature. To deny them is the whole effort of the Powers of Limitation.

The worlds of the vijnana & ananda & those of sat & tapas below the Janaloka have to manifest themselves & their activities. The trailokya is already manifest though not in its fullness.

Leave now the vijnana to grow in power & concentrate on the sharira & the kriti, so that they too may come to the requisite swadha, especially in utthapana & saundarya, in dharma, kriti & kama.

Script.

The action of the dharma is evident; the action of the kama is only held back because the time & the circumstances are not ready, but the power is there in the subjectivity. In the kriti the power has still to be established, because it does not yet prevail definitely.

Arogya.

There are movements which seem to indicate a final siddhi in parts of the Arogya, but they are almost immediately contradicted by the Nidah.

Jala 3 times.

July 22d.

Repeated Vanis from the 6.7. purporting to indicate the Kriti.

Script.

What is now happening is that the Kriti & rapidity, its necessary condition, are being constantly affirmed by the Word & denied in the Fact.

In the Darshana even there is a struggle between the full affirmation in fact & the inferior affirmation supported by the Nidah who base upon the alleged unreadiness of the general Swabhava. The Anandamaya Purusha is the lowest affirmation having still a
tendency to stability; the lower intensities tend always to [ ]\textsuperscript{10} pass into the third & highest, the Jnanam & Ananda Brahman into the Anandamaya Purusha.

The two affirmations which have now to be worked out perfectly are the development of the Ritam in the satyam brihat & the conquest of the obstruction of Time by the three supplementary Affirmations.

At present the Asiddhi possesses the field & strenuously denies their possibility.

The Asiddhi has once again shown itself a means of siddhi. It has corrected a false movement of the Tapas & the effective Aishwarya is once more in action.

Today the Ritam of the Trikaldrishti will farther develop, exiling more & more the exterior habit of false stress. Effective Tapas will advance but as yet slowly. Samadhi & rupa will also progress, but there will not yet be the rapid siddhi

An almost perfect ritam of both trikaldrishti & power is now repeatedly manifesting, with intervals or occasional admixture of a falsifying activity in the satyam brihat. Only the force of the light & power is saumya not chanda, manda not ashu.

The exterior nature is now progressively moulding itself to the perception of the Anandamaya Krishna & the triple affirmation & all the attempts of the Nidah to reverse the movement, only makes it more full & perfect. The Swarwatir Apah are pouring into it freely.

Today the Anandatattwa & the Anandamaya Shakti of the old jail-experience manifested in the visvadrishti.

\textit{Ananda}

The raudra & electric anandas now come less frequently, but more spontaneously.

\textsuperscript{10} MS the
Vijnana

Effective Tapas was constantly active, but is not yet dominant.

Ritam of the trikaldrishti also increases, but is not yet perfect, nor sure of itself.

There was some more activity of brilliant rupa in the antardrishta, but for the rest the samadhi is held back & subjected to the tamasic nidra. Dream also does not advance.

Arogya.

Continued reaction. Utthapana fails to reestablish itself.

Karma

The Synthesis of Yoga.

Strong opposition to Dharma in R [Richard].

July 23d.

Script.

The opposition, apparently successful, covers a continual advance.

1. The tapasic trikaldrishti is beginning slowly to justify itself; it is no longer only the inert that is predominantly correct. It is only the egoistic tapas that fails.

2. The pressure of the Tapas is more continuous & more constantly effective. The resistance strong in appearance, is becoming more & more difficult.

3. The telepathy is constantly justifying itself & veiled only by a slight film of error & uncertain placing.

4. The Ananda Atman is now firm in the place of the Jnana & the Krishnadashan becomes continually more normal even in the external nature. If the identity of the Ananda Atman & Krishna is sometimes veiled, it is in order to admit of a more complex vision which is preparing.

5. This vision is now apparent. It is that of all the gods in man at one end & Krishna at the other.

6. The rupa, samadhi, the lokadrishti, vishaya continues to progress less definitely behind the mist of obstruction.
The physical siddhi prepares its strength always. So too the Karma.

Vijnana —

The progress of the siddhi is now taking place automatically, though with the will & the smarana as subordinate aids,—inevitably, though against a great resistance. In rupa & samadhi the progress is so much slower, that it is not marked, but its principle & method is the same; only the rapidity varies. It is this that is slowly being extended to sharira & [kriti]\(^{11}\) against a much more powerful resistance.

Script.

There is as yet no apparent advance towards the effectual affirmation of the three supplementaries. It is their contradiction.

It is notable that the contradictions of the two first chatursthayas & the sixth are now only possible by a physical touch imposed with a tremendous force & slight effectivity. Even half of the fifth, Krishna-Kali is accomplished.

The obstacle offered by the mental forms of the gods & the remoteness of the Ishwara is a means for the full manifestation of the Lilamaya.

The full brilliant ritam jyotih is now sending down its massed rays to dispel the limitations imposed by the intellectual upon the divine mind. This is Surya —

Samadhi

In swapnasamadhi entire manifestation of vijnanamaya perceptive & vangmaya thought; it has only to be extended to the deepest layers of samadhi with sushupti of the mind and this also has been prepared.

Dense crude & developed crude as well as the preparations & first beginnings of dense & developed in the antardrishta. An attempt at free & profuse manifestation has had as yet only a crude & initial success for the crude forms & the preparations of the

\(^{11}\) MS krita
dense & developed. The latter in their perfection only appeared in
the long established form of the reel of cotton.

In swapna samadhi, shabda, conversations etc are being or-
ganised.

Trikaldrishti is also beginning to enter into samadhi.

Although these movements are not yet developed, it is the
beginning of the automatic rapidity in the whole vijnana.

_Karma_

The struggle between physical unwillingness (nir-utthapana) &
the faculty of constant luminous work & activity is being resumed
in the Sahitya.

_Synthesis of Yoga._

July 24th.

_V. यहिव्यक्त उपसनौ वहुन्तीजानाय भागमानाय भवेत। तत्रो निप्पे वर्षो
मामहनामसिद्धि: सिन्धु: पृथ्वीं उत्त हो:। — ie the rich & various
activity which has only just begun to develop as the result of the
samata & shakti chatushhayas & the Ananda of the Brahma cha-
tusthayas. Varuna gives it greatness & expansion, Mitra intensity
of love & delight, Earth & Heaven combine to formulate it, the
cosmic consciousness & the universal ocean of substance supply
that formulation with its field & materials._

_Script._

The inconclusive result of the rupa extension has somewhat
discouraged Prithivi, ie the inferior consciousness of the parthiva
Akasha.

The activities of the luminous divine mind are now taking final
possession of the thought & only need to take final possession of
the trikaldrishti. The obstacle there is the sense of uncertainty born
deficiency. There is no other obstacle.

_Samadhi_

A greater firmness of continuity (rupa & action) in the swapna-
samadhi, but not yet a greater continuity.
Script—
There is today an appearance of Asiddhi; the physical tamas weighs on the system without absolutely possessing it; for work is possible & easy in spite of the obstruction, but the physical brain does not take its proper share in it or the physical prana in its enjoyment. These are conditions & influences on the body which have to be extruded in order that the work may be well done & rapidly done.

Vijnana
Particular perception is now manifesting a great power of ritam which is of the nature of chit that is tapas, a perception that fulfils itself & is on the higher plane the cause of its fulfilment, Knowledge that is at the same time self-effective Will.

The prediction constantly made throughout the Yoga, which always seemed to be contradicted & turn into falsehood, that the tapasic perceptions & insistences, cause, as it seemed, of the greater part of error & failure, would eventually become true & justify themselves, is now being steadily & even rapidly fulfilled. Their an-rita movements are being partly excluded, but much more corrected & justified & the ritam in them is revealing itself spontaneously & initially.

As a result the knowledge & tapas is ceasing to be a property of the dual mentality & is now plainly proceeding from a higher plane. The movements that are falsified come from a distance, horizontally.

Karma
Synthesis of Yoga—2d chapter finished. Rewriting of Secret of Veda begun

July 25th
Opposition to the siddhi. Organisation of swapnasamadhi confused by restoration of chhayamaya, of the antardrishta & bahirdarshi by obstructions. Yesterday’s siddhi of vijnana denied.

At the same time there was prophetic rupa in the samadhi confirmed this morning by the event.
Rupa—
1. Pale orange & subdued blue—indicating the state of those immediately under the influence of the dharma.
2. Red with a rim of blueblack cloud resolving into a blueblack hand holding a red sun which becomes more & more brilliant till it appears like a burning fruit in the hand. Red = karma, blueblack = passivity of the spirituality by udasinata or samata. The blueblack hand is that of Kali, the Shakti; the red sun—the accomplished karma.
3. The Hansa in a pale illumination (state of B. [Bijoy])

All in antardarshi

Lipi
1. daily intensity of the delight
2. telepathy.
3 twilight of the daityas

Script.
The prevalence of the lower intensities of the darshana is visibly working towards a more comprehensive organisation of the entire Krishnadarshana. The momentary prevalence of the Jnana Atman in the Ajnana form of the general Ego, has resulted in a perfect placing of the Ego & the greater strength of the Ananda Atman. With that there is a greater generality of the first intensity & a more powerful presentation of the third.

A strong telepathy also manifests, although the telepathy of thought is always obstructed & works in a lack of illumination.

These two movements are closely connected. It is the firm basing of the Jnanam Brahma which admits of a more & more complete telepathy.

The Anandatattwa is now very clear in its Powers behind all action & consciousness (in the Nrih & [Gnah]).12 There is a hesitation to manifest equally clearly the Sat & the Tapas

Animal forms (crude) now occur with a great richness in the

12 MS. Gnah
Antardarshi & are beginning in the bahirdarshi, but the instability of the perfect forms has seized with an exaggerated force on the crude.

---

*Karma—*

Life Divine. II commenced.

*Ananda*

Kamananda has again become active after some days of weak & intermitted action.

---

**July 26th**

*Rupa*

Rupa in the akasha (jagrat) is now capable of single figures, groups, scenes, landscapes with figures & objects, human beings & occasionally animals, but it is either confused & indistinct or clear but momentary in its distinctness.

*Vijnana*

The transformation of the tapasic [perceptions]\(^{13}\) is still the main movement; & the transformation of the tapasic impulses has begun. The suggestion is that the aishwarya must wait for the perfection of the tapasic perceptions, but this is not the Will of the Master.

*Faith.*

Enthusiastic faith (aveshamaya & anandamaya) in the guidance is independent of the mental Purusha, but he interferes with the faith in the details & therefore clouds the general faith. This has to be mended.

*Script*

Faith in every smallest detail of the guidance must be not only a belief, but a living knowledge always active. Such dull returns of physical depression as are still possible are due to this defect. Also to the perception of the continued interference of the Time deities and consequent denial of entire rapidity.

---

\(^{13}\) MS perfections
There is faith in the rapidity and an entire faith for the comparative rapidity of the three first chatusthayas & the sixth, but not in the entire rapidity, ie the rapidity in the fourth & fifth & the rapid rapidity in all. There is simply a fluctuating belief that this entire rapidity will come.

Vashita is now very powerful, but has still to use some pranic pressure. It has to be liberated from this necessity & is being liberated, but slowly or with the lesser rapidity. Once it is done, aishwarya & ishita must share the perfection.

The opposition in the body does not seem to lessen; & although it is now more slack, it persists in the Kriti

The chanda ananda is opposed. Without the chanda Ananda nothing must be done – It is being brought into the use of the Tapas (Aishwarya & Ishita) & will be established in all action of the Vijnana.

Karma –
Life Divine II

July 27th

Script

Await the impulse always. Care not for the result. The impulse is now towards the action of the Vijnanasiddhi. Accept that. When it changes, accept the change.

Today the rupa should take form.

There is a movement always, but not yet a conquering movement.

Lipi

1. Telepathy — telepathy — fulfilled
2. battle in the vijnanasiddhi — fulfilled
3. 3½ 4. 2½ (not yet approaching finality)

Script —

Samata now maintains itself with nothing worse than failings
of self-confidence and movements of physical depression which cannot last. That chatusthaya then is accomplished.

The second needs only the most intense dasya and the faith in the entire rapidity to reach its highest expression in the subjectivity.

The third is the present field of progressive & automatic self-fulfilment.

The fourth is half in automatic progress, half in hampered & even concealed progress. This is the meaning of the lipi 3½.

The fifth is only in its stage of preparation.

The sixth is complete, but as yet denied its full intensity.

The seventh is complete, except in the siddhi. Shuddhi, mukti, bhukti are complete; only they have not reached their last terms.

The fullness of the vijnana is the key to the perfect & rapid siddhi, & there especially the unhampered action of the power.

Asiddhi

Strong force of asiddhi; refusal of light, cloud in brain, lassitude in the nervous powers of the body. Samata & dasayta etc endure. Krishnadarshana of the first intensity correcting strong jnanam Brahma which tries to cover the Ananda Brahma. The second & third intensity have more hold on the state of asiddhi than before. Tapas effective, but only, usually, after long resistance.

Lipi

4. Tapas —

followed by fresh & stronger activity of the chit-tapas; but this is not luminous. It is however, powerfully active & there is knowledge, though not jyotirmaya knowledge.

5. Gita — Commentary on the Gita to be written

Karma

Life Divine II — Veda. Nirukta & Hymns to the Ribhus, the latter commenced today, the former yesterday.

Lipi.

6. Tapas —ie it will continue, in answer to a doubt in the mind.

7. telepathy. the telepathy of the trikaldrishti This is working along with the tapas.
8. earlier in the day & now — fulfilled.
9. fulfilled.

Script
Therefore the authority of the lipi in these matters is perfect. It is only the tapasic attempt to exaggerate its sense that veils the perfection.
Only in the objective world & in the distant future its authority has still to be vindicated.

Rupa
Has begun to redevelop clear forms, but without stability.

July 28th
Script
All conditions imposed on the siddhi must be denied. The Tapas, however used, must be successful. It is true that the pranic force will be replaced by a higher movement, but not as a condition of siddhi. The Ishwarabhava must entirely develop.
The authority of the Vani & Trikaldrishti are increasing. They will soon be perfect.
The Tapas & Trikaldrishti are yet unharmonised, the fullness of the Tapas is awaited.
The obstinacy of the Bali element must now revive along with the growth of the Rakshasa. Equally, the lower forms, Pramatha, Pishacha, Gandharva, Yaksha, Charana, Pashu, must range themselves in their places & grow distinct yet one.

Darshana
Since yesterday afternoon the second intensity has taken possession in place of the first & is itself preparing to give way to the third. Where the Jnanam Brahman of the Dwaitabhava does not interfere, it is general & very strong.

Faith etc
There is now a present enthusiastic faith in the details of the guidance which at once meets the physical touches of Asamata and
destroys them. The strong physical depression & obscuration is now being overpowered.

Vijnana

Trikaldrishti & Tapas acted with great perfection & continuity, but are now working again within the resistance, attacking & overpowering it, but not entirely.

Rupa is manifesting clear & temporarily stable images of the three types in their lower crude expression; the quadruped has manifested clear, perfect & stable for two moments in the developed crude. The general force of the rupa has also increased.

Ananda

Ananda is again active in all asanas. It can be interrupted, but not impaired. The reaction in Visrishti is lessening.

Kriti

Kriti is now becoming more effective. It is trying to come up to the standard of the general tapas. Karma of sahitya (Veda etc) is trying to arrange itself & take its place, but except for Veda, this is still subjective, not yet manifested & materialised—

Script—

Physical siddhi must be progressively insisted on. First, the Arogya. This will not be done without farther struggles; but the Siddhi must begin to prevail.

Kriti must also be steadily insisted on. In Sahitya, Dharma & the Review; also in equipment & the beginnings of Kriti. Kama will follow.

Today Rupa & Samadhi must develop towards the effective totality of the Vijnana, Ananda recover continuity in intensity overcoming Asmarana.

After meals.

Three realisations to be fixed in a few minutes & recorded—

1. A strong & anandamaya perception of all action & thought in beings as action of Prakriti obeying & expressing the Purusha, Ishwara.
2. Strong compulsion of dasatya in my own action.
3. Third intensity of Anandamaya Ishwara first in the Avidya part of all, then in the whole.

**Rupa**
The rupa in *antardrishta* is now permanently capable of manifesting all forms. An initial movement towards stability of clearness & completeness in the Brihat began today.

Shabda is once more becoming active & sentences out of conversations past, present or future are heard in the waking state. The words are not always clearly separated & the shabda is sthula of sukshma or sukshma of sthula, not full sthula.

Conversations occur in swapnasamadhi, but except sometimes the last sentence or part of it are lost to the waking memory.

In bahirdarshi, there is as yet no clear advance beyond the morning, only a general tendency of advance & greater stability in all forms.

**Ananda.**
The kamananda is now again becoming continuous in its intensity and often without smarana. But it can still be withheld by force from outside.

**Samadhi**
Great vividness, activity and an elementary organisation of rupa in swapnasamadhi.

**Karma**
Life Divine II

July 29th
**Darshana**
All is now in the third intensity, usually, except the ego, and, as a result of ego, sometimes the jnana consciousness which is still in the first & second intensities or goes back to the mere jnana Brahman.
**Uttapana**

Physical energy, not yet perfect, has returned to the body & supports the impulse of sustained intensity in work.

**Script**

Today to finish Life Divine II & commence completion of Secret of Veda.

**Samadhi**

The state of partial organisation continues.

**Karma**

Life Divine completed (II)
Analysis of I.U. [Isha Upanishad]—half finished.
Secret of Veda commenced (final copy)—

**Script**—

The day has been devoted chiefly to work. It has been promised that the rapidity shall be transferred or rather extended first to the completion of the first two chatusthayas & secondly to the vijnana—

**July 30th**

V.  यो रोहिनी वाजिनी वाजिनीवान्
       तिबिते सच्चानावधित।
    यूने समस्मे तिलयो नमःतः
    शुद्धराध्य नमःतो इवायः।

The three hundreds of the mind, prana & body, the two powers of Tapas. It is the Balaka Krishna who manifests in them in the car of the Inspiration; all the nervous thought-powers are to submit to him & do him service.

**Darshana**

From yesterday the third intensity is firmly established, but the human personality is still in front, the divine behind & sometimes veiled by the human.

**Faith**

The swashakti is now manifest as a term of the Shakti of
the Ishwara & enthusiastic faith in it is established, subject to its entering into oneness with that which it represents.

**Samata**

There is ananda in asamata, duhkham & ahasyam. Hasyam has now to be eternised so that even this anandamaya asamata may disappear into a variation of positive Ananda.

**Vijnana**

Power is today puissantly manifest; only the mind is not single-minded in its application, but the playground of a complex activity of willings which are not all personal to the Adhara. Hence the element of ineffectivity. This arises from an insufficiency of knowledge. If the whole will of the Ishwara is seen in the Chit Tapas, there will then be invariably effective Will.

Trikaldrishti must know God's event & its time, place & process. Tapas will fulfil what trikaldrishti has seen. All, however, will not be foreseen, though all will be known.

The difficult[y] is now the organisation of the Vijnana,—for all the faculties do not act together. Telepathy, trikaldrishti, jnana, power, Samadhi must cooperate & not give place to each other or conflict with each other.

Nor must karma when it is being done, monopolise as yesterday the vijnana, so that the rest of the siddhi seems to be arrested.

**Trikaldrishti.**

Declaration of War known & the news foreseen for today, also the possibility — no more — of localisation.

Script.

Hasyam is fixed in the sense of the Ishwara’s Lila. The physical touches have to be transformed into joy of the Lila.

Rapidity has now to work out in the vijnana & establish itself in the kriti & sharira.

**Samadhi**

Swapnasamadhi greatly increased in force & vividness; continuity of action is now well founded on a base of stability. The state of jagrat in swapna does not cause the vision to vanish. Lipi
is attempting to compass brihat in the swapna, but the first result is the old incoherent combination.

In antardrishti there is obstruction, also in bahirdarshi.

Karma
Analysis of I.U (for Sept) completed—
Life Divine corrected.

July 31st
Vijnana—
The Power continues to act & the telepathy, but the decisive trikaldrishti & Power in exact detail are deficient.

Darshana
Intensest third intensity except in the birds which were afterwards included in a minor force of the third intensity. Along with this manifestation full harmony of the suddha, chidghan, prema & kamanandas in the subjectivity.

Vijnana—
In the rupa, vishayas, samadhi, physical ananda there is a slow, but solid advance. Rapidity has not yet firm hold of the vijnanachatusthaya—

Asiddhi
Strong attack of asiddhi, but wholly ineffective except in the external touch, unenduring, & the obscurcation or obstruction at one or two points only.

Saundarya
There are some indications, but more indications than accomplishments except in the restored thickness of the upper covering of hair. The regrowth of the hair all over the scalp has not yet become a dominant tendency & is still subject to doubt.

Script
There is now a full affirmation of the Vijnana as a steadily advancing & entirely inevitable siddhi, but there is not the entire rapidity.
In the body the sharira [siddhi] in all its members is now recognised by the Nidah to be inevitable, but its subjection to the gradual process is asserted & the extension of rapidity to it prevented.

The inevitability of the karma is not yet apparent; only the sahitya is being organised & the idea of organisation is at work in the dharma, but not yet in kriti & kama.

Rupa.

In jagrat, both antardarshi & bahirdarshi, dense crude & crude dense (stable) are well-established; the developed crude & dense & crude or dense developed also in the antardarshi, but these are not so firm or pronounced. Developed developed & dense developed have also occurred in the antardarshi. None of these forms are rich in matter or strong in substance, [but] some are exceedingly clear & perfect in form. The best forms are not yet stable.

Script

The subjective is assured & in all but its final touches accomplished. The subjective-objective is formulated and progresses inevitably. The objective still awaits strong formulation & the inevitable pace of progress.

August for the objective.
September for the Karma.
Both are preparing, neither prepared.
August 1914.

August 1st

Script

The work done in July is still incomplete, since even the samata & faith are capable of temporary and partial obscuration, although no longer of serious disturbance or actual eclipse. Hasya has to be strengthened and faith in sharira & kriti made imperturbable, so as to end this persistent imperfection.

Rapidity & complete organisation have to be brought into the vijñana.

Sharira has to be brought to the level of Vijnana.
Kriti has to be made effective.

The obstruction to the power has been restored and although when force is put out, it breaks down in almost every case, yet the resistance is obstinate, occasionally vehement, & when the force is not put out, usually successful. The spontaneous effectivity of the Chit Tapas has been suspended. All this, however, is an appearance & not a reality.

It is the effort of the Dwayavins to divide the being into two forces of effectivity & ineffectivity & of the Limiters to identify the ineffectivity with the clairvoyant knowledge. It has been proved that this is only telepathic trikaldrishti & shows at most which force will prevail, if no other is applied.

Ananda of struggle & defeat has been suspended & the activity of the affirmations. Therefore August begins with successful Asiddhi. This occurs always & shows that the struggle still continues. As usual it is the intention of the opposing forces [ ] to show that the statement of the completion of the subjectivity is a falsehood. But all that has been said is, It is assured & all but the final touches accomplished. It

MS is
has not been said that the results cannot be clouded or sus-
pended.

There is still an excessive affirmation of result cast on the mind
by the Tapasic powers of the intelligence.

Vijnana is not active in its own light, but only the mind in
the borrowed & often deflected light of vijnana. It is therefore
the worst asiddhi possible at this stage. An outer shell has been
placed over the siddhi, through which however it is still entirely
visible.

Reject the conditions of struggle imposed by the Dwayavins
who are now replacing the Nidah as they replaced the Vritras &
Atris. A little of the lower activities has been taken up by them, to
be afterwards dropped.

It has been shown that the personal Power can prevail over
the opposition & in its development must certainly become domi-
nant. But it is the impersonal Power that has to prevail by taking
possession of the hostile forces. It is for this reason that the gradual
process is so prolonged & that even now the hampering of the full
rapidity is permitted.

The Karma of Sahitya is being maintained, but too much in one
groove. As soon as the October work is finished, a freer movement
must be allowed, including Veda (Vamadeva), Poetry, Philology and
a prose volume on Yoga. Essays on the Gita will also be begun.

There is no advance, only the struggle which shows continually
that they cannot eventually prevail, but can obstruct & limit, to a
certain extent cloud, to a less extent devour. But the last is an
appearance rather than a fact. The clouding is also obstruction.
Limitation is obstruction of new movement, clouding the obstruc-
tion of old for a time, devouring the actual impairing of what has
been acquired. In this sense the clouding is a fact, but it is done by
the Nidah, not the Vritras.
Script

The immediate struggle is almost over & the natural march of the siddhi is being resumed, a march not unhampered but gaining strength & richness from every opposition. The Ananda & Tapas have once more to be puissantly united & applied in their union to every activity.

The affirmations are once more being affirmed.

There is nothing as yet definite in the nature of an advance beyond the point already reached.

Instructions

Regularise the work of the Review, Sahitya and study of the Veda & philology

Commence the regular working of the Dharma.

Perceive & arrange the course of the Kriti.

These instructions, except the first, seem now impossible of fulfilment, but the Shakti must turn steadily towards their fulfilment.

From tomorrow the regularisation of the first element.

The variations between the vijnana & the unillumined mind continue. Ishita is frequently active.

Kriti Veda VI. 29 . . 38. (previously 39 . . 4 )\[16\]—Secret of Veda II finished.

August 3\[d\]

The Nidah attempt to prevent the application of the true trikaldrishti by the old method of misused telepathy.

Today there will be a definite beginning of the end of this resistance.

---

\[16\] Space was left for one digit after the 4.—Ed.
As yet there is no definite advance, only beginnings which may turn into something definite.

Kriti is successful only in details. Arogya is still successfully resisted.

_Vijnana._

There is an action of the decisive trikaldrishti, but it is not yet either exactness in time (except roughly & occasionally) or certainty in the use.

Effectivity of aishwarya is being constantly suspended & resumed.

There is a check in the progress of samadhi.

_Karma_

Veda VI 19 . . 21

Aug 4th
_Script._

The Sahitya is being steadily pursued but has not yet gathered sufficient force & rapidity.

The decisive, untelepathic trikaldrishti is now finally active & will not again be suspended; only its relations with the telepathic have to be reduced to the terms of the ritam.

_Karma—Veda VI. 22 . . 26._

Aug. 5th
_Script._

The Lipi 40 refers to the state of the Tapas effectivity which is now normal in this degree, ie effective but with resistance, slow success, often apparent unsuccess (being fulfilled afterwards or when the Tapas is not active or the attention elsewhere) or successful in wrong time, _patra_ & circumstance. The higher degrees of the siddhi are held back or manifest only in detail.

The next step is to raise it to 50°.
For the kriti all preconceived notions must be renounced; only
the Sahitya is sure in its details.

Aug 6\textsuperscript{th}

---

www.holybooks.com
The progress is once more gradual, but there is progress. In order to justify themselves, the powers of Mahasaraswati are labouring to evolve more consciently & largely.

The struggle to carry forward Tapas to 50° has begun. There is now a mixed action of the two degrees 40° & 50°

40° when the result is brought about imperfectly or perfectly after a strong, obstinate but not dominant resistance.

50° when the result is brought about exactly after a brief & ineffectual resistance.

60° when the result is brought about instantaneously in spite of a slight internal resistance, but with all the resisting power behind in posse.

80° when the result is brought about instantaneously without resistance in spite of all the conditions of resistance being there.

100° when the conditions of resistance are changed immediately into conditions of fulfilment.

The last three are powers of the Chit-Tapas, the others of divided Chit & Tapas.

Rupa-Samadhi has again to be carried forward.

—

Karma

Samadhi

Renewal of activity in the samadhi.

Aug 7th

The force of Asiddhi has now endured for a full week. Its power is still in limitation by the division into favourable & hostile forces. It is most active in kriti & in sharira.

Samata has stood the test, but not the faith in the rapidity or the faith in the kriti. These are entirely eclipsed.

Karma

Translation of Paroles Eternelles—L’Impensable Divin. Le

Script—
The body resists the impulse of indefatigable work which the Prana accepts & the Mind Powers support. As yet this struggle must continue. It is sure to end in success, but rapidity is not yet assured.

The power & thought are again working & overbearing the opposition.
Consequently, the faith also is reviving, but not yet in the kriti, nor entirely in the rapidity.

The decisive trikaldrishti is gaining in strength & frequency.
The communication of an exterior “vani” “England declares war” has proved accurate in time & in circumstance.

The indications of telepathy only go wrong when the false ideas of others are received as truths of fact. The adhar has no ideas of its own in these matters. The impression that it has, is a remnant of the old illusion.

No personal effort must be made to push forward the siddhi. That gives a handle to the Dwayavins.

It will be found that without effort everything arranges itself. The fight is only over the rapidity & over the method, but that battle must be fought out by the forces in the Prakriti.

The forward march will again begin—

Darshana
The third intensity is now constant, but not invariable as the perception is frequently pushed back to the lower intensities. But it is only in particular cases. The attempt at a general lowering always fail[s], although it is aided by the strong perception of ego in the consciousness of persons & of indeterminate sat in things.

Aug 8th
ie the fiercer (chanda) energy in the physical Ananda.
Script.
The remnants of physical habit of asamata are to be entirely removed by transformation into dasya—

Today, Translation & Vedic Hymn.

Growth of Vijnana
Ananda—

The dasyabuddhi & samata are now being strengthened & universalised both in the subjective & objective. For the latter to be absolute, it is necessary that there should be the utmost power of titiksha. Here the rapid concentrated & not the gradual method will be used, except in the titiksha of intense pain from external sparsha.

Both Vijnana and Ananda are already advancing.

The Karma of Sahitya must now be entirely regularised. Here also the rapid concentrated method will be used.

Afternoon.
There is now fixed and strong dasatya as well as dasyabuddhi. The faith in the Ishwara is once more firm; but the faith in the rapidity and in the kriti is as yet without food of sustenance.

In the thought the process of conversion of the non-luminous into the luminous continues.

In the ananda there is the process of conversion of subjective and objective discomfort into values of delight.

In the trikaldrishti the ritam continually increases and if not yet brihat in the active knowledge, is brihat in the passive and tends towards mahima in the active.

The power increases in the mass of its force but is resisted in detail. In the end it more often prevails than fails. And it is now acquiring exactitude of result.

From tomorrow recovery of power in sharira and in kriti.

Karma.

Veda [I.] 165–6 — with Notes
Le Pourquoi des Mondes
Aug 9th

तदु वौचाय रमसाय जन्मनेपूर्व महिष्यं वृक्षभयं केतवे—

That is the old lost power with the new Light & Ananda.

—

Script—

The progress of the Vijnana & Power will be found inevitably rapid. The opposition now will be in kriti & sharira.

The rapid growth of the hair, although not yet prevailing in lowest stratum, is a second sign of rapid effectivity in saundarya. The first was the figure. The three that are effective, must be perfected—and the force extended to the features where chiefly the resistance is concentrated.

Uthapana will presently be resumed, the secondary,—the secondary is the key of the primary & tertiary.

The sharira has finally to be embraced in its entirety.

The vijnana is justifying itself always & the effective vyapti; the tapasic suggestions are now being converted into truths & the force of will is no longer a serious disturbing factor in the knowledge. It is active as a potential source of error, but the element of error is being constantly reduced.

There is a momentary resuscitation of the force of opposition in the vijnana & power, but until the opposition in the third chatusthaya is eliminated, such appearances are to be expected.

Karma

also L’Essence Unique & Au Commencement in E.P. [Les Paroles Eternelles]

Vijnana—

Attempt to push forward Rupa. Not as yet successful, although the vision is slightly strengthened.

—

Temporary obscuration of third intensity of Darshana. Mental vision is now more frequent.
Aug 10th

Script.
The advance is evident, but it is not yet dominant in Rupa-Samadhi or in Arogya.

Kamananda is now perfectly fixed in recurrence & in frequent continuity. It has intensity as well & is independent of asana, although to some extent influenced by old habit of asana. It is becoming independent of smarana, but that is not so apparent. It is more independent than it seems. The contrary notion is due to a false experiential logic in the mind, which lays too much stress on the defect and on a certain attempt of the exterior smarana to rush upon the ananda & claim it as its effect by a rapid self-association. Entire continuity is delayed by old memories in the body which help in keeping up the idea of inability of dharana and the habit of discontinuance.

The other physical anandas are more subject to these old memories and habits & too dependent on smarana. The one strong exception is the tivra, but only in certain parts of the body.

Telepathy of sensation, feeling, state of mind, vague thought, especially those connected with action, are now extremely strong and frequent. Even when veiled for a time they reassert themselves. Pure thought & precise thought are also received, but here there is a much greater difficulty for the discernment, & they usually come as ideas in the mind rather than as perceptions of another mind. Clear telepathy is still much dependent on sanyama & not so spontaneous as general telepathy.

Karma.

Philology. An family (also an)
Veda [I.] 168 Notes (elaborate)
VI. 1. 3–9.

Script
The scholastic is now begun in earnest, with order & the working of the intuitive perception & the intuitive reason. Nothing, except physical interference, can now oppose its steady completion. It is also working rapidly.
The poetical faculty remains to be remanifested. That will be done afterwards, though not too long afterwards.

Aug 11th
Script.
The force of Aiswarya in Kriti is evident in the action, but successfully opposed in the result.

By the successful materialisation of further opposition, the apparent struggle has been brought back into the Vijnana. It must again be expelled.
The opposition works by preventing illumination; it must be expelled by insisting on illumination.

This opposition will disappear presently. It has no force of reality, but only an artificial & external pressure.

Although the movement towards the final exclusion of the physical touches of asamata has been temporarily defeated, it will gather greater force from its check.
The suspension of the full activity of lipi, is also due to the opposition, but it also prepares the spontaneous uninterrupted activity independent of smarana

The normal action of the Siddhi has recommenced.

Karma—Veda VI. 50 . . 59 —

Aug 12.
Telepathy justified in the German entrance into Liège. Aishwarya & Vyapti by this movement & by the French advance into Alsace..

Nevertheless the Kriti cannot be said to be much advanced.

Vijnana.

There is again the activity of the trikaldrishti; when it acts, it is no longer fallible, as before. But it does not always act, or not always with full light and energy.
Aishwarya is sometimes effective with the Chit-Tapas of the second intensity, sometimes effective by time, sometimes ineffective.

Nevertheless, it is becoming more & more powerful & pervasive after every check and even the Kriti in some of its sides, appears no longer quite impossible from the point of view of the rational intellect.

The Samaja seems impossible; and rapidity in the sharira denied, throwing a doubt on its completeness.

Activity of the siddhi throughout the day. Nothing final, except in details.

Karma—Veda V. 61.
VI 60–61.

Aug 13.—

Today there will be finalities.

What is being done, is the reduction of perceptions to their right value, the removal of over & understress. This is essential for the ritam. The trikaldrishti is already infallible, provided the telepathy does not disturb its valuations in the mind, mistaking forces for eventualities. All is satyam, all is not yet ritam.

This reduction will today be complete. Not that there will not be temporary disturbances.

At the same time there will be a rapid advance of the Aishwaryya-vashita-ishita. This is already being prepared. Its present sign is the greater obstinacy and at the same time the greater weakness of the opposition. Its later sign will be the diminution to vanishing point of the factor of Time indicating the failure of the resistance. Its latest will be the disappearance of the deflections of circumstances.

At first limited in range the effectivity will be finally universalised.

Some advance will be made in Rupa-Samadhi

One finality yesterday was the irresistible reduction of all touches subjective or objective of discomfort or pain into terms
of ananda. It is now only at the first touch that the subjective can present themselves as pain or discomfort; they are immediately afterwards converted into Ananda. The policy of conversion replaces the old method of exclusion, &c is infinitely more effective.

Once more the Light & Ananda must dispel the twilight & the grey tint of the pale white serenity – nirananda shanti.

The record of lipi etc must be resumed.

**Lipi**

1. Tapas
2. Limit of the delight is about to be destroyed.
3. Sylhet

Limit of the French
German advance

**Utthapana**

Of arms medial position, standing; strong defect of anima. Laghima & mahima strong. 16 minutes.

**Ananda**

Raudrananda. All dull pain even long continued is now Ananda. Also all acute pain & acute discomfort not long continued, even those proper to disease. It is the continued acuteness beyond a certain degree that still needs to be converted.

**Vijnana**

The whole action of the triloka is now perceived habitually, and no longer only the nervous & physical worlds, in their activities, except that the activity of the highest heaven is still a little obscure; because that of the second reveals itself more in relation to the third, than in relation to the super-conscient realms.

For the ritam it is necessary that the Maharloka should also reveal itself.
The reduction of perceptions to their right values proceeds . .
In its type & general application the change is now fixed & final,
but it sometimes fails in its particular application.

The force of effective Tapas is now very general. The extreme
weakness of the opposition becomes more & more evident, but it
has still a reserve of force which supports its obstinacy & which it
is constantly expending in order to maintain itself.

In the swapna samadhi the firmness has increased in the conti-
nuity of action seen, but the continuity itself is rare. Momentary
figures & scenes are still the rule. In jagrat the struggle continues
without a definite victory on either side. Stable perfect rupa mani-
fested twice, but in a distant akasha. The obstruction still reduces
most stable forms to a blur or keeps perfect or clear forms to the
state of instability varying from one to two or three moments.

_Trikaldrishti._
German advance on Mülhausen & recoil of French—

Karma—V 1 notes . . 2–3. 5–6 read
VI. 62.
Selected Hymns. III

Aug 14.
_Samadhi_
Long stability but of pale rupa, chhayamaya.
Better lipi in swapna samadhi.

_Script._
Today more finalities.
1. Samata by farther & swifter conversion to Ananda.
2 Krishnadarshana.
3 Activity of lipi.
4 Vijnana in all parts.
Lipi—
1. rupa telepathy telepathic trikaldrishti.
2. Saraswati in the Samadhi.
3. intense telepathy.

Script—
Obviously in the Samata the tendency to conversion is fixed. Only it must be swift, instantaneous and puissant in its intensity. The Saraswati bhava must now subordinate its predominance. It forms the mould only, not the contents.

Aishwarya of the 50 degrees is now more frequently & easily active, & is no longer hampered by the telepathic trikaldrishti in its activity, nor always in its effect.

Krishnadarsana is no longer hampered by the perception of ego which is now seen merely as a formation in the universal personality.

Karma  Ved – V. 4 . . 7. 30. 46 . . 63.

Utthapana
Arms, walking, medial, 30 minutes.

Script—
The Krishnadarsana is now fixed, but not at its highest intensity.
Everything is once more active in the swapna-samadhi, including symbolic rupa useful to the karma. Only the stability, continuity & coherency have to be perfected.
The rupa in jagrat is still imprisoned in the old grooves of the adri.

Today shows a distinct advance in the normality of trikaldrishti; but as yet the obstruction to the direct luminousness of the thought perceptions is maintained and the powers of jnana that are ready await the removal of this obstruction for their full activity.
Aug 15th
Script.

Life has been preparing all this time. Today it begins with the publication of the Review and the continued stream of subscribers.

However limited at present the success and the effectivity of the Tapas, it has been proved beyond doubt effective and is becoming regularly effective; always as a force among others, sometimes, in varying degrees, as the effective force. So much has been gained, no more.

The organisation of the vijnana is now possible, because there is not only the abundance, the vaja, not only the satyam & brihat—although both of these are capable of improvement,—but also the basis of faith & samata. Not yet faith in the kriti or the sharira to the extent needed, but faith in the powers that are at work as real powers & the aim as their real aim.

Whether that aim can be worked out by the evolution of the full power needed, has now to be seen. That is the work of 1914–15.

It is not necessary now to record every fluctuation of the siddhi,—only the definite results.

==
Organise vijnana.
Develop arogya, utthapana, saundarya.
Perfect ananda.
Become master in the karma, samrat as well as swarat.
==
Finalities for today in
Kalibhava
Organisation of Vijnana.
Faith.
Krishna—(relation)
==
Karma—Veda V. 64–72.

Aug 16th
The 15th passed in a state of void and of passive receptivity.
The suggestion of the complete Kalibhava is now fixed; ie the
form of the egoistic consciousness with a name attached to it is re-
pelled whenever it throws its shadow on the central consciousness,
& there is instead the conception of the ego as an ansha of Prakriti
or a vibhuti serving as an instrument and slave of the Ishwara or
Para Purusha.

Organisation of Vijnana is now definitely proceeding by the
combination of Vani, vangmaya thought and perceptive jnana. All
mental perceptions are being made luminous & the anritani of the
trikaldrishti and telepathy steadily reduced to the luminous terms
of the ritam. There is an incipient arrangement of ritam.

This carries with it a corresponding andha visvasa & bhakti
for the Ishwara, with anandamaya submission, but not faith in
particular kriti. Sense of responsibility is repelled and begins to
disappear. Vak is being definitely renounced into the hands of the
Ishwara. The demand for truth is disappearing in its remnants,
also the idea that anything done can be wrong or have the wrong
results.

The perception of Krishna everywhere and all as forms &
names of his play is definitely & irrevocably established. Inten-
sity of the perception with chanda ananda is being added to the
fixity.

The relation with the internal Ishwara is being fixed in the
system by the Vani & the Kalibhava. The perception of the internal
Ishwara is intermittent.

The relation with the external Ishwara is now permanently
fixed in the consciousness. But both internally & externally the
perception of the Person is imperfect, intermittent in the internal,
covered in the external by the perception of the Manomaya.

This defect has today to be corrected.

From today dates the perfection of the first seven Affirmations.

The swapna samadhi strives to organise itself, but is contin-
ually held back & its component parts dissociated. Nevertheless,
every fresh struggle marks an advance.
For some days the progressive [conversion]\textsuperscript{17} into the illuminated intelligence will continue; the organisation of the swapna-samadhi will proceed more slowly. It is only now in the jagrat samadhi that the obstruction prevents a sensible advance.

\textit{Karma Veda—V. 73–87. 31–32.}

\textit{Lipi}

\begin{enumerate}
  \item England is still hesitating to adventure its fleet.
  \item perfect telepathy in the intelligence.
  \item tapas telepathy trikaldrishti in the intelligence (have to be organised perfectly).
  \item The German eagle is fluttering in the tempest (refers to a vision in swapna samadhi; two rocks high in heaven, at an incredible height, showing prana jagat; a narrow passage between. At outer mouth an eagle attempts to advance into the open, but is met by a violent wind which prevents its progress & is struggling against it. Vanishing script, “German Eagle”; fixed script, 31.)
\end{enumerate}

\textit{Trikaldrishti.}

\begin{enumerate}
  \item Before going out, the perception of the Ishwara will be settled in type, but not perfectly established, till afterwards.
  \item Saundarya will yet be obstructed & only won after a prolonged struggle, which, however, may be shortened by irruption of a new force.
  \item There will be interesting conversation tonight.
\end{enumerate}

\textit{Script.}

The Ishwara has manifested Himself subjectively & to the sukshmadrishti veiled in the Light and also in the darkness of the chhayamaya form; but chiefly in power & bhava.

No 3. fulfilled.

Strong perception of the Master of the Yoga as the divine Reality behind Indra with the thunders. This, however is not Indra,
but the Lilamaya with Indra, Varuna, Aryaman & Surya united in him. Bhaga was perceived to enter into the presence. Rudra has preceded & will be taken up as soon as the Jehovah form is assimilated.

Aug 17th
Aishwarya—
The Kriti is at last succeeding in a greater group of details. Aishwar[ya] has been fulfilled in
1. The defeat of the Germans & their recoil to Liège & Tongres.
2. The successful resistance of the forts of Liège.
3. The impending of a naval battle in the North Sea.
4. The French successes on the Lorraine frontier
5. The Russian successes on the Bug & Dniester.
6. The crossing by the Austrians of the Save & the Drina.
7. The purchase of the German cruisers by Turkey. (Ishita)?
8. A long-standing Ishita, powerful recently in the thought, in the autonomy of Poland.

It is only in Alsace that there has been a marked defeat of the Aishwarya; the Austrian repulse from Servia was a temporary defeat now mended.

So long, it was the Vashita alone that was really powerful; it has now been joined by the Aishwarya. The Ishita is still obstructed.

Script—
Today the Sahitya will be successfully resumed & brought in spite of opposition into its final stage of victorious activity; but not this morning, this afternoon

Lipi
D. B® [Deputy Bluysen] destroyed in the subjectivity, intelligence, temporarily delayed in the fulfilment.

Script.
There is now a double perception of the Iswara as the Anadamaya & as the Lord of Light & Power. The latter has to possess
Rudra and be possessed by Krishna. Mitra & Bhaga are both seated in the luminous Deva. Only the Rudra assumption remains for the basis.

*Darshana*

The third intensity is now well fixed & normal but not yet in entire possession.

*Vijnana*

The most untoward things are henceforth seen as important steps of fulfilment & the greatest anrita as pregnant of the greatest truths. But the habit of physical-subjective responses of asamata remains, like the habit of physical discomfort. They are turned or turn readily into an ananda of discomfort, but this is not sufficient. The element of discomfort & depression must be entirely eliminated.

*Karma*

Veda V. 33–45.

Selected Hymn. Commentary.

*Script*

The Commentary must be completed tomorrow, and the Secret of the Veda and a fresh hymn begun.

There must be a complete detachment from the pranamaya feeling after the result, and ananda in all result & in all process. For this state a settled faith & light must be present. It is still possible for the mind to lapse back into the obscure physical consciousness.

Aug 18th

The greater stability, with dimness, in swapnasamadhi continues and is increased –

*Aishwarya*

1. Resumption of the French advance in Alsace.
2. Continued successes of the Allies.
3 Inclusion of German & Austrian Poland in the Czar’s ukase.

Script
The Sahitya was resumed yesterday in the afternoon as indicated. It will be taken up again this morning, but not immediately.

Vijnana
At present, there is a stay in the progress of vijnana.

Darshana
The third intensity is fixed in the Krishnadarshan and more prevalent, only in animals it is temporarily of the second intensity, owing to the non-assimilation of the ego. The universality is also nearer to fixity.

The intensity of the subjective Ananda has been for a time depressed & denied. It is now again brought forward. This is the Prabhrittha of the Veda. Intensity in the Indriya-Anandas, (sight etc) is easy; for it has long been established and can only be covered for a time, but can no longer be limited or, now, divided. The intensity of the purely subjective (manomaya & baudha) Ananda will from today reach the same immunity. It is already there, but does not occupy always the surface of the chitta.

Vijnana is now again active, but the illumination & decisiveness continue to be resisted.

Karma
Selected Hymn. Commentary finished.
Veda III. 40 . . 52.

Aug 19th
There is only, as yet, a nominal fulfilment of yesterday’s script of the Karma. The Commentary & Hymn have to be corrected and recopied. The rest is postponed till tomorrow.

Karma.
Commentary corrected and partly recopied.
Hymn corrected & copied. Veda V. 2. notes
Script.
The energy is depressed & the illumination withheld in order
to prepare a greater normality of the Vijnana in those tracts of
chaitanya that are still insufficiently receptive.

Certain habitual activities which belong to the old order of
things, are likewise being discouraged by this suspension.

The slow trickling in of subscriptions continues; the rapid
stream has not yet begun.

In Samadhi the organisation is arrested & there is inactivity in
rupa and even in lipi, although the latter can always be energised
by attention.

The action of the Vijnana cannot be destroyed, it can only be
suspended for a while with a lowering of its correctness, as soon as
it revives, it recovers all its force & power of ritam.

Aug 20—

The violence of the opposition to Arogya is now somewhat
abating; but as yet there is no positive progress. The siddhi has,
however, resisted strong tests & is slightly improved in its force.

The physical Ananda has been exposed to severe tests, but its
stability & intensity remain unimpaired. Its permanent continuity
is still successfully resisted.

The general force of primary utthapana remains. But here too
there is no positive advance.

Saundaryā after an attempt at advance is once more station-
ary—

Faith in the Yogasiddhi is now firmly settled; also Samata of
the shanta order with sukham & hasyam firm, though subdued.

The denial of Kalibhava amounts only to a temporary obscu-
ration,—the positive egoistic form of namarupa is no longer able
to reassert itself.

The Krishnabhava also can, at most, be obscured for a time.

In the first two chatusthayas, half of the third, half of the
fourth, half of the fifth & the sixth, arrest is possible, no longer diminution.

It is evident that the effectivity of the Tapas is stronger than before the eclipse, & also the sureness of the perceptions in the trikaldrishti.

It has now to be seen how swiftly this force can be extended.

Already the settled faith extends itself to eventual & general kriti as well as Yogasiddhi; & the anandamaya samata prepares to take the place of the shanta.

Sahasa is now assured, but has to unite with the kaushala.

The second stage of the third intensity in the Krishnadarshana is taking the place of the first.

Aishwarya-Vashita
1. The French march upon Strassburg
2. The entry into Colmar.
3. The commencement of activity in the North Sea.

Trikaldrishti
1. The British landing (Boulogne was not seen).
2. Death of Mme Petrus.

Script.

The third intensity is now confirmed although the bheda-buddhi still struggles to exclude it from the individual object.

Veda VI 63–4–5 with notes.
71–73 read.

Sanadhí

Dream of the old kind but attempting to transform itself.
Chiefly, substance of the Pranajagat and its ideas.

Aug 21st

Script.

It is now the tertiary dasya which is gathering strength to get
rid of the shadow of the old Prakritic illusion of freedom in the adhara.

The Kalibhava also persists in strengthening itself and the third intensity of the Darshana.

The Dwayavins are being excluded by the perception of the One in all mutually opposing movements & of the harmony of means and end in that movement.

The ordinary mental perceptions even in trikaldrishti are becoming more & more correct.

The resistance to the activity of Premananda must be removed. There is no positive denial any longer of the universal Prema which manifests itself in the adverse movements & associates itself with anger, opposition etc turning them to rudrata pure. It is the effigies of the old indifference which has to be replaced by the udasina prema. For there must be three forms of the prema, rudra prema, mitra-prema & udasina prema. All the three must eventually unite into a trinity with one or other of its three faces uppermost at will. This prema must be ugra & chanda; but the saumatyā will be always concealed in it as a basis.

All this must be done rapidly & even suddenly, not gradually & slowly.

But the chief work now must be the perfection of the vijnana; in the trikaldrishti first; for there it is only the remnants of false stress that have to be transformed into right stress.

At bottom it is the same in the tapas. The will of the Ishwara has to be known & the adhara made its instrument. Here it is the false stress of partiality that has to be transformed.

The rupa & samadhi are less easy to perfect. For there the Nidah have a long record of successful obstruction.

That must now be broken, but the whole of the vijnanasiddhi must now be done spontaneously without individual effort on the part of the adhara.

Lipi. Rupa etc

1. Tool.—marking the final perfection of the yantri-yantra bhava.
2. Perfect sun of subdued tejas (antardarshi) marking approaching perfection of mentality (non-radiant).

3. Indication of the sense of chitra, Assyrian king seated, a type born or about to be born on earth. About to be born; the forerunners are born.

Script.

As yet the obstruction to Rupa & Samadhi remains intact, but a beginning has been made which will this time develop the brihat siddhi.

Karma—Veda VI. 66–67 notes.

Work for Review.

Samadhi—

Stability of dim rupa greatly increased; begun in brilliant rupa.

Aug 22d.

Script—

As indicated yesterday, the telepathy (prakamya vyapti) is forming now towards perfection. Only the pure thought, without any indication, escapes the prakamya. It includes in its scope the subconscious & superconscious as well as the entirely conscious.

Strong blow on the elbow with resulting raudrananda continuous & varied.

There is no farther need for Will in the first two chatusthayas, nor in the Krishna Kali of the fifth, nor in the sixth.

There will be a daily progress in Rupa.

Samadhi—Rupa

The results of the night have been repeated & confirmed. Continuities also occur in the stability.

A fresh activity has begun in the antardarshi.

In the bahirdarshi perfect forms show a tendency to manifest, but there is no stability.
Exactitude is not yet conquered, but it is not far off. Meanwhile telepathy of pure thought has to be developed.

Violent attack on the faith, samata & kriti. Faith in Yoga did not fail, but faith in the kriti was temporarily interrupted; there was depression, but sama ananda survived—

1. Eloignement of friendship & support.
2. Cloud with R [Richard]
3. Reverses in Kriti

Samadhi—at night. Great richness of rupa & scenes; continual stability of both; lipi, but not always connected; power of rupa even in antardarshi.

Shabda for some time has become occasionally active even in jagrat samadhi, but only when concentrated not in the diffusive samadhi.

Karma

Ved VI. 68–72 Notes.
Secret of the Veda.

Aug 23

The faith has righted itself, but remains vague & with doubt as a background. Recently doubt had receded to an observing distance, with a rattachement in the mind.

Rupa & samadhi have begun to advance irresistibly & methodically. They must now be extended to the outermost waking consciousness.

Lipi etc
1. Intelligent type of the ideality at its least intensity
2. Lion force (inferior vani)
3. Type of the ideal intensity
4. Fortnightly effectivity
5. Rupa . . tapas intensified.
6. destiny questioned in the intellectuality (akasha)
7. destiny.
Trikaldrishtis confirmed—
1. The entry of the Germans in Brussels
2. The French check in Lorraine
3. The stiffer resistance to the Russians on the Austro-German frontiers.
All these like the Servian victory are contradictions of the Aishwarya.

Shabda (human) is becoming active in the full jagrat, but as yet is insufficiently sthula. It will gain force during the day, as well as other activities of samadhi in the jagrat bahirdarshi.
The collapse of the obstruction in jagrat samadhi has commenced.
At the same time a stronger Tapas is being exercised on the Sharira & Kriti.
Karma Veda VI. Notes 73–74 & part of 75.

Aug 24th
The siddhi must now push forward to fullness of the chatusthayas realised or progressing & the free progress & realisation of the chatusthayas still incomplete, the fourth & fifth.
Rapidity has to be strengthened & universalised.
The forces of asiddhi are attempting once more to utilise their immediate success in the kriti to recover lost ground in the other chatusthayas.
This attempt may be disregarded & the siddhi pursued tranquilly.
It is in the samadhi & the body that it must be pursued & in the kriti.
=
Vijnana
1. Perception of German advance justified.
2. Also, attack on Namur.
=
Strong activity of Rupa-Samadhi in swapna & jagrat. Great fertility of crude rupa in antardarshi & beginnings of the same
freedom in bahirdarshi; strength of entirely sukshma rupa, sparsha etc (manasic) & perfection of images in the Chidakasha.

**Sharira**

Strong attack of roga (stomach) due to particular causes —

Aug 25th

An empty day.

Karma — Work for Review.

Aug 26th

In swapna samadhi continuity is now joined to stability & habitual; but neither are developed to their full extent. Organisation of shabda, rupa, action, sparsha together is proceeding.

In jagrat samadhi there has been a pause.

Trikaldrishti has been justified

1. in the fall of Namur
2. in the position of the Br. [British] expeditionary force
3. in the French withdrawal from Lorraine
4. in the battle engaged at Charlevoi.
5. in the German non-reply to Japan

But Aishwarya only in the Russian advance.

Faith in the Kriti is now at a low ebb, & the direct relation with the Ishwara clouded.

Karma. Letter to Hindu18 —

Aug 27th

Kriti —

Subscribers have begun to come in again, but in insufficient quantity.

Trikaldrishtis successful.

1. Retreat of Allies to covering positions & British losses

---

2. Repulse of German attack. (fulfilment of Aishwarya)

Samadhi.
Organisation growing in swapna samadhi; but utility suspended—Antardarshi obstructed, & jagrat; but not, as before, entirely suspended.
In the afternoon lipi in swapna samadhi improved in coherence. But the rest of the organisation was hampered by a light but obstinate veil of tamasic nidra.

Sharira.
There are signs that the saundarya is being prepared in spite of the outer veil of asiddhi.

Work.
For the Review.
Vijnana
Activity of Script & organised Lipi, etc.

Aug 28th
Samadhi ineffective at night owing to tamasic nidra.
Throughout the day, no definite advance.
At night samadhi more effective, but full activity not yet recovered.

Work
For the Review.
Vamadeva’s Hymns begun.

Aug 29th
In Kriti the Aishwarya works very slowly & not perfectly. It fluctuates & has periods of ineffectivity & strong, though not as yet fatal reverses.
Record of 27th, not then noted—

Lipi
1 perfected intellectuality in the ideality  } a [antardarshi]
2 delight
3 destiny is about to be shaped.
4. it is the last budget of deficit  } b sadh. [bahirdarsh sadhara]
5 French budget
6 delight definitely established
7 delight agelong.
8 destiny Tuesday Ak. [Akasha]
9. deputy Bluysen Chi [Chitra]
10 Italy joined Ch.
11 It is intended to finish the opposition.

Rupa—
Arm bare to elbow loosely mantled from shoulder, mediaeval hat; old Flemish type of face & body. a. cr. [antardarshi crude]

Kriti
For some time subscribers have been coming in for the Review. All being well, the immediate demand for money can be met. But the obstruction is still strong.

Karma. Work for Review—
Veda V—translated.

Aug 30th
The obstruction to the rapidity & attempt to throw back the Siddhi has been persistent for several days. As usual there is a half opaque veil over the finished parts of the siddhi and a suspension of the most recent successes in the rest.

Continued state of demi-light with obscurity incumbent & occasional coruscation of the Vijnana.

Karma.
The Life Divine resumed.
Aug 31st

The last day of the month, which, like others, has been a disappointment, for that which it set out to fulfil, has not been fulfilled. The imperfection of Vijnana remains; there are still some occasional touches of Asamata; the faith in the Kriti is lacking except in a small & rudimentary form; the sharira is successfully obstructed; the Kriti is still a field of petty successes & large failures.

Advance there has been in the three first chatusthayas & the sixth, & the preparation of advance in the fourth & fifth. But real rapidity has yet to be evolved. What is done rapidly, is held back from its finality, even when it is not temporarily veiled or undone. The action of the Atris remains in its remnants, of Vritra in a partial veiling, of the Dwayavins & Nidahs in their practical power of division & obstruction.

Until these are removed & the false suggestions of the pranic & mental world corrected, there can be no effective general siddhi.

Karma Veda IV. 41 . . 49. 51 . . 57 –
Life Divine.
Analysis of Isha Upanishad.

Siddhi.
The Samata has recovered its positive force.
Samadhi is slowly reinforcing its general tone, & in antardarshi there are brilliantly perfect, but fleeting rupas.
The force of satya gains always in pervasion & definiteness.

Sept. 1
The Krishnadarshan, Ananda etc are recovering tone.

Karma –
Analysis of Isha Upanishad
Veda IV. 33 – 40. 19.

The siddhi is still under a cloud of obstruction owing to the division of the knowledge & the division of the power.
All depends on the manifestation of the Maharloka.
Sept 2.
Karma
Analysis of Upanishad
Veda IV. 20.

Samadhi—
A return to old forms of Samadhi, ie continuously moving pictures of places, but more coherent in the whole & stable in its parts.

Sept. 3
Karma—
Analysis of Isha Upanishad completed.
Life Divine recommenced.

Sept 4

Trikaldrishtis realised.
1. Russian check & partial defeat in East Prussia
2. Their success against Austria.
3. Resumption of forward movement.

Aishwarya
1. Sale of Review.

Script.
The effective activity of the seven forms of consciousness & the farther establishment of Ananda are predicted in the sortilege. The key is always the opening up of the Maharloka.
The figure of the Cavalier & horse, seen by M R [Madame Richard], the latter hesitating to take the leap from the brink of the precipice to the summit of the mountain, indicate the Soul pushing the Prana, which resists, to undertake the great leap,
1. internally, from the trailokyā to the Parardha.
2. externally, from passivity to the supreme action.
Both Cavalier & Horse are justified.
In the internality the leap will now be taken.
In the externality it is being prepared.

The vijnana is now active, admirably, within the surrounding mass of the mental movements, clarifying and converting them.

Karma—Hymn & Commentary.

The recent experience has shown that in proportion to the passivity of the mind, satya increases & converts itself into ritam. Extreme receptive passivity of the mind, increasing activity of the vijnana, this is the law, Tad vratam.

As for the Samadhi, that still prepares behind the veil & is obstructed in front. From time to time it manifests fragmentarily in front of the veil.

The power is enclogged & encumbered.
Therefore rapidity has not been accomplished, hampered progress continues.

Lipi

1. Prakriti. Pradhana—Ch. [Chitra]
2. 13. (jyotirmaya lipi) Ant. [Antardarshi]
3. lipi . . figurative intelligence. Ak. [Akasha]
4. tonight—Sthap. [Sthapatya] (fulfilled).
5. destiny . . dynasty.

From the evening the recovery of the Siddhi activity began to be more pronounced.

There is a clear illumination in the Sahitya & Veda. The word is not always immediately the best. There will be some delay in this respect, owing to the imperfect receptivity of the brain, a part of which is still obscure and another admits fatigue. But, except when there is general obscurcation, the Sruti acts in spite of all.

Power is again clearly & rapidly effective, although still resisted & in details & immediate movements with frequent success.

Samadhi (swapna) has suddenly moved forward. There was long continuation of the same rupa (a pool of water) with continuous movement in it & a long succession of images in the water, each
distinct, lifelike & long-stable. There was also perfect continuity of consciousness. This was also notable as an example of dream perfectly changed into vision. All night there was a higher activity.

Sept 5.
Antardrishta Samadhi is again being resumed with organisation of the samadhistha thought.

1. A bija of violet (ie active daya etc as opposed to green, dispassionate karma)

2. Destiny will steadily destroy the obstacles of the intellectuality . . (Ant. Lip. [Antardrishta Lipi] accompanied by a blur of bright light in the shape of an unformed sun, indicating that the obstacle arose from a confused but brilliant intellectual action transforming itself into an imperfect ideality

   (This is due to the necessity of first perfecting the intellectuality in the ideality ie intuition vivek before the higher ideality can be safely used.)

4 Images of girls seated or standing in a field—a sense of luminosity. —(Satyayuga).

5. A finely formed leaf (crude) with a stalk.
   (Symbolic of the Earth that is preparing & of the physical universe as a leaf on the aswattha tree.)

The organisation of antardrishta has therefore not suffered by the eclipse. It has now to be completed.

Karma.

Hymn. Commentary completed.
Secret of Veda recommenced.

Sept 6.
Samadhi, active, but still ill-organised in swapna. There are more instances of dream-vision.

St. तेजोमयनापिदृशिः स्वरूपं सत्यस्य विज्ञ्यन सदा परं तु
   भानाकसी यः पुरुषोऽनिति सोऽहूः द्रष्यं विभु ब्रह्म सदैव स्वरूपं

www.holybooks.com
Vijnana
Vijnana is now applying itself to particular trikaldrishti, showing the elements in perception of nervous force, of mental possibility and going back from these to the ideal Truth which figures itself out in the physical actuality.

Rupa has recovered its former activities, but does not yet progress—

Sharira.
Utthapana—of arms medial position 30 minutes. Sufficient laghima & mahima. Slight actual defect of anima, but considerable reaction afterwards in the superficial muscles.

Knowledge of all the seven worlds, in their action on Life here, is now active; but in the two higher it is not yet pervasive & organised as in the three lower.

There is as yet an imperfect harmony of the vijnana with the thought in others. This has manifested tonight. It has to be attained by dissolving the last ties of personal opinion.

Sharira
Utthapana in the afternoon a failure except in the vertical position of the arms, recumbent, 30 minutes.

Samadhi.
Jagrata Antardarshi more active, though always crude. A pillared pavilion with numbers of men & women in a balcony; a corresponding style of pleasure-boat (houseboat). A medallion, varnamay etc. All of the past cycles—

In swapna, visions of actuality; faces of living men or forms & their present mood & occupation (none known).

At night a great advance. Perfect figures came several times in the antardrishti, though not stable. Dream became perfectly coherent again & dream-vision increased & grew firmer. Images of actual known scenes came in the swapna-samadhi, as an assurance of reality. It remains only to unite scene & figure in a firm &
stable continuity. Some of the dream visions were of the Pranajagat (Bhuvar.)

_Lipi_

1. Sunlight— (fulfilled)
2 sublime trikaldrishti
3 false thought of inability (in body & mental mind)
4 Integral ishta-siddhi.
5. S. (blue, large in Akasha, not compact—spiritual faith well grounded, not distinct, but developed . . not yet intellectual faith)
6 reply to the faith in the intellectuality
7 delight in the ideality.

Symbolic Rupa

Chitra—

Blackbird displaces shadowy crow on slender twig (before, a brighter bird on a faery bough). The brighter bird is the pranamaya dream that seeks to realise itself. The blackbird, displacing the crow, is the first step of the realisation. That will be replaced by better forms & finally by the Bird first seen.

The twig—Earth.
The Bird—Humanity (vih, suparna).

Sept 7.

_Samadhi_

It is noticeable in swapnasamadhi, that dream is pursued by associations of Ego, dream-vision free from them, but watched by intellect rather than ideality.

_Uttapana._

Of arms, vertical position, walking 30 minutes. Laghima strong, but not dominant; mahima defective, but not insufficient; anima attacked; defect & after reaction pronounced, but with less hold & effectuality than on former occasions.
Samadhi
In swapna lipi became extremely profuse, but for the most part incoherent.
In Jagrat the perfect rupas are becoming more frequent & less instable, but this is on the borders of the swapna, not in full jagrat.
In the jagrat there are signs of possible advance, rather than the advance itself.
Karma
Commentary copied & retouched.

Sept 8.
Utthapana
Of arms, vertical, walking . . 46 minutes. Mahima & laghima stronger, defect of anima only felt for a time in the first half hour & then again in the additional 16 minutes. Immediate reaction strong. Chief defect in the loins.
Commentary completed

Sept 9.
Devoted to Sahitya—
The Life Divine

Sept 10.
The Life Divine.
Trikaldrishtis
1. Strong impression of great German reverse approaching
2. Idea of increasing Russian difficulties but eventual victory.

Sept 11
The brief period of preoccupation is now over & the steady forward progress has to be renewed.
The thought with a little attention now always assumes automatically the vijnanamaya form, is always satya & increasingly
rita. If there is any serious defect of rita it is that which still persists in trikaldrishti & affects the jnana. The trikaldrishti & telepathy have now to go through their closing stages of organisation. The rest will be only extension.

Power is improving really, though not quite apparently. That is, the resistance even in kriti is becoming more & more difficult.

Sharira & Kriti move slowly & with a hampered progress.

Lipi of Sept. 8
1. 1½.
2. finality independent of the obstacles (Ak. [Akasha])

Lipi of 11th
1. Sudden in place of steady (Chitra)

The conversion of ordinary into vijnanamaya thought, has now almost reached completion. The defect is still in the trikaldrishti. But it proceeds from the sluggishness of the physical system which requires the smarana to be ideally active.

Karma.
Life Divine revised & completed.

Sept 12

Sharira
Utthapana, of arms, vertical, walking, 1 hour. The strain from the past utthapana (defect of anima) remains & had a depressing effect on the Prana in the body. But there was no acute defect of anima except in the loins—only dull strain & some physical unwillingness, the latter not pronounced.

Vijnana
The trikaldrishti is proceeding towards the organisation of ritam in its telepathic parts. The pure trikaldrishti is not yet brihat.

Lipi.
1. Intensity of delight (to act again)
2. It is the lost flight (that men are seeking to recover)
3 As it is a settled ideality (the knowledge part of the vijnana is assured).

4 It is to oblige the physical ether (that pressure is put by the eye for the production of rupa).

5 Physical energy is still requisite.

6 It is entirely requisite in the entirety of the siddhi.

Asiddhi.

Strong attack on the Kriti. (Review work . . opposition; misunderstandings; stoppage of flow of subscribers).

Sept 13.

Part of the asiddhi seems to be giving way.

Utthapana. The same half an hour. Strong resistance, at first acute, then dull but heavy.

There has been a remarkable display of effective vyapti (Lipi 3 days ago “effective telepathy”) succeeding instantaneously in a number of cases & in mass.

Aishwarya continues to grow, effective vyapti is efficient, but ishita is defective. The three have to be united & fused, so as to represent the divine energy.

Certain trikaldrishti is growing in power

Fulfilled trikaldrishtis & vyaptis

1. The check to the Russian advance; preventing an immediate destruction of the Austrians.

2 Rumour of Francis Joseph’s death

3 Russian check in East Prussia

Sept 14.

The prevision of a German defeat has been fulfilled.

Spontaneous Kamananda has been resumed.
Coherent lipi in swapnasamadhi.

Sept 15.

The great German defeat satisfies at once trikaldrishti and aishwarya. Similarly, the Russian victory, in spite of great resistance for several days.

Utthapana, the same, for half hour. Strong, but dull defect of anima.

Lipi.

1. The retreating intellectualities insulting the defects of the ideality.
   2. Tapas
   3. D. (dasya)

Ananda—

Long continued intensity & recurrence of the Kamananda.

Vijnana

Aishwarya now usually acts in the end, but not always, nor perfectly. It tends to dominate the physical akasha, but not yet to possess it.

The effectuality is often rapid, but usually in isolated movements.

A large confused activity, again, preparatory of a more effective ideality.

Cessation of effectivity in success of the Review—

Sept 16.

Utthapana.

The same, one hour. Dull resistance present, but much slighter & more subdued than on the 15th & 13th
There is a continuous struggle between the Siddhi & Asiddhi, the latter in all parts preventing finality of organisation, the former getting scattered advantages.

Utthapana of the legs, medial position, on the 15th, for 5 minutes with great difficulty, for 10 minutes on the 16th with greater. The old siddhi is entirely in abeyance.

Sept. 17—

The Ideal Intelligence drinking of the Ananda in its diffused & scattered form, is to lead the ideal perceptions perfected in their activity by the surrender to a peaceful & universalised realisation of the Light.

Utthapana—

The same, 1½ hours; pressure small except at the end. Laghima & mahima increase with the length of the kriya; only anima loses & increases its defect.

Lipi—

Perfectly spontaneous lipis, perfectly stable in the akasha & composed of several words, have suddenly begun to appear. Some are varnamaya.

Other lipis are stable, but not quite distinct or not quite spontaneous in their emergence.

Sept. 18.

Swapnasamadhi improves in organisation especially in coher-ence of the lipi. Yesterday rasa, the most infrequent experience, was three times repeated.
Heavy depression of unfaith continued from the last two days –

Lipi
1. Folly of questioning . . not progressing
2. phosphor[esc]ence of telepathy
The vijnana is recovering its more accurate action.

Sept 19 –

This describes the process of luminous conversion now in progress. It has also several subordinate indications.

_Utthapana_ –
The same one hour. The pressure of defect of anima again very strong, but could not overpower the mahima.

_Vijnana_
The telepathic trikaldrishti has been thoroughly confirmed in every detail with regard to the war; even as to the cause of the German retreat; also their reinforcement & retrenchment; the line Laon, Noyon, Rheims; etc etc

Aishwarya has also been effective, but is still resisted.

Lipi
1. Entirety of the trikaldrishti (Akasha)
   obliged by the telepathy (chitra)

Sept 20th
The Kriti tries to form, but the movements of the forces are extremely confused.

Sept 22d
The cloud continues & prevents organised siddhi. There is progress but no definite & decided progress. Eg stable lipi is settled in the akash; the long continuity of scene in swapna samadhi is
being slowly prepared; Tapas grows more powerful; the cosmic consciousness is settled.

The general intention seems to be to fix these & other siddhis in the obscurer parts of the consciousness so that they shall not be dependent on the play of the Vijnana.

The opposition to the siddhi is now greatest in great things; normally, it gives way easily in small ones; but chiefly in general effects, not in particular details.

Sept 23d

1. Routine of Lesson.
2. The Rajas. Div. — ie the remnants of Rajas in the prakritik atoms of the intellect are being purified.

Samadhi.

Continued movement firmly seen in swapna samadhi is now well-established, but not frequent; nor is it long continued.

Proof of the power of the Dharma (Yogasiddhi in others) is accumulating from various directions, and is evident in the immediate surroundings, but it is not yet sufficiently able to direct in details.

The preparation for Dharma & Kriti shows itself in the general working of the forces of Nature, but it is as yet only abhasa —

Sept 24th

You are not near me & I know full well
My heart has need of patience & control.

Lipis

1. It is the late difficulties that are being gathered in [order] 19 to be destroyed.
2. It is at once realised.
3. If it is realised, it is the truth

19 MS ordered
German success in the North Sea.

Sept 25
St. But the idea—ie the Vijnana still awaits finality—

Siddhi

Today the organised Ananda unified in all its parts, is once more manifested. As usual, it is more complete than before the obscurcation.

The completeness of the first two siddhis revives with it, as also of the affirmations.

Kamananda is once more attempting to possess the body, but the obstruction is still too strong for it to be permanent.

Sept 26th
St.
1. Count No (obstacle)
2. The Anglo-French Text.

The activity of the Vijnana is now reviving and has to be enforced without heed of the obstacles & unsuccesses. The second St. provides an example—the will to make the Review the A-F. text of a new dispensation, in spite of the immediate obstacles. It is understood that the text in Sanskrit and other chosen languages will come subsequently.

Roga still resists, clinging to the system; but with a less fixed force than formerly.

Kamananda is frequently estopped & smarana is generally needed.

The lassitude of the body is pronounced & persistent.
Sept 27th

20 Volume III. extant. (third chatusthayā)

1. A choice collection of sensational trials (i.e. to the samāta & shakti)

Lipi—

1. Enthusiastic faith in the ideality
2. Fearful effects of the aishwarya

Utthapana.

The same as before, an hour and eighteen minutes, interrupted. It was only at the end that the defect of anima became a little insistent, though never effective. Laghima strong; less need of mahima.

It appears, therefore, that in this utthapana the principle of the safety of past gains is applying itself. Formerly, after the suspension for some days the vertical utthapana of the arms could not be restored without a painful struggle.

Samādhi

The shabda (sukshma sthula) of the human voice has now become a normal action, free in swapnasamadhi, but needing concentration in jagrat.

Sept 28th

St. In the abundance of strength he carries the impeller beyond.

Utthapana

Of the left leg, horizontal position, recumbent on side, 15 minutes—strong laghima to the end; defect of anima often strong, but ineffective. Voluntarily discontinued.

Of the arms, one hour—

20 The numbers are so arranged in the manuscript. — Ed.
Sept 29th

**Lipi**

1. By intensity of the delight – (the other siddhis will be perfected)

**Ananda**

Extreme intensity of the kamananda, but the body was unable to hold it.
29–30 SEPTEMBER – 31 DECEMBER 1914

October – 1914.

Sept 29–30

Preliminary

अस्मे राधे दिवे दिवे संचरर्तु पुरुष्युक्तः।
अस्मे बाजाम ईश्यतम॥
स विभृषणीयां शरवा मात्रपाणाम॥
अर्थ विभृणम विभृणत॥

“In us may felicities rich in aspiration come & combine together from day to day, in us may all abundances be set in energetic motion. He illumined by the light & force of the human activities shall pierce & rise beyond with somewhat of rapidity.”

These two days are not to belong to the former series; they are not to be days of oppression and obstruction, but of an increasing rapidity in the advance, preliminary to an uninterrupted progression in October.

Nati is now perfected, with titiksha and an udasinata only occasionally and superficially troubled. This habit of superficial touches has now to disappear.

By that perfection the finality of positive samata is at last entirely possible. All Ananda, except the purely physical, is now preparing for perfection. The perfection is being manifested, the intensity organised.

The second chatusthaya is only a little less advanced.
It has two bases, dasya and faith. Perfect tertiary dasya is now in normal action; only sometimes smarana of the Master is insufficient. Faith is being prepared for perfection; but faith in the double Kriti needs still the evidence of effective Aishwarya & Ishita. For want of sufficient Ishwarabhava it cannot find firm ground & the rest of the Chatusthaya, though well-prepared, cannot organise itself for action.

The physical Shakti has been entirely overpowered in the external body for many days owing to the attack on the Shárita siddhi. The month of October is set apart for its increasing perfection.

The third chatusthaya awaits organisation and perfection.

The fourth has yet to be given its victorious forward movement.

The fifth awaits the organised activity of the third and fourth.

The sixth is almost perfect in combination & organisation. Only the constant Krishnabodha has to be added.

The Rik promises for October (1) the increasing richness & organisation of the Ananda; (2) full and active plenty of the faculties & siddhis. (3) Vijnana fulfilling itself by action (4) an increasing rapidity.

The rapidity will be real and positive, not apparent, but still not the extreme rapidity.

Question—

Bodily Asiddhi?

Rik—आह्नेत जलवेदस्य रथमिव संस्त्रेष्मम नमोऽय।
भद्व दृष्ट न: प्रज्ञात्रस्य संसदिद्यमे तथापि अन्व अव्य श्रेष्ठ दृष्ट यथाये।
सुतायं विचलमन्यथमुवृक्तः॥

It is therefore by the Will that the body has to be perfected, but its effectivity depends on the \textit{bhadra pramati}, the mentality being
sufficiently clarified to be the medium of the perfect vijnana.

तवाहुमन ऋतिभिंदिवस्य च प्रगहलिभः।
द्वेश्युवी न उपित्ता तुयांम मन्यावाम॥

The conversation yesterday has given light on the Yoga. Ananda confirmed & universalised is the path to the conversion of Prana into the universal Chit-Tapas and that the path to the conversion of Body into Sat—

It is this Chit Tapas which is the base of Aishwarya-Ishita-Vashita; so long as it is not entirely realised there can be only a partial efficacy of the individual Tapas. The way to it is self-association with all energies in the universe. The Dwayavins are those powers who divide these energies into acceptable and unacceptable, friendly & hostile, accept some, repel others. A choice is necessary in action, but it must be made not by the Dwayavins, but by the Ishwara. The elimination of the Dwayavins is the main work now in hand. A perfect passivity in the hands of the Ishwara is the first necessity.

Subjective Ananda is completed; physical Ananda is being added. Sudden pain of burning has at last become Ananda—Prolonged intensity of pain has also to become Ananda.

The fitness of the body has to be compelled. There is no time for slow and indulgent methods. Faith in the Ishwara & acceptance of all energies & experiences are therefore being given.

The remnants of pranic choice between satya & asatya, siddhi & asiddhi, mangala and amangala are giving way. It is this element of pranic choice which is the chief enemy of unity.

Faith in some karma has been given; the exact karma is not yet luminously revealed. Or rather the lines are known; the exact accomplishment or the measure of accomplishment in this life is still obscure to the intellect.

The second chatusthaya will now be completed; its finalities will be given. For action sahasa & kaushala have to be combined. For support of action Devibhava & faith. The basis of
action is the combination of *dasya & ishwarabhava.*

The power of the physical failure has been almost broken. Sustained action is now becoming possible; but there must be no farther consent to interruptions. The body must be forced to do the work as the slave of the Ishwara.

Lipis—
1. Find by the isolation of the telepathy the just trikaldrishti. (Sadhara Akasha)—
2. Judge—(sthapatya)—

The fulfilment of the first lipi has begun, but is not as yet very strong or distinct in the general action of the mind, only in particular movements.

The call to judge (viveka) is a part of this development.

St.

This does not mean that there shall be no official guidance or help.

At the moment of thinking of the universal action in which the particular is to be merged & the method in which it can be harmonised with the particular action guided by the Ishwara, the eye fell on the above sentence in the newspaper “Mahratta” lying on the table. This sort of direct reply to a doubt or difficulty is now frequent.

Trikaldrishti—
1. There will be, today, intense Kamananda
2. Sleep must be lessened, what remains must be samadhised.
3. The final struggle over the physical siddhi is definitely begun.

There is an intermittent fulfilment of the first; the fulfilment of the second has begun, only a small part of the afternoon sleep being at all darkened by tamasic nidra. The truth or error of the third cannot yet be judged.
October 1.

यानसो मृत्यु..समस्या ज्ञानीकरोति इत्यथः:

Samadhi—

Sleep at night was for less than six hours, but not samadhis.

There is a preparation of organised samadhi (formerly only realised in the crude type), but nothing definite is yet evolved. Obstruction continues.

= Script.

Work is being combined, the scholastic and the philosophical at first, with dharma in a crude state of commencement. The rest of sahitya will be added gradually, as soon as the present work is sufficiently organised.

1. Philosophy — 1. The Life Divine
   2. The Synthesis of Yoga —
   3. The Secret of Veda
   4. Isha Upanishad.

2. Veda. Bk V. IV. translated & studied
   Notes for General Interpretation
   Bks I. II. III. finally read.

3. Vedanta. The Upanishads restudied.

4. Correspondence —

6. Diary.

7. Miscellaneous.

= There is an opposition in the material world in all its strata; there is no opposition in the worlds beyond.

Sharirananda

The tivrā is growing at different points of the body. From today, it will nowhere be dependent on the smarana, but will come sometimes with smarana, sometimes without.

This is one finality.

It is also intense & continuous in its recurrence at
many points & will soon be intense & continuous in recurrence everywhere.

Continuous intensity of the kamananda is now restored—the question is of the degree of dhāranasāmartya in the body. It is the battle that has now to be fought out, for there is no other real obstacle to the permanent & not recurrent continuity of the Kamananda.

Raudra must now be developed to the same force as the tvra, & Vishaya & Vaidyuta brought out from their involution,—ie to say the Ahaituka, for the Sahaituka is already well-established.

\[ \text{Tvra} \text{ is now intense in all parts of the body & much more spontaneous than before, usually almost and sometimes entirely brought without smarana.} \]

Raudra is once more active & without immediate smarana.

Kamananda has been for some hours almost continuous, but only occasionally intense.

\[ \text{Sukshmagandha, intense & varied, is again active, but infrequently—Sparsha, as before, but slight & momentary in those contacts which suggest the human touch.—There is occasionally sparsha & rasa in the mouth, but after smarana. Shabda comes only by mudra or by concentration. Drishti is not active.} \]

This is, on the whole, the old condition of occasional obstructed siddhi, subjected to many limitations. Here there must be freedom & finality.

Lipi—
1. A strong defeat, then destiny easily accomplished
2. Russian defeat at Berlin— (neither 1 nor 2 are intelligible).
3. grief— only occasional shadows left in the physical prana, as attempts at depression.
4. insult— fulfilled— (Ar. S. talk of being “espion”).
5. battle— a struggle against the siddhi easily decided.
Beyond the finalities already attained today, there is already a greater activity, though not yet entirely free, in the sukshmagandha. Other finalities of the same order will occur and be confirmed in the first days of October.

In addition, the revelation of the Personality in the four-fold Brahman is again returning.

Already the sukshma drishti begins again to be active & perceive certain elementary forms of the Pranic worlds.

There is also the perception of the jnanamaya ego as the Ishwara, spontaneous & without immediate smarana.

The various sukshmavishayas have now recommenced their manifestation, but it is not yet powerful. Nevertheless, there is a finality here which will be made entirely firm.

The sense of the Lilamaya Krishna in all, is growing firmer & more intense, but is sometimes still suspended by the mere Brahmbhava.

October 2.

And when Jesus was passed over again by ship unto the other side, much people gathered unto him; and he was nigh unto the sea—

The sortilege has no reference to another exodus, but embraces at once several movements; it is typical, more than particular.

There is still the same obstruction to the vijnanasiddhi, but the first two become more & more perfect.

Yesterday’s finalities have today to be confirmed. The obstruction to the K.A [Kama Ananda] in standing & walking must disappear, as also the demand for smarana, which is no longer necessary.
K.A. is now active in all circumstances, but active without smarana only in the stationary postures. This difficulty is to be removed. All that will then remain will be the defective dharana in the body.

The isolation of the telepathy is proceeding so that there may be a finality in the exclusion of false stress of perception.

This cannot be done at once. During the month of October the organisation of the vijnana will proceed to the possibility of finality.

There must be no return to inactivity. As for the work it will be done with force as soon as the bodily tamas is dispelled –

The obstruction has prevailed throughout the day except in the generalisation of the Kamananda. Now, in the evening, the vijanamaya thought (vangmaya) is once more active as well as the ideal perception. The Aishwarya-Vashita are still in their old stage of retarded & uncertain fulfilment.

October 3.

The sense of the obstruction is that it is only in conscious Yoga with the Master of the Yoga (by the three affirmations) that the siddhi should proceed.

Samadhi

The power of organisation is growing in Samadhi with the vijanamaya vangmaya thought as its central agent. It is entering even into the deepest sushupta and attempting to organise there coherent lipi, perceptive thought & experience, with rupa to be added, making the Jiva jagrat in all stages.

This is the beginning of final siddhi in the swapna-samadhi & in the antardrishta jagrat, which will necessarily bring with it siddhi in the bahirdarshi & in the sushupta.

Samadhi in the afternoon pursued the same course, but was less successful owing to a heavier force of tamasic nidra.
Images & actions were combined with the rest, but not well combined.

In the jagrat, samadhi is, for the time being, obstructed & unsuccessful.

Kriti continues to operate in the same fashion of partial success and partial failure without any great or decisive result.

Lipi –
1. The telepathy isolated.
2. jollity.
3. results.

The “battle” against the Siddhi continues and has not been so easily decided as was imagined at the time of the lipi.

There is still a tendency to choose those of the perceptions which are flattering to the hope. Only this is sure that the progress continues in spite of resistance. The finality of the Samata has once more been successfully denied, although the touches of revolt and grief are only physical & momentary; but the Jiva associates itself with them for the moment. There is the old process of persistent disintegration & crumbling down at points of the siddhi in its superficies which seems to be something more than superficial to the impatience of the Tapas.

The moment of defeat has passed and for the rest of the afternoon, the siddhi will be pushed forward. Inactivity must on no ground be accepted. It is the pretension of the Asiddhi that it will only allow the siddhi on condition of passivity & retarded progress. The necessary passivity is already there in the mental parts; it has no longer to be extended to the whole system.

There is to be no farther work of Sahitya, this afternoon; only the Yoga—

The revolt comes always from the tapasic insistence on result, the apparent sanction by the Ishwara and the subsequent discrediting of the sanction.
It is a circumstance of the imperfect assimilation of the Mahakali Bhava, which in its stronger movements tends to be the pure Mahakali using Mahasaraswati & not Mahasaraswati informed by Mahakali. It is therefore an imperfection of the Daivi Prakriti.

October 4

In spite of all the Vijnana is getting into habitual action, not always successfully, but with a frequent effectuality & always with some power upon the object & the environment.

*Lipi*

1. twenty third August eighteen ninety
2. thirteenth August nineteen fortyfive.
3. Alexandrine . . objection.
4. intensity of the delight

The tertiary dasyam has to be entirely enforced in its full intensity, in the body, with a view to the perfect vijnanamaya selection of the action in the mind with a view to the similar selection of the thought & the perception. At first, the result may be some confusion, eventually the positive & authoritative vijnana must emerge.

So also with the speech. All this is finally determined today.

Clear & perfect animal forms, crude, in akasha, suddenly & spontaneously; not stable.

October 5

Power of active Consciousness.

The modified Asiddhi continues; siddhi proceeds, but interrupted and obstructed, petty & scattered in its advance.

Therefore, there is not yet the “uninterrupted progression in October”; except in so far as the work of forming Siddhi, as
apart from constant success in advance, does not at all cease.

In kriti as regards the war, the Will is only effective in the slight Russian successes, but in France & Belgium it is on the defensive.

The Kamananda continues, but is not yet held by the body. The sukshmavishayas have again become rare & unimportant.

Tamas once more holds the body, but not entirely. Sleep is diminished, but the samadhi does not progress.

Aishwarya etc are effective in a great number of small points, isolated, but as yet there is no mass, decisiveness or combination—

Work is seriously obstructed.

Utthapana is interrupted; saundarya entirely stationary.

Lipi.
1. Totality of index.
2. Retiring (the attempt at asiddhi).
3. Vital ecstasy (chitra)
4. World ecstasy do

There is no work to be done today in Sahitya; it has to be resumed tomorrow—

Utthapana—

Of the arms, vertical, one hour. Defect of anima is no longer effective, but there is a lassitude in the prana which opposes a certain amount of physical unwillingness to the utthapana. Defect of anima acts more in reaction after the cessation of utthapana, very little during its activity.

Vijnana.

The tapasic stress of telepathy is being rigorously isolated.

Script—

Unknown to the obstructors, veiled by external failure, the
greater siddhi prepares. The organisation of the vijnana is the sole preliminary step that remains. This step once successfully taken, the vastness of the accomplishment, the rapidity of the future progress will be apparent & effective.

The défaillances of the body are the instrument of the asiddhi, not its cause. In a sense, also, they are the result. The cause is in the physical Akash, in the unwillingness of the earthguiding Powers to undergo a novel Law.

The organisation is ready in all but the Power & the physical trilokadrishti.

It is now evident that the sukshavishayas are firmly established, & so far as developed, even begin to be organised.

The sthula touch has to be enforced, the sthula voice, the sthula taste. They have all reached the point when they can manifest—the obstruction, strong & persistent, is yet artificial. Smell is already sthula; vision in certain forms, touch in certain contacts, taste in certain rasas.

Aishwarya-Vashita is beginning to act again more swiftly against the resistance.

The lipi “finality in the midst of obstruction” is now being fulfilled. Indeed, the obstruction is being made an instrument of finality, as in the normality of the tertiary dasya & the renunciation of the remnants of tapasic stress.

It is definitely fixed that udasinata is to be replaced by sama-bhoga & sama Ananda. There need, therefore, be no attempt to reestablish udasinata. Essentially it is there behind.

Oct 6.

The course of the conversion & organisation in Vijnana has to be pursued today. The whole of the hridaya (brahman) has to be given to the illumination
The attempt of the Asiddhi is, by disturbing the Samata, to compel tamasic udasinata and renunciation of tapas. The perfected Nati is attacked and the udasinata touched more than superficially. Owing to the constant siege of Asiddhi faith also is diminished.

After a long time the doubt of the Ishwara has returned with doubt of the Yogasiddhi & a moment & an element of tamasic udasinata.

This crisis, however, has not been able to stop the activity of the Tapas & the siddhi. Its more violent touch has been momentary. A general distrust of any decisive thought remains behind, & doubt of the relation of the Ishwara to the personality & the world, but especially to the personality.

Recent Visions

1. M in the bare garden, watering it. (on the 4th)
2. M in a great bare hall with a large fire at the end, walking towards the latter and returning.

Utthapana—
The same. Less physical unwillingness.

Oct. 7.

There is still the same siege of the Asiddhi. Tamasic udasinata is always forbidden; but faith & Nati are seriously breached. The Abhayam has also been successfully attacked in the physical prana, although it remains intact in the mentality (chitta).

There is finality of the perception of the triloka, (thrice seven), in the forces & purushas that constitute it.

There is finality in the perception of the brihat satyam, without finality in the ritam. Satyam means truth of being, in thought, force, tendency etc, not truth of fact in actual eventuality.

The finality of illuminated thought & ritam is
being prepared. When it is complete, there will be no farther asid-
dhi in the first two chatusthayas. Knowledge is the condition of
perfection. The lower powers were aiming at perfection without
knowledge, a passive & negative perfection.

There is finality in the telepathic perceptions, satyam,
of forces, tendencies, thoughts etc, but it is not yet brihat. Brihat is
being prepared.

There is finality in the ponderability of the Will. Wherever
it is applied, it is a force to be reckoned with, although not yet a
force that always prevails.

Yesterday closed the period of prevalent Asiddhi. Today begins
the period, for October, of siddhi prevalent in spite of Asiddhi.
Even in the Asiddhi, there was an uninterrupted progression of the
Siddhi.

Uttapana—

2 hours. At first physical unwillingness, intermittent; after-
wards eliminated except in an occasional subcurrent. For the first
1½ strain chiefly in loins, for a time, at first, in the back; only in the
last half hour in the arms and shoulder-muscles.

Lipi
1. Steadily, steadily
2 Still—Tuesday. (the Asiddhi)
3 tapestry
4 passage of the faith.

*Samadhi* continues to be resisted.

Oct 8.

The thought is now arranging itself in the sense of the ritam,
only the trikaldrishti is seriously obstructed. The Energy is therefore
transferring itself to the combined trikaldrishti and Aishwarya in
order to make an effective combination.
Utthapana—2 hours. No physical unwillingness except momentarily in the exterior prana. At first some defect of anima in the arms, but this disappeared, & during the last half hour there was no strain, such as yesterday’s, on the [shoulder-muscles & arms]. On the other hand the strain on the loins was more pronounced.

The absence of faith is still accentuated and there is nothing in the experience to restore the lost sraddha. For small indications are no longer satisfying—

The action of the vijnana is trivial and unimportant, so far as concerns life, and the attempt to organise it for practical use has failed.

The day has chiefly been occupied with work, & there is little progress.

October 9th

1. मृत्युव्रो प्रभवति
2. न तस्य योगिनो रोगो न जरा न मृत्युव्रो प्रभवति। कस्य। प्रातस्य
योगासनमयं जरिंग

Ananda

Although Kamananda can now occur in all asanas and without smarana, yet the Asiddhi persists in demanding smarana and obstructing in the ambulatory asana. It puts its whole force on the strength of physical habit and the inability of the body to retain a continuous Ananda.

In the subjective Ananda it invades sometimes and suspends or momentarily impairs the indriya rasa, but this rapidly rights itself. The force of Asiddhi is in the mangalāmangala & still more in siddhi-asiddhi. By leaning with its full force on these weak points it has restored depression and unfaith.

Therefore the old method persists and no part of the Siddhi is free from it. The Dwayavins are, for the time, triumphant.

1 MS shoulder-arms & muscles.
Sharira — Arogya

The Yogagnimaya Sharira was more developed in Calcutta than now. Since then there has been a reaction. *Mrityur va prabhavati.* The signs of old age, disease, death, not only persist, but sometimes prevail and the force of the Arogya has to bear them as an irremovable, though not definitely overpowering burden.

The *Saundarya* no longer advances.

*Utthapana* progresses with difficulty and in a limited movement.

Sleep is once more dominant.

Karma

*Kriti* is again obstructed by a successful opposition. The month of October, proposed as a period of triumph, opens with a time of hampered movement. All the siddhis are obstructed and rendered inefficient except within their assured limits.

==

Script —

The importance of the present movement lies in the systematic discouragement of the tapasic stress which mistook telepathy for eventual trikaldrishti.

==

Kriti

A result willed vehemently a year or more ago now occurs suddenly — The faith accepts it as a result, the intellect questions

Oct 10 —

St. *Bismillah placed at the head of the Koran*

The movement of the Siddhi is once again overcoming the Asiddhi. The second & first chatusthayas are being restored in their completeness. The faith that disregards immediate outward circumstances, is developing, although still combated by the suggestions of the intellectual environment.

Outward circumstances of the moment have to be understood by the vijnana. But there must first be this general faith that they have all an intelligible purpose & an intelligible sense.
It is true that they are worked out through the Pranic world by the Dwayavins using conflicting energies, but the Power that governs them in spite of their ignorance & mutual misunderstanding is One, who is neither a passive Being nor a blind Force.

The only question that remains is whether the immediate guide of the Yoga is the Ishwara himself or a Spirit who errs,—the Manomaya Purusha in oneself or a Manishi outside.

The faith must be that it is the Ishwara, Anandamaya & Vijnanamaya who is the guide, although He still uses the impulsions & ideas of the Manishi & not yet the full Vijnanamaya harmony.

It is the replacement of the mental perceptions & impulses that is the work of the Vijnanachatusthaya. It is because that work is not yet done, that the first two chatusthayas are open to shocks & disturbances through the disappointment of the faith.

This is why it has always been said that the absolute finality of the first two chatusthayas depended on the fulfilment of the third.

But the entire fulfilment of the third implies the fulfilment of the fourth and fifth and therefore necessarily of the sixth and seventh.

Therefore it is an integral fulfilment that is being worked out & this aim prevents the separate perfection of each chatusthaya by itself without relation to the rest.

Faith & Ananda Brahman are the two keys to the perfect internal state, with dasya as the joining point. Knowledge & Power are the two keys to the perfect external state, with Daivi Prakriti as the joining point.

Uthapan Arms 1 hr 45 minutes, discontinued for want of time, not failure of power. More physical unwillingness & more defect of anima than day before yesterday.

Effectivity of tapas still acts against resistance and by lapse of time.
1. Lipi—
   28th truth. (changed to) tejas.
   18th third.
2. La cuisine Française.

St. The End of the Beginning.

Script—
The principle of the Siddhi has been given. The actualities of the future have to be given—

The first seven Affirmations have to be continually reasserted and maintained until all denial is eliminated. Afterwards the other two will naturally emerge.

The satyam of the telepathy & trikaldrishti is the next finality intended.

After it the satyam of the Power—

Then their ritam.

Meanwhile the physical siddhi will work against its barriers and bring itself into line with the rest of the siddhi

Oct 11th
St. Arya . . The Wherefore of the Worlds . . Isha Upanishad—

What will now be done is to idealise all the perceptions & impulses, normally and spontaneously and so convert the whole being, including the two lower mentalities and the prana, into the ideal being. The body will follow.
This is already being done.

The state of another’s mind is now physically concrete to the sense-mind. The contents are less visible, except in their generalities.

Aishwarya-vyapti of the nature of Dharma is now very commonly effective on people in the immediate neighbourhood; but the effectiveness is not invariable, & least developed in details.

At night, after a long time, the dreams were to a certain extent watched & remembered, but they have gone back to the worst confusion of incoherence & the intrusion of present personality and present associations. All were of the nature of pranic dream.

Oct 12th

अत्र वाञ्चो अकृत्य स्रष्टिं वसुधोव्य अवितारा जनानाम्—The Aswins.

There is a preliminary Siddhi completed in all but the fourth & fifth chatusthayas, in preparation even in those chatusthayas. In the first two there is a perfect organisation, the only defect of which is that it is not constantly immune from disturbance. The same organisation is being prepared in the third, & even in those parts of the fourth & fifth which are ready—

It is now well proved that the Kamananda & Tivrananda are firmly established. There is only the question of their continuity & in the second of its pervasion. Questions of intensity remain behind.

It is necessary, for this purpose, that the Arogya should be strengthened; but the Power is not yet strong enough in its dealings with the body.

The Utthapana has to be extended finally to legs, neck & back. The old siddhi has to be recovered & improved.

In Kriti the rapid fall of Antwerp, anticipated by the Trikaldrishti, but combated by the Will, shows that the powers of the opposition are still too powerful.
Nevertheless satyam of the power is being established, though not yet perfectly.

Today physical Ananda, subjective Ananda of siddhya-siddhi, mangalamangala, organisation of Vijnana, pressure on Sharira.

Telepathy
1. Perception that the Russians had had slight success in Prussia, but not yet elsewhere, justified by today’s news.
2. Rapid fall of Antwerp, anticipated but not seen.

Utthapana —
2½ hours. Arms. Defect of anima greater than yesterday in the arms & shoulders. On the other hand the acute strain on the loins has disappeared; such strain as was felt, was intermittent & only at the end. Full laghima is almost accomplished; not yet full mahima or anima.—

Sortileges.
1 Application
2 प्र को महे मतयो यंतु विषाणे —

Script —
In the points noted for today’s progress, there is a movement, but nothing is yet definitive.

The Kamananda attempts to be more constant, Vishayananda is more & more settled, but the subjective Ananda of good & bad event is still fiercely contested by the powers that oppose the Siddhi. It is there always, but more often retrospective than valid at the moment.

The satyam of Power & Knowledge is being more & more revealed; furiously attacked in the morning, it could not be seen by the mind for a time, but was persistently asserted by the intellect.

Samadhi —
Dream at night was more coherent; possessed at first by present personality & suffering in the end from present associations, it
was for a long time delivered from them. The incoherences were no longer nervous & bizarre as on the 11th, but mental & due to abrupt transition & wrong combination of separate strains of experience or vision.

Oct. 13th

अश्वात्स्य तारुण्याते अश्वात्स्यान्ते – Usha.

The mind & nervous impulses to be clear, well-formed & true, by the illumination—

= Kamananda maintains against obstruction its persistent & often continuous recurrence—Tivrananda is slowly developing and vishaya with vaidyuta shows signs of manifesting more firmly.

= Arogya is still subject to constant obstruction

= Saundarya is prevented from advancing.

= Utthapana of the legs & neck is being attempted but as yet without success.

= Lipi

1. Effectuality in the lipi.
2. distinguish the trikaldrishti altogether from the telepathy.
3. Soldiery . . talented stranger—(civilisation)

Utthapana

Utthapana of the arms for one hour—discontinued to give place to work for the Review. The laghima is now well-established; yesterday’s exercise could have easily been continued for another half hour. Mahima defective is only a secondary state, an effect of defective Anima; in itself Mahima is sufficient,—weighed upon but not overpowered by defect of Anima. It is only in the defect of Anima, that the Asiddhi has a real point d’appui.

In other parts of the body, mahima is deficient & overpowered by violent pressure of the Asiddhi on the defect of Anima.
This defect of Mahima has to be forced out of the whole body.

Samadhi—
Rupa is now rarely manifested in the jagrat, except in form of Chitra. When manifested it has a tendency to the perfect and spontaneous, but has as yet no stability in the sthula except an initial & fugitive stability.

Kriti—
Kriti continues to be resisted. In the immediate surroundings Power grows in strength and frequency of effectiveness, although it is no longer intense in action or rapid in effect, except in certain instances of ishita & vyapti.

Faith—
Faith is being enforced in the terms of a knowledge that gives its proper place to actual circumstances & events, but is not subjected to or guided by them. It is still insufficient with regard to the personal love of the Ishwara and the fulfilment of this life, but admits the general Kalyana and the guidance.

The love has now to be admitted. The idea, given by knowledge without love, is that of a great mechanism & a wise, perfectly intentioned mechanician careless of the means of his work so long as they are well-judged & effective. The Iswara is known to be all-powerful; he has now to be admitted as all-loving, but not a victim of His love, not compelled by personal affection to vary from his plan, which is always the best for the individual and the universe.
Subsequently, it must be perceived how far that love implies for the Jiva fulfilment in this life of the desires & impulses implanted in him by the Iswara & of the ideas towards the realisation of which he is continually forced to strive.

Utthapana
Of the neck maintained for 15 minutes. The old acute pain in the muscles declared itself, but was suspended at times.
Karma

Sahitya is proceeding with great rapidity, but with varying excellence. The attempt to resume poetry has not yet been successful.

Samadhi.

Dream as before. Present associations & personality still interfere

Attack on faith through *amangala* in Kriti.

Oct 14th

Swapnasamadhi again active; the stability of rupas & scenes greatly increased.

Utthapana.

Legs; medial position, 15 minutes. Strong defect of anima, laghima sufficient; mahima distressed by defect of anima.

Lipi —

1. Destruction Antwerp
2. Defeat Antwerp 18th.
3. Responsibility
till eighteenth..
5. Respectful of the rights of the opposition.
6. Passivity
7. The assembly of the English Parliament
8. Blague. (in reference to menaces of the opposition, Ar. etc)

Note the 18th & 23rd October & 9th November have been given as dates for the siddhi.

The separation of the telepathy & trikaldrishti continues.
Telepathy & Trikaldrishti
1 Of relief of Przemysl confirmed.
2 Of German successes at sea farther confirmed in loss of Russian cruiser.
3 Of check of Russian advance in Prussia

The former constitutes, as well as the 3rd a failure of the Will.

Utthapana
Of the arms, an hour and a half. The annakosha is somewhat exhausted, but there is a great force in the pranic body —
The utthapana of the neck was unsuccessful.

Faith is increasing steadily & taking cognisance of the intention in things & events.

Dream incoherently consecutive, full of present association & ego. Forgotten entirely, afterwards by passive & empty tapas on the mental consciousness, almost all the details returned.
Swapna samadhi; but no advance.

Oct 15th
Great weakness followed by chill & fever.

Utthapana of arms for half an hour, interrupted owing to illness of body.

Strong fever throughout the rest of the day.

Samadhi
Rapid advance in samadhi
1. The three states of jagrat, sushupta & swapna superimposed simultaneously and perfectly combined. The mind in sushupta perceives below it the activities of the swapna & perceives also what is happening in the jagrat.
2. Perfect & unmixed arrangement of vijnanamaya thought perceptions in the mind; the result of an absolute flexibility of the
intellect gained during the last few weeks. Both in jagrat & in swapna & also in combined samadhi.

4. Activity of Will in the samadhi, attempting to become vijnanamaya.

= Strong confirmation of samata; extended to body; but failed, physically, at the strongest pitch of the discomfort of fever.

= The struggle to expel the fever was unsuccessful.

Oct 16th

Another day of fever.

= Again progress in samadhi, but not so marked as yesterday. It is during the feverish state, the system being raised to a high pitch of force & intense living, that these phenomena take place. It has to be seen whether the full progress will be maintained in the normal condition of health.

= Kamananda active, but discouraged for fear of the body being unable to sustain it. Strong activity of tivra & raudra anandas.

= The attack of the fever & its force of entry was less powerful & prolonged. It is notable that the means on both sides was really mental, physical means being entirely inoperative either to check or increase the fever, except to a slight extent sweating. The latter was brought about by the will, not by remedies or external appliances.

= Lipi –

1. nineteenth text.. (Indicating that the text of R.V. V. 81. which has still to be written out for the review, will be copied on that day. The fever will therefore be cured by that time as well as the weakness after fever).
Oct. 17th

The fever expelled in the morning.

No progress during the day—

Strong attack on prana sharira at night, but no fever in the physical body, only strong “surexcitation” & uneasiness & broken sleep.

Progress in swapna samadhi.

Oct 18th

As yesterday, but no farther attack. This time little reaction of weakness. Only unwillingness to work—in part of the system.

Progress in swapna samadhi confirmed & increased. Yesterday there was long continued action in firmly stable scene, but it was one action constantly continued for an indefinite period, the falling of rain in pools of water over a large surface—Today a varied action—and more than one vision.

Oct 19th

The Siddhi is now taking up the results of the 16th & 17th. The organisation of the vijnana in the normal condition is to be firmly based. First, in the combination of the thought-perceptions, vangmaya, script & vani; secondly, in the combination, with them, of the samadhi; thirdly, of the addition of the organised Power; the one element subordinated during the last few days.

The gathering (ghana) of the Chit in the brain is no longer to be associated with morbid heat in the body. The attempt to absorb & hold it in the period of fever was the right & dominant movement.
Most of the day devoted to other occupations. Dullness returns on the system and suspends progress.

Oct 20th

There is still in the physical system the obstacle to activity and progress; but this will not endure.

The faith has to make itself more implicit, & to be the same for the guidance in Karma as for the guidance in Yoga.

It is not to be faith in every suggestion, but faith in the ensemble and in all that comes from the Master above.

The definite organisation of trikaldrishti & power is proceeding; it will be henceforth like that of the knowledge automatic & well up spontaneously out of the Sat. So also with the Samadhi.

The Tapas has to be used for the removal of the obstruction which is now general and mechanical.

Oct 21st

Lorsque l’esprit alors assemble les données et assouplit assez sa langue pour les traduire synthétiquement. —

Indicating the condition for the perfect trikaldrishti, —as it has been for the thought.

The whole active force of the Shakti must be concentrated on the body & on the Karma.

The trikaldrishti is defining itself more & more clearly in the sense of the sortilege. It is more effective & positive with regard to things near in time & place. This distinction will be steadily diminished & finally removed.

October 22d

The day was chiefly marked by a great advance in the organisation of trikaldrishti both telepathic and pure. Normally, the impressions received are justified; but there is still a remnant of the tendency to overstress when there is the attempt at active judgment.
For the most part, however, the impressions & perceptions were justified & begin to fall more & more into their right place & order.

The organisation of Tapas is proceeding, but has not yet gone very far.

Samadhi is still obstructed. The progress made during the fever has not been maintained in the normal condition.

There is more & more stress on the bodily siddhi and on the Karma, but as yet without effect.

The full Brahmadarshan—full in type, not in contents,—is becoming more & more entirely ordinary & normal.

Oct 23d.

The Vijnana, with the exception of Samadhi, continues to organise itself.

Remarkable effects are being produced in the immediate vicinity by the Tapas. But the element of resistance, sometimes successful, sometimes overcome immediately or with delay, entirely or in part, always persists.

Utthapana resumed. Arms 30 minutes. Defect of anima impresses itself strongly on the body, but without overcoming laghima and mahima.

Sraddha (swashaktyam bhagavati cha) is now well-founded, but not sufficient either in range or in enthusiasm and intensity.

Nevertheless, the perfection of the first three chatusthayas is now decided & will accomplish itself inevitably. It is in the fourth chatusthaya of the body that a lengthy struggle seems still to be inevitable.

In the fifth Krishna Kali is ready for completion, but Karma is only in embryo and Kama still less advanced.

The sixth is now as much advanced as the first & second & more than the third.
The seventh is established in all but the bodily siddhi & the karma, and approaching perfection of a kind in all but the mukti from pain, the shuddhi of arogya, the bhukti of the raudra, the siddhi of body & of work, or if not approaching, then already in practice capable of perfection.

Attempt at recovering the progress in Samadhi as yet only partially successful, as the sushupti tends to take possession of the two other states and to admit a certain amount, though less than before, of the tamasic nidra.

Oct 24th

Swapna samadhi effective; but the continuity is still obscure & interrupted, and more of a continuity of action than of vision. Touch, sound, sight & movement are well combined.

In the War the Russian success is a first sign of renewed effectivity of Kriti.

Roga now attacks chiefly the stomach (mucous looseness), the teeth and the kamic centre. At other points it is usually ineffective. There is a tendency to dull headache, but this materialises badly.

In swapnasamadhi the organisation of the three states of consciousness effected in the fever, was restored; but with less force of the jagrat in the sushupti & swapna.

Oct 25.

There is as yet no new perceptible advance of any kind, rather an attempt of old confusions to reestablish themselves, — the result, it is suggested, of an attempt yesterday of the Tapas to move forward rapidly & get rid of movements of relapse, at least in the subjectivity.

The truth is that there is an alternation of states, the divine & the human, the illumined and the partially obscure, where there is pale tejas, not ritam jyotih. This alternation tends towards the
elimination of the mortal and obscure and the normalisation of the
divine and luminous.

Today the lower state predominates

*Samadhi*

Action of perceptive thought, usually vijnanamaya, at a
deeper level of samadhi.

Dream makes no progress.

Oct 26th

Power is now distributed with a limited effectivity over all its fields; but it cannot entirely prevail anywhere, is nowhere free from resistance and is subjected to signal defeats & successful obstructions.

Utthapana of arms, an hour and a half. Pranic trouble the first half hour, muscular the last quarter of an hour. Good utthapana in between.

Oct 27th

Powerful attack on the kriti.

The telepathy has been proved to be still very mixed, for things at a distance, & the falsifying overstress continues.

In things near the decisive trikaldrishti works, but not with any largeness.

Oct 28th

The period of depression continues. Faith is shaken and udasi-nata replaces ananda.

Utthapana of the neck 15 minutes. Pressure of defect of anima, more pranic than material.
Sahitya—poetry has been active for some days.

More trouble, though of a minor kind, in the kriti, but this did not disturb the samata.

Lipi.
1. oubliez
2. tonight
3. inside a fortnight.

Oct. 29th
The literary activity continues in spite of everything.

The Yogic siddhi is attempting to revive from the serious blow that has been dealt to it; but the faith is wanting.

Without the faith the siddhi will continue; for the failure of faith has been allowed or even brought about because it is necessary.

There is an active Trikaldrishti, but it is of a mixed result & telepathic in its character.

The progress of the third chatusthaya must be resumed & the fourth & fifth insisted on again in spite of all opposition.

Only the conditions of the fifth must be changed

Oct 30th—
In seven days. St.

The Vijnana is now recovering its usual movement—

1. And he came by the Spirit into the temple.
2. P.X.
3. O Lord, my strength and my fortress and my refuge in the day of affliction, the Gentiles shall come unto thee from the ends of

www.holybooks.com
the earth and shall say, Surely our fathers have inherited lies, vanity, and things wherein there is no profit. Shall a man make gods unto himself and they are no gods? Therefore, behold, I will this once cause them to know, I will cause them to know my hand and my might; and they shall know that my name is the Lord.

Lipi—
1. Lipi—
That is to say, as the sortilege is now active & organised for the actuality, so the lipi will now be made active & organised for the actuality.

Trikaldrishti, selective & decisive, is now acting in small matters with great frequency & correctness. The latter is not yet invariable.

The rest of the vijnana is still dull, except occasionally the jnana.—

Oct 31st
St. 1 Chand. 2 Les Débats 3 Littéraires.
Lipi.
1. Jollity. outside. perfection. digest. 2 passive. 3. 13.

The normal activity of Vijnana is restored; the attempt to generalise accurate trikaldrishti and effective Tapas is being restored. The subjective vishayananda is finally normalised; a similar normalisation of ananda in the manas with regard to events will complete the subjective ananda. Meanwhile the physical must be perfected.
The utility of the holding back of the perfect Brahmadarshan is now manifest. The defect was that the mind had not made a proper harmony between the Anandamaya Chaitanya & the ignorant Jivatman. The latter tended to be suppressed in the darshana; therefore it has been restressed & now enters normally into its place in the darshana.

The pursuit of rapidity is renounced by the Jiva, which has once more become passive, and is digesting the greater measure of perfection rendered possible in the lower consciousness.

Tertiary dasyam is getting a greater hold on the normal consciousness.

The whole stress of the Siddhi is towards a steady & unobtrusive normalisation of what has been gained. New progress seems to be suspended.
November.

Nov. 1 —

The aims set forth for October are only now beginning to be accomplished, but the month of October was the turning-point for the action.

= =

Lipi.

1. Already fitted for the intellectuality; fitted for the ideality. (Ak [Akasha])
2. Results of the rapidity. Yogasiddhi (Ch [Chitra])
3. It is futile to expect results immediately.

Darshana.

The Ananda Brahman is now an entirely normal part of the Darshana. It contains implicitly the Anandamaya Purusha. Krishna has now to become explicit in the normal darshana as he has been in the abnormal, when the intensity was at its highest.

= =

Vijnana.

The telepathic perception, sukshma drishti, is being steadily purified from overstress & false stress.

Nov. 2 —

Lipi.

1. It is fundamentally easy to distinguish the telepathy. (Chitra. Sky)
2. Henceforth distinguish telepathy from trikaldrishti.
3. 13.
4. 15 —i.e identification with all energies in the world, in the terms of the truth so that those to be preserved may be chosen, those to be transformed [? ], & those to be eliminated recognised but rejected.
5. energetic faith — egoistic faith.
6. enthusiasm.

Telepathic trikāldrishti can never give the inevitable result, although it may often give the right & actual result; for it contains only what is present in the subconscious mentality of the world, not the forces that may at any moment enter & change the event. Telepathy in the vijnāna passes into trikāldrishti.—

Entire tertiary dāsya is now being enforced, so as to overcome the mental suggestion of kartavya which seeks to preserve the prakṛti or secondary dāsya. The egoistic or personal dāsya, with the illusion of choice, has long been eliminated in fact, but sometimes recurs in the external mentality.

The dāsya established, energetic faith will be possible without the returns of egoism. Enthusiasm can then return.

St.

rial d. = internal dissensions
Utthapana of arms, 45 minutes.

Nov 3.

St. Nos amis.

Lipi.

1. Faith—
2. Energy of yoga—
3 generalise the faith.

There is a tendency of revival of the energy in the yoga & of the energetic faith, but it is not yet very extended—

Tapas seems to be increasing in power—

Lipi is active & organised to serve the knowledge & the yogasiddhi, but not as yet the trikāldrishti—
Chitra also is organised for the intelligence of the world & its forms & tendencies.

Script is being organised within the same limits

A considerable organisation of the Vijnana proceeds, but height & energy & perfection are withheld.

A beginning of progress in the Rupa & Samadhi is indicated as imminent. As yet, there is no material indication. Script—The rupa will now be developed in the akasha.

Utthapana of arms, one hour.

Nov 4.

Samadhi.

In dream, there was once more absolute & long coherence, other dreams supplying omitted & collateral parts of the first, & entire absence of present ego & associations. But all was in the nature of a tale or fiction, rather than actual event.

In swapna samadhi, there was long continued coherent conversation, not sufficiently sthula, & rather in the nature of a monologue.

In Kriti there is some confusion owing to the sudden change both in circumstance & attitude.

The removal of all habit of choice from the lower being is essential. The buddhi has entirely understood, the manas understands and no longer sanctions choice; it is now only the physical & pranic elements that have the habitual reactions which come from the mental choice. These have to be eliminated for perfection of Samata, for perfection of Shakti.

The Ishwara will choose through the Vijnana & work out through mind, prana & body obeying the Vijnana.
There must be the certain faith that all He does, is for the perfect Yogasiddhi. The perfect Yogasiddhi is for the perfect life.

When these reactions are excluded, then only there will be the perfect positive Samata = the perfect subjective Ananda —

Meanwhile the physical Ananda is resuming its development.

Rupa in the Akasha (crude) is remanifesting & it is evident that nothing is lost which was gained. Human figures, groups, landscapes, objects come freely; animal forms (fourfooted) are obstructed. In all a clear-cut & stable distinctness is the characteristic deficient & to which the opposition in the Akasha still presents its effective veto—

Forms not crude, but ghana & developed have a clear cut distinctness & completeness, but no stability or only the first initial stability, often with a deficient completeness.

It is the former gain without any advance, except in the energy of manifestation slowly increasing behind.

Vani is beginning to be organised.

Rupa is beginning to reappear on the background (sadhara).

Uttapana of arms. 3 hours. Muscular strain reappeared, more as the result of repeated utthapana than of extension of time. Twice an attempt was made to make it oppressive & victorious over the laghima & mahima, in the fourth quarter of an hour & once in the third half hour. A later attempt in the last half hour hardly materialised & the utthapana could have been continued, apparently indefinitely. Stress was then laid on the strain of reaction & this now remains as the one effective obstacle to this utthapana.

Trikaldrishti is beginning to be common & even to organise itself with continual ritam of detail, though not yet of arrangement.
There is a very brihat basis of telepathic trikaldrishti. Ritam of arrangement is being prepared.

A strong opposition is still offered to the organisation of Samadhi.

Nov. 5.
St. An omnipresent reality.

Lipi—
1. First stage effectually accomplished (Ant [Antardrishta]).
2. Ending without delay.

Definite trikaldrishti fulfilled, that the spell of continuous rain for a month would be broken up the first thing in November. Actually broken up from the second.

Uthapana of arms one hour. Reaction of strain less than expected.

Nov. 6.
The pressure of advance has somewhat diminished, but the progress attained continues. Only in the samadhi, there is not yet a sufficient movement of organisation; & the Tapas fluctuates in its activity.

Uthapana of the arms for about an hour, interrupted by visitor—Persistent dull strain, but there is no longer as there would have been before a powerful reaction preventing successful utthapana.

Chitra is now very clear, firm, rich & detailed. In swapna samadhi Chhaya still overhangs & stability is obstructed—There is strong obstruction to the firm emergence of akasharupa, whether sadhara or niradhara—
An attempt partially successful to bring back old conditions of siddhi by diminishing the affirmations.

Lipi.
1. Fortify the Aishwarya.
2. Tonight . . light on the situation (ie interior)
   (Both antardrishta & very vivid, firm & stable – the second fulfilled).

Nov. 7.
Progress today stationary—

Utthapana, arms 10 minutes, interrupted.

Nov. 8.
Utthapana, arms, an hour & a half; some pressure from defect of Anima.

Progress tends to recommence, but is still encircled.

Partial effectivity of Tapas is more generalised, but effectiveness is withheld from its detail—

Nov. 9th
Chiefly given up to Sahitya.

The Sahitya & study are now becoming well-organised, guided entirely by the impersonal force of the Personal & not interfered with by egoistic action & choice. The latter still makes suggestions which are more & more rejected.

A similar action must now be extended to the Dharma & to such external Karma as is immediately in the power of the Adhara as well as to subjective action for the Kriti.
Nov 10th

The Darshana is now beginning finally to normalise the perception of the Parapurusha in the Anandam Jnanam Anantam Sarvam.

It begins with the perception of the Manomaya Purusha in the individual as identically the Parapurusha even in its apparent separateness & half-negative representation of Sachchidananda.

=Tertiary dasya is now powerful & begins to be pervasive.

The first chatusthaya is steadily working out its last remaining defect, the recurrence of physical reaction to external suggestions of duhkha & aprasada proceeding from others or from the world-environment & taking advantage of the deficient sraddha in the Karma. Persistent Asiddhi in Karma & Yoga is used for this purpose. It stamps nati on the most physical parts of the nervous being as it has already been stamped on the mental being.

The second chatusthaya is, except in faith and in realised karmasamrthya, complete in the manomaya organisation of the self. It has now to be converted into a vijnanamaya organisation based on the faith, the tertiary dasya & the daivi prakriti (karmasamrthya & ishwarabhava).

All animal forms are now coming freely in the Chitra. Objects are also more varied.

Utthapana, arms, one hour; defect of anima stronger than for some time past.

There is a promise of rapidity in the vijnana.

Lipi.
1. Brilliant.
2. great (brihat)
3. final submission of prana.
4. spiegel.
Insistence is once more being put on activity, constant will to know & tapas.

Nov 11th

Uthapana, one hour—defect of anima less, but still stronger than it should be.

Sahitya continues to be active.

Recurrence of intense kamananda throughout the day—

It is a remarkable fact that most of the things willed during the last few years & months, not connected with the personal life, are now being fulfilled in a confused mass, but the attitude having changed present an obstacle to the immediate willings.

Lipi

1. Saturday (for the vijnana)...
2 jadis
3 lordless energies of the asiddhi
4 first thought is infinitely better organised than the less spontaneous thought.

The present combinations are all mental & have no real relation to what is destined,—this is the indication given.

More precise indications may be expected very shortly.

The clearing up of the situation is inevitable. No attempts in a direction not intended will succeed.

Swapna-samadhi continues in the same condition. Coherent sabda now occurs in jagrat, but only a sentence at a time.
Nov 12.

All are now personalised in the Brahma Darsh[ana] as the one Person who is the Tat. The normalisation of the perception of Many in One is beginning. Here the ego in the mind of others is the obstacle.

The Master of the Yoga remanifests as well as the Kalibhava—

Lipi

1. aspiré
2. [no notation]

Swapna-Samadhi.

Struggle at night to develop entire & coherent lipi in deep samadhi. The scenes, rupas etc remain as before. There is an intermittent attempt to develop organised rupa etc in antardrishta jagrat—

Nov. 13.

There remains a want of harmony between the separate form of mind & temperament and the personality of the One in the Many which possesses the form. The perception of identity & penetration is insufficient; the form seems to belong rather to the material of the impersonal Brahman.

This view frequently gives way to entire possession, in which Prakriti & Purusha are again united.

Uthapana – 1½ hours. No defect of anima in Prana, only for last half hour in muscles, —not compelling.

A repeated lipi—“John”,—pointed to the Epistles of St John for a reference. The passage turned up ran—

“Beloved, believe not every spirit, but try the spirits whether they are of God: because many false prophets are gone out into the world.

Hereby know ye the Spirit of God. Every Spirit that confesseth that Jesus Christ is come in the flesh is of God;
And every spirit that confesseth not . . is not of God.”

As a doubt suggested itself: how there could be certainty of right decision; the next verse came

“Ye are of God & have overcome them; because greater is he that is in you than he that is in the world.[”]

The reference is to the method in which the Vijnanachaturthaya has to be effected. All suggestions that have not the consciousness of the Master & the instrument behind them, have to be distrusted or else judgment reserved. The Power felt to be governing the world is the power of the mentality & is not vijnanamaya.

This Reference was supported throughout by Lipi, giving the exact answer to the thought in the mind & guiding the judgment.

Note that yesterday, the mind being in doubt about external menaces, the reference ran, “I will lie down & sleep, for thou, O Lord, art only my safety.”

The immediate occasion of today’s reference was an insistence on immediate organisation of sadharadrishti in jagrat.

Forms of rupa, including fourfooted animals, did outline on the background, but without stability or hold upon the akasha.

There is a preparation, but except in one or two points, mainly in the first, fifth & sixth, no rapid or final realisation.

Kamananda seems to be overcoming some of the adverse conditions which formerly helped its negation. These conditions recur, but have no longer the same power of prolonged suspension.

Asamata, when it recurs, is powerful[ly] discouraged & can no longer take hold on the system.

In arogya the struggle proceeds.
Lipi.
1. affirm. 3. righteousness strength
2. fixities.
4. egoistic faith justified. (now that it is ceasing to be egoistic).
5 softly . . fiery.

Samadhi.
Effort to organise lipi in samadhi continues.

There is a tendency to redevelop exact time in the trikaldrishti & telepathy.

Nov 14
There is no rapidity as yet in any of the three chatusthayas of effectuation, only in the three which are purely subjective.

R. [Reference]
And he shall sit as a purifier & refiner of silver, and he shall purify the sons of Levi & refine them as gold & silver that they may offer unto the Lord an offering in righteousness.

Indicating the purification of thought & life into the terms of the Ritam.

In this purification & refinement there are necessarily two processes corresponding to two necessities. First the mental & nervous reactions must all become satya, so that in the end there may be no anritam in Etat falsifying the vijnana; secondly, the mental & nervous action must be translated into the terms of vijnana, thus becoming ritam, & eventually being replaced by the total vijnanamaya action. At present the first process predominates, but the second also is definitely & finally proceeding.

The fourth & fifth chatusthayas depend on the perfection of the third, as the third has been led up to & at the same time assisted the first & second.
Utthapana.

Arms. 2 hours. Strain after $1\frac{3}{4}$ hours, mostly due to combination of walking & utthapana in this form, the muscles of the loin & back becoming outweareried. Utthapana must be enforced also in these parts of the body.

Faith.

There is now a well-founded certainty of entire siddhi in all seven chatusthayas, on two conditions—

1. That no circumstances intervene which prevent the continuation of the Yoga in this life—eg premature death etc. All circumstances hitherto brought in with that intention have failed of their object.

2. That no such successful obstruction is interposed as to retard the siddhi to the last days of this life or beyond.

The two questions, therefore, that still subsist are those of safety & rapidity—sati & taras. (सति . . तरस).

Ananda.

There is again a successful obstruction of the Kama Ananda since yesterday afternoon, though it is in the nature of an artificial difficulty, rather than a natural suspension.

Rupa.

Images in akasha & sadhara, chiefly chhaya or tejas, sometimes varna; human figures the most distinct & stable, animal vague & unstable but various, objects of both kinds.

Dasya

Tertiary dasya is now strongly confirmed, complete & powerful in the body. In the mind it is still mixed with the secondary & Prakritic form. Shadows of the primary fall only when there is a touch of asamata.

Kamananda begins to resume its activity.
Samadhi—

Continuous incident by successive pictures of the same action in different stages, cinematographic in piecing rather than lifelike.

The struggle to develop clear & stable rupa in jagrat continues.

Nov. 15th.

A greater intensity of Tapas not disturbing the tranquillity of the Samata & the passivity of the Yantra in the hands of the Worker, has to be elaborated.

In rupa vague blurs of unrealised material of form alternate with form nearly realised or quite realised. The tendency to form is frequently active with success, but not yet master of the physical Akasha.

Rupa on the background begins in a blur, starts out into form & then immediately dissolves into a blur. Human forms, animals & objects occur equally; but there is at present a considerable tendency towards the frequency of the fourfooted animal which was formerly always obstructed.

Uttapana

Arms, 1 hour, 53 minutes. Physical defect of anima. It tried to make itself a pranic reaction for a while, but failed. Reaction strong in the body afterwards.

Rupa

At night very clear & perfect shadow forms on a background.

Nov 16th

Darshana has now a large & sure form of the Jnanam Brahma. Personality is therefore firm in the vision. But the Ananda Brahman, although always present, is not yet sufficiently strong & vivid.

Vijnana—

Certain trikaldrishti is now often entirely positive & compelling, but not sufficiently frequent.
There is also a secondary certainty or rather insistence of trikaldrishti which is not so positive, rather questioned by the sceptical intellect, but fulfils itself equally with the other.

There is a third which is a perception of force of possibility, afterwards self-justificatory in the event. It is this which is most difficult to distinguish from the mere perception of force of possibility unsanctioned by the destined Event.

Sometimes the trikaldrishti is surprisingly fulfilled at the very moment when non-fulfilment seemed inevitable in the actual occurrence. In such cases it seems to partake of the nature of Ishita, Aishwarya or Vashita.

Rupa has now a greater force & in Akasha is very clear & perfect with some stability, as well as on the background; but the stage of difficult & confused formation is not yet left behind.

**Uttapana.**

Arms. 2 hours; after an interval of 5 minutes, due to exterior causes, another 15 minutes. The physical defect & reaction were less, and the attempt to invade the prana was unsuccessful.

Samadhi in its profoundities remains disorganised but today thought emerged in it & commenced putting lipi & experience in order.

*Lipi in S. [Samadhi]* Persist alone . thought . judgment.

Nov 17th

Strong reaction of unfaith in Karma & direct government & choice of Krishna.

**Lipi.**

1. *Yet enthusiastic faith* (that is will persistently return and establish itself).

2. *Keltic faith* (the faith of the heart & imagination,—as distinguished from Teutonic, the faith of the nervous mentality,—Latin, the faith of the intellect in the idea,—Indian,
the intuitive faith. Of these the Latin is there, firmly; the rest are deficient, recurring, but not settled).

3. *Perfect beatitude; faith* (the perfection of the subjective Ananda depends on the perfection of the faith).

---

**Utthapana.**

Arms. 2 hrs. 30 minutes. No reaction in the loins & back except for a few intermediate moments, until after cessation of the utthapana. Reaction, chiefly in the muscles of the left shoulder for the last hour, strong only at the close. Ambulatory all the time.

---

There is a tendency to the establishment of 3 hours utthapana of the arms as perfectly normal; only the reaction in the shoulder resists. Laghima & mahima are sufficient & could have easily supported the arms for the remaining half hour and beyond.

---

**Rupa**

The struggle now in rupa is to establish rapidly the combined clearness, stability & spontaneity in a various rupa.

---

**Utthapana**

Of arms; after bath & meals, an interval of 1 hour 10 minutes, for thirty minutes sitting. More pranic than physical reaction

Of back & loins 1½ minutes; laghima excellent, inefficient mahima.

Of legs, 10 minutes; good laghima, entire absence of mahima; therefore the defect of anima prevailed throughout.

---

*Nov 18*th*,

**Utthapana.**

Legs. 15 minutes. Mahima introduced & laghima stronger than yesterday. Defect of anima, after the first ten minutes, tried to overpower but failed. A great force of physical tapas is present in the body, but failed entirely for a time in the evening. Afterwards it recovered itself.

Long sleep is at present the habit of the body which thinks
it necessary to recuperate itself from the strain which the pranic parts of the body feel less & less but the physical still consciously or subconsciously undergoes.

The Nine Affirmations have now again to be considered

It is evident that IV–VII are being completed first. The tertiary dasya is perfect in the body and perfecting in the mind & prana and there is a firm though not always equable or well-distributed sense of the passive yantrabhava in the whole system. But the dasya is not yet the dasya of the Madhura except at times because the subjective Ananda of karma-siddhi asiddhi is not yet perfect in the chitta.

Hence the acceptance of all bhoga as a slave & instrument of the Master is near completion, but not the acceptance as a slave and instrument of the Lover.

The Personality of Krishna is still often & long concealed behind his workings, his Prakriti.

If these can be perfected, the rest will be more easy. For there will be, & this is now preparing to be perfected, the universal sense of the Anandamaya Krishna as the continent & cause of all conscious activity & the base of Ananda with the instrument of free & joyous Tapas & Prakasha.

The principle of Affirmation has been constantly growing, but has not yet entirely replaced the principle of rejection & denial. Ritam is developing on the lines of the brihat by the progressive rejection of the idea of the Dwayavins.

Affirmations VIII & IX are only preparing. The basis of the five worlds has been laid down in the consciousness, but only the three are habitually active to its awareness & this without particular observation. But the Anandaloka is also frequently active in the manoloka.

The main effort now is to subordinate Time so that it shall be instrument and not determinant.

Strong movement of progress during utthapana. The Ishwara
takes full possession of the script, vani & vangmaya thought, a
possession compatible with the suggestions of other vanis always
automatically distinguishable from the central Word.

Farther progress in rupa.

Tapas is assuming a progressive strength & the Asura &
Rakshasa begin to take their places.

The force of ritam begins to increase.

Enthusiastic faith is increasing its ground.

But the chief result has been the final rout of the Dwayavins
& the unification of all multiplicity & dualities in the Ishwara.

Utthapana.

Arms, 3 hours. Strong attack of physical defect of anima
chiefly in the muscles of the left shoulder which in the last half
hour took the form of an acute pain. The attack failed to impose
pranic defect or fatigue on the system. But the reaction is stronger
than yesterday.

After 1½ [hours’] interval, one hour sitting. Pranic unwilling-
ness & oppression, afterwards only oppression then all clear, then
again unwillingness without the oppression.

The after reaction increases in strength, but is almost entirely
physical in its incidence, entirely in its direct incidence.

Lipi.
1. first let it disengage itself—the rupa
2. hopes.
3. hopes safeties
4. field of safeties is the field of the established, field of hopes
  is the field of the disestablished.
Kamananda once more intense.

The Record has now to include not only the details of what is accomplished & the lines of the accomplishment that is being attempted, but also the record of experiences and the indications of the future movement. This has often been attempted, but without success because of the insufficiency of Tapas and ritam. It will take a little time to establish the right working of this element. It must, first, be undertaken irregularly, so that it may gradually regularise itself.

There is still a great deal of action in the mentality nervous & intellectual; it is allowed so that by its self-motion under pressure from above it may idealise itself.

\textit{Utthapana}

Right leg, horizontal, lying on side; 15 minutes; mahima & laghima although increased in strength overpowered eventually by acute defect of anima.

Back & loins, three minutes.

In the evening, a fresh attack to disturb the faith & the unity. The knowledge in the mind, although pushed backward in order to allow of the attack, was not overpowered, except in the matter of the faith in the Kriti.

Nov. 19—

\textit{Utthapana}—

Legs—17 minutes. Entire absence of mahima, replaced by force.

The energy depressed last night & this morning is now recovering itself—(9. am)—and will maintain itself during the day. The affirmations have to be given a farther extension.
The attempt of the attack is (1) to restore the empty, indifferent shanta Mahasaraswati bhava & negate the combination of Ananda + Tapas, centred in the Mahakali-Mahasaraswati Bhava; (2) to assert the passive Devi in place of the Asuro-Rakshasic (Chandi) Devi governed by the Deva in Krishna.

It is now a settled gain that the Maheshwari bhava as pratistha is practically covered over; it is dominated, first, by Mahasaraswati as continent and, secondly, by Mahakali as in-habitant, seated on Maheshwari & embraced by the conditioning Mahasaraswati. When the combination Mahakali-Mahasaraswati is perfect, the pratistha will be entirely covered. It only emerges when it is necessary to correct the tendency of Mahakali to assert the supremacy of her own peculiar bhava to the detriment of the Mahasaraswati continent.

The type fixed is the Mahakali bhava of the Mahasaraswati Personality, not the Mahakali personality.

The emergence of the full intensity of Mahakali-Mahasaraswati is the development now attempted.

Yesterday the physical reaction of utthapana was excessive. Therefore today there must be some rest & relaxation, but not discontinuance.

An introduction to the study of metaphysics. (This is the line the philosophical work has to take).

Utthapana

Arms 2 hrs. 25 minutes. Strong pressure of physical reaction & sometimes Pranic unwillingness; the former in loins & back, the latter generally or once or twice in the arms.

The Ishwarabhava steadily imposes itself on the mind & prepares to take possession of the Will in the action.

2 In the manuscript, “(1)” was inserted after “negate”. — Ed.
The full bhava in its personality has reappeared, that is the conscious self-knowledge as the Mahakali-Mahasaraswati Prakriti-angsha & the corresponding ego-form in the sukshma body & mind. It includes the bhava of the Dasi.

Perfect identification with the prana in all, the hopes, passions, discouragements of friends, enemies, distant nations in the war, the British in India, the estranged Swadeshis here etc. etc. There remains only the identification in physical prana and body.

**Utthapana**

Legs—horizontal: left—17 minutes, deficient mahima & laghima: right, 7 minutes, laghima and mahima sufficient, but acuter defect of anima manifesting as pain of nerve & muscle compelled desistence.

Swapna-samadhi.

Frequent occurrence of continued action, but consisting only of two or three rapid movements.

Thought & perception in samadhi are attempting to become vijnanamaya.

Yesterday’s lipi, “utility” is being fulfilled, as such scenes & conversations are presented as may give knowledge of practical importance.

Dream is again being analysed in the state of samadhi itself & the importations of present sanskara separated from the true substance of the dream.

In this way one dream took its true aspect of a conversation in manoloka speculating as to whether certain presentations of event etc were not emanations from the minds of men falling in battle rather than realities.

1. A face & figure, gestures and the words—“They went up there & then turned in the right direction & were peeping through....” All could not be heard. The face was familiar, but long forgotten, & it was only after a time that it was remembered to be the young man who was first proprietor of the B.M. [Bande
Mataram] & his name almost immediately afterwards recalled, Kshetro.

2. A man, official or minister, sitting at a table with a map before him in which there was much red, on the West, &c saying “Ainsi n’est-il pas assez rouge pour vous.”

3. Figures etc connected with the war.

Antardrishta

The development here is slower; all sorts of crude forms come but not complete & except in a few cases not stable. Groups also come, eg a girl rocking in a low chair and another sitting facing her & holding her hand.

Lipi.

1. Godhead.
2 subtlety –

Rupa

At night, farther progress, the old stable ghana forms & unstable perfect reappearing. But there is as yet no advance on the past gains thus recovered.

Samadhi –

The movement is towards the rehabilitation of the former method of dream interpretation which had been somewhat discredited.

The perfection of the second chatusthaya has been completed in all but sraddha & chandibhava by the growth—still continued—of the Mahakali-Mahasaraswati.

Nov. 20 –

Utthapana

Legs. 10 minutes only. Defect of mahima; laghima also insufficient.
The elements of shakti & virya—

Viryamiti

Kshatriya—
Abhayam, Sahasa, Atmaslagha, Yasholipsa.
Limited by Kaushala, but all now perfected (barring exterior nervous touches) except Atmaslagha which depends on Sraddha swashaktyam.

Vaishya
Danam, Vyayah, Kaushalam, Bhogalipsa.
All perfect & rightly combined.

Shudra
Prema, Kama, Dasyalipsatmasamarpanam.
Perfect & rightly combined.

Brahmana—
Jnanaprapaksha, jnalipsa, brahmavarchavyam, sthairyam.
Well-combined & now almost perfect; but full prakash does not yet extend to action, & therefore brahmavarchasya is not yet perfect in effectivity.

Samanya
Sarvesham etesham tejo balam pravrittir mahattvam.
This is coming by Mahakali bhava.

Shaktiriti

Dehasya
Mahattwabodho, Balaslagha, Laghutwam, Dharanasam-arthym.
Well-established.

Pranasya
Purnata, Prasannata, Samata, Bhogasamarthyam.
Established, but sometimes attacked & touched in physical parts. The entire fullness of Bhogasamarthya depends on Arogyasiddhi.
Chittasya
Snigdhata, Tejahslagha, Kalyanasraddha, Premasamarth-yam.
Well-established, but Kalyanasraddha is sometimes attacked by the intellectual doubt. It is complete in the normal state of the Chitta.

Buddher
Visuddhih, prakasho, vichitrabodho, jnanasamarthyam.
Well-established, but not entirely complete in the active parts owing to lacunae in the vijnana.

Samanya
Sarveshetesu kshiprata, sthairyam, adinata cheshwara-bhava.
Coming by Mahakalibhava.

Chandibhava
Mahakali
Shauryam, ugrata, yuddhalipsattahasyam, daya cheshwara-bhavah sarvakarmasamarthya.
These are now developing, but the [ ] Ishwarabhava is insufficiently established owing to defect of effectivity of Tapah-shakti & therefore of Karmasamarthya in manifestation.

Sraddha
Swashaktyam Bhagavati cha
Insufficient owing to thwarted Tapah-shakti & doubt of Kriti.

The lesser trikaldrishti is now very active & usually accurate,—that which comes in passivity by a sort of vyapti. The trikaldrishti of great things, distant things (distant in time & space), & that corresponding to prakamya, is less active[,] correct or organised.
Vijnana, not in the least depending on experience, is now becoming more active but does not yet command entire confidence from the intellect.

3 MS the
There are three kinds of vijnana; the first corresponds to material mind intuitively reasoning & deals intuitively with things & ideas that might be known by experience, if the means of experience were sufficiently wide. It is prajnanamaya vijnana intuitional & discriminative.

The second corresponds to intuitive mind (perception) & is independent of possible experience. This is now developing. It is inspirational.

The third is pure vijnana & revelatory sakshaddarshana.

Yesterday kamananda was almost inactive, today it is again recovering activity. It must be intense & frequent during the day.

Utthapana shakti is a little depressed & will take a little time to recover. Arogya advances, but so slowly as to be almost imperceptible.

There is no sign of progress in saundarya except in increasing clearness of hue, varnaprasada.

In kriti there is still ineffectivity, except in details.

Vishayadrishti now acts occasionally in gandha & sparsha, more intensely or more variously than before, but there is no real advance in generality & organisation. Aswada is also occasionally active, but not so spontaneously & usually in the bitter, sour or bibhatsa rasas, which lead the mind to doubt whether they are not prakamya of sukshma effusions from the stomach. Some, however, are obviously non-material, eg taste of medicines which are never taken physically,—non-material or non-immediate. Sight & hearing are mostly in abeyance or sluggish.

But they are all attempting to throw off the obstruction & must progressively succeed.

Utthapana—
Arms. 15 minutes,—& after twenty minutes interval, 2 hours.
A violent attack of Asiddhi, first intended to prevent utthapana at all, then to bring it back to the one hour limit. Great strain on loin, back & shoulders.

Swapna Samadhi—
More extensively varied combinations of Rupa (various foods) & Rasa; the latter not always vivid, but always, when present, well appreciable. Also other combinations.

Image of large, bare room with one chair etc, & a young Brahmacari, slim & fine-featured of Bengali type, hastening full of respect & bhakti, to answer the call of his Guru.

Image of self, wearing dress with peculiar border & long hair, some hanging over the breast on the border. Query—future or idealised past?
More coherent lipis in deep samadhi; also a tendency to evolve the true lipi in those that are incoherent.

Rupa—
Perfect image etc came freely, but either before the eye without stability or with stability but avoiding the direct gaze or both indirect & unstable. The obstruction remains as yet obstinately unconquered.

Siddhi-Asiddhi.
There has been today a strong combination of circumstances in the nature of asiddhi in order to negate, as far as possible, the Mahakali bhava manifesting. All remains intact except the Ishwarabhava & its concomitants, but these are less affected than before.

Vijnana
At night a great activity for a time of Vangmaya transforming its habitual vak from effective speech into the illuminative & inspirational forms with an occasional rise into the pure inevitable.

There was also a movement of complete Jnana. The lifting of
perceptive thought from the intuitional reason to the inspirational revelation is being prepared.

Swapna-samadhi
Dream still pursued by present association, therefore sometimes difficult of reduction to right form.

Kamananda failed to recover intensity and frequency, being overpowered by kshaya.

It is noticeable that now relapse is no longer general & activity of progress is rapidly resumed after a movement of recoil. But it changes its location, leaving the parts affected to undergo a period of suffering & depression. Nevertheless even there there is no longer the tendency of entire quiescence, udasinata & temporary renunciation.

Trikaldrishti pursues its organisation in the pranamaya response.

Nov. 21—
Aishwarya-Vashita
Kriti is still effective only in details & movements, not effective in the mass & final effect, except when the final effect comes after a lapse of time.

The old habit was to leave it & allow time for the general ensemble of things to assimilate as much as it could of the tendencies created by the Aishwarya. The effort now is to maintain the Tapas and attempt to govern the movement of the ensemble by the Aishwarya-Ishita-Vyapti. But these powers cannot yet, even in small & ordinary things effect an organised ritam, though they can often act in the mass & produce a general result against resistance.

Nevertheless, the force of resistance in unimportant things is much attenuated, & in the majority of cases there is the result, sometimes with remarkable rapidity. But not where the opposite tendency is already strong & fixed.
In one case that has just happened, the same object (a bird) has four times in succession executed with only a slight tendency of deviation (ineffective besides) the movements willed. Another (human being) has done it with a little delay in spite of the intervention of hostile circumstances dispersed rapidly by the Will. Another performed the requisite movement, immediately & in full; three others with difficulty & not in full. (Human beings). Another (a goat) performed in full, so far as allowed by physical intervention of a companion; but negated the complete fulfilment by a return to its original position.

All this shows a marked advance of power; if generalised & applied it would be nearly omnipotence of Vashita over things animate.

Ishita.

The real defect of Tapas is imperfect Ishita preventing the full play of Aishwarya, Vashita, by giving a large hold to the Adverse, — just as in utthapana the real obstacle is defect of Anima which prevents the full play of Laghima-Mahima by giving a large hold to the opposition of the established physical powers.

There have been some movements of effective Ishita, but its general force is still submerged & tardy of effect, or, by result of tardiness, finally ineffective or [effective] 4 at wrong time & in wrong circumstance.

The Ishita must now be applied with a greater force & effectivity so that, by experience of success, yashas, the mental response may acquire confidence and affirm it.

It is noticeable that when the opposite tendency or intention is fixed, insistence of Tapas gives it immediately an acceleration in the opposite sense. But this is often compensated by rapid exhaustion of tendency and a subsequent return in the sense of the Aishwarya or Vashita.

At present all attempt to enforce the Ishita by itself meets with

4 MS ineffective
an effective resistance, except in particular details, or leads to an inexact and deformed result.

It is the same whether Ishita is used or Ishita-Vashita.

When applied forcibly, however, it usually produces some effect; when passive, the effectiveness is occasional, except in nityakarma, where it is normal.

**Utthapana**

Arms—3 hours 15 minutes. No serious reaction, except the pure physical which was ineffective. There was an attempt at pranic unwillingness in the second hour, baffled & expelled; an [attempt] at physical pressure & unwillingness in the third hour, baffled & expelled; an attempt at acute physical pain in the left shoulder, at the end, baffled, dulled & expelled. After the completion, the body rejected fatigue & the desire of relief & rest. The contrast with yesterday is remarkable.

**Vijnana**

The conversion of intuitional into inspirational & inspira-
tional-revelatory perception continues.

Thought & script also continue their inspirational-illu-
minated movement.

Trikaldrishti, inspirational, is preparing but not yet organ-
ised.

**Rupa**

Stable clear forms crude in the akash, but few, & insufficiently vivid.

On background, free, but not sufficiently clear-cut. Eg a street & house, with succession of moving images; men & women walk-
ing, riding, driving in carriages. Especially at end a carriage (mo-
tor?) driving at immense speed, seen continuously for almost a minute. Tejomay & varnamaya.

In the afternoon. All sorts of images in small, behind a thick but transparent mist of pranic akasha; all crude: women, men, men on horseback, animals, birds, houses, objects. Not numerous, but of all kinds. Spontaneous, stable, well-defined, but not complete. Eg
a woman's head & shoulders, the dress very clear in every detail; a man on horseback, the back & saddle of the horse clear & distinct, also the general figure & outline of the man.

In swapnasamadhi, swift images only; one combination of rupa & intense sparsha.

1. A young Bengali, known type, saying in B\[i\] [Bengali] “Once we get free from Ashanti, what next”. Future?
2. S\[s\] [Saurin] at end of a table with papers neatly ordered & placed upon it. An opera or field glass near him, at one side. Present or future?
3. Vividha Vani in jagrat. “Two hours at least”, ie before tea is given & the sahitya etc is begun, for the movement of Siddhi contemplated.

Vijnana

Inspirational trikaldrishti is moving towards brihat satyam in its application to surrounding things & events. It has to be applied similarly to the distant & important.

Telepathy is proving correct in distant things.
A general satyam of thought telepathy is preparing.

Lipi
1. 2 (ie trikaldrishti) —
2. Satis universitatis (ie the time has now come for the development in the multiple actuality).

Vijnana.

Trikaldrishti is proving true even when it reveals itself to the body, the physical sensations, the obscure mind etc. Eg. an object sought in the darkness, the hand instinctively seeks the right place, if not interfered with by the mind. A physical consciousness presents itself of a certain fact or event, the mind being without a clue is unable to specify, although the kind of fact or event is felt or known. The fact or event justifies or produces itself. There are, also, wrong impulsions & perceptions which translate tendencies, possibilities, intentions, past facts or future
events into present fact or immediate eventuality. But these are being more & more sorted out from the rest & stripped of sanction.

Asiddhi.
The sense of Asiddhi became again strong, but not overpowering at night. There was a partial withdrawal of the Mahakali bhava realised into a form less dominated by MK and more of the nature of Mahasaraswati with the Maheswari-Mahalakshmi type prominent.

This seems to be an operation for the increase of the Mahalakshmi colouring in the Chandibhava.

There was no failing of samata, no indifference or denial of Shakti within, but only a sense of want of means & sanction.

Samadhi.
Dream & samadhi continue on the same lines. In dream the present association is dispersed & attenuated

Nov. 22—
The morning devoted chiefly to work for the Review.

Utthapana
Arms, one hour, five minutes, owing to lack of time.

Yesterday’s ambulatory utthapana for 3 hours & more left a violent stiffness in the calves, but this morning nothing was left of this reaction except a subtone of physical sluggishness in the outer annakosha.

This extended to the arms & loins as well.

Rupa
Freedom of variety, spontaneous, in the Akasharupa continues to develop. Stability is still of the confused or the incomplete clear rupa, not of the complete in clearness

Clear & fixed animal forms are becoming more frequent.

In antardrishta there is the same liberality; but there the veil of
pranic mist is thicker; the figures come less forward, start less into distinctness.

Most of the day given to work for the Review, without leisure for the rest of the Sadhana, except at night.

The chief movement of the day, a recursus to states of apparent Asiddhi with the foundation of a perfect & catholic comprehension that overt Asiddhi is always veiled Siddhi—

It is this perception that is now being applied and enforced at every point.

Nov 23.

Sharira

Kamananda resumed yesterday morning was again obstructed entirely. This obstruction is apparently intended to enforce the perfect spontaneity of the normal Ananda which is not to be inconsistent with its response to inward Ishita. That is to say, there are to be eventually three operations of Kamananda

1. Normal, continual, spontaneous—the level of its pratistha.
2. Continual progressive heightening of the pratistha in response to a spontaneous ishita.
3. Temporary waves, swells, upheavals in response to exterior stimulus.

At present the real positive obstacle to the siddhi is the defect of Arogya.

Arogya still in the state of struggle. Nevertheless only in two circumstances is the obstruction still really important, 1. the digestive Assimilation; 2 the Kamic centre.

Saundarya, except in one slight movement, shows no definite progress...
Yesterday, there was depression in the physical force and a certain sense of partial exhaustion.

There has been for some time a persistent pressure to introduce cough of a serious description. Except a recurrence of capricious irritation in throat and chest, this movement has not succeeded. But the body’s sensitiveness to cold is persistent.

The remnants of skin-irritation tendency remain in recurrence, but are reduced in force of persistence, volume & extent; even in effective acuteness.

**Kriti.**

Kriti in one direction shows a certain positive mass of effectuality, but it is not yet decisive and cannot yet be pronounced final even in what is gained.

On another side it has been effective for attempt, but ineffective in result except for one or two details.

On a third it remains undecided.

**Vijnana**

Vijnana continues its pursuit of the mental brihat with increasing success

Aishwarya-Vashita when there is not *recursus*, continues to increase in effectiveness, but is still subject to the element of resistance—in things immediate and unimportant.

**Affirmation**

The affirmations are preparing a larger completeness. The mind now accepts more integrally what the buddhi had already accepted, the truth of anritam, the kalyana of akalyana, the effectivity of ineffectivities. In this way positive samata is being rendered more secure in its basis, as well as the perfect passivity that is the basis of the perfect activity, the absolute *nati* that is the basis of the
Dasya of Madhura and the absolute brihat of satyam which is the basis of complete ritam.

The mind cannot always distinguish the particular truth, kalyana & effectivity, but it has the belief which begins to be an intuition. It sees the thing formlessly when it does not see it in form

Kamananda again recurs with a perfect spontaneity. Aishwarya Vashita has to be replaced by Ishita & pure Aishwarya as a means of its progression.

The element of self-choice in the Tapas by the shadow of personality in the intellect has now to be exiled. Neither external action nor internal action is in the least to be determined by personal or intellectual choice. The Kavi in the Manishi has to give place to the pure Kavi dependent on the Ishwara, Krishna (Chaitanya, Sachchidananda).

**Utthapana**

Arms. 2\(\frac{1}{2}\) hours; interrupted. Relics of yesterday's depression caused certain recurrences of pranic lassitude and unwillingness; but the physical strain was nil in the arms & shoulders & less in the back and loins. Utthapana is now quite normal for the 3 hours.

**Vijnana**

Ritam is now seeking to take full possession of the thoughts & perceptions, and also to translate into its own terms the habitual remnants of imagination.

**Rupa**

For the last few days there has been an attempt to redevelop manasic rupa in the antardrishta. Today in the bahirdarshi, pranamaya, manomaya, vijnanamaya, anandamaya, chaitanyamaya, sanmaya physical rupas of the butterfly (richly coloured) occurred successively, each very vivid, real & visible in its own akasha.
Nov. 24  

**Kriti**

Remarkably successful in one point; but serious adverse signs in another. There is the same balance elsewhere.

Only telepathy is active here; decisive trikaldrishti is unable to manifest. The telepathy points to the probability of an adverse result.

There is strong obstruction to the rapidity of the development of Vijnana and to its constant action.

Sharira is also unable to advance.

**Vijnana**

It is Vashita, not Aishwarya & Ishita, that brings in the element of resistance, because it is still pursued in the material action by the habit of desire; a desire not formal or accepted, but vague, representing an excess of weight or pressure of pranic tapas rather than what is usually called desire, but easily creative of the psychological phenomena usually associated with or environing desire.

The temporary inactivity of vijnana is only in order to give time for the mentality to readjust certain inferior movements & prepare higher & more intense movements.

The force of Aiswarya & Ishita really maintains itself, as is shown in the two applications just now made. In one the general movement was executed with a few hesitations, in the other first a general movement, then a precise.

The resistance to Vashita is very great & strongly concentrated. It is when the pressure of Vashita is removed from the object, that the movement willed fulfils itself by the Aishwarya, less frequently by Ishita contained in the original Vashita.

This is an indication that the Vashita is the real point, (to a less degree the Ishita), in which Siddhi must be enforced.
Self-identification with all energies tends to lead to a certain *paresse* in enforcing the central energy when the mass of the others is against it. It is in order to emphasise the danger of this defect that, for a while, the self-identification has been drawn into the background & along with it the perfect samata that came with it.

The mental being passive & receptive, the Vijnanamaya tapas active, this is the formula for the Dharma and the Kriti. But the tapas is not yet entirely Vijnanamaya. Hence the element of mental stress & the appearance of the reactions of desire.

**Rupa**

The general development is intermitted; but there are occasional signs which show a progress behind the veil (eg—perfect image of head & neck of a horse, a knee with part of the leg above & below, the latter perfectly, the former initially stable).

**Utthapana**

Arms 3 hours. Depression in body; absence of pranic force & ananda. Defect of anima in the last half hour. Nevertheless the true reactions are dulled and reduced, though marked by a sullen obstinacy.

**St.** 1. Knowledge — to be the basis of perfected Tapas.
2. The True Christ. (vicarious exhaustion of the internal suffering).
3. Maya. Therefore. (ie the appearance of asiddhi & its reactions).

**Rupa**

Other rupas are less stable and represent the partial siddhi, from which the Yoga is advancing.

**Vijnana**

It is noticeable that Ishita works in some matters to combine things according to the immediate need. But this is not a predominant tendency.
The telepathy of exact thought was again active, chiefly in the form of a perception of the idea in the other mind and, secondly, of the word about to proceed from the mind in speech.

There was also a general movement at night of vijnana and Ananda; but not of any force of Tapas.

Tapas is at present discouraged by its failure to produce decided results.

Samadhi has also ceased to progress.

Samata persists in spite of a temporary & brief superficial disturbance.

Nov. 25—

*Kriti doubtful.*

*Utthapana.*

Arms; a little more than an hour. Interrupted by the arrival of visitors.—

Morning chiefly occupied with talk & with work for the Review. Afternoon also. The flow of the Sahitya is also a little hampered and imperfect in expression. Throughout the Siddhi there is the same deliberate depression of the effective Tapas

Lipi—

1. It is still the rapidity that is held in doubt
2. Defective Tapas.
3. It is still the figure of Asiddhi, not the reality.
4. Faith.

That is to say, the call just now is for faith *Swashaktyam bhagavati cha,*—especially the faith in the details of knowledge & Tapas & that a truth is carried in every suggestion, a fulfilment in every defect of strength & failure.
This faith is confirming its hold, but is not as yet secure against obscurcation even in its general form and is continually combated in its application by inability to see the exact truth or fulfilment as well as frequent doubt of the explanation suggested.

Swapnasamadhi—
Occasional perception of incidents in the war, but obscured and shadowy..

Vijnana
A wider perception is already coming; it will normalise itself.

There is still much to be done tonight before sleeping, though very rapidly.
1. Restoration of vijnana activity.
2. The fixing of the personal relation
3. The reactivity of the Affirmations.

The vijnana has already begun to be active in perception with a wider satyam & also a wider, but not complete ritam. This includes activity of the inspirational vijnana and even a secondary activity of the revelatory thought.

The Vani also became active, Anandamaya, taking up the old mental relations and establishing the personal & human contact between the Master & the Jiva.

Trikaldrishti also was active in a limited sphere.

In Samadhi there was all, except the long-continued continuity. Even lipi was effective, in deep Samadhi, in a long-continued perusal.

Nov. 26th
The final perfection of the relations with the Lilamaya Ishwara has firmly begun. They are based on the madhura-dasya, the eternal Bala-Kishora-bhava & the Kautuka-krida. The difficulty
that remains is on the side of the Jiva in the grave importance it attaches still to satya, mangala & siddhi.

This importance is real, as it is necessary to develop the Vyaya-lakshmi. But it will develop more rapidly when the samata of the Tapas is effected.

At the same time even in the Adhara the Bala-Kishore-bhava is developing and has attained a certain mass in its force of realisation (pajas).

Vangmaya thought has suddenly passed from the inspirational-illuminative to the pure inevitable forms of speech. The new form is yet deficient in Asu and Ananda, because the Prakasha it carries with it touches directly the obscurer parts of the mentality which give a less clear response and not the illuminated mind or sentiment which for the present is a little quiescent.

This quiescence is necessary in order that the obscurer parts may also become capable of satyam and convinced of satyam.

Sometimes, however, the Prakasha, Asu and Ananda are allowed to manifest in order to convince the Prana that it is the “true & happy Vak”.—\textit{sunrita}

Kamananda still fluctuates owing to the imperfection of the chakra. The Pranic dynamis increases in the body, but is not yet in possession.

The Arogya is also in the same uncertain condition. Its force increases and its pressure. But it is not in possession and is unable to expel the recurrent habitualities of Roga. The latter rely on tamasic dhriti of habit for their long persistence, though they are no longer sure of ultimate survival.

The bhava of the Mechanist, Yantri, has now become humanised to the consciousness and is taking its place as the rule of the play; the Child-God managing his toy-engines. This is an idealisation & fulfilment in the brihat of the former relations, mental, sentimental, restricted, with the boy Krishna.
The Bhaya Anandamaya once promised is now also manifesting and takes the form of the same relation, Bala-Kali at play with the Bala-Krishna.

All this can now be reestablished in the cadre of the satyam ritam brihat.

Therefore the Affirmations are taking their greater, deeper & fuller form.—to begin with 5–7

5. The Personality of the Ishwara Krishna present (no longer merely to be present) in the consciousness, governing all the activities

6. Dasya of Madhura the personal relation of the Jiva with Krishna—the dasya (to be) tertiary with the most intense consciousness of passive yantrabhava in the whole system.

7. Acceptance of all bhoga as a slave & instrument of the Lover to be the principle of the madhura.

Among the first four affirmations, 3 & 4 are powerfully developing.

3. The principle of Affirmation replacing the principle of rejection and denial.

4. Ritam developing no longer in isolated or combined details, but in the undivided brihat of the satyam with truth of detail and combination as a play of the ritam satyam brihat.

Undivided means in practice free from the brihat & leads to the second affirmation and that again to the first.

1. Ananda as the base, free & joyous Tapas & Prakasha as the special instrument.

2. The universal sense of the Anandamaya Lilamaya Krishna in the Brahmadrishti as the continent, cause, lord & Purusha of all the conscious activity—

That is to say, the relation now established personally has to be seen as the Truth in all others & in the universe in general.

The eighth & ninth affirmations are still being prepared for their effectivity, but are not yet fully realised in consciousness or
dominant in fact; but only realised in perception and increasing in tendency.

8. Siddhi must be on the basis of the largeness in the five worlds and not of a selecting and limited siddhi.

9. Time must be no longer a determinative, but only an instrumental factor in the siddhi. So with Space & Circumstance.

Utthapana

1 hour 8 minutes—interrupted for an hour by outside circumstance, then half hour. The depression of the physical force continues. Unwillingness and strong reaction in dorsal muscles.

Distant telepathy justified. .. kriti unsuccessful.

The attack on the karma continues, but hovers around without actually touching; there is always however the menace of an Amangala constituting a serious blow to the Siddhi—

Rupa

The human figures (small, crude) that now come, chiefly in groups, in the Akasha tend now to be often more clear, complete & stable.

Lipi

1. Safety intensified—(jyotirmaya stable)
2. Religiosity definitely denied.
3. settling the utility of the opposition (varna)

The exact utility of the opposition is now being settled to the perception both generally & in each case. At the same time the sensational revolt against Asiddhi is losing its force and giving way to serenity in front with Ananda behind. The emotional Ananda has long been gained, but it was besieged by the sensational nirananda. This is now in course of amelioration, although it has not yet disappeared.
Nov 27.

The mass of the Shakti must now turn towards effective Tapas siddhi applied to 1. Samadhi. 2. Sharira. 3 Karma.

The rest is so well assured that in them the faith cannot falter or be deficient.

Thought telepathy is now definitely organising itself.—

Lipi—
1. 31
2. 3 (ie the Rupa etc to be made effective for 1).
3. 13— Kama.

Kamananda active as yesterday. When in activity there is a much greater force of continuity, but not of intensity + continuity, than formerly. There is, however, an influence, not natural but imposed of the Asana.

Tapas—
The first necessity in the Tapas is persistence in the line of action or of will chosen.

Utthapana
Arms. 2 hours. Physical depression, though still existent, is diminished.

Samadhi
Activity in swapna-samadhi. Continued action a little more deliberate and prolonged than usual, but not very appreciably.

Kamananda strives to enforce itself with occasional intensity. It is only entirely discontinued for a long time when the attention is absorbed in some engrossing activity. Brief kamananda once more occurred in samadhi.

Akasharupa on background is active, but only human figures come out spontaneously clear, except in rare cases. Groups & landscapes are common.
Lipi—
1 Safety from the results of the intensity of delight—
(first, simply “safety from the intensity of delight[”])
2. safety
3. perfection of the safety.
4. belittle . . soulless. (the opposition)
5 before it is effective some little delight to be confirmed.
6. tangent.
7 telepathy . . enjoy the delight of others.

Kamananda still continues (10.30 pm) when there is smarana.
The freedom from Asana & Smarana has not yet been reestablished.

Samadhi
Remarkable dreams of past and future; absolutely original & impossible under present circumstances; yet perfectly coherent, except for a slight admixture of present associations, trifling in quantity, yet almost sufficient to distort them & veil their sense & purport to the intellect.

Nov 28
Kamananda
“Safety from the results of delight”, that is the bodily reaction[,] is beginning; since yesterday in spite of its daylong continuance, there was only [an]\(^5\) ineffective attempt at physical exhaustion.

There is this morning a struggle between the Siddhi which insists on the continuance of the Ananda & the prohibition of Siddhi which insists that after a day of manifestation should follow a day of reserve.

The Ananda is there in the mentality of the body, held back from the outward shell, but affecting it and occasionally breaking out in distinctness at a point.

\(^5\) MS any
Trikaldrishti—
1. German defeat in Poland.—justified
3. Completeness of German failure in the West—
   All these were telepathic trikaldrishti, the decisive behind in 1. & 2, were not accepted because of tapasic doubt.

All these results (1. 3. & more) are in accordance with previous Will—exercised from the beginning of the war as an aid or instrument to active Asura powers against Rakshasa powers—until a month ago.

Utthapana
Arms 2 hours with 3 interruptions, of 20 minutes, 2 minutes & 5 minutes, two of them for correcting proofs. Entire absence of pranic enthusiasm, void of mahima, absence of force in laghima; great defect of anima in the whole back. The physical being is depressed & discouraged in the matter of utthapana.

Asiddhi
The struggle in the Ananda resulted in an entire denial of Kamananda all the morning. There was also a violent, persistent and increasing attack of asiddhi, suspending all progress and bringing back in miniature the old movements of asamata.

All three mental principles of the old sadhana were insisted upon.
1. The test of siddhi by destruction of siddhi—long recognised as absurd
2. The test of siddhi by continual recurrence of asiddhi showing [each] time a diminution of the latter’s effective force.
3. The principle of exhaustion—which is a stupidity, since all things are infinite & the things combated can be infinitely replenished. The only true means are knowledge, illumination of the whole being, and force to keep out the attacks of the Asiddhi. If

6 MS such a
knowledge is clouded in any part of the being, force also must fail.

The constant status and activity of the Vijnana is the only remedy. All the rest are merely evolutions intended to prepare the system for vijnana.

Nov 29.

A general quiescence since yesterday—More preparation for Sahitya than Yogic progress. Only in certain points of progressive indication rather than realisation was the latter active.

The impulse towards Karma continues, but does not take material form. It is only the subjective action that continues and this is in effective detail scattered & without dominant mass & in mass slowly preparatory without effective detail.

Lipi—
1. Major . . inert— (the passivity prepares for a greater effectivity.)
2. Efflorescence of the righteousness (ritam) in the ideality telepathy
3. Choose destruction of difficulties by effective telepathy.

Utthapana

2 hours. Depression still continues. The reaction & defect of anima & mahima manifested in the second hour & were very strong.

Asiddhi continues, although no longer pure asiddhi.

Study of Veda in the afternoon (Hymns of Gotama Rahugana)—

In the morning Kamananda for a time overcame the obstruction, spontaneously. Obstruction returned by smarana.

It is a mark of the Asiddhi that telepathy & suggestion are
extremely active, but there is no Light & no discernment (Jyotir Daksha), no power to distinguish the rightly interpreted & applied telepathy from the wrong or to give its right place & value to the suggestion.

When, however, a strong will or force, Tapas, is applied, there is a sort of unillumined rightness (ritam) which gives the right value & brings even the right trikaldrishti.

This is because the knowledge descends from the vijnana & is able to pierce the cloud; but the substance of the truth comes and not the light of the truth.

The vijnana began again to become active in the evening, but slowly & incompletely.

Samadhi

The same circumstance of dream constantly repeated. But the nature of dream & samadhi made no progress.

The obscuration of vijnana contains a movement of siddhi which is divined and asserted by the tapasic suggestion, questioned and denied by the superficial experience.

The acceptance of the internal light in the obscure tapas, even when it contradicts the immediate experience, becomes then a necessary development in order that the obscure tapas by justification may assume the habit of light.

This assumption will be the siddhi of Vijnana.

Nov 30.

(1) आ विध्यानादिः स्वरूप ध्यानं त्यज्य अविध्यानस्य द्वारा। आ विध्यानं न द्वारा यथा न प्रसूता युक्ताया॥

The passage indicates the nature of the change which the period of Asiddhi is intended to serve or prepare

(2) इमं स्निम्माः कर्तवेदयं स्वरूपिकाः संस्कृते सन्नासनस्यः।

This defines farther the विध्यास्य इशा—

(3) अनुव्रत्त यथा माधवयस्य स्वाते दर्शनं विधिः हुध्या।

ie. Bring the divine knowledge etc according to the self-fixity
attained by the nature, that is to say, the basis provided in its formation for the revelation of what is itself infinite; let the delight be in accordance; then let the action proceed from that basis of formed knowledge & delight, but swahakrita, turned into a self energy which produces fresh results & arrives at fresh formations through those results.

==

Vijnana

Once more active in script, perception, thought, & subordinately in vani, with the inspirational nature containing intuition & discrimination and at once expressing & veiling in its direct action the revelatory faculty.

The stress now is on the full value of the tapasic & the right value of the tamasic suggestions, ie on a full & complete ritam & rinam on the basis of a full & complete satyam

This has to be realised in the trikaldrishti, in time, arrangement, place of action & event.

Devabhava manifest as Vishnu with Agni prominent & in Agni Vayu, in Agni-Vayu Aryaman & Bhaga, Indra concealed in Agni Vayu, Mitra & Varuna behind Aryaman-Bhaga. Vishnu & Brihaspati are one. Surya is Vishnu working as Pushan & Yama. Rudra is a bhava of Vishnu. The Maruts are the host of Agni Rudra.

==

Lipi

1. Fierce tapas
2. disability in the telepathy is not of thought, but of the delight of others (not of the universal Anandamaya; for that is known)

Samadhi.

A considerable movement of Siddhi in the Samadhi.—

1. Jagrat Bahirdarshi—restoration of the inferior, inchoate or formative movement of Rupa
2. Antardarshi—a greater formative activity, crude, with all sorts of rupa. One instance of crude, dense & developed following each other in a single form, repeatedly & with some initial stability even of the developed.
3. Continuous & organised vangmaya thought in swapnasaṃmadhi, connected and continuous on supramental level even when mind is sushupta and retained by the mind when it awakes.

5. Perfect coherence of lipi in swapnasamadhi, frequent.

6. Coherence of vani, both of the Master & the Many in sw. sm.

7. Repeated Kamananda in swapnasamadhi.

8. Persistence of the same scene in sw. sm. rupa with changing figures in the scene, separated by intervals of non-sight. (eclipse of rupa)

9. Continuous organised action, firmly held in alternate swapna & waking; rupa first seen by chakshu, then only by manasa vision.

10. Persistence of the same scene recurrent with continuous action, more firmly held than before, but separated by intervals of non-sight.

    Kamananda again continuous for a time, & attempting against obstruction the complete continuity.

    Vijnana continues its development of satyam ritam

    Tapas & vijnana are being combined in Trikāldrishti-vashita, but without any perfection as yet of combination.

    Kamananda again succeeded in being continuously active in the evening, but afterwards failed for want of smarana.

    Utthapana

    Arms—one hour. Some defect of anima at commencement.

    Study of the Veda. Mandala I

---

Dream

Once again obscure and dogged with present association.
December—

The month of November has been marked principally by a sort of final and irrevocable confirmation of the organised fullness of the two first Chatusthayas. The one defect is in the Faith & Ishwarabhava,—the faith not in the Yogasiddhi which is irrevocably confirmed,—but in the Karma or rather in the Kriti, as opposed to the Sahitya and Dharma. The faith in the latter is subject to a proviso or doubt in the intellect whether something may not happen through failure of Kriti which will prevent either completion in this life of the full Yogasiddhi, ie the physical & active, or else the complete & successful exteriorisation of the Dharma & Sahitya.

The deficient faith in Kriti reacts and prevents the confirmation of the Ishwarabhava and this again produces a certain fluctuation, instability and limitation of the Krishna-Kali relation and consciousness which is the basis of successful Kriti. The deficiency of the faith itself is due to experience of deficient effectivity of the Tapas—unachieved organisation of the Vijnana.

The second result of November has been the confirmation of the Sarvam Anantam Jnanam in the Brahmadarshana with the Ananda constantly, but not continuously manifested. The occasional veiling of the Ananda Brahman carries with it a veiling of the Lilamaya Personality in all things & persons; for the two go together

The third result has been the confirmation of the satyam brihat in Jnana and with a less firmness and fullness in the trikaldrishti & telepathy and the beginnings of a full and organised ritam. The same movement has begun, but is not yet accomplished in Tapas. Samadhi is being organised in preparation for the same
movement, but is not yet sufficiently advanced for the final confirmation.

Sharira and Kriti are being prepared; Sahitya is deployed, but not gathered together, Dharma has begun to deploy. In Sharira the Ananda is advanced, becoming more & more capable of organisation and continuity; Arogya is struggling with the tamasic dhriti of the opposition; Utthapana is alternately strong and oppressed for long periods; but inactive in certain directions & confined as yet to imperfect secondary utthapana; Saundarya struggles to manifest itself positively in certain details, in which it makes a slow advance, but is suppressed by an iron resistance in its generality.

Shuddhi, Mukti, Bhukti are approaching completion; Siddhi has accomplished its basis in all but Sharira and Tapas of Kriti.

In December the line of progress indicates, logically, a confirmation of the Ananda Brahman, the Lilamaya Personality, the Krishna Kali Bhava, the subjective & physical Ananda, and a development of the satyam ritam brihat in all parts of the Vijnanachatusthaya. In Sharira & Kriti, apart from Ananda, no definite progress is indicated by the past advance. Some progress is, however, inevitable in Arogya & Utthapana. Saundarya & Kriti are much more doubtful.

December 1st

The Ritam continues to grow in an increasing firmness of the satyam, even in trikaldrishti & telepathy.

This growth of the satyam ritam is communicating itself to the Tapas.

The difficulty of the Tapas is to harmonise the universal, the central & the individual Will. The universal is realised in the present & past progression. The central having realised itself in the past & present determines & prepares the future. The individual submits to the central and accepts its part in the preparation & determination.
The difficulty is to do it consciously knowing its part in relation to the whole. To know its line of action, but not the results & their relation to the whole plan & result, is not sufficient.

Samadhi

In jagrat antardarshi the variety is maintained but no appreciable progress made.

In swapnasamadhi, perceptive thought & vangmaya became active spontaneously at a great depth of samadhi. Vani was spontaneous, along with shabda, thought & vangmaya, at a lesser depth.

All these movements are now becoming normal and there is a tendency for activities of the jagrat to persist self-conscious & undistorted in the swapna.

This, however, is in the daytime, not at night. At night nidra predominates.

Also in swapnasamadhi, repeated kamananda[,] continuous action & conversation. The action continues with a faded chhaya-maya rupa in jagrat antardarshi or light swapna. It does not yet last long in profound samadhi in which alone rupa is vivid, brilliant or varnamaya.

Lipi

1 Essentiality of the twilight is the tapas
2 Internal light in the tapas.

Ananda

There is now the physical Ananda of shitasparsha & atmospheric cold, but not yet entirely of the sense of chill.

Certain strong touches of burning now produce Ananda.

Kamananda throughout the day; subdued only while walking or working and usually then suppressed. Continued till the time of retiring.
Aishwarya very successful, especially with regard to the rain which stops or diminishes usually in response to the Ishita-Aishwarya & sometimes stops altogether.

Trikaldrishti acts frequently now in the Kriti, but only in immediate things and details; it does not act largely or with combination.

Kamananda, suppressed or dull, until sleep.

In certain directions Arogya seems to be getting the upper hand. In others it is still stationary —

December 2d
The Kamananda continues with a disposition to greater intensity. This is the third day of continuity.

Arogya
Arogya seems definitely to have the upper hand in the matter of irritation, although the dhriti of the roga is not yet expelled.

In assimilation the old symptoms of roga still recur but without the same force of persistence or hold as before.

Dregs of toothache, headache, cold & fever still hang about the system & seek to touch it when there is exposure or other provocation. But they do not seriously materialise.

The only other roga is the weakness of the chakra which as yet shows no apparent signs of yielding.

At present exposure to rain & cold (moderate) is being persistently resorted to in order to compel equality in the body. Ananda is assured, not yet Arogya.

Tapas of Kriti is still effective only in defence; its positive force of effectiveness is scattered and limited.

Uthapana
Arms 1 1/2 hours. Reaction commenced, with the completion
of the first hour and was fairly strong. The depression is not yet conquered.

Ananda

The difficulty of the asana has been conquered. Kamananda continued, sometimes subdued, sometimes half-suppressed, sometimes intense (even for some minutes together[[]]) during the whole period of the uthapana, which was throughout ambulant.

Smarana & waking have now to be overpassed by the Ananda as means and conditions of its continuance.

It is not dependent on smarana for its recurrence, but seeks its aid for its continuity & ceases its action when the attention is entirely absorbed elsewhere.

R.V [Rig Veda]

This reference describes the movement which has occupied the morning; the growth of Agni as master of Tapas fulfilling the desires (anandamaya ishita) by self-effectivity of the Tapas; taking up all the inspirations based upon the Ananda and becoming no longer a mechanist of doubtful results but an entire friend. The last line suggests the result intended for the movement, the full establishment of complete manifested Tapas in the revelatory Vijnana (ilaspade).

Samadhi

In Antardrishta scenes with long continued action, eg two riders passing away from a great building at the meeting of two roads, two others galloping up, carriages driving, etc; occur freely. There is a vivid & precise sensation of the action & the movement as well as the vision, less often the sound. But in the vision only some details are quite clear & precise, although all is intelligible and more or less visible. Separate stable figures occur, but
not with sufficient stability, clear, but not with sufficient body & vividness.

At night on the borders of sleep & waking there were many perfect rupas, scenes, groups, troops, seen entirely by the manas-drishti, but also with a greater or less clearness by the chak-shu. But none of these were stable or sufficiently prominent before the eye except for a moment.

Some images are entirely [stable] but incomplete. All are crude, but sometimes dense or developed crude. Crude dense & crude developed also occur as well as their opposites

This restores the antardrishta rupa, after a long period of asiddhi, to its former efficiency. It must go farther and recover the efficiency it had in the jail period of the sadhana & more, but with the vijnana to understand and interpret its figures.

Perfect images, very fleeting, begin to occur in the jagrad antardrishta.

In Swapnasamadhi there has been maintenance of gains with better combination of continuous shabda, sparsha, rupa. But the force of the samadhi was inferior to its force during the last two days.

Kamananda almost suppressed but occasionally active in the afternoon, active in the evening.

Dream coloured by present associations, but extremely detailed and coherent.

December 3rd

Morning taken up with work for Review.

Uthapana.

Arms, one hour: defect of anima, depression of energy.
Kamananda at first not active except occasionally, with smarana; afterwards active

**Afternoon**

Kamananda active

Rupa & Samadhi very active, but as yet no definite progress, except a more free & spontaneous activity of manusha shabda in jagrat as well as in swapna.

The activity of Rupa is on the whole swifter & more energetic; the organisation of the elements of Samadhi oscillates

Slackness of siddhi throughout the day

In the evening Vijnana became more active; but there was a recrudescence of unfaith in Kriti owing to inefficiency of Tapas—

Dream continues in the same condition—Force of Rupa is strong in Samadhi.

Dec. 4th

Vijnana once more active, but not with a full activity.

Kamananda discontinued in the later afternoon & evening, resumed this morning.

Strong denial of Tapas for a while seems again to be giving way; but there is no radical change in its force of effectivity.

**Utthapana**

1 hour. Defect of Anima; but less depression of energy.

The action of the Vijnana is still insufficient in light, force, ananda and in regularity.

The faith in the Kriti is not yet really restored.
The Affirmations also are clouded and defective

Asamata is now only manifest in occasional, separated & more or less subdued touches. Force becomes depressed, but no longer entirely inactive, although it lacks certitude and enthusiasm and regularity of action—

In Swapna Samadhi entire stability & entire perfection of rupa for the first time manifested. There was also a more prolonged continuity of action & shabda.

Kamananda recurrent throughout the day, until sleep. Recurrent also on the morning of the fifth in Samadhi & waking, before rising. This is unprecedented.

Dec 5th
Kamananda active.

Samata and Shakti passive, but strong.

The essence of the negative Samata has not really been shaken by any occurrence or contrariety; the positive is still a little feeble with regard to amangala and asatya and therefore easily overborne, but it is there at the bottom and always emerges as soon as the impact has passed.

Faith is arriving at a poise when the intellect neither asserts nor denies, but simply awaits confirming or refuting result. Meanwhile, none but convincing confirmation or refutation is accepted as final, since appearances may always mislead, even when they are strong and firm in actual incidence. They may show only an immediate tendency, or at most the immediate and not the final destiny.

What has now to be determined is the power of the Tapassiddhi—It is now a question whether faith is necessary for its complete action. In an instance just given,—the movements of a fly
hébéte and its escape from two spiders on each side of it,—faith at first made all the difference, but afterwards concentrated energy with an unresolved intellect was sufficient to produce the exact movements willed & their exact result.

In other cases, it is evident that the lower Tapas is only one force among others, through which a higher direction works. The struggle now is to exchange the lower Tapas for the higher direction.

Kamananda recurrent and often continuous throughout the day.

Swapna-Samadhi

Lipi at first coherent in small phrases, afterwards great bulk with entire uncoherence, from which towards the end some attempt at emergence of order proceeded.

Samata

Positive Samata is steadily advancing, though mechanical touches of depression of a purely physical order still continue.

Preference in Tapas is still accompanied by vague reactions in the outward nervous consciousness of the physical body, but these are merely a survival of the old habit. There is a great mass of true samata behind in which titiksha, udasinata & nati are fused into a complete harmony of shanti.

The perfect Ananda still depends on faith in details founded on vijnana & faith in kriti founded on habit of effective Tapassiddhi.

Lipi.

First entirety of lipi, then of telepathy.

Swapna-Samadhi

Continued growth of perfectly stable rupa, but this does not yet hold its field entirely. The rest is in a state of struggle to advance.

Utthapana—one hour—defective anima..
Dec 6th

Vijnana

This morning it appeared that the combination of Tapas & trikaldrishti has made great progress; it is not yet perfect in all details or in decisive trikaldrishti but the telepathic parts are well-combined. This achievement is as yet typical only, but the type is surer & more equable than it has been in the past. There is also a movement towards its generalisation.

There is a forward movement towards entirety in lipi and in telepathic trikaldrishti. In the former the defect is insufficient vividness and a stability not yet perfectly assured. In the latter insufficiency of material and too haphazard a selection.

The eagerness of tapas and the desire of rapidity are being entirely suppressed in order that they may not interfere with effectivity of tapas and effectuation of rapidity.

Lipi

1. It is the intelligent aishwarya that is being established.
2. It is the entirety of the lipi (that is to say, the siddhi represented by the appearance of this entire phrase sufficiently stable in the akasha or sadhara).
3. It is the intensity of the entirety (that is, the long stability and the combination of many phrases not yet established).

Utthapana

Defective Anima almost stereotyped. At the beginning & end oppression of energy.

Kamananda continues, but is constantly besieged & obstructed, especially when walking. The siddhi of it recently established is not yet permanent. It is once more partly subject to Asana & Smarana, & even so obstructed and often oppressed.

Swapnasamadhi.

Extremely successful. Activity of form, scene, word. Stable continuity of action in perfect stability of scene was fixed into the
chittakasha and securely possessed by the eye which did not for a moment lose the rupa, and this not in one case, but two or three. The continuity was long & perfect.

Kamananda recurrent, but much obstructed. In the afternoon it was continuous for a time with intensity.

The organised vijnana interrupted for some days past showed signs of recovery. Truncated vijnana is always active.

Lipi grows in spontaneous frequency of entirety.

Jagrat rupa other than chitra is only occasionally active.

Dec 7th

Vijnana

Aishwarya Vashita acted successfully on seven movements of birds & insects in a minute or two with only slight resistance. The Aishwarya from above was effective; it is accompanied by a movement of effort contradicting the Ishwarabhava, but this tends to fall away.

In other instances afterwards (children, fourfooted animals) the effect was incomplete, compelling only a partial movement in the sense suggested, or came only after a long denial. But in all cases there was either whole or half or three quarters success. In other cases the resistance showed itself only in partial divagations. Only in one case was the final movement contrary, & there the Will was not persisted in. In another the object came back after a short absence & executed the required movement.

The Power is not yet perfect, but it shows a great advance on its past effectuality. It is at the degree 50°–60° & is now almost habitual. But it does not yet apply with equal force to Sharira & Kriti. There it only produces effect in details, in movements, & after long pressure in broad & final results. But there is no mastery over the object, only a more or less successful pressure. Adverse result is still frequent.

Lipi is recovering its former occasional intensity of action.
In Aishwarya it now happens frequently that even the set intention of the object is often changed, a new thought or impulse being suggested which fulfils the required movement. This siddhi is not yet complete. As a rule a set intention in the object especially if an adult man, is too strong for the Vashita.

Ishita occasionally acts with great effectiveness.

All the morning the general efficacy of Tapas has maintained itself, but against a greater resistance. It has fallen back from 60º to 50º.

In only one instance the final result was repeatedly baulked, even though it was several times on the point of completion. In others partial effect. In most complete.

Ishita is manifesting the same efficiency as Aishwarya-Vashita.

Kamananda mostly obstructed in the morning & early afternoon, became again active, spontaneous and independent of smarana.

It was afterwards again oppressed, but continued to be recurrent—

There was an attempt at a general attack on the health, but it did not materialise except slightly at one minor point, throwing back a siddhi that had almost been attained.

The Ananda of atmospheric cold is more & more confirmed.

An attack of events was made on the samata & shakti but failed to depress them. Calm & Tapas continued. Only faith was slightly & externally touched.

The organisation of Vijnana has been resumed, in Script & Reference especially.

There is some difficulty in establishing the pure inevitability of the Vangmaya.

The basis of vijnanamaya progression is now definite.
December 8th

Ez. [Ezekiel] 34. 17 . . 31

Lipi.
2. Startling effectivities.

R. [Reference]
1 And they took him and brought him unto Areopagus, saying
“May we know what this new doctrine, whereof thou speakest,
is. For thou bringest certain strange things to our ears; we would
know therefore what these things mean.["]

2 Ezra V. 1–2

Utthapana
Arms. 2½ hours. (Yesterday 1½ hour)
At first exactly as during the last few days, strong defect of
anima with occasional oppression of energy. But as soon as the
body refused to yield to the Asiddhi, the old Siddhi manifested
itself. The utthapana could have been continued for the full three
hours.

It is evident therefore that the siddhi here also is safe, asiddhi
factitious, except in so far as it is a defect of anima and of sraddha
of the body in its own progress.

Tapas was less effective than yesterday.

Strong isolated effect of Kriti in the vicinity.

It is now definitely established that samata and shakti cannot
be overthrown. Even faith in Kriti suffers only from uncertainty,
not from actual breach. It is still limited in its scope.

The organisation of vijnana is proceeding almost of itself, but it
occupies the gross of the attention. For attention is still necessary,
not for its action of a kind, but for its perfect and organised &
continuous action.
As soon as this necessity ceases, the whole of the attention will be concentrated on Karma & Sharira. Already this is being prepared.

There is a certain promise of greater rapidity in the siddhi.

Physical Ananda makes progress. Kamananda (as indicated first by a reference) became strong & spontaneous in the evening & so continued with a slight break till sleep.

Tivra inflicted on another subtle body was communicated to this physical body in the waking state. This usually happens only in Samadhi.

Subjective Ananda is now ready to possess the physical prana.

Dream coherent, but chiefly a combination of old familiar thoughts, once customary, now forgotten.

Stable rupa & continuous action, shabda etc now common in swapna-samadhi; but not usually with a firm hold on the Akasha.

December 9th

Vijnana

Rapid effectivity of Aishwarya-Vashita increases in frequency.

The full effectivity now depends on rapidity & on the removal of the resistance offered by previous intention, will, temperament or nervous & physical tendency.

When this is accomplished, Aishwarya & Ishita will be completely siddha.

Proof continually comes of ultimate effectiveness of tapas, even when at first it seems to have failed.

Also of justice of telepathic perception, even when immediate outward circumstances seem to contradict it.

Decisive trikaldrishti is acquiring brihat & even rightness of circumstance, but there is still an absence of well-combined ritam.
Predictions for today were put down in yesterday’s script—
1. a great advance in lipi
2. a great advance in telepathy
3. some advance in decisive trikaldrishti
4. some advance in effectuality of tapas.
5. some advance in rupasamadhi.
2. 3. 4. are already being fulfilled.

Utthapana
Arms. 2 hours 42 minutes—(interrupted at end by having to bathe). Defect of anima slight, except in reaction of stiffness when bringing down the arms. Oppression slight, occasional & ineffective. Defect of anima in back diminished.

Ananda.
Movements of pain & discomfort formerly acute are now giving Ananda.

Lipi
Lipi is becoming more vividly legible & intelligible. Formerly its stability was limited to phrases of four or five words & usually existed only in separate words, now it is extending itself to short sentences.

Rupa
All rupa siddhi is shown to be safe. The perfect forms are trying to become stable before the direct regard.

Developed & dense forms formerly only visible at night (in lamplight) now begin to appear by daylight. These, when a little loose and vague in material are fairly stable.

In antardrishta developed & crude forms (objects), stable, have begun to be more frequent, but they are far from being perfect. Long, continued action of a perfectly stable figure (horse & man) is preserved.

Utthapana
Arms, vertical, sitting, 1 hr 18 minutes. This makes a total of 4 hours & restores suddenly the siddhi of the 23th & 24th November after a decline of exactly a fortnight.
Physical weariness is being replaced by pranic unwillingness. This was manifest in the last half hour.

∞

Kamananda

Very intense at times and tending to be continuous in its intensity.

Script

All five predictions of yesterday’s script have now been fulfilled. In addition two others.
6. Utthapana and Arogya will continue to be pressed.
7. Kamananda will gain continually and not go back.

Lipi
1. The perfection of the lipi.
2. The intensity of the delight.
3. The liberty of the body.

These, it seems, are three of the siddhis that are now to be evolved.
4. The intellectuality resists the ideality for a space.
5. It is longing to be justified in the ideality.

∞

Vijnana

In vangmaya the vak suddenly attained to the entirety of the pure inevitable form & recovered intensity of force, light & ananda.

∞

Lipi repeated its gains in antardrishta.

∞

Dream less troubled by personal association, but not perfectly organised.

∞

Vaidyuta Ananda has begun, but needs smarana and does not yet hold the body.

Dec 10th

Samata

The Samata (positive) is being frequently tried by the old movements that used to disturb it. Momentary physical disturbance still comes, but is held by the Chit-Tapas & immediately rectified.
It is allowed to recur in order that the displeasure of the physical being may be turned into the pleasure of a contact forcibly endured.

_Brahman_

The Jnanam Brahma is now as strong as the Sarvam was previously & all beings are seen as personalities of that Brahman.

Anandam & Anantam are held a little back in order that there may be a full sense of weakness (defect) and depression, grief etc as movements of Anantam & Anandam—self-constraining movements. This cannot be felt when there is too strong a sense of the Purna & Vaisva, for then the minor & constrained movement is overpowered by the major & free movement.

When the Ananda of this lesser movement is entirely grasped by the sensation, then the full Anandamaya Purusha in all things can be fixed finally in the darshana.

Kamananda yesterday was at a very high level of intensity; there has been this morning an attempt to take advantage of the principle of recoil to interrupt it. But it continues with the same intensity.

It is now equally capable of continuous intensity while walking, but not equally habituated to it.

_Utthapana_

3½ hours, walking. Great stiffness as result of yesterday; occasionally violent oppression, at other times heavy pressure of defect of anima. At end, last half hour, acute pain in the shoulder-muscles.

It is now clear that laghima & mahima are sufficiently developed to maintain secondary utthapana of any part of the body, for any time, if allowed by the defect of anima. The latter is stronger in some parts of the body, weaker in others. Hence the variations of the power of utthapana. Mahima & laghima are not yet strong enough for tertiary utthapana, ie uth. of the whole body raised from the earth.
Ananda

The acute continued pain in the muscles recurring & sometimes almost constantly for nearly half an hour came as ananda to the psychic prana and to the physical as pain in which it took & felt pleasure. To a part of the physical prana it was pure ananda.

The liberty of the body in ananda is therefore assured, even already gained and has only to be applied uniformly.

Unexpected pain usually used to surprise the body with the negation of ananda; now even unexpected pain comes as ananda, though to a less degree than watched or anticipated pain.

Sharira.

Liberty of the body is assured in ananda, waits only for the removal of defect of anima in utthapana, but is still to be won in arogya & saundarya.

It is noticeable that defect of anima in the back & legs obeyed the prohibition of the Tapas and that the after reaction is being reduced.

The sense of exhaustion after effort is being expelled from the physical consciousness.

Vijnana

During utthapana a great & large activity of vijnanamaya thought harmonising all oppositions, explaining all appearances, justifying all forces, illuminating the truth of all suggestions. This movement has farther fortified the positive samata against all sorts of attacks and is preparing the enthusiastic faith.

Utthapana

2½ hours after meals making all together 5½ hours. The pranic unwillingness much reduced since yesterday; in the body only an effort, in the left arm[,] the usual offender, at pain quickly reduced to mere stiffness. The utthapana could have been continued indefinitely. Defect of anima is rapidly ceasing to be an effective obstacle.
Ananda
Continued ahaituka tivrananda with smarana, but overriding & independent of physical will, continued even in samadhi.

Samadhi
Lipi in swapna-samadhi coherent in short sentences and in deep samadhi read coherently for three lines together.
Frequent stable rupa with fixed scene & long-continued movement & action. Crude in light samadhi, but not in deep samadhi.
Perceptive & vangmaya thought perfect & in possession in continued profound samadhi coherent, organised, long-continued, perfectly vijnanamaya, regardless of mental sushupti.
Rupa in jagrat active in the crude

Utthapana
Another 35 minutes at night, making the 6 hours

Prediction in Script for today was of advance throughout the Vijnana as well as in Ananda, Arogya & Utthapana.
In utthapana amply fulfilled; in Ananda steady advance of Kamananda, rapid of Raudra, consolidated of Tivra. Strong Vaidyuta sahaituka but spontaneous, suddenly began; ahaituka is there, imperceptibly increasing, as also Ahaituka Vishaya. The advance in Arogya is more doubtful except that the Tapas is more able to work in the body & repel the attacks of Roga from outside.
In the Vijnana there is a general advance especially in Brihat of telepathy, in Samadhi, in Lipi & in thought.
On the other hand brihat Trikaldrishti resisted & Aishwarya has suspended part of its advance.

Dec 11th
Attack of Asiddhi by means of obscuration.
The Script predicts.
1. Recovery of full Tapassiddhi
2. Activity of Vijnana.
3 Progress to fulfilment of Trikaldrishti.
4 Growth of Rupa & Samadhi
5 Growth of Power of Arogya
6 Growth of the consolidated Ananda objective & subjective
7 Growth of utthapana
8 Weak beginnings of Saundarya.

Utthapana
2 hours 52 minutes—interrupted. Defect of Anima felt. Some fatigue in the muscles. Greater reaction than yesterday. Afterwards 10 minutes more.

Ananda.
Movements connected with Asamata are now almost entirely turned into ananda of the tamoguna.
Raudra was felt in pain of great acuteness and continuity, of the nature of agony, but not entirely overpowering. It remains to be seen whether actual agony can be so converted without farther relapses—
Kamananda more & more normal in walking. Today it is more frequently recurrent than continuous, but intense when it manifests.

Lipi is now beginning to manifest double sentences in two lines, both in bahirdarshi & antardarshi.—

Jagrat rupa after being held back since its last movement is now manifesting dense & developed forms with a persistent but shifting stability. The attempt of perfect forms to stabilise themselves is not yet successful.

In Samadhi more coherent lipi sometimes in two lines; stable rupa.

Tapas siddhi is recovering itself, but is still hampered by a consolidated resistance.
It is now restored to its full former activity.

At the same time telepathy and decisive trikaldrishti have resumed their progress, but the excessive stress endures..

The subjective parts of the programme are therefore being fulfilled.

Uttapana has grown only in the fact that after so immense a deployment of force, the reaction has not been sufficient to break the 3 hours minimum.

Ananda is undoubtedly growing in tivra & raudra. In the rest, the growth is still doubtful.

Power of Arogya grows generally, but is not yet manifest in the removal of remnants.

Nothing new is noticeable in Saundarya

In Samadhi there is now fluent reading of successive lines of more or less coherent lipi.

In Rupa, jagrat bahirdarshi stable dense rupa begins to fix itself.

Powerful consolidation of the Kali-bhava.

Dec 12th

Predictions of yesterday’s script.

1. Ananda of all kinds, Uttapana, Arogya will continue to progress.
2. The pressure on Saundarya to manifest will increase.
3. The general organisation of the Vijnana will proceed in a movement of unprecedented rapidity

www.holybooks.com
Utthapana.
Arms—walking 3 hours. Defect [of] Anima, but ineffective against established siddhi. — However, it persists in order to prevent improvement of siddhi.

The three hours limit has triumphantly survived a doubling of the utthapana in time extension.

This is the fourth day of the three hours exercise, the second after the six hours realisation.

Extraordinary perfection of vijnanamaya thought, perfect satyam in knowledge of force; less effective attempt to extend entire satyam in knowledge to telepathy & trikaldrishti.

Rupa develops a little more stability in the dense.

The chief siddhi of the morning is the entire confirmation of the Kali bhava & entire possession of the world in subjective unity by the Jiva-Prakriti.

Raudra Ananda, yesterday & today, is constantly developing and possessing more firmly all reactions of pain & discomfort.

Subjectively, also, amangala is increasingly ananda.

Premananda intense & active, applying itself to all things & persons. —

Lipi
1 Firmly
2 Daily effectuality
3 Tapas-siddhi.

Samadhi-Rupa.
Lipi in three lines in chitra.
Swapna-Samadhi maintained in status, but no fresh progress, nor is long-continued action with firm hold on akasha repeated. —

Sahaituka Vaidyutananda is becoming frequent & in its train ahaituka vaidyuta. —
Ahaituka raudra is reappearing with a greater generality—
Ahaituka vishaya comes usually combined with the others.
Combinations of raudra & tivra together or with vishaya and
vaidyuta are frequent. Many of these movements are still obscure.

In the general unity of the Bhava vaira & prema have sud-
denly become harmonised & united. Formerly when they were not
opposed, they stood side by side without mixing.

A certain degree of burning (when the finger is pressed on the
lighted cigar) becomes too poignant for the nerves; but this is a
degree of heat much higher than formerly. Continuous burning of
this kind can now, below that point, be both borne & enjoyed. The
degree is constantly & swiftly rising.

Heat of the sun after a time becomes discomfort, not owing to
the degree of outer heat, but to the oppression due to the reaction
of heat in the body. This has not yet been overcome. The first
touch of very cold water fluctuates between ananda & discomfort.
Continued it is only ananda.—
The organisation of telepathy, trikaldrishti & Tapas siddhi in a
block has now begun. Isolated trikaldrishti is often entirely perfect
and independent of telepathy—contrary that is to say to immediate
force & intention & yet true in fulfilment. This siddhi is rapidly
growing.

The rapidity is indeed very great in all Vijnana except rupa-
Samadhi. It is already “unprecedented”.
The Sharira continues to progress in all its parts, except Saun-
darya, but not so decisively in Arogya & Utthapana as in Ananda,
nor so decisively in Kamananda as in others, nor so decisively in
Ahaituka as in Sahaituka.

Authority of script & lipi, thought & vangmaya is growing in
force, greatly in the two first, immensely in the others.
Kamananda is now entirely independent of asana & essentially of smarana for its recurrence or continuance. It is attempting an entire & spontaneous continuity & a greater level of intensity.

The organisation of telepathy, trikaldrishti & tapas siddhi in one block has now definitely begun.

Utthapana of back & loins, 3 minutes. Shakti defective.

Copious play of sthapatya & chitra rupa, with beginnings of the tendency to manifest forms everywhere.

Akasha Rupa is attempting a general organisation of its movements, but does not yet progress victoriously

Dec 13—

Utthapana of legs, medial position, 20 minutes. Laghima improved, defect of mahima, strong defect of anima.

Script yesterday predicted for the day beginnings of the unprecedented rapidity in rupa-samadhi and telepathy-trikaldrishti-tapas siddhi; as well as farther developments of arogyashakti, utthapana & ananda.

The beginning was felt in T3 [telepathy-trikaldrishti-tapas siddhi]; but not in rupa-samadhi, as there was only progress in details in samadhi & a tendency in rupa.

Utthapana & Ananda began fresh developments. Arogyashakti was strong enough to negate the attempt at a fresh general attack on the body, to bear exposure at night to cold air from both windows without reaction of fever, cold etc, to expel partially symptoms of one remnant-disease and to compel some progress in assimilation which has yet to be confirmed.

For today is predicted—

1. Continuation of the same rapidity in vijnana, in subjective base of Karma (Krishna-Kali) & in Brahmadarshana.
   2. Beginnings of a greater rapidity in Sharira.
The advance in utthapana seems to indicate that the second prediction will be fulfilled.

\[=\]

**Lipi**

Chitra lipi in several lines is now established, only the words after they have been read, tend to change rapidly.

\[=\]

**Vani**

Truth of all sorts of Vani is established.

**Krishna.**

These vanis represent the mental voices of the Deva & principally the operation of fusion between the Indrabhava which is still independent and the Agni-Vayu-Aryaman bhava (Rudra-Vishnu) which is predominant.

**Karma—Tapas**

In Kriti the forces of opposition still prevail and have some notable successes.

In Tapas the forces of resistance that prevent full Aishwarya & the establishment of the 60 degrees power, maintaining constantly the survival of the 30º, 40º & 50º, with the 60º as an occasional movement, still hold the field, though with greater effort than before.

\[=\]

**Krishna Kali**

The Krishna Kali consciousness is beginning to realise itself. It is indeed realised in the Saguna Brahman, but not in the Ishwara (Lilamaya).

The fusion of Indra into the Agni-Vayu-Aryaman (containing already Mitra-Varuna-Surya-Aswins-Brihaspati-Twashtri-Maruts-Ribhus) seems to have been effected.

The female energies have already been resumed in the Mahakali bhava.

Only shadows now remain of the separate bhavas, shadows that are about to be absorbed.

**Utthapana**

2 hrs 40 m. Obstinate defect of anima consolidated in stiffness of shoulder-muscles. In the rest of the body, dull though always repeated.

**Krishna Kali**

Krishna Kali consciousness of the Iswara mould is now manifesting.

**Tapas-siddhi**

Swift, sudden & complete organised tapas-siddhi in immediate kriti (event last night, justifying yesterday’s prediction of beginning of rapidity). If the same can be effected habitually in distant kriti, then the visvaiswarya will be accomplished.

**Rupa.**

The turning of Rupa, begun last night, to organise its various separated & conflicting tendencies of the past into one mass movement is today more pronounced. These tendencies are

1) to manifest form always out of an initial blur of material
2) to manifest forms of all kind of material
3) to manifest clear, crude form not stable.
4) to manifest stable crude, not clear
5) to manifest stable dense, not quite complete.
6) to manifest developed out of dense
7) to manifest unstable perfect forms
8) to stabilise perfect forms, not always complete.
9) to manifest variety of human forms, animals, landscapes, groups, scenes etc.

**Ananda.**

Subjective Kamananda is beginning to remanifest & generalise itself.

**Utthapana**

Arms (sitting), half an hour.–
Vijnana—

Frequent sukshma gandha during the day.

Lipi

1. first Liège foresee Antwerp
2. M. Ephor Colossus
3. हुठ हुठ.
4. thorough military charge (change?)
5. lose not the entire faith
6. satya
7. doubt is the refuge of the denial.
8. two (2d ch. or two days)
9. fix third. (chatusthaya)

The two line lipi is being fixed in chitra, akasha & antardarshi.

All parts of the Vijnana are now being prepared for practicality & combined to that end. This includes sukshma shabda (manushi vak) which is becoming more coherent. It is also being applied to the lokas.

Krishna is fixed in the self, but varies between swapada & mentality.

Dec 14—

Predictions of Script—

1. Great stride forward in T³; considerable strengthening of Rupa-samadhi.
2. Continuation of the greater rapidity in Sharira.

In the morning fresh attack on Kriti, combined from all sides of the immediate action.

Tapas siddhi in environment shows a growing force in spite of resistance.
Lipi is acquiring fixity in chitra—

Kamananda has triumphantly overcome its ordeal.

Satyam of telepathy is complete; it must become ritam. Trikaldrishti must manifest brihat satyam, & also tapas—

Strong activity of luminous thought & telepathy combined with entire satyam.

Lipi. 1. Light of telepathy

Effectuality of trikaldrishti.

There is a struggle between static perception of event & dynamic perception of event (passive & active Chit). The latter which alters the event predestined by the ensemble of forces by a personal intervention (ie of higher forces) is becoming rapidly stronger & brings with [it] increasing satyam of trikaldrishti & increasing satyam of tapas-siddhi. The active Chit is either effectual trikaldrishti or effective will on the supramental plane (lower vijnana); but in higher Vijnana, they are twin actions and in Sachchidananda are inseparable & indiscernible.

They are now moving upwards towards the higher vijnana and therefore approaching each other more & more.

Kamananda is now continuous for a long period. But its hold is not yet confirmed in the body— It is not yet entirely naturalised.

Tapas-siddhi grows in force.

Uttapana

Arms—1 hour 55 minutes. Interrupted. Some depression of energy in the body.

Legs—30 minutes. Mahima increased, but still very deficient, laghima not sufficient to take its place, strong positive defect of anima from the beginning owing to reaction of stiffness in the leg
muscles. Throughout a violent struggle; but the laghima increased
to the end.

Samadhi

Manushi Vak—coherent conversation . . short sentences regard-
ing things of the moment in Europe . . of this world, not the
other lokas.

Rupa

Rupa still attempts to stabilise perfect forms, but increases in
general force without getting definite results.

Ananda

The continuity of Kamananda continues; there is also a sort
of subdued or diffused intensity. This sometimes gives place to a
great or even the beginnings of a massed intensity. The Ananda
since meal-time has only been partially discontinued by force of
interruption in sleep.

Even if interrupted by sleep or other cause, it should re-
sume automatically on waking and not have to be brought back by
will or by lapse of time.

It is to this siddhi that it is moving. But the continuity is still
too dependent on Asana.

Krishnabhava & Darshana

Krishnabhava is often obscure in the mentality, although
fixed. Ishwaradarshan (Anandamaya) is combated by the men-
tal formation of the jnana Brahma and the perception of the
udvigna Anandabhava. This disappears only by the recovery of
Chidghanananda—

Utthapana

Back & loins, 8 minutes, maintained with immense difficulty
owing to defect both of laghima & mahima; both were withheld
except in infinitesimal quantity;—just sufficient to prevent the effort
from collapsing.
Ananda—

Kamananda is more constant today than it has been before. It has been maintained with only a few intermissions from 1 to 6.30 minus an hour of sleep & samadhi, when it was recurrent & ceased to be continuous. This is a true continuity, & no longer a continuous recurrence.

Subjective Kamananda also continues to increase its hold and generality.

The Ananda was continued till sleep 1.30—always recurrent & spontaneous, and even in a subdued form continuous. Discontinued for sleep or any other cause, it revived at once when the cause was removed. This happened also in the morning at 5 on waking, for the first time,—as usually it takes some time in the morning for it to revive.

Great abundance of rupa etc in swapna-samadhi—everything but the firm hold of the experiences of Samadhi on the chittakasha.

Tapas, telepathy, etc continue to grow.

Dec 15.

Utthapana

Right leg, horizontal, crooked, lying on side, 1 hour. For the first 45 minutes defect of anima only occasional and quite ineffective; easy utthapana. During the last quarter of hour acute attack compelling momentary desistence. It was overcome in the end but not entirely. This is an unprecedented success, as this form was formerly the most difficult & could not be maintained for more than 20 minutes. The improvement is quite sudden, comes after a long discontinuance and shows,

1. That practice is only an excuse for habituating the body to the idea of a change which in itself could be otherwise effected
2. That siddhis prepare effectively behind the veil.
3. That laghima in the body is already sufficient, if defect of anima could be expelled,
4. That defect of anima is artificially maintained & ought long ago to have disappeared

Arogyashakti is standing stronger & stronger tests.

The rapidity of the advance in Sharira cannot be questioned. It was predicted in the Script that this rapidity will be rapidly increased. The increase seems already to have begun.

Rupa in last night’s samadhi did sometimes hold the akasha and complete its movement perfectly. Swapnasamadhi is now nearing the point when it can be perfectly organised. Jagrat is still subject to the general obstacle.

Darshana
Ishwaradarshana is established in inanimate things; with regard to persons it comes and is taken away and forcibly withheld

Today, however, by the stronger perception of the Anandamaya as lord of all action & not only of all bhoga, it is becoming firmer with regard to persons.

Vijnana
T3 this morning has made a great advance and is approaching fullness of satyam, although as yet in type frequently realised, not in general fashion

Script on the 12th fixed five days as the period of incubation for T3, after which it will be ready to undertake perfection. This is especially for the Tapas siddhi, telepathy & trikaldrishti preceding it. The same period is fixed for the removal of the obstacle in Rupa-Samadhi.

Darshana
It is the mentality in the object that, as usual, presents the chief obstacle to the Ishwaradarshana & divides the man from his real Self. This is now being corrected by the mind being seen

www.holybooks.com
as an activity formulated & directed in himself by the universal Ishwara.

To this is now being added the same relation of mind to the transcendent Ishwara in the individual.

All that has now to be done is to confirm thoroughly the Krishnabhava & Ishwaradarshana against surprise & interruption, as is being done with the already established Kalibhava.

*Rupā*

Arms, 2½ hours. Strong defect of anima with usual oppression & occasional depression of the energy; twice there was deflection for relief to the horizontal position.

Action of the limbs now begins to be left to the Pranashakti. This means, when effected, generalisation of primary utthapanā and intensity in the body of tertiary dasya.

*Rupā*

Rupā in jagrat is now to be based on the realisation that all is there except a generalised clear stability. Nothing has to be entirely accepted except what is at once clear & stable. Such figures now occur more frequently; but the general obstacle still remains.

*Ananda*

Kamananda continues, really continuous, but in its entirely sensible manifestation constantly recurrent. It is yet of too insufficient a force, except in seated asana, to enforce smarana in spite of absorption of attention elsewhere. The Ananda has more mass than formerly & begins to take some hold of the body.

*Rupā*

Unstable figures tend to be more clear & vivid and are sometimes admirable in their own mode.

*Script*

There will be a new movement of the siddhi from today aiming
at the preparation of perfection in Vijnana and Sharira.

\[\text{Vijnana}\\\text{Swapna-samadhi}\\\text{Various indications of the sati—but isolated.}\\1. \text{Sweet tea drunk with aswada}\\2. \text{Tivra in samadhi.}\\3. \text{Conversation, brief but coherent.}\\4. \text{Three or four lines of lipi coherently read}\\5. \text{Admirably vivid phrase lipi—}\\\text{Antardrishta jagrat less active & fruitful, but though it does not advance, it has not really fallen back.}\\\text{Lipi}\\\text{Three line lipi, confirmed in Akasha and on background as well as in chitra, in swapna as well as in jagrat, has now to be given a firmer stability & then extended to page lipi and other extensions of the perfect writing}\\\text{Script}\\\text{There is now a certain amount of confidence in vijnanamaya vak when it expresses trikaldrishti. There must be entire confidence in vijnanamaya vak, thought-perception, lipi, rupa, samadhi-experience, vani, all instruments of the vijnana; but first there must be an accurate interpretation of everything that presents itself to the mind. For that accuracy mind itself must cease to judge even in the slightest degree. It is vijnana that must perceive, represent, interpret, judge—the revelation, the inspiration, the intuition, the discrimination.}\\\text{Lipi}\\\text{Kaushalya of the lipi is beginning to organise itself (different colours, jyotirmaya lipi, vividness, stability).}\\\text{Script}\\\text{It is necessary to give oneself up passively to the Power that governs. All will shape itself rapidly & inevitably.}\\\text{www.holybooks.com}
Lipi
1. It is today ideality begins its definite victory.
2. Tomorrow the intelligence quite submits (fulfilled 16th Dec.)
3. it is difficult
   in the neighbourhood of intelligence
   for subjectivity to be free from intelligence *
4. the intelligence is a very bad judge
   especially the logical intellect.* —
5. first ideality in all parts of itself

* Examples of the two lined & three lined lipi

Script
Overstress will now easily be got rid of.

There is a check apparently in Arogya and Utthapana, not in
the growth of the Shakti, but in its successful manifestation. Ananda
is overcoming the check. The other two will also overcome it.

Rupa
Rupa begins to manifest a more effective force of formation,
but it is still upon the old lines of gradual development.

Ananda
Raudra ahaituka manifests only occasionally, but with increas-
ing intensity.
Kamananda continues its development, but hampered by the
old sanskara of asmarana.

Utthapana
Utthapana failed in the legs. There is a strong return of physical
depression of energy, less powerful than before, but still effective.
It prevents result; it does not prevent action.

Utthapana of arms sitting, half an hour. Strong depression of
energy and physical unwillingness.
Siddhi

In the vijnana also there was an apparent slackening of the siddhi, such as has always been noticeable in periods of transition. As usual unfaith assailed the mind, but had not the same effect as formerly. Nevertheless, faith in kriti is still easily depressed; it does not disappear, but is rendered doubtful & overcrowed by its contradiction.

Faith & Ishwarabhava are still the weak points in the two accomplished chatusthayas, and prevent the fulfilment of their full fruition.

The accomplishment of the Ishwaradarshana will greatly facilitate the perfection of the Ishwarabhava.

That again will facilitate the fulfilment of the three unaccomplished chatusthayas.

Dream

Dream still fluctuates between freedom from present association & an entire though thinly enforced subjection to it.

Dec 16.

Entire confirmation of the Krishnabhava and the personal relation (madhura-dasya). At the same time the Ishwaradarshana becomes more powerful in the world.

Utthapana

Legs. 14 minutes. Defect of anima still insistent, but laghima more mahat than before.

Vijnana

Telepathy & perceptive (telepathic) trikaldrishti seem to be fairly ready for perfection (ritam) but effective trikaldrishti lingers for want of tapas-siddhi.
Effective trikaldrishti (telepathic) is now taking its place in this fulfilment along with the rest. Only tapas-siddhi lingers behind.

The greater force of tapassiddhi is confirmed but at 50°. 60° and above manifest, but without hold on things.

In spite of all resistance it is true that in T³ there is an ever increasing rapidity of growth.

The Ishwara has taken up the satyam of the telepathy-trikaldrishti-tapassiddhi.

A sudden, puissant & compelling rapidity of effect is manifesting itself in the effective trikaldrishti which is supported by decisive trikaldrishti & the Will of the Master.

At the same time the Rudra in the Ishwara is manifesting. The gigantic imaginations of Alipur are being confirmed by the Vani & Script, and the War in Europe is given as an imperfect type. But the mind, though overpowered is not yet entirely willing to believe.

Utthapana

2 hours. The old system of laghima supported by a pranic mahima working partially through the muscles, with reaction, strain & defect of anima, still persists. It must be replaced by a laghima containing pure mahima in itself and producing no strain on the body which in its turn must get rid of the purely habitual reaction of defect of anima.

Great activity of the jnana under the new conditions preparing a comprehensive Tapas & trikaldrishti on the basis of the Krishna-bhava and Ishwarabrava.

Rupa has developed clear stability, but with insufficient force and with no variety of forms.
Siddhi
A strong attack on faith & samata which for the moment reintroduced touches of partially effective ashanti.

Script—
1. In spite of all this disturbance faith in the entire rapidity will be rapidly established; for the Tapas-siddhi is on the point of manifesting.
2. Today, rapidity of Rupa-samadhi will be confirmed.
3. Ananda, Arogya, Utthapana will emerge again from the apparent denial of rapidity from today to tomorrow. Always Ananda first.
2. has been already partially fulfilled.
3. has been fulfilled by a sudden development of Tivra & raudra.
4. The period for the physical siddhi begins from today and extends to the end of the month.
5. Karmachatusthaya in its subjective parts will be perfectly established in the same period. In its objective parts it will begin to emerge during the fortnight.

Utthapana
Left leg horizontal ten minutes. In the left leg as in the left arm defect of anima is much stronger than in the right.

Ananda—
Great development of tivra; at double point, persistent, continuous in recurrence, ahaitsuka, entirely spontaneous, frequently recurrent. In the rest of the body it is beginning to assume that character, while it responds acutely to sukshma betu.
Raudra is less long continued, but still has acquired some continuity, entire spontaneity and great intensity. It grows rapidly in force of continuity
On the other hand, Ananda, interrupted, sank for a time to its lowest or subdued point of continuity.

Intense ahaituka vaidyuta has also swiftly established itself. It is already capable of continuity.

Kamananda is again intense & [continuous].

The five Anandas are preparing to join hands. Ahaituka Vishaya is manifest but in conjunction with the others.

_Samadhi_

Swapnasamadhi is preparing generality of vijnana in all its movements and experiences.

Clearness, stability, variety are beginning to manifest in rupa on a background. The figures are necessarily crude.

_Ananda._

The subjective Anandas are also preparing for a brihat universality and _sajatyam_, especially Prema, Kama, Chidghana in the final vision of the universal Anandamaya Ishwara, which has suddenly manifested & accomplished the Brahmachatusthaya.

_Faith_

Faith in the entire rapidity of the Vijnana & Ananda is restored & fixed. It is not yet extended to the whole Sharira Chatusthaya or to the objective parts of the Karma Chatusthaya.

_Dream_

A number of dreams more clearly remembered, all of the same character, coherence not quite perfect, present association less egoistic, but not quite expunged.

Kamananda strong & continuous or constantly recurrent during the evening.

---

8 _MS_ continuity
Dec 17

Vijnana

The 60° Tapas-siddhi is becoming more & more frequent & can sometimes be applied with great continuity & to a succession of cases.

Telepathy now definitely exceeds the possible limits of sense, inference etc; the trikaldrishti also deals fearlessly with results beyond the immediate assemblage of active forces; but as the management of the unseen & uninferrable is difficult for the mind, it throws in an element of wrong inference & suggestion which leaves the substantial truth of the results untouched, but distorts slightly the incidence of fact & the arrangement of details, the ritam.

Much of the anritam comes by the attempt of mind to make a formation from the elements of the satyam that it receives instead of allowing the truth of ritam to manifest itself. That which forms is not mind, but vijnana.

The attempt of the Sadhana now is to arrive at the ritam, being already sure of the satyam, but for this to be accomplished, mind must become entirely passive.

T3 is now ready to undertake perfection, except for the greater deformation of satyam in Tapassiddhi & effective trikaldrishti which has to be corrected

Uttapana

Legs, medial position. No mahattwa in laghima, 15 minutes only, the last two with great difficulty.

Ananda

Ahaituka Vishaya distinct from the rest, strong & intense, massive (pajas) has manifested. This completes the ensemble of the five physical Anandas.
**Script**

The important movements today are in

- **1. Ananda**
- **2. Rupasamadhi of all kinds**
- **3. T³**
- **4. Sharira generally**
- **5. Karma**

The movement henceforth will not be absent from any of the unaccomplished chatusthayas or unaccomplished parts of chatusthayas.

Vijnana is now in a sense accomplished, but its organisation, intensity & effectuality are still imperfect.

Ananda is accomplished, but has to be organised.

KrishnaKali is accomplished, but has yet to be entirely fulfilled in the intended harmony & effectuality.

**Vijnana**

**Tapas-siddhi**

Instances of 70º are now manifesting themselves, in brief continuity or succession.

The T³ is beginning to be organised. 60º & 70º are becoming common. At the same time the invariable insistence on immediate result is being renounced by the tapasic forces which are trying to put themselves in harmony with the will of the Ishwara. At the same time there is no mere shama or inert passivity.

A continuous succession of effectivities both in the same object & action & in different objects & actions is now common. 80º must now manifest

**Uthapana**

Arms—one hour. The utthapana could have been continued,
but the method is about to be altered. In a sense there will be a recoil to prepare a better siddhi.

Vijñana

Rūpa
The movement in Rupasamadhi continues, but not with sufficient rapidity. Nevertheless a constant variety of all forms is showing itself in the crude, though without right stability, yet with an increasing clearness & vividness.

The various crude forms in the Akasha are now beginning to manifest either an initial or even a preparatory stability.

Lipi
Lipi is being organised for utility, applying itself at the right point or even physical spot to indicate what the mind could not know & the T² [telepathy-trikaldrishti] was at fault in supplying.

Vishaya
Sukshma gandha seems to have established itself, as it recurs daily, though sometimes oftener, sometimes once or twice only, in various odours which are strong, distinct and sufficiently stable. Only a little obscurity in the sukshmendriya remains to be corrected.

Sparsha & sravana come with difficulty or only in the few habitual touches.
Rasa only sadhara and seldom.
Darshana very little & in a few habitual forms.

Samadhi
Swāpna-S. & Sushupta
Enormous advance. Perfect vangmaya thought almost entirely continuous for the whole hour of samadhi, only ceasing at will, or very occasionally when the tamasic nidra became very heavy; but for the most part it triumphed over both sushupti and tamasic nidra.

Perceptive thought was also active, but less victorious, because less intense in its vijnanamaya force and prakasha.
The Anandas received the freedom of the swapna-samadhi, kama especially being intense and constantly recurrent; tivra, raudra, vishaya, vaidyuta all occurred in their full intensity, the first two recurrently.

Lipi was consecutive though not always coherent & in more than one line; but too fugitive to be retained, although even when instantaneous, the mind was swift enough to read.

The printed page presented itself clearly, but was too fugitive to be legible.

Trailokya drishti recommenced with Patala and with shadowy pomps of past or future events upon earth, crowds, kings, generals, tribunals.

**Jagrat**

Activity of rupa in jagrat. Fixed shadowy landscapes, a rock by the sea, figures by water at night etc. The separate images were crude & for the most part fugitive.

Organisation of samadhi and rapidity of development have begun in earnest. The various activities are now combined. Organisation of lipi and of consecutive coherent experience & stable rupa are the sole elements of perfection wanting. These occur only rarely.

**Prophetic Rupa**

Prophetic Sadhara Rupa is manifesting—eg A crow in the opposite terrace mistaken for a pigeon. It was explained as a sign that a pigeon would alight & move about there today; but as during all these months this has never been seen, not much credit was given to the indication. In the afternoon, however, two pigeons alighted in the terrace & for a long time sat & made love there.

**Tapas-siddhi**

75° & 80° are manifesting together, establishing the type of a swifter consecutive Tapas-effectiveness

They have now to be made frequent and normal in all fields.

The prediction that 80° would now manifest, is fulfilled.
In vijnana only the element of stable & clear jagrat rupa (Akasha) is still in a backward condition; Vishaya is manifesting. Sadhara rasa is becoming more frequent. Vishaya also is in a sense obstructed, but not seriously. It is only its range of variety & fullness that is not yet manifested.

The distinction made between the two is not yet quite understood. Its reason will be made clearer soon.

==

Karma

Fresh proofs of effective Karma through subjectivity in surroundings; formerly C.S & R² [Richard and Madame Richard], now difficulties in the house righted.

==

Sharira

In Sharira (except Ananda) the surface movement has been today contrary rather than helpful. There are one or two weak signs in Saundarya. Arogya is attacked ineffectively, Utthapana almost suspended.

==

Rupa

The obstacle in crude Akash rupa is disappearing; in the rest it is still valid against stability.

Chitra is showing an extraordinary perfection, sthapatya preparing to follow suit. It has already acquired it in certain relief figures.

==

In the evening tertiary initial stability of dense, developed & primary initial of perfect. None of these effects are yet strong.

==

Samadhi

Rich and frequent lipi, more & more legible & more frequently coherent, sometimes in masses or pages of which parts or phrases were legible.

Brief conversation.

Long stable continuous action complete or else complete with moments of eclipse. Scenes, groups, streams of figures. Mostly chhayamaya
Frequent stable rupa, but stable only during sushupti of mind or its most swapnamaya swapna; disappearance when mind became jagrat in samadhi. This is now the one positive defect in swapna-samadhi.

Combinations of vishayas,—taste, hearing, touch, sight. Taste became strong & intense. Scent alone is absent.

It is noticeable that taste survived into jagrat with a physical effect on the palate and was frequently repeated & varied. In the rasa sparsha predominates.

Sharira attacked, ananda in its continuity, utthapana in sati, Arogya in its shakti & details.

Dec 18—

Taste is emerging into frequency, but is still ordinarily obscure and ill-formed in jagrat. Sravana showed a slight sign of recovery. Sparsha is intense & more frequently active, but only in habitual touches.

The attack on Sharira has failed, though at the end it slightly clouded the immediate strength & faith,—owing to apparent non-fulfilment of Script satya.

Cold & cough, in spite of a violent & persistent effort, failed to materialise; fever could not even touch the system. The fragments of roga are being more & more reduced to simulacra, although they can still put out points of momentary intensity.

Non-assimilation is at once constantly active & constantly receding.

Kamachakra is attempting to develop force but as yet without success.

Uthapana is quiescent; saundarya except in the hair not definitely progressive.

Uthapana

Arms, one hour. Depression of energy at its height. Laghima,
mahima, anima all inefficient hardly offering any opposition to the Asiddhi.

During this hour all the other siddhis were equally oppressed, except at the beginning when Vishaya & Kama attempted a fresh progress.

Tapas-siddhi has now a great force, although its ritam is not yet effected. 80°, 70° & 60° are becoming more and more frequent. Ishita is increasing in activity & effectivity. Telepathy & telepathic trikaldrishti are constantly increasing their hold on the brihat satyam. Effective trikaldrishti is also increasing in mass & frequency

Rupa
Great richness and perfection of sthapatya. It is inferior to Chitra only in perfection of details, eg features of the human face. But this defect it is beginning to remedy.

Vishaya–sukshma.
Taste is now developing greater body and distinctness.
Kamananda is still oppressed in its continuity. Ahaituka Vishaya is acquiring continuity.
The attack on the Siddhi continued. Kamananda though for a moment it made a considerable progress was overpowered for the rest of the day. The other Anandas advanced, but piecemeal. Raudra developed continuity and a greater intensity. Tivra grew only a little and locally. Vishaya acquired continuity and a greater distinctness in Ahaituka.
Vaidyuta became freer & more spontaneous.
Uthapana was entirely arrested.
Arogya-shakti persists against attack & seems to have made one considerable progress.

\[ T^3 \] continued its rapid development and was the one siddhi that did not suffer from the attack.

Rupa in jagrat went on developing but with considerable difficulty. Clear stability appears now in crude forms of all kinds, but is not yet their normal state. Dense, developed & perfect forms are manifesting, but with no great realisation in stability. The obstacle is not yet removed, though it can no longer entirely prevent progress.

Gandha, rasa, sparsha are now active though not yet entirely free from obstruction—especially in the rasa. But they have not yet advanced beyond their old limits.

Samata was attacked through the old inequality with regard to siddhi asiddhi. In this respect it broke down. In the evening the Ananda of battle & temporary failure were imposed, but have not entirely prevailed.

Faith in the rapidity has been somewhat shaken. Sharira-siddhi is no longer seen as a near event.

Samadhi

Maintenance of activity in lipi. Stable rupa with an entire hold on the akash long seen & resummoned after eclipse—part of a great city in the moonlit night, then only a particular house & its surroundings.

Perfect vijnanamaya perceptive thought with the mind su-shupta

Dec. 19.

Utthapana

Legs. 15 minutes. Defect of anima, mahima insufficient.
Darshana

Anandam Jnanam Anantam Sarvam Brahma is now perfectly established everywhere. The object is no longer seen as other than That. The Anandam also carries with it the Nirguna Guni, the Impersonal Personality. But the sense of the Ishwara is still capable of drawing back into the super-conscious and being felt in the Brahman as its result rather than in itself. Definitely, it is now known & seen that the Ishwara is that from which the Brahman is born. Existence is the form of the Existent, Brahman is the mould of Parabrahman, & Parabrahman is Para Purusha. Purusha is the last word of the knowledge.

Vijnana

T³

T³ continues to develop. 80º, 70º, 60º are active, but also 50º & even less, because the subjectivity of things & beings still resists. This is typified in two instances, one because of a rajasic obstacle, hunger, the other because of a tamasic, the ananda of repose. The first gave way after a long time. The second still resists... It has given way after a long time, almost double the other & by extraneous circumstance.⁹

80º now sometimes act with great force & compelling instan-
taneity.

Telepathy, trikaldrishti are still much more developed than tapas-siddhi. Decisive trikaldrishti has progressed greatly.

Script

It is to be noted that Utthapana & Arogyashakti are taking longer to emerge from the denial of rapidity than was predicted on Dec 16th or than appeared to be predicted, — for the sense of the words “from today to tomorrow” was even then felt to be uncertain.

The 18th given by trikaldrishti & script has been a day of beginnings of perfection for T³, as predicted; in other respects, as often happens, it was a day of attack & denial. A date fixed is

⁹ This sentence was added at a later time. — Ed.
almost always the object of attack by the opposing forces, so as to prevent the conquest of Time. This conquest of Time is now one of the main objectives of the siddhi.

Script predictions for yesterday were.

(1) Removal of obstacle to clear stability in akasha rupa, not complete, but effective. Fulfilled in type for crude & to a less extent for dense-developed at night.

(2) Rapid growth of T³. (fulfilled).

(3) Rapid growth of Samadhi (fulfilled in swapna; begun in sukshnavishaya jagrat.)

(4) Karma. (fulfilled)

(5) Sharira

(a) growth of Ananda in all its forms (doubtful with regard to Kama, true of all other physical Annadas & of subjective Annada in general)

(b) Restoration of utthapana (not yet fulfilled except in bhava underneath Asiddhi).

(c) Growth of Arogyashakti (fulfilled)

(d) Increasing pressure on Saundarya to manifest (fulfilled).

On the whole, with the exception of 5bh, there was fulfilment always just sufficient, if not always generous. This, on a day of attack, shows a considerable advance.

Ananda

Kamananda is recovering itself with the promise of a greater pervasion of the system.

Subjective Ananda aided by jnana is attempting to throw out the reversion to rajasic stress & reaction of Asamata. It appears, however, that this cannot be entirely done till Rudra-Vishnu is ready.

Krishna in his fullness is only seen in individuals where there is some kind of beauty, charm, youth, childhood etc. To remedy this defect it is necessary to perfect the chidghana and shuddha anandas.
Rupa

Promise of rupa perfection increases. Spontaneous images of perfect crude and perfect dense, developed & lifelike, the former with stability are beginning to break out from behind the tiraskarani.

Utthapana

Arms, one hour.

There is no longer an attempt to maintain the utthapana by separate mahima. The two principles are now to enforce maha-t-laghima and to eliminate defect of anima.

The utthapana-shakti in the arms is restored, but not yet sufficient. It failed for a while at the end of the hour & faltered at other times.

Vijnana

Vijna[m]aya thought now embraces telepathy and a part of trikaldrishti, in the satyam—not yet except initially in the ritam.

Samadhi

In jagrat a great advance in rupa; especially dense & developed for the first time appeared with a firm stability & hold on the akasha. But the crude also greatly improved in clearness, stability & body.

In swapna samadhi the general stability of rupa constantly increases and lipi is constant.

Utthapana

Left leg horizontal. 20 minutes. defect of anima. strong mahima-laghima. The utthapana might have been maintained ten minutes longer.

Script Predictions for the day.

1. Increasing rapidity in rupa-samadhi—(fulfilled)
2. T³ (fulfilled)
3. Ananda moves towards perfect spontaneity & force.
5. Utthapana progresses on the new lines.

Script
Sahitya must be resumed and proceed normally, but not with great force until rapidity in Kriti has begun.

Tapasic interest has almost been excluded from the system; it must be entirely eliminated and replaced by force divine.
The Ishwarabhava has again to be manifested, this time without resuscitation of Tapasic force.
The Ishwarabhava is again manifesting, but not yet with entire force. Ishwarabhava, Sharira, Kriti are now the three fields of the Shakti; for the rest is fulfilling itself. These three are closely connected. Their full manifestation forms the last stage of the sadhana. The rest is pure siddhi.

Tertiary dasya in the mind is the condition of the last stage of sadhana. The sense of personal responsibility must be entirely renounced.

Since Vijnana is now assured, the Shakti must concentrate more upon Sharira and Kriti,—Sharira as a condition of Karma generally. Immediate Kriti is hardly dependent on Sharira, rather on Vijnana. It is Sahitya & Kama that depend upon Sharira. On Kriti, then, there must lie for some time the principal stress.

Krishna-Kali
Anandamaya Krishnadarshan is now extending itself to all objects & beings independent of form, guna etc.

The bhava of Mahalakshmi has taken its place in the Devi Bhava. The Kali Bhava has toned down its force in order to assimilate Mahaluxmi.
The Ishwara in the system is still preparing his bhava. Balarama-Aniruddha manifested; but Rudra-Vishnu is not yet entirely harmonised.

Vani, long silent, is now again active.

Lipi
1. Responsibility to be banished.
2. The brotherhood of the Ishwara (bhratra)
3. Friend (sakhya)
4. In reality soulless opposition to the kriti
5. It is already entirely ready equipment (mentally & nervously perhaps, materially it does not yet command faith).
6. Tapas . . telos . . tejas shuddhi—
   (The tejas is purified of stress; if the tapas is purified, the shuddhi will be complete).
7. The effectivity of tapas in the kriti.

Rupa
Rupa at night showed an advance in the crude, clear figures (an arm holding a spear, jyotirmaya, a flag etc) appearing on the wall; others not so clear, but with more body (a human figure, two flags, a four-footed animal,) in the akash. The higher forms were mostly in abeyance except in the fugitive side view.

Samadhi
Dream copious; those that were vivid were exact representations of realities, but coherency was not sufficient. Present association, though not vivid nor compelling, held all the representation. The interpretation of dream has recommenced. The movement in Samadhi towards the éveil and idealisation of the profounder states of swapnasamadhi continues.

Arogya
Arogya Shakti very slowly gets rid of fragments of Roga.
Dec 20—

_Utthapana_—

Legs, medial position, 10 minutes, then after [? ] minutes interval 16.—Mahima in laghima defective. Strong external oppression, which more & more takes the place of gravitation.

——

_Vijnana_

_T3_.

An attempt to force back T3. The opposition long, but finally ineffective. Immediate movements contradicted. One example of 80º.

_Utthapana_

Arms. one hour. There is a struggle and alternation between mahat laghima and laghima void of mahima weighed down by defect of anima, needing to be supported by mahima.

——

_Rupa-Samadhi_

A great play for a while of richly various crude [crude crude] rupa, not stable; a little also of dense crude.

The effort to generalise samadhi in the state of sleep continues.

Stable rupa & stability of continuous action are entering into jagrat antardrishti.

——

_Ananda_

Kamananda continues but is comparative[ly] feeble in action, recurrent, but far from continuous.

Of the other Anandas tivra alone is fairly active, but not with full spontaneity

——

_Script Predictions_

_Sharira_

1. Utthapana develops the true and pure laghima
2. Arogya Shakti constantly increases.
3. Ananda maintains and strengthens itself.
4. Saundarya prepares
Vijnana
5  $T^3$ extends itself to distant things and to distant time
6. Rupa continues to grow towards the point where it can manifest perfection.

It is notable that in the Script prediction there was an error of understatement with regard to a particular thing to be done. These predictions, though usually fulfilled to a more or less extent, are still largely telepathic.

Lipi
Lipi, for some time sluggish, remanifested activity, but with an imperfect vividness and stability except in isolated words, one or two in number.
Afterwards it began to manifest long lines of many words and the beginnings of the page, but vividness, stability & legibility were insufficient, or rather there was stability without legibility or else legibility without stability
Lipi is now more free & self-acting in its development and formation

Shakti
Tertiary dasya in all parts of the system and in all actions is becoming entirely normal. With its development the stress of tapas and the sense of responsibility are being entirely removed. The remnants of agraha & asamata over siddhi, satyam, mangalam are also being dispersed—At the same time action is proceeding with a perfect energy and regularity of the Prakritic mental type, but not coordinated & perpetualised in energy by the vijnana

The energy of the mind is limited to the work in hand and intermittent with intervals of rest or change to other labour. The energy of the vijnana is permanent & equal, needs no rest and turns to other work in accordance not with interest of any kind or any necessity, but the free will of the Iswara.
At present there is the *manomaya* freedom of the paramahansa with the balabhava & jadatwa of the will that selects. The instrument does its work by the impulsion of Prakriti in obedience to the Ishwara.

---

**Vijnana**

Throughout the latter part of the day there was an extraordinary spontaneous accuracy in the thought telepathy & trikaldrishti, accurate even in the smallest details & shades of perception. There were still suggestions ill understood, intentions unfulfilled or refusals of intention contradicted in fact, but these were only a small part of the mental activity.

The type of union of knowledge & tapas, manomaya more than vijnanamaya, was almost entirely achieved.

---

**Dream**

Fantastic; not of this world.

---

**Siddhi**

Vijnana is hastening towards completion so far as that is possible without full control of Sharira & Karma.

Knowledge is preparing to complete itself both by perfecting itself in the limited field which it occupies and occupying the fields which it has invaded partially or else merely touches in a fragmentary fashion. As yet, it does not seriously attempt the higher movements which belong only to the Vijnana, but is directed towards completing its conquest of the fields of the Mind.

Tapas follows the march of the Knowledge. It is becoming more & more Vijnanamaya Tapas, that which fulfils what the knowledge sees.

The intellectual knowledge of the physical branches of information & utility is not yet attempted; for these are reserved for the action of the perfected Vijnana, not of the mentalised Vijnana.

---

In Sharira Ananda is preparing its masses and combinations rather than insisting on detailed successes. Arogya-Shakti also prepares its mass & only presses by the mass upon details. Its two great
defects still remain in the defective actuality. Utthapana similarly insists on the growth & complete affirmation of pure laghima & is negligent of external victories. Saundarya is yet in the sukshma & only throws its chhaya on the sthula. There are one or two definite, but not yet decided sthula movements.

Karma also prepares its mass of force, & does not yet manifest fulfilment of its actualities except in the little.

Dec 21—

Vijnana

Tapas is now attempting its vijnanamaya completeness. It has to regulate its relations in eventuality with its action of tendency and its process of time. Once this is done it will be perfect in mental condition & tapasic potentiality.

Ishwarabhava

The type of Balarama-Aniruddha in the combination Rudra-Vishnu is now perfect in form, but not in force & contents.

The great question now is the validation of the 9th affirmation, the mastery of Time & process in Time.

The three Krishna affirmations are now finally founded.

Affirmations—

The affirmations can now be restated in other language.

1. Anandamaya Lilamaya Krishna, the source & sense of all being & activity.

2. The world rendered in the terms of Sachchidananda; therefore Satyam & Tapas in the form of Ananda the substance of all knowledge, feeling & action.

3. All being satyam, all must be affirmed, but in right terms, in the ritam.

4. Ritam, the just action of the Satyam Brihat. Vijnanamaya Sachchidananda the fulfilment of mind, life & body to replace asatyam, alpam, anritam.
5. The inner & the outer life of the person & the world the play of the consciously manifested balaka Krishna (Rudra Vishnu)

6. Madhuradasya the relation between the Prakriti-Jiva & the balaka Krishna.

7. The Jiva accepts all bhoga as the slave & instrument of the victorious & rudra Lover.

8. The field of play of Krishna the five worlds working themselves out in the fifth, Bhurloka

9. Time the instrument of the [Ishwara] & Ishwari, instrument & not determinant of the world-result.

It is the realisation of these nine affirmations which constitutes the active Siddhi. The rest is the condition of the active Siddhi.

Utthapana
Arms. 50 minutes. Stronger laghima

Rupa
Increasing perfection of sthapatya images and renewal of sadhara akasha images (half sthapatya) –

Perfect human figures & groups, crude, are now common in akasha rupa & occur in antardarshi.

Landscapes & fourfooted animals in bahirdarshi akasha are becoming clearer & more stable.

Lipi
1. first telepathy trikaldrishti afterwards
2. entire faith entire rapidity entire faith in the rapidity
3. entire faith in the telepathy & tapas-siddhi

Siddhi
There is an attack on the Sraddha. There is sraddha in the satyam, not yet sraddha in the ritam, sraddha in the tapas-siddhi of the small, not yet in the tapas-siddhi of the karma, sraddha in
the sharira-siddhi, not yet in the rapidity of the sharira-siddhi. The possibility of rapidity is admitted, the actuality is felt to be doubtful

\[\textit{Script}\]

Deeper perceptions, more distant sight, a more rapid and all-embracing march.—

The greater vijnana; the more luminous and puissant ideality—

\[\textit{Vijnana}\]

T³ is always active, but there is an increase in mass with some temporary loss in clearness and separate fullness (\textit{suvrikti})

\[\textit{Siddhi}\]

The rapidity of the advance has been evidently intermitted, although the general rapidity now at the worst moments is greater than it was before the recent forward rush.

The old principle of advance & relapse has been greatly modified, but is not yet eliminated in any limb of the siddhi.

Certain gains are always there, intact in foundation and mass, but not in intensity, activity and detail.

Sraddha is the key to perfection of sati in the first half of the siddhi, and sraddha is not perfect.

Dec 22—

Intensity of the Krishnadarshana in all beings, (Krishna & Kali, not yet KrishnaKali in human beings).

Krishnakali-darshana intensity begins in things & animals.

It has begun also in human beings.

Also pervading the extension of the Brahman in Akasha, Vayu etc—

It is the full joy & plenitude of the conscious existence illuminating also the inert & the void.

The difficulty that remains is to harmonise the perception of the ordinary egoistic consciousness with that of the KrishnaKali. The former is a subordinate mode of the latter and it must be seen as a lesser conscience in the Integrality. It is so seen, but the difficulty
is that the egoistic conscience presents itself first & translates itself into the Integral or the mass of the Integral comes first & the mental egoistic has then to be distinguished in it—the two must be simultaneous, not exclusive.

The attack of the last two days is passing away & the normal daivabhava is restored.

Sharīra
In one of the features the gross outline of the future saundaryaam is beginning to establish itself after a long struggle which is not yet finished.
On the whole the struggle of the saundarya with its physical prison can be felt; it is not yet effective as a whole.

Vijnana
Sukshma darshana is again manifesting and sravana attempting to manifest. The rest are for the time being obstructed, but not entirely inactive.

Utthapana
Arms 56 minutes. The struggle continues.

Rupa
Perfect animal forms are attempting to appear with stability in the Akasha. Hitherto only objects manifested. These forms are as yet only reproductions of sthula forms previously seen.—the eyes of a cat (in the pranakasha); a richly coloured butterfly, first seen in mental akasha of Earth, then in its pranakasha.

Landscapes in Akasha now appear distinctly, crude.—women on a hill, scattered houses, trees.
The fourfooted animal form tends still to be fugitive.

Vijnana
Vijnana is attempting its fuller movement of ritam.
Script

The lines of the past are fixed. It is only a question of accuracy in detail.

The future is vaguer and there is less sraddha. But there also there are materials for the sraddha. Certain lines have been laid down precise enough though general. They have to be filled in in the detail. The main difficulty is about the karma. It is here that asraddha stands as an obstacle.

The little ideality must be replaced by the large in order that the movements now being effected may fulfil themselves.

Samadhi

The siddhi (lipi, stable rupa etc)\textsuperscript{11} continues to take a firmer hold of the akasha in swapna-samadhi. But as yet the hold is not entirely firm.

Sharira

There is a general adverse movement in Sharira, all the physical anandas being depressed & only intermittent in action & the subjective also superficially troubled

Arogya is attacked; the old affection of the eyes has revived, assimilation is put back, a copious rejection taking its place.

Uttapana does not prevail & the Shakti is discouraged.

In the little of Saundarya gained there are adverse signs.

Vijnana

Vijnana also is besieged by the old double asiddhi of tapasic & tamasic suggestions.

Siddhi

The general attack on the Siddhi is a denial of all the hopes of rapidity recently encouraged. It is again progress on the old lines of Anritam creating Ritam by advance & relapse, instead of the new lines of Ritam proceeding directly to greater ritam.

\textsuperscript{11} Closing parenthesis after “continues” in MS.—\textit{Ed.}
Swapna samadhi slowly enforces stability in the chittakasha. Double page lipi read, but not with entire coherency.

Dec 23.
The movement of Asiddhi continues although the larger Siddhi prepares by means of the Asiddhi—

Vijnana

T³ last night and this morning seemed to be disorganised and to lose hold of the objectivity; but afterwards there emerged a larger &c. more massive action, though less sure in details.

Especially, there is opposition to the Tapas-siddhi and an attempt to throw it back from the rapidity & sureness it had acquired.

Tapasic stress appeared; when it was absent, 80° acted frequently. In the action of the Tapasic stress, there were a number of contrary results, but a tendency was always created which acted in the mass, but with uncertainty of the detail.

Rupa is hampered by the affection of the eye which gives a disinclination towards Trataka.

Lipi continues to develop the page in the chitra, but it is not yet sufficiently legible. The double & triple line are frequent.

In samadhi the slow taking possession of the chittakasha continues.

The movement towards a larger trikaldrishti of the past & the future continues, but as yet it is neither fulfilled nor dominant.

Darshana

The Krishnakali darshana continues to increase its own normality.
Sharira

Arogya

The affection of the eye continues; it is evidently connected with cold, which it materialises; the materialisation of actual cold (catarrh) is not effective, but it has reestablished with great difficulty certain remnants. Cough does not materialise in spite of exposure.

Assimilation has been thrown backward for the last few days.

In another direction the Arogyashakti has maintained its gains, but certain remnants are more insistent than they have been.

On the whole the Asiddhi is for the present stronger in the objectivity than the Siddhi.

Ananda

Sahaituka Kama in its acute form reached a great extension of prolongation.

Ahaituka continuity has reached its lowest ebb and is unable for the present to reassert itself.

The other physical anandas are also less powerful in frequency of recurrence.

Subjective Ananda has been subjected to a revival of Asamata with regard to Asiddhi & Amangala.

Utthapana

Discontinued during the day.

Saundarya

The advance of saundarya is also checked in appearance.

Karma

Karmasiddhi is also stagnant. There is a great immobility everywhere. Points of asiddhi present themselves & threaten to become fulfilled.

Some of these points turn out to be illusions of actuality thrown out from a background of real though at present ineffective possibility; others are attempts to materialise possibilities.
Ananda
Ananda (kama) revived in the evening, continuous in seated asan, initially continuous otherwise. This under the circumstances of the day is unprecedented and along with the other advance in the afternoon constitutes a marked progress, in spite of the failure to establish spontaneous continuity.

Kamananda is also emerging from the vishaya & tivra in other parts of the body.

Arogya
The struggle over the eye affection continues. It is lessened, but not yet expelled.
Arogya as yet makes no rapid advance.

Vijnana
General vijnana again took stronger possession of the intellectuality in the evening.

Lipi
1. inflexible ideality, flexible intellectuality. (It is this which is the condition of the perfect ritam)

Dec 24
Sharira
Ananda
Spontaneous continuity of Ananda is attempting to establish itself. The spontaneity is manifesting, but not yet any dominant continuity.

Arogya
The eye affection has regained strength.
Assimilation, today, has improved.
Remnants expelled try still to rematerialise
There is acute sensation of catarrh, but only a point of material reality.
Uttapana
Arms. one hour. Laghima was easy but has not yet the required freedom from reaction.

Vijnana

T³
There was a great largeness of T³, but the defect of Tapasic stress and its reaction were prominent.
The final irresistibility of Tapas after long resistance was three times exemplified; but immediate siddhi occurred rarely.
On the other hand jnanam was almost full & luminous in ritam.

=Lipi continues its work of self-preparation

=Rupa is for the time being arrested in its progress by the eye-affection.

Dec 29.
The Record has been discontinued owing to the activity of the eye affection which is only now sufficiently cured to admit of freely reading or writing.

=The siddhi has during these days continued but without an organised or forcible activity except in T³.

=T³ from the 25th has attained to the coordination of the Tapasic & tamasic oppositions in thought, perception and telepathy. These are now at peace, seeking always to understand each other and usually succeeding. Something of the old nature of mutual hostility tries sometimes to recur, but unsuccessfully.
The movement is now establishing itself in Trikaldrishti and tapas-siddhi where it is as yet less final and successful.

=In Rupa certain forms have improved, eg the eye or eye and part of the face with a continual recurrence & obstinate stability
of perfection in all forms, both in antardarshi and bahirdarshi, but
with most perfection in the former. This is the reflected image at its
best.

Samadhi has been sometimes active, sometimes depressed, but
chiefly occupied with self-organisation in profound swapna.

Today Samadhi reached a very high organisation of perceptive
thought & vangmaya, even very profound samadhi admitting the
jagrat & partly coherent observation of the mind.

Ananda, sukshma shabda, sukshma gandha recur in samadhi.
Organised continuity of mental vision in jagrat antardarshi
continued in swapna.

Vani once more active

Sharira.

Utthapana

Arms— one hour.

During these four days there has only been utthapana of the
arms varying from half to three quarters of an hour without great
force. Today the force of utthapana was sufficient.

Ananda

Continuity is not achieved. The Kamananda has varied con-
siderably; the others have been intermittent, only tivra somewhat
more frequent.

Today all are again active, but not with full activity.

Arogya

Resisted all attack except in assimilation which does not yet
assimilate the new habit demanded of it. In Chakra there is no
visible advance except in force of M.A. [Maithuna Ananda]

In Saundarya Asiddhi is strong except at one or two points.

Karma

Mostly stationary except at one or two points. Nowhere any
exceptional results.
Vijnana

Rupa Samadhi –

In the evening crude rupa distinct in forms.

Samadhi at night & in the early morning was very successful & received its fulfilment afterwards. The obstacle to continuity has broken down entirely.

Frequent continuous action in stable rupa & connected series of action; frequent continuous conversation.

Lipi often continuous & fairly coherent except at the end when incoherency broke in again.

Continued rasa combined with appropriate action & experience.

The material of swapna samadhi is now complete in form though not yet full in content nor yet sufficiently effective in utility.

T3

What is lacking now in T3 is sufficient force of decisive telepathy, decisive trikaldrishti, decisive tapas-siddhi. This defect supplied, perfectly organised ritam will be possible.

But for the defect in jagrat rupa and vishayadrishhti the vijnana is almost complete in itself; but its organisation for utility in life-action is as yet only in its commencement.

Sharira & Karma remain incomplete. The struggle that began in the middle of the month has not yet ended victoriously.

Dec 30th

The action of the Vijnana is now assured of its final development. The Shakti must concentrate even more than in the immediate past on Sharira and Karma.

There the development is following the path of steady consolidation and patient overcoming of difficulties. The effect is a rapidity which is only disclosed by the subsequent results, but is not apparent in the course of the action except in certain points.
of swift realisation which either prepare definite finality or are the result of an obscure previous preparation.

The rapidity is therefore not definitive and not yet entire.

Rupa in the afternoon developed certain clear stabilities of form on the background. Otherwise it only manifested the general variety without stable distinctness which it had already attained previously.

$T^3$ is preparing the emergence of decisive activities.

Uthapana half an hour.

Ananda is evolving the pure spontaneous action which must be its definite base

In dream perfect continuous & coherent lipi.. Reading of a sort of Akashic record of 20 lines in the nervous world relative to the last Franco-German war.

Dec 31st

Rupa in the afternoon developed a greater freedom of images on the background, including almost all varieties of form & combination in the crude.

There was no definite advance in any part of the siddhi, only a sense of stronger preparation in the various members not yet sufficiently realised.

Spontaneous equable continuity of the Kamananda is the chief force visibly preparing

Decisive $T^3$ is not at present visibly efficient in its organised action. There is once again the state of avyakta, a mass of indefinite potentiality, which gives a certain sense of Asiddhi, but the Prana is not allowed to revolt.
Swapna samadhi maintains its gains.

There is visible progress in some around, not as yet definite organisation of advance.

In Kriti there are signs & promises of movement, not yet the movement itself.
Record entry of 7 October 1914

www.holybooks.com
January.

During December the advance has been chiefly in the third and sixth chatusthayas.

In the first, Asiddhi has been reduced to an occasional physical depression of the sukham which does not affect the being generally but only the nervous & physical layers of the physical consciousness. As a rule the full samata operates.

Positive Ananda is sometimes deficient. Asiddhi does not bring revolt, but only a temporary failing of positive Ananda and a depression of force and faith.

Everything being now seen as the play of the Lilamaya Krishna, revolt is no longer possible. It is also seen that all forces, all experiences act & occur, succeed & fail in pursuance of his self-fulfilment in the world. It is only in the relations of the Lilamaya with the Jiva that there is a defect, positive harmony proceeding by ignorance, uncertainty, some unfaith.

This renders itself by a defect of the second chatusthaya. Faith in the Yogasiddhi does not really falter except in relation to the Saundaryam. An increasing rapidity & sureness & safety, (dhananam satih), is acknowledged. But the decisive knowledge & effectivity being insufficient, faith in the entire rapidity is insufficient, faith in the Kriti grows, but is troubled by doubts.

Hence, the Ishwarabhava cannot fix itself & brings with it a

*The Record for 1–6 January 1915 was kept in the notebook in use since 29–30 September 1914. Between 2 and 23 January an “intermediate record” was kept in another notebook. There are entries for 2–6 January in both records; these contain some repetitions.—Ed.*
general laxity of the Virya and Devibhava. Nevertheless the faith & the Ishwarabhava grow steadily.

In the third chatusthaya satyam brihat has extended itself to the trikaldrishti, telepathy & tapas-siddhi, but have not yet been converted into the full ritam. Ritam is being organised, but is self-constructive rather than transcendently decisive. Therefore it lacks mastery & selfconfidence and fullness.

The defect is in tapas-siddhi. There is the play of forces, the acceptance of all forces, the effectivity of tapas in the end. But the balance wavers continually; the tapas effects itself through a struggle of mutual adaptation on the level of this action, not by union with a mastering will that transcends the action.

This defect is dependent on a defect in KrishnaKali relation & related to the defect of the faith & Ishwarabhava.

Swapna Samadhi has conquered all its difficulties and has now only to organise itself finally for steady manifestation and definite ritam and utility. In jagrat there is manifestation of all sorts of forms, but not yet a victorious hold of stable clearness on the Akasha.

Sharira is still in full struggle to manifest & organise itself.

Ananda has arranged all its terms, but cannot yet deploy them in a sure & normal continuity. Recurrence is established varying in frequency & stability in the different terms, but continuity is still prevented.

Arogya advances slowly. It has got rid of the permanence of certain affections & of all but the last remnants of their recurrence, but it is not yet sure of the non-return of rogas that have been expelled but not destroyed,—as instanced by the eye-affection. Assimilation still repeats the old see-saw between excessive consolidation and jalya-tejomaya dissolution. The Will for right assimilation does not succeed. The chakra makes advances in certain details, but not any organised advance. Will is effective slowly or swiftly in temporary movements.

Utthapana has abandoned the attempt at self-fulfilment by tapasya. But the exclusion of defect of anima by Will is not yet sufficiently advanced to replace tapasya.

Saundarya is still held back. The body is prevented from
obeying the Will. There is only a predominant, but slow and uncertain advance in some details.

Kalikrishna is manifest & established in the completed Brahmadarshana; but there is need of smarana still. As soon as there is smarana, there is complete darshana, but emerging out of the incomplete darshana in which Ananda is involved, not dominant & Krishna concealed by the extended Brahman.

In the person Kali is organised in the Maheshwari-Mahaluxmi-Mahasaraswati combination, the second element as yet insufficient, but the dominant Mahakali is occasional only, the normal bhava being the contained and dominated Mahakali.

This again is due to the gulf that still remains between the Purusha & the Shakti. The Purusha is the dominant Krishna, bala, Balarama-Aniruddha; but the Prakriti does not always feel the fullness of the tertiary dasya & the actual presence of the bhava of madhura-dasya. Hence the Ishwara is recognised, but the Devi is not yet Ishwari by expressing the dominant will of the Ishwara.

Hence karma is not yet manageable. Sahitya is powerful & effective, but hampered by the sluggish response of the physical instrument. Dharma grows in strength, but is not yet easy & sure except in certain persons & movements & there not with sufficient force. Kriti is struggling slowly to emerge, but is still enveloped.

Kama is growing continually in bhava, but awaits the Sharira-siddhi.

Shuddhi-Mukti-Bhukti are imperfect only by the imperfect physical response. Siddhi moves forward steadily & surely, but is not yet victorious.

For January the development of ritam, the entire union of KrishnaKali in the madhura dasya, the organisation for life & action of the three first chatusthayas & the fullness & force of the completed chatusthayas seem to be indicated.

The struggle is now in Sharira and Karma. Ananda is assured, but its organisation has to be completed by continuity. Arogya has to conquer the obstacles to perfect sati & victorious fulfilment. Utthapana has to conquer defect of anima. Saundarya has to break
down the wall of physical inadaptability. It is not clear how much of this can be done in the month of January.

The progress possible in Karma is still more obscure. A great development in Sahitya & Dharma is possible. Kriti is enveloped in doubt. Kama waits on Sharira.

Probably the resistance will finally break down, if not completely, in January February.

Jan 1st!

The day begins with a struggle as a result of which it is decided that no sadhana is necessary for the development of the ritam. The attempt at direct sadhana results in a return of old conditions and old defects.

T³ [trikaldrishti, telepathy and tapas-siddhi] is now proceeding normally. The main movement is towards the substitution of Ishwarabhava in the tapas-siddhi for the attitude of effort and aim of the Devi.

In Rupa also the old tendency to compel by tratak imperfect figures to become perfect, is from today abandoned. The imperfect figure is only an indication of the Drishti working upon the physical akasha to open it to the physical vision. The Drishti will do its own work unaided by trataka.

Ananda also must be left to perfect itself.

Sadhan is still needed in the rest of Sharira, but sadhan only of the discerning Will.

Lipi

By the faith

Trikaldrishti

Vague intimation that S [Saurin] & others would return about 11.30 pm. They came at 11.22—
Ananda
Shuddha Ananda with Kama & Premananda inherent in it is beginning to dominate Chidghana-Ahaituka.

Rupa
Stable rupa partially distinct at night. Perfect rupa with initial stability occurs occasionally.

KrishnaKali
The Ishwara is beginning finally to dominate all the action. There is always tertiary dasya, but it is generally void of the madhura. The madhura is now about to establish itself as the normal bhava.

This is evident in the darshana of external objects and there it comes automatically. It is less easy in the internal darshana. Kali is now everywhere revealed in the bhava of the madhura dasi dominated by Krishna & ministering to his bhoga.

This bhava is becoming by a secondary motion more normal in the internal darshana—

T³
The decisive trikaldrishti is becoming more frequent & better justified in its frequency

Kriti
Kriti is manifesting tongues of potentiality, but at present it is action without any certain result.

Samadhi
In swapna samadhi lipi is still subject to a certain incoherence, ordinarily. Coherence of phrases is common.

St. [Sortilege]
1. The airship
2 Matches
3 safety.

www.holybooks.com
Sharira

Ananda was recurrent, not continuous. There was frequently a physical obstruction.

Arogya also does not advance beyond the point already attained.

There was no utthapana

Samadhi

Samadhi at night was unproductive.

Dream was confused and entirely occupied with present associations.

Siddhi

The movement just now has reverted to the condition of obscured and disaggregated progress with preparation behind the veil.

Doubt of the Kriti has taken a somewhat acute form, although there is a struggling faith which refuses to retire.

Doubt of the Yoga-siddhi can no longer be reestablished. There is only uncertainty of the rapidity.

The ritam is steadily advancing under all.

Jan 2.

The ritam of telepathy is now becoming more & more marked and decisive. That of trikaldrishti is still hampered by hasty tapas-sic decisions. But these are converting themselves into excess of statement rather than misstatement.

The element of misstatement especially survives in the combination of Trikaldrishti & Tapas-siddhi.

The Tapas siddhi is now in a period of recoil. 80° acts seldom or not at all; long & obstinate resistances, contrary movements are the rule.
Utthapana
Arms, one hour. Easy; but afterwards there was some heaviness in the shoulder-muscles.

The Asiddhi is associated with an attempt of the Dwayavin consciousness to reassert itself and support an activity of the tamasic dhriti in the physical consciousness opposed to the constant manifestation of the Siddhi. The success has been to create a cleft between the divine consciousness & the physical by which the latter sees all things as the Brahman in the many, but not the Many as the One.

There is an alternation between this division & the integral consciousness.

Rupa
Jagrat Rupa of all kinds, except the perfect, with an initial stability, just before the eyes, emerging from pranic akasha.

Utthapana
Right leg, horizontal, recumbent on side, 20 minutes. At the end strong defect of anima,—always recurrent defect.

Saundarya
A certain gain has been effected in one of the features, but this is not accompanied by any general movement.

St.
1. Forget me not (nityasmarana)
2. The New Way (ie of the entire dasyam; by this the nityasmarana will come)

Trikaldrishti
1. The hold of the asiddhi passes away today
2. 4 days of progressive siddhi.

Ananda
The physical Anandas again became active.
Lipi
1. light
2. destiny belongs to the Ishwari
3. entire stability of the lipi has to be reinstated (fulfilled)
4. tapas siddhi
5. faith in the entire rapidity is about to be justified
6. fortnightly attack of the Asiddhi.
7. This is the entirety of the faith in the Yogasiddhi.

Jan 3d
The decisive Trikaldrishti is now regularising itself, putting away to each side of it the tapasic and tamasic insistences.
This involves a certain putting aside of the Tapas siddhi of tapasic aishwarya vashita, which has to give place to the self-knowing divine Aishwarya-Ishita-Vashita.
The Tapasic stress reveals itself more and more as a force working for a future effect in opposition to resistances (tamasic stress) and mistaken in its idea of time and circumstance because of absorption in the sureness of its own fulfilment. The tamasic stress is more in harmony with present time and circumstance, but mistakes present for future non-fulfilment.—

The day was chiefly given to work for the Review.

Utthapana half hour. At first dullness, afterwards force of the laghima.

Lipi active in sthapaty & manifesting page in single & double word, vivid & legible, but not entirely fixed.

At night activity of the tejomaya rupa in Swapnasamadhi.

Verification of distant telepathy.
Jan 4th

The morning devoted to work for the Review

Vijnana

T³ continues to progress. Many combinations which come automatically in the unillumined mentality, prove to be right in every detail. This is a definite beginning of the ritam.

Tapasic stress justifies itself more & more as a promise of the future. But though the examples are many & striking, the fulfilment is either not invariable or does not always present itself to the observation.

80° does not now occur, but on the other hand there are instances of the almost immediate effectivity (70°) even where there is a previous opposite tendency & intention. Not yet, however, where the intention is strong and fixed, except rarely.

Stable dense rupa & dense developed (less stable) came frequently in jagrat antardrishta.

In swapnasamadhi there are now frequent instances of true scene, event & conversation of this world. Combinations are becoming more frequent & firm. But as yet there is not the use of samadhi for life-utilities.

Anandamaya Ishwaradarshan in all is now normal, but not usually intense.

Sharira

In Arogya there is something of a setback.

Physical Ananda can no longer be annulled. It can only be obstructed by a strong pressure.

The hair continues to be thin in front and especially on the left side. It is in the lower layer that the Asiddhi is obstinate.
Suddhananda is now fixed behind the Chidghana & Ahaituka. Prema & subjective Kama Anandas are as a result normalising themselves.

There is no indication as yet of any decisive movement in the Karma.

Uttapana of the arms one hour, laghima effective but burdened by [subsequent] reaction of the defect of anima.

Vijnana
80° acted twice in succession once for exact detail of aishwaryam, once after failure of aishwaryam for general effectivity of ishta

Swapnasamadhi continues at the same level wavering between imperfect and more perfect organisation.

Sharira
Denial of Arogya was a little stronger & one of the gains was temporarily abrogated.

Ananda sometimes obstructed, always impeded, yet maintains itself.

Jan 5th
In the morning a strong obstruction to the Ishwaradarshana preventing the physical consciousness from enjoying the light of the Affirmations even though aware of their actuality behind the denial.

This obstruction contains in itself a more entire, ready & solid participation in the siddhi by the whole conscious existence. The subconscious is being rapidly trained by the force of its obstructed aspiration towards the light.

1 MS subagent
The response to the Asiddhi proceeds from the subconscious; as the source of these responses, it is being purified from them and fortified for the response to the Siddhi.

In the waking mind the obstruction creates a conclusion of unfaith in the rapidity of the Siddhi &c, consequently, in the importance of the karma.

The element of error in the satyam is temporarily emphasised in order that the resultant truth may be more sure and self-assured.

= St.

1. ऐः प्र श्रोता प्रतमस्य मायया ऊँचा द्वान्: मुक्तिप्रेषणं विचिं।

Agni, the divine force, precedes the present movement of action by the concealed creative & formative Maya of the Master of the Yoga holding in himself a thought pure in form of vision & exalted to the Vijnana. This is the sense of the present obstruction & its eventualities.

2. Any person must be able to trace his past, present and future.

Sharīra

Ananda oppressed at night &c in the morning acted from time to time during the day.

= Utthāpana

1. The utthāpana of the arms failed because of the denial by physical heaviness.

2. Left leg, horizontal 27 minutes. Strong laghu mahima, strong defect of anima with kampana, finally prevailing. Intervals of pure anandamaya anima after the tremblings.

Samādhi

Jagrat

1. A river with islands, chhayamaya but clear—occasionally dense

2. The same with a house on a small island in the middle, at first lit by a lamp which was afterwards extinguished

3. Objects, stable; one dense (the reel of thread[]).
Swapna
Scenes, objects, activities. Brief stability
Lipi, legible only in detached sentences of an illegible page or tract.

Trikaldrishti
The four days of steady (obstructed, not rapid) progress are over. The Lilamaya Ishwara darshana is confirmed.

Jan 6th
Today, the obstruction to the Lilamaya darshana is less powerful, though equally obstinate. It is put aside easily, but obscures the plenitude.

Satyam is again recovering its elasticity & throwing off the obstruction. Ritam is still obstructed, but not entirely. Tapas siddhi meets constantly the obstruction & immediate denial, though there are instances to the contrary.
Jan 2d

The continued oppression of the Siddhi is met by an equally effective repression of the attempted Asamata. The attempt to reintroduce duhkha and Ashanti has definitely failed.

For some time the force of the kshatriya viryam has been suspended. It will now be restored to its firm activity.

In the saundarya the attempt to denude the head of the fresh growth of hair has failed. The thickness has not returned. There the two powers of youth and age are evenly balanced. With regard to the whitening, the new growth is black; it is only the old hair that keeps up the appearance of age.

The remodelling of the nose has not proceeded far, but a certain definite advantage has been gained.

With regard to other features the resistance of the Prithivi continues.

St.
1. Forget me not — (nityasmarana[])
2. The New Way (ie of the entire dasyam,—by this the nityasmarana will come.)

Telepathic Tr. [Trikaldrishti]

The hold of the Asiddhi passes away today.

Ananda

Ananda (kama) has been intense & continuous &, instead of being discouraged, assisted by manasa abhyasa.

Tivra shows a sufficient strength of spontaneity for a beginning of the new method.
None of the other Anandas is, separately, very active.

==

*Script*
There is as yet not sufficient certainty in the guidance. Its details of time & arrangement seem sometimes to be contradicted by the event. This defect is about to be removed.

==

*Lipi*
1. This is the entirety of the faith in the Yogasiddhi.
2. fortnightly attack of Asiddhi
3. light.
4. destiny belongs to the Ishwari.
5. entire stability of the lipi has to be reinstated.
6. tapas-siddhi.
7. faith in the entire rapidity is about to be justified.

==

5 has been already fulfilled. Stable lipi of two lines has manifested with a greater sureness & vividness than before.

==

Ananda of raudra & vaidyuta are again active, as also vishaya—

*Samadhi*
The restoration of activity, but not as yet any new development.

==

*Vijnana*
Activity was restored after an interval of the play of unilluminated mental forces. But it is not as yet a well-organised activity. The illumination is opposed and insufficient except at times.

Script.
The main movement and utility of the last two days has been to deepen samata (nati and rasagrahanam) and to strengthen the general force of tertiary dasya.
The elements of bhoga & udasina nati must be so combined as to unite into a secure and full sama Ananda.
Tertiary dasya is only complete when anandamaya nati is complete

Anandamaya nati is the condition of madhura dasya and madhura dasya of the full vijnanasiddhi.
But it must be the madhura dasya of Mahakali-Mahasaraswati, not of the merely passive Mahasaraswati.

Trikaldrishti-Vani
4 days of progressive siddhi.

Jan 3d
The decisive Trikaldrishti\(^2\) is now regularising itself, putting away to each side of it the tapasic and tamasic insistences.
This involves a certain putting aside of the Tapas-siddhi of tapasic aishwarya-vashita, which has to give place to self-knowing divine Aishwarya-Ishita-Vashita.

The morning has been given to sahitya for the Review; as also part of the afternoon.

The process with the first two Chatusthayas continues, as well as the progressive normalisation of the Krishna Kali consciousness in all vessels. The Anandam Brahma is already normalised.\(^3\)

The Tapasic stress reveals itself more & more as a force working for a future effect in opposition to resistances (tamasic stress) and mistaken in its idea of time & circumstance because of absorption in the idea of its own fulfilment. The tamasic stress is more in harmony with present time and circumstance, but mistakes present for future nonfulfilment.

Activity of the tejomaya rupa in swapnasamadhi.

\(^2\) NB. An error. This was telepathic and not real trikaldrishti, called decisive only because the prevision and the event happened to agree. [Sri Aurobindo’s note]

\(^3\) Errors. Both were imperfect and temporary. [Sri Aurobindo’s note]
Jan 4th

Morning devoted to Sahitya for the Review.

T³ continues to progress, many combinations coming automatically in the unillumined mentality, proving to be right in every detail.

The siddhi is now regulating itself in the new way. But the normal movement has not yet established itself in three members of the Sharira & in the Kriti.

The two trikaldrishtis of the second [January] have justified themselves. Moreover the full movement of the Asiddhi only lasted for three days at the most. There has been some relic of it for these two days also—But these will now pass away.

In Vijnana only jagrat rupa is giving real trouble. The rest is all moving forward very steadily in spite of the obstruction deliberately & massively opposed to it.

The Asiddhi of Samata is condemned to be now purely physical.

Two quickly successive instances of 80º, one of aishwarya in detail, the other of ishita in general movement.

The contradiction of the Sharira has now to be removed, first in the Arogya & Urthapana, then in the Saundarya.

Jan 5th

This record is not to replace the other,4 but to supply another element.

4 i.e., the record written in the other notebook, which was temporarily abandoned after the sixth. —Ed.
The obstruction now offered is to the conscious use of the Affirmations. They are all present in act, but the physical consciousness is prevented from enjoying their light.

This obstruction serves eventually the end of a more entire & solid participation in the siddhi by the whole conscious existence; for the subconscious is being trained through the aspiration towards the light. It is from the subconscious that the responses to the Asiddhi proceed, & the source of these responses is being fortified and purified. But the waking mind derives from the sense of obstruction a conclusion of unfaith in the rapidity of the Siddhi and the importance of the Karma.

The element of error of the satyam is therefore emphasised this morning.

Agni, the force of activity, precedes the present action by the concealed creative & formative Wisdom of the Master of the Yoga holding in himself a thought pure in form of vision & exalted to the Vijnana.

The denial of the Lilamaya Ishwaradarshan made strongly this morning, is again rectified.

The withholding of the Madhura Dasya bhava has now to be rectified.

The Ananda oppressed at night and in the morning, is again restored to its activity.

Jagrat samadhi.

Landscape
1. A river with islands, chhayamaya, but quite clear.
2. The same river with a house on a small island in the middle; the house at first lit by a lamp, but this went out.
3. Objects (stable); one dense (the reel of thread).
Note—1. became dense at times.
Some sukshma-shabda (vak).

Swapna-samadhi
Scenes, objects; actions. Brief stability.

Utthapana
Left leg, horizontal, 27 minutes.
Strong laghu mahima; strong defect of anima with tremblings only succeeded in prevailing after 25 minutes. Intervals of pure anandamaya anima after the tremblings.

Back; 1 minute 30 seconds. Mahat laghima did not fail, but defect of anima prevailed.

Script.
The four days, as was perceived by the telepathic trikaldrishti, were of steady progress against obstruction as opposed to rapid progress.
The progress has been especially in Ishwaradarshana & telepathy.
It must now extend itself to tapas & trikaldrishti,—though in the latter also there has been progress.
The struggle in the Sharira must continue.
In the Karma there will be some progress.

St
Any person must be able to trace his past, present and future.

Script
The failure of faith in the Kriti and the rapidity was inevitable at this stage, since the forces that oppose are allowed to justify their denial in appearance at most points.
Yet it is evident that the great force of Aishwarya Ishita continues, only it works against a stubborn resistance which prevents rapid result and rapid progress.
In reality the Ishwaradarshan has been rapidly effected; it is easy, it is normal; only it is still liable to forcible interruption &
obstruction. The difficulty is no longer in the Siddhi asserting itself, but for the Asiddhi to prevent the self-assertion even by massing all its force on the point.

In the other movements the rapidity is veiled by the opposition

The rapidity will manifest in spite of the obstruction.
The Kriti will fulfil itself in spite of the denial.
The Sharira will prevail in spite of the struggle.

Jan 6.
St.

But lo he speaketh boldly & they say nothing unto him. Do the rulers know indeed that this is the very Christ?

The revival of the Satyam is a preliminary to the larger assertion of the ritam.

In the thought the ritam is restored. It has to be restored in the trikaldrishti in an enlarged movement.

Sudden & strong attack of the old kind of Asamata, leaving vibrations behind in the outer parts of the physical heart & mind.—

The day has been for the most part dull and inactive. This inactivity is a preparation for a greater passivity of the instrument and a more intense normality of the tertiary dasya & yantrabhava.

Samadhi

As yet obscured in its more effective parts, but active in all.

Passivity is still being perfected; the straining of the consciousness for the result is being systematically discouraged.

As the darshana of the Lilamaya Ishwara has become normal, so the madhura-dasya bhava in its full intensity must become normal.
Jan 7th
The passivity has now to be tested by action.

The References point both to the idea of the continual progression in the Yoga, not stopping short with an imperfect result.

Lipi
1. telos trikaldrishti tapassiddhi.

The physical passivity is now complete; that of the mind & heart must follow.

Samadhi
Jagrat Antardrishta
1. Stable developed forms (books, reel)
2. Human group.

Swapna
Activity of organised drishti.. (not the most perfectly organised).

In the afternoon there was a return of Asiddhi, but the Ishwara persists in the enforcement of the Madhura Dasya. This will now be harmonised with the Tapas, the latter being delivered from the shadow of the independent ego.

The trikaldrishti is acting with the ritam on broad lines, in large questions akin to the jnana. The application in time & immediate circumstance does not yet take place.

Dream very coherent; a whole story read in dream lipi.

Jan 8th
The struggle between Siddhi & Asiddhi continues. At first sight obstructive Asiddhi seems to have replaced positive Asiddhi and to hold the field.

It is now suggested that this will endure till the fortnight is
complete, 14th January, but there is also a suggestion that this formation will be contradicted.

The necessary realisation which it is so difficult to establish as a normally working practical view applied to every little detail of thought, feeling, action & event is that of the undivided Ishwara, who is at once fulfiller & opponent, Deva & Vritra. It is the relics of the Dwayavin consciousness that are the strength of the remnants of subjective Asiddhi.

Trikaldrishti is now active, both telepathic & decisive, but without ritam of time & exact arrangement of circumstance.

Nevertheless this ritam also is becoming much more frequent. There is an attempt to make the telepathic or mental trikaldrishti one with the decisive or veiled vijnanamaya. The completeness of the satyam of telepathy & telepathic trikaldrishti is becoming more & more absolute. The ritam lingers because of continued misapplication in time, circumstance, eventuality.

This is due chiefly to the tapasic suggestion at the right side of the head near the ear, false knowledge of false sruti, which is substantially true, but erroneous in circumstance. There are other elements, tamasic suggestion etc, but these are less important.

Tapasic suggestion more & more frequently fulfils itself in the end, though baffled at the moment. Tamasic suggestion fulfils itself chiefly at the moment, though still often in the finality.

Tapas is at present depressed and occurs as a rule only in the finality, but often ends in an adverse movement.

Ananda also is depressed, Arogya does not advance, Urthapana makes no appreciable progress, Saundarya is immobilised. —

Karma likewise is for the most part obstructed.

With the remanifestation of the intense Kamananda a progress is visible in Vaidyuta which now flows through the body with a great intensity, distinctness & spontaneity. Tivra is also manifesting greater intensity & vishaya is acquiring it.
Uthapana
Arms—about one hour. Some heaviness
Left leg—10 minutes.

Trikaldrishti progresses. Many instances of decisive trikal-
drishti of the nature of Chit-Tapas.

Some activity of Tapas-siddhi & Jagrat-rupa.

Samadhi
Jagrat Ant.
Perfect forms, but on the borders of sleep

Swapna
Reading of successive lipi.
Long continued action & rupa with intervals of eclipse.

Jan 9th
महं नो अश्व योथयोयो राथे विचित्तमति
यथा तिः अविहय: सत्यशब्दम् वायम्
हुजाते अशुभुस्वरूपे।
The Sortileges are always appropriate; they are not always
immediately fulfilled in their entirety. The reference given describes
the movement towards which the Siddhi is directed, as yesterday’s,
अते व्रतमासिंश्च र्गो वामवाय: भूते: gave the preliminary movement
begun yesterday, not finished.

Lipi.
1. Yes, it is already finished in the verity of the ideality
   (on background)
(but has to be realised in the physical consciousness)
2. वसी इन्न मुखिः चतुर्थी—(Chitraliipi)
   चतुर्थी = प्रथु = the physical consciousness.
   Ideality is accomplished, but has to be imposed on the whole
   physical consciousness. The siddhi of the mental & nervous
dominating the physical are already complete, but they are veiled by
Krishna as Vritra in order that they may not interfere with the
enlightenment of the isolated physical consciousness.

www.holybooks.com
3. good Tuesday (chitra)—
   ie this movement will be complete by Tuesday.

4. perfect effectivity in the sahitya siddhi—(savalambara)

   In the sahitya siddhi ineffectivity lingers in the form of a physical obstruction which prevents the inspired action of the vak. It can always be overcome, but its interference must be eliminated.

   \[ Utthapana \]
   Left leg.—horiz. 30 minutes—attacks of an-anima ineffective, discontinued by will, not from necessity.

   \[ Samadhi \]
   The same action of the samadhi continues
   In ant [antardrishta] jagrat dense & developed rupa (book, shoe).
   Some activity in bahirdarshi of rupa on the background.

   Frequency of ritam in trikaldrishti is now normalised, but is not entirely complete and therefore not invariable.

   It appears as if stable rupa on background in bahirdarshi were now established, but it is still far from perfect.

   Stable clear rupa of all kinds, but imperfect in force of distinctness & lifelikeness is established in both antardrishta & bahirdarshi. Its development of perfection has to be awaited.

   Therefore the vijnana continues to develop in spite of all obstruction with a limited & indecisive rapidity.

   Ishwaradarshana is passing through the stage of Vritratwa after its final emergence. It is there but often concealed by the Vritra effort to restore the old bhavas of the darshana with a view to entire denial of all darshana. But this is now impossible.
At night

Inkstand,—carriage & horses, house, & other objects; none of these, except the first, when it is dense or developed, is entirely distinct.

Human figures, groups, landscapes, scenes.—the same characteristic—

Very crude images of bird, butterfly & beast.

Kamananda, long intermittent, has become again spontaneously continuous. It so remained in act or tendency throughout the evening and till midnight.

Today Kavya was resumed.

Arogya continues to be subject to the Asiddhi.

The slight gain made in Saundarya is now being disputed by the Asiddhi. It is no longer apparent.

Swapnasamadhi inactive at night. Dream confused.

Exact instance of time trikaldrishti, S [Saurin] waking & rising at 3 pm instead of 4.30 pm. In other instances the time was only rough & approximate & hesitated between different alternatives (eg 8.15 & 8.30).

Jan 10th

That is, the growth of the Vijnana in many forms increases, its mahattwa is not destroyed by the opposition.

It increases close about & within the adhara bringing with it the Ananda; it is becoming more & more illuminated in the physical consciousness which increases in peace & joy.
It is applying itself unperceived to the minds of all and overcoming the opposition of the littleness, besieging the mentality of the world with the Truth.

All this is justified by the observed facts.

There is entire satyam and almost entire ritam & brihat of the jnana & the telepathy in relation to outward event; decisive trikaldrishti is yet defective owing to defect of tapas siddhi and prakamya vyapti is not yet normally brihat, although it has all the necessary capacities.

For the rest T³ is moving forward in the mass towards inevitable fulfilment.

Lipi
1. Tapas-siddhi entirety of tapas-siddhi
   (Tapas has to become one with knowledge in order that there may be entire tapas-siddhi).

Utthapana
Arms. morning—half an hour, heaviness & pranic fatigue eliminated
   Afternoon, half an hour, force & ananda, but reaction at moment of cessation.

Kavya.

Tapas-siddhi & lipi in work of formation, nothing final or definite.

Arogya still refractory.

Lipi—
2. sahitya-siddhi.
3. rupa-siddhi in the light
4. delight.

www.holybooks.com
Kamananda has recovered its tendency of continuity. The other shariranandas manifest from time to time.

The madhura dasya is attaining continuity, but the mere dasya is still too dominant over the madhura. This is a defect that from tonight will begin to disappear.

The one real obstacle is insufficient sraddha in rapidity & in kriti.

Sahityasiddhi is now assured in all its parts. The physical opposition, it will be found, is disintegrated. Only the remnants of it remain.

Ritam of trikaldrishti is more & more emerging; only it is not yet applied to important things in a large & definitive fashion.

Telepathy of thought & feeling is recovering distinctness, but is not yet sufficiently confident of its ritam.

The Mahakali-Mahasaraswati consciousness with the Mahaluxmi colour is finally taking form, but has not yet sufficient force of Mahakali.

For today in the Script, a progress in jagrad rupa antardrishta, in tapas-siddhi and in lipi was specially indicated. These indications often denote a movement of tendency rather than of definite or immediate fulfilment.

Lipi is visibly arranging the page behind the veil and shadows out from time to time, in front of it the reflection of its concealed movement. This it did yesterday, the large page appearing, but unvivid and therefore illegible. In front, entire vividness & stability of the long single line was reasserted, less vividness & stability of the double line, still less of the triple. The lipi still keeps the tendency to dissolve when it has been read. This is the chief obstacle to progress. Only sthapatyā lipi has conquered it. Chitra sometimes prevails. Akasha tries to prevail.

In antardrishta there is the same movement of lipi less pronounced in its partial success.
Tapas-siddhi seems to be preparing its movement rather than to be actually advancing.

The dasya of Mahakali-Mahasaraswati with the Mahalakshmi tinge is now affirmed.

Whenever the Mahakali consciousness has been affirmed in Mahasaraswati, it has had too strong a tendency to overwhelm both Mahasaraswati and Maheshwari & assert the violent Asuric Kali bhava. For this reason the combination Mahasaraswati-Maheshwari has been constantly strengthened against this assertion & each time it has thus been strengthened, it has absorbed more & more of the Kalibhava which it denied.

Tonight the combination Mahalaxmi-Mahakali was effected & held steady against the Asuric Kali tendency which it then took into itself. By this action the perfect harmony was established; for Mahalaxmi has always asserted itself in the Maheshwari-Mahasaraswati formula, that is to say, with the right continent and the right pratistha. All that has now to be effected is the strengthening of the Kali tejas & virya till it reaches the right intensity without disturbing the other elements of the harmony. The intensification is already proceeding.

The result is the divinised Asuro-Rakshasi Kali with the Pisachi, Pramatheswari & Pashavi contained in the Rakshasi element. Mahalaxmi-Mahasaraswati brings with it the Gandharvi element.

The smooth development is now possible because the dasya is now complete and is taking the madhura into itself. The bhava is firmly founded on jnana & state of being & the Ishwara is being felt in all thought, feeling & action. The distinction between Ishwara and Prakriti is not yet merged in the unity + difference, but the Prakriti is subordinate & more conscious of being a form of the Ishwara.

Mahalaxmi brings with her bhakti & prema, the stable permanence of which was so long denied.
Jan 11th

The growth of ritam in the trikaldrishti continues, but still works chiefly on the material of the telepathy.

There is also a movement towards ritam of the impulsions which is not yet complete, but their satyam is now pronounced.

Sraddha in the guidance is now becoming absolute, but is still only partly illumined by knowledge of the exact drift of the guidance. Nevertheless, the exact sense & utility of each movement, whether overtly favourable or apparently adverse is more & more understood.

The sraddha is limited also by the doubt of the rapidity & of the kriti. In the vijnana & subjectivity generally the doubt of rapidity is giving way to comprehension of an increasing swiftness & sureness in the development; but in sharira & kriti the view is still blind. It is certain that something will be done, but the way & the extent is withheld from the knowledge. It only appears as a speculative formation.

Samata is almost entirely free from reactions of positive depression. There is only a shadow of depression & impatience due to defect of tapas-siddhi.

Sraddha in exact tapas-siddhi once accomplished there will be no farther defect of the first two chatusthayas.

The completion of the third is therefore the practical assurance of the whole Yoga-siddhi. The rest is only a matter of Time.

Jan 12th

The progress is now rather in thought & sahitya; in the rest there is more of preparation.

The force of the Kamic chakra & the sahaituka kamananda is increasing, but the Arogya is not sufficient.
There is a constant application of tests to the samata; but except momentary touches of depression & impatience, there is no result. The sama Ananda increases constantly & the only shadow over it is that of the recurrent unfaith.

On the other hand Shakti is affected by non-fulfilment and Asraddha. Tapatya continues, but fitfully where there is not the faith and without assured Ananda.

The Siddhi seems to move towards the Ananda of a purely disinterested and instrumental Tapatya not depending on faith in the results. But this brings a certain indifference to the Tapas-siddhi which cannot be final.

Jagrat rupa is at last manifesting really stable forms of all kinds that are at the same time clear, vivid & complete.

4 footed animal forms, long withheld by return of asiddhi, today manifest freely, but at first had no stability. They have already however begun to assume stability, though the movement is not yet successfully accomplished.

All this is in crude & with trataka, just in front of the eyes in a thick pranic akasha.

The figures at first ran swiftly away to the right, but they can now be kept floating before the eyes.

Both these results, reappearance & initial stability of four-footed animal forms and the cessation of the fugitive movement, are instances of almost instantaneous effectivity of tapas.

Lipi continues to develop fixity of single line and legibility of the multiple line.

The advance of rupa has come at a moment when a long obstruction made it appear impossible to push forward this siddhi.

It was followed by an outburst of successful tapassiddhi after a long period of ineffectivity. In the course of two minutes there were
six or seven instances of aishwarya siddhi swiftly effective against which all resistance was helpless.

Uthapana of arms one hour, not yet free from slight defect of anima.

Of legs for eight minutes, medial position, strong & successful oppression of the laghima.

Bahirdarshi rupa at night began to repeat the movement of the day.

A certain movement of Kriti, but not of any great importance in itself.

Dream & samadhi continue in the same condition, the first subject to confusion, the second somewhat inactive, but capable of stability.

Jan 13th

First stable page lipi—chitra—Not legible at once, though very vivid. Legible line [ ]\(^5\) by line. But the preceding lines once read remained firm & could be re-read. Some seven or ten lines with fairly long phrases (about 7 words), a phrase to each line.

Tapas-siddhi continues.

The force of the Ananda of event increases, although the surface nirananda (negative rather than positive) still continues.

The faith increases slowly. The rapidity now manifested is a relative rapidity, a rapidity of gradual progression, not a positive and masterful rapidity. The body, the physical consciousness, the physical akash, the physical world are being moulded to the siddhi, but present still a tamasic resistance which reproduces mechanically

\(^5\) MS &
the old forms of asiddhi. Hence the inability to advance with a 
positive rapidity.

There are other signs of a revived effectivity of Tapas-siddhi, 
but as yet it is not decisively extended to Kriti or to Sharira.

Uthapana Arms one hour. Defect of anima a little more 
heavy than the day before.

Samadhi –
Long sleep. Struggle to conquer the tamasic nidra, only slightly 
successful.

The physical consciousness attempts to escape from the con-
continued action of the Vijnana, not from hostility, but from tamas,
indolence & addiction to easy & accustomed methods.

Telepathy of thought frequently occurs, but in a scattered form.
It is not well-organised in the ritam.

The whole action now is one of adjustment occurring automatic-
ally, like a machine that is gradually putting itself to rights. . –

The attempt to conquer tamasic nidra continued. At night it 
was largely successful. There was a sense of samadhi rather than of 
nidra in the sushupti.
Swapna samadhi was rich in its activity & jagrat forms of 
considerable beauty (sea-scapes) appeared; but the more perfectly 
organised samadhi was not active.

Dream developed a great accuracy & considerable coherence 
of successive scenes & incidents, but the names & human images 
belonged to present ego & its associations.

In Arogya there is a struggle with revived form of old malady. 
Assimilation does not advance.
Saundarya is also stationary.
There seems to be a promise of recovered rapid realisation; but as yet there is no realisation.

Jan 14th

After a struggle with resistance the effective tapas-siddhi began to work as yesterday.

There are exceptions to its action of which the trikaldrishti becomes aware at the moment of tapatyā. But this awareness is sometimes contradicted by a tapasic movement.

Utthapana. Arms, half hour. Defect of anima stronger, stiffness.

Return of Asamata in the forms of impatience, disbelief & duhkha. This came as usual from the unfulfilled promise of the Tapas & a violent repression of the siddhi. It is a direct denial of the suggestion made yesterday that the Samata is at last about to accomplish a complete finality and that rapid advance was about to return.

The period of asiddhi has now covered a whole fortnight, although for the most part (ie except in the body & in the rupa samadhi) it has taken the part more of an arrested siddhi than of any positive recoil. There have been movements of recoil, as in the samata today.

Darshana has gone back sometimes for a moment to the perception of the mere man in the Sarvam Brahman; but its normal pitch is now the Anandam J. A S [Jnanam Anantam Sarvam] Brahman as represented by the individual limited mental consciousness.

The Darshana of KrishnaKali is no longer normal.

It is now, however, manifesting again holding in itself both the double Personality & the bhava of Purusha enjoying Prakriti.

Stable scene & movements in scene in the jagrad antardrishta.
1 January–27 February 1915

Serious & unforeseen blow to the Kriti, received without any reaction except incertitude & loss of faith in the Kriti or rather admission of the possibility of being entirely misled in the conception of the future.

At night perfect swapnasamadhi.
Intense, distinct & vivid vishayas, touch, hearing, taste, smell frequently repeated and well combined with rupa, with incident & with each other.
Perfect stability of rupa continued into the jagrat antardarshi.
Perfect coherent conversation
Rich activity of forms, scenes & incidents.

The only defects that remain are insufficient prolongation of the continuities, inapplicability to use in life and imperfect memory after the samadhi is over.

Jagrad rupa & vishaya are now the only parts of the Vijnana which are not well advanced; though none are yet finally perfect in their ordinary action, except pure jnana.

Sharira & Kriti continue to be backward, & this backwardness exercises its reactionary effect on the other chatusthayas.

Nevertheless now that the first three chatusthayas & the sixth are taking form, the power can be more concentrated on these so that the final question may be more rapidly fought out

Jan 15th
Clear & stable rupa on the background are now beginning to appear in bahirdarshi.

The period of dominant asiiddhi seems to be over, since the obstruction in vijnana has proved ineffective. But the obstruction in Sharira & Kriti remains.
By the removal of the artificial obstruction of Asiddhi the Krishna Kali consciousness of the Anandamaya Purusha has been immediately normalised in all things & beings.

The sense of being in all things & all things being in oneself has returned.

The Devi envisages herself as the Ishwari though in conflict with her present world-form in order to purify & uplift it.

---

**Lipi**

1. The object is faith in the tapas-siddhi.
2. Myself testing the opposition.
3. Honestly hopeful siddhi
4. The enthusiastic faith is still obstructed by the unfaith in the tapas-siddhi of the Kriti.

---

**Utthapana**

Arms one hour, stiffness more pronounced, but defect of anima less effective.

Kamananda which had been dulled becomes once more active.

Animal forms appear on the background & attempt to be stable, also objects, but the latter especially are not fine or correct in their outlines.

All kinds of forms & combinations are now so appearing as chhayas on the wall

Stable clearness has heralded but as yet failed to establish itself.

---

In jagrad antardarshi entirely stable forms attended sometimes by entirely & long continuous action are now well-established & begin to be various, but are surrounded by an atmosphere of dimness which makes them appear entirely crude though otherwise complete & even quite perfect & definite in form.

It is noticeable that continuous action here has a far better hold of the akasha & is far more firmly held by the vision than in swapnasamadhi.
Perfect rupas begin to reappear in the bahirdarshi, but they are still momentary.

Sukshma Vak is again attempting to manifest in the bahirdarshi—

A struggle over the Tapas-siddhi continues—

Perfect rupa in bahirdarshi at night also, but momentary—

Tamasic nidra took again some hold, but not a strong hold. Dream was confused. The higher parts of samadhi did not appear.

On the whole a day of progress.

Jan 16th

Tapas-siddhi is still active, but usually against strong resistance. 80º is long suspended.

Dream & samadhi are still under the shadow of the tamasic nidra; there was only one new outbreak, the inscription in antardarshi, novae suae patriae percipere. The first two words were slightly deformed “nuovae suoaee”. This inscription responded to nothing in the waking mind and was of the nature of Sruti.

Darshana varies between the perception of the lower Purusha in the individual, Anandamaya Brahmamaya, occupying Prakriti, & of the Lilamaya embracing & occupying all individuals.

The latter is the normal perception, but slides back into the inferior view. The darshana of Krishnakali is replaced by the darshana of Purusha-Prakriti.

The Ishwaribhava has again given place to the Devibhava with the Kali force quiescent and almost absent.
There has therefore been no definite progress during the day, although certain signs for the Kriti are good.

==

Utthapana

Arms—half hour. interrupted (diminished defect of anima)
Neck 10 minutes (strong defect of anima)

==

Samadhi

Obstruction of tamasic nidra.

Jan 17th

(1) तब्लिखनार्यां प्रतीये मध्ये निरेपिता परहेण प्रत्येक यथादिक्तां परायणम् वायुवाचण आरोपण। प्रातः प्रसादीपात्राचा तनुष्चिद्याये निरेपिता।

==

The nature & the person have been formed in the [ ] 6 first three chatusthayas, but not being sufficient the fifth is now being pressed. The means of purification of the matter is being pursued in the fourth.

(2) स एष संप्रादायोऽभ्यायाः प्रतीये तद्भवं प्रभावमयस्य स्वेतुत्तमानविमण्डले।

This is the means. (तत्तच न रोगादिभि:तत्त्वाः)

(3) प्रश्नयोग्यहृदयायु: जयंति — तत्प्रताधिकसीदि

(4) जिवो जिविति तां कृत्य सा भूत्ति: पुरुषं जगत्।

==

The vijnana is gradually reasserting the Affirmations, but against a strong opposition.

==

This month has been a reassertion of the Dwayavin consciousness ending in the possession of a world unity in which two forces of the same Being are at strife, both directed by the Ishwara.

==

The attitude of continual struggle with the adverse forces is

6 MS the
being established in the consciousness. Tapatya is constant against a heavy obstruction.

That is, the surrounding consciousness has to be normally felt as the Lord and not only as the continent & material & determining substance. This consciousness of the Lord is resisted by the Asiddhi; all the rest is well established in the Darshana.

80° is again manifesting itself.
Exact fulfilment is also manifesting itself.
Both, however, are as yet exceptions to the general rule of strong & often successful resistance.

Ananda is once more occupying the system.

The different physical Anandas are again at work in entire spontaneity & with strong intensity.

Uthapana of the arms, half an hour vertical, strong denial of Anima; afterwards, medial between horizontal & vertical, half an hour. In the latter laghima is exceedingly strong; but there is a subsequent reaction in the shoulders.

Uthapana of legs; medial, 6 minutes only.
Of left leg, horizontal, 15 minutes.

Swapna-samadhi
Two visions of actualities, living people, existing scenes.

The recovering Arogya was again attacked and pushed back. With the exception of Ananda, Sharira generally fails to advance. Ananda itself is only recovered, not advanced—

Madhura dasya is restored.
Vani is free & dominant.
Jan 18th

A new formation can be felt, marked for the moment by a great intensifying of Mahaluxmi and a mergence in her of Mahakali —

Lipi —
1. Rapidly telepathy is growing definite
2. There is a little result in the immediate futurity; in the remote there is the period of great results.

The satyam is restored, but still lacks the definitive & decisive ritam. It is a satyam of telepathy, not of the pure trikaldrishti.

There is a similar satyam, without definitive ritam, of the Tapas.

The satyam has a firmer ritam than before, but it is a ritam of telepathy & of manomaya forces, not vijnanamaya.

Utthapana of the arms — one hour & a half — increased laghima besieged by defect of anima.

Utthapana of legs, medial, 10 minutes.
Left leg, horizontal, 18 minutes —
   Neck, 5 minutes.

Madhura dasya is well-established, but there is no action of Mahakali.

There is however a movement towards the fusion of the Mahakali & Mahaluxmi bhavas in the Anandamaya Tapas & Premamaya Virodha.

Jan 19th

There is no rapid or definite progress except in Darshana, where the Ishwaradarshana has become normal & the consciousness even when pulled back for a time to the simple Brahmadarshana, reverts naturally to the Siddhi.

The vivid personality of Krishna Kali is not yet normal in
the darshana, but Purusha-Prakriti comes easily & is always there implied.

It is noticeable that as in former times the morning brings a reversion to the asiddhi. Today the reversion is determined and powerful.

Its main object now is to prevent the ritam in the knowledge & tapas by besieging the mind with the agitated struggle & errors of the nervous & physical mentality.

==

Utthapana.

Arms. 1 hour 45 minutes. Afterwards strong reaction in left shoulder

Back—ten minutes

Neck—half an hour.

==

Karma of scholastic work has been begun with some initial steadiness (study of Rig Veda).

==

The poise of the Siddhi was restored during the morning, but the force of it is absent.

Utthapana increased.

General Ananda has become settled.

At the same time there is a lassitude with regard to the Kriti.

The Tapas is more firm on Sharira.

Jan 20th

Utthapana.

Legs 15 minutes—defective still, though improved

Arms 2 hours—pranic defect in the first hour, strong reaction after cessation, strain manifested in muscles of the back & loins.

Laghima effective, but not mahat.

==

The consciousness of the cosmic Purusha-Prakriti confirms itself always; but belongs to an inferior plane, not to the Vijnana or the Ananda. There is no satisfaction to the Will or to the Mahakali element.

==
The same state of the Siddhi continues.

Work on the Veda continues.

Jan 21st
The samata continually deepens.

Utthapana – 
Arms 1 hour and a half.

No definite progress, but the Ishwaradarshana deepens & fortifies itself.

Jan 22d
Samata is now very strong & has converted itself into a more or less dense Ananda.

Ishwaradarshana is also very strong & spontaneous. A little smarana is now all that is needed.

The same process of deepening & final basing is in process with regard to the Shakti. Along with this movement Mahakali is again emerging out of Maheshwari-Mahaluxmi-Mahasaraswati.

Rupa in jagrad is resuming activity after a long dullness. There is no disposition in the nature towards personal tapas of the Will, but only towards tapas of the action in the body.

St.

लष्टः नो [अत्र बोध्योपो]⁷ रापे दिवित्तकी

Lipi again active in the Swapnasamadhi, but only partially coherent.

⁷ MS अत्रोपों शोभ्य
Utthapana. Arms 1 hour.

Work for the Review.

The activity of Vijnana is re-forming, but not yet in possession.

Jan 23d.

Utthapana.

Arms—1 hour 25 minutes.

Neck—35 minutes.

In the struggle between Arogya & Roga the latter had re-affirmed itself in the blood with great vehemence. It seems now to be again subsiding under the pressure of the Aishwarya.

The Mahakali element increases in the energy, but has yet no faith in the result of its thought or its action. It maintains udasinata & nati, but not an active attitude of tapatya.

The swapnasamadhi again became active, but jagrat state of the mind in swapna is not very firm.

Veda continues.

The Vijnana acts sometimes, but it is still usually the unenlightened physical consciousness which is dominant.

MS धामामायत्
Jan 24th

The intermediate record has been kept in a separate book (2\textsuperscript{d} to 23\textsuperscript{d}).

Throughout the month there has been an encroachment by Asiddhi on Siddhi which became strongest between the 16\textsuperscript{th} & 23\textsuperscript{d}.

The result has been an entire confirmation of samata & sama Ananda, followed by a revival of Shakti on the basis of entire samata and, now commencing[,], a revival of Vijnana on the same basis.

The defect of last year’s siddhi was the survival of a Tapas & Tapatya which responded too eagerly to sakama suggestions from outside. For this reason it was necessary to obscure the siddhi in order to assure entire titiksha, udasinata and nati of all favourable or adverse results, pleasant or unpleasant experiences. Especially, the Ananda of success & failure, truth & falsehood has been secured against the constant denial opposed to them by this recoil.

On the other hand a temporary abandonment of Tapatya and Mahakali bhava and an all-prevailing incertitude amounting to ill-faith was brought back by the necessities of this movement.

Arogya has been thrown back violently & Sharira generally retarded.

The Ishwaradarshan is now securely normalised with the Krishna Kali Ananda, Guna & Jnana as its contents.

This is the first chatusthaya (Brahma) entirely satisfactory in its finality. Only intensity of bhava and fullness of detail have to be added, but this depends partly on the progress in other chatusthayas.

Samata is also final, but still vibrates sometimes momentarily to the touch of tamasic asamata.
Shakti is not final for want of faith, but force of madhura dasya has greatly increased.

The Affirmations of the Anandamaya Ishwara, the madhura dasya & the submission to all bhoga are now ready for their perfection.

Those of the Anandamaya as continent & Ananda as base follow upon these, but the free & joyous Tapas & Prakasha as base depend upon the fullness of the Ritam & Satya Brihat Affirmations.

The two other Affirmations are still held back.

For the results in Vijnana, Sharira & Kriti it is necessary to await the emergence of these siddhis.

In Swapnasamadhi the full hold of stability & continuity on the Akasha; but not the full play of the jagrat in swapna.

Jan 25th
Uthapana. Arms ¾ hour; interrupted.

The energy is now more fixed upon action than on Yoga-siddhi. Work before which soon wearied out the body is now being pursued with tenacity and lines of effort that seemed formerly to be constantly broken & lead to nothing begin to prepare their fulfilment.

The Veda is taken up in two parts – Vamadeva’s hymns on which notes are being taken from Sayana & the Ninth Book which is being copied and annotated.

The work of the Review must now be systematised as also the preparation of a statement of the Yoga –
The rest of the siddhi does not advance, but the first & sixth chatusthayas are maintained.

Sharira
The advance in Arogya has again been checked.
Ananda cannot normalise continuity because of the check to Arogya.
There is no progress in Saundarya.

Jan 28th
The last two days have been chiefly occupied with work & the Vijnana has been left inactive for the most part except in its dispersed action.
A slight depression in the superficial Samata is observable this morning; but the Vijnana is reviving its activity.
Ishwaradarshana remains firm.
The difficulty now experienced is with regard to the Tapas. The mind is unwilling to accept the effort of imperfect Tapas & no other manifests. There is also an entire uncertainty with regard to the Kriti & all things concerning the life & the life-work.

St.

By this it seems to be indicated that the mental activity of the Tapas has to be admitted and used to destroy the obstruction.

9 MS ऑजसे
At present there are all sorts of brilliant formations of the nervous mentality which seem to have no sanction from the luminous mind

The action of the Vijnana is being resumed where it left off. There is occasional 80° but ordinarily resistance and imperfect result or delayed result, sometimes no apparent result.

What is now being attempted is the sustained and even obstinate action of the Tapas without regard to result and into this action the introduction of the united power & knowledge.

Uthapana
Arms. an hour and a half.

Samadhi
During the last few days samadhi & coherent dream have asserted themselves partially, with all their right circumstances & gains (except the jagrat); but there is still a dominant Ashasti, if not so strong an abhisastib.

Sharira
In Arogya at present the struggle seems to be turning again in favour of the siddhi.

Physical energy is more consistent but directed chiefly towards the support of brain work.

Vijnana
Aishwarya works again in immediate surroundings, but is not more advanced in effectuality.

There is this time no sudden & powerful revival of the Siddhi, but only a slow movement of recovered activity.

The finality, however, is greater in everything connected with the subjectivity.
Jan 29th

Script

Although the opposition seems to be strong, the force of the siddhi is stronger. It has already asserted itself entirely in the first, mainly in the second, entirely in the sixth chatusthaya. Except for deficient faith in the life, which is really a deficient knowledge, it holds the subjectivity. It has now to conquer the subjective-objective and this it is steadily doing in spite of all reverses & retardations.

The power on the immediate surroundings showed itself throughout the morning extremely effective in spite of all resistance sometimes compelling results subjectively, sometimes, where the subjective object resisted by the creation of circumstances which physically induced or compelled the necessary action. There was only one instance of failure.

Uttapana

Arms — 1 hr. 15 minutes —  
Legs — 5 minutes only.

Samadhi.

Swapna Samadhi is trying to get rid of the Ashasti

Jan 30th

The Dyumna or luminous power (rajas, rocana) is established in the Bhuvav, it is now being established in the Divah. The energy is ready in the active nervous power and in the soul-thought (suvirya arvatā . . brahmanā) although manifest chiefly in the work of knowledge, thought, writing etc, not in the things of Prithivi, the objective world. It is here that the mental thought
The activity is now great in the intuitional field of the intellect, but concentrated chiefly on the Veda etc.

The first line refers to the recent passive activity of the Aishwarya from which the nervous force & anandamaya movement (aswa and ratha) have been excluded in order that they may be replaced now by the right aswa & ratha. This is the new action for Indra who with the Shakti in him is to conquer the opposition & bring in the varied bright activity of the swarvatir apah.

This is already being done today, the activity of the luminous mind being extended beyond the jnana & literary work to the trikaldrishti, but as yet insecurely & incompletely.

Feb. 1st
1. The Reference of the 29th repeated.
2. Finally in the third Rik.

The day has chiefly been devoted to work of Sahitya & Veda. A great capacity for large quantities of work swiftly done is being now manifested.

There is an attempt also at the primary utthapan in the shape of diminished sleep and the rejection from the physical system of fatigue and exhaustion; but this applies at present only to brain-work, not to physical activity.

In samadhi there is a strong tendency to the development of sukshma Vak, but as yet this is normal only in isolated sentences and
when there is concentration in the jagrat or without concentration in the swapnasamadhi.

The Kriti is not yet favourable in exterior results & circumstances, only a difficult defence of the Sati.

Each part of the Kriti has its own difficulties and when these are brought forward & seem to be accumulated in an unsurmountable obstruction, the faith falters or is eclipsed.

Samata remains undisturbed, only there is still uneasiness & occasionally a subtle depression in the bodily consciousness, but much less palpable than formerly.

Feb 2d

Uthapana Arms 1 hour.

The vijnanamaya plane manifests in the thought & trikaldrishti, but as yet there is no constant well formed action.

Swapna samadhi is sometimes active, but here also it is only a scattered activity of details. In jagrad there is no activity except of imperfect figures except in chitra & sthapaty.

The progress of Sharira has long been discontinued.

In jagrat samadhi vak is acquiring greater force and perfect rupa, unstable, is more frequent.

Poetry resumed with more power.

There is a pause before the deficient parts of the third chatusthaya declare themselves & until they declare themselves, the organised action of the chatusthaya cannot manifest itself.
The powers of obstruction, always, are not broken, but merely pushed backward. Rapidity, so often promised and on the point of realisation, is still unrealised.

Feb 3rd
There is a general increase of the siddhi in the vijnana, but not as yet anything decisive.

In swapna samadhi there is a movement towards utility, but nothing as yet of any value.

There is some relaxation in the physical force of the body for work.

Feb 4th 5th
The same condition continues

Utthapana of arms daily for an hour or two.

The struggle in Arogya continues.

Kriti is still undecided.

Samadhi fluctuates; jagrat is mostly inactive, but vak becomes more & more spontaneous & sthula.

Karma of sahitya is alone pronouncedly active. Veda, poetry, Aphorisms.

Feb 6th
1. ἐπιστρέφω. Successively, in order, thence, afterwards.
2. We can begin then with this concentration and a constant consecrating of ourselves. . . For the first movement.
The concentration indicated is a movement no longer of personal effort, but of a sort of will from below evoking an action from above.

The result is a slow redevelopment of the beginnings of organised Vijnana.

[Half a page left blank.]

Feb 25th

The record has been suspended because of an almost entire suspension of all progress in which the hostile forces have seemed to take possession and only the literary & intellectual activity has continued to progress. In this field the perceptive intuition & creative interpretation grow in force.

Roga has been very powerful & violent.
Sharira has been practically suspended.
Kriti is a struggle in which minor points are gained, the great lost or left undecided or even if won are not decisive.
The one definite advance is in antardrishta where forms & vak are now perfect and sometimes stable, but this is when they come spontaneously, not when they are commanded.

Nevertheless there is progress, as now appears. First, the personal effort, view etc are more & more merged in the All. Action & thought & perception come more & more out of the All. Self is more and more identified with the All & proceeds out of it in its becomings rather than stands separate within it.

Secondly, telepathy & intuition are far more developed than before. Decisive intuition is fortified though not yet dominant.
Thirdly, the power of work without choice, steady, nishkama, proceeding out of Sat & Tapas of Sat is infinitely increased.

Feb 27th

The atmosphere of the Asiddhi still hangs heavy upon the system. Roga persists though the tide is receding. Sraddha finds no food to grow upon.
The opposition is now no longer from Vritra, Vala, the Dwayavins, but from the Nidah & the Rakshas,—in reality however from the Rakshas giving the others their opportunity.

After a long interruption Kamananda is beginning again to be active.

In Samadhi the antardrishta and swapna are both perfect, except (1) for lack of long continued samadhi, (2) for lack of life utility.
April 22\textsuperscript{d}(?)\textsuperscript{1}
1. The vision (in Samadhi) of the Theosophical Path on the table, fulfilled next day. Suggestion of importance—fulfilled by solution of the Vedic Rishi-idea by example of Bodhi-sattwas in Japan.
2. The waking drishti of the cigarette on the table. Suggestion of certain fulfilment by exceptional means. Found on floor.

April 24\textsuperscript{th}
Anandam Brahma confirmed in its final generality.
Renewal of the Anandas all contained together in the Suddha.
Firm general definition of Karma.
First entirely spontaneous & prolonged intensity of Vaidyuta (yesterday).

April 25\textsuperscript{th}
Krishna Kali in all beings confirmed in its final generality—still obstructed in the animal. Afterwards extended to this field as well.
Kamananda made persistent (predicted during the last few days)
Telepathy justified in its general satyam and accepted—trikaldrishti in telepathy, but obstructed.
Beginnings of final organisation of knowledge parts of the Vijnana.
General prevalence of Aishwarya-Vashita, against resistance, after lapse of time. As yet, no general perfection in detail. The field is still limited.
Other Anandas continue to grow.

\textsuperscript{1} The question mark was put by Sri Aurobindo. — Ed.
22 April – 26 August 1915

Rupa etc still strives to emerge into distinctness, stability & variety.
  Growth of the Kali permanence.
  The second chatusthaya increases in power.
  Tertiary dasya emphasised in action & thought.
  3. Telepathic trikaldrishti of movements of the child in the opposite house.

April 26th
  Krishna-Kali now generalising itself at its lowest pitch. It alternates with the Anandam Brahma also at a low pitch, in the terms of the material Avidya. It is still as a rule more at the back of things than at the front.
  The organisation of the Knowledge by illumination proceeds. Lipi & Rupa are included.

  Lipi
    1. Build desolated Europe into a city of God.
    2. Eyes in the splanchna. (the pranic sense).

April 27—
  Prakriti Purusha well established in the Ananda Brahman.
  Kamananda obstructed yesterday but not entirely discontinued in the body. Strong pressure for the Ananda from the Sukshma. Continuous under adverse circumstances.
  All the physical anandas have for the time being slackened in frequency.
  Organisation of vijnana continues against steady obstruction.
  Prolonged rupa-vishaya (crow flying about in sky), chhaya, but not merely image,—saprana image left in the ether. True rupa vishaya of insects & birds in the Akasha (Prana akasha) are now common, but not detailed.

2 Numbering continued from 22(?) April. — Ed.

www.holybooks.com
April 29.

The Krishna Kali as the all containing one (An. Br [Anantam or Anandam Brahma]) & everything as its expression in the terms of Purusha Prakriti.

The Ishwara begins to take final possession.

Truth continues to grow in the trikaldrishti telepathy, effectiveness in the power. Rupa advances, but is still seriously obstructed.

April 30

Krishna Kali in all, but not in the intensity.

An established sama-ananda in harmony with the ish, but not as yet with its full forceful activity.

The harmonising with the unequal reactions of the more forceful activity has begun—they are brought & taken up by the Ananda which has entered into them.

April 30—

Trikaldrishti has suddenly increased enormously in truth, but it has still its basis in the telepathy, and subject to the stress of error.

May 1st

The day is the close of one week of progress, steady and often rapid—

Samata

Universal samata has been finally confirmed and the reactions of asamata imposed from outside are now taken up by the Ananda.

In the body there are still movements & reactions of discomfort & nirananada, but these also are now being taken up. Even the pain of burning is pursued by the Ananda and generally accompanied by it. Bhakti is therefore on the point of accomplishment in generality. It remains to give it its destined intensity.

The reactions contradicting titiksha, nati, udasinata thus persist & are being purposely brought forward in order to be transformed. They can no longer prevail in their own kind.
Shakti

There is also a generalisation of Shakti. Sraddha is now confirmed except in the Karma where it still fluctuates and is environed by doubt. The doubt is no longer absolute. Kalyanasraddha has increased in the chitta.

The growth of knowledge, Ananda Brahman & Krishna has firmly based the Samatachatusthaya. The growth of power, Krishna-Kali & Sraddha has prepared the final basis of the Shakti-chatuskhaya; but the power is not yet sufficient to assure the full sraddha and devibhava (daivi prakriti).

Dasya is tertiary, but not always of the full intensity of its third tertiary form. D3 is established, but not D33, except as a frequent exception.

Brahman.

The generality of Sarvam Brahma, replaced by Sarvam Anantam, is now replaced by Sarvam Anantam Jnanam with the Anandam subdued but present in all the three. It is now in course of being replaced by the Krishna-darshana in the Jnanam Anandam; the Narayana-Vishnu Bhava persists, but as a past habit. The intensity of the Krishna-Narayana is now taking its place.

Karma.

Krishna-Kali bhava is growing to the point of the firm epiphany. Subjective kama is assured & the full subjective Ananda based on the Shuddha is present either in the subdued status or the intense movement. The oppositions of the subjective Vishayarnirananda are being finally eliminated & exist only as external vibrations in the external mind. They are attended by the viparita Ananda.

Karma yet awaits the full power. In intellectual (intuitive) work it is now only combated by the remnants of the physical resistance; but in all else it is still bound & to a certain extent afflicted.

Vijnana.

All its parts, except Aishwarya-traya & Samadhi are in the hands of the Master, directly. The instrumental usurpation persists, but is no longer effective.
Telepathy is now mahat, except in thought-vyapti & thought-prakamya. Satyam is established, but ritam is still imperfect. Trikaldrishti is now acquiring the satyam & has greatly improved in the ritam. The Chit-Tapas combination is beginning to prevail.

Aishwarya-traya & Samadhi have to be liberated in this month & essentially in its first week.

Sharira

All the physical Anandas are frequent & much more prolonged than ever before, but not yet permanent in continuity, only permanent in recurrence.

Vaidyuta (ahaituka) now manifests frequently, physical Vishaya ahaituka less frequently, but sahaituka is well-established.

Arogya grows in force, but has not yet expelled the habitual reactions.

Uttapana is suspended, but increases subjectively. In Saundarya there is no appreciable advance.

The stress is now on Vijnana (especially trikaldrishti); it is growing in Aishwarya-traya and rupa. In the Sharira it is on Ananda & in a less degree on arogya; but it seeks to extend itself to the two deficient members.

Lipi

1. Yeast of bliss
2. Yeast of life
3. Yeast of trikaldrishti
4. pragmatic telepathy
5. taste.
6. glad of bliss — ie the system & all its environment consenting to the Ananda. This is now done
7. glad of Ares in the force & struggle harmonised with the Ananda. This is now undertaken.
8. toil
9. [no notation]
References
1. enimvero . . certainly, but indeed . . enisus . . eniteo. (as an event) enitesco (as a habit)—enitor, enixe, enixus—
—connected with lipi 8. and indicating the struggle & luminous emergence now transferred from the person to the environing Prakriti.

2 eno—
enodate. enodatio— confirming (1) from another standpoint & throwing light on Vedic images in the hymns to the Aswins (Kaksh[ivan]) read yesterday & today.

Lipi, rupa etc are now taking the pragmatic turn more decidedly; but this is not yet extended to the telepathy.

May 2\textsuperscript{d}
In the morning a general reduction to the lowest terms, with the object of taking up the apparent contradictions & turning them to siddhi.

Aishwarya traya increases in force & produces more rapid & exact results in the field of exercise, but is still subject to the obstruction & contradiction. In the karma it is still weak

Trikaldrishti grows in mahattwa of the satyam ritam, chiefly in its telepathic basis

Lipi
1. In the infinity youth; (not yet in the finite).

The adverse movement continues throughout the day,—reactions which are not taken up by the Ananda, voices, thoughts, suggestions which are not taken up by the Ishwara nor proceed from him, absence normally of the Krishnadarshana replaced by the Saguna-Nirguna Brahman, impaired Ananda of the vishaya of sight, failing faith, absence of udasinata & nati etc. Trikaldrishti, aishwarya etc act, but are no longer dominant.
Evening

The siddhi is now remanifesting, but with a residue of the Asiddhi. The main asiddhi is the reaction of Sushna Kayava, with the bhrista tavishi.

May 3rd

1. Yeast of love
2. Yeast of difficulties (general ferment of the opposition still left opposing the progress).

1. Universal Prema is now becoming fixed & spontaneous, ie not needing the aid of the mind's attention to the object

The Rupa has been largely eclipsed for some time; it is now undergoing a fresh movement towards manifestation; but the obstruction is not yet conquered.

After a long struggle the covering consciousness has once more been removed & the Krishna Kali once more occupies all manifesting freely in all often with the intensity & directly, or else with the disguise of the form & mentality.

Vijnana strives to perfect itself; but is still pursued by the error of stress.

Dream is once more coherent & better organised.

Perfect organisation of lipi, thought & sukshma vak in jagrad antardrishta and swapnasamadhi.

May 4th

The Kalikrishna darshana is now generalising itself more firmly.

In the health, the struggle continues. One long persistent roga is now in the last stage of dying recurrences. Another that threatened to be chronic (the eyes) is being successfully attacked at its roots. Feverish exhaustion attempts to recur daily, but is expelled after a
short struggle; nevertheless it lingers in the environing akasha. Two only are still in the persistent stage of recurrence.

Reference

This is now beginning to manifest & attempting to generalise itself.

Organisation of the vijnana of knowledge proceeds.

The sense of the universe in myself and all energies & activities even the most adverse has been restored & is now constant.

Great extension of effective Vashita working in harmony with an almost perfect ritam of the telepathy & trikaldrishti.

Samadhi continues to organise itself. The things of the pranic & mental worlds are now distinguished, lipi & vak grow in coherence & organisation, there is a beginning of free rupa in the antardrishta.

Exact fulfilment in aishwarya vashita is again becoming frequent, but the deflecting resistance & to some extent the entire obstruction have still a power which though much diminished struggles to remain. The Shakti is now being led to apply itself with determination to the karma.

The श्रे was first brought forward in the morning; it is now established in the action. The Agni is being developed अग्नि नि मूल्यतः

Rupa became active, but did not increase to the full point attained in the past.
May 5—

Rf. [Reference] Nulli visa cito decurrit tramite virgo—

There is no fresh advance, but only the yeast of what has been already accomplished combating the difficulties of farther progress. This difficulty of farther progress is a principle of retardation that has now to be destroyed as it is no longer useful for the purpose of [conservation].\(^3\) The shakti can now dispense with such aids.

The struggle over the unfinished parts of the vijnana continues. It has not advanced appreciably beyond yesterday’s limit, but is obviously preparing an advance. Meanwhile the sama Ananda etc are being strengthened.

Strong discomfort is being given & constantly met with the assumption of the discomfort by the ananda.. It is not as yet entirely transmuted.

Faith in the Karma fluctuates, but is normally much stronger than before.

May 6—

The Aishwarya-Vashita is less effective today, on the other hand the Trikaldrishti-telepathy increases.

Force of rupa increases, but slowly & against great obstruction.

Lipi

Transitional character of opposition struggle (ie it is becoming more & more defensive).

No definite advance during the day.

Samadhi advances in all respects, but not yet victoriously.

\(^3\) MS conversation
May 7.

The Krishna Darshana after going through several fluctuations has added to the darshana of the Continent & constituent which are now sufficiently fixed & that of the inhabitant which fluctuates the darshana of the identical (atmaivabhud bhutani). It is when the inhabitant, continent[,] constituent & identical unite that there is the full intensity.

Lipi.

1. for yeast of bliss – (to confirm it entirely the samata is being tested)
2. yeast of pain (this is now being given to generalise the raudrananda).
3. for yeast of life.

Kamananda very intense for a time; now frequently recurrent, but usually subdued. The intensity, however, also recurs.

May 8th

The Siddhi is now restored in the Aishwarya, although not yet in entire force.

This time the disturbance of the Samata by the Asiddhi has been slight & quite inconsiderable.

The Trikaldrishti progresses always in spite of apparent setbacks.

Kamananda grows slowly in force, as also Samadhi.

May 9th

The fluctuations of the Vijnana chatusthaya continue, especially with regard to Aishwarya, rupa lipi and samadhi. This afternoon there is a general cloud of tamas.
May 10th
A day of advance, but not of decisive advance.
Telepathy has grown stronger & surer.
Trikaldrishti is restored almost entirely, aishwaryatraya partially.
Rupa advances, but does not yet break the barrier to stability.
Samadhi is depressed.

The work in process is chiefly a work of general basing.

May 11th
At first aishwarya traya depressed by the resistance, then it assumed for some time the upper hand compelling the result against direct resistance sometimes immediately & entirely, always at least partially in the end. This movement clearly reveals the fact that the physical Akasha-shakti is now on its defence maintaining its freedom with difficulty & no longer assured of its empire.

May 12
Since yesterday the organisation of the Vijnana has become normalised, 1. in script, 2. in vangmaya thought, 3 in vani (today) 4. in perceptive thought. 5 in aishwarya traya. In the last two there is still positive defect, owing to the imperfection of the aishwarya which brings with it the struggle of the Will against the Akasha-Shakti and throws back on (4) the shadow of the excessive stress of will-thought.

Aishwarya traya today is working more evenly, though with less precise force. Ishita is becoming more prominent. The shadow of personal will is steadily losing force of insistence & giving place to the Master-will.

The personal relation with the Master manifests, not again to be suspended; it brings the madhura dasya, the delight in all things & the understanding of all experience & movements of event in the terms of the divine Will.
Krishna darshana depressed & put in the background for the last two days but not suspended is once more general as the continent & as the all. It is only deficient as the Inhabitant.

Rupa increases always in force, samadhi is depressed.
Trikaldrishti gains always in ritam, thought-telepathy increases
Kamananda depressed for the last two days, but not suspended, is again active & sometimes intense.

Afternoon
Crude rupa in all forms presented both primary & secondary stability.
Developed rupa increased stability to the remote or indirect vision, but does not yet endure before the fixed gaze, except primarily in the type form of the reel.
In this movement aishwarya ishita was throughout the agent.
Krishnadarshana now embraces whole groups in a great & sometimes with the first intensity.. In the intensity it is not yet general.
Primary utthapana is being enforced, but is still not entirely dominant.

The Rf in the morning to all the gods setting Agni to work (पञ्चयंति) in his activities has been fulfilled.
The confusion of Knowledge Thought by Will Thought became very violent in the evening, but could not entirely annul even the decisive trikaldrishti; the telepathic maintained its satyam, but could not preserve the constant or always central use of its ritam. Subsequently, there was a reversion to the better harmony.

May 13th
Kamananda still active, with touches of intensity, sometimes in samadhi.
In the morning perfect telepathy & trikaldrishti. Aishwaryatraya sometimes in full force, but usually baffled by the resistance.
Gandhadrishti developing since yesterday was this morning full, varied, vivid & sthula. Rasadrishti also became active, but usually comes as a result or a part of gandha; not however always. It is sometimes associated with sparsha half-evolved from sukshma to sthula. Sparsha except in the old established touches is chiefly vivid sukshma. Shabda is infrequent & more sukshma than sthula. Darshana is poor and intermittent.

Samadhi has not yet recovered its activity and coherence.

Rupa is active, developed forms frequent, sometimes thickly frequent, but not stable.

Manusha sparsha has been experienced indirectly, on the cigar held between the fingers, not on the body itself.

Activity of the Rupa at night. At first free crude, akasha, & beginnings of free crude sadhara; also first stable dense & developed. Afterwards resistance brought in to spoil the forms.

Aishwarya of rain successful.

May 14th

The force of the aishwaryatraya is greatly increased.

There is a movement towards the completion of the satyam in the vijnana.

There is also an incipient movement of more complete ritam.

The bhava in the Ishwara is entirely confirmed; it is now being perfected in the Balaram-Aniruddha type, preparatory to the Sri Krishna-Rudra (the Asura).

The habit of relapse in the Krishnadarshana is being attacked.

Kamananda these two days has been constant with intermit-tences, but not continuous. This evening it has once more the tendency of continuity.

Rupa improves always, but does not yet confirm stability except in the crude.

Samadhi is beginning to reorganise itself.

Gandha is varied, but not so frequent & rich as yesterday. Aswada is also obstructed, though occasionally it manifests.
Samadhi is partly reorganised. Vangmaya thought is thoroughly established & continues in a stream even in the sushupta swapna, when memory, reason, mental attention are all absent. It was combined with lipi, perceptive thought & shabda (vak).

At night organised samadhi. Continuity of drishya, primary frequent, sometimes incipient secondary.

May 15
Organised samadhi in the morning.
Kamananda seems now to be settled in the system, as a constantly recurrent experience throughout the day and a permanent tendency. The other Anandas are still intermittent.

In the subjective Ahaituka is constant, Chidghana, frequent, Prema recurrent, Shuddha occasional.

The whole Vijnanachatusthaya is now on a line of fixed progress towards perfection. Sharira & Karmachatusthaya alone remain.

In the later part of the day a reaction and suspension of the progress.

May 16.
The reaction continues. Nothing is precisely lost except for a diminution of the Sraddha; but the forward impulse has ceased & in sharira & karma the adverse forces seem to be triumphant.

Asamata of satyasatya which hitherto gave such acute trouble has disappeared. Asamata of siddhi asiddhi has revived and is the sole asamata remaining; but it is neither absorbing, nor violent. It is being rapidly killed.

May 17
The reaction has deepened & injured without suspending the action of the Vijnana. The satyam is no longer perfect; the stress of suggestion & intellectual perception has revived. The Aishwarya traya acts less surely on the surroundings. Rupa is no longer active.
This morning the satyam is recovering tone & the aishwarya traya recovering force.

Krishnadarshana of a certain intensity is now general in spite of a constant effort in the Akasha Prakriti to pull it back to the mere Saguna Brahma or Narayanadarshana.

The Ishwara is now manifest in the Vani & as the master of all the thought & action; the dasyam is becoming entirely complete & personal. As yet it is the Balarama-Aniruddha Bhava with Aniruddha prominent.

Rupa revived, but not in full force.
Kamananda in spite of adverse circumstances.
Gandha frequent & varied.

May 18—

Krishnadarshana seems to be invincibly established.
There is a tendency to the full restoration of the action of the Siddhi. This is most evident in the Aishwarya-cum-trikaldrishti, & in the three subjective chatusthayas & in Krishna Kali.

The new movement has not yet begun except in the first chatusthaya & the second & sixth where it is a completion and a preparation rather than an initiation.

Vak, jagrat, manifests, but with difficulty.

May 19th

All the subjective Anandas are confirmed, not in the intensity, but in their synthesis, from Suddha to subjective Kama.

Udasinata, Nati, Titiksha are finally established in their unabridged completeness & synthesis. The positive bhoga of Asiddhi is being enforced. This has been hitherto the one imperfection of the first chatusthaya & the point at which the Asamata always broke in. It was done chiefly through the impatience of Asatyam. That impatience is now killed. Without this basis the impatience of Asiddhi could not last.

Krishna Darshana resists all attacks.
Gandha continues, though less frequent.
Physical samata and Ananda of pain & discomfort are also
being finally confirmed. Touches which formerly overcame the Titiksha, are now anandamaya.

Kamananda continues intermittently against oppression.

The other siddhis are obstructed in act, but none actually abridged in fact.

The relation of the Dasya grows constantly in force.

The Sraddha is attempting to override its difficulties.

Vijnana is considerably obstructed and the movement towards the ritam seems temporarily to have receded and lost part of its force.

Rupa & Samadhi are comparatively ineffective

Karma & Sharira fluctuate.

Krishna-Kali is preparing its finality.

The sense of the Self everywhere & all energies as the Self’s is returning to activity.

On the whole the Suddhi, Mukti, Bhukti are nearing final completion & the purely subjective siddhi. Only in the subjective-objective siddhi the victory is still delayed & in the objective the adverse forces still hold most of the ground except in the physical Ananda, where victory is now assured.

May 20—

Dasyam is now becoming all-pervading and intense

Sraddha Bhagavati is almost complete; sraddha swashaktyam is still deficient. The sraddha bhagavati is hampered by the inability to have complete confidence in the Vani; all vanis are now being taken up by the Ishwara.

The siddhi has now to take a new turn. Basing itself on the complete Dasya, Sraddha & Ananda it has to acquire intensity in all that is possessed, sureness in the Vijnana, rapidity in the Sharira & Karma. The Seven Affirmations have to be finally completed & then the two that remain.

The state of these Affirmations may again be stated:

1. The universal sense of the Anandamaya Lilamaya Krishna
in the Brahmadrishti has become the continent of the conscious activity in knowledge & is becoming the continent of the conscious activity in Will.

2. Affirmation has almost entirely replaced rejection & denial, but not entirely.

3. Brihat of the satyam is affirmed as the basis of the development of the ritam, but is not yet free from attack.

4. Ananda is now entirely confirmed as the base, free & joyous Tapas is in course of being established and in a less degree free & joyous Prakasha as the special instruments.

5. The Personality of Krishna is present in the consciousness governing all the activities, but sometimes there comes the veil of the Prakriti.

6. Dasya of Madhura & tertiary dasya confirmed entirely, but not yet in full intensity.

7. Acceptance of bhoga as a slave & instrument of the Lover only now entirely & finally accomplished. Intensity has yet to be given.

8. Siddhi on the basis of the largeness in the five worlds is prepared, but not yet accomplished.

9. Time, Space & Circumstance still appear as determinative, not yet as instrumental factors.

Intensity is now being brought into the Suddha-Chidghana-Ahaituka-Prema Ananda and prepared in the Madhura Dasya which is becoming Saumya-Raudra. For the present the Saumya predominates, with the Raudra as a background. In the Sraddha there is greater intensity (answering to yesterday’s lipi, “enthusiastic faith”) but not yet certainty in the Karma and Vijnana.

To the tratak the moving clouds of the pranic akasha are visible, sometimes a star, living specks, birds or insects.

There is the old struggle between the decisive vijnana & the perception of actual possibilities; but the consciousness still dwells in
the triloka. Vijnana & Ananda occupy it or are in the background,—they are not yet the habitation, *ksbaya*.

Aishwarya continues to fluctuate, sometimes triumphant, sometimes resisted successfully in moving objects; in stationary objects (prani, not sthavara) resisted usually with success. In inanimate objects there is now often success of the aishwarya..... Resistance is almost invariable, but often it is rapidly overcome

Kamananda is once more dominant.

Reference

- Purification . . rectification . . acquittal of debts . . retaliation.

- At night foiled attack on the samananda.

- Movement towards the intensity of the madhura dasya accompanied with a stronger sense of the Ishwara not as Mechanist, but as Natha & Bhokta.

May 21st

Rf  1  The haven must be reached.

   2  Not soon is God’s delight in us completed, nor with one life we end. Termless in us are our spirits seated and termless joy intend.

   3. The heavens of the Three have beings bright (Sarvalokadrishti)

   The subjective Ananda has made a sudden stride forward towards great intensity in all its parts.

   The vangmaya has now risen from the effective-adequate to the illuminative & inspirational substance & form. This was preceded by a slow movement of the transformation of unharmonised satyam to harmonised ritam, which as a result of the rise has become rapid. The perceptive thought is becoming luminous & vijnanamaya in the vijnana instead of vijnanamaya in the manas.
Aishwaryavashita has also become much more forceful. Ishita tends to the same force, but is not yet so decisive.

Rupa-samadhi are still obstructed in their attempt to progress.

In aishwarya immediate decisive effects almost without resistance are now frequent; effect against resistance is more common in the ishita.

Trikaldrishti is following the same rapid forward movement. Decisive trikaldrishti, once more active, is aiming at exactness of place, time, circumstance.

Lipi
1) 15 . . 25 (ie 1915 – 1925 for the external purification & rectification).
2) solarithm (a new mathematical figure)
3) perfect disponibility of the lipi

The Aishwarya-Vashita is almost all-victorious this morning upon things in motion; only the insufficiency of the Ishita gives a hold to the resistance. Things in station feel the force, but resist successfully the exact fulfilment.

Where there is fixed intention with rapid movement, the Power does not as yet prevail. Fixed tendency, generally, is still an imperfectly mastered obstacle.

Rupa & samadhi are again active; the first in the crude with an imperfect deliverance of the form & a difficulty of the quadruped form, but with a greater hold on the akasha; the second imperfectly organised in rupa & vishaya, fluctuating in lipi, but perfect in thought, vangmaya & perceptive.

Samadhi
1. Conversation. “in emergency”. (political. IO [India Office] & India)
2. “At such a distance we find that we can do nothing” and a figure in dhoti.
3. a conversation in French on a gnomical Greek poet, perfect in form although derivative in substance, indicating fresh discoveries of lost Greek poets. (N.B. The discovery of Bhasa’s plays was fore-
seen a year or two before it happened. Saumilla’s have also been promised.

The force of Tapas on the Roga increases. Chronic false cough has been expelled. The eruptional tendency is almost eliminated. Assimilation imperfection still resists as also the functional defect.

The resistance of living things in station is now overcome. Success is more usual than failure and exact fulfilment is frequent and striking. There are also now cases of immediate triumph over fixed intention in rapid movement.

It remains to give full intensity & universality to the power of the Tapas, raising it all round to the 80º, so that the resistance may disappear and Time, Place & Circumstance become instrumental instead of determinative. It is to this result that the siddhi now turns.

Effective tapas has to be imposed on the body & on the life (karma). Siddhi is effected in the first two chatusthayas & in the sixth & in three parts of the general (seventh) chatusthaya, & in the subjective half of the fifth, so far as is possible without dominance of the Tapas-Prakasha in the fourth & effective half of the fifth. In the third the successful & victorious march of the siddhi in all its four (five) members is now assured. Sharira & Karma-Kama remain.

The Siddhi at night showed signs of resuming the stability of the dense & developed; but the movement was not carried forward.

May 22d

In swapnasamadhi successive scenes coherently connected together, but in themselves fleeting, though absolutely perfect. In jagrat antardrishta a scene of the manasa loka, (affective), coherent, well designed, but dim.

The vak of the thought maintains the level it had acquired and yet prepares a more ample & varied form. That it does this without
sinking into a more backward state, is a sign that the old rhythm of progress & relapse is passing away; a movement anandamaya anarvan is beginning.

The Tapas is less in possession this morning; its directions are more often refused or, when obeyed, usually more imperfectly. The trikaldrishti is more confused by the will-thought.

Krishnadarshana has for some time drawn back into a fuller Ananda Brahma Saguna-Nirguna with the Narayan & Vishnu bhavas contained & the Lilamaya without the all-pervading expressed Krishna Nama in the rupa.

The violent attack of the old Asiddhi has failed after producing a few fugitive vibrations, — an effigies of incipient asamata & non-vijnana.

The struggle between Kamananda and its obstruction is now becoming constant.

Decisive trikaldrishti, independent of telepathy, increases in force, frequency & certainty; but it works in the midst of a mass of telepathies acting in the manas which tend indeed more & more to reveal their satyam of tendency or actual possibility, but continue to throw a shadow of confusion on the trikaldrishti. The Knowledge is still farther confused by the anrita will-thought, which is a stressed perception of tendency or actual possibility in the physical or subconscious that does not manifest in event, although it sometimes manifests in conscious tendency.

Knowledge & Tapas are this morning acting again in the manas & not in the vijnana; therefore there is no general ritam; only a ritam disengaging itself with difficulty from the brihat of the unregulated mental satyam. This constitutes a relapse.

The vibrations of asamata of asiddhi continue & amount to a breaking in on the siddhi of the fourth chatusthaya. As usual, there was a false security that this lapse would not again happen. There is also a shadow of the asamata of asatya.

4 MS of www.holybooks.com
KrishnaKali Darshana is once more intense and more all-pervading than it was hitherto. There is an obstacle to the intensity of the darshana in the bird form and a general obstruction to the pervasiveness of the greater intensity & even a shadow of obstruction lingering about the intensity attained.

After a long struggle lasting till 3.30 pm the siddhi has again been resumed, but the vijnana has not yet been entirely recovered in all the movements, nor the complete Ananda in the manas. The delight of the vishayas has remained firm throughout in all its parts. It is the ananda of the physical Manas in asiddhi that has failed.

The intensity of the Ananda is, however, insufficient in a certain thin layer of vishaya sensation chiefly felt in the taste of insipid food, of vulgar & insipid faces, of coarse & discordant sound etc.

Samadhi has been afflicted by incoherencies of vishaya etc without losing what it had gained. What has not yet been gained, is being made prominent.

The Krishna-Kali-Darshana after a period of higher intensity has fallen back again into a lower degree of the Saguna-Nirguna dominated by Vishnu-Narayana with the Ananda in the background. The Asiddhi is still powerful. Suddha & Prema Ananda have also become depressed, though not denied.

The Shuddha Prema is now being restored independently of the Krishna-Darshana.

Continuance of entire asamata in the evening—including rejection of nati. Resumed suspension of the progress of the siddhi.

The degree of the raudra up to which pain can be made subject to titiksha and converted into Ananda has immensely risen & is being rapidly & constantly heightened.

There is a reinforcement of the roga which had almost been eliminated, but as yet its materialisation is insignificant in force and extent.
None of the physical siddhis is yet decisively victorious in any of its parts.

The confusions & ill-results of the lapse continued even into the night. The refusal of the Jiva to participate in the effort of the Siddhi prevented the movement towards resumption of siddhi from taking definite shape. [Ritam] was challenged even in the script and vangmaya thought & therefore all confidence refused to any form of thought or knowledge. Samadhi at night was barren. All thoughts & suggestions from whatever source or through whatever instrument were contradictory & confused; the reconciling ritam was excluded in obedience to the asraddha.

The result of these movements in an increased siddhi cannot be apparent till the morrow.

May 23.

The siddhi is being remanifested, but with a successiveness which makes it appear like rapid rebuilding. The intensity of the dasya & the sraddha have not, however, been restored. In most movements the power of the siddhi emerges increased in range or intensity or in both.

The Aishwarya-Vashita has not yet the general force to which it temporarily rose, but it produces very often rapid effects in detail of a temporary or sometimes a final decisiveness, while its power of prolonged pressure has not decreased & that of the ishita has increased.

The unalloyed Ananda of defeat has not yet been restored.

The distinction is now being clearly drawn of trikaldrishtis certain of [themselves], formed in the nature of knowledge & infallibly fulfilled and drishtis hesitating or else insisting & assuming a spurious certainty, formed in the nature of twilit & obscure force, dual, balanced or pursued by their opposites, representing a clash of forces & often or usually baffled of their result. The former are

5 MS Anrita
6 MS itself
growing in frequency. There is also an intermediate drishti, in which
the certain emerges out of the uncertain, the pure trikaldrishti out of
the telepathic, but without the clear luminosity of the spontaneous
sureness.

There is a pressure of movement towards the harmony of
knowledge & force (Prakasha-Tapas), but it is as yet vague &
ill defined, a large & obscure fluctuation & inchoate formation.

During the afternoon a confusion of Asiddhi without yester-
day’s violences. The Ananda of defeat has not been restored and
the attempt of the system to replace it by indifference or akriya
udasinata in defeat is being constantly thwarted.

The relation with the Ishwara has also not been restored.
The script, vani, thought are no longer regarded as entirely in his
possession; full dasya sometimes returns, but with a reserve, & is
then again disturbed. Sraddha is absent, except when the vijnana
is in play.

May 24.

Samadhi failed to preserve the incipient organisation already
realised. There was, however, a movement to remanifest the lost
stability of rupa & continuity of active drishya, but the continuity
achieved was only of the manasic drishta and the stability had no
sufficient hold on the akasha.

The siddhi is now restored with a more direct presence of the
Ishwara in the thought and script and a more intimate prabhutwa
in the dasya by the diminution of the role and insistence of the
instrumental ganas. Only the intensity of the Sraddha is lowered by
the exclusion of the hasty tapasic element in the enthusiastic faith.
The faith is now deficient in enthusiasm & entirety, because it is
deficient in certainty.

The Krishnadarshan is now full of the Saguna Brahman with
the contents of the Trinity & often descends into the Saguna
Brahman. At other times it rises to the KrishnaKali. Usually it is divided between the two.

Sraddha has not yet been restored.

Trikaldrishti works with some fullness, but not sufficient certitude. Tapas is temporarily depressed in order to give more scope for the udasina prakasha.

There is no decisive forward movement anywhere else.

Sahitya has been recommenced.

Samananda of siddhi asiddhi is still infirm in the prana.

May 25th

There is today greater strength of the Sama Ananda & the Asraddha is less aggressive.

Aishwarya is stronger in exact movement of things in station, less powerful over things in motion. The general effectivity is still depressed. Satyam of telepathy always increases in largeness.

Trikaldrishti is becoming more & more accurate in general fact and even in perception of general order of circumstance, but is much astray in time & place & therefore in exact order of circumstance.

Rupa grows always behind the veil rather than in front of it and slowly against a still prevailing obstruction.

Samadhi is gradually reestablishing continuity of active drishya.

Sparsha is now beginning to be sthula in other directions than in the falling of water drops on the body etc, but it is a very sukshma sthula. It is chiefly as indicated often in the lipi on the lips that it makes itself felt.

Gandha persists, but more sparsely & sparsely than at first

Rasa is infrequent & seldom decided.

Chakshusha in the habitual forms of the Akasha.

Sravana is the most backward.

A reaction in which the tapasic powers that helped the siddhi
are thrown out from the centre and appear in the environment as confused suggestions & will-forces that no longer command the light.

May 26th

The Siddhi is now in a period of transitional reaction.

Frequent coherent conversations in the Samadhi; better organisation of rupa; incipient organisation of lipi.

Satyam brihat very pronounced; resumed action of ritam in the satyam.

In the evening attempt of the sukshma vak to manifest more freely & fully

May 27th

Attempted movement towards the complete satyam-ritam of the trikaldrishti, broken down by a fresh reaction.

Aishwarya depressed.

Kamananda persists, but is slight & broken during the last two or three days.

The chief movement has been the emergence of the fixed Mahakali temperament with fixity in the struggle and yuddhalipsa and the rejection of the tasmik Mahasaraswati temperament which draws back from apparently useless struggle & desires either an easy progress or acquiescence in an imposed immobility.

May 28th

Reemergence of the siddhi. Trikaldrishti & Tapas now act combined, but the trikaldrishti is surer than the Tapas. There is also a growing combination of the telepathic and the decisive trikaldrishti. None of these movements are yet perfect.
Kamananda shows a tendency to recover force.  

The Ishwara is still obscured.  

May 29th  

The Siddhi is now restored in all but the Aishwarya-traya & the Rupa-Samadhi.  

Among the Vishayas gandha alone persists & gandharasa. The others have fallen back to a lower degree  

May 30th  

The Krishna-darshana is reestablished in its first intensity; the difficulty of the unbeautiful face concealing the Sarva-sundara is conquered in fact, though it attempts to return & does recur as a reminiscent experience. The second intensity is now more frequent and more secure as founded on a firmer foundation of the first intensity.  

Preliminary – Krishna sensed behind the disguise  

1st intensity – Krishna seen behind the human mask.  

2d – Krishna seen in the human being  

3d – The human being seen in Krishna  

Consummation. The human being = Krishna.  

The same rule holds with all things and beings  

The samata holds against all things except complete asraddha of the Karma; it then becomes udasinata on the surface as soon as it has recovered from the positive depression.  

In the second chatusthaya sraddha and consequently ishwara-bhava & attahasya are still subject the first to depression, the second to rejection from the front and non-emergence. The last two indeed are seldom present.  

Vijnana improves in trikaldrishti, but is there subject to violent return of the falsifying will-thought due to baffled Tapas.
Rupasamadhi goes through a constant process of construction, demolition, reconstruction or manifestation, repression & gradual remanifestation.

Kamananda is now daily recurrent, but its intensity & continuity fluctuate. The other Sharira Anandas are intermittent.

Arogya grows slowly, but is not manifest in the two deficient points (teeth and the central function).

Uthapana & Saundarya are depressed or repressed.

The Krishnadarshan now varies between all intensities of itself and even all stages. Sometimes it lapses into the ordinary vision with the Brahman behind it.

The Dwaya consciousness which has long re-usurped this mind was again removed this morning, but still hangs about the mentality.

Aiswarya traya manifests sometimes, but is usually ineffective.

The rupa-samadhi attempts to progress, but as yet without any decisive success.

Gandha is now frequent & spontaneous. Sparsha is limited to the habitual touches, but capable of a surprising intensity & long after-effect in the contact.

May 31st!

Another strong effort to organise swapna-samadhi by bringing coherence into vak, liipi, thought, successive rupa and connecting them together. A partial success.

The struggle is again over the vijnana. Aishwarya & trikal-drishti fluctuate, sometimes combining, sometimes acting against each other and at others both sinking into entire imbecility broken only by detailed & isolated successes.

The movements of thought occasionally move all in the vijnana.
or are vijnanamaya, but this is followed immediately by a collapse.

= Physical touches of asamata persist.

= Lapse of the Krishnadarshana; attempt to enforce the darshana of the Trinity, the Brahman or the mere Nara.

= Repetition of the movements of the crises with Knowledge & Ananda combating & seizing on the disturbances, obscurities and painful reactions. The success of the movement has not been complete.

= Trikaldrishti is telepathic, mental & non-luminous; it has a satyam which attempts & often succeeds in a non-luminous arrangement of the ritam.

= Satyam of vijnana is well-established and does not fail during the asiddhi. It is the brihat ritam that fails & so much so as sometimes entirely to disaggregate even the particular ritam.

= Exact trikaldrishti of time (by the watch or in the order of other measuring circumstances) has begun definitely yesterday and is continued today.

June 1st

Samata

The hope or idea expressed on the 1st May has had to be modified. Asamata is still capable of returning in its own kind; the tendency to turn it into Ananda is not yet victorious, although it prevailed till almost the end of May. In the body the growth of the bhukti continues without any sensible reaction.

Shakti

The same condition of things continues. Sraddha in karma came for a time only to be destroyed again. There is again a certain doubt even about full Yoga-siddhi. Devibhava is deficient, because of deficient power and sraddha.
Brahman
   Full Krishnadarshana came, but is now subject to reactions of all the old bhavas.

Karma
   Little has been altered. Krishna Kali remains, but is hampered by insufficiency of sraddha, power and general Krishnadarshana.

Vijnana.
   Satyam is well-established even in trikaldrishti. Ritam began to be brihat, but has been thrown back. Telepathy of thought is still deficient. Aishwarya-Traya & Samadhi after a rapid movement are again hampered & successfully confined.

Sharira.
   Stronger in the first two members; but vaidyuta is infrequent

Today sravana became acute & distinct, but only in one or two sounds. Gandha persists & a subtle rasa.

June 2d
   Dasya has attained an extraordinary completeness in the tertiary form. Along with the dasya is the restoration of the perfect samata. But the Mahakali bhava (Singhabahini) is diminished and not always present. Nevertheless it is more normal now than the others.

   KrishnaKali is now almost absolute.

   The physical Anandas (sahaituka) continue to gain in force & normality. The ahaituka anandas are once more frequently recurrent. Raudra today is very frequent & prolonged. Sahaituka raudra is especially growing in force, intensity and above all normality.

   The Will has once more abandoned the tapasic insistence on rapidity and immediate results.
Ananda of defeat & failure is restored; sraddha in karma is still depressed and partly withheld.

The lipi “intensity of delight” often repeated recently is now being fulfilled.

Gandha seems well-established; sravana (vak) is attempting to normalise itself.

Samadhi is again organising itself (swapna).

Emergence of the sukshma vak in various degrees of evolution, half-involved, evolved; half-audible; audible but unintelligible; intelligible in part, the rest to the mind; intelligible to the hearing.

June 3.

Rf.

1. Therefore saith the Lord concerning the prophets that make my people err, that bite with their teeth and cry, Peace.

2. Shall I count them pure with the wicked balances and the bag of deceitful weights?

Instances of exact fulfilment even by things in station are becoming suddenly very frequent, but the resistance is concentrated and obstinate. It is exceptional to have the 80º force or anything approaching to it.

The general power of the Aishwarya has increased.

Trikaldrishti of time continues to occur, but there is a wavering sometimes between possible general appreciations of time, sometimes of the exact minute or a falling short by a minute or two, eg. 11.22 (the right time) & 11.23 (a possibility), 11.35 instead of 11.34½ (right time) or 11.27 instead of 11.34.

After the morning reaction of the Asiddhi. First two cha-tusthayas attacked & momentarily touched. Sraddha farther shaken especially in Saundaryam & Utthapana of the Sharira and consequently in Karmachatusthaya.
Ananda remains firm & all the 2d [chatusthaya] except sraddha
Satyam of trikaldrishti etc without ritam, except isolated or
fragmentary movements. Vijnana obstructed.
Today asiddhi in the hair and progressive denudation.
Sharira is at [present] obstructed & attacked. Karma likewise.

Attempt to fix the sraddha swashaktyam

June 4.
The state of obstruction continues; but it contains only a slight
amount of disruption.

Lipi.
1. Today – finality
2  finality of the delight
3  totality of the delight

Vaidyuta is again manifesting itself spontaneously.

The sense of the universe = self is growing in force and perma-
nence, although strongly besieged by the dwaya consciousness. All
energies are now felt to be in oneself.
Along with this realisation comes the Ishwarabhava and atta-
hasya. The hasya is also manifesting itself. The sense of the tran-
scendent Krishna maintains the dasya.

The Aishwarya is again active and powerful.

There is sraddha, but not immediate or particular, only of
general and final result. There is still doubt as to the karma of the
life.

Krishnadarshana is once more general.

7 MS presented
Extreme intensity and sthulatwa of sukshma rasa (bitter). Other tastes, eg lemon, are less well defined in the sthula, though in themselves quite distinct.

June 5.
A day of no appreciable advance or recoil. The Krishnadarshana is attempting to fix itself & eliminate its denial by the less complete bhavas.
The denial of Arogya is still dominant in certain points and affects others where it was supposed to have been done with & expelled practically, if not in seed.
A proof of Tapas-shakti in Kriti

June 6.
The Krishnadarshan progresses greatly in fixity of its general presence, but is not yet free from temporary denial. There is, however, in essence no farther obstacle to the Darshanas; the obstacle is only a tamasic dhriti habit in the memory.

The first chatusthaya resists successfully the attempts at disruption, which are now losing all force; the second increases in Ishwarabhava & Yuddhalipsa. Sraddha is still deficient

Vijnana is obstinately resisted, especially in Trikaldrishti, Aishwarya & Samadhi. These sometimes fall back entirely, sometimes manifest a sudden completeness always just short of perfection. The struggle is over (1) perfection; (2) constant action; (3) organisation. Separately each element is there in something like perfection; they cannot be securely put together—the moment they are combined, a furious assault of the disruptive forces scatters them again and a fragmentary action takes place.

Sharira makes no definite progress. Daily recurrence of Kammananda is moving towards all day recurrence and a sort of incipient continuity; but this is not yet accomplished. Arogya is strongly combated. Saundarya recedes rather than advances. There
is no progress of utthapana; the little that had been made is suspended.

In Karma KrishnaKali stands, although the first is not yet securely centralised; Karma Kama move forward or otherwise with the Vijnana.

Four assertions
1. Vijnana organised and in constant action within June—perfection perfectly organised afterwards
2. Sharira delivered & made sure to faith in all its members within June
3. Life begins to be developed under control of Ishwara
4. The seeds of these things to be laid down now within a few minutes.

The last assertion fulfilled.

June 7 —
Krishnadarshana remains constant even when the other bhavas (the Three, the Four etc) seem to occupy the whole front; they are superficial and cannot blot out the Lilamaya even when they seem to exclude him from the organised object.

Samadhi this morning (swapna) crept forward one step towards greater hold of the thing sensed on the akasha.

For a moment Samata was broken; afterwards the movements of the old crises repeated themselves mechanically without producing asamata.

Crisis continual throughout the afternoon. Samata suffered, but only in the prana of the physical being with an occasional reaction in its mind. Towards evening promise of the foundation of the first assertion made yesterday.

The vangmaya and script firmly established in their constant
(not incessant[] action; anandamaya, vijnanamaya, with the inevitable style in the vak of the thought, possessed by the Ishwara even when an instrumental or interceptive devata comes to the front. The vani also established, anandamaya.

The other instruments of the Vijnana are being prepared for their finality of right & constant action.

Perfect action of vangmaya thought organised along with other instruments (not perfect) in swapnasamadhi & antardrishta, whether jagrat-swapna, swapna or sushupta-swapna.

Stability of rupa increases & variety increases in the swapnasamadhi.

June 8th

Vijnana continues to progress.

Intelligibility, authority & stability of the lipi make considerable progress.

Action of certainty in the trikaldrishti is increasing.

Lipi, “rapid ideality in telepathy” in the swapna,—fulfilled in the progress of the siddhi.

Intense Krishnadarshana is becoming more firmly general.

Afternoon

A firm use of accurate and active telepathy, not yet entirely full nor entirely ritam, of vijnanamaya rita perception and of incipient positive and certain Trikaldrishti is now added to the action of vijnana which is meant to be constant. The trikaldrishti is not merely telepathic, but often pure vision. This movement however is not yet luminous, & in the whole knowledge, except in jnana, there is only at best a subdued light.

MS (not incessant action);
Krishnadarshana is again general although still sometimes obstructed, but successfully only in regard to certain classes of animals.

Ref.
Like long lost knowledge speeding back
In sudden swelling flights she fills my mind
With bliss intoxicant,

Lipi –
exhaustive lipi.

Some progress of trikaldrishti & tapas [attempted],\(^9\) but marred afterwards by the irruption of the will-thought, destroying the ritam and adversely affecting the samata. For a time the trikaldrishti was admirable.

June 9th
Krishnadarshana rose to generality (with one defect), in human beings, of the third intensity, then collapsed, then reasserted itself.

The movement of the vijnana continues.
The trikaldrishti is attempting a greater wideness of the satyam ritam; aishwarya a stronger and more firmly & generally effective movement.

Lipi –
1. perfect ideality of the trikaldrishti. movement towards fulfilment
2. resurgence of life.
3. brilliant blaze. fulfilled
4. oceanic drishti in course of fulfilment

\(^9\) MS attended
Strong threat against the kriti... a general adverse wave against
the kriti.

Instances of “exhaustive lipi”.

Krishnadarshana in the third intensity is now perfectly gen-
eralised with regard to the human being; the defect in regard to
animals is being remedied.

Satyam of the trikaldrishti manifests with something of the
ritam.

Attempt to bring forward the primary utthapana (6½ hours;
not continuous, but in three portions of 3½, 1½, 1½ with intervals
of 1 hour and 1½ hours). Process of turning physical strain into
electric ananda, raudra and force.

June 10th

Satyam of trikaldrishti and telepathy combining; ritam is yet
very imperfect.

Satyam of Tapas is trying to establish itself.

There is also an attempt of Jagrat samadhi to evolve again &
break out from behind the curtain. Samadhi perception of sukshma
sparsha (a bird hitting against a tower) is one of the elements.

Reaction in the afternoon, throwing back Krishnadarshana
into the unfixed and fluid state ranging from non-vision or veiled
vision to the third intensity.

The Vijnana generally was attacked by the intellectuality
Nevertheless its progress still continues,—a progress of in-
choate preparation rather than of decisive results.

Farther development of taste (sukshma rasa) predicted yester-
day in the lipi.

Abhyasa of primary utthapana, 3 hours, 1 hour, 3 hours, 1½
hour = 8½ hours, with intervals of 1 hour, 2 hours, 3 hours. In the morning a reaction of weariness from yesterday's abhyasa —

June 11 —
The same state as yesterday.

Samadhi tends to grow; there is once more some application to life.
In the rest of the vijnana there is battle and preparation.

In the Sharira the Asiddhi has slightly the upper hand in Ananda & Arogya; entirely in Saundaryya.

Practice of pr. utth. [primary utthapana] 11½ hours (5 hours 10 minutes, 3 hours 20 minutes and 3 hours with intervals of 15 minutes and 30 minutes) up to 7.7 pm. After 9.40 half an hour = 12 hours. Result, no weariness, but considerable stiffness in muscles of the legs & pain of the soles of the feet. Elsewhere only slight reaction. Stiffness induces weakness physically not pranic —

The satyam of the telepathy-trikaldrishti with a great completeness but an imperfect ritam is now acting constantly.

The Tapas became very forcible & obstinate against a great and obstinate resistance and almost always gained its point in the general result; particular result also comes to be more & more subject to the force from day to day.

Kamananda was depressed & only occasionally recurrent.

The siddhi is moving to the union of chit & tapas.

There is now the attempt to fulfil the ninth Affirmation by overcoming the condition of Time. This is closely connected with the affirmation of the eighth principle, action on all the five planes at once which also tends to manifest.
June 12—

Steady advance in Aishwarya-traya.

The Aishwarya-ishita-vashita now acts with a very frequent effectivity in exact detail, a still more frequent partial effectivity in detail and a habitual effectivity in general result on things in station.

Ishwarabhava & Yuddhalipsa increase. Sraddha tends to increase.

Rupa-Samadhi grows constantly, but the decisive line has not yet been passed.

Strong, frequent, prolonged, varied & perfectly materialised intense gandha in the evening (scents etc). Gandha has for some time been constant.

Taste tries to become more varied, but except in two or three aswadas is insufficiently materialised.

Intense vaidyuta ananda in palm of hand as result of slight contact with a chair by the side of the hand; prolonged, compelling movement of the fingers & recurrent in long continuity, gradually diminished in continuity & intensity. For half an hour. Vaidyuta Ananda fully established, sahaituka and ahaituka. (Afterwards felt in the rest of the body.) It extended from the palm to the whole arm, then with less intensity to the left arm; accompanied by raudra and by tivra in palm and armpit. Another touch brought a separate stream, the two acting together for a short time. All this justifies the most vivid imaginations of the Alipur jail.

Strong kamananda, continuous or recurrent for greater part of the day; free from asana; intense & continuous in walking, intense but not continuous in standing, more of body in sitting.

Retrogression in arogya (incipient cold; gathered power of skin-irritation)
P. utth 10½ hours (3.45 + 2.15 + 3 + 1½ with intervals of ¼, ¼ and 3½ hours)

June 13—

The “first assertion” is now to a great degree fulfilled. All the parts and instruments of the Vijnana are in constant action and more or less organised. “Constant” is not “continual”. There are periods of disorganisation and broken action, even of quiescence or mere mental action,—although the latter survival is decreasing in force and frequency.

Thought and script are frequent and normally vijnanamaya, but too often possessed by ganaus who try to veil the Iswara. Perceptive thought is more often pulled down into the mentality, but still it rises again into the luminous action. Trikaldrishti is constant; though often disorganised. Aishwarya-traya is constant, though often broken and even confined to isolated effects.

Samadhi (swapna) is now organised; there is stable scene & movement, continuous action, combination, but it does not go beyond a brief stability & continuity. Samadhi jagrat is not yet delivered from the obstruction. This is the only absolute defect of the organised vijnana, but even here there is incipient organisation.

The contradictions of the Samata have now ananda behind or in them, except when the ananda also is expressly overpowered.

Sraddha & devibhava waver, but are founded,—though not yet complete.

Brahman is complete, but not yet quite securely Lilamaya in the Ishwara. The defect however is occasional & slight.

Krishna-Kali is constant, but not yet quite continuous.

All the physical Anandas ahaituka & sahaituka have progressed greatly.

Uthapana is attempting to emerge. In primary utthapana weariness, stiffness, pain can all be got rid of or rendered ineffective

10 See the entry of 6 June, page 863.—Ed.
by the Tapas, but the exhaustion of the store of Pranic energy in the *annakosha* still persists as a habit & the resultant weakness tends to bring back these reactions. These are, however, very rapidly cast off. . The secondary & tertiary utthapanas are not now in action.

In Arogya there is still the dominant recurrence of the habitual fragments of roga and the persistence of the two that are yet unbroken. Cold is attempting to return.

Saundarya is still unable to break its shell.

Karma & Kama await the growth of the Aishwarya & the Sharira. The life & its work [are]\(^{11}\) still under the menace of the Enemy & deprived of their instruments and equipment.

During the day 9 hours primary utthapana, but with greater breaks & less force of utthapana.

The relapse from the Arogya increases rather than diminishes.

On the other hand Sharira Ananda of all kinds grows more spontaneous, frequent, intense and prolonged.

A crisis during the day lowering the sraddha and the force.

No definite progress in the Vijnana which has been thrown back into the “yeast” of a confused and obscured action with the perceptive thought and tapastraya trying to form out of it.

---

June 14—

Some increase in the organisation of swapna samadhi. In the afternoon lipi of swapna samadhi again began to come right.

Continuation of relapse & crisis till the middle of the afternoon—

---

\(^{11}\) MS is
Krishnadarshana, relapsed for these two or three days, is again active in its various intensities, but sometimes lapses into the Brahman.

Force of aishwarya traya increased a little, but the resistance still prevails over the attempt to apply it in all cases.

Taste developed strongly, so that always in the swallow there is some kind of taste sukshma or sthula. Taste of sweetness entirely sthula & intense lasted for many minutes. Gandha is frequent, often entirely niradhara – Shabda tries to develop.

The rule of not sitting or lying except when necessary, but always walking or standing is being observed and in this way almost the whole day has passed. Standing restores the declining force & thus a continuous spell of 4 hours in the afternoon has been done without any serious difficulty. Whole period of primary utthapana $4\frac{1}{4} + 1\frac{1}{4} + 4 + \frac{1}{2}$ hours with intervals of $\frac{1}{4}$, $\frac{1}{2}$ & 4.

Sleep 12.30 to 7.15.

June 15–

Pr. utthapana 15 hours ($4\frac{1}{4} + 7\frac{3}{4} + 3$ with intervals of $\frac{1}{4}$ and $2\frac{1}{4}$ hours). Today practically 12 hours were done without a break. The reaction became powerful at times towards the end, but always lightened. Standing is sufficient without other rest for restoration, but sometimes the restoration of strength comes while walking.

A great advance in certainty of trikaldrishti and some in Aishwarya. The basis of perfect organisation of the knowledge has been laid.

Arogya is still affected by the persistence of the attack.

Karma is also suffering.
In the Vijnana it is evident that Will & Thought are drawing towards each other preparatory to union. At times they coincide entirely, but not yet in a well-organised fashion. Something of the tapasic stress still survives in the will affecting the thought. Something of the passive inertness and absence of power still lingers in the thought divorced from will.

Vishaya has not yet definitely advanced, although shabda seems to be preparing, & there are pure sukshma movements in the others.

Samadhi is almost stationary in swapna; in jagrat dense forms of a certain stability imperfectly manifested in the darkness.

There is no advance in Saundarya.

In Krishnadarshana the vision of everything as a form of Krishna Kali seems fixed. Darshana of Krishna Kali ranges between the various intensities down to non-intensity.

Ananda is firmer, as the remnants of responsibility & desire have been diminished, the former to vanishing-point; but sraddha is not restored. There is sraddha in Yoga-siddhi minus Saundarya, imperfect in all Sharira except Ananda, but none in Karma.

The 16th will be a day of progress.
Sleep 6 hours.

June 16 —

An enormous progress in Krishnadarshana, which has fixed itself rapidly, first in the mere darshana, then in the first intensity, then in the third where it varies between the first & third in the third. The first in the third is Sarvamaya, the second is Anantagunamaya and the third is Anandamaya Krishna.

A great intensity of 3³ Kd [Krishnadarshana] in things, sounds etc.
The vijnana made considerable progress in trikaldrishti. The will also began to become more easily identical with knowledge. But there is still the difficulty of accommodating the transvolutive will & perception with the evolutive will and perception.

In rupasamadhi no definite progress.
Vishaya is depressed.

Anandamaya Samata made considerable progress towards undisturbed perfection. There is some attempt at backsliding in the invulnerability of the physical ananda.

Ten hours pr. utth. but much broken. Reaction prevails.

Arogya struggles to regain its ascendency, but it is not yet accomplished.

Sleep about 6 hours.

June 17—
The Krishnadarshana is now almost fixed in the third degree of the third intensity, but the lower degrees still tend to return sometimes into predominance.

The entire vijnanising of the mentality proceeds rapidly, but the Tapas today is less potently effective. There is a movement, however, towards the entirety of the vijnana organisation.

In swapnasamadhi stability is both stronger and more frequent.

Jagrat samadhi is still preparing more behind the veil than in front of it.

In the second chatusthayā Ishwarabhava grows & declines along with the intensity of effective Tapas. Sraddha follows the same fluctuations.
The Ishwara is now manifest behind all thought & vani, sometimes both behind and in it.

Sharira is still subject to struggle.

Uthapana is under the influence of the reaction which is now strong & persistent; the weariness & weakness recur, but only in the annakosha & its pranic environment, not in the pranashakti proper. Stiffness & pain also recur, but are not persistent.

Ananda (sharira) is less active & vishaya depressed or obstructed.

Karma is obstructed, but the Tapas maintains itself & produces slight positive & much negative result.

A great advance in the combination of knowledge and tapas

Lipi . . “figurative fashioning tapas”

Pr utt. 7½ hours.

Sleep 5 hours—swapnasamadhi 1½

June 18—
The Krishnadarshan fluctuates and admits new combinations, but with a general fixity of the third intensity which only occasionally gives way. The intensity is imperfect with regard to animals.

The disorganised mentality is again active & all parts of the Siddhi depressed.

Lipi increases in regular activity.

(Lipi—regularity of the lipi)

June 19—
The Mahakali-Mahasaraswati consciousness with the Maheshwari pratistha & the Mahaluxmi colouring is now being firmly & finally established.
A similar finality of Krishna Kali is in process of final foundation.

The revolt of the evolutive tendency non-central to the adhara is the cause of the relapse of these last two days and the break of the unity in the universal consciousness. As usual the relapse has synchronised with the reappearance of the Mahakali energy.

Anandamaya samata has been superficially disturbed, but tends always to hold its own.

Sraddha is affected with regard to karma and rapidity, but the lapse is much less complete than on any former occasion of the same magnitude.

Lipi.
The last attack on the telepathy trikaldrishti.

Growth of the balabhava and manifestation of the KrishnaKali relation, the latter element in perfection, the former in imperfection.

Free recurrence of the sharira Anandas, depressed for some time, is now reviving.

A good part of the sleep turned into Samadhi.

June 20—
The Krishna relation is now established with perfection of the Krishnabhava.

Experiment has shown that the Kamananda is much stronger than it ever was before, reviving almost immediately from what formerly depressed it for a day or for half a day. Moreover it is beginning to manifest in the body and no longer only at its own centre.
Greater activity of the sukshmavak.

June 21

The Krishna-Kali relation is fixed & confirmed.

The Krishnadarshana which had gone back to the Anantaguna is now recovering the Anandamaya, the third degree of the third intensity.

The Sharira Anandas are again on the increase, more intense, more recurrent, tending to the continual recurrence & even to the continuous.

Satyam of combined telepathy, trikaldrishti, tapas is again active with greater force, but ritam is imperfect.

Strong increase of sukshmavak: it is not however entirely developed from the material envelope (Vritra).

Manasik rupa has for some time been occasionally active; manasik sparsha, sravana, etc are also occasionally active and not only in the form of imperfectly materialised vishayas, but as pure manasa.

The premananda which was long involved, has reemerged to the surface & is both general and particular.

The suddhananda also, which was contained & almost suppressed in the ahaituka + chidghana, has reemerged. With it the full intensity of the third degree of Krishnadarshana is reemerging.

Vishayas of smell & taste are again becoming active with the first force.

June 22 —

An uprush of a material layer full of the asiddhi.

Chidananda emerges with Sadananda behind it giving the
ananda of the material oneness (substance) & of the all-life in its vital activity (prana).

The vijnana obscured during the last two days reemerges with the decisive Will-Knowledge.

Siddhi of Kriti, but not yet decisive.

June 23—

There is a movement towards the settled intensity of the Anandas, subjective & objective, but the material environment resists strongly & obstinately.

Certainty of trikaldrishti, telepathic and pure, is very strong in the general result, but the anritam prevails in the detail. The movement is towards such a correction of the physical mentality that it shall record faithfully the ritam even when not illumined, but this movement is as yet unsuccessful except in moments of concentration.

The struggle in the Arogya continues. There is nowhere complete deliverance, but there is an increasing effectivity of the Will on the body in respect of Roga. In Utthapana & Saundarya the Will is depressed, held down and sometimes overcome.

There is a general repression of the Siddhi by the physical nature, but through it all the Siddhi progresses.

June 24—

General intensity of premananda with occasional high intensity.

The shuddhananda increases.

Intense revelational-inspirational thought is manifesting in the
vangmaya. Vijnana is active illuminating the perceptive thought & thought suggestions.

Rupa has for some days been increasing in intensity in the jagrat (perfect developed & dense) but has only an initial stability or none. Crude jagrat rupa has receded and seems dissolving rather than forming.

The Krishnadarshana is fixed, but depressed, at the lowest intensity possible to the complete darshana, except in occasional instances or moments of concentration. There is now a movement to recover & fix the general intensity beyond relapse.

The work now being done is to fix all gains in the lowest physical consciousness so that they may be always secure and not only present during periods, however long, of concentration, illumination or exaltation.

Tivra is beginning to generalise its intense recurrence throughout the body. Vaidyuta is also seeking to pervade the body and with less force kama and vishaya.

Rupasamadhi is growing by little jets of progress in the midst of an obstructing physical consciousness.

Trikaldrishti grows constantly in force, but fluctuates in completeness and especially in ritam.

Intensity of premananda fails now only because of the inability of the prana to hold it. The prana is accustomed only to calmness or to an equable ananda.

Kriti wavers in the balance & progresses only in little points.

The vishayas are depressed in their recurrence.

The defective parts of the second chatusthaya grow in strength.
June 25th

Vishaya is now the strongest pervasive Ananda in the body. The others are becoming continually recurrent at points & more disposed to pervasiveness. Pervasive Kama is the most backward.

The second chatusthaya is now fixed in its lesser completeness & intensity. The greater awaits the full organisation of vijnana.

Ananda is now complete & organised, the subjective & the physical; only the continuity in intensity has to be acquired. Continuity is beginning in all the physical anandas.

Trikaldrishti & tapas increase in force, but the organisation is once more inchoate preparing a stronger harmony.

Krishnadarshana is moving steadily towards its full & fixed intensity.

There is now a strong movement to replace the remnants of the intellectuality altogether by the ideality. It has already made some progress.

Crude akasha rupa of a certain stability & variety seems now to be established in the jagrat. Crude dense is also frequent.

Ananda Brahman came to the front; this was followed by a lapse into Jnanam Brahma. Afterwards Anandamaya Ishwara took its place.

Continuity of Sharira Ananda still needs smarana; recurrence is almost free from the necessity.

The Vijnana movement was obstructed & receded again in the afternoon.

Drishti of sukshma rain etc.
June 26th

Yesterday’s lipi $= 175 = 17 + 5$ and $1 + 7 + 5$. In accordance with the first Ananda Brahman & some progress in Samadhi. In accordance with the latter progress in vijnana, sharira ananda and drishti of other planes.

$= 17 + 5$. Lilamaya Ananda Brahman with full fivefold subjective Ananda perfectly organised.

$= 115. 11 + 5$ preparing (Kalibhava on five planes). The action of the divine Prakriti must centre in the Vijnana and flow from it and work itself out through a passive receptive channel of mind, a passive enjoying Prana, a passive instrumental body.

$= The Seven Affirmations.

The three Krishna affirmations are now unalterably established in the being, but are sometimes pale to the consciousness

The four Brahma affirmations are fixed, but for their full action await the Ritam of the vijnana

The two Prakriti affirmations, Time & the five worlds, are in course of being established.

$= June 27th

The day has been devoted to the farther confirmation

(1) of the Ananda Brahman;

(2) of the 1st chatusthaya in sama Ananda; especially Ananda of failure

(3) of the 2nd, especially in sraddha

(4) of the combination of Ishwarabhava & (3)

(5) of the vijnana organisation.

The only true resistance now is in the physical obstacle [affecting] especially (1) samadhi, (2) three members of the Sharira, especially Saundarya, in a less degree utthapana, in a still less degree Arogya, (3) Karma

$=$

12 MS effecting
At night repeated coherent swapna.

June 28th
Organisation of samadhi has entered into the deepest sushupta swapna; but is not yet more than initial, conversations of three or four sentences, brief complex actions, short stabilities, rapid but not long continued thought, vangmaya & perceptive etc.

For the rest the established siddhis are growing stronger, especially telepathy & trikaldrishti, but there is a thick veil and siege of the environing manastattwa through which the vijnanamaya action has to break.

Lipi.
1. large interesting results.
2. pursue all the business of the aishwarya, telepathy, tri-
   (double line lipi) kaldrishti

Double line lipi in akasha & sadhara (chitra) is becoming gradually frequent.

June 29th
Great progress in organisation of tapas, telepathy, trikaldrishti.
The swapnasamadhi organisation progresses & confirms itself on a surer base.
There seems to be some beginning of a freer movement in the jagrad rupa.

June 30th
Swapnasamadhi very strong in all but stability of rupa and long continuity. Rupa in jagrat continues to attempt a freer breaking through the veil.
On the whole the vijnana may be said to have been well organised, but not perfectly in the month of June.

The Sharira has been delivered only in Ananda, not in Arogya etc; nevertheless there is a foundation of firm faith in the Sharira, but it wavers on the surface with regard to tertiary utthapana and saundarya.

The Iswara leads the life, but not yet to any definite result.
July—

June has been the period of four powerful finalities—

1. **Anandamaya Samata**

   The first chatusthaya is delivered from the external attacks of the nirananda and asamata. Only a slight vibration is left combating the Ananda of failure, but this is itself becoming Anandamaya of the duality and is kept only to found a particular vibration of the pure Ananda.

2. **Daivi Prakriti**

   The daivi prakriti and the fundamental sraddha are founded firmly and the Mahakali energy has occupied the Mahasaraswati frame, covered the Maheshwari pratistha, assumed the Mahaluxmi colouring and made its fiercer working compatible with the anandamaya samata. This movement is not yet touched to the final perfection and the ishwarabhava and sraddha are still insufficient and fluctuate on the surface. But the former defect is likely to disappear during the month. The latter depends on the imperfection of the vijnana and will disappear as the Tapas increases in its effectiveness.

3. **Brahman & Krishna Kali**

   The Anandam Brahma is now fixed in the vision of all things and only occasionally goes back for a moment into the Anantam Jnanam Brahma. Along with this finality there is also the finality of the Lilamaya darshana in all existences; there is no longer the sharp distinction which confined the strong darshana to that which is urjasvi, the beautiful, young, noble or emphatic in character or to the human being. The siddhi however needs a more unwavering firmness and a more delightful intensity. These come to it sometimes, but are not yet part of the normal vision.

   Krishnakali has been finally fixed in the consciousness. The Ishwara governs the action, thought etc entirely, but not yet with an invariable prominence. He is vibhu, but not always immediately & directly prabhu. Still the vangmaya, script & vani belong to him directly; only the perceptive thought & feeling are still indirectly possessed except in their extraordinary moments.
4. Organised vijnana

Vijnana is organised in all its parts. Tapas, telepathy, trikaldrishti work together, but while telepathy is *brihat* and almost entirely and spontaneously *ritam*, trikaldrishti though always active, has often to wait for or acquire its *ritam* out of the mass of the possibilities. The *ritam* however plays a large part and grows continually. Tapas is effective sometimes as will-thought against resistance, sometimes as Chit-Tapas. It is not yet entirely chit-tapas and therefore not in possession of the *samrajya*.

*Samadhi* is still crude & unstable in the jagrat, and in the swapna still brief and often attacked by confusion and dislocation, but all the necessary elements are present and work more and more together.

The perfection of the first three siddhis may be expected in July as well as a much greater perfection of the fourth.

Deficiencies

Sharira is the field of the main conflict; the Arogya is subject to constant attack which takes the form of habitual fragmentary roga. Uthapana after making a great stride (primary) fell back & is suspended. Saundarya has been unable to manifest in the head and *jara* attacks chiefly in the hair. In the *bhava* there is eternal youth.

Karma makes little visible headway. It waits on the growth of the effective Tapas. It is attacked chiefly in equipment and freedom.

Physical Ananda

All the physical anandas are daily active and even have an initial combination and organisation. This is the one physical siddhi which is liberated from complete obstruction and ready for finality.
July 1–

Lipi—

1. sahitya-siddhi
   trikaldrishti tapas telepathy  ie the right combination
   της ὑγιεινης  ie the substitution of the healthy
   Prakriti for the rogamaya.
   Lointain  ie distant telepathy etc.
   (ie these are the things that must now be brought to perfection)

2. telepathy
3. trikaldrishti-siddhi.

In accordance with lipi 2. there was a great extension of telepathy of thought, the motions of thought in one physically near being followed with a great and constant, though not invariable exactness and proved by the subsequent action; the working was by a sort of combined mental prakamya and vyapta, prakamya predominating,—neither of them yet luminous,—manomaya, not vijnanamaya.

In accordance with lipi 3. there was a swift movement of ritam in trikaldrishti at the same time. This has yet to [be] perfected and extended to the distant (lointain of lipi 1); for in the distant there is still mainly the surge of possibilities, telepathy not trikaldrishti.

Sahitya-siddhi seems to be moving towards the recovery of the lost Mahalakshmi colouring in the style. (lipi 1).

Throughout the day a violent struggle between the Arogya-prakriti & the Rogasharira. The latter has manifested for some days in bad forms of assimilation and incipient cold, and now in incipient fever. The latter has been defied in all respects except not bathing & so far has been unable to make itself felt except in a fluctuating recurrent heat and occasional tendency to weakness. The weakness however makes no difference either to intellectual work or to physical exertion. This is the struggle to establish the Arogyasharira (lipi 1. της ὑγιεινης)
The lipi “trikaldrishti tapas telepathy” is not yet in visible course of fulfilment, but there are incipient movements.

July 2d
Lipi
to full effectivity hereafter in the telepathy trikaldrishti tapas together.

It is becoming more clear that the life has been directly taken in control by the Ishwara

Reference.
1. प सोमस्य परमानन्द्योऽऽया हनुम्यं यति ज्ञम् ज्ञात्रि सुप्रेमसः
2 it is the glow of life, its finest breath

Developments in the jagrad rupa showing that the definite foundation has really begun (akasha, sadhara)

The struggle in the Arogya continues.

July 3d
Sudden advance in several directions.

The fixed general tertiary intensity of the Krishnadarsana in the third degree has been suddenly established, free from all subjection to forms and circumstances. All fluctuations are in different degrees of purohiti of the Ishwara.

Vijnanamaya satyam of the jnana (complete) as opposed to manomaya satyam and, with less completeness & nearness, of the trikaldrishti in surrounding movements has been suddenly established

There is ritam of the jnana, only partially of the trikaldrishti & force.
Satyam of the force is preparing.

Ishwarabhava & sraddha have taken a step forward.

Thought, vangmaya, vani have all been entirely possessed by the Ishwara; the other voices & suggestions are being either taken up by him or turned into sukshma vak. This latter movement is assured, but has not yet the final definite completeness.

Personal relation of Ishwara & the jiva (prakriti) is now complete though not yet forceful in its central characteristic (rudrabhava).

The ritam of telepathy-trikaldrishti-tapas has now to be fixed.

Lipi—
1) 12  2) 13  3) great results.

Strong emergence of the shuddhananda involved in the chidghana-ahaituka; also of the subjective prema-kama. They are not entirely fixed in generality in their intense forms.

Since yesterday the gandha has again recovered its intensity & variety and is today beginning to become frequent. There is a movement of recovery in the rasa, great intensity in habitual sparshas & preparation of variety involved in indeterminate sparsha, incipient certainty & considerable intensity in sravana (chiefly in habitual sounds), spasmodic recurrence of darshana.

Trikaldrishti of things distant in space & time is beginning to be generalised (telepathy was already working & occasional trikaldrishti); but as yet there is no certainty, as there is still the siege of possibilities. Ritam is not yet certified to the intelligence. Lipi is beginning to work again on these things and rupasamadhi is preparing to follow.

In the afternoon the siddhi receded from the morning’s intensity and in the evening there was even some touch of the reaction
contradictory of samata usually associated with the Mahakali rajasic activity.

There is a considerable attempt of jagrat rupa to advance in all parts, but the success is not yet manifest.

At the same time the tendency to use even imperfect rupas for purposes of vijnana increases and seems to help the attempt.

July 4—
Ref.

The suddhananda as the result of yesterday’s movement is fixed, dominating the Chidghana and sajosha with the subjective premakama, but not yet in its invariable intensity—

Yesterday’s general attack is being overcome— It failed to create a crisis.

The fivefold plane is being manifested in thought etc (puru viçvâ janima manushânânam) with the illumined mind as the centre (samo divo dadrishe rochamâno) & the brihad archis of the vijnana as the source.
The five purah are being manifested even to the rupadrishti. The vijnana (surya) has yet to ascend into all. The completion of this movement will establish the eighth Affirmation (of the nine, ebhibh stomebhih), see May 20. The three Krishna affirmations are almost perfect. The four Satya-Ananda affirmations await for their perfection the free Tapas & Prakash.

The dominance of the Vijnana has been restored, but it has to be consciously related to its roots in the Ananda. As foreseen in the jail the Ishwara is seated in the Ananda; the Ishwara + Jiva in the Vijnana.

Development of samadhi continues —

1 Jagrat Antardrishta — Any image willed comes after a time, always recognisable, but not always clear in outline or distinct.

2 Jagrat bahirdarshi — Images on the background independent of the will, a few distinct & stable, others clear, constant but shifting, not very distinct, others changing & fleeting.

3 Swapna. Combinations of vision, speech, action.

July 5th

Strong opposition and attack.

Ananda (sharira) continues to be constant in recurrence, sometimes continual in recurrence (especially tivra & kama) with an occasional continuity (especially kama). The anandas (vaidyuta, vishaya, raudra) are often pervasive. Pervasive kama & tivra also occur, but with less force & hold.

Samadhi continues slowly to develop.

Vijnana of trikaldrishti, telepathy, tapas is much obstructed

July 6th

Again a day of obstruction and struggle. Sharira is especially obstructed and the positive Asiddhi seems to prevail at some points.
The day devoted chiefly to sahitya (poetry).

Continuities of kamananda.

July 7th

The decisive trikaldrishti has during these few days acted only fragmentarily or dimly at a distance. Telepathy & its stresses have governed the field. Tapas has been with difficulty effective, often ineffective.

Kamananda is increasing against obstruction its force of continuity; but there is a tendency in the body to insist only on one continuous ananda at a time.

Last night pain of strained nerve in the knee joint turned to Ananda, but imperfectly owing to jugupsa.

July 8th

The vijnana siddhi touched bottom-point & then suddenly rose again. It appears that the final elimination of temperamental stress is being now engineered & that this was the principal object of the retrogression.

Sama Ananda has stood firm, except for rare touches; the second chatusthaya & the Mahakali bhava have been strengthened, even the ishwarabhava & the temperamental sraddha (in the heart) although the intellectual mind has been shaken.

Krishnadarshana increases in the tertiary Anandamaya sense through all fluctuations.

Sharira & Karmasiddhi have been obstructed & retarded; but the vijnana has been the chief sufferer.

July 9th – 10th

Indefinite progress at various points

Telepathy, trik. tap. [trikaldrishti, tapas] are recovering force in their combination, but telepathy always predominates.
July 11th

The first part of the month has passed in the usual relapse into a confused and inchoate condition of the siddhi marked by a partial and temporary dissolution of what had just been gained, some amelioration & confirmation of previous gains and the vague beginning of a fresh advance.

It is indicated that there will now be a steady movement forward.

The right form of the Krishnadarshana seems now to be fixed—the Ananda-Purusha Krishna containing the Ananda Brahman which contains the Ananda Purusha as the Jiva—the Shuddha Ananda containing the Chidghana & Ahaituka and giving rise to the PremaKama. The right harmony in intensity of the three elements is not yet fixed.

Daivabhava of Mahakali is fixed. The Maheshwari Pratistha is submerged, but the Mahalaxmi-Mahasaraswati continent is still too strong for the right intensity of the Mahakali inhabitant to fix itself.

In Samata there is still a tendency to return of depression by non-faith in Siddhi.

The Pranic deficiencies of Ananda have yet to be mended; the indriyas are now fixed in the subjective vishaya & the buddhi in chidghana of vishaya, but the prana is not yet free from the memories of virodha in bhoga, eg in bad food, certain reminiscences of repulsion in sound, smell, sight, mental vishaya. These are however shadows that fall from the external auric shell and are rejected by the Prakriti when not compelled to respond.

Tapas-telepathy-trikaldrishti are now successfully combined and strong; but imperfection of trikaldrishti has to be mended before there can be perfection of tapas.
Jagrat rupa is once more seeking perfection in the crude.

Sudden development of the antardrishta; many scenes, stable, but marred by a constant “flottement” of the images—eg a sea against a rock, landscapes, in one a small cottage in the night, a fight in process, long continued flashes from & against the window from which first a light shone, figures behind watching a man on horseback wading through a wide expanse of water, also long-continued etc.

Tapas & trikaldrishti are gaining in general force of fulfilment, but they act mentally not with the light.

July 12th
Lipi.

1. Easy delight faith aiswarya result for the fulfilment of the harmonised T³
2 energetic faith
3 tejas.

Perfect T³ as the result of the above combination; it cannot yet be steadily applied because of defect of energy in the physical prana and of faith in the physical mind.

It is indicated by the Vani that telepathy must become trikaldrishti and trikaldrishti turn into Tapas = Chit-Tapas.

Already the perfect examples of telepathy turned trikaldrishti are being given, long, continuous, many movemented, exact in each detail.

Dream is once more attempting to turn itself into swapna samadhi

Telepathic trikaldrishti is now acting with almost entire perfection, only slightly marred by tapasic stress. Tapas is increasing in effectuality. All this in the mentality, not in vijnana.

The resistance of thing in statu to the exact movement willed is now often overcome.
Lipi.
4. to the entire liberation of the tapas in the physical siddhi
5. to the authority of the lipi.

(Both these are in the future—in preparation)

After a long discontinuance of some months secondary utthapan has been resumed. Laghima-mahima are very strong, defect of anima persists.

Lipi
6. third chatusthaya perfected
7. finality of the Krishnadarshana.

Exact trikaldrishti of time.

July 13th

A day of struggle. The T\(^3\) is attacked and underwent some relapse, but in the perfection gained, not in its continued activity, except for some temporary failure in the activity of the tapas. Telepathy is sometimes clouded by will-thought masquerading as telepathy.

Samadhi is obstructed and does not make any advance. It is continually being suspended (ie thrown back to a former imperfection) in swapna and antardrishta

Vijnana is almost suspended, except for an occasional action. The mentality is being exercised in non luminous reception & action according to a concealed vijnana behind. The attempt is to make it mechanically right in all its movements.

Sharira makes no sensible advance.

Ananda Brahman containing Ananta-Jnana = Suddha Ananda containing Chidghana seems to be fixed, but it is still capable of following to the greatest point of depression consistent with non-evanescence.
In pain even when intolerable there seems always now to be a basis and content of Ananda; it is only the skin, as it were, of the contact that still preserves the memory of mere pain. This is at least true up to a certain & a high degree of intensity.

The pranic nirananda of the vishaya is in course of disappearing; it is already immensely extenuated; eg in tasteless food, disagreeable sounds, bad smells, ugly or vulgar forms, uncomfortable contacts.

Nirananda of event is now entirely physical & imposed by force from outside.

Lipi
1. justice for the youth — georgos youth —
2. youth. tapas. 
3. the divine Indian dynasty (Ch. Vsa?)

The Dasya is constantly increasing in an all-embracing intensity. Madhura which has often fluctuated since May 26, but has always been behind the veil when not present or insistent in front, will now be always in front. Bhoga of the slave & instrument is also now complete. The presence of the Ishwara has often been veiled by his manomaya personalities & ganas, but is now to occupy the directing centre in the Ananda tattwa. The triple Krishna affirmation is therefore perfected.

July 14th 15th
Again an apparently stationary condition.
The Ishwara remains, the forward action seems to be opposed & inhibited.
Literary work is now done more rapidly.

13 Ch. Vsa = Chandra Vamsa. The question mark is Sri Aurobindo's. —Ed.
July 16th, 17th, 18th

The lapse into mentality with a disorganisation of the vijnana in T³, preparing a farther discarding of the imperfections in the previous organisation, eg—stress of telepathy, stress of tapas, division of trikaldrishti from tapas.

The Samadhi advances dully enlarging itself, but shadowy, not luminous or in possession of itself.

July 19th

Development of swapna samadhi. Pages of lipi; but the power to read coherently is still withheld; coherent parts of sentences are frequent but mixed with parts of other sentences. Rupa, Vishaya & event are oftenest shadowy, but all kinds occur and there is occasional stability & continuity. Thought in Samadhi is fragmentary or suspended.

Telepathy & trikaldrishti of tendencies & “contingent certainties” is greatly extended. Tapas is slowly recovering itself. Positive trikaldrishti is discouraged and tapas no longer sure of itself.

Lipi
1 perfect inability to digest in the pristine fashion
2 perfect telepathy.

July 20th, 21st

Slow recovery of the organised vijnana.
Mechanical unillumined trikaldrishti of exact time (3 times in one evening).

[Here a third of a page left blank.]

July 31st

July has been throughout a month of Asiddhi; retardation, suspension of activities gained has been its leading characteristic. All that is unripe in the siddhi has manifested itself,—all the error and false leading.
Samata is established except in regard to siddhi of result where continued asiddhi brings an occasional positive depression and vague touches not of asanti but of suffering & shadows of the old revolt against the leading. On the other hand complete samananda of siddhi asiddhi is obviously preparing & has become more normal than asamata.

In shakti faith is depressed, in siddhi of physical yoga, in siddhi of karma, in siddhi of rapidity and in God & self-power. It is doubted whether the leading is directly divine, – whether the leader of the yoga is the Master of all. Mahakali-shakti is depressed in its Mahakali bhava.

The third chatusthaya is entirely clouded; its action is disorganised & only mental, though constant. The satyam has gained, the ritam only occasionally manifests itself except in fragments. Power is slow & uncertain in its effectivity. Samadhi does not advance, but keeps beating against a wall of aggression.

Sharira is in all points obstructed & in most thrown back.

Karma gets no sure foundation; only sahitya progresses. Asiddhi prevails in kriti.

In Brahmadarshana jnana is strong, Ananda Brahman vague & often only implicit. Krishnadarshana is no longer intense; although it is laying its foundations more solidly.

A general physical lassitude & indifference of the will prevails.
August 1st

र्द्दत्त पखों वरण; सूचीय ग्राण्डि समुदायिया नदीनाम।
समाधान सृजियों अप्रवृत्तियांद्रकि महारुपानीरूपः॥

1. Wideness & purity of the Soul. (Varuna)
2. Has to cut out paths for the Vijnana in the mind.
3. Along those paths must be the flow of the higher existence.
4. The Tapasic impulsions and will-thought have to [be] turned into truth of Vijnana.
5. So all the activities or streams of the existence have to be made vast for the dawns of the Vijnana by the rapid movement of the wideness & purity.

Sukshma gandha recurred after a long time with intensity and frequency.

Vijnana is attempting once more to organise itself, better & more soundly than before. There is especially a perception of the relative truth of the physical, mental & vital satyam & ritam, with the absolute truth of the vijnana behind it.

Ritam increases slowly but steadily in the trikaldrishti & telepathy.

August 2nd

Chiefly, a preparation of finality in the Anandamaya Ishwara-darshana.

Formerly the Brahmadarshan was of the impersonal Sarvam Anantam Jnanam Anandam, centred either in the Sarvam or Anantam or Jnanam or at the highest in the Anandam. Now this is a past state that recurs; it is the Personal in & embracing the Impersonal that is now the more normal, but this is most often in the Jnanam. From yesterday it begins to be more fixedly, more recurrently, for a longer time in the Anandam.

At the same time the second chatusthaya with the Mahakali bhava tends to fix itself. There is sraddha in the struggle & power of battle, not yet firm sraddha in the result.
The main point is that the maintenance of Mahakali bhava no longer depends on successful manifestation of power. Formerly with insuccess it fell back to Maheshwari-Mahasaraswati, recently to M.M with quiescent Mahakali. At present it wavers between M³ with predominant Mahakali & insufficient Mahaluxmi colouring and M⁴ with insufficient Mahakali force. In the latter case Maheshwari pratistha tends to be hidden, as is intended, in Mahakali intensity of the prana, but the intensity ceases in the general Tapas. In the latter there is intensity of tapas, but the pratistha appears & emphasises itself so as to support the tapas & prevent a relapse into the rajasic Kali. In the former there is a harmony and the intended harmony, but with insufficient sense of power.

This has now to be remedied.

Vijnana & Sharira continue as before; but in Vijnana there is the foreshadowing of victory, Sharira still dwells in the shadow of defeat. In Karma there is nothing decisive.

Aug 3.

Yesterday sukshma gandha only in the evening, today active with the taste. Neither free.

A movement of the vijnana by which the central vani, script, thought (vanguard) separate themselves from the indirect and apocryphal and assure themselves more firmly to the faith.

This movement proceeds along with an increasing firmness in the foundation of the Mahakali bhava and a definite assurance of the finality of the Ananda.

It is not yet clearly fixed for the intellect that the Master of the Yoga is the Master of the World, but it is fixed for the faith;

14 MS रक्षकः रक्षूः
& this is clear that it is the Swarat of the system accepting the conditions he has created for the work of development and not at once manifesting his full power and knowledge. It had already been indicated that this was his method—a progressive unveiling out of the satyam and anritam of the human creature. The same rule would then apply to him as Master of the World, Samrat,—but there the mastery is not yet so wide & absolute, the evolution has not proceeded so far and is therefore not so evident.

Aug 4.

Faith today seems to be completely founded & formed except in the detail and in the rapidity, but faith in the detail is preparing. It remains to be seen whether what has been formed can again be shaken.

In the Vijnana a preparation of farther advance towards (1) certainty of trikaldrishti-telepathy, (2) more general effectivity of tapas, (3) firm foundation of samadhi which has again been obscured & depressed. In the kriti there is again some effectivity, no longer merely of detail; in the sharira as yet no advance.

Lipi

1. act realise begin (in strong letters, but not sharply distinct)
2. rely on the aishwarya
3. delight. (ie in the action & result).

There has been as yet no definite success in the directions indicated, only a general strengthening which does not visibly go beyond the actual results already obtained. The fluctuations of the vijnana still continue.

There is a tendency towards renewed activity in the Sharira especially in Ananda which has become sparse and sluggish. It has to be remembered in order to come.
Aug 5 —
A great advance towards certainty of the Ritam in the trikal-
drishti.

At the same time there has come a rush of the will-thought at-
ttempting to establish itself as the effective thought with the knowl-
edge thought contained in it. This is the same movement which
formerly followed any considerable advance of the siddhi,—a rush
of Mahakali pravritti, with confidence in the immediate fulfilment
of the hope, desire etc in the rajasic being and a subsequent recoil
of disillusionment, disappointment and loss of faith.

At present, however, the will-thought is much more normally
effective than it ever was before; but it is not yet entirely effective
and seldom immediately effective. Its enlightenment is imperfect &
even when it is right, it is still half obscure of the nature of right-
Force but not of Light or luminous right force. It is not kratum
sachetasam, but only prajavat, suvitam.

The harmony of the will-thought & knowledge-thought must
be the next step, leading to their entire oneness.

Some slight advance, but not yet quite firm in the jagrad
antardrishta. Perfect forms initially stable.

Constant movement towards settled perfection for several days
in the Brahma and Krishnadarshana.

Aug 6.
Movement towards harmony of the will-thought & knowl-
edge-thought. Greater effectiveness of the will-thought.

Increasing frequency of the pure inspired & revelatory vijnana.

The whole process of the Yoga is now concentrated towards
the perfection of the vijnana (samadhi excepted) and the perfection
of the Krishnadarshana. In the former the entire perception by
sanyama of the mental state of the object is now frequent, but the
entire perception of the thought has to be added: the right (rita)
perception of the trikaldrishti in that which is near in place & time is gained and frequent, but the perception of that which is far in time & place is inadequate. There is also the lapse into the intellectual perception visited by vijnana from the general vijnanamaya perception suffered by the intellectual & sensational mind. These defects have to be remedied.

In the Krishnadarshana, the difficulty of the entire perception of all forms as entirely Krishna is still only occasional & the siddhi which has progressed rapidly oscillates back into the lower stages from and through which it has progressed. The Shakti is aiming at the final removal of these defects.

The movement of the Samadhi is again suspended.

Sharira still continues in the same state of obstruction.

Ananda (kama) in sharira tries to move again towards normal continuity, the others towards normal recurrence.

Aug 7—
The Krishnadarshana has surmounted several of its difficulties. Formerly the adult vulgar & hirsute masculine face did not at once throw back the idea of Krishna. Now all faces at once reflect him. There was also a division between the Krishna in human form & the formless & universal Krishna. Either the first was intensely sensed & the latter became merely Brahman or the latter was seen & the human form became a mask of Brahman + guna etc. This is now in type surmounted; but the Siddhi goes back to this stage firmly in order to bridge over the division by proceeding from the universal to the individual and no longer from the individual to the universal. In all probability this movement will be complete today.

The tapas is becoming extraordinarily effective both in general movement & in exact movement whether of things in statu or things in motu. But it is only occasionally effective immediately
& without resistance. Therefore for things in motu the perfect movement is delayed, others contrary or imperfect intervening, or there is a failure of the occasion. In the latter case either the failure is definitive or the object returns to the same place & executes the movement or some other comes & executes it in its place. For things in motu, the movement is often executed, but in another place & time than was first indicated, after one or more contrary or imperfect movements; sometimes it is done immediately, sometimes in the same place but after delay or return.

Nevertheless the end of resistance is within sight for things near in time & place

Vani has assumed the entire madhura dasya relation which is beginning to affirm itself definitively; with it comes the full sense of the Lila and the attahasya.

The intermediate vani now makes no difference.

This siddhi is extending itself to the script & vangmaya.

At the same time the perceptive thought is becoming more powerful in trikaldrishti.

Tivra Ananda is becoming much more intense and tends to unite itself with madhura.

Raudra is becoming frequently spontaneous (without smarana).

The perfect spontaneity of all the sharira Anandas must be assured before there can be fixed recurrence and continuity.

The entire Krishnadarshana, individual in universal, universal in individual and both the same, is now accomplished. It has yet to be given such force & consistency as to eliminate all relapse and to be raised to higher intensities.

Farther combination of the instruments of the vijnana; especially script begins to work simultaneously with vangmaya which is getting rid of sthula sabda.

Renewed activity of samadhi in all parts, but with insufficiently
firm hold on the akasha. There is sometimes perfect combination, but no stability and lipi in swapna has not recovered its coherence.

Aug 8th

1. Dieu sorti de l’école
2. fonder l’enseignement morale.

There is again a point of arrest, farther progress attempting to realise itself, a passive obstruction resisting.

In the tapas & knowledge the movement is toward immediate effectiveness of the tapas and automatic accuracy in detail of the knowledge. This is sometimes entirely realised, but immediately afterwards contradicted.

In Krishnadarshana it is the intensity.
In rupa it is the fixity & perfection of the rupa in all its variety.
Finally, the effective control of the body & of all outward result by the Will

The activity of Samadhi continued—stability and firm continuity, but not very prolonged. Occasional coherence of lipi in Swapna.

On the whole, however, the day has been one of arrest. The Tapas etc fell back slightly and the force of the Mahakali bhava; at the same time there was no forcible retrogression.

Kriti continues to be slight & limited, but it works.

It is felt that another advance is being prepared.

Aug 9th

The day chiefly occupied with Sahitya.

Spontaneous gandhadrishti shows a tendency to regularise itself.
Sukshma vak is also developing in its spontaneity.

The more subtle form of the vangmaya is already established; the script unsupported by vangmaya is also developing.

There is a suspension of organised vijnamaya perception; but trikaldrishti of exact time is repeating itself. It is telepathic in its suggestion, rather than vijnanamaya; but it is trikaldrishti, not telepathy.

Sukshma vak tends now to develop sentences and is growing rich in implicit voices.

All drishti is attempting to break down the veils that have so long confined it. Sparsha is much stronger than before, but does not get beyond the habitual touches. The barriers still prevail in rupa.

Since writing, however, three or four dense & developed forms have appeared stable straight under the eyes.

Rupa in swapna samadhi is growing in habitual intensity, but there is still the influence of the chhaya over all, though all is not now chhayamaya.

Aug 10th.

tamamuktam vijnanamupasthe adhikaritam shishno abhivyaktam.

That is to say, the suspension of the vijnana action is for the purification of the Pranic Force in the vast of the infinite consciousness by the right action of the pure mind.

During the day no sensible advance. Occasionally it is shown that the siddhi has not really retrograded.

The movement is towards a more complete possession by
the Ananda & Vijnana & the elevation of vijnana thought and perception to the pure drishti & sruti.

But the obstruction seeks to draw it back to the intellectuality. This obstruction is being used as a means for the necessary transformation; it allows the habit of the inferior activity of vijnana to be weakened by suspension.

There is also an assertion that the decisive effectivity of the tapas is to be evolved.

Aug 11th – 12th
Dream & samadhi united at the borderline.

There is now definitely a new period of obstruction & of attempt at relapse; hostile attack is evident & not merely the pause of transition. Even the Samata has been slightly touched.

In the Krishnadarshan all that has now to be done is to exhaust the force of the habit of relapse which allows the opposition to affect the consciousness attained & throw it back to the simple Brahmadarshan or even the mere Sarvam & Ananta or Jnana or else to the inferior stages of the Krishnadarshana. This reversion seems now to be merely mechanical & to happen only because it has happened in the past and can still be forced on the consciousness in the present.

The loss of faith in the Sharira & Karma is still possible & brings with it brief touches of Asamata with all the old symptoms & reversions to the mere Mahasaraswati type. All these are forced upon the system by long and persistent violence & with great difficulty and are not natural to it, much less normal.

Yet the suspension of the Vijnana is not real, but only an appearance fastened onto the mind by sheer force. The coverlid is held on by sheer force & whenever contrary force is applied, it is lifted.
Aug 13th 14th

Progress chiefly in samadhi, confirmation of one or two stable dense & developed rupas, coherence of dream etc; but nothing very strongly decided.

The adverse current prevails in sharira and kriti and is not yet removed in the rest of the siddhi. The most discouraging fact is the return, however slight & transient, of the circumstances of the Asamata, ashanti, asukham which seemed to have been definitely excluded. Although no lodgment was effected, the attack itself contradicts this elementary & initial finality. The hope of rapidity in the rest of the siddhi has now to be postponed indefinitely.

Krishnadarshana is also successfully resisted & kept fluctuating between its inferior degrees & those of the Brahmadarshana.

Seven days have been given to almost entire asiddhi & almost the whole of July. None of the instruments of Vijnana can yet be firmly & wholly trusted, since they all seem to give themselves to the intrusion of inferior powers.

Physical Ananda is infrequent and the vishayas again rare & sluggish.

Aug 15th 16th

The Siddhi is again dominant in the vijnana, but the element of mental error remains, though subordinated, & the element of tapasic ineffectivity.

The higher energies of the vijnana are trying to manifest, Repeatedly indications that seem to be contradicted or in constant course of contradiction & the corresponding tapas fulfil themselves victoriously; but the fulfilment is not always perfect.

15 MS रायो न कियो
There is as yet no firm possession of the Vijnana and the realisations acquired sometimes descend and take possession, sometimes stand back & allow the old conditions to play in front of them, sometimes seem to be almost entirely obscured.

At present a process is going on with the mind in which that is at the mercy of mental suggestions and all that is true is carried on from above automatically, the mind being only a channel and not participating except very slightly & wrongly.

Later on (16th morning) entire return of the siddhi (tapas-telepathy-trikaldrishti-lipi).

Ananda sharira is again becoming normally active. The whole poise of the siddhi has been restored and the beginnings of a new organisation manifest.

Aug 26th

The last nine or ten days have been a period of uncertainty and confused labour; the main result has been to confirm the satyam entirely in knowledge thought & will thought on both the two planes of nervous & pure mental mind, but not yet in the intuitive mind; for satyam of intuitive mind = ritam.

Tapas effectiveness varies between all the different degrees from postponed or deflected effectivity to 80º

Telepathy is in the same condition, active, but not well-organised.

Samadhi is obstructed.

Krishnadarshana is firm in the Jnanam Brahma, but Anandam Brahma is not yet sufficiently brought forward,—therefore the full intensity is ordinarily absent.

Sharira is still denied.

Kriti is stronger than before, but very partial.
This is an indication that the satyam (and ananda) are to be extended to the highest or intuitive mind as well as the two others. It has begun to be fulfilled to a certain extent.

Gandha seems now to be fixed in recurrence, but it is sometimes rare, sometimes more frequent. Rasa also comes, but less firm & intense & often as a result of gandha. The others are frequently suspended & do not attain to any new variety or freedom.

Raudrananda has increased, especially in the agneya-sparsha.
February 1916

In the interval since August there has been a period of long torpor and inertia followed by a period of more steady advance.

Samata chatusthaya is complete as well as the positive bhukti; only touches of asamata now occur, chiefly in the form of momentary depression though touches of uneasiness also sometimes but rarely occur. For the most part samata, shanti, are untouched, sukham occasionally, hasyam is sometimes clouded, but not seriously or positively.

The viryam is complete, except in touches of a-shaurya; only nyunata, not positive defect of contradiction is manifest in the other elements. Tertiary dasyam is complete & firmly established, but not always forceful. Shakti is deficient in the body, in the rest complete, but not forceful, and sometimes touched. Aishwaryabhava and sraddha (swashaktyam) are improved, but not yet firm, except for the sraddha in yoga-siddhi, minus shārira. There is no sraddha in adesh-siddhi.

Brahma chatusthaya is now complete, constant in Sarvam, Anantam, Jnanam; established but not always intense in Anandam. The Person is manifest in all, but not always vividly and there is still a divorce between the individual & the All in personality, no longer in the impersonality.

Sharīra makes no evident progress, except in the frequency of the Anandas; kama and tivra especially are established, but not always operative.

Jnana is firm, as also telepathy except that of thought; trikal-drishti and tapas-siddhi are drawing towards a first initial perfection; the instruments are developed, but not frequently active;
Samadhi is slowly developing a firm basis in swapna, but has been thrown back in Jagrat.

---

Feb [Saturday Feb 19th]

Bath fixed first after 11, then at 11.20, (the intellect tried to fix 11); actually at 11.19. The exact time was fixed about half an hour before fulfilment, the approximate time about an hour before.

---

The tapas-siddhi has been steadily increasing in general force. The rule of resistance is no longer so absolute. Very often the exact movement is fulfilled again and again without resistance or with a minimum of resistance; but where the object is stationary at first, there is usually resistance. Eg. a squirrel on opposite ledge, suggested to mount on parapet, afterwards perceived that it was not to be at that spot (A), but might be farther on (B); seen that it would go on to the turn of the ledge; went on beyond to the end whence it attempted to descend. Stopped by will which suggested and trikaldrishti affirmed that it should mount the parapet suddenly; was compelled to do so by arrival of crow. This movement was twice willed, foreseen and fulfilled. Afterwards it went near position A, on the ledge, then frightened by a crow on the other side, fled to B exact and mounted in accordance with the original suggestion. This example and many others show that trikaldrishti and tapas, so long enemies, are beginning to unite and coalesce.

---

S’s [Saurin’s] return seen at either 9.15 or 9.30. The intellect first leaned to the latter, but after willing for the former, the ideality approved 9.15 (by the watch, by the right time 9.24), although the intellect still doubted. S came at 9.16.

---

In the evening two drishtis of a watch pointing to 11.50 and 2.57; the first indicated by the thought as the time at which S. would come upstairs tonight, the second connected with teatime tomorrow. S came at nearly 11.40 by the watch which must have been about 11.50 by the right time.
Sunday –

S rose in the afternoon at 2.55 by the watch (right time 3.16) and went to make tea a minute afterwards; this agrees with the watch-dristi 2.57 last night: there is a minute’s difference which may be due to wrong observation, since the watch-rupa was diminutive & the exact minute could be only approximately given. It is to be noted, however, that the two drishtis seem to have referred to different time-pieces.

Aishwarya increased in force. Formerly the object of the will would execute four or five evolutions & then escape entirely from the will-force. Today after the first escape it only deviated for a moment & that in obedience to a previous suggestion not maintained and subsequently still obeyed others, though not so perfectly as in the first five or six evolutions.

Sunday.

Feb. [20]

It is noticeable that [there]$^1$ are now no longer long gaps of time in which a brief play of tapas and trikaldrishti gives place to confusion of knowledge and entire barrenness of effectivity in the will. The telepathic knowledge is always active and increases marvellously in correctness, although it is still troubled by a certain amount of false stress and false distribution but very much less than formerly; trikaldrishti is constantly active although it does not yet securely lead, but it is becoming frequent and active.

Tapas sometimes fails entirely for a few minutes, afterwards it rights enough. It always produces some effect slight or great, immediate or subsequent, in the object willed or other object not willed, perceptible in act or only just perceptible in tendency: but accurate result is now becoming frequent, though not yet continuously active. All this however, does not entirely apply outside the field of ordinary exercise of the will & knowledge.

Rupa in jagrat is growing, but slowly and with relapses, not

$^1$ MS they
into long suspension as formerly, but into inferior activity. The vishayas are yet very rudimentary; gandha is the most advanced.

Tuesday 22d February.

Final confirmation of satyam of telepathy, followed by a great confusion of ritam owing to the insurgence of the mental and pranic environing suggestions. The precise place of these was, however, made clearer by the experience.

The Krishnadarshana (personal) generalised firmly in all existences, a little defective in animals. This darshana formerly depended on strong perception of the Ananda Brahman coupled with strong perception of the Lilamaya. It is now automatic, even when Ananda Brahman is depressed and sense of Lila not prominent. Only the invariability & intensity have now to be confirmed and the perfect union of Krishnakali bhava and the now complete Brahma chatusthaya will be founded.

The right interpretation of lipi and the lekha (sortilege) is now automatic.

The swapnasamadhi has now definitely advanced. Formerly the drishya there was evanescent, disappearing as soon as manifest, or else permanent only so long as the waking mind in sleep did not turn its eye upon the thing seen and it was only watched by the dream mind above. Now drishyas are common which remain before the swapna-jagrat eye long firm and constant in the sthana though not for very long in the karma. Transient drishyas are also more frequently lifelike & not shadowy. Lipi is more frequently coherent.

Thursday 24th

The vijnana overpower for two days is returning to activity.

Meal fixed by trikaldrishti after 12 and bath with some hesitation at 11.55. (fixed about 11.) Bath at 11.55 (called at 11.54) and dinner at 12.5 to 12.10. Trikaldrishti (apara) continually justified in movements of birds etc.
Development of a powerful self-fulfilling force which is sure beforehand of its result, yet is not trikaldrishti, but still fulfils irresistibly; only it is only in general movements & does not apply victoriously in sthana or exact circumstance, but only in kala. It is not knowledge but sasradha shakti—not the doubtfully effective rajasic tapastya but true tapatya. This however does not come at will.

Lipi. perfection of delight.

Friday.
Two strong telepathies in the evening
1. Bh. [Bharati] will not come, combated by a weaker telepathic suggestion of coming. Bh did not come, as he does daily
2. At 9.18 (by watch) strong suggestion that S [Saurin] would come immediately, combated by suggestion of mind trying to fix 9.30. Assurance that it was before 9.30 and indeed immediate. Mind compromised saying “Now probably, but at least before 9.30”. S came at 9.20.
Constant growth of firm-founded general satya in the telepathy, trying to convert itself to ritam.

Saturday.
Satya of telepathy becomes more & more ritam; general satya of trikaldrishti preparing.
Growth of the more intense Vishayananda of the mind in all the objects of sense.
Growth of Krishna Kali bhava in the Brahma darshana

Thursday
March 2
In the evening telepathic trikaldrishti that N [Nolini] will come soon after 8.30, M [Moni] soon after 9.0, S [Saurin] soon after 9.30. N came at 8.35, M at 9.8, S at 9.35. The approximate time after was also correct.
Friday.
March 3

The telepathic trikāldrishti has now an element of certainty in general results distinguishing it from the mere telepathy; the latter also tries to represent itself as trikāldrishti, but is not accepted as before without the certainty.

All the siddhis are going through evolutions of recoil and advance. Firm and strong sama ananda is secure except in the case of strong and massed baffling of siddhi. Hasyam is beginning to take a stronger hold on the system.

Time of bath given correctly as after 12. and then as 12.10. (first mistaken for dinner-time); ready at 12.10, called at 12.11

Sunday
March 5

The Krishna-consciousness is now perfectly normal and universal, though not as yet seated on the plane of the Vijnana or Ananda, but only on the mental. Smarana is still necessary, though not invariably.

The dividing line between the Nara and Narottama is removed.

General Satyam of trikāldrishti is adding itself to satyam of telepathy in the immediate time, place and event; ritam is as yet only in its initial stage.

All siddhi, except in the first chatusthaya, is subject to temporary denial in its later acquisitions.

Instances of immediate or exact fulfilment of tapas begin to become more normal; eg, a kite near the window pursued by crow; knowledge-will that crow should strike three times rapidly, then fly away; immediately & exactly fulfilled. Crow on bar under balcony opposite; willed to go one side, then return, then fly away from a particular spot; first two fulfilled immediately, the last after hesitating and moving several times to one side and another.

[Here one page left blank.]
Tuesday. Mar [7]

The satyam of thought, telepathy and trikaldrishti is attempting to arrange itself in the terms of the ritam, but as yet only succeeds occasionally in the type. There is the old struggle between the intellectuality to keep the truth for itself & become intuitive mind of the intelligence and the ideality to replace the intellectuality and establish the pure intuitive mind or the vijnana itself. For the present the intellectuality prevails; but tends to lose its hold of both satyam and ritam in the struggle.

Wednesday. March [8]

The Krishnadarshana is again subject to fluctuations. It has descended into the Anantam & the Jnanam; but the Chidghana is now more normally informed & encompassed by the Ananda and perceives the Narottama in the Nara. Sometimes however it is more Anantam than Jnanam and then sees merely the Nara with only an implicit Ananda and the Chidghana prayas.

All is now being turned into Ananda in the mind & body. The old reactions returned for a long time in the morning, but were forced to be anandamaya, as are all discomfortable sensations in the body. Nor can they now disturb the calm of the being, but only suspend the hasyam with a minor contradiction of the sukham making itself an ananda of asukham & ashivam.

A new brihattwa, deepening, intensifying and unification of
Titiksha, Udasinata & Nati with each other and all three with unified rasa, bhoga & ananda.

Intense chidghana is moving up into shuddhananda & the sense of a faery beauty in all things, even the most ugly. The downward movement of pure shuddhananda embracing chidghana and ahaituka is suspended. Sakama premananda and saprema kamananda are being unified, more firmly generalised & normalised.

After several days cessation the trikaldrishti is being again worked over, for a more positive satyam. The first movement is a greater certainty of the final result, but this is still by suggestion to the intellect or in the intellect. The difficulty is still to distinguish always, though it can now generally be done, the ideal suggestion from the intellectual certainty which cannot be securely trusted.

There is also an attempt to fix ritam of detail; this is still done in the old way, by unillumined suggestion to the intellect. Eg re the bath; fixed as after 11.30. Times fixed 11.35, 11.30 for unknown stages, 11.38 for being called to bathe: then 11.30 was fixed for S [Saurin] getting up from under the tap, 11.35 for M’s [Moni’s] finishing the actual bathing. 11.38 & 11.30 came out exactly to the second, but there was some doubt about 11.35 as the exact time was not noticed. At 11.35½ M had left the tap and was drying himself.

Usually tapas is eventually successful in the immediate environment—but the tapas is no longer personally used; it comes of itself.

Since yesterday script and vangmaya are constantly in the type of vijnana with prakasha, asu and ananda, and Vani, less securely, in the type of pure ananda containing vijnana.

Reference carries with it a great clearness, appositeness and sure fulfilment.

Sometimes there is wrong application or combination of time and circumstance. Eg. 7.8 was given and taken as the time when Bh. [Bharati] would come; but at 7.8., the servant went out, Bh. came at 7.27. Afterwards indeed 7.25 or thereabouts was given, but it was thought by the intellect Bh would not come, although the ideality had given its decision that he would.
19 February–20 March 1916

10.5 given by rupa of watch; decided to be time at which dinner would be finished, for it was already foretold that S would come early (he came about 9.15); when the watch was seen two or three minutes after finishing dinner, it was exactly 10.5.

9.40 and 7.50 given by rupa of watch.

Tuesday [14] March

9.40 doubly fulfilled, in the morning as the time when work on Veda (Bengali) was resumed (unforeseen), in the night as time of meal (foreseen), the first exact, the latter probably approximate, the watch not being immediately consulted —

Friday [17] March

After a crisis of anrita of intellectuality in which the unrelia-
bility of intellectual suggestions was insisted upon, there being no means of detecting whether they are ideal or merely telepathic, the Yogasiddhi is resumed on other lines.

Krishnadarshana fluctuates again for more confirmed normal-
ity of what has already been gained.

Rupa is slowly developing, but still without stability of perfect forms; samadhi fluctuates.

Samata is not yet entirely immune, but hasya has become en-
tirely normal. Asamata is now usually anandamaya and only caused by strong nonfulfilment of yogasiddhi.

In the second chatusthaya, the only positive fluctuation is in sraddha and ishwarabhava and in the externalities of dehashakti.

Sunday. [19] March

In fixing time of Bh’s coming two suggestions came 7.45 and 7.55. At 7.44 the servant went; at 7.55. Bh came.
Note –
Only these exact correspondences of time are at present being recorded; the numerous fulfilled telepathies, trikaldrishtis etc which occur each day are not set\textsuperscript{8} down.

Monday. [20\textsuperscript{th}]\textsuperscript{9} March
Known by telepathy & telepathic trikaldrisht that Bh [Bharati] would not come; still 7.30 suggested – nothing external happened, only the beginning of an internal movement.
8.20 suggested for N’s [Nolini’s] coming. N came at 8.20 exact (by the watch)
Telepathy that N. would not come to read Greek; justified.
Will for S [Saurin] & M [Moni] to come at 9; they came at 9.3.
9 JANUARY – 14 FEBRUARY 1917

Jan 9th 1917.

Re. [Reference]

य ओहुँ रक्षसों इतिनामच्च करार्याच्या भिन्नते मर्गसों नि यात।
यो व: जननीजनानान्त निम्नातु तुष्ट्यान्तकामान् करते सिंहिडान्॥

“The Rakshasas who rush to the attack in the birth of the godheads, — O Thought-gods,¹ him assail in your wheelless cars who confines your work when man seeks his self-expression and with sweat of effort creates little fragmentary desires.”

This corresponds to the actual state of the siddhi. Samata is conquered; only vague unsubstantial touches of asamata can now trouble the outer physical skin of the pranakosha. Shakti on the basis of dasya is well founded, though still imperfect in the application of sraddha through uncertainty of knowledge & will and therefore imperfect also in aishwarya of devibhava. But the third chatusthaya is held back in order to get rid of the last fragments of the ghost of desire which prevent the free identification of the effortless will with the cosmic Will and to get rid also of the defect of the thought which the Rakshasa still tries to limit to the stumbling movements of the intellect.

Telepathy is now strong and spontaneous in its satyam, but the ritam is imperfect because of the persistence of the intellectual overstress, false choice, false valuation, false interpretation. Trikaldrishthi is gradually strengthening itself, but is still occasional and uncertain because usually rendered by the physical mind intellectually and not ideally.

Re परिष्कृतस्य रसिन इयमादुविश्वासमयं पत्यश्

¹ In the manuscript, “Thought-gods” is written above “Maruts”, which is not cancelled.—Ed.
The Ananda purified felt a little afterwards flowing through the sukshma body like a sweet and delightful wine (juice of grapes).

Jan 10

Sensitiveness of pranic body; intense pranic and emotional & sensational telepathy, brihattara; also development of sense-thought telepathy in the mind & some vague pure thought telepathy. Strength of sanyama

Valuative vartamanadrishti becoming more & more ritam. Immediate trikaladrishti strong, but still more tentative than decisive.

Ref.

Not immediate future. vartamanadrishti indicates vijnanamaya realisation of the Ishwara.

While rejecting suggestion of fifth chatusthaya, fourth member—

That is by rapidity of development of the divine Will and its destruction of the opposing powers, the thing may be realised even in this life.

Jan 11th

Both perceptive (ideal) thought & vangmaya as well as coherent lipi are constant in samadhi, seated, even at great depths which formerly brought sleep. Now sleep is put back and only slightly, occasionally and for a moment or two overcomes the swapna-sushupti or supta-swapna. It remains to be seen whether this great advance is firmly consolidated & whether or how far it will extend to samadhi, lying down, daytime. Night is still given to sleep, & until yesterday it prevailed always after a time in the daytime recumbence.
Doubt is being destroyed by the growth of the ideality, samata and dasya perfected have got rid of egoistic desire and its attendant stains, the Ishwara is governing the being; therefore the time has come to establish the inner joy and light, in itself entirely, the joy of things being merely its outflowing & not at all dependent on things. With this will come the completion of the brahmabhava by the dissolution of the remnants of mentality & the power to begin the karma. Thus atmarati & brahmabhava are already established, but still besieged by old habits of mind & therefore still imperfect.

Jan 12th
Stability, spontaneity, legibility of the lipi. When legibility is imperfect, spontaneity suffers[,] the mind interfering to catch the unexpressed or decipher the illegible portions. Stability also is then diminished.

There is some revival of intellectual confusion preparing a larger ideality.

Jan 13th
The battle to transform the telepathy into ideal thought and perception continues.

There is a distinct advance towards the universalisation of chidghana-shuddhananda & the sense of universal divine beauty in place of shuddha ahatuka ananda and the sense of natural beauty. If this is established, the chidghana is now firmly prominent in the ahatuka in place of the nirvijnana ahatuka, even in human figures & faces where it was or tended to be absent. For some time chidghana has been perfect in things and present in animals.
Jan 16th

After two days of struggle & obscurcation in which the Asamata pressed upon and into the consciousness owing to the revival of rajasic struggle, there is a triumph of the Ananda, cosmic, possessing the whole being, though it is still besieged from outside in the physical Prana by the resuscitated Asamata. This is connected with defect of Aiswarya & sraddha in the perfect siddhi.

Brahmadarshana has become again & more firmly Anandabrahmadarshana and is now being refilled with Krishna-Kali-darshana.

At the same time madhura dasya is restored with intensity.

The last remnants of the personal egoistic attitude are being attacked and persistently and rapidly removed to be replaced by the divine & cosmic ego, for whose will, enjoyment, knowledge, power the mind, life & body are to exist & not at all for the separate individual will & enjoyment.

Antahsukha & antararama are therefore well founded, but antarjyothi is only beginning. It cannot be complete except by complete conversion of manas into vijnana.

Jan 20th

The last few days have seen

(1) Strong confirmation of the first chatusthay in its completeness. There is now little opposition. Only the intensity of the sama ananda has to be increased and an occasional recurrence of vague disappointment prevented from returning.

(2) Increased strength of second chatusthaya especially of sraddha bhagavati, devibhava and confirmed dasya. In the latter madhura has to be increased. Aishwarya has to be encouraged & devibhava to be less Maheshwari-Mahasaraswati with more in it of Mahakali. The Mahalakshmi colour comes with the positive ananda & madhura, fades with the sinking back towards mere shanti and general samata & sukh. The rest awaits the development of the third chatusthaya.

(3) Great extension of perception of satyam in telepathy, which is preparing to embrace sensational & mental telepathy
and telepathic trikālādriśhti. Tapas is increasing towards brihat effectiveness, but is not yet ideal (vijñanamaya). It awaits the development of pure trikālādriśhti unified with pure will.

(4) A struggle in the fourth chatusthaya arogya. The opposition still prevails, though more hard put to it to maintain itself.

(5) Considerable extension of lipi.

(6) Increase of Krishnakali, but not in the perfect form. Karma has suffered a return to the deadlock.

The instruments of vijñana are becoming more directly the Ishwara’s.

अंतःपृथ्वी & अंतःगतिः being assured, अंतःपृथ्वी: is increasing. Agni is massing strength (कृष्णवान: यज्ञ:) in order to create a wide & swift movement (पूर्वी प्रविष्टिः & पूर्वी प्रविष्टिः). But the principal action still needed is that of the Maruts रक्षसो: नि: यतः.

Jan 21!

The lipi is still developing though hampered by the mental eagerness of the environment which seeks to anticipate and reproduce its own ideas in the lipi. The lipi is slower when not pressed, but more spontaneous, stable, vividly legible.

Spontaneous, stable, legible jyotirmaya lipi: also tejomaya. Varnamaya comes but with less ease. Dhumramaya and agnimaya are least spontaneous.

Script in the morning
“Today third chatusthaya”
“Lipi, script, thought, vani”
“Samadhi”
“Tapas-siddhi”

In the first part, the programme commenced its own fulfilment at once. A great flood of ideality in all these members is pushing out the siege of the intellect. At every point the ideality shows its superior truth in giving the light, the right relation to fact of any part, fraction, aspect of the thought, which the intellect has bungled.

The inspiration is fixing itself into all the instruments of the vijñana, even the perceptive thought.
Interpretation of the rupas (sadhara) has begun

Script. “Believe luminously”—that is by the ideality, in spite of the apparent resistance and nonfulfilment. This is now coming into force and the belief justifies itself by the eventual fulfilment; the light is also seeking to embrace more perfectly the details of the resistance and the fulfilment.

In consequence tapassiddhi is becoming larger in its movement and more frequently & powerfully effective, often immediate or nearly immediate, sometimes exact in circumstance.

In the afternoon samadhi made a general forward movement towards

1. activity of ideal thought, perceptive as well as vангмая.
2. coherent & consecutive lipi, thought, narrative
3. continuous drishya combined with sravana and sparsha.
4. removal of mere shama in samadhi, replacement by shama + tapas + prakasha.

The motion is large, but not as yet entirely victorious. Especially is there resistance in the drishya etc.

On the whole the movement is that of the कृष्ण पार ज., the पृथ्वी तृणो प्रसिद्धि of Agni, the अंत्याच्यांि added to अंतःमुख एवं अंतराराम.

Intimation in the lipi several times repeated that this movement of the ideality will come to a head on Tuesday

Jan 22\textsuperscript{d} Monday

For the first time today the Ishwara is the sakshi, and not the Jiva. At the same time the Ishwara jnata, bharta, anumanta, karta is being rapidly strengthened\textsuperscript{2}—(the karta from this moment after being added[]). There is still a downward tendency of the mental powers trying to insist on the jiva in these capacities, but it is losing force.

Ideality of style & substance is constantly increasing in the vijnana instruments, especially the perceptive thought, in spite of

\textsuperscript{2} The word “karta” was added between the lines, apparently when this point of the sentence had been reached. Sri Aurobindo explained the insertion in the next phrase.—Ed.
the tamasic resistance of the old mentality in its general sanskara.

Script

Ideality in (telepathy), trikaldrishti, tapas

Samadhi.

(1) is being already fulfilled; first as indicated in the trikaldrishti-tapas; that is to say will & knowledge are combining, preparatory to unification; afterwards in all three.

Lipi. “future telepathy turns to trikaldrishti” This is being gradually fulfilled.

The tendency of the mind to carry on one thing at a time, insisting tamasically on the impossibility of doing all at a time in the siddhi of the ideality, is being constantly contradicted and corrected.

Ideal intellectuality is receding out of the system under pressure of intellectual ideality and that is constantly turning itself into ideal ideality, predominantly of the srauta kind (inspiration).

It is found more & more that every impulse, suggestion etc in the sadhan has its utility for its own purpose, but for that utility to be perceived and appreciated, the truth and limits and relation of each has to be ideally perceived. This is now being done more & more.

All this action is principally in the “school”, not yet applied to life at large.

Antariyoti may now be considered as established. Brahma-bhava is growing, but has to be made more vivid & steady.

The पाज़, पूज़ी प्रस्ति & तृष्णी प्रस्ति are founded. What is left is the destruction of the limiting Rakhasas and the royal march of Agni. यो...तृष्णीवायस्मानां कर्ति निम्नित्य; that Rakshasa is being destroyed rapidly. The निदः—यो शर्मा श्रमवायस्मय निदः has lost much of his field, but still holds the body & the karma and is not quite driven out of the ideality.

---

3 Apparently the script first came: “Ideality in trikaldrishti, tapas”, the word “telepathy” being added later. The parentheses around and the caret below “telepathy” in Sri Aurobindo’s transcription of the script appear to be his way of representing this sequence. — Ed.
In Samadhi the activity of ideal thought perceptive and vangmaya is becoming quite normal, continuous, coherent in all the lighter layers & even in the middle depth. It is penetrating into deep samadhi. The real struggle continues to be in the jagrat.

Ideal activity has now become normal in all depths of the mental samadhi. There is as yet no jagrat in vijnana-samadhi.

Rupa-drishya manifests coherently only in brief scenes of a few seconds' occurrence; the deeper the samadhi, the richer the power of vision, although this \( \) is not invariably the rule. Lipi and reading ditto. They are coherent, easily, only in swapna & sushupta, but in sentences only. It is at night that they begin to be long and yet coherent.

In jagrat antardarshi a little impression has been made, but it is nothing firm or definite. It is here, in jagrat, that siddhi has been most deceptive in the past. The results have always been stolen by the Rakshasas.

Script

In jagrat rupas of all kinds begin to reappear with a greater general tendency to siddhi.

\( \) increases in ideality, broadly; nothing definitely new.

In physical siddhi the tivra & vishaya are taken up again and carried forward with greater generality & spontaneous intensity.

Jan 23\(^{\text{d}}\) Tuesday.

Script—

The \( \) has to formulate itself in the ideality
Jagrat develops farther.
Vishaya improves
Sraddha swashaktyam, aishwaryabhava and devibhava have to found themselves firmly.
T³ is faulty in detail. To mend that fault must be the next movement of the third chatusthaya.

Brahmabhava is now vivid & steady. To Brahmabhava has been added & united = Brahmatmabhava. To this there is attempting to unite itself Ishwarabhava, but here there is a difficulty. “Each body is the body of God” lipi realises itself with vividness, but not steadily. Each mentality the mind of God in spite of anishabhava less vividly, less steadily. The sense of the Spirit = Deva presiding over mind and body comes only occasionally.

Ananda Brahma has been for many days in suspension in favour of Manas Brahman. It is now returning sometimes with, sometimes without vijnanananda.

Sraddha swashaktyam (subject by dasya to sraddha bhagavati) is founded, —so too Devi bhava of the Dasi-Ishwari (Mahakali-Mahasaraswati) and as a result a qualified daiva aishwaryabhava

T³ is formulating itself; but there is confusion owing to misplacement of detail by intellectual tapas. This is removed in general thought, where ideal tapas has almost replaced intellectual, but not in the application of t³ to objects even in the “school-field”.

Rupa in jagrat is now often clear and complete in crude, ghana crude & occasionally in perfect developed crude. It includes all the four main forms—animal, man, object, scene or group. But it is perfect & stable only in the bird form which has been chosen for the type owing to the preoccupation with the flight & movement of birds in the vicinity during the exercise of t³.

Vishaya last night began to remanifest, but without any distinct improvement except in sravana. There was, however, the perfect & vivid sense, sukshma-sthula, of the sparsha of object with object, eg the moth knocking itself or moving on the window-pane or resting on the wall.

The तुष्य प्रज्ञ: is now accomplished, but it is not as yet
sufficiently full of driving force to follow an entirely तृणी प्रतिभा.
Still the rapidity in the third chatusthayā is great; it has to be perfect.

Touch is developing itself more strongly in the sukshmabodha,
and the result-sensation is often felt in the sthula; but the contact-
sensation is only occasionally & very imperfectly sthula, except in
the two or three familiar touches, especially that of water.

Taste is recovering its force, but has yet no stability except
in the vaguer touches. Gandha is redeveloping.

See towards end of book6

Jan 23rd 1917. Tuesday. (continued)
The Devibhava has now been fully defined—

स्मीमोक्ष्यता युद्धिर्मान्तः
ई जानिति: विज्ञातवा एकांतिः आत्मप्रसादः
ल प्रेम भावसमुद्रः सौदयोऽत्तुया खेदः
स् दाश्येऽंविधातुयं कर्मलिङ्गम प्रतिभा:

Common to the four दधा ईशर्मान्: स्वर्यकमसामान्य
The last three bhavas, ई ल स [i.e., Maheshwari, Mahalakshmi
and Mahasaraswati], are now complete; the first is there except
अन्तुः, but not steady nor well combined with the rest.
The afternoon has passed in a massive resistance to the re-
cent siddhi, which has developed Ananda in battle, resistance &
temporary defeat. The Devibhava has triumphed over the resis-
tance.

Sukshmabodha of sparsha continues to develop.

The mental-pranic tejas (rajasic) has been absorbed into
tapas; the intellectual tapas is being now excluded & its action

5 MS no
6 In the manuscript, thirty pages of previously written notes on the Veda intervene
between the first and second parts of the entry of 23 January.—Ed.

www.holybooks.com
transformed into ideal tapas. This can only be completed by 
identification of the three members of $t^3$.

Varna in the lipi,—blue, green and red as well as the usual 
black, blue black & occasional brown & yellow. Varna, chhaya, 
tejas, jyoti, agni, are now all manifest with perfection in crude rupa 
of the three kinds. Developed crude is becoming common, though 
not so common as dense crude.

Jan 24th

Sahaituka Tivra now increases instead of diminishing by re-
peated sparsha. The old rule of decrease is not entirely abolished, 
but the new of increase has been established.

The body still tends to sink back from ahaituka tivra etc and 
only to feel it, except rarely, when remembered and willed. But each 
time it revives activity, it revives with greater intensity, though not 
with greater continuity.

In Arogya, the habit of disease is still violently strong. New 
disease does not come, but the old maladies persist by irrational, 
causeless habit & do not lose hold. Cold formerly could not ma-
terialise; this time it materialised for two days, but though really 
cured in two or three, the inert habit of certain of its reactions has 
continued, decreasingly, for 7. The two chief maladies on the other 
hand persist not decreasingly, but always with recurrence of force. 
Breast pain on the other hand is subject to the will, though not 
utterly abolished.

The physical siddhi is still the chief stronghold of intense and 
massed resistance by the opposing forces.

After an obscuration, lasting all yesterday afternoon & evening 
& partly this early morning—intended to get rid of intellectual 
tapas by isolating it, showing its futility when unenlightened & 
unsupported by the vijnana—$t^3$ is reviving, still largely telepathic, 
but more easily converted to ideal terms.
Chitra is now being perfected in richness & variety; some are
marvellous in the perfection of every detail.

Rupa (crude) is increasing in variety & frequency and man-
ifesting sadhara, but is usually imperfect in stability, vividness or
finish. Prakasha and chhaya, a little vague, are commonest.

Jan 25th
Some advance in samadhi.
The movement of ideal thought entered well into the deepest
manasik sushupti, but it is not yet at home and in possession there,
as it is in swapna and antardarshi jagrat. Still a kind of jagrat in
sushupti is becoming more common, though not yet well-sustained.

Coherent dream, which has almost ceased to have its dream
element and rather reproduces some truth not yet grasped in its
circumstances, is becoming common in daytime. At night it is less
common.

Lipi fluctuates in the manasik sushupti.
Long continued stable rupa drishya and long coherent action
in it, is increasing in frequency and firmness. But it is usually a little
vague in its outlines & always shadowy in its substance. The vivid
& the tejomaya are less stable.

Antardarshi tends to advance in rupadrishya but very slowly.

Jan 26th
Lipi fluent with a perfect legibility, but not vivid, and a spon-
taneity often anticipated by the thought. It is vivid only in brevity.

Vaidyuta is now common and even normal in association with
tivra. Raudra is increasing in frequency & force and is also asso-
ciated though less firmly with tivra & vaidyuta; it is also entering
into tivra.\footnote{Sri Aurobindo may have intended to write “vishaya” instead of one of the two
apparently redundant occurrences of “tivra” in this sentence.—Ed.}

The opposition to the Ananda-vijnana-darshana of living faces
& figures (mostly faces) is breaking down; ananda is even intense;
but the vijnana is still oppressed by manomaya.

www.holybooks.com
T³ is recovering its force and increasing in light, knowledge and effectuality, but is still far from perfect in arrangement of detail and in certainty of result. Telepathy is still too predominant and intellectualtapasbuddhi still distorts the decisive perception.

Script.

T³ developed into trikaldrishti-tapassiddhi

Vishaya

Samadhi

Physical siddhi. Anandas

Fifth chatusthaya. Krishnakali

T³ has begun to develop into T² [trikaldrishti-tapassiddhi], very crudely.

Vishaya has increased in sparsha (brihat sukshmabodha and strong sthula resultant feeling)

Samadhi in stability of clear rupa-drishya in motion. The slow advance of antardarshi continues.

Krishnakali has reestablished its force, increased with an entire hold of Ananda-vijnana.

The Anandas continue to grow slowly.

Jan 27th

Script

T³ = T²

Samadhi especially jagrat and rupadrishya

KK [KrishnaKali]—madhura dasya.

Physical siddhi—Anandas.

T³ is progressively becoming T², but trikaldrishti is stronger than tapassiddhi, although the latter increases steadily in largeness and force, the will becoming more and more impersonal.

Madhura dasya of the KrishnaKali relation is well-established. It is now repelling all return of the nirananda relation as of that of the mere dasya.

Vishaya is cruelly active in three, afflicted in two vishayas; but in the latter when it acts, it is sufficiently sthula.
The working of turning all pain and discomfort into raudra ananda is proceeding. Much sharper and stronger touches than before have become anandamaya.

Rupadrishya in jagrat at night developed all kinds of clear, perfect & stable forms; some of these were dense or developed or turned from crude to dense and developed.

Samadhi continues to gain in force, variety, stability, continuity of rupadrishya; but is not yet perfectly secure in these qualities. The penetration of manasik sushupti by the ideal thought & perception continues; it is only in the deepest sushupta that nidra or its swapna easily arrives.

Ananda Brahman with vijnanananda in the shuddha continues to grow in hold & force; in the mental darshana vijnana elements tend to become more pronounced.

Physical ananda slowly develops.

Jan 28th Sunday.
There is considerable assault of the intellectuality. Still tapas grows in effectuality and the element of certainty in trikaldrishti remains constant, though it cannot yet grow firmly.

Activity of vishaya & rupadrishya.

Jan 29th
Progress considerable in samadhi, richness of drishya—occasional perfect stability attained in rupa (swapna-samadhi) and frequency of relative stability—frequency and greater firmness of continuous drishya: perfect combination of rupa, shabda, sparsha—the speech as well as sound proceeding from rupa and not merely associated with it. Persistence of continuous event with vague or shadowy rupa, —eg. cutting meat etc. This is even in antardarshi. Substantial progress in antardarshi; fixity of progress made in crude rupa in bahirdarshi.

Physical raudrananda (sahaituka) now normal and general, all touches of discomfort & pain bring their ananda, except in sudden
& strong bahyasparsha of pain; even there the after effects tend to be anandamaya.

Tapas-siddhi against roga is getting stronger, though still not decisive.

Krishna growing stronger in personal Krishna Kali. Kali now normal, old bhava of personality almost entirely destroyed. All the instruments of vijnana are becoming the Ishwara’s entirely. Madhuradasya increases.

T² still hampered & obscured, but developing.

Samananda hardly at all interfered with; when amangalabodha comes, it is anandamaya; the place of the amangala as a step of the mangalya is usually understood at once.

In second chatusthaya, aishwarya, Mahakali bhava, sraddha swashaktyam, daihik shakti still imperfect,—the rest satisfactory. Daya very strong. Mahalakshmi colour, once quite absent or almost quite, is now very deep. Dasyam is almost absolute, except in certain remnant movements of the intellectual suggestions.

Karma is now stationary, with slight advantage to the hostile forces.

Premananda is beginning to be general & strong, though more ahaityu than sahaityu. It manifests and relapses, then manifests again, but is on the point of becoming normal.

Jan 30—

Third chatusthaya is now complete, though imperfect. It is most advanced in jnana where it is almost perfect in its more luminous movements.

Script

Today a great movement forwards intended in T², samadhi and for breaking of the obstacle in vishaya and rupadrishya.

Certainty in T² is now becoming rapidly general & normal; but it is only in the main event, not in the details surrounding it which are supplied by telepathic trikaldrishti which [is]⁸ uncertain

⁸ MS in
but usually correct, though with certain lowerings & fluctuations, misses and overstresses. The certainty also arises out of telepathic perception & is in its own nature telepathic, that is the certainty that the tapas in Nature will effect the thing seen as the event. There is not yet, except exceptionally, action of pure trikaldrishti or united or identical action of the ideal knowledge & will. With the increase of certainty, the tapasbuddhi is becoming regulated, the tapassiddhi more effective and the sraddha in effectuality increases according to the frequent directions or predictions in the lipi “telepathy, trikaldrishti and tapassiddhi” and “enthusiastic faith in the light, knowledge and effectuality.”

The degree of pain intensity from bahyaspars at which ananda is possible has been sensibly raised, so much that it promises even complete siddhi of every touch short of those which break, cut, rack or crush the body.

All the fundamental tastes are established, the bitter, sour, astringent in strength, spontaneity & solidity, frequency & persistence, the sweet rare & less strong except in one touch, the rest intense, but less solid & spontaneous, fairly frequent but not persistent.

Tratak brought the old forms in the pranic air[,] dark & brilliant living spots, shadows of real winged things, & insects & butterflies seen in the body, the first vividly, the second shadowily, but both without detail.

In Samadhi a movement towards generalisation of the ideality in the depths of mental sushupti—ideal perception, vangmaya, lipi, etc. The jagrat chaitanya has to take possession & sushupti to be shifted upwards out of the mentality.

Activity in vishayas, but not yet breaking of the obstacles.

Some initial successes, not decisive, in bringing stable developed & dense into jagrat bahirdarshi.
All this activity is being indicated in spite of a massed assault & obstruction which tries to destroy results obtained and prevent fresh results.

Jan 31.
The same programme
T² advances; its chief difficulty is to get rid of the intellectual tapasbuddhi. Mental tejas seems to be definitely taken up into the tapas.
Premananda continues to develop itself. It is including in itself by intensity and the spiritual embrace of the physical the shuddha kamananda

Feb 1.
A higher ideality is now manifesting in the jnanam and takes up a large part of the thought
T² is developing, but still greatly hampered by overstress of telepathy and tejomaya intellectual tapasbuddhi
A great advance in Samadhi. The last two days there was the attempt to normalise the ideal consciousness in manasic sushupti of the deepest kind, but this was only successful in fragments. Today coherent, continuous and even, in the lighter stages, unceasing ideal thought vangmaya and perceptive, continuous statement and speech, continuous action with almost perfectly stable rupa were brought firmly in and for the most [part] normalised in the deepest sushupti except perhaps in one layer of strong nidra. Dream is becoming entirely coherent vision and dream vision is acquiring the force of real vision. Lipi written before the eyes is coherent even in sushupti; lipi already written is still incoherent. All this is in daytime and is only trying to begin in the night
Lipi (antardarshi) is beginning to manifest in long, almost interminable lines and in three lines at a time, but is still in these circumstances almost illegible from faintness.
The ideality is now more revelatory than inspirational.
The spontaneity of lipi is being made absolute and anticipation by the mind discouraged, other words being substituted
for those fixed by the mind when it escapes from control and anticipates.

Feb. 2

Brief incursion of asukham and ashanti after ineffectual touches during the last two days—announced by lipi—“grief” day before yesterday. A certain violence in it, but no power of stability—rejected by centre of being in the mind & prana & by its bulk; chief effect in surface of prana, touch in heart & mind momentarily forceful, but ineffectual. Return of T³ during last two days ending in confusion of T²

In the afternoon again a stronger outbreak of asukham & ashanti with all the old circumstances of revolt against the method of the sadhana and the self-assertion of the Jiva, his refusal of anumati.

No progress in samadhi except a stronger tendency to read the written lipi coherently.

Rupa moves in the old rut of crude, usually crude crude, with occasional unstable perfect or half stable imperfect rupas.

In the evening a firm foundation of the higher ideality in script, vangmaya and less completely in the perceptive thought, where it is still ill disengaged from the mentality. But the revelation, revelatory inspiration, revelatory intuition, revelatory judgment were all displayed.

Feb 3.

There is a confirmation of the last night’s work and the habit of refusal of all that is not reduced to the terms of the higher ideality. This siddhi is extended to the lipi and is being prepared in the tapas.

The Mahakali bhava has taken possession and is being combined with the Mahalaxmi colour.

Ananda is beginning to take possession of the prana and body. It has long been in possession of the chitta and mentality.
The higher perceptive ideality is not yet confirmed owing to deficiency of T².

Reference

This indicates the possession of the knowledge by the Ananda and the summing up of the work of the Maruts in the revelation of the Indra godhead, divine Mind of vijnana destroying the obstacles summed up in the one Vritra-force.

The páj: of Agni is attempting to become universal and ideal.

No definite advance in Samadhi, but wakefulness of the Purusha in mental samadhi is more राजः and has more राजः and dream was also more attacked by the inner wakefulness, यो मुच्छु जगति —

Mental, moral, pranic certainties are being reduced to their proper position, deprived of their certainty and shown to be merely probabilities & expectant forces, so that the ground may be clear for the generalisation of ideal certainty. Tapas-siddhi is now at the 50° and there fairly sure of itself and general.

The whole mental consciousness is now beginning to be pervaded by a sense of substantial light (jyotih) and the body with a sense of the flowing of a wine, an ecstatic subtle liquor of delight, soma. The sense of will as a fire, Agni, is sometimes present.

There is a strong movement in jagrat rupadrishya towards the development of the dense & developed on the former large scale, but with greater firmness and permanence. As yet however there are only scattered signs, the few developed and perfect or dense & perfect rupas that come being momentary or only having a second’s stability in the pranic akasha.

9 MS अही नि: श्रजा
Great progress, sudden in its definition, though long prepared in tivra ananda. First intensity has much more than doubled its normal force and tends to be decupled. Secondly, the law of the deadening or diminution of tivra by repetition of touch whether slow or rapid, is giving way & may be said to have given way to the law of increase by repetition. The old rule struggles to survive but is suppressed. The tivra maintains itself, if oppressed recovers, usually increases. The law of increase is not yet very strong, but it is born as a law & not, as before, only as an occasional phenomenon and then an often oppressed tendency.

Higher ideality has made its way into the perceptive thought in the midst of a general luminous play of inspirational intellectualised ideality (अत्याचारिक सत्त्व ज्ञान). It is now seeking to confirm & generalise itself. Indra is destroying Vritra on the earth,—in the physicality of the mind.

It is attempting to extend itself to all trikaldrishti.

Telepathic trikaldrishti of time
1. The three young men will come before nine; or at least two. vague in detail.
   N [Nolini] & M [Moni] came at 8.45
2. N will come before 9.
   Uncertain when he came, either just before 9 or just after; within 9.5 at latest.
3. Someone will come at 9.10.
   Sn. [Saurin] came at 9.10
4. 9.20 named as time of meal—changed to 9.10 by my watch, which is ten minutes slow.
   Meal at 9.20 (9.10) or a minute or two earlier—usually at 9.30 or after, rarely so early as 9.20
5. 9.25 (by my watch = 9.35) named—first associated with S's coming, afterwards with finishing of meal. Meal finished at 9.25 exact
Feb. 4.

Script.

Today the higher reality will grow and be confirmed in its possession. The rupadrishya will make a great stride forward by the night. Lipi will advance. T2 will begin to confirm itself. Kamananda will increase steadily in force from today. The battle for the health will continue. More force will come to the saundarya.

In the afternoon a strong attack of the old mentality, accepted yet rejected by the Purusha, which helped finally to put the intellectual movements in their right place.

The higher ideality is now at the back of the perceptive thought and will as of all other instruments. Wherever it gives the sanction as a sort of Will-Knowledge, though with more force in it than light because of a certain veil between it in its source and its manifestation in the mind, the thought or will infallibly fulfils itself. The rest has to be regulated and put in its place; for now the truth behind each thought & will is perceived, but not at once in its right relation to the rest and result.

For a while trikaldrishti was almost absolutely perfect, but without certainty.

Thespesia.

1. Lipi. feast.

At first misunderstood, afterwards understood rightly, but not with certainty—In the afternoon, long after, the Mahomedan came to arrange for pullao in the evening.

2 Yesterday, prevision of karana this evening. No intention in any mind, yet fulfilled by afternoon event.

3 Today, prevision of the same tomorrow. Contrary to all custom and intention arranged for by event and impulse in every mind but one, although resisted in act by myself. These incidents are decisive of a trikaldrishti which is no longer telepathic or uncertain.

Rupadrishya developed force of full dense & developed, but only in the type figure of the bird. In the rest a general tendency
to display of the unstable or else imperfect dense & developed. Samadhi is only labouring to confirm and generalise its past gains.

Lipi is taking possession of the material trikaldrishti.

Kamananda is continually growing in force, but not yet free from dependence on hetu.

The will to saundarya is increasing, but as yet without any definite visible result. The habitual rogas still assert their force of persistence and recurrence though not with the old sovereign force.

On the whole T square is at last firmly founded.

R. [Reference]

That is to say, the general light in the mentality has to be turned into a large illumination of ideal knowledge which will be a firm support for the ideal will.

Prediction. Things—objectivity.

That is, the subjective-objective being now on the road to siddhi, the battle will be more henceforth for the control of things and objects, the bodily, prithivi.

Feb 5.

Script.

“The ideality must be confirmed against such attacks as yesterday’s which must rapidly be made impossible

“There must be definite and steady progress in the Shuddha-Ananda-sarva-sundara-darshana on the Ananda-vijnana basis.”

In the morning sudden efflorescence of a perfect shuddha anandamaya-vijnanamaya vision of universal beauty. Every detail is seen in its perfect, divine sense and faery loveliness and in its place in the whole and the divine symmetry of the whole based on its
“brihat” Idea, even in what appears to the mind [un]symmetrical. This was realised in things yesterday, today in faces, figures, actions, etc. It is not yet stable, but strong and returns in spite of the force that depresses the vision and attempts to return to the diffuse mental view of things. In the mental view the general shuddha ananda is ahaituka, even when it is full of feature; in this it is self-existent, yet contains all hetu, guna, rasa = Ananda with vijnana in its embrace.

T<br />
Ideality in all the instruments  
Samadhi  
Rupadrishya  
Ananda  

Ideality enlarged its hold on the perceptive thought & intensified its action in the other instruments.

T also developed

==

Trikaldrishti of time

1. 8.5 for first arrival. Incorrect by the watch.  
L arrived at 8.10.

2 Arrival at 8.25  
N & M arrived at 8.25

3. 8.55. Mistaken for time of arrival of Ns.  
As it happened, we sat down exactly at 8.55.

General forecast of lateness today justified.

==

==

In jagrat rupadrishya is getting rid gradually of the method of fluid and fluctuating creation of images out of a confused blur of material. In antardarshi trailokyadrishhti is attempting to emerge.

==

In Ananda raudra alone made some definite advance.
Feb. 6

Ideality is more and more overcoming the intellectuality which has lost all selfconfidence and only persists when it thinks itself the ideality or inspired by the ideality. This confirms recent lipi—“servant of ideality”

Samadhi confirmed its movement. It is trying to become complete. In jagrat there is still the obstacle and the same movement.

Jagrat bahirdarshi is slowly developing force and precision

Trikaldrishti still uncertain among the telepathies, sometimes almost entirely, rarely entirely accurate in all details, usually right in many points, overstressed & therefore wrong in others.—eg

1. Crow running along ledge—telepathic suggestion of its flying up to the parapet, though it ran the contrary way & then returned with constant impulse to fly downwards into the road.

2. Perception that it would not fly downward—fulfilled in spite of repeated impulsions & repeated uncertainty. It flew onto parapet fulfilling (1).

3. Perception that it would fly away in frontal direction. Fulfilled after much uncertainty & hesitation of telepathic perception and with a first movement sideward, justifying the uncertainty

Samadhi develops coherency [of] dream reading and dream-event.

Attempt to develop primary utthapana. Concentration on physical siddhi—not yet effective.

Feb 7. Wednesday.

Ideality taking up all telepathies; but this brought confusion of telepathic stress,—tejas & tapas—into trikaldrishti tapassiddhi. Though rejected, they insisted.

Samadhi is beginning to move towards fullness[,] firmness & sureness
Yesterday’s time tri.

1. N will come early, take dinner and go out. N came about 8.20 and went just after 9.35—the latter time seen, but not quite accurately placed; it was considered that he would finish his meal then; he finished at 9.33, went up at 9.35.

2. Ns would come second—he came at about 9—(a little before)—time wrongly placed by a few minutes.

3. S at 9.5—he came at 9.3

   Hour begins to be seen by rupa of watch-hands, eg 11.45 for going to bed.

   Wednesday’s

   Much less accurate; nevertheless generally correct.

   Samadhi developed perfect coherence of dream. What has now to be got rid of is the presence of present personalities & namarupa in dream vision of past & future events.

   Absolute stability of chhayamaya rupa. Tejomaya perfect but unstable. Trailokyadrishti begins to develop.

Feb 8.

Continuance of telepathic insistence in the morning. Confidence of intellectuality as representative of ideality destroyed; desire to pose as ideality practically destroyed except as a mechanical past habit. In the afternoon ideality resumed its expansion, completing more largely what it had begun before the interruption [—] the taking up of telepathy & putting it in its right place for T².

   In jagrat bahirdarshi stable developed & dense are beginning to manifest spontaneously in type rupa; perfect rupa (life) manifested, also in the type rupa, with the power but not the fact of stability.

   Coherent lipi is founding itself in the samadhi, both ready written and consecutive. Reading remains.
Tejomaya is beginning to develop.
Perceptive ideal thought is taking firm hold of mental sushupti.
Results perceived before commencing samadhi.

In vishaya and antardarshi the obstruction remains quite unbroken.

The highest ideality is manifesting through the veil.

The normal intensity of tivra is greatly increasing. Two new movements are beginning to define themselves, (1) a prolongation of tivra after cessation of touch, by repeated recurrence, not yet by continuity; (2) simultaneous tivra and raudra. Also there is a visible preparation of general tivra-sthiti.

Time.
No accuracy.
(1) General perception that all but one would come early; between 8.30 & 9. Three & L came at 8.35.
(2) Perception of early meal — 9.5 or 9.10. Meal at 9.5

Samadhi
Dream coherence; lipi; attempt at coherent dream reading

Feb 9
Attack of old intellectuality and asamata throughout the day.
Confused progress.

Ananda intensifies in vaidyuta, kama, raudra. Intensity is becoming normal. Kama much resisted.

Energetic tapas for removal of chronic ailments. It seems to be dominating in one direction; in the others doubtful. No progress as to chakra-shakti.

Samadhi again overpowered by nidra, still attempts to generalise
chaitanya of the vijnanamaya in the mental sushupti and arrive at brihat. Jagrat relapses.

The secret or one secret of incoherent lipi etc in swapna is now found to be false combination. The thought is now able sometimes to correct the combination; by correction perfect coherence emerges.

There is still a fluctuation between the deadening of ananda by constant sparsha and the increasing by constant or repeated sparsha; the former intervenes, the latter begins, recurs and tends eventually to prevail. It is stronger in the tivra than in the other anandas.

Time.

(1) At 9—some will come between 9. & 9.15 by watch
M came before 9.10.
(2) At 9.10. N will come separately from S. and next
N came at 9.13
(3) At 9.13. Ns. will come at 9.25. dinner 9.30 perhaps 9.35 (without regard to watch)
Ns came at 9.26 by clock below; dinner at 9.36.
(4) After 9.30—S will come close on 10. S. came at 9.55 or thereabouts.
Clock vision. 10.19, direction, not prediction. . fulfilled.

Samadhi resisted—confirmed some of its gains, but with less force. However, combination of sparsha and drishti perfectly & repeatedly emphasised; also dream-reading and continuity of drishya in action.

Feb 10

Result of yesterday's attack—telepathy & mental tapas deprived of all force of certainty. Telepathy correct when seen as force, intention, what is trying to fulfil itself. When sanctioned
from above, then fulfilled. The sanction is sometimes perceived; but there are also mental sanctions which only give an added force for fulfilment, but not certainty or else force for subsequent fulfilment. Even the higher sanction is not to be considered absolute, unless it is the luminously ideal sanction.

Therefore mental certainty is abrogated and non-existent. Ideal certainty is temporarily suspended

The instruments, except perceptive thought, are free now from the remnants of intellectuality.

There are three planes of ideality. The third or lowest regards the intellect, corrects and fulfils it. The first is absolutely independent. The second is intermediate.

Samadhi reaffirmed most of its gains against massed and violent obstruction; but with an inferior force of vividness and largeness. Obstruction successful against lipi and tejomaya drisya. Dream-reading of printed book began. Afterward lipi reaffirmed in jagrat antardarshi.

Script.

The difficulty of certainty arises from the refusal to affirm more than from the haste to affirm wrongly. Affirm and correct.

This being done, knowledge with Tapas proved to be invariably right in main issue; telepathy (knowledge without tapas) of details sometimes certain and correct, sometimes uncertain.

Violent tapas, long forbidden because rajasic or mental, is now being applied with success.

The ideal Tapas-knowledge is being more widely applied but the incertainty of the untransformed telepathies creates a strong obstacle to its ideal use.
Rupadrishya emphasises developed, dense and perfect, but only in the type.

What is called riot of the lipi develops, this time without the old effort and confusion or with only a shadow of it. It is not yet perfect, being often stable, but illegible or legible but unstable.

Contacts now create kamananda response as well as the other anandas. Kamananda is trying to generalise itself (ahaituka) in the body. The movement is as yet occasional only.

Various complete rupas even to the most developed manifest at night with great spontaneity but with no stability. The stable are always imperfect and incomplete, usually crude, sometimes dense, never developed.

There is a general growth of ideality taking up the telepathies, revealing their truth, their right relations and limits, correcting the errors of the mind’s valuations and interpretations.

Samadhi, reaffirms continuity of action; stability of chhaya-maya forms and scenes, variety; begins to develop more stable though less brilliant tejomaya; continues dream coherence but is still subject to the obstructive attempt at limitation and dislodgment from its gains.

Antardarshi yesterday developed variety of forms, some of them perfect, stable, in status and motion, complete; though mostly crude. (reel, dense; bed, [crude] in status, birds in motion magnified, in status, book, etc). Today violently obstructed and sterile.

Feb 11. Sunday.

Telepathy, brihat, confused in ritam, though greatly increased in ritam, entirely satyam in the sense of being true in essence, though misapplied in fact. Tapas has still an effect perturbing to the ritam by its mental overstress.
Telepathy = trikaldrishti steadily increases, but tapasic over-stress of will in the suggested thought prevents as yet entire amalgamation of tapas = trikaldrishti, which is meant by T\textsuperscript{2}. The illumination of Tapas is, however, progressing, though with a more hampered movement.

Telepathy = the effective trikaldrishti. That is what is seen by the foreseeing & willing knowledge becomes effective force, feeling, impulse, etc and is perceived by the Manas. That is telepathy. What is foreseen is also forewilled—thus sight & will in the Knowledge coincide.
What was seen by the manas, is now beginning to be seen by the ideal mind into which the manas is being withdrawn or changed.

The tapas is moving towards its self-harmonising with the supreme Will in the matter of Time both as to final result and detail of stages in the evolution of the result.

Accumulative fatigue is being massed and emphasised in order to be exhausted more rapidly and attacked more completely by the Tapas.

The exhaustion felt was very great, so much that the body insisted on the need of recumbence to ease the back, but a few minutes afterwards — after half an hour's sitting — all had gone, activity returned, wine of anandamaya tapas was felt in the body and the tables were rearranged, dusted and motion kept up for an hour and a quarter with return of pain in the shoulder and neck and with unease in the physical nerve matter, but without the sense of dominating fatigue, rather of dominating vigour. Nor is there now any inclination in the Prana to rest.

All thought (not trikaldrishti), even what was formerly the discursory vagabondage of the mind, is becoming luminous, ideal and true in its limits.

Raudra Ananda is developing. Sharp & long-running muscular pain three times repeated, which would formerly have been felt as torture, was entirely anandamaya; the sharp pain in the neck-muscles is also being transformed. The prolonged contact of heat (the burning terrace floor at noon) was yesterday borne and turned into ananda-pain.

Time — Seen that the three would come late, long after 11 and the dinner be late, after 12. Came at 11.40—dinner at 12.30.

Sharp hunger conquered, but not abolished, nor actually turned into anandamaya bubhuksa; but this movement seems to be beginning.
Continued walking, half an hour; pain in neck-muscles suddenly abolished, though left in subtle form and power of revival. Afterwards it attempted to develop in the legs and partly succeeded; when tapas is withdrawn, fatigue declares itself.

Rupasiddhi is successfully developing variety in the crude. Formerly only a few types came with difficulty or easily only by repetition—the woman, the horse, the man on horseback or driving, sometimes groups of men [and] women, two horses and riders—the bird (crow or sparrow), butterfly or moth, one or two objects, a hill with figures or a building on it. Now many kinds of fourfooted animals, birds, insects, moths of various forms and hues. Others seem to be coming, fish, variety of objects, not yet variety of scenes & human figures.

After swapna samadhi this has increased; already, all sorts of fourfooted beasts—the thing most resisted till now—while variety of figures (boys, a man’s face and head with hat) has begun, variety of scenes is trying to manifest; old forms which were vague (horse with carriage) are now becoming clear and complete. These shapes have usually little stability, swift variation, a trend to momentary precision. Sometimes they are precise and have an initial stability, sometimes more stability with precision and perfect completeness, but this is rare. Now however an attempt to combine precision, completeness and stability with the variety has begun.

Samadhi

Antardarshi. A certain variety of forms, but not clear & perfect as day before yesterday, except one or two, and not stable. Riot of varied lipi, not organised, but trying to organise itself.

Swapna. All perfect in swapna except richness of scenes & images. Coherent lipi, perceptive & vangmaya thought.

Sushupti. Fluctuates between confusion and coherence.

Dream-speech, narrative with lipi, lipi, etc.

It is notable that in daytime nidra is usually entirely absent, except for an occasional fleeting touch which today did not come. Even at night sushupti is beginning to replace nidra. In place of the
sense of being asleep or the memory of it, there is the sense and memory of sushupti, full of shanti, ghana chaitanya and now of incipient ananda.

Pages for reading are being presented with more firmness, not yet with much success.

In jagrat bahirdarshi variety of scenes is beginning eg a house above a ghat, the ghat very clear, the house sufficiently & coloured; a bridge over a stream, a boy upon it not sufficiently clear and vivid; a temple and ghat and road—the same & high bank of a river. Other scenes longer and more detailed, but vague.

Variety of human figures increased, women, children, young men, boys (youth & beauty predominate) in various postures, groups, scenes, action. Variety of birds and insects and fish is developing. A great variety of buildings of all forms and structures, chiefly in colour, when not in prakasha.

Thus the poverty of the crude rupa seems to be at an end.

Raudra ananda is increasing greatly in frequency, intensity and even in prolonged intensity. Vaidyuta also tends to develop. Vishaya is strong and general, but in intensity tends to pass into the others.

Prolonged intensity of pain (internal, ahaituka and sahaituka) no longer overpowers the ananda; it increases it, merges into it or turns into it. Also pain is now seldom separate from the ananda; it does not come and cause it whether at the moment of the touch or after the touch has seized it, but is amalgamated with it. It is either anandamaya pain or pain-ananda or pure raudra ananda. Even in strong pain from outside touches, eg burning, this tends to be the rule. The old separation is only an occasional survival. Discomfort is following the same rule, but has not gone so far towards absorption.

Strong attack on the siddhi. Results

(1) Violent reaction against primary utthapana, but the utthapana was forcefully depressed in the body, not abolished even in the physical prana; and revived and resumed work though with a wounded force.
(2) Reaction in arogya. One of the chronic rogas which was on the point of abolition, reasserted tendencies of recurrence, but with a minimum force producing very slight material results. Another which was being depressed, revived, but still with less force than in former reaffirmations.

(3) Temporary return of phantasy and ideal intellectuality in perceptive thought, quickly removed. A quite momentary touch in one or two of the vijnana instruments, immediately gone.

(4) A shadow upon the faith, ineffective in the faith of siddhi. Faith of karma is still immature and uncertain.

(5) Obstruction of the lipi, samadhi, rupasiddhi, only partially effective.

Variety of scenes, mountains, valleys, river banks, oceans, with human figures, ships etc, but all vague, pallid and indistinct, though the objects are recognisable. Initial movement to variety of objects. All this in the crude, mostly crude crude, sometimes dense crude.

Samadhi. First combination of absolute stability of perfect scene with absolutely firm continuity of action in clearly seen perfect rupa. A street of picturesque houses, a woman in blue walking down the street to the end, joined at the end by a woman in green.

Second complete scene; a richly furnished room; only momentarily stable.

This marks a great advance in rupa power, for this combination has always been successfully resisted; either the scene was shifting and unstable and vague or if stable and clear, void of action and motion.

Feb 12.

Continued effect of yesterday’s denial of utthapana. Strong sweat in the heat of the sun to get rid of toxic matter generated by fatigue. N.B. Usually, exposure to heat produces no such sweat or very little. The utthapana-shakti persists in spite of denial; it does
not, as it formerly used, collapse and acknowledge defeat, except apparently for an hour or less.

The attack on growing arogya also continues. Sensitiveness to cold and discomfort returned.

Ideality is taking hold of the interpretation of lipi; only the intellectual atmosphere still surrounds it. This, according to the lipi, is to be removed by tonight.

Ideality is also taking firm hold of telepathy in connection with trikaldrishti. All telepathy of the kind is now correctly understood in substance; the sole disturbing factor is the remnants of the mental tendency to fix event by the mind choosing one of the possibilities or tendencies or intentions thus seen as the event. Often this is done correctly, the possibility being properly valued, but then the method breaks down. If this can be removed, there will be no farther positive obstacle to correct certainty in the trikaldrishti; though some negative obstacles will remain.

All this is in the field of exercise, not yet applied to life and the world at large.

Tapasic mind action, = will stress in the knowledge or effective mind action is being idealised and taught the truth within it and its limits as well as its possibilities.

Intensity of self caused sahaituka tivra is greatly increasing. In the physical Ananda all the movements recorded are being more generalised and normalised, but most of them are not perfectly general and most fluctuate, sometimes manifest, sometimes are suspended.

In Antardarshi lipi developed, but its abundance cannot yet organise itself without the help of the interpretation which is becoming ideal in the antardarshi as well as in the bahirdarshi, in samadhi as well as in waking.

Rupa became more vivid in antardarshi with groups and a long though interrupted stability of scene, but instability of human
figures. It would be easy to develop a great variety of vague, imperfect, instable figures, but both in inner and outer jagrat vision this is being rejected and combined precision, stability and variety is being insistently demanded.

Rupas of yesterday, of all kinds, but a few or one or two of each, in spite of the obsession of the akasha by the type rupa, which again appeared strongly in all forms, except the perfect or lifelike. The higher forms appear freely only after long watching of the living object. Stability + precision is not yet satisfactory (outside type rupa) except in one or two forms.

Source of ideal certainty has appeared, tapas-light, and is beginning to group round it[s] certainty telepathies of the stages and their tendencies. The movement is as yet kachcha. It was interrupted by a violent, rather brief attack of mental tapas which left the telepathy much freer than before from false incidence. Brief physical touches of asamata, strong but without body. The attempt is now to abandon all tapas except the ideal will-knowledge.

Physical asiddhi continues, but the siddhi also, though over-weighted, persists.

Free play of crude rupa on larger dimensions, at night, in artificial light, combining precision and stability, though in various degrees, with variety; all kinds of forms, but quadrupeds few and human figures only in the old form. Greater variety of objects, utensils chiefly. Scenes not yet developed in this kind.

Some stable dense forms bear the gaze and remain complete; one of them turns to developed. Till now complete dense & developed forms were unstable.

Samadhi failed both afternoon and night, except for play of ideal thought in swapna and jagrat (afternoon).
Feb 13.

Temporary suspension of ideality, for a certain development of first two chatusthayas amounting to forceful samata and combination of  ugrata and dasya. Caused by a circumstance throwing life siddhi into doubt. This endured till nearly noon when the ideality began again to play. It has firmly acquired certain elements of certainty of event, but for the most part it is composed of certainties of ideal telepathy.

Thought telepathy is beginning to take shape and justify itself in a less scattered fashion, more habitually and organically.

The habit of evolving rupas out of a confused blur of material, one changing into another before it was well formed, most not developing properly, many only hinting themselves, others confused together, is being again discouraged. Only figures which present precision first, then precision + stability are accepted. Variety is at the same time being demanded. As the result of yesterday’s crude progress, the delineation of entirely perfect stable crude figures is gaining strength, frequency and variety.

Antardarshi is at last taking into itself the bahirdarshi gains; but stability & precision are not yet properly combined, neither being quite perfect in itself. Variety is great and scenes and colours are more vividly depicted.

It is noticeable that the physical light still makes a difference; when the room is open, the atmosphere of the antardarshi is luminous and the forms & scenes tejomaya and vivid; when two of the windows are closed, it is chhayamaya and the scenes and forms vague and chhayamaya though vaster, more full of unseen details.

At first samadhi was [received] by the lower nature but the Will as Shakti (now manifest as the Ishwari in the Samadhi) insisted and prolonged samadhi with important results followed

(1) Ideal thought is now at ease in all realms of the mental samadhi, fluent, coherent, dealing even in the sushupti largely, consecutively, powerfully, grasping and solving problems the waking mind had missed. This is done though there is nothing awake in the mind except the inactive Sat-Purusha who hardly
even watches, is merely bharta. All is done by the supreme Shakti from above.

At first the ideal thought failed and broke off in sushupti owing to nidra, but the Shakti insisting, the thought resumed, *without coming back to swapna*, in the sushupti itself. Still in the deepest depth of all, there is still a little difficulty in eliminating nidra.

(2) Recently, the samadhi has developed the power of being in sushupti and yet receiving clear sense knowledge of the waking world—limited to one or two sounds etc—without for that ceasing to be sushupta. Today this developed into a triple Samadhi, the Ishwari sushupta, full there of ideal thought and absorbed consciousness, yet aware of another swapna consciousness open to a second plane of action and another conscious without living in it of things in the outer world.

(3) Consciousness of the supramental Ishwari, the Shakti of which the mental Jiva is a mental personality.

The Akasha still resists the rupadrishti. It can no longer persist long in denying forms to the eye; but it still perseveres ordinarily in the blur method and is more ready to give precision than stability. It yields free variety of forms only when quick succession is allowed and complete precision is not demanded, and even then with a certain reluctance, a preference of forms that have been often repeated, a tendency to deny those, eg quadrupeds, which it has been in the habit of denying.

Formerly, the principle was to form by mental-physical pressure images out of akashic material, the material being of seven kinds,—chhaya, dhuma, tejas, jyoti, varna, agni, prakasha. The result was a blur of material shaping itself into forms. A second method was sudden manifestation of form partial or complete out of other akashas into the physical.

The second is now preferred. Mental and physical pressure are abandoned except when they recur involuntarily as a habit. Ideal will only is used.

Depression of the physical in the evening in the mental shama. Quiescence of all progress.
Feb 14th

Recoil of the siddhi, owing to perception of anrita in what professed to be the ritam; this comes by excessive and therefore wrong affirmation. Attempt henceforth neither to overstress affirmation nor to linger in negation. Right affirmation of the truth in or behind all thought and perception is the secret. But the difficulty must not be underrated, nor achievement too easily announced.

There is greater spontaneity with a certain amount of variety, precision, stability in the rupa. But the stability is less than the precision, the variety comes still with difficulty. The terrestrial akasha is overborne, but not yet conquered and possessed.

Antardarshi still lingers amid difficulties. Scenes and objects come, but without clarity of precision or clear stability or ease of variety.

In Samadhi yesterday’s experience reaffirmed, but with a less powerful grasp on the sushupti. On the other hand, the triple Samadhi has developed. Not only are sushupti, swapna and jagrat simultaneous, but the sushupta purusha or shakti not only observes, but judges the jagrat experiences and, initially at least, the swapna perceptions.

Telepathy grows in brihat & satyam in the field of exercise, but ritam is a little discouraged.

Samadhi (sitting) of a lighter kind than in the afternoon, but the same type and a strengthening of the jagrat in conjunction with sushupti or swapna or both; swapna stronger, sushupti lighter. Attempt to regularise firmly lipi, etc. in sushupti. At night rich and brilliant (jyotirmaya) rupadrishya in swapna of sushupti.
15 FEBRUARY – 31 MARCH 1917

Record of Yoga
Feb 1917

Feb 15

Programme laid down in script on 14th

(1) Today T² combination of knowledge-tapas
From 15th to 28th perfectioning of knowledge-tapas

(2) Today. Spontaneity of rupa-drishya with tendency to precision + variety + stability.
From 15th to 28th perfectioning of spontaneous precision-variety-stability.

(3) Today—breaking down of habit of relapse in samadhi
Completion of elimination of relapse and normalising of the elements of the samadhi

(4) Vishaya.
Breaking down of the obstacle. Evolution of general, spontaneous and varied vishaya.

These for the third chatusthaya

For the fourth

(1) Ananda.
Today; commence regularising kamananda.
From 15th to 28th regularising of kamananda—the others to arise out of it and it to arise out of others. They will also be generalised separately

(2) Arogya.
Elimination of blood-asuddhi confirmed. The stomach to be regulated.

(3) Utthapan
The battle of the primary utthapan to proceed towards victory.
(4) Saundarya
The obstacle to youth and saundarya to be more vigorously and successfully attacked.

The shakti continues the elimination of mental stress in the telepathies.

(1) That which is perceived by mental prakamya vyapti is tendency, impulsion, intention, force etc. The mental tapas tries to turn it into fact without knowing whether, how, when, to what extent it is destined. The telepathy must simply observe without willing; but it must observe the force for fulfilment as well as the fact of intention etc.

(2) That which mental tapas wills, mental intelligence hopes, believes, is certain will happen—when it does not unduly negate. Mental tapas, awaiting its elimination and transformation into ideal tapas, has to feel itself only as a force and await fulfilment or nonfulfilment.

(3) However often or even invariably mental tapas or telepathy may be fulfilled, it must not be trusted; but simply observed. Only ideal knowledge-will must be trusted.

This is what is now being brought into actuality.

Kamananda
Regularity commenced yesterday in customary posture, but not perfect. This morning regularised without regard to posture, sitting, walking, standing, but of varying intensity, sometimes intense, sometimes almost nil, though always potentially present and manifest as potentiality

Rupadrishya.
Only a small number of images come with a little difficulty, others, eg, quadrupeds, with great difficulty and no completeness or no stability. The whole represents a small variety, though of all kinds, and all the other abundance of images brought out during a moment of siddhi do not emerge, except a few, rarely.
T^2

T^2 is now aiming at the development of ideal certainty, not only in the field of exercise, but in life, and with application to time and circumstance. It has already begun, but enveloped still with a confused mist of groping mentality.

K.A.

Kamananda continues striving against a suspensive obstruction which sometimes overpowers it and against the absence of smarana.

Phantasy is being brought forward in order to be destroyed.

Lipi.

Lipi is much more organised and now often vividly legible and stable.

Samadhi.

Keeps its gains and is attempting as yet without success to remanifest the perfection of its other constituents and perfect those which were still deficient.

Tapas.

Ishita is growing visibly in force, but is still too mental. Aishwarya is nearer ideality.

K.A

Kamananda recovered force at night and remained steady.

Samadhi.

Strong, frequent, almost generalised stability and continuity, but chhayamaya, often vague, sometimes with great force of outline and detail, but always shadowy. Attempt to read perfectly stable printed page in very minute type; only one brief sentence suddenly magnified and legible. Tejomaya still unstable and infrequent.
Feb. 16. Friday.

Lipi continues with a tendency to fix itself, but is yet resisted by the physical akasha.

The lipi is rapidly organising itself. First it has come sparingly making itself precise. Here there are two movements. In one suggestion, no longer intellectual, but ideal, helps the lipi to manifest, but it is then legible, yet not vivid, with a relative stability and only becomes vivid and stable by repetition; but it comes swiftly and writes itself out fluently. In the other movement it comes of itself, without assistance of suggestion, but slowly, sparingly; it is then usually very vivid, legible, spontaneous, stable—not with a long stability, but sufficient to be clearly read and held.

Subsequently there has come, with the assistance of suggestion, with all the characteristics of the first movement, [?] but are imperfectly realised to vividness. Now it is emphasising this tendency and preparing to reject entirely the help of the suggestion. By suggestion is meant now the ideal mind’s perception of what the lipi is going to write or intends in its sense, but has not yet written.

K.A.

Kamananda is not so vivid as yesterday, but has a greater natural persistence in trying to manifest itself uninterruptedly. In this it does not yet succeed.

Arogya

The battle of the arogya still continues; the force of health increases and the tapas for health, but the undominated roga tendencies still hold the body against it. The one dominated attacks sometimes with energy, but its physical results are scattered and feeble.

The main struggle now is over the digestion and assimilation where there has been a setback.

Sharira

The other physical siddhis are in the same state as before, except that there seems to be some return of primary utthapana and dissipation of the physical depression of fatigue.
Samadhi

Samadhi in the afternoon has been rich and successful.

(1) Antardarshi; a great freedom and variety of rupa, chiefly human groups and sometimes scenes, brilliant, tejomay, often coloured, but extremely unstable in a floating varnamaya atmosphere. Scenes of the heavens of mental ananda.

(2) In swapna and sushupti all the elements, but not free in their manifestation, except continuity and stability of chhayanaya. Tejomaya has begun to be stable as chhayamaya tejomaya or tejomaya chhayanaya. At a higher level of tejas, it is sometimes stable, but only when the consciousness is not turned upon it; then it fades into the shadowy tejomaya.

Lipi in all three stages, but not copious; three kinds (1) self-writing, (2) written, (3) printed.

T²

T² continues to idealise the telepathies, but more to justify them even intellectually by reducing them to their right proportions. It is noticeable that mental tapas-telepathy is now much more frequently and often much more rapidly effectual. It seems even as if the time obstacle were beginning to come under control.

Vijnana

A great rush of ideality, jyotirmaya, higher, highest as well as lower taking up and transfiguring the intellect remnants into the light of truth. Mostly timeless idealities, in jnana, not yet except slightly in trikaldrishti and then without reference to time.

Darshana

The Anandamaya darshana has been steadily increasing and generalising itself, but more often contains vijnana of mentality than the vijnana-ananda proper. This however is also increasing in force and frequency and is general enough, though not yet universal in objects. It is still in human figures that the vision of the vijnanamaya sarva-saundarya finds still a difficulty in manifesting
or, if manifested, in ascending into the shuddha ananda without losing itself.

Rupa.

Rupa enforced variation in images seen in a relative darkness—on the terrace.

Feb 17.

Obstruction in the third chatusthaya. Negative sadhana.

Samadhi.

At first strong and persistent nidra, but with elements of samadhi enforcing themselves in the midst of the nidra

Afterwards samadhi.

(1) Ideal perceptive thought attained to the same abundance, fluency, continuity, power even in deepest sushupti as the vangmaya had already attained. Neither now needs to descend from the higher to the deeper states; both can act freely and initially even in the deepest.

(2) Power of physical action even in the deep sushupti. The particular action was writing with the hand what occurs in the thought. At first the consciousness dwelt on the thought and the action was mechanical; afterwards it dwelt on both the thought and the action united, continuous, unbroken

(3) Coherence in deepest sushupti even of the reading, lipi, dream speech, dream narrative. Concordance of successive scenes.

(4) Visions of chhayaloka, with light on incoherence of thought and action, visual hallucination etc. (eg. cat prolonged in leaping on table by persistence of sukshma image, pail of water about to be thrown on a table with books etc)

Ananda

Kamananda afflicted with frequent discontinuity.

Raudra touch anandamaya even when intolerable (extreme heat of terrace floor to the feet).
Rupa.
First, refusal of images, then persistence of blur unable to take
shape, then inconstancy of images changing into each other, some-
times before complete formation. All these are being discouraged
by failure.
The tendency to variety of images, less or more various, partly
or entirely precise, initially stable or unstable seems to be now fixed
in the physical akasha. The type still persists in usurping the place
of the others, but with less force.

T²
T² deals still with telepathies removing from even the most
positive all decisive certainty.

Arogya
Asiddhi of the digestive process is still in possession.

Rupa
Greater freedom of dense rupas sometimes lifelike in the daylit
atmosphere.

Samadhi
Great dream coherence. Only in dream reading is the incoher-
ence still dominant.

Feb 18.
T²
T² is now taking up telepathies on a larger scale and more
rapidly. The siddhi attempted is to receive mental telepathies rapidly
in great number without attaching to any one of them a decisive
certainty or seeking for their fulfilment, secondly, to accept every
telepathy and discover rapidly its ideal truth and exclude the mental
error associated with it.

Rupa
Rupa is attempting to develop spontaneous and perfectly pre-
cise and complete images with variety. The tendency to frequency
of dense, even developed images, sometimes lifelike, but unstable except when sadhara, continues.

Devabhava

Mahakalibhava seems to be now normal and the reversion to Mahaluxmi-Mahasaraswati empty of it, is rare. But there is variation between raw Mahakali bhava too ugra and saumya Mahakali with Mahaluxmi colour. Maheshwari, normally, is quite covered and a pratistha only.

Kamananda seems to be recovering force of continuity and even of intensity, though not the full force.

Samadhi.

(1) Antardarshi. Chhayamaya scenes, a railway line by a precipice, a train speeding up and back far out of sight, a path among mountains or moors or between two precipices with a cavalcade going, a two horded carriage advancing, a horseman turning to fight, groups on foot, etc. Mountain scenes. A lake with a boat and a woman; the same with bird or a fish leaping. All vague and shadowy and yet every image clear enough to be recognizable; often a shoot of shadowy distinctness.

(2) Coherency of dream reading insisted on and constantly enforced, though still with a certain effort and difficulty. Lipi very coherent and continuous in nidra; so too dream thought, as opposed to ideal thought, dream speech, all dream connections.

Rupa.

The blur habit seems now to be definitely going out; the tendency of image formation overpowers it and is dominant; but the habit of rapidly inconstant, incongruous, ill combined or only partially successful formations still persists. Also, the customary incapacities, eg of formation of quadrupeds, try to persist; though it is often overpowered, it makes itself felt.

Still, the variety with sufficient precision for a recognition of the object is established. Even variety with perfect precision and completeness, natural and without effort, is frequent; stability
combined with these though comparatively rare, is still not absolutely infrequent.

\[ T^2 \]

Sudden development of tapas siddhi; exact place and manner of movement was manifested repeatedly, and even three rapidly successive times in the same object, without resistance, only a pause, very brief. This is 80° power of tapas. The fourth time there was resistance and wrong place (direction) but right manner and upshot.

There is again an attempt to combine telepathy with ideal certainty, largely but not entirely successful.

Samadhi.

There is now a struggle to create the same general rule of coherence and continuity at night in the sleep, as in the daytime, in the involuntary as in the willed samadhi.

Kamananda stronger today, but discouraged in the evening

Feb 19 Monday.

Ananda.

Sparsha now as a rule creates a triple Ananda, tivra-vishayakama, one or other sometimes predominating and leading, or else all three equal and practically simultaneous. Sometimes one tends to overpower the others.

Arogya.

The struggle in the Arogya continues to be immediately adverse to the siddhi. Physically depression returns persistently, the old roga that had been abolished returns slightly, the asiddhi of digestion still continues.

Samadhi

Afflicted by nidra. Some development of tejomaya.
T².

T² pursues its work of taking up the telepathies. Some development of distant telepathies, the object being far or unseen.

K.A.

Kamananda strong in recurrence, not yet continuous throughout the day; but it seems to have overcome the old habit of long suspension. It is now only depressed or suppressed for short periods, within the day itself.

Feb 20th. Tuesday.

A certain inactivity of the siddhi or lessened activity during the last two days—partly owing to preoccupation with “Arya”. At the same time there is a great increase of certainty and accuracy in the idealised telepathies and a slow but steady growth of force of effectuality in tapas.

Lipi is almost free from the aid of suggestions and manifests itself more or less vividly, usually in a stable legibility fluent or strong; but not with freedom in its perfection. Fluent, it tends still to be a little indistinct.

Samadhi infructuous, afternoon and night, except for some development of tejomaya

Rupa struggles to develop variety in the stable precise (crude) but is also strongly obstructed.

Kamananda less strong; persistent with a dull largeness rather than intensity in asana.

Physical depression has the upper hand of the primary uttha-pana.

The struggle in arogya sadhana continues.
The whole physical siddhi is for the time being more or less held up as were the other chatusthayas at the same stage.

Ananda darshana progresses slowly towards normalising of the global ananda, but as yet attains no finality of the movement.

The fifth chatusthaya is also obstructed. In all obstruction, however, there is now some sense of progress prepared.

Feb 21st
The movement towards generalisation of ideality continues. The movement is towards elimination of the critical intellect, the mind of doubt, and its replacing by the ideal judgment.

Obstruction of third chatusthaya has been strong for the last three days. Nothing fresh achieved. A strong preparation of advance in Brahmachatusthaya.

Kamananda continues, but less continuous. It is strong only in asana. There is some tendency to the renewal of advance in other anandas which are in no way thrown back, but a little quiescent.

Arogya in the half-abolished affection seems to be getting the upper hand. It is still oppressed by the old habitual inequalities in the assimilation, though for the time less intensely. The other members of the physical siddhi are obstructed or depressed.

Nothing in samadhi except in bahirdarshi jagrat greater tendency to freedom of unstable dense & developed, solitary intrusion of dense into antardarshi which otherwise is oppressed in lipe, no advance in swapna-sushupti, but less force of nidra.

Purification of tapas is proceeding; the tendency is to get rid of the remnants of tapastya and tapatya.
Feb 22\textsuperscript{d}

Some activity of samadhi in the early morning. Coherence of reading and lipi is here the one siddhi most often distressed.

Attack of the old breast pain; at first only in sukshma (pranic) parts, ineffectually touching from time to time the surface of the annakosha. This for a long time. Then a physical attack unprecedentedly rapid in its repetitions of intense pain. Ananda (raudra) maintained itself with difficulty, sometimes overborne but always repossessing the pain. The attack very soon cast out; formerly it would have lasted an hour. Remnants, dull, are still left in recurrence or more often the attempt to recur.

Fear of disease and death is practically abolished; touches only come from outside. The physical shrinking from intense pain is still able to affirm itself in a subdued, but effective fashion. The prana is touched by it, but not the mind.

Complete unification of all the anandas of darshana on their mental basis. Frequent affirmation of chidghana, intense or less intense. Its universalisation may now shortly be expected, since no images or objects, faces or figures can now be successfully free from it.

Rupa is remanifesting with a greater tendency to dense crude and dense Prakasha of the seven kinds. Hitherto in the last movement of the siddhi Prakasha has almost monopolised the field of the crude rupa. Now real chhaya has begun again to manifest.

Stable and precise rupa is increasing its force of manifestation. There are notable scenes of a vividness and ensemble superior to almost anything previously manifested in the jagrat without adhara. Others are less vivid & stable, but all have the tendency.

Samadhi remanifests in almost all its features, but with some difficulty and still without sufficient force. Nidra is almost absent, but deep sushupti is refused.
Antardarshi has begun again to manifest with a greater unfulfilled promise of abundance but not yet freely, except in chhaya-maya landscapes. One alone was tejomaya.

\[ T^2 \] is still mostly quiescent.

Roga is attacking in a curious fashion suddenly, without immediate cause, through the sukshma, usually between sleep and waking; it vanishes as abruptly, without evident reason, except the pressure of the will, but leaving behind it slight vestiges. This is the old attempt to reinforce a malady which still has force of recurrence and make it chronic. In the morning it was breast-pain, in the afternoon cough and cold.

23rd–24th

\[ T^2 \] develops the perfect ideality of the telepathies into stuff of trikaldrishti.

Otherwise things remain in status quo or obstructed,—especially samadhi.

Feb. 25th

The idealisation of the telepathies is finally confirmed. The intellectual are now only a mechanical survival and when they occur make no attempt to know, but passively record suggestions as suggestions. It is only when will is applied, that they recur to their old nature of seeking to anticipate fulfilment or non-fulfilment.

Renewed activity of the samadhi. Preparation for conscious vijnana-samadhi. Continuity of action and stability of scene are now firmly established.

A great lessening of the physical asiddhi in its generality, though in certain directions it is still felt heavily.

Vishaya is still heavily obstructed and practically inactive except occasionally in gandha.
Feb. 26<sup>th</sup> Monday.
Kamananda powerful and repeatedly intense and increased in force of continuity.

No other noteworthy movement. There is the repression of activities in order that a new movement free from the old defects may emerge.

Activity of samadhi at night—rupa-drishya.

Feb 27<sup>th</sup> Tuesday.
The play of the higher ideality is renewed. The movement now imposed is the removal of the direct source of the action and its plane to the level of the higher idealities. The intellect-regarding vijnana must take a lower place as part of this higher movement.

Absolute passivity of the lower being is demanded in order that all action and all siddhi may be conducted openly by the Ishwara from the higher nature.

Kamananda tested, momentarily depressed, survives the test and continues its previous action.

Feb 28.
Continued purification from the independent action of the lower nature. Preparation of a new movement in which it will fall into its place as part of the ideal nature.

Meanwhile, suspension of the illumined higher action, in order that the lower, deprived of the light, may learn to be passive & not seek to substitute itself, as if it could make up for the deficiency, but wait always for the higher to remanifest. This impulse of the lower to act when the higher withholds itself, is now the one strong positive obstacle in T². Its removal marks the turning-point of the siddhi.
Mar 1 Thursday

Large play of ideality in jnana. All thought or thought-suggestion taken up into the ideality and its ideal truth luminously revealed. As yet this is only the action of the higher ideality acting on the intellect through the lower vijnana, not yet on its own plane.

The light does not yet become in the same way brihat in the T².

Samadhi of all kinds is more or less in abeyance or active only in crudities or reduced to the type.

In the physical siddhi Kamananda goes on preparing its normality: there is flux and reflux, but no absolute suspension. The other anandas act occasionally.

The nirananda ahaityuka and sahaituka (asiddhi & asraddha) is being taken up by Ananda so as to ensure final finality of positive samata.

Mar 2. Friday.

The large ideality playing on mind and mental suggestion is taking up all telepathies and showing their ideal truth by discernment of their form & limits; so also, though less largely all tapas. The principle of faultless certainty of trikaldrishti (future and, to a less extent, present) is being sought for, but is not yet perfectly found.

Telepathy of pranic & mental thought & feeling in animals is being founded in the brihat, not prakamya-vyapti of human thought & feeling & impulse, which is still only sought in the isolated and spasmodic fashion of the past.

The suspension in the rest of the third chatusthaya continues.

Samadhi active but quite incoherent, assailed by nidra.

Mar. 3

The lipi is once more active, entirely independent of suggestion even when attacked by it; but still obstructed in its physical manifestation. Legible, but not always vivid or stable.
Increased general intensity of tivra and of visvasparsha in kama + tivra.

Return of samadhi, but not yet in its full force of continuity or coherence.

At night coherence of the Samadhi in dream-reading and dream-thought.

Vishaya (gandha & rasa) begins to remanifest.

Some remanifestation of rupa in antardarshi and bahirdarshi.

Thought-telepathy (animals).

Mahakali bhava now firmly founded and in possession. Harmony of the four bhavas not yet developed on the new basis of Mahakali Mahasaraswati.

Mar 4.

Stability and vivid legibility of the unsuggested lipi is developing against the obstruction.

The Maheswari bhava concealed as pratistha in Mahalakshmi-Mahasaraswati has again risen, though it can no longer possess; it has to be concealed again in the Mahakali-Mahasaraswati with the Mahalakshmi colour.

Tapas is recovering its old effectualities which had fallen into disuse; but they are now only material for the larger effectuality, not, as once, an object in themselves.

There is in the kshetra a sort of rough and imperfect tapas-siddhi now fairly generalised. The main object is roughly attained, but not, except exceptionally, in the details and always with difficulty. The siddhi does not rise above the 50° or 60° limit in its
general power. In life there is only khanda-siddhi, the attainment of partial effects which do not assure the success of the main object, and even this though much more frequent & general than before, is yet far from being quite general. Always there is some effect, but not always effectuality.

The development of the lipi continues and is almost in possession of the akasha.

Tendencies of redevelopment in samadhi and rupasiddhi

Mar 5. Monday.

Lipi is becoming rapidly stronger in vividness, stability and a certain relative abundance.

Almost entire recovery of swapna and sushupta samadhi. Example of perfect stability and continuity of action in tejomaya, shadowy but distinct and generally increased force of both in tejomaya. Movement towards idealisation of the samadhi

Greatly increased general force of effectuality of tapas-siddhi even in exact result, but always within limits of the 50° or 60° power and still in the kshetra. As yet the final combination of T^3 into T^2 lingers and is mastered by the obstruction.

Mar 6.

Samadhi in the early morning. Perfect coherence of ideal thought (vangmaya) in deep sushupti. The lapse of memory persists, but was powerfully overcome and the lost memory restored in the samadhi itself.

Telepathies & tapasbuddhi are being more largely taken up into the brihat satyam of the ideality preparing the brihad ritam.

Unity of action in lipi, reference, T^3 and other instruments of the vijnana is being established.
Tapas continues to increase in force, but is still far from being master of the akasha.

Samadhi in afternoon. Lipi in sushupti incoherent except when the ideal consciousness was present and either saw coherent lipi or evolved coherence out of confusion by disengaging the words from each other and adding what was incomplete. But all else tended to be coherent even when the ideal consciousness was not present.

At the end all sushupti and swapna became possessed by the ideal consciousness.

Images related to life upon earth.

Sukshma sparsha revived, but as yet it fails to pass into the sthula except in the accustomed touches.

Lipi developed independent fluency with some diminution of legibility and much of stability. It occasionally follows the ideal suggestions, but is usually independent or else affirms its independence by substituting other words when the thought has divined too soon the word that was coming.

The passage of $T^3$ into $T^2$ continues.

Strong & intense kamananda recurrent throughout the day. Intensity of tivra and vishaya.

Manifestation of the gods as agents of the ideal action, especially Surya in charge of the ideal vangmaya thought (recalling the last 15 August)—less directly Indra behind the perception, Agni behind the will. Mental images of the four Shaktis on the lower & middle planes of the ideality.

Traigunyasiddhi in type; shama full of prakasha and tapas, prakasha full of shama and tapas, tapas full of shama and prakasha.
Devi bhava complete and strong, in type, not yet in action. Reemergence of one of the talents,—chitra.

Mar 7.
An attack of the intellectualities begun yesterday, continues. Still the devi bhava is confirmed. It tends to bring also the sraddha bhagavati swashaktyam cha and as a result the sraddha in the complete siddhi, also a great physical energy into the body.

The attack of the intellectualities continues and there is no progress in the third chatusthaya.

Samadhi confined to an attempt to convert dream into samadhi, not as yet successful except in a minor degree.
One prophetic image in yesterday’s samadhi was justified today by the physical fact.

Samata severely tested has this time held good in spite of one or two adverse touches; the second chatusthaya (faith, devi bhava) sometimes gives way, but reasserts itself swiftly. The lower nature still resists the new devi bhava and attempts to go back to the old sense of limitation and essential incapacity.

The devi bhava is taking into itself Surya, Soma, Agni, Indra and seeking to unify them.

As a result, partly, of the unsuccessful attack sama ananda is greatly strengthened & is increasing rapidly in force. It is finally overcoming the dwaita of siddhi & asiddhi, as it did the dwaita of mangala and amangala.

Premananda remanifesting with the sense of self as all things and the Ishwara as all beings for its basis.

Mar 8.
The Premananda is combining its elements—(1) self = Ishwara; prakriti self all things and all beings. Therefore all the prakriti of
Ishwara one with myself (2) the beauty of the Ishwara—shuddha governing chidghana with ahaituka involved in it—(3) relations of brotherhood, love, motherhood & childhood, sakhyā, madhura, vatsalya united into one composite bhava. It includes also guru-shishhya, sakhyā-vaira etc. Others are preparing to enter into the composite bhava.

The united action of the ideality, transforming virodha, is being prepared.

The shuddha-vijnanananda is now generalising itself successfully and firmly. It lives sometimes in the mental, sometimes in the vijnana plane; in the first shuddha predominates with vijnana subordinate to ahaituka; in the latter sometimes shuddha sometimes vijnana predominates. The tendency is for vijnana to be a prominent term of shuddha with ahaituka involved as a subordinate term.

Dasya vaira of Mahakali. The Energy serves all, but enforces on them with more or less violence the higher in place of the lower aims of their being; thus it is often in vaira or virodha with their lower desires which it yet accepts as part of its system and as material of its work.

The sixth chatusthaya of Sarvam Anantam Jnanam Anandam Brahma is now complete in itself. Its completeness of contents depends on the perfection of the third, fourth and fifth chatusthayas. Subjective bhukti may be now considered complete as well as subjective mukti. Subjective shuddhi is only defective in as much as the intellectual mentality still resists complete elimination by transformation into the ideality; but the separation & distinction of the two in knowledge is now complete. The full transformation is rather siddhi than shuddhi. Therefore only siddhi remains of the four elements of the seventh chatusthaya.

Physical shuddhi, mukti, bhukti though far advanced is not yet absolute, nor can be except by initial siddhi of the fourth chatusthaya.
The siddhi of the three chatusthayas still to be completed depends on the glory and power (sri) of the ideality perfecting itself and taking full possession not only of the mental being, but of the body and the life. The negative states are being replaced by the positive; quiescence by shama-tapas-prakasha, the human poise by the divine, the Brahmi by the Aishwari sthiti.

No advance in samadhi

The play of the old telepathies and tapas-telepathies continues with a view to their loss of all decisive force and reduction to their proper proportions. Meanwhile the action of higher ideality in T² is suspended. It is in force only in the jnana.

The direction is now for the ideality to act wherever it is free, jnana-perception, vangmaya, lipi, reference etc and not to wait suspended for the T². This it is already beginning to do

The alternations between the higher and the lower devibhava continue. The higher has at present too much of the Maheshwara in it, being dominated by Surya.

There is an increasing attempt at control of the speech by the ideality.

The power of the ideality is definitely emerging out of the state of subjection to the circle of the physical mentality. For some time it has acted in this field and upon it from above, dealing with the facts and the ideas open to the lower mind, the knowledge beyond its ken being presented to it as suggestions, not as light possessed by the mind. A higher action is now beginning to outline itself, not, as before, as something beyond the normal, but as the normal action of the new vijnana-buddhi.

Mar 9.

Three ideal planes—one observing the facts of the manifest world, the second the facts and the forces, possibilities etc out of
which the facts emerge, the third & highest both these and the
certainties, prefigured in the truth, which both possibilities and re-
alised facts figure out in the succession of time. The lower knows the
higher as the thing behind to which it refers back for the source of its
activities; the higher looks down to the lower as its own fulfilment.

Suddha vijnanananda is becoming more and more confirmed,
brilliant and intense on the vijnana plane. It is becoming also full
of the devibhava and is preparing to base the full Krishna Kali
darshana.

Devibhava grows in firmness and intensity and is preparing to
expel the habit of reversion by the full illumination of the lower
bhava and the removal of the division between para and apara.

Kamananda severely tried for the last few days has persisted in
spite of depression and may now be considered as firmly established
against all dependence on condition and attempt at temporary ex-
pulsion. It is still however capable of temporary depression, never
now amounting to entire suppression, and subject to rise and fall
of intensity, to lesser or greater power of recurrence and continuity.
It also varies with the asana, tending to be quiescent in the others
except by smarana or uddipana. These are the defects that have yet
to be conquered.

The other anandas seem to be awaiting the complete victory
of the kamananda. Only the sahaituka tivra advances steadily,
though without any marked rapidities and subject to temporary
quiescences. It is still not free from the fault of the cessation of
the nervous response after constant stimulation. For a time the re-
sponse maintains itself, may even become more intense, afterwards
it becomes neutral or changes to vishaya, raudra or vaidyuta.

The energy of the Shakti is more and more changing from
saumya to raudra. The Mahakali bhava has therefore taken full
possession of the centre of energy, though it still fluctuates and has
not taken its final character.
Mar 10.

At present the attack of the old against the new is the general feature of the sadhana. An attack in the first place on the siddhi of the third chatusthayya, obstruction and inefficiency, with the view of breaking down the recent gains of the first and second, and thus bring the system back to the poise of the old intellectual mentality of the limited human poise. While there is no definite breaking down, there is a certain success in restoring old touches of the asamata that had been expelled—.touches of the asukham (predicted by lipi, “grief”.)

The traigunya-siddhi is especially denied. Shama alone seems perfect; tapas and prakasha fall back into mental rajas & sattwa when there is an attempt to particularise their actions.

Deabhaba also now tends to sink to the lower condition by separation from the higher and, when joined to it, the poise is still in the lower rather than in the higher nature. There is a denial of ishwarabhava and sraddha in which the knowledge of the buddhi is resisted and tends to be overcome by the sense of deficiency & nonfulfilment acting on the pranic temperament.

Absolute finality, therefore, is still to seek in the first two chatusthayas.

Samadhi of the three avasthas; freer play of ideal thought, vangmaya and perceptive, the latter first free, afterwards obstructed.

For some time there have been sudden attacks on the health during samadhi which could not be successful during the waking. This is because a certain physical depression or even disintegration seems to take place in samadhi which is not possible when the tapas is concentrated on the physical world as the mental. Although this has been greatly reduced, it is still sufficient to leave the room open for attacks, eg yesterday of violent nausea, a thing easily dominated and dismissed if it comes in the waking state, today, of pain near the muladhara which refused to be turned into ananda although
it could [not] prevent some ananda from being associated with it, though much submerged or rather overweighed and oppressed.

Mar. 11.

The main necessity is the full illumination of the tapas which remains on the lower level and for this the return to the direct dasya, but dasya to the vijnanamaya anandamaya Ishwara.

For some days the sense of the immediate presence of the Ishwara has been withheld and all has been done by the Prakriti. Now the presence is being restored and with it the intensity of dasya, but not the entirely immediate presence. The Prakriti still stands between.

Kamananda oppressed yesterday, though always present in sensible tendency, is recovering itself, though not yet in intensity.

The tapas-siddhi is losing its exclusive insistence on the particular result, accepting as its own the opposite energies and their results. Yet at the same time it is increasing its power of general and particular result.

The Chitshakti is insisting on a more universally vivid sense of all beings and objects as the anandamaya Ishwara manifesting himself in various forms. This is resisted by the mentality which is accustomed to see Brahman in all and all in Brahman and, with a less facile readiness, Brahman as all, but not all as the Ishwara. Notably, it makes more resistance as to beings than as to objects; in the latter the shuddha-chidghana-ananda is more habitually seen than in beings.
The difficulty of the tapassiddhi is still to combine it with trikaldrishti. The aspect[s] of will and idea in the telepathic mind, —tapas and jnana,— are being now gradually harmonised; but the decisive trikaldrishti and the decisive tapas do not come together.

Samadhi is recovering its force, but as yet no new progress has been made.

A considerable advance has been made towards the firm normalisation of the chidghana ananda in objects.

Samadhi continues to progress towards complete recovery of its force, but is not as yet in firm possession of itself.

Mar 12.

The universalising of the Ishwara-darshana is extended to beings as well as objects. When the ananda-darshana falls back into the mentality, it tends to be replaced by the Brahma-darshana; when it remains in the vijnana, it is firm. There is now a tendency to have the Ishwara vision in the mentality even, but only as a circumstance of the Brahma vision. In the vijnana the two become one, Brahma (Akshara and Kshara) being only aspects of the Ishwara.

Samadhi is now in possession of itself. It moved forward in three directions (1) The enforcement of the ideal consciousness as basis of vijnana-samadhi. (2) The insistence against lapse of memory. (3) The insistence on coherency everywhere.

In addition there was a manifestation of chhayamaya tejas & varna, scenes shadowy but full of beauty, subdued brilliance, rich colour and the faery atmosphere of the ananda.

The insistence throughout the day has been on the fifth chatusthaya + Ishwara, ie on the Ananda Brahman merging into the Anandamaya Purusha (Krishna-Kali).

For days the rupadrishya has been disorganised. The mental
stress and formation is being eliminated. Meanwhile the old round
of breaking up and rebuilding the broken siddhi is feebly occupying
the atmosphere.

Samadhi at night confirms the day action.

Kavya for the last two days. Chitra daily, crude but with the
automatic movement and growing norm.

March 13. Tuesday.
The suddha chidghana is now the normal basis of the ananda-
darshana for objects, the attempt at reversion to mental shuddha
still surviving, but feebly. The same holds good for animal forms,
but with more strength in the reversion. It is only in the human
figure (chiefly the face) that the reversion is still strong; but here
too the sarvasaundarya of shuddha chidghana is gaining rapidly in
strength and becoming normal. The strength of reversion here is
due to the fact that there is a standard of divine beauty to which
the actual form does not correspond.

The movement now is to strengthen sraddha so that there may
be no room for any lapse, even slight, in the first two chatusthayas.
In the first there is still a deficiency in ananda of asiddhi and
in the shuddha chidghana ananda of the vishayas, taste, sound etc
—especially taste. Rasagrahana is there, but not invariable bhoga
—owing to the pranic resistance—and therefore not the full, vivid
and satisfying ananda.

Kamananda is recovering intensity. There is strong obstructive
resistance to the physical siddhi, also to the karma-siddhi.

The chief obstacle to the ananda of asiddhi is that when it
comes entirely, it tends to bring acquiescence in asiddhi: but the
true bhava is ananda in and acceptance of asiddhi as a step towards
siddhi. The other therefore is not allowed to establish itself, while
the true bhava is as yet obstructed; its basis is not yet properly laid.
The movement now is to the fixing of that basis.

The progress in samadhi continued. Free chhayamaya of all kinds, though seldom at once the stability and the force of presentation. Lapse of memory minimised in sushupti in the perceptive thought (mainly ideal) as well as the vangmaya.

Today the ananda has begun to overbear the resistance of prana in the taste. In hearing, smell and touch, there is always the bhoga of ananda, not merely the rasagrahana. The only defect is defect of the chidghana, for the shuddha is always there though often only mental shuddha. But in the taste there is frequently denial of ananda or neutrality.

Lipi is rapidly normalising itself in the vivid legibility with an initial perfection of stability. The suggestion is again allowed to play a part in removing the obstruction, but it is always an interpretation of unmanifest lipi rather than a former of uncreated lipi. The lipi is largely spontaneous.

The telepathy is beginning to indicate in itself its spontaneous ritam; similarly the ideality even when it manifests in a thick veil or a thick atmosphere of mentality.

Some insistence on a spontaneously retentive memory, but the amnesia is still dominant; memory is more active, but retains its usual or capriciously selective character.

The insistence on ananda in the taste continues.

There is a covert struggle between sleep and the shakti that tries to overcome it. The physical reaction of diminished sleep, is still the stronger, even when the total amount of sleep is the same and the diminution is only of the night sleep. eg. tonight 5 hours (from 2 to 7) after 2 hours in the daytime, making the sufficient quantity of 7 hours. It is true that the day sleep was mostly samadhi and only a brief nidra. . As yet samadhi is not a substitute for nidra; the body is rather adversely than favourably affected by it. The
opposite tendency is present, in state of preparation, but not yet effective.

Dream is no longer samadhi-like. It is again incoherent.

Samadhi at night very slight, mostly rupa-drishya in sushupti

Mar 14
Script.
“Today T² and lipi
“Confirmation of the first two chatusthayas and the (fifth + sixth) Brahmamaya Ishwara.
“Completion of the Ananda (subjective)

“First the shuddha chidghana in the chidghana, on that basis the Brahmamaya Ishwara.”

This was immediately fulfilled. The chidghana darshana is being founded firmly in the chidghana consciousness, with a firm delineation of vijnanamaya form in all things. The shuddha is shuddha of chidghana, and the premature tendency to insist on the shuddha of ananda is being postponed. The first result was to have shuddha-chidghana of forms, but shuddha ananda with strong envelope of mentality in the surrounding Brahman. Immediately, however, the vijnana Brahman manifested in the containing Purusha, taking possession of the Akasha in place of the Manas Brahman.

The Brahmamaya Ishwara at once came in and associated itself firmly with this vijnanamandala darshana.

This is the basis for the next step of the siddhi and has to be made inviolable before the final step can be successfully taken.

All vishaya is being subjected to this chidghana ananda sense of things.

The manasic sense in the darshana still hangs about, but it no longer dominates.
In $T^2$ the difficulty is still in the tendency of the telepathy to attempt the decision of the event. Left to itself in the mentality, it now speedily drops this tendency; but when the telepathy is idealised the resulting brilliance and positiveness gives it the false idea of decisiveness; it tries to supplement the ideal telepathy by the intellectual decision or determining choice. This is the secret of most of the intellectual error of brilliant minds. The ideal telepathy only gives the idea of intentions, forces, facts, possibilities surrounding the moment of time. Decisive certainty belongs only to the trikaldrishti. Therefore the final purification for $T^2$ consists in the discharging of the false foreseeing certainty of the intellect which tries to attend the ideal suggestions.

In the morning sudden attack of the external (exiled) mentality on the sraddha & sukham (samata). At first touching the buddhi, it failed to take possession of it. It only reproduced a mechanical repetition of some of its old movements on the prana and sense-mind by a purely physical touch. Striving constantly to recur, it failed to endure.

In Samadhi much interference of nidra, but at the same time the ideality is taking hold of it and undermining incoherence. The grasp of ideal perceptive thought in mental sushupti is increasing. Especially lipi in all the four states is gaining fluency, legibility, cohesion, stronger in swapna than in antardrishti, in both than in sushupti.

Lipi has now accomplished fluency in perfect legible stability. The result has only to be thoroughly confirmed, deepened and released from minor defects, the survivals of the older imperfection. The stability is essential, it does not as yet remain long fixed in the akasha; but there is no tendency to vanish as soon as it is manifested or, as before, even in the act of manifestation. The tendency is to remain as long as is necessary.

Chidghana in the human figure is being constantly pulled back into the mentality and constantly reasserted. This is now
the only serious defect, but the affirmation is stronger than the denial.

Telepathies combined with tapas siddhi which begins to have the light of the trikālārāṣṭrī in the telepathies.

The first two chatuṣṭhayas recover their norm in the evening.

Brief manifestation of variety of crude rūpa (in the darkness of the terrace). Only relative precision + stability.

Mar 15.

Manifestation of perfect stability of “readymade” sentences, rushing into the physical akāśa from behind and holding it before the suggestion can interfere. This is now increasing. This stability is vivid and often vīchitra in its lettering, that is in varṇa, jyoti etc as well as chhaya.

The combination of telepathies and tapas-siddhi continues, but the element of trikālārāṣṭrī in the telepathies is not yet precise; uncertainty predominates.

Besides the developing elements of the three first chatuṣṭhayas and the Ananda + Ishwara, the Script indicates Vishayas and Rupadrīṣṭya as part of the day’s progress.

The Ananda Ishwara manifests itself with greater force and perfection of chidghana than yesterday. The human figure has come into the line with the rest. Only in the human face the tendency to reversion has some strength, but it is daily diminishing.

Some drishyarupa.

Most of the afternoon & evening taken up with kavya.

Vishaya hardly noticeable—gandha.

www.holybooks.com
Mar 16.

Lipi is now confirmed in legible stability with a fair amount of fluency. The legibility is usually vivid.

Trikaldrishti begins to increase in the telepathy + tapasbuddhi.

Ananda now goes back to the manasa chidghana and not to the mere ahaituka or shuddha in manasa. There is a tendency to greater intensity of this subjective ananda.

More rupadrishya, but imperfect.

In Samadhi antardarshi is more frequent but slight.

Vishaya of rasa.

Kamananda discouraged for these two days begins to revive. Tivra is always intense with smarana, but tends otherwise to sleep.

Strong adverse movement in karma.

Mar 17.

The Ishwaradarshana has made a rapid bound to the shuddha Ananda possessing the chidghana, with the sense of the absolute universal beauty with the variety of feature. The chidghana gives a centrality and perfect harmony to the variety and reveals the spiritual law of each form of beauty, the guna and the swabhava, the thing it expresses. The Ananda is sometimes intense, sometimes moderate, sometimes goes back to the manasa shuddha chidghana; but the trend to intensity prevails.

Energy of tapas-siddhi is increasing, but there is still the division from trikaldrishti, the three elements of $T^3$ acting separately and not taken up into the union in duality of $T^2$

Sense (physical) and delight of touch in the contact of objects outside oneself, even at a distance, has long been developing,—mostly behind the veil with manifestations in front—and is now
thinking of universalising itself. The sense is sometimes subtle physical, sometimes sthula.

Lipi confirms fluency in legible stability, but its free manifestation is forcefully obstructed.

Successful samadhi. Lipi in sushupti often coherent; otherwise resolved by ideal thought into some form of coherence; only occasionally left to incoherence. Increasing force of rupadrishya; present also, but more successfully resisted in antardarshi. The obstruction to samadhi is obstinate and strong.

Mar 18.

The rudra energy which has long been attempting to seize the system, has now laid hold.

Lipi

“Do not limit the rapidity possible to the Shakti.”

“Do not admit defeat.”

The last means obviously definite defeat; for actual adverse result has to be admitted. Script — “There must be a constant insistence, but an illumined insistence”

From today the third chatusthaya has to be pushed on, the denials of the first and second energetically refused.

“Today the foundation of the rudra energy has been successfully laid and the Maheshwari in Mahakali once dominated (taken in as pratistha) will be perfected.”

The Maheshwari already taken in as pratistha was Maheshwari in Mahasaraswati, the other sometimes manifest is Maheshwari in Mahalakshmi. Once in Ch. [Chandernagore] Maheshwari herself was manifest. This is the last stage of the pratistha preparation. It is connected with the union of aishwarya-ishita-vashita with trikaldrishti and prakamyavyapti.
For the last few days a revolution in Russia with Michael brought to the throne as Czar has been telepathically suggested to the mind. This is half-fulfilled by today’s news.

Reference.
“The result will be that Prakriti will lose her power of reflecting herself in the Brahman” ie the lower Prakriti which interferes with the ideality. The higher is simply the consciousness and will of the Ishwara.

Samadhi
Force of distinct variety in rupa-drishya of Antardarshi. Great power of suppression of incoherence in the sushupta.

The sarvsaundarya of the Ananda chidghana is growing more and more, although it is not as yet secure against relapse.

Mar 20.
The sarva-saundarya increases in its hold. It tends to lose the vividness of its prema-kama elements and of the Ishwaradarshana, but easily recovers them.

The external asamata now is failing in its touch on the mind as well as on the buddhi; it touches only the physical sheath and affects the physical prana, but by evanescent touches, even when it is allowed to act without any attempt at expulsion.

There is an attempt of the asiddhi to confuse the Devibhava and sraddha which that draws back a little to see how the asiddhi works when the system is left to itself.
All these are the vestiges of the old mentality which come athwart the ideality without actually replacing it.

Samadhi oppressed by nidra.

There are constant returns of the physical asamata, never assuming the assent of the buddhi and the mind, but touching,
sometimes settling for a while on the physical emotionalism.

The main work today has been the persistent and rapid discouragement of all tapatya whether of will to determine event or of will to determine knowledge or of will to secure results or enjoyments. Tapatya is intellectual, mental, rajasic will. In order to do this almost all will and almost all favourable result or inner activity has to be stopped, except such as is purely passive.

In the evening a movement outlined itself that has been for some time preparing, that of correct self-telepathies, telepathies perceiving at once their own substance of truth. This gives no surety of trikaldrishti, but only actualised fact of event, state, tendency, intention etc correctly conceived or rather felt & seen.

The old time-trikaldrishti, long discontinued, revives with its old imperfections.

2. N’s [Nolini’s] return approaching
3. S’s [Saurin’s] early return and meal at about 9.15 and 9.25 but only the times came right, the two events being wrongly placed, S’s return at 9.25, the meal at 9.15 or 9.25.

Mar 21.

Most of the day given to work for Arya. Negative condition in the siddhi. Asiddhi emphasised, as far as it will go, in all the chatusthayas. Some play of ideality in the evening.

Mar 22

Out of the inhibition and asiddhi there is being created a new luminously mechanical ideal substratum of thought and action—jñana tapas—combined which replaces gradually the old half-intelligent action or thought, habitual, instinctive etc which rose out of the subconscient or was determined by the subconscient. This rises out of the realised sat in the mental, vital, physical prakriti (pradhana elementalised) and is therefore satyam. It is not yet ritam,
but prepares to be. It will be brihat by the large assimilation of the circumconscient under the law of the ideality.

Physical tamas has been for some days dominant. It is now being violently thrown off to be replaced by the dasya-tapas guided by an inherent, though largely involved shama-prakasha. The reactions of a sort of unreal, yet actualised physical weakness are fighting against this new type of action,—new, because formerly, when it came, it contained an element of rajas.

Ashanti is becoming more & more purely physical. It contains a sort of mechanical asamata and asukham. .

The resistance to the light of the ideality still continues. There is a physical repression of the thought when it tries to rise into the jyotih. The diminishing of the asamata into the pure physical touch continues.

Mar 25

The last two days given chiefly to Arya and poetry. No marked incident in the sadhana.

Today samadhi is recovering its activity after a temporary cessation.

Revival of the active sadhana.

The chidghana shuddha is now perfectly founded, normalised & universalised. Only its status varies.

The Ishwara-darshana is equally founded and universalised. But there are two experiences of it, one in which it is only present to the observation as the material of consciousness, but does not come home to the mind, the other in which it is vivid and the very nature of the soul’s view of things.

The Ishwara is not as often before Krishna or Kali, Purusha and Prakriti, in the individual, but the Lilamaya impartially in all, Krishna with Kali in the purusha, Kali with Krishna in the stri.

The prema-kama is normalising itself in the same way,—in two ways separately, first as essential stuff of the ananda; secondly, as essential result of the chidghana shuddha and its revelation of universal saundarya. This is not yet quite firm and complete.

For some time samata and dasya were isolated from shakti, in order that the last power of attack of asamata might be removed. It now touches from outside without any hold on the buddhi or the manas and a very weak clutch at the prana, as a sort of mild physical depression in the prana dependent on defect of sraddha in the karma. The velleities of ashanti, revolt (absence of nati) etc which the external Nature would force on the individual, have no power left to form themselves, the aid of buddhi and manas being refused.

The active side is now being revived. Absolutely perfect reference, telepathy perfect in satyam of substance, perfect too in ritam of arrangement when it does not attempt to develop trikālārshi and tapas; occasionally perfect trikālārshi. Tapas is still tainted with the habit of effort and struggle; trikālārshi with the false tapasic stress in its telepathic parts.
Aug 15th 1917. Wednesday.

The siddhi has reached a fresh turning-point.

The first chatusthaya is firm, complete, universal—except for occasional and quite momentary touches which have no power to fix themselves in the consciousness or outlast their moment or acquire intensity,—except, again, rarely in the failure of samadhi. But this is quite exceptional. Even the earth of the system (called in lipi, γη, territoriality) is subjected to the law of the samata. Only the positive ananda is still weak in [siddhi].

The second chatusthaya is complete, fixed, universal; but there are defects, principally in devibhava (ishwari bhâva, sarvakarma masâmartham, ) in sraddha swashaktym and most in daihiki shakti. All needs to take on a greater intensity, but all are founded, all firm except these three, but all have their points of weakness. Eg. dasyam is not yet normally tertiary of the third degree.

Defects in the first two chatusthayas are really not self-existent, but the result of insufficiency in the third, the vijnana. Here all hitherto has been preparation. Gnana is well advanced, T2 only founded, samadhi is still subject to mentality and incoherence, the physical basis is undeveloped; but all have acquired their crude material. Lipi is specially forward. All the stages of the ideality are customary.

The fourth chatusthaya is developed only in Ananda. Arogya is prepared but still subject to fragmentary denial, in all but the [. . . ] roga which still persists. Utthapana is thrown backward, Saundarya only developed in psychic youth and a few preparatory movements of the physical change.

Krishna Kali are both developed, but not perfect. Karma kama are psychically progressing, physically held back.

1 MS asiddhi.
Brahmadarshana is complete as continent, incomplete in contents.

Shuddhi, mukti, bhukti are well-advanced psychically, strong with fragmentary defects physically. Siddhi depends on the perfection of the still imperfect chatusthayas.

Aug 15th to 20th

Arogya.

Attack of roga,—attempt at cold and fever. Slight cold and eye-affection; the former unable to materialise entirely, the latter materialised successfully after three days’ struggle, but not with the same force as formerly. Strong on 17th and 18th, slight since. The disease was made an occasion for the exercise of the tapas-siddhi on the mental level, where the effect is never more than partial when used against strong resistance.

T2.

During these days the telepathic mentality has been entirely and firmly idealised on its own level in the perception of force, tendency, possibility, and entire satyam thus secured. Even when the ideality is removed, the satyam remains as an unillumined perception. The movement towards ritam (T2) is being resumed.

The stress on forces = mental tapas. This tapas has begun to be idealised and is already of the nature of a half-illumined balance of force-action. The satyam of the mental tapas is not so sure or not so illumined ordinarily as the satyam of the mental perception.

Samadhi.

Strong play of rich and perfect chhayamaya. There is a lack of stability and continuity; but these are firm in the obscure chhayamaya, sufficient in the half tejomaya chhayamaya without richness and variety. This rich and perfect but unstable play of rupa occurs sometimes in the jagrat antardrishta,—though more often various than rich and perfect. It is trying to emerge even in the bahirdrishta.
Vishaya.

Vishaya develops only in the sukshma, not in the sukshma sthula where it is still held up.

Aug 20th Monday.

Ananda.

Ananda is stationary in kama and tivra, preparing for a fresh advance. Vaidyuta has attained to occasional fullness in body and in length of pervasion. The basis of raudra is being farther perfected.

The rule of decrease by repetition is more and more giving way to the increasing power of the rule of greater intensification. Orgiastic tivra direct from the touch, after it has ceased, and subsequent sympathetic tivra orgasm elsewhere have begun to show themselves. Sometimes repetition produces variations from intense tivra to intense vaidyuta and back.

Orgiastic kamananda stream in pervasive non-orgiastic kamananda. The orgiastic tends to suppress and replace the pervasive, but sometimes the latter persists circumferentially in the body or is even increased. Simultaneously increasing orgasm of both has to be developed.

Vaidyuta tends to grow constantly, to be pervasive and to be ahaituka as well as sahaituka.

Tivra touch continued in the same place for five minutes; constantly disappearing into vishaya or lessened, but always recurring and increasing though with [necessity]² of smarana or smarana + tapas. After slight discontinuity more intense than before. This begins or presages the final victory of the law of increasing intensity. After complete cessation orgiastic tivra, continued briefly and often repeated.

Aug 21st Tuesday

Dasya

Tertiary dasya in the third degree is now being more regularly

² MS necessary
enforced in the movements of the body, even the slightest. The remnants of the secondary degree are being swallowed up into the third

The same control is now to be enforced and is being enforced in the script, vâni and vângmaya. The dasya is now thoroughly introduced into the isvaribhâva. Also into all bhoga. The firmness of this siddhi has to be firmly guarded.

The introduction of the dasya into the perceptive thought seems more difficult, but it is being easily done in the jnana. The test will be in the trikaldrishti-tapas. All responsibility for action, physical, vital, mental must be left entirely to the Iswara, the Shakti is only an instrument and the Jiva their meeting-place.

All traces of the asamata, now only the occasional recurrence of an old habit, must be finally removed. This can be done by bringing forward the delight in the asiddhi.

Brahma

Strong Ishwaradarshana sarvabhuteshu, followed by jyotih of the Anantam (Jnanam) Brahma in things. This was preceded half an hour ago by the lipi 15, several times repeated, the number of the Anantam in the enumeration of the siddhis which compose the last five chatusthayas.

1. jnanam, 2 trikaldrishti, 3 rupa-siddhi, 4 tapas 5 samadhi 6 arogya, 7 ananda, 8 utthapana, 9 saundarya 10 Krishna, 11 Kali, 12 karma, 13 kama 14 Sarvam Brahma, 15 Anantam, 16 Jnanam, 17 Anandam 18 suddhi, 19 mukti, 20 bhukti, 21 siddhi.

This jyotih is not yet to be free from interruption and diminution, but it is founded and from henceforth bound to increase. It is jyoti not tejas, ideal light, not the mental. It is now trying to ally itself entirely with the Jnanam and Anandam Brahma. These manifest usually each with a separate intensity in which the three others disappear from view; henceforth the quadruple intensity has set out to create its united effulgence.
Aug 22\textsuperscript{d} Wednesday.

The siddhis established yesterday stand, except in vismriti, in which they are not so much denied as either unnoticed or in sus-
pense. The tertiary dasya seems to be absolutely firm in the body, script, vani, and only suspended by vismriti in the perceptive jnana and in the vangmaya for the change which is being operated. This change is the transference of the thought from the control of the inferior devatas to that of the Jiva-Prakriti receiving it direct from the Ishwara. The perceptive thought is being similarly transferred. Thought is to occur henceforth in the vijnana of the Jiva; not as suggestion, but as thought in action and the thought of the Ishwara in origin.

At present the perceptive thought is becoming impersonally vijnanamaya with a vague sense of the Ishwara behind. In telepathic trikaldrishti, when it is not vijnanamaya, its nature and descent as manasic suggestion from the mind-world through the rajas of the pranic is more and more often perceived in its fullness. This is the false trikaldrishti, which is in reality no more than telepathic suggestion of possibility. These suggestions come either from above or from around, from the mind and life-planes of the earth; in reality the latter derive rapidly from the former except when there is exchange on the earth plane itself; even then the derivation is eventually the same.

Brahman.

The jyotih of Jnanam Anantam is now taking into itself the Anandam.

\textit{Lipi— September,} the physical siddhi begins its perfection.

\textit{tejorashi.} (yesterday) fulfilled today in the flow of ideality into the perceptive thought.

Vijnana

The real trikaldrishti is slowly growing over the telepathic basis, but combated always by the mental doubt. Lipi—“It is fashioning itself gradually in spite of the intellectuality; first, it has to take itself up into the ideality.” “Together the effective telepathy
and the trikaldrishti.” “Telepathy tapassiddhi.”

Rupasiddhi and samadhi are resisted, sometimes growing, sometimes falling back.

Trikaldrishti is increasing as indicated in the lipi, in spite of a mass of intellectual suggestions of the old type; out of it emerge three elements, (1) the ineffectual suggestion which falls away, (2) effective telepathy, ie telepathy tapas sometimes dropping into pure tapas without foresight sometimes into foresight with an involved tapas, (3) trikaldrishti proper, but insufficiently illumined and uncertain of itself. Only when there is illumination, is the trikaldrishti sure of itself and its fulfilment.

The pranic suggestions which amount only to rajasic imagination are being finally discouraged.

Some activity of vishaya in smell and taste. The latter is stronger in sukshma than in sukshma-sthula, but there is some sign in the latter of progress from the crude basic states to the dense and developed, which have hitherto appeared only in the madhura.

Aug 23 Thursday.

Lipi, “perfect telepathies siddhi.” Perfection implies liberation from false stress and, positively, accurate limitation and accurate extent. This has begun to develop, but is yet imperfect. The necessary condition of perfection is that the mentality should cease all attempts to determine the trikaldrishti and leave that entirely to the ideality.

The force of tapas increases but as this works as telepathy tapas and increases only the effective telepathy, it makes the distinction of telepathy, ie mental perception of present fact, force and tendency, from trikaldrishti, as perception of present and future (the past has so far been mostly left alone), more difficult; for a constantly effective telepathy tapas easily masks as trikaldrishti,
until an occasional failure shows the mistake. All this would not occur if the highest ideality were at work for T², but at present it is only the lower ideality working on the mental perceptions.

The satyam of the telepathy is now extremely perfect, the ritam more perfect than it has ever been before; sometimes the perfection is entire. But all this is as yet in the field of vision where truth and error can be tested by immediate result. The telebuddhi and telesiddhi on which the lipi has been for some time insisting, is as yet imperfect and very limited.

Renewed action of samadhi with an increased general hold of the ideality in thought, vangmaya, lipi. Rupa, dialogue, reading etc have made no definite progress.

Aug 24 Friday.
Entire perfection of stability and solidity in lipi with an almost perfect freedom in manifestation. There is only a slight obstruction still sensible in the akash, but this is sufficient to compel a return to the less perfect lipi. Until a siddhi has become entirely the nature of the system and environment, according as it is purely subjective or subjective-objective, it is not perfectly possessed and is liable either to temporary loss or diminution. A siddhi maintained by force or by habitual exercise is imperfectly possessed; it must be held entirely by nature, as easy as breathing or thinking.

Rupasamadhi is again obstructed; the obstruction is now evidently artificial, maintained by a pressure upon the nature of the terrestrial sattwa which is ready to yield the coherent vijnanamaya samadhi in its full abundance.

In all subjective movements and those subjective-objective in which the subjective element predominates and the personality alone is concerned, the obstruction of the गृं is similarly artificial, not belonging to the earth nature itself, but to the Patala nature into which the old powers have been exiled but from the borders of which they still maintain their opposition.
The ideality is therefore obstructed in its progress only by this opposition; the real obstruction is only in the fourth and fifth chatusthayas.

Saturday 25th August.

Lipi more emphasised in its perfection, especially stability which is now practically universal; the solidity varies and the legibility is sometimes partial to the eye, and sometimes still at first the lipi is stable only, or solid also, but there has to be tapas to bring out the legibility. Sometimes it is incomplete, part of a sentence, or else words are omitted; sometimes it becomes coherent, instead of appearing formed, coherent and [complete] at one leap of emergence into the akasha. But the latter is now common, and all defects disappear at the first touch of tapas.

In tivra the law of increase grows yet stronger, interruption decreases, intensity tends to be maintained. But at present if left alone, the general impressionability to tivra sinks often into a sort of subdued half quiescence and the intensity reawakens only after the first touch or the first few touches.

Samadhi varies, sometimes yielding to the obstruction, sometimes reemerging. Only the ideality of thought, vangmaya, lipi maintains itself and seems to be firmly established. Dream is commonest, comes very readily and is vivid, bordering on samadhi in its aping of coherence, vividness of rupa, dialogue etc, force of presentation. It is not however really coherent, as it was sometimes, but fanciful and extravagant in its details and connections. The nearness of a siddhi artificially withheld is however strongly felt. Rupa remains obstructed.

Sunday August 26th

The siddhis already established are now being taken up and carried to their completion on a higher plane.

Vangmaya is being taken up into the Ananda of the vijnana level, where it is no longer the thought of the Jivaprakriti with

3 MS complement
the Ishwara as the origin of the thought, but the thought of the Ishwara in the Shakti who is the medium and the instrument of the thinking. This has been done perfectly in the type; it has yet to be universalised.

A similar process is taking place with the perceptive thought and has been done less strongly and perfectly in the type, but its perfection and universalisation cannot proceed so far because the ideal perceptive thought still carries in itself an element of mentality and therefore more easily descends into mental thinking than it ascends into pure ideal thinking.

In the script to the presence of the Ishwara is being added the personality of the Ishwara and his relation of madhuradasya containing all his other relations with the Jiva-Shakti.

T² is still unidealised, but is pressing towards idealisation.

Lipi is rapidly universalising perfection of form and light in the thought-interpretation.

The containing Brahmadarshana is preparing to fix itself in the Ananda with the Jnana Ananta as content and Sarva as base.

**Physical siddhi**

In the physical siddhi *kamananda* pervasive and orgiastic is becoming more easy and natural in all positions, but needs and indeed is almost entirely dependent on *smarana* and sometimes on *smarana + tapas*; but the need of *tapas* is being gradually rejected. It is no longer entirely dependent on excitation of the centre by *sparsha*.

*Ahaituka tivra* has been for a long time less common, but it has a greater intensity and force for insistence when it comes and comes, besides, more easily everywhere.

There is the same increase of intensity in *vaidyuta* and *vishaya*, and also in the former a greater ease and normality in arrival, development and extension. But it needs *smarana* or *smarana* and *tapas*, more commonly both, in the ahaituka and in the *sahaituka* current, *smarana* only — and not always — in the intense *sahaituka* touch.

The other three members of the physical siddhi have made no definite advance and are except in certain directions subject to relapse.
Karma (subjective), though often and increasingly effective, is subject to great opposition, obstruction and reaction. Kama at present is not being pressed.

==

Samadhi

The other parts of samadhi not yet idealised, began to be taken hold of by the vijnåna in the afternoon, except the reading and rupa; all at the same time increased in coherence. At night the reading also was taken hold of, powerfully, both in its coherence and in its incoherence. Mentality now reigns only in swapna, although it still strives to persist also in swapna-samâdhi; but swapna is increasing in coherence. Even when interrupted, it tends to be resumed at the same point or to return to the same subject; this even happens after a long diversion to another subject. It is still, however, a sort of fragmentary coherence. The ideality also works in a fragmentary fashion, except in vangmaya

Tapas

Lipi, “sixty seventy”. 60 degrees rising to 70 degrees of tapas effectiveness is being enforced in type and has set out to generalise itself. Hitherto tapas effect was all haphazard and incoherent, often strong, seldom perfect, frequently weak or nil, always partial except in details, never or hardly ever final except in certain broad effects after much difficulty

Aug 27 Monday.

60° to 70° effectiveness is becoming more general; though 50° and less persist and 80° occasionally occurs, but rarely. The 60° is sometimes in swiftness of overcoming resistance, sometimes in amount of effect, which is often not perfect, but only partial, a \( \frac{3}{4} \) or \( \frac{4}{5} \) effect,—especially in tapas of exact circumstance;—sometimes in both respects there is only this partial success.

Extension of kâmânanda proceeds against obstruction.

Much action of Samadhi in the direction of strengthening the ideality, but all is still fragmentary. The incoherent reading tends to be turned into coherence or replaced by coherent reading or
else taken as it is and interpreted in its scattered parts. Increase of coherence is the rule.

Tuesday Aug 28.

The telepathy-tapassiddhi is becoming again idealised in the sense of being seen in its right limits of the satyam in the light of the vijnana; the tapas-siddhi is also acquiring more force with $60^\circ - 70^\circ$ as the average force, though it falls below and goes above, the latter more often than the former, because of the renewed strength of obstruction. T$^2$ is in abeyance. A similar process of idealisation, more advanced and luminous, is being applied to the mental deformations of the $\text{jn\'\text{\u093e}}$.

Violent attack of the asiddhi chiefly on the first and third chatusthayas, but to a certain extent in all six. The old method of forcing undelight in asiddhi on the system from without through the pranic physicality aided by intellectual suggestions and throwing it out from within by the tapas and the buddhi. Pranic manas in its physicality is still compelled to respond, with a slight or evanescent response in its emotivity, but not in its buddhi which does not recognise the undelight as belonging to the system. The freedom of the buddhi from undelight is stronger for the attack; moreover the restoration of the ananda is becoming abaituka or depends on the tapas and no longer on the buddhi. The habit of return of physical depression is also being eliminated, as well as the remnants of susceptibility to the suggestion of desire. Complete asiddhi is contemplated without revolt or depression.

There is now commencing an attempt to establish a more lasting stability in the lipi so that several lines may be manifested simultaneously—this has already been done often enough in type, but vanishingly,—with a firm hold on the akasha.

In the evening a preparation of farther progress towards the complete taking over of the whole action of the consciousness by the Ishwara.
Wednesday Aug 29th

Continuation of yesterday’s last movement. No definite advance, except that even the telepathy, trikaldrishti and tapas are being taken up by the Ishwara.

The taking over of the whole ideality by the Ishwara is now complete; only the recurrence of the old movements has to be eliminated.

\textit{Samadhi}.

Strong original lipi of the highest ideality in the \textit{sam\=adhi}, (\textit{antardarshi} and \textit{swapna-samadhi}). \textit{Rupa} is active and abundant, but not stable in \textit{antardarshi}; obstructed, but sometimes luxuriant in certain \textit{chh\=ay\=amaya} forms in \textit{swapna sam\=adhi}. Brief dialogue in \textit{sthula sukshma} word in swapna, coherent but not continuous or perfect. Reading, sukshma dialogue etc vary again from coherence to absolute incoherence. Thought of all kinds is much stronger in the ideality.

At a very deep level of samadhi neighboring on the sushupti the old defects still remain, but dream has less hold.

Telepathy and trikaldrishti are now beginning to shake off some of their imperfections, but the latter is still very hampered and limited. \textit{Lipi}. “perfect telepathy trikaldrishti” (yesterday) today, “perfect telepathy, perfect trikaldrishti”. The perfection realised is necessarily only in type. It is now attempting to extend itself into the large and perfect satyam ritam. This attempt made formerly on the mental, is now being done on the \textit{vijn\=ana} level.

Ambulant orgiastic kamananda

Aug 30 – Thursday.

Ishwarabhava in the Brahmadarshana seems now to be fixed in its universality, sometimes subdued, sometimes intense; but it varies from the mental to the \textit{vijnanamaya} and Ananda levels and is generally upon the mental. It is only by tapas and smaran\=a that
it returns to the higher planes. The subjective prema-kamananda is also now absent, except by smarana.

Aug 31 Friday.

Ananda

Steady progress in the tiyra.

Orgiastic kamananda is becoming more frequent and progressing towards normality, although still dependent on smarana and liable to obstruction. Ambulatory ananda is developing very fast, stationary is beginning to make itself normal, the sedentary without regard to asana shows sign also of following suit. The necessity of tapas is disappearing, smarana alone is required, except when the obstruction tries to recover strength; the normal readiness of the physical system for the Ananda may be considered as established.

Arogya is still obstructed, subject to relapse and unable to make any large advance.

Saundarya is also obstructed. Only psychological yauvana has become almost normal, varying in force and age, but never now settling into vârdhakya.

The pervasive kamananda is now orgastic in its nature, even when subdued in its force and insufficiently sthula in its hold. The ananda has now taken hold of all positions, recumbent and loose sedentary as well as ambulant, sistory and close sedentary. It is rapidly increasing in intensity, continuity and power of self-repetition. It has even occurred once or twice without smarana. This is the beginning of the “vertiginous rapidity” predicted today in lipi of samadhi.

In samadhi reading more firmly gripped by the lipi. Vishaya in samadhi, separated or combined, taste, sound, touch, sight, smell is rare and unready, occur often in great intensity, but intermittently. They are not yet a standing feature of vision in swapnasamadhi.
September 1917

1st Saturday.
Telesiddhi (karma)

Telesiddhi takes place frequently in fragments; large, decisive or final success is rare except in telesiddhi of some propinquity. In the main matters the obstruction and opposition are in the mass, though hampered, still successful.

Ananda

The kamananda seems now to be firmly established as a normal dharma of the body. Continuity and intensity have to be normalised. There is continuity with smarana; continuity without smarana has to be established. Intensity increases with the continuity. Ananda wave by strong sparsa on any part of the body is now being taken up; it is kama with admixture of tivra, vaidyuta, raudra. It is at first dependent on smarana and tapas; but in fact the latter is being eliminated; the ananda now as a general rule develops best and most readily when there is smarana without pressure of tapas; the latter, at least if too direct, is even something of an obstacle. Practically this ananda wave by touch has been established in its universality, but the siddhi has now to be entirely confirmed. All this development has taken place in the course of five minutes or so, with the vertiginous rapidity.

Ananda of acute discomfort has for some time been developing and is now preparing to be confirmed and perfected.

In samadhi stronger grip of observing ideality on narrative and dialogue.

Tapas is now more frequently effective (60°–80°) in the environment (not life) on general event; it has begun to work more frequently also in exact circumstantial effect but against great obstruction and with more frequent failure than success. This is on the mental level, by itself, or in conjunction with telepathies, without trikaldrishti.

Obstruction is being offered to the new ananda siddhis; they
lower the readiness, frequency, continuity and intensity, but do not succeed in altogether suspending; meanwhile independence of the abaituka pervasion and normality of the short sabaituka wave are increasing.

Strength of ideal lipi in the samadhi.

Sept 2. Sunday.

Obstruction in all the siddhis and attempt to enforce relapse yesterday and today. In the first it is unsuccessful except for fleeting and increasingly unsubstantial touches. In the second it lowers the force of tertiary dasya in the third degree and keeps in abeyance the ishwarabhava and the intenser sraddha. In the third it forces back the ideality and keeps up the dead play of the disjointed intellectual mentality, as well as the direct sense of the Ishwara control. In the fourth it tries to keep up the old stereotyped rule of denial of siddhi after a day of exceptional siddhi in the kamananda and enforce vismriti on the body; it is only partially successful[;] it diminishes and interrupts but cannot suspend.

The process of changing separated telepathy and tapas into united T² is being given a new turn. This is to give always the decisive event first as at once trikaldrishti and tapas, and attend afterwards to the movements which try to contradict the decreed and foreseen result and those which help with the aids and modifications of the opposing forces to bring it about. For the latter purpose it is being attempted to universalise the ideal light in the telepathies. The difficulty is always to distinguish the real finality from something that imitates it and to seize the right measure of the telepathies. The force of possession of the telepathies by the ideality is as yet insufficient, the interference of the mentality yet too frequent to allow of this invariable certainty.

Sept 3 Monday

The movement of T² continues. To idealise the decisive T² entirely and to enforce ritam on the satyam of the telepathies are
the two requisite preliminaries for perfection. The latter is the more
difficult of the two processes.

Lipi is confirmed in the ideality; it is now attempting to raise
itself into the highest ideality.

Attempt at *lipi-trikaldrishti*, but as yet distant prediction with-
out detail of circumstance or time.

The lipi now varies from the lower idealities to the three forms
of the highest vijnana.

Movement of T² continues to be prepared; but as yet with no
decisive result. Only the satyam becomes more pronounced.

Samadhi is stationary, persisting in its present gains, but also
in the obstacles

Sept 4 Tuesday

In Samadhi the tejomaya is reappearing, chiefly in the chhaya-
may environment, clear, perfect, but only with an instantaneous
stability, although a tendency of increased stability is not altogether
absent. The chhayamaya is now capable at all stages of a great
stability which is not infrequent, but still even in the chhayamaya
stability is not the rule; instability prevails.

Lipi is now full of the highest vijnana light and usually or
almost invariably belongs to that plane in its substance and status
and increasingly in its style.

Thought also has followed the same development, but it is
not as yet so advanced in the universality of the highest and most
luminous vijnana.

T² is attempting to follow. The illumined satyam of the
telepathies is now the rule, the darker movement is the excep-
tion and is immediately replaced by the light of the vijnanamaya
interpretation. But the tapas is not equally illuminated in its satyam. With the increase of *satyam*, *ritam* also increases. Still *vijnānamaya* T² is the exception, T³ is still the rule.

Wednesday, Sept 5.

Tapas effectivity in the environment tends towards greater normality of 70°, greater frequency of 80°, but this tendency is not yet well established. This effectivity however does not extend to exact detail of circumstance in which asiddhi both of will and eventual knowledge is the rule, siddhi the rare exception. Telepathy of contributory force, tendency, intention, impulse etc is sufficiently exact, though not always sufficiently complete.

Contributory tapas is becoming illumined in the same way as telepathy, in its *satyam* and increasingly in its *ritam*. But decisive tapas like decisive vision and even more is still unillumined or insufficiently illumined.

On the whole the vijnanamaya is now well-grounded and the rule of the being, but very far from perfection.

Tivra seems to have gone slightly back, but this is only the emergence of tendencies which had been held down by the energy of the tapas, not quite eliminated, though diminished and depressed. The habit of fluctuation from greater to less and from less to greater response has to be got rid of. Moreover the intimacy of the response has to be secured, that is to say, the inherent excitability of the physical system responding immediately to the sparsha by an intimate and intense thrill. At present this excitability is lost by prolonged excitation and replaced by an unsteady communicated excitability. Moreover the necessity of tapas has to be eliminated and smarana made sufficient. In kamananda this necessity is already recognised, and the advance is therefore retarded in order to get it satisfied.

There is now increasing frequency of tapas-siddhi in exact circumstance, often sustained, varying from 70°, 75°, to 80°, but also sinking to 60°. Below 60° the normal, though not invariable rule is asiddhi. Delay of fulfilment brings often inexactitude in place as well as time or even incompleteness of the effect.
Thursday Sept. 6.

The lipi is now fixed normally in the highest ideality.

Kamananda has resumed its action of continuity. It is noticeable that pressure of tapas is eliminated, although an original act of tapas-memory is still sometimes used to set it in action. Smarana is still necessary except sometimes in the most habituated asanas. There is some indication of the future substitution of a partial or side attention for smarana, but this is not yet anything more than an unrealised intention in the system.

Rupa is active to some extent in the jagrat, but there is no ascertainable progress.

Friday Sept 7.

There is a more settled ritam in the telepathy and tapas working in the unillumined or partially illumined mentality. The increase in effectivity of tapas seems now to be settled and normal. The development of this movement continued throughout the day has been the one feature of its siddhi. Also the return of the Ishwara control

Saturday Sept 8

The substitution of the necessity of half-attention for the necessity of smarana in orgiastic kamananda is taking place; it is already strongly established in the type. At first it was only sufficient for the sustaining of the ananda, not for its inception after cessation or its assertion against obstruction; but the sufficiency of the half-attention for initiating or renewing the ananda is now established. All this is in type; much has to be done before it can be universalised. In the end even this will not be necessary. The old habit of applying tapas survives in a fragmentary fashion, but is no longer accepted or efficient, except in smarana-tapas.

The Ishwara control is now firmly universalised in vani, script and vangmaya, with whatever survival of gana participation; it is
not yet universalised in perceptive thought, still less in $T^2$. That is being prepared.

The excentric waves and currents of kamananda are following rapidly the same development as the main or central surge; they have to come to depend first on smarana without tapas—though at first with an implied tapas in it,—then on a half-attention, while the removal of even this necessity is being already prepared. Here too maintenance without full smarana is easier and more frequent than inception or even renewal.

These excentric currents are often ahaituka, that is, not created as before only by actual sparsha. There are signs that ahaituka tivra will also be soon prepared for normality. At present it is still dependent—except in the three main locations where half-smarana is already sufficient,—on the full smarana and usually on smaranatapas.

Vaidyuta is developing indistinctly along with the tivra and kama. Separate development of vaidyuta and raudra seems to have been postponed.

Intense continuous ahaituka tivra is being prepared and established in type in all the nine locative centres; it is already done in type in the seven main and is begun in the two subordinate centres. The discursive tivra, which once emerged, is now being encouraged to reappear. Note that there are three other subordinate centres of the third class in which the same preparation is being indicated.

The fault of incomplete pervasion in the ananda surge is being remedied in the type.

Sunday Sep. 9.

The force of greater ananda continuance seems definitely to have been established. Obstructive denial persists, but it is greatly weakened and half ineffective. It can only have a temporary strength as a result of discontinuance by vismriti.
So far it is only in Ananda that the prediction of September as the first month of strong physical siddhi is being fulfilled. In the rest obstructive denial or successful resistance are paramount, denial in 8 and 9, resistance in the Arogya.

The half smarana is now often reduced to a minimum of attention chiefly in the physical mind or even the mind of the body and the dependence of the Ananda on the attention begins to be replaced by the involuntary Ananda forcing the attention. But this is only occasionally. Usually greater or less smarana is required. If the mind is vacant, then the attention can sink to the minimum. If it is concentrated on any object or subject, the ananda either sinks and ceases or is kept in abeyance and resumed with full force on the cessation of the absorption.

A new circumstance is the pervasion of the pranic body by the ananda as well as, with a less forcefulness of sensation, the manasic body. In the latter, at the highest, it is pure madhu of the Soma.

All the anandas show signs of an increasing tendency to the orgastic

Monday Sept 10.

A strong attempt by the artificial obstruction to renew its power of strongly suspending the Ananda; at times almost successful, it has decisively failed.

The ananda in the pranic body has now the power of taking possession of the physical.

Kamananda diminished in force of continuity and frequency, but not suspended. The obstruction is no longer able to suspend it strongly and imperatively as before. Its occasional control is becoming more and more artificial and its strength to obstruct more and more laboured. No longer intervals of suspension, but intervals of more difficult manifestation are the most it can impose.

Tuesday Sept 11.

Kamananda is gradually recovering its force and the greater pervasion is being insisted upon.
T³ after a somewhat prolonged eclipse is once more idealising itself, but not with any great force.

Even in the lesser force of the Ananda the power of the involuntary Ananda is increasing; it often re-initiates suddenly the forgotten or oppressed orgasm.

Wednesday Sept 12.

The lipi now perfectly founded in the highest ideality, is aiming at perfect fluidity on that level. It is easier in the chitra than in the akasha lipi, though even there there is some difficulty of immediate physical manifestation. In this difficulty are comprised all the formal defects that still remain in the lipi.

A certain lethargy of the vijnana action which has been dominant for some days, is now in process of being removed. It is noticeable that even the intellectual action is really a perfectly accurate action of the ideality except in T³, but its perfection is only realised when the ideal perception, ketu, stands above to observe it. Even in T³ the action would be perfect in its justice, if the remnant intellect judgment would not misinterpret and misemphasise it.

Kamananda is increasing in the type its force of involuntary initiation and involuntary retention or repetition. The force hovers, it is true, on the borders between pure involuntariness and a minimum, hardly noticeable or even unnoticeable act of smarana.

Revival of samadhi activity. Very perfect ideality of thought, lipi, vangmaya. The lipi has suddenly taken on the full perfection of ideality already established in the jagrat as well as certain types of extreme formal perfection which used only to occur in the beginning, years ago, when the vital force of the sadhana was strong, but the ideal weak.

The lipi predicts the return of that vital force into the new ideal principle. At present vital force is often at a minimum due to the excessive force of shama which was necessary to purification. But as shama is now absolutely strong, tapas-force in vitality can be increased without perturbation.
The interregnum of non ideality was necessary to get rid of false certainty and the last insistences of the intellect trying to play the part of the ideality. These have now been immensely weakened, though not abolished. The intellectual action is now in $T^3$ becoming more and more just, even when quite unillumined. It is far however from having then a perfection of *ritam*.

Ahaituka tivra is taking on firmly the orgiastic character.

Intense pain, other than burning, now often not only takes on the character of ananda but keeps it when prolonged. It is noticeable however that pointed, lancing pain is easier to deal with than the long-edged and the long-edged easier than the massed. Also the nervous is easier to transform than the gross physical produced by a physical object. The Nirananda element in certain forms of discomfort obstinately returns, even when their ananda has been frequently strong and complete in the type.

Thursday. Sept 13

In samadhi yesterday’s gains repeated; in addition a stronger force of conscious ideality took possession of narrative, dialogue etc which attained to a firm, long, consecutive coherence hardly exampled before. Fragmentariness however still remains and relics of the dream mentalising touched the action at its best. Reading and rupa still remain to be developed in the ideality.

A movement in the samadhi, jagrat, swapna, etc to take possession of all activities by the highest idealities. But this is not yet a sustained movement.

$T^3$ continues its development, and even in the unillumined action the growth of ritam is removing the distinction between telepathy and trikaldrishti. Tapas has still to take its proper place in the ritam which extends only to the two other members of $T^3$.

Friday. Sept 14.

Chiefly, the continuance of the movement by which the direct Ishwara control in the highest ideality is taking possession of the whole vijnana. The $T^2$ is still the least prepared for the change and
its preparation is the main feature of the sadhana, apart from the
movement of the Ananda.

Steady progress in the Brahmadarshana. It is confirmed in the
Ananda mentality and is being lifted into the Ananda ideality. There
is no longer any strong tendency of relapse into the mental asundara
and nirananda.

Saturday. Sept 15

The poise of the Brahmadarshana in things has changed
rapidly, suddenly from the vijnanamaya with Ananda in it to the
Ananda full with vijnana. It is only in beings that the lower poises
are still strong. It only needs the sense of the infinite Ananda in each
ingthing to be added and the darshana will be completely founded.
This is already being prepared and is partially active even in regard
to persons.

T^3 has been rapidly prepared this morning for the ideal control.
It is only when the physical brain relaxes into failure to respond or
when there are too rapid suggestions from the external intellectual-
ity that the ideal reception fails. Even the intellectual ideality is
now losing all its credit, because of its failure to satisfy the needs
of the siddhi, especially the ritam.

Great incoherence in the reading. The other powers of samadhi
maintain their ideality or at least their coherence, though some-
times with an initial difficulty. In rupa and reading the sadhana
is up against the curious phenomenon which seems insuperable in
jagrat rupa, vishaya, and the physical siddhi other than ananda,
the stereotyped difficulty, the action of the Vedic Nidah, which
consists in the eternal repetition of the past movements of success
and failure forming a circle which refuses to be broken. In all the
siddhi this phenomenon has been active, but most obstinately in
certain members of the sadhana. In others siddhi has arrived in
spite of it, has been more forceful than the tendency to turn each
step into a final step, but in others it has seemed powerless. This
however can be only an appearance. The change must come.
Sunday Sept 16.

Ananda darshana moves between suddha ananda proper and the same in the ananda vijnana or ananda manas. Sometimes it falls back into vijnana or mentality. This falling back is due to the recoil from the attempt to realise the infinite Ananda not only in but behind each finite, for which the mentality is not ready and therefore falls back into some fine or coarse mental representation of the thing desired by the will and sometimes, but insecurely seized in the knowledge.

Brilliant jyotirmaya action of the vijnana working sometimes upon the stumblings of the intellectual T³. This is the real surya, still hampered by the limited receptivity of the mind, but already presaging in type its opulence of plenary light.

Yesterday’s lipi was “Today is the last day of the intellectuality in the telepathy trikaldrishti aishwarya; it will be the first day of the ideality”; that is the last day of acceptance of the intellectual T³ as a means of knowledge-siddhi and will-siddhi. The remnants continue to force themselves on the mind, but do not receive acceptation from the Jiva-Prakriti.

Monday Sept 17

Remoulding of the stuff of mind so that all thought and will and feeling may be vijnanamaya, has set in in earnest. The progress is rapid; though not yet of the highest rapidity, still of a decisive rapidity.

Tuesday Sept 18. Wednesday 19.

The same movement with a tendency to relapse.

Thursday Sept [20]⁴

Renewal of intensity of kamananda. This time full pervasion in the intensity is established. But the power of the obstruction

⁴ MS 19
to profit by the vismriti has to be removed. Activity of the other anandas was also in a sort of abeyance and is reviving.

The passive samata is much stronger than before; positive ananda in the asiddhi is not yet quite firm, therefore a vague depression is still able to touch the system. Sraddha is capable of suspension with regard to rapidity, to complete physical siddhi and to karma; the ishwarabhava also and the sense of direct Ishwara control.

Arogya does not visibly advance; the other physical siddhis are still subject almost entirely to the denial.

Confirmation of the intense, all-pervasive Ananda in all positions. The strengthening of the separate current or wave so as to effectively universalise it, is beginning; but strong smarana with tapas in it is usually necessary.

Friday Sept [21]

Conversion of the passive samata, titiksha, udasinata, nati, into their positive forms of Ananda through Ishwaraprema and dasya. By this ananda in asiddhi will be perfected, since asiddhi will be the accomplishment of the will of the Ishwara, when decisive, of his temporary will and tortuous movement to siddhi when temporary.

Dasyam completed by intensity and universality. The Ishwarabhava belongs to the Ishwara at present, the Shakti has only the Mahasaraswati dāśībhāva. So also sraddha in the power of the Ishwara; not yet in swashakti as its expression. The sraddha is now in the accomplishment of the will of the Ishwara, whatever it may be, through this adhara; for the siddhi only in eventual accomplishment, except for a doubt of the sharira siddhi and of the extent of the karma.
With this the determining of the Kali-Krishna bhava in the personality; together, dasya of the Kali-prakriti as expressive of the Krishna-purusha both making the upper and lower sides of one personality. The Ishwara of the system, with the Ishwara of the worlds above, one in two dhamas.

Idealising of the telepathies and perceptive thought practically complete; tapas is being also taken up by the Ishwara entirely and idealised; unideal tapas is being rejected. Decisive Trikaldrishti rare

Saturday Sept. [22]

In sahaituka tivra, the law of increase has received a setback. Attention is necessary to maintain it if there is a rapid and prolonged excitation, and finally attention even with tapas becomes unavailing in some local sthanas; the sensibility seems for a time entirely to fail, although it revives after cessation. On the other hand the attempt on the contrary to make even attention unnecessary is being made and has an initial success. This method of enforcing strong advance out of temporary regression and denial, is noticeable in other parts of the sadhana. To a certain extent the defect in the tivra is being remedied

Premananda, long held in abeyance, is now again universalising itself, and this time firmly, as the subjective kama has universalised itself. It has two aspects, the prema within independent of the object, ahaituka, but ready to apply itself to all objects, and the prema awakened by the object, all objects, sahaituka.

Lipi is pressing for the immediate manifestation in fluidity of the ideal lipi. The territoriality resists, but the resistance is much weakened.

General flood of ideality, not yet perfectly clear and distinct in all its details or perfectly luminous in its hold.

6 MS 21
Fluidity of the immediate independent manifestation in the lipi is gaining great strength. It is now oftenest independent of the suggestion of words, but when delayed or incomplete in its manifestation, sometimes dependent on suggestion of substance.

Independent manifestation is secured; it must be universally immediate.

Sahaituka raudrananda has increased in force and hold. Ananda of discomfort is not yet universalised. Ananda of pain still subject to limitation by degree, but much less than before.

Lipi develops force of manifestation; but it does not yet get rid of the initial obstructiveness of the parthiva akasha

There are times when the whole action of the mentality becomes vijnanamaya with a long continuity; afterwards there is a fall into a confused tamasic condition of the receiving brain, when the unredeemed physical mind tries to work; after a struggle the light of the vijnana reappears in whole or in part action.

No definite movement during the last few days except the preparation of absolute spontaneity in the immediate manifestation of the lipi and an uncertain movement towards restoration of right activity in the samadhi. For the rest, the sadhana has been in a state of torpor and slight relapse. In arogya strong and persistent attack. In vijnana remnants of intellectual ideality at work—suspension for the most part of true ideality.
Feb 14.

After a long interval, mainly end of December and January, devoted to poetry, there has been during February a steady Yogic activity.

Results.

(1) Siddhi of first chatusthaya finally complete. Momentary touches of asamata in asiddhi alone remain, but are being rapidly replaced by ananda, which is now not only the passive, but the active Brahmabhava occupying the whole conscious being.

(2) Second chatusthaya finally completed though still not quite perfect in devibhava (aishwaryabodha, attahasya). Dasya absolute except for some remnant of the habit of responsible effort in the will.

(3) Ananda Brahman complete. Brahmachatusthaya only now needs filling in; the uttama and the akshara are complete. The view of things, creatures etc as well as the sense of the containing Akasha is the Ananda view; = suddha, chidghana (vijnana), prema, kama. Some more perfect confirmation is all that is needed.

(4) Suddhi, mukti, bhukti complete except so far as they depend on the remainder of the unfinished siddhi. Subjectively they may be considered as complete; only the physical remains.

(5) Krishna Kali firmly established, but it has to be more developed.

(6) Vijnana is at last taking firm possession not only of Jnana, but of the telepathic mind. This movement is as complete today as it can be without the development of ideal T². T³ has reached a certain relative completeness—not satisfactory—and is making towards the satisfactory completeness and perfection which will turn it finally into T². Thought telepathy is still weak and all is obstinately obstructed. Rupasiddhi and Samadhi are successfully
obstructed and get little play; what there is, is fragmentary and unsatisfactory.

(7) Physical Ananda is developing (ahaituka) against obstruction. Ahaituka kama promises to fix itself. Sahaituka tivra is well advanced, and only imperfect by a remnant of the habit of interruption when rapid continuous excitation takes place, but this interruption no longer amounts to a suspension, much less a relapse. The rest is slowly pushing its advance, but not yet with any large effect. Arogya is still in the struggle. Saundarya and utthapana still obstructed from manifestation except in details.

Feb 15

T³ is definitely turning itself into vijnana. The final step must be to turn the intelligent mind from the recipient and judge which it is now into a channel, so that the ideality will no longer send its messages into the lower mind, but work in itself for itself, with itself as its own observer and judge. This is now being undertaken.

Hitherto it is the active activity of the intelligent mind which has had to be eliminated by a long progression of advances and relapses; now it is the passive activity which must also go. It is only in the tapas that the active activity still makes any noteworthy attempt to persist.

Lipi is now entirely idealised. It is attempting to stabilise perfectly its spontaneous legibilities. This stability is becoming more and more frequent, pronounced and ample; but when the tapas is not applied, the old confusion, indistinctness and evanescence still tend to predominate. The truth of the lipi is now continually being justified by results.

Trikaldrishti proper is developing (until now all has been really intelligent and telepathic); but all is being arranged first in the lower intuitional vijnana, not in the higher revelatory and inspirational ideality.

In physical siddhi Kamananda is progressing rapidly. Today for the first time there was settled unmoving ahaituka kamananda pervading the whole body, somasya bradah. This was at first only in the sitting posture,—owing to old habit it could not at first take hold while walking. But this also was confirmed in the afternoon;
but here there was a greater tendency to movement. Movement of ahaityuka k. [kamananda] was established in the evening. All this depends still on smarana; but it tends to be constant and even when interrupted returns immediately at the call of smarana. The effect of the opposition is slight and transient. Sahaituka occurs now most frequently as a wave in the ahaityuka.

Some action of rupasiddhi. The old forms are beginning to recur

Feb 16.

Full force of constant ahaityuka kamananda, standing. The only defect now is the dependence on smarana. In the afternoon full ahaityuka k. lying, in antardarshi, over the borders of samadhi, united with thought.

Lipi increases in legibility and stability in antardarshi, where confusion was formerly the law. It is noticeable that as the samadhi gets deeper, vividness and stability increase.

The interpretation of the lipi is now being done entirely by the vijnana; but definite trikaldrishti with time, circumstance etc is still to seek, except as regards the sadhana.

In T^3 there has been today a throw back to the intellectuality which is still attempting to judge what it receives and even indirectly to determine.

More old rupas tend to revive. Some weak hints of vishaya returning

Feb 17

The movement is now to get rid of the intellectual element altogether and allow only the intuitive vijnana to act.

Intense ahaityuka ananda not dependent on smarana.

Script is now perfectly idealised, following in the footsteps of the vani.

Asmara k. is now established; it is interrupted by exclusive thought-concentration, but is found again at once still in possession or else recovered at once, usually of itself without need of smarana, when the exclusive concentration ceases. This has now to be confirmed in complete continuity. It remains (1) to get rid of the interruption noted above, (2) to increase the intensities.
The lipi has reached a certain relative perfection of combined legibility[,] spontaneity and stability: but the old imperfect type still recurs where tapas is not applied. The sadhana has now to eliminate (1) confused or indistinct lipi; (2) incomplete expression. This done the rest is a matter of intensity of inspirational and revelatory speech, which is already beginning to become common.

Vijnana thought is now inspirational and revelatory as well as intuitional, but chiefly in the intuitional form.

The rule is established that there shall be first knowledge, then tapas in accordance with the will, reversing the former order in which tapas came first and then it was questioned whether it should be fulfilled.

Feb 18.

Confusion is being got rid of in the lipi; indistinctness remains. It is only in the imperfect lipis that these things exist, but even there confusion is rapidly disappearing. The habit of intuitional interpretation, especially of suggestive lipi where it is most difficult, is being confirmed. In express lipi it is becoming the rule.

Rupasiddhi is manifesting the perfect as well as the developed forms; but for the former the old defects persist, (1) side manifestation, (2) want of stability, (3) want of variety—for it is almost entirely in the type form, though with variety in that narrow limit.

Continuity and intensity of ahaituka k. increase, but not yet sufficiently to conquer the interruption of exclusive forgetfulness.

Tapas on the mental plane is being abandoned; trikaldrishti also must be abandoned. It is finally seen even by the intelligence that there can be here no absolute certainty of foresight or result, since it is the play of partial, conflicting and mutually self-adjusting tendencies, forces, ideas, impulses. The telepathy of these things and the understanding of them is becoming wider, subtler, more accurate, though far yet from being perfect and complete. Meanwhile T$^{3}$ is suspended. T$^{2}$ is postponed.

The hostile powers are attempting, as they are no longer able to prevent directly the continuity of the a. k. [ahaituka kamananda], to
turn it into a neutral vishaya with extremities of acuteness turning to discomfort, so that this may be a cause for its discontinuance. But the effect has been only temporary.

Variety is returning to the rupa, but only, as before, in the crude forms.

Feb 19.

Samadhi after a long time recovered its activity. The ideal lipi chatusthaya is founded; vangmaya thought is freely active on all four states of the mentality; ideal perceptive thought has initiated itself in the three inner states as well as the one outer. The rest is still mental only; but there was the seed today for reading, narrative, dialogue. Rupa was active only in the vague chhayamaya. All this was done in a rush, by the exclusion, almost though not quite complete, of sleep. Henceforth sushupti must mean the Yogic sleep of the mind with wakefulness of the vijnana.

Lipi is advancing continuously and rapidly. It has become all intuitional lipi to the exclusion of the telepathic ideality—though prediction of material events may be an exception. It is becoming distinct in an orderly completeness, and now fluid in a legible and spontaneous legibility. This has not yet been universalised, but it is becoming a general rule.

Both sahaituka and ahaituka raudrananda are advancing. The burning touch is entirely anandamaya, except when it is so continued as to be intolerable, but even then in certain forms and up to a certain degree, a high degree, it remains anandamaya. There are signs of a similar progression, not yet so far advanced in the mārana—

Five forms of raudra—karshana, aparakshana, prakarshana, apikarshana, sankarshana

Strong relapse in T² still persists. Relapse means now stress, the attempt of the intelligence to attach certainty to the results of mental telepathy and tapas

Lipi is now seated in the antardarshi and bahirdarshi; but in the former it has still to conquer a natural tendency to instability, in the latter the large though now less insistent recurrence of the old imperfections.
Great strength of intuitional light in all the instruments of thought; imperfect only in $T^2$

Feb 20.

For the last two days ahaituka k. much subjected to violent suppression to its minimum point and easily interrupted, sahaituka obstructed. Smarana can always restore the former to action and generally but not always to intensity. It is mainly while walking that the adverse movement takes place. Nevertheless the intensity is increasing both in force and in general level and in power of sustained continuity. The habit of interruption is the one real difficulty in ahaituka k.

In rupa perfectly developed and perfect forms now show, especially the former, a certain power of stability, but they arise from long tratak on the living object as their excuse or starting-point, though not their real cause, and they are confined to the type form, chiefly in the three varieties most commonly watched.

A clear ideal (intuitional) trikaldrishti is now acting, but it has to be firmly distinguished from the less certain vision of the mental and pranic superplanes which sometimes come in its place and sometimes are mixed with it. Moreover it is isolated and gives only the general result without time, place or circumstance of intermediate event. Tapas siddhi is still manasic, but has greatly increased in force for general, and even though much less, for particular result. The power varies from 10º or 20º to 60º. A higher force is rare, except in moving objects, where it sometimes reaches 80º.

Unity of Trikaldrishti (telepathic and intuitional) and tapas has been roughly accomplished. The siddhi is now attempting to get rid of the confusion which periodically overtakes the $T^2$ thought, owing to revival of intelligent turmoil and false stress.

Ahaituka k. is again continuous, ordinarily with a certain intensity. The periods of exclusive forgetfulness find it still in the body; therefore it must be considered to have been there all along in a suppressed state.

In Samadhi the effects of yesterday were carried a little farther, in antardarshi and swapna of the lighter kind. Lipi especially made great progress to an easy, spontaneous and unsupported perfection.
which it realised, but cannot always maintain against the old faults of confused manifestation, instability and vagueness and dimness. Some initial ideality and coherence was manifested in reading, dialogue and narrative, but none of them were well sustained. Tejomaya rupa in chhayamaya atmosphere, but evanescent. Some stability in some chhayamaya rupas, but not of long duration.

In afternoon work.

Feb 21.

Spontaneous variety in crude rupa greater than ever before, but all in the crude crude. Perfect stability only in two or three type forms, but an initial stability is striving to fix itself in the others. The rupas are not yet always complete or perfect.

Vangmaya, vani, script suddenly taken up in full by the Ishwara.

Inspirational ideality begins in the lipi and is already as common as the intuitional. Lipi begins to justify its trikaldrishti — eg with regard to the situation in Roumania, viz that the principle had already been settled, to yield after a little velleity of resistance. It is notable that the telepathic interpretation of the situation was correct. The perfect lipi with well developed stability is becoming more normal.

The style of the thought vangmaya is becoming more and more illumined and inspirational.

The intuitional lipi is oftenest perfect with difficulty, — it has not except at its best an immediate stability, legibility, spontaneity; the inspirational has it normally; the slower manifestation is exceptional to it. It is even sometimes instantaneously perfect as if in the flash. It is now however taking up the intuitional lipi.

Free manifestation of chhayamaya rupa in swapna-samadhi at night; stable forms, scenes, etc, continuous action. Even in one case the supreme stability of vivid scene, but with a certain chanchalya of motion in the scene and appearing and disappearing of figures. Strong stability of reading in one case. It is to be noted that the old habitual difficulty of quadruped forms seems to have been overcome in all fields; wherever this has happened, there has come as a sign, as previously predicted in the lipi, the form of the Antelope.
For some time lipi kaushalya has been tending to develop: clear fiery and jyotirmaya lipi in antardarshi. In bahirdarshi tejomaya is common and dhumramaya occurs; varnamaya is rare and not varied in hue.

Feb 22.

The intelligence is being pushed aside as the judge and recipient; it still persists, but is being dominated. It is the intuitive mind that is taking its place, while in the thought etc it is mostly the ideality itself that is the judge and recipient.

Lipi trikaldrishti is now being constantly fulfilled.

After taking up telepathies into the intuitive mind and observing there all the relative uncertain certainties of the mental, vital and physical planes, so as to give them their right incidence and root out false stress,—a rapid summing up of the movement of the last few days,—the intuitional trikaldrishti has founded itself. The intellectual action with regard to T^3 is now only a habit-survival which must progressively be discouraged and eliminated.

In samadhi large masses of reading and a persistent attempt to decipher, but only brief clauses or phrases decipherable, separate or in the mass. These however, are becoming more common. Development is also proceeding in the other deficient parts.

Feb. 23.

The union of T^2 is becoming closer, but there is strong resistance to the development of the intuitional ideality. It is, however, progressing.

Full variety in crude rupa. The tendency to clear completeness and stability does not yet fix itself; and all is done against great obstruction.

Inspirational ideality entirely takes the place of intuitional in the vangmaya and establishes itself in the perceptive thought; only the lower telepathic thought is intuitional. The trikaldrishti is also now inspirational and tends to increase, but is still imitated and hampered in its development by false inspirational certainties of the mental, pranic and physical planes. This in the midst of a violent attack of the old intelligence.
Samadhi advances greatly. Long coherent narrative and reading and to a less extent dialogue, but still infirm and floating; the dream element predominates. Lipi is becoming more and more perfect in the antardarshi.

Some attempt to recover activity in the vishaya; still much obstructed as also rupa.

Shadow of athumia still prevents perfect continuity of the first chatusthaya, though it is unable to persist successfully. Purely in reference to siddhi and asiddhi.

Feb 24

Intuitional lipi of the inspirational type is giving way before the pure inspirational which is more perfect in substance and form. The inspired lipi has at its highest an element of direct revelatory sight

T² has been considerably extended, but there is still much that has to be taken up before it can be secure or complete in its extension.

Sahaituka Kama Ananda has for some time been reduced almost to nil, and ahaituka depressed so as only to be active on condition of attentive smarana and intense by tapas smarana. Ahaituka is now recovering its vina-smarana activity suspended only by exclusive concentration, and its intensity. Vaidyuta has been showing occasionally signs of development.

Perfect development of narrative and reading in Samadhi, coherent, long-continued and initially idealised. The old incoherence intervened only at the end and very slightly from time to time. Dialogue also, but on a lesser scale, yet with the same essential qualities. Long continuity is frequent in rupa of swapna samadhi but stability is rare, except sometimes a troubled and recurrent stability. Chhayamaya reigns. In antardarshi lipi alone is really active. Rupa is obstructed more even than in the jagrat.

Rupa and vishaya fail to advance beyond their former bounds, except that the type touches are frequently stable and long-continued and the general touch is coming out from sukshma just over the borders of sthula. The sthula effect of feeling is partly there, though the touch remains sukshma.
Great force of delight in raudrananda even when pain is strongly present. There are exceptions.

Feb 25.
Farther elimination of the attempt to decide things by intelligent telepathy. As a result the inspirational thought and T^2 are growing stronger.

Vishaya is resuming development, touch on the lines already indicated, taste and sight resuming their old gains, but hearing and smell are still obstructed, the first almost entirely, the latter partially.

Kamananda varies between the sasmarana and vinasmamarana; the first is still more usual. Sahaituka is slowly recovering.

Brief attack (10 minutes) of the old form of asiddhi modified.

The inspirational ideality has completely taken up the lipi, the perceptive thought, the vangmaya: even the intuitional thought or lipi is inspirational in its substance and manner. Only the T^2 and the phantasy still admit the intellectual thought. In the former however both telepathy and tapas are becoming inspirational. Interpretation of lipi is following the same course.

Great play of rupa in the evening of all kinds, but imperfect except in crude and in the rest only when seen indirectly or sadhara (sthapatya) etc or in type forms. Stability is yet unattained and variety in the perfect forms is only promising to develop.

Sudden lipi perfect in form is becoming frequent.

Feb 26.
The inspirational ideality continues to enlarge, in spite of a turmoil of recurrent intellectuality assailing the system from outside.

Idealising of samadhi continues. Long continuity of successive event increases in rupa, but stability is still only recurrent, except up to a certain point. There is much obstruction. In vishaya and rupa there are only small isolated gains; the obstruction prevents a secure basis being founded.
Shanti resisted all attacks today, sraddha faltered for a while. Dasya is deepening. Once hasya and sraddha are perfectly established, only the secure intensity of the chandibhava of devi will remain in the first two chatusthayas to be secured against all attack or temporary relapse. Dehashakti is however still subject to superficial failure; at bottom it remains.

Feb 27.

T² is now successfully taking up all the old T³, this time with a certainty of rapid finality. The attempt to decide by other means than the inspirational vijnana, whether by knowledge or will, is not entirely eliminated, but is now far advanced, and prevails only in moments of forgetfulness. As yet it is only to the extent of the old T³ which was far from complete that this success obtains, but it is extending itself to the whole range of possible intelligent thought and will, to complete the brihat satyam ritam. Beyond that, however, there is the highest T², absolute, which has yet to manifest.

The defects in the strength of I and II [first and second chatusthayas] are being rapidly dealt with, except in dehashakti. 

Raudrananda is raised to a high degree, but not yet absolute. Above a certain point, the first impression is pain, though ananda immediately intervenes and takes possession. In subsequent effects pain mingles, but the tendency is for ananda to prevail. The general receptive attitude of the physical being is anandamaya and this is rapidly prevailing.

The intelligence has not only lost, but renounced its right to judge; but it is still involuntarily the recipient in the lower mental system and even by habit in the thought, except when the latter acts as if by a sort of force in the inspirational ideality. The ideal action has not yet become natural to the whole being. The result was a temporary inability to act subjectively, a sunk quietude. No disturbance of samata, nor of dasya, but some of sraddha.

Rupasiddhi continues to prepare its advance. Intermittent recurrence of variety in the crude is the only siddhi as yet well established.
Feb 28.

The inspirational ideality has suddenly become natural to the system, especially in thought of all kinds. The defect lies still in vyapti which comes to the emotion, intelligence or vital feeling, and in decisive trikaldrishti which is sometimes ideal, sometimes mental. But this is being rapidly remedied.

Physical siddhi has for some time been left to itself and does not advance. It maintains itself, but with difficulty and lapses. Vina smarana Ananda especially has lost its hold and comes only intermittently after sasmarana.
March 1918

The month of February has been the month of the founding of the vijnana in the type; the month of March is marked out for its confirmation and primary completion in all parts of the third chatusthaya. April for the farther confirmation and a greater completeness.

March 3.

After two days of oppression by the environing Intelligence, the ideality is again busy defining its form in the lipi, ideative thought and vangmaya. First, there has been in the thought, including telepathic thought of trikaldrishti, the entire revelatory intuitional ideality in the bed of the intuitive mentality. It is now seeking to get rid of the intuitive mental response and become pure revelatory inspirational ideation, the highest point reached on Feb. 28 in type. The surrounding Intelligence tries still to preserve its habit of response; this is still the chief stumbling-block.

Lipi more easily confirms itself in the revelatory inspirational vijnana; the lower forms occur, but are there easily discouraged.

March 4

The decisive trikaldrishti has at last fixed itself in the revelatory intuitional type.

Perfect lipi, sudden, spontaneous, vividly legible, completely stable of a high revelatory inspirational ideality is now beginning to make itself entirely normal.

Letter in the samadhi perfect in form except for want of vivid distinctness, not stable enough to be slowly deciphered, but recurrent in variation

Premananda is becoming normal in the sarvadarshana.
March 5.

Telepathies of thoughts, intentions, impulses, tendencies which do not fulfil themselves are to be known and are now to be addressed to the idealised heart consciousness,—it is not yet idealised,—all positive fact of trikaldrishti is to be known by the vijnana buddhi

Mar 7.

The lipi now fixed in the inspirational or middle ideality is being firmly founded in the eight qualities, spontaneity, legibility, stability, rapidity, fluidity, completeness, light, justice. The lipi kaushalya is being finally developed and all forms occur with some initial frequency of recurrence except the pure varna. Jyotir is commonest, tejas and agni occasional; prakasha seems to have been abandoned.

Both forms of thought have replaced, when the ideality is active, the inferior by the middle or inspirational vijnana, which holds in itself revelation and has taken up intuition and viveka. Trikaldrishti is in course of transformation. The middle ideality has a surer certainty and lends itself less to the relapses of the intuitive intelligence.

Prema kamananda in the darshana have firmly combined with the shuddha. The full ananda only fails when the sarvasaundarya darshana is deficient or withheld.

Vishaya and rupa are again obstructed.

Certain and decisive trikaldrishti is enlarging itself rapidly; tapas-siddhi is coalescing with the ideal knowledge and pure telepathic tapas is being rapidly abandoned. It is in fact no longer admitted. T3 has received its dismissal. It only continues to exist in chaotic fragments in the external suggestions which are no longer accepted. This is with regard to the buddhi,—but in the sense-mind intuitively intellectual telepathy still exists.

There are trikaldrishtic indications that March will be a month of the extension of the physical Ananda and that secure continuity in the Kamananda will be rapidly established. The movement has already begun.
Sudden intensification, with prolonged recurrence, of the sahaituka vaidyuta, current through the body (arms and legs).

Mar 11
The revelatory has suddenly today substituted itself for the inspirational ideality, but it is at present the intuitional revelatory. It is taking up all the action of the ideality and enlightening and transforming the relics of the intelligential mentality.

There has been a struggle in the Kamananda. Persistent continuous recurrence seems to have been well established, though the enemy still struggles to bring about a long entire suspension; but secure continuity is not yet established.

Mar 15
The sadhana is going through what would formerly have been a relapse but is now a process of readjustment through the permission of the intellectual action trying to reestablish itself, but bringing about at each step a farther diminution of its power to return.

The first two chatusthayas are being steadily confirmed in their completeness and the touches of denial are being eliminated. The first is practically complete in its armour of passive samata, almost complete in the active. The second is feebly besieged at times, but the completion of the dasya and the chandibhava is evident. The latter is only deficient in hasya.

Continuity of ahaituka kamananda, when not suspended by exclusive vismarana, is confirmed. Sahaituka has been for long depressed and only occasional.

The Ananda in darshana is complete and consolidated in its combined action, but sometimes falls momentarily back into the mental form with one or two habits of dissociation, mostly omission of kamaprema; but this ordinarily, is instantaneously corrected with regard to living beings. The whole has still to be raised to a firmer intensity.

Kamananda continued through samadhi, light and double, only suspended by the deep and complete interiority. Other former
incompatibilities initially conquered. A beginning has been made in overcoming the exclusive forgetfulness, but this is not yet confirmed.

Mar \[date not written]\n
The first chatushthaya is now entirely confirmed. Even if old touches of impatience, discomfort etc arrive from outside by strong habit to touch the surface of the physical mentality, they are at once stopped and either disappear or are transformed.

The second chatushthaya is now complete in all its circumstances with the one fault that the Kali element in the Devibhava, which is constant, is not steady; the ordinary condition is that of the Mahasaraswati with a strong Mahaluxmi colouring and submerged Maheshwari basis. This is full of shama ananda, but insufficient in tapas. It is the Mahakali element that carries the full tapas, ishwarabhava and attahasya of the lila; but when the Mahakali element is there, the Mahaluxmi colouring and ananda intensity diminishes; this defect is the cause of the unsteadiness. Tapas ananda has to take possession of shama ananda; Mahakali has to mould itself into the Mahasaraswati, and be the contained in that continent.

After a long period of lower working the revelatory ideality is taking possession. The old physical lethargy of the mind can no longer act; but in its place is the akartri-shama; into this the prakasha of the revelatory vijnana (drishti) is beginning to pour itself.

The ahaituka tivrananda is recurring after a long interval of rarity. It is now pervasive, more prolonged in persistence, occurs in all the members.

Lipi is enforcing itself in the eightfold qualities against the old etheric obstruction.
Ishwaradarshana has taken possession of the Anandadarshana. It dwells more normally in the Ananda than in the lapse to the mentality.

Although violently obstructed, vaidyuta ananda now occurs, more and more pervasive in its current.

For several days the ahatuka kamananda has been violently obstructed and persistently expelled, but it retains its ground, though often reduced to a minimum.

There is a continual alternation now between the Mahakali bhava and the Mahasaraswati for possession, the latter becoming more and more full of the former.

Mar 25. The Mahakali element has fixed itself. Eight days are given by the lipi, up to April 2, for its taking full possession of the bhava.

Mar 27. Only momentary and rare touches affect the first two chatusthayas. The one deficiency is an infirm faith in the full extent of the siddhi in the sharira and the life; the devi hasya is there, but not constant. The third chatusthaya is extending itself, but experiencing still at each step the lapse towards the mentality.
20 APRIL – 20 MAY 1918

Notebook of the Sadhana.

20th April 1918.

A manifest change has been the accomplishment of the Chandi personality in the Devibhava of the Prakriti. This bhava is in its nature Mahasaraswati, the Aniruddha-shakti. It has for its base Maheshwari; it is strongly coloured with Mahaluxmi. This combination was finally expressed in a strong and long-permanent personality, perfect in equality, intense in bliss, full of universal love and madhurya, but deficient in virya and shakti. The advent of the Chandi bhava, effected in accordance with lipi and other prediction on the 2nd, stabilised and completed in rudra force on the 15th, since then undergoing modifications and vicissitudes, has brought the completion of the Devibhava, not yet altogether perfect, but firm fundamentally. It is Mahasaraswati personality with the Mahakali bhava; the Mahaluxmi colour, a hidden Maheswari base (pratishtha).

Defects still existent. (1) Occasionally the madhurya of the Mahasaraswati gets the better of the rudra tejas; this is mostly when things are getting on well or when the samata in shama gets the better of the samata in tapas. This however is rare. Ordinarily samata in tapas is the temperament.

(2) The samata having lost its old base is disturbed from time to time. The excessive mental tapas and its reactions which used to come with the Kali bhava recur, though with less and less hold on the system; they come but they cannot remain. They rush upon the adhara from outside, but can only partially get their hands upon it and have to loose their hold. Nevertheless this is now the chief difficulty and the root of all the others.

(3) The ishwarabhava has come with the Chandi virya. It is in its perfection the aishwarya of the Dasi empowered by the Lover.

www.holybooks.com
and Master, the [real] aishwarya being his, the executive aishwarya hers. But the mind element often insists too much on the instrumental aishwarya acting through the mind in forgetfulness of its source. Then there is trouble and disturbance of samata.

(4) The hasyam of the first chatusthaya is developing the atta-hasyam of Mahakali into which is to be taken the jnana-hasyam, sneha-hasyam and kautuka-hasyam of the three other powers. But with defect of perfect sraddha swashaktyam, of perfect samata in tapas and of perfect ishwarabhava, this cannot take possession of the temperament.

(5) Sraddha has an occasional perfection when it is sraddha in the Bhagavan and in the shakti as his executive power; but in the absence or defect of ideal tapas-siddhi, this also wavers. General habit of sraddha prevails, but is crossed by the intellectual uncertainty as to the intention of the Ishwara.

(6) & (7) Resultant defect of Mahaluxmi colour (bliss and love) and resurgence to the surface of the Maheshwari to correct the defect of excessive mental tapas and asamata.

Lipi predictions. Finality of the ideality from 15th July. (20th April).

The seagod in the ideality (Varuna).
Liberty in the idealities soon (21st April)
January to July the ideality, July to January the physical siddhi. (3rd May).
The seagod in the telepathies, trikaldrishti, tapassiddhi. (May 4th)

The devihasyam which was formerly only in the buddhi and from thence affected the temperament, is now manifesting originally in the temperament. It is a compound of the four kinds of hasya or a combination of them. It has not yet occupied the place of the original colourless and featureless hasyam (ahaituka), but is preparing its occupation. Incidentally the ξəθυλιζα of the Mahasaraswati is being taken up by the Mahakali,—it is an

1 MS really

www.holybooks.com
anandamaya titiksha-udasinata-nati—and will be converted into an
element of the sama tapas (shamomaya tapas). Sraddha, ishwara-
-bhava etc are also taking their proper shape and the other elements
of the shakti-chatusthay are preparing a more perfect combination
and fusion. All this, however, is not yet well accomplished or
perfectly sure in its action.

21st April.
The akashic lipi is developing with an extraordinary swiftness.
The lipis are manifesting in spite of a dull etheric resistance still
left with a phenomenal rapidity and fluidity and an outflow of
ideal justice and light in the substance and ordinarily, though not
always, in the expression; also, with a great completeness. This is
being done by the aid of the suggestions, but these are now not
the intellectual, but the ideal suggestions. The resistance is to the
rapidity in the completeness, but this is being overcome; and to
the legibility; but the illegibility also is being overcome, though less
perfectly; and to the spontaneity. Spontaneous lipi flows less readily,
but this also is preparing to associate with itself the other qualities.
Interpretation of the lipi is now really ideal with a spontaneous
judgment (gnwrisic). There is still a habit of confusion when the
mass of outflow is left to itself, but this is mainly in the chitra-lipi.
This progress is in the bahirdarshi; lipi in the rest is still imperfectly
developed. All this has been done in a few days.

22d April.
The development of the lipi and a certain development of the
ideality—the sea-god in the ideality—is making itself common to
bahirdarshi, antardarshi and swapna, but as yet with less force
and ripeness of large action in the two last. In the jagrat there is
an action of tapas which is at last quite freed from the personal
element and perceives all its willings as actions of knowledge and
has even begun to distinguish with a commencement of automatic
fidelity those which will realise themselves from those which will
remain as yet unfulfilled tendencies, impulses or intentions. What
was formerly called the trikaldrishti was simply a telepathic stress

www.holybooks.com
which happened to come right, but had no sure principle or light of judgment and might easily turn to false stress. What is now coming, is an automatic fidelity to truth, a fidelity not of the telepathic stress in the intuitive intelligence, but of the intuitively revelatory judgment in the ideality. This is as yet very imperfect in its action and still involved in the intellectual telepathies.

25th April

After two or three days of a confused action, the intuitively revelatory judgment has disengaged itself and is extending its action. As yet it applies only to tapas and telepathies. As regards the latter it sometimes replaces them, that is, it takes them up idealised and accompanies them with the ideal judgment, so that they are entirely correct ideal and not doubtful mental telepathies, or it observes and judges them, or there is a mixed action. The latter has to be eliminated as an evident source or pratistha of error. With regard to the tapas, it is the impersonal perception of what has to happen, because that is what is being definitively willed in the ideal Vijnana; at present it is correct with the substance of the ideal Truth, but not often clearly luminous with the light of the ideal Truth. This is because it leans on what is being willed in the present, but does not go back to what stands as willed in the Eternal Idea. There is as yet much tendency to attendant intellectual hesitation and error of circumstance, where the fulfilment is not immediate, but this is being eliminated. The action of the ideal Truth as applied to present status of invisible objects is not yet developed beyond the telepathic action. What the ideal T² is now working on, is the present tendency and future action of visible objects.

30th April.

Completion of the Brahma-chatusthaya in the perception and sense of all things as the conscious body of the Purushottama. This was prepared by the sors,

रसों हृदये कृत्सन्ध प्रभासिन्म विज्ञानोऽत्यन्तः
प्रमणं सत्यायं शब्दं श्रेयं नीरूणं दुः.

followed by the sense of the Ishwara as the delight, rasa, in the flood of the being, अन्तः, the light of knowledge in the vijnana
(sun) and mentality (moon), the word and the thought, the tapas. This led to the perception and sense of all substance of matter and consciousness, quality, force, thought, action etc as the Ishwara. Formerly these perceptions were of separate things (tattwas, elements) and temporary, though often of long duration, but now it is global, integral and steadfast. It rejects the remnants of the intellectual fragmentation and division which still come to deny its completeness.

Ananda of samata has proved sufficiently firm throughout the month. It is now combined firmly with the tapas; desire has perished, though tapatya still remains, but only as a minor element. Therefore the touches of asamata can get no hold, are entirely external and are cast out of the adhar automatically as soon as they enter. External, moreover, not of any near, but of a distantly watching, rather than environing mentality.

Tapas is now very strong; in the field of exercise the obstacle has no longer a genuine power of resistance, but only of persistence and this again persists only by a persistent recurrence which gives it after much difficulty the power for a time to reestablish itself rather than by a right of its own in the environment. This is even when the tapas is without knowledge of trikaldrishti. The movement has now begun which will turn Time from an obstacle with which the personal Tapas had to struggle into an instrument which the personal Tapas, become that of the transcendent will working upon the universal to modify it as well as through the universal, will use for the disposition of its results. This movement is as yet only initial; as it advances tapas and trikaldrishti will become entirely reconciled and identified. Trikaldrishti increases in frequency and has begun to carry with it the right perception of Time.

This development enables the Chandi in the devibhava to affirm its characteristic singhi element more firmly. The ishwarabhava and attahasaya are preparing to grow upon the system. The intellect is gradually fading out of the system, (lipi, euthanasia of the intellectuality) and the whole is becoming vijnana + intuitive mentality. Only a vague floating remnant of the real
intellectuality is left; it acts most when faced with the obstacle in life.

All is being idealised in the samadhi, but the dialogue, narrative etc are still usually mental, swapnamaya, though much more sustained and coherent. Reading is still normally incoherent. All are occasionally ideal. Lipi is always ideal, but is less perfected in its eightfold quality and less free and spontaneously active in the antardarshi than in the bahirdarshi. Rupa and vishaya in the bahirdarshi are still unable to take firm hold of the etheric system.

On the whole the “liberty in the idealities” (lipi, 21st April) is working itself out, but does not cover the whole third chatusthaya and is nowhere quite absolute.

May

May 1st—Lipi predicted today perfect ideality and the beginning of physical delight; but it is only the seed of the perfect ideality and the definite beginning of physical delight in the tivra that the interpretation relying on the mental pre-sentiment admitted. It is this which has actually evolved, but as a beginning in both cases of a steadier final development, of the perfect ideality including T² and of the total physical delight in all five anandas.

May 4th Saturday

Yesterday the siddhi in the sahaituka tivra developed beyond all mistake an incipient finality of development. First, an universality of the tivra response to any touch however slight, and even a general mass response even to such habitual sparsha as the close pressure of the cloth at the loins usually unfelt and the loose pressure on the legs. This tivra contains the vishaya and develops the kama, as is now seen, today. This triple movement is preparing to become a law, but as yet sometimes the vishaya prevails over the tivra, sometimes the tivra alone remains, or else the vishaya is at once the kama without any intermediate tivra. The tendency however is for all vishaya to become tivra. At the same time an abundant ahaituka raudra is beginning to manifest even while the sahaituka is pressing to generalise itself. Vaidyuta comes with more
difficulty owing to want of past habit in the body or insistence in the mental tapas, but when it is insisted on, is more assured and can have more mass than before. Kama has for a long time been most vehemently resisted and suppressed partly because it has been the most demanded by the mental tapas and has therefore attracted the mass of the physical opposition, partly because it is the most central and vital of all the Anandas. It is now pressing to remanifest more securely, but has not yet got rid of the suppression, though that is steadily becoming less effective. All this justifies the lipi “today total delight”, the truth of which was doubted by the intelligence because to the mental perception the physical opposition to the kamananda seemed too strong to be surmounted.

The script set down yesterday. “The first week of May outlines the ritam in the satyam brihat. It prepares the totality of the physical delight. It prepares too the samadhi.” All three predictions are being fulfilled with what has been called the enthusiastic, that is a sudden, vehement and anandamaya rapidity.

In the samadhi today continuous vangmaya and ideal ideation was established, the habit of fatigue in the physical mind which demanded cessation or intermission being denied its claim and dismissed. The habit of simultaneous action of the two which has hitherto been violently or obstinately resisted by the physical mind, was firmly founded and illustrated by a rich continuity of simultaneous action. Initially the habit of simultaneous manifestation of the lipi in the antardarshi and even in the swapna, where it has been the most difficult, was immediately afterwards founded, in the same stream of rapid progress. The lipi in the antardarshi is now assuming the same freedom and perfection of the eightfold quality as in the bahirdarshi, only it is still rather more resisted by the physical ether, its manifestation less free, prompt and fluid in completeness, its stability more initial and less definitive. Ideal ideation is driving out the dull habit of intellectual thought in the samadhi along with the physical fatigue; it has been busy with its electric needleplay modifying the physical mind, in its sukshma brain-stuff even when no definite ideation was at work.
The same movement has begun in the outward waking mind; it is extending first to a confident play of the ideal telepathy, that is what was the intelligence's perception of present intention, tendency, possibility etc. This is now firm in the satyam brihat, except for actual situation etc of objects where the tamasic darkness of the external intelligence opposes the action of a power which has already been established in the mental telepathy, but has yet to be established in the ideal. T² today is developing the play of the universal ideal perception and tapas and for the first time manifested the transcendent Tapas and idea which predestines and decides. This is evidently the first beginning of that perfection which, it has been declared, will be made final in July.

That this may be done so rapidly, the lethargy habit has to be abolished, as the lipi has predicted, that is, the demand of the physicality for cessation and intermission, its refusal to respond to the tapas and idea which was the real though hidden basis for the habit of long cessation and relapse which the sadhana has been struggling with and at last gradually eliminating,—recently quite rapidly,—during the last seven years. It is still strong in the physical sadhana; therefore there is there except in the Ananda, only a slow and laboured and intermittent progress, though in some directions still a steady progress, and in some respects only a defensive denial of farther active asiddhi relapse, in others a balance of relapse and reparation with a slight gain sometimes for the siddhi, sometimes for the asiddhi. It is in utthapana and saundarya that the asiddhi is strongest, in arogya the siddhi for the most part holds its own and even has had definite particular victories and advances; in Ananda it is hampered, but now on the verge of a general triumphant progress, even engaged in its actual inception.

In the evening some initial fulfilment of the lipi, “the seagod in the telepathies, trikaldrishti, tapassiddhi.”, chiefly in the telepathies.

Activity in the remainder of the samadhi, increasing with some difficulty and a tendency to constant intermissions, is not yet idealised or well-combined, but it tends in that direction.
May 5.

There is a considerable increase in frequency of the transcendent idea-tapas but the rest of T² has been acting through the intelligence this morning therefore uncertainly and without clear light. The chief advance has been in effectivity of vashita for particular effect, but the movement, though not without strength is only initial.

The main cause of the descent has been a general physical lassitude which has been indulged to a certain extent. Fatigue has begun now to be excluded from the mind, the psychic prana and the prana upholding the action of the body and confined to the body and the physical prana directly involved in the body. Action of the body can go on in spite of the fatigue in the muscles, but the general effect of the latter can still throw a general effect on the upholding prana, not precisely of fatigue, but of lassitude in the virya. The only imperative effect is the reaction of muscular strain.

Tivra has now established the rule of increase by excitation; but this modified by a continued habit of intermediate deadening or diminution of response. The rule—in continuous excitation—of response with interstices of deadening or diminution followed by renewed and in the end increased response is being supplanted by the habit of sustained response; but the substitution is not yet complete.

Prolongation of response after cessation of touch and repetition after cessation, the latter sometimes an often repeated and almost continuous repetition, is rapidly coming in; so also the habit of sympathetic response, after cessation.

Pervading vaidyuta has begun, but is not yet strong in its hold or intense. The intensity is however increasing.

Sahaituka tivra still generally demands nistapas smarana, passive attention; continuity usually requires satapas smarana. Ahaituka is trying to develop frequency of its nihsmarana action. With smarana it occurs spontaneously anywhere.

After strong obstruction in the daytime a great development in the night of swapna samadhi. The undeveloped movements develop...
fluidity and ease in coherency; especially reading firm, clear, legible, sufficiently stable, only once or twice incoherent, frequent, fluid. Only when presented in the mass and not in short sentences, was it still incoherent, illegible, quite unstable, but even here there was an attempt at improvement.

Dream is now normally consecutive and coherent, though not invariably. It still has, however, the nature of phantasy.

May 6th

Tapatya is being exiled steadily from the action of T². Tapatya is the straining to know and fulfil; it is not in itself desire, but the cause of desire in the prana and heart; desire being banished, tapatya has remained as an illegitimate prolongation and stress of what is received in the ideality, it is mental tapas, bringing false stress and falsification of values. Although not a cause of grief and disappointment like desire, it is a cause of false hope and false doubt and also of undue pravritti and undue nivritti of mental action and as a result of temperamental and physical action. It is being driven out by the establishment of the transcendent idea-will of which the universal tendencies and movements become the effective media and results. At first this tends to bring an excessive passivity of the instrumental Jiva, but this is a defect which is in the course of being remedied. Tapatya took up the communications of the idea will and personalised them into a mental effort, belief, hope in the instrumental Jiva. They have, where necessary, to be personalised but as part of the personality of the Ishwara creating in the Jiva ideal sraddha and pravritti.

The day has been one chiefly of obstruction, only minor progress made. Fluency with incoherence in the newly progressing parts of the samadhi. Tejomaya rupa is frequent in swapna samadhi, but it is instable or imperfectly stable, without hold on the chidakasha. Perfect rupa has once or twice manifested in antardarshi, usually it is only crude; but it is only momentary.

Ananda progresses distinctly only in the tivra; there is a general tendency to suppression.
May 7.

The defect that has to be got rid of throughout the ideality, is the descent of the vijnana into mind. This makes the intellect the receptive agency which creates a sort of receptive intellectual judgment, assent and denial, a cause of error and uncertainty. It prolongs the old defects, especially in T\(^2\), the defect of taking (1) inactual possibilities, (2) actual tendencies and possibilities as definite trikaldrishti. The first is not frequent and has no imperative power, the second is still the chief cause of positive error, although it is less powerfully insistent than it was formerly. The removal of this defect begins today. It is prolonged by the *rhathumia*, the leaving things to take care of themselves instead of insisting by the ideal tapas upon perfection. It gives an undue force to the etheric resistance in the physicality and prevents the full liberation of the ideality to act largely and perfectly. When it is absent, there is an anandanama certainty.

The script has laid down for May in the physical siddhi (May 5)

(1) primary utthapana, to be pressed steadily and laid down in the base;
(2) a distinct general advance in arogya;
(3) a struggle with old age and asaundary;
(4) a complete fivefold physical ananda.

All these necessarily to be only an initial movement.

For today the script runs

“The liberation of the ideality is to be completed today within certain limits. T\(^2\) will take a little more time; so will effectivity of tapas in rupasiddhi and vishaya.”

Nothing is said here about the samadhi.

The liberation of the ideality is being effected by two movements;

(1) elimination of the intellectual response, involving a physical movement by which the thought ceases to descend into the area of the mental brain-stuff in the sukshma body environing the brain in the physical body and acts from the junction of the sukshma mind and the vijnana above the head, upon and above the sahasradala;
substitution of the inspirational for the intuitional stuff in the ideality.

This has been done already in speech thought and ideation; it is still to be done in T², though there too it is done within certain limits. Rupasiddhi has begun today with a more ideal tapas, but as yet no definitive progress has been made in the forms. Rupasiddhi also has eight qualities to be perfected,—spontaneity, stability, vividness, rapidity, fluidity, completeness, variety, coherence, and a ninth, truth (ie, point, right relation, utility) corresponding to the “light” and “justice” in the lipi qualities.

Vishaya shows no tendency to develop beyond its persistent limitations.

There is no longer any difficulty about maintaining the ideal liberty in the speech thought, it is normal; there is still difficulty in the ideation, it is only becoming normal.

Lipi is perfect in sadhara and niradhara, normally; it is still difficult to maintain perfection or even to enforce it in the chitra lipi and sthapata lipi. The absolute perfection comes most easily in the niradhara; but in none is there entire freedom from the resistance of the physical ether to the perfect manifestation. Some force of tapas is always required; left to itself the ether yields always ideal lipi, but in an imperfect form.

For the second week of May the script runs.

“The second week of May is more important than the first. What was begun in the first, will be made effective in the second, that is, free ideality, abundance and accuracy of T², evolution of physical ananda, idealisation of the samadhi. In addition rupasiddhi and vishaya will break the long obstruction which has prevented their evolution. Other results will outline themselves during the week.”

Physical ananda is once more active; the kama is overcoming the obstruction and it is developing a new movement which shows that even in the physical movements there is such a thing as the ideal and the mental action. That is to say, the ananda hitherto manifested even if in its origin supramental, was supported by the
intelligent mind or at the best by the intuitive mind, while what is
now manifesting is ideal delight in the body. That was mixed in its
character, modified by the lower physical reaction, this is pure and
sovereign and has taken up the physical reaction into the ideality; it
is self-existent even when sahaituka. The sparsha only awakens, it
does not produce it. A similar distinction is prefigured in the arogya
but is not as yet practically defined.

May 8

The first week of May has fulfilled the outline of progress laid
down for it, a preparation within certain limits. It has effected a
great liberation in speech thought, ideation and lipi and not only
outlined, but laid down here the clear and strong ideal ritam in the
satyam brihat, fixing it for the present mainly in the inspirational
form or at the lowest in an intuitional form truly ideal and not
intellectualised. Sometimes the old intellectualised form still recurs,
but this is an exception without power or sanction in the nature. In
T2 it has done no more than prepare, but it has got [rid]2 of desire
in the tapas and diminished the force of tapatya: it has put the
telepathies in their right place and tried to make the field clear for
the real trikaldrishti; it has also laid down the right relation between
the transcendent and the universal in this action of the ideality. But
as yet the nature has not perfectly accommodated itself to the ideal
law. The physicality persists in besieging the system with the old
imperfect action. Lipi is fixed in the ideality, but has only established
the formal perfection in the type frequently occurring, it has not
as yet successfully universalised it, though for a time it seemed
on the point of an almost complete success. The totality of the
physical delight has been prepared, but not accomplished, except
to a certain extent in the tivra. The samadhi has made great progress
in the lipi, ideation and speech thought, which are all idealised and
the [ ]3 first two well established in all depths of the samadhi,
except for occasional touches of nidra bringing interruption and
breaking of the thread; lipi occurs in all [four states], but not freely

---

2 MS ride
3 MS two
and firmly except in the antardarshi. Other elements now occur freely in swapna and have an initial ideality, but are not yet firm in it; rupa is less forward, but it has achieved frequency of tejomaya and an occasional initial stability in it. Formerly the stability and continuity was only in chhayamaya.

T² today has almost got rid of tapatya, but still has tapata, an uninsistent intellectual stress. When the decisive sight comes, it is exact so far as it goes, but does not come freely, nor is it either luminous or forcible.

Kamananda is redeveloping against a strong, but still weakened physical obstruction (from the environmental ether, not in the body), but it is still subject to the old difficulties, limitations and disabilities. It has not yet any force of pervasion or the massed intensity and enthusiasm of former accesses of kamananda.

This has come subsequently, a pronounced and pervasive ananda. At first proceeding from the centre to pervade the lower parts of the body and occupying, from thence rising to pervade the upper parts to the brain. It was only by application of tapas that the contrary movement was induced; but it is a noteworthy instance of the tendency of the physicality to make laws of imperfections which are in their origin only temporary movements and stages in the complete evolution, that the normalising of this latter movement and the full occupation by it is still resisted and is not so complete as that of the former. This kamananda is long continuous, but not entirely continuous; it has however already the habit of constant return. It can be continued into samadhi, but there tends to drop away.

In samadhi of all depths an abundant play of lipi is now established. It is ideal, almost but not entirely free, but not yet perfect in the eightfold quality. Reading is acquiring force, the other movements are less apt to come freely.
Insistence on vishaya has only brought isolated internal sparsha in antardarshi and isolated combined drishti, sparsha and sravana in swapna samadhi. Insistence on rupa has only brought perfection of form in the type rupas. But the insistence has been only occasional.

In samadhi great wealth of reading, but with the established tendency to coherence a great bringing forward of the old tendency to incoherence. Rupa in swapna develops, but still not beyond the line already attained.

May 9.

Some difficulty is found in preventing even vangmaya thought from descending into the [intellectuality]. Still the pure inspirational is rapidly developing freedom and normality and the frequent descent tends to stop at intuitive ideality, without now the descent into the intellect and even this is now a secondary and no longer a chief movement.

It is noticeable that even what might be called the subconscious telepathy,—for that is what it was once, and it is still really that emerging to the surface of the sense mind,—is beginning to become idealised. This is a great step in advance and a promise of the total idealisation of the mind-stuff.

The inspirational ideality prevails more and more and has developed rapidly a higher revelatory substance, but the divergence has brought an unease and want of ananda into the mental system. This has been used as a discouragement to the intellectual thought when it comes because it creates a positive physical unease, but this use is contrary to the ideal method all whose means must be anandamaya. The ideality does not need the reactions of the old mental method to assist its progress; it can go on more rapidly and satisfactorily without them by its perception of truth and its own force to fulfil it.

The inspirational vangmaya now descends more freely into the physical region of the intellect without descending psychologically,
—that is to say, it is not intellectualised or turned into intuitional thought, it remains the inspirational ideality. The ideation tries to follow the movements of the speech thought; but it is more backward and owing to its past habit of conversion into intellectual thought unable to effect the same progress as successfully.

It is noticeable that the difficulty is greater in samadhi than in the outward jagrat, which is also a reversion to a former state of things. Samadhi is now divided into two parts, the lighter forms in which the purusha is wakeful and ideality reigns, the deeper in which nidra reigns and the action is intellectual with much of the old incoherence. But now in this nidra the purusha is wakeful though in a swapnamaya fashion and the intellectuality is nearer to ideality and is sometimes idealised. It is on the point of conversion to the ideality. In this nidra kavya has suddenly made itself frequent.

Sparsha is increasing in swapna and even trying to enter into antardarshi

The ideation and speech thought have now effected the requisite conversion and the force of the ideality in them can be trusted to complete it and remove or transform the unconverted elements or tendencies that still remain. T² is now turning to make the same conversion and has begun it, but here the intellectual confusion and chaos of mental telepathies has been so great, though now partly cleared, that time is required to make the conversion equally effective.

The true revelatory thought has begun to manifest in the lipi, but with an absorbing inspirational form of itself or with a strong and too heavy intuitional tendency. The highest and subtlest form of it is not yet manifest

This revelatory thought has at once extended itself to the speech thought both in the jagrat and the antardarshi and swapna samadhis, and to a less extent to the ideation. Nowhere does it occupy the field, but it is already dominant everywhere.

Lipi now well established in antardarshi and swapna, even the deepest, is now insisting against great opposition on (1) perfectly free manifestation with no obstruction from the lethargy of the
ether, (2) perfect manifestation in possession of all its eight qualities. It has already some initial success.

Reading in the swapna is becoming rapidly coherent, except when it presents itself in masses; it is then illegible and the attempt to read brings in incoherence.

May 10.

Script today fixes a large programme.

(1) The decisive conversion of $T^2$ fixed in all its parts
(2) Vishaya and rupa farther insisted on.
(3) Samadhi developing the undeveloped parts in a mass.
(4) Kamananda settled
(5) Ideality progressing in the revelatory thought.

$T^2$ at present has to deal with the following component situation.

1. The largest element to be dealt with is the old telepathic intellectual perceptions. These now are unable to insist on themselves and are no longer false trikaldrishtis, but perceptions of thought, tendency, intention, impulse, either belonging to the object or working on it from the environmental physical Virat or from the pranic and mental planes. Yesterday the inspirational thought was busy observing them and giving them their right place and scope. They have to be replaced by the intuitional telepathies.

2. The next largest element is the intuitional perceptions which are really telepathic, but which the intellect tried to represent by over-stress as definite trikaldrishti of future action. These are now putting on their ritam and have begun to figure as accurate intuitions of present tendency etc. and immediate or closely subsequent future action. This telepathic trikaldrishti of the future, however, can only be definitive if approved by the higher revelatory or inspirational ideality. Moreover they are vague about time and not quite full in circumstance.

3. Blind or un-luminous inspirational thought of trikaldrishti-tapas, ie indicatory inspirations without farther discernment of detail or aspect, limit or scope, and without light of the revelation. To be entirely replaced by luminous revelatory trikaldrishti; this is the main conversion.
4 Luminous inspirational perception of trikaldrishti-tapas. These have been few and disputed by mental perceptions which imitate them, seem to give an ideal sanction, but are really only the ideality’s sanction to the telepathic tapas, that is to attempts, partial results, side results etc. This is the element that has to be converted into decisive revelation and to dominate.

Sors

इद्दिपद्राय वृहते पवमकु सुमुखीको अन्वयान रिजादा।
भर संध्माणि गृणते वर्जिन —

dhru is the Ananda, both ideal and physical—dhru वृहत the large ideality

The kamananda is now, for the time being at least, so fixed that it is present whenever the attention or any part of it is turned to the body. There have been three recurring stages always of this Ananda, (1) prevalent obstruction refusing the Ananda even to the tapas, except occasionally, (2) the obstruction broken down by satapas smarana, Ananda recurring but intermittent though with periods of continuity, (3) constant Ananda dependent on nistapas smarana, but varying in intensity, sometimes full, sometimes only an impression, not definite Ananda. What has to be developed is nihşmarana Ananda, that is enforcing itself on the sense in the body even without smarana. This is now acting in the sahaituka.

The sahaituka creates a stronger deposit of ahaituka; but this tends to diminish and fade away. When this tendency ceases, the Ananda will be perfectly founded.

The strong intense sahaituka still leaves a doubt whether the body is capable of bearing and therefore holding its indefinite prolongation and increase. This dharana-samarthya also must be determined in order to ensure permanence. When it is fixed, Ananda will help to enforce perfect arogya on the body.

The transformation of all telepathy into intuitional ideality is proceeding rapidly. When it is completed, thought will be entirely idealised, an ideal mentality will replace the average imperfect mentality. But this intuition has now (1) an inspirational and a revelatory element within its limits, (2) a strong intellectual element
and atmosphere. The latter has to be entirely eliminated, the former strengthened and made dominant.

The vaguer parts of roga, not those that still have a strong and definite hold on the body, are being brought forward, evidently for the ideal tapas to begin to deal with them. If this is done, the arogya as well as the Ananda will be brought within the field of the new ideal activity.

The elimination of the intellectual atmosphere of the telepathy has begun. It will take time, but the difficulty is not so great as at first appears or as past experience would lead one to think, for the mentality now pervading the body is intuitive and not intellectual-vital; the intellectual element and atmosphere are brought in from outside, from the environmental mind.

The concession given to the intellectuality, led to a renewed intellectual interruption, but this has been very rapidly remedied, and it has served its turn in establishing a real will in the intellectual devatas in the environmental mind to seek for their own idealisation instead of resisting the idealisation of the adhar.

Both smarana of kamananda and ni[h]smarana ahaituka and sahaituka are becoming easy and frequent in samadhi. Even some initial continuity has shown itself.

The Ananda has now only to overcome the tendencies of discontinuation to be fixed.

In Samadhi there was a massed development, in strong and firm type, of ideality in kavya, dialogue, narrative, reading etc; a first movement turning these from ideal phantasy into truth of a definite aim and utility in the purpose of the divine Yoga, at least in one first instance of combined reading and lipi (Indian News . . nerv. [. . . ]); also a first instance of strong, though partial legibility in persistent mass lipi, with however the defect that its persistence did not amount to legible stability. Kavya developed remarkably, eg “What swoon has brought The key of many immortalities?” But the farther progress was hampered by the after effects of the intellectual reaction, as the thought-action in the intellect hampered the revelatory thought from acting.
The physical anandas no longer as a principle of action replace, prevent or interfere with each other, but all seem to help the kamananda. The kamananda suffers not only from the old defects of diminution and discontinuity, but from its other old defect of insufficiency in ambulando. There seems however to be on the whole a much greater force of continuity than on former occasions. The intensity of the morning’s sahaituka has not been repeated. There is strong reaction of negative vaidyuta on the sukshma body affecting the sthula. Recurrent Ananda is now fixed in the system.

The inspirational ideality has now sunk to the secondary place,—a degradation of the revelatory in the intellectual region. Thus another part of the script programme has already been fulfilled.

In T² the telepathy has become inspirational idealistic in the intuitive mind; there is also a secondary trikaldrishti which reposes upon it and is therefore telepathic in its nature; the intellectual element occurs rarely and is rejected and dismissed. Part only of the script programme has been fulfilled under this head and that too not completely; still it is a decisive conversion and therefore so far the fulfilment is, verbally, complete. In addition a pure inspirational trikaldrishti, not telepathic, has begun to operate again. But these inspirations are only just enough illumined for their restricted work. They have a narrow discrimination, no revelation. They give only the particular result sometimes with a time element, but no accessories or attendant circumstances except when another inspirational or intuitional indication is added to eke out the first main indication. There is satyam and ritam of a sparse and narrow character, no brihat.

Tapatya is being destroyed along with the intellectual element; but there is tapata. All trikaldrishti now contains its own effective tapas, and separate tapas apart from trikaldrishti is rarely employed. It is being eliminated, except to some extent in the action of will on the body. Tapas comes in the trikaldrishti only as if a sort of subordinate accessory, although really in the ideality both are necessary to each other and essentially inherent in each other. But the subordination is kept up in order to get rid of tapata. Once that
is removed, the way will be open for an equal unified idea-tapas in
the T².

Revelation with a stronger discriminatory power is now entering
into the pure trikaldrishti, but it acts oftenest by a descent into
the intuitive mind. Time, place, circumstance, though now often
correct, are still pursued by intellectual error and uncertainty.

In the evening and night strong intellectual obstruction which
for the most part prevented any definitive progress. Still there was
a notable advance in the development of revelatory thought.

Vishaya [ ] ⁵ has only gained so far by insistence (1) a daily
but isolated occurrence in swapna, (2) intensity of subtle sparsha
in jagrat, antardarshi and bahirdarshi, (3) greater intensity of the
type sparshas already in force.

Rupa is still limited to tendency in the jagrat, to occasional
frequency of established movements in swapna.

Great intensity of audition and mental vision of the person-
alties (devatas) that stand behind the action of the intuitive and
intellectual mind and temperament in the sadhana. The truth of the
developments thus seen is established by the subsequent result in
the changes of the mentality.

Script.
“What will outline itself, will be
1. An advance in the arogya, a decisive advance
2. An advance in primary utthapana
3. An advance in saundarya.
Also the T² acting in life.”

May 11.

Script programme
“Conversion of the thought-speech to the revelatory is already
complete. Ideation is to be converted today; for that has only be-
gun. T² has to be converted from the inspirational-intuitive to the
revelatory inspirational

⁵ MS by insistence
“Kamananda to overcome several of its difficulties and to be sure of fixity.

“Vishaya and rupa farther to insist and develop.

“Samadhi to develop the idealities gained and to insist specially on rupa.”

The thought speech is now revelatory in all its forms. Even when the inspirational and intuitive occur, they are revelatory in their substance. Lipi also is always revelatory in the same way. It is, it says, to develop T² and be the diary (journalier) of the trikaldrishti, telepathies, tapassiddhi.

Ideation is still afflicted ordinarily by the necessity of expressing itself, though ideal in substance, in the intuitive mind. Until this difficulty is overcome, its full conversion cannot take place.

Kamananda was oppressed in the latter part of the day yesterday; it is now recurrent rather than continuous.

Intense continuous kamananda; action of the nihsmarana sahaituka and in a less degree of the nihsmarana ahaituka. The Ananda has now only to strive with the forgetfulness in the body which tends to be quite effective only when supported by exclusive absorption in the mind. The Ananda in ambulando is maintained by nistapas smarana and in ahaituka partly by nihsmarana sahaituka, the latter sometimes of a fair intensity. Pervasiveness and an increase of force not yet amounting ordinarily to intensity were brought in successfully, even the fourfold wave movement.

Kamananda has attained power of continuity and easy maintenance by smarana in lighter swapna.

In Samadhi strong action of lipi even in the depths and frequent and strong sparsha. Play of rupa; instance of perfect rupa, but unstable.

The barrier has not yet been broken down in jagrat rupa. One definite development is the progressive elimination, by force of rejection, of what was once most common, rupa formed painfully out of chaotic material in the akasha. Spontaneity is now the rule; vividness has also begun to predominate; but stability is only initial, except in certain crude forms and even there it is very little more.
Only some incomplete forms have more stability. Completeness however is not yet perfectly established, though it is common; incomplete forms are frequent. Rapidity and fluidity increase, but are not perfect. Variety is growing strong in the type rupas, but other rupas for the most part come imperfectly and without any developed variety. Group coherence is very occasional. The two main things the will insists on, stability and variety in vivid completeness of the spontaneous developed or perfect figure only come,—if at all the first,—in the type forms. The main barrier remains erect.

In the afternoon much trouble of intellectual suggestion and obstruction, so that no new development came in the subsequent samadhi, except intensity and extension of lipi, speech-thought and ideation. Some mass lipi and reading, but no advance in coherent legibility. The rest was obstructed and occurred, if at all, feebly, and not often in the ideality.

The development of ideation was also much baffled and the two lines on which it proceeded rendered for a time doubtful and ineffective by intermixture or intervention of intellectuality. Now, however, the effect has become pronounced; 1st, conversion of intuition to the revelatory ideation, but with an intuitive burden and a tendency to drop towards mental intuition, 2nd revelatory inspiration, as demanded in the script programme for T², with a leaning also, very often, to excess of intuition; 3rd, though rare, revelatory ideation proper, a little broad and blurred in its light. By the development and liberation from defect of this process will come the complete conversion both of the ideation and of T².

Kamananda seems to be strong and fixed in a constant or frequent recurrence; it remains to be seen whether the old obstruction will again prevail to impose a long discontinuity or only the present tendency of brief discontinuity by vismriti will limit this siddhi.

Chitra rupa and sthapatyā rupa are very strong, stronger even than at any previous time, although they have been well founded for several years. Rupa shows a tendency to variety, especially in the crude; but this cannot be entirely relied on as there has again and again been the same tendency, never leading to permanent siddhi;
it has always been undone, built itself up again, but each time with a diminution rather than a progress. The element of spontaneity however gives this time a greater chance of a final true initiation of progress.

Kamananda, though as usual less in the decline of the day, preserved its power of recurrence until sleep.

No definite progress in vishaya. There is some tendency of expansion of shabda in the sukshma voice.

Primary utthapana fluctuates from return of a certain strong exhaustion in the upholding prana, not the vital, but the physical, and an expulsion of the fatigue tendency, which then clings only by the habit of muscular strain exhausting temporarily the body’s force for motion, but not the upholding prana. For some days the exhaustion has held sway, tonight the elimination was again resumed.

May 12.

Script gives, (1) T^2, to be pushed forward, — (2) conversion of ideation, to be enlarged and universalised, (3) kamananda, progress decisive, — (4) rupa, progress decisive, — (5) vishaya, insistence, — (6) action of ideality on health and primary utthapana. Add rapid development in things established, li, vangmaya, etc.

T^2 is now proceeding automatically in the idealisation of the telepathies which are to be converted from the mental to the intuitive ideal. It is dealing with all telepathies and fixing them decisively in their proper place.

Vangmaya is now to be noted in two movements, effulgent and refulgent; (1) effulgent, the pure vangmaya, vak leaping forth from the ideality with the ideation contained in it, (2) expressive of or responding to a previous ideation or else proceeding from a silent indefinite ideation to which it gives form and expression. The former tends to be always revelatory thought and to reject the inferior inspirational and intuitional forms; the latter is ordinar[y] revelatory in the intuitional form or merely intuitional and can even
sink to mental intuitive speech. Ideality is working upon this latter action to assimilate it to the effulgent revelatory speech.

Ideation is now usually full of revelatory substance and sometimes of revelatory light, but is obstructed in its form of manifestation by the old tendency to expression in the mentality. This is being indulged in order that the resisting intellect may be forced to change entirely into ideal substance of thought. It is the unconverted $T^2$ which is the main support of this obstruction.

The physical obstruction, taking advantage of suspension during the night, has tried to get rid of the kamananda, to disprove fixity. But the powers of fixity and pervasion have prevailed. They are now natural to the body, can do without tapas and, even when suppressed by the suspension, need only smarana to set them in action. To get rid of suspension by vismriti is now the task that lies before the Ananda. It is now no longer dependent on position, but self-acting in all positions, even in ambulando, where indeed it has a great power of spontaneity and pervasion. Nihsmarana ananda has also become self-acting.

Rupa develops variety in the quite crude forms, but the old defect of chaotic non-spontaneous formation with defect of rupa qualities is again strong in them, as in instability and want of variety in the spontaneous forms. These are the two rocks upon which the progress has always fatally stumbled, come to a halt and gone back.

Accuracy of intuitive telepathic trikaldrishti is now very strong and embraces detail, though here it is not always quite perfect in its choice. Confusion of stupefied intellect in the physical brain atmosphere is the one successful obstruction now remaining. When this occurs, the ideality has to break its way through to manifest.

In samadhi rupa shows a tendency to manifest in antardarshi, some of the forms with an initial, others with a greater stability, but all crude. Developed rupa in swapna once with a strong stability; chayamaya with a long continuance of chitras or action. The rest—reading sometimes very vivid and initially stable—ordinarily idealised, but their free action is not yet fixed in the samadhi.
Conversion of ideation into the revelatory-inspirational thought is now enlarging itself very rapidly and being applied to $T^2$. Decisive trikādrishti is frequent, but it is usually telepathic or leans on the telepathic. The greater trikādrishti awaits the development of the secondary ideality of which there are some precursor signs and instances. $T^2$ applied to internal movements is advanced, $T^2$ applied to objects in the field of exercise copious but weak, $T^2$ applied to life hardly yet in action, except for scattered instances.

Rupa developed some variety of fugitive perfect rupas in the evening; they do not emerge perfectly from the chidakasha.

The conversion of ideation has been founded, enlarged and developed a strong tendency of universalisation; $T^2$ has advanced, but is still obstructed. Kamananda has fixed recurrence and an initial power of nihsmarana. Rupa has a certain fixity of its will to progress. Vishaya made no progress. Ideality is acting on arogya and primary utthapana, but without any definite progress.

May 13.

$T^2$ is to be rapidly developed today; ideality to continue to universalise its action in the thought and its conversion of thought-speech to the revelatory form and substance; kamananda to develop sasmarana continuity and nihsmarana force, rupa and samadhi to compel their obstacles. Physical siddhi has to generalise its initial progress in its other members.

$T^2$ is busy with the telepathies. It is distinguishing two fields of telepathic knowledge. By identification (sanyama) with the physical plane of being, it feels accurately the tendencies etc that materialise in the object and determine its action; it can even see provisionally the presently future action to a certain extent, provided it does not miss the possibilities that are not yet in action, but may or will be in action. It can see which will prevail, provided no higher idea or will intervenes. Secondly, there are the forces of the lower mental and pranic planes. These it sees before they at all touch the physical; that they are true, it can see by feeling their reality and also because they translate themselves subsequently into...
intention, tendency, action, impulse, impression etc in the object observed. It is here that the danger of perversion by false stress is strongest, though it occurs everywhere, because the pranic especially have a vehement urge towards selffulfilment, the mental a strong intention to fulfil and belief in their success, and they convey this to the observing mind. But only a few can really act upon the object effectively and fulfil their aim. Their action is irregular; they often produce a subsequent partial effect or modify the immediate or subsequent action without fulfilling themselves as they had wished, or they fulfil themselves at other times, in another place, under other circumstances, even in other objects. Often the object first influenced escapes, but another which has come into the field of the influence is entirely affected; it is as if the powers acting in him took up and carried out the suggestion which the powers acting in the first had rejected. The powers of the higher mental and pranic planes fulfil themselves much more frequently, powerfully and they have more of the truth in them. But in all this there is no absolute certainty of future trikālārdriṣṭi, though prevision after prevision may be fulfilled with unvarying accuracy for a long time; still it is only even then a prevailing certainty, a mental and moral, not an absolute and ideal certainty. Moreover in all this there is a will attending the idea and the will in the observer may help or retard, make possible or prevent the fulfilment; because the powers hostile to a result take note and resist more strongly and if they are stronger, prevail, the powers favourable to it take advantage, strengthen themselves and if the observer's will is strong, they prevail. All this is now felt, seen, participated in by the intuitive-inspirational or less easily by the revelatory-inspirational perception in the being. The element of revelation however is now increasingly present in the first or else attends it in the accompanying ideation.

The perception of all these things is becoming steadily more intense and satisfying, it is increasing in the quality of the satyam brihat and in the ritam of the satyam brihat. The pressure from above is for what is subconscious to be mentally or ideally.

6 MS frequently,
seen and felt, and for the mental perception to be transformed into the ideal or to be accompanied or enlightened by the ideal thought.

Kamananda is [increasing] rapidly in sasmarana continuity, but it still tends sometimes and the Ananda tends always to diminution of intensity by vismriti. The opposite tendency of increase by continuity is not yet strong enough to get permanently the upper hand. There is also the habit of discontinuity which though no longer proper to the physical body is imposed on it by the mind of the Akasha of the surrounding [physicality] and accepted through force of past habit. The old sanskara of the body that the Ananda must be discontinued to give it relief, exists also in that mind and has its effect in bringing about discontinuity. The latter can be more easily eliminated than the general habit of discontinuance, which cannot be finally expelled except by the growth of the nihsmarana action.

In Samadhi rupa played freely in swapna, occurring automatically with spontaneous fluidity, rapidity, vividness, usually with completeness and with much variety every time, the moment the verge of swapna was crossed; but it is still unstable. This play carried itself also into the antardarshi, but there with a certain inability to impress itself on the chittakasha; the rupas however were in their nature of the developed kind. There is still a recurring obstruction to the free play of all the members of the samadhi; the etheric akasha holds them back, is forced, again withholds and has again to be forced. Nevertheless reading manifested and narrative by succession of images.

Sasmarana continuity seems now to be sufficiently established, but nihsmarana is still too easily suppressed. The stress has now to be more upon the overcoming of vismriti and its effects.

Script. “In kamananda the vismriti to be conquered in these three days, not indeed entirely, but fundamentally.... Rupa and

---

7 MS increasingly
8 MS physically

www.holybooks.com
samadhi will still take some time. The ideality to move strongly forward in thought and $T^2.$"

The vismriti seems already to have been conquered in its effects and it is being now initially conquered in itself, that is, its force is being diminished and at times the Ananda persists against it enforcing itself and drawing back the mind to it instead of waiting for the mind to return from its preoccupation and then either reforming or renewing itself. Even when it waits, it does not now need to reform or renew, but is there all along and is simply felt again by the sense, like the water in which a swimmer is moving.

The movement in ideality and $T^2$ is preparing to set aside its remaining deficiencies.

May 14
Script.
(1) Kamananda, initial conquest of vismriti.
(2) $T^2$, emergence of pure trikaldrishti, enlarging of the tapas element
(3) Ideality; revelatory thought in the speech; farther conversion in the ideation.
(4) Rupa and samadhi proceed with their development.
(5) Vishaya to be strongly insisted on so as to break the barrier.

The initial conquest of vismriti is growing rapidly and irresistibly in strength. The obstruction is now falling back on the fear of the kamananda in the external physicality, its sense that the body will not be able to bear continuous or at least continuously intense kamananda. The only present justification is that the body does not feel quite at home with the grosser, too physical-vital, unidealised form which the ananda still tends too largely to take.

Rupa has now broken down two barriers, (1) the inability to proceed with its self-development which arose from a wrong attitude towards the processes actually employed and a haste to get done with imperfect movements; (2) denial of stability in perfection to all but very crude forms.
The development is proceeding steadily against every difficulty; all the old difficulties, presenting themselves as strongly as they can, are being overborne. Secondary initial stability as well as primary has been established in perfect, developed, dense and crude forms alike, but only in the type. Primary initial stability is when the object stands long enough for the eye as well as the mind to get a strong view and impression of it; it is momentary, of one moment. Secondary is when the object stands longer than is needed for this, lingers a moment or two and vanishes; it is a stability of two or three moments. Tertiary is when it stands for several moments. Final stability comes when the object stays as long as the will holds it.

The defect of the siddhi, the third barrier still unbroken is its lack of variety. Other forms come, but either they have not even the primary initial stability or, having it, yet they do not come so easily as the type, are not so complete or are in other ways deficient; and in the crude they tend always to be anticipated or replaced by the type. When this barrier breaks down, rupa in the jagrat will be able to develop rapidly its completeness, freedom and perfection.

Revelatory thought on the right level and in the inevitable style pure or the inevitable forms of the inspired, illuminative, effective and adequate styles is now well fixed, natural and normal, practically universalised in the original vangmaya. In the derivative it is beginning to triumph finally over the mental gravitation.

Vishaya is now reviving in gandha and taste. The position of vishaya is complex and unequal. In gandha it has already been well developed, but it is subject to exceedingly long periods of obstruction and cessation and has then to be redeveloped by tapas. If this habit is overcome and sthula and sukshma gandhas well distinguished, there will be perfect siddhi. Crude primary tastes are similarly established, but here tapas is more easily effective and the distinction is clear; specific tastes occur, but not freely nor in great abundance; of substantial taste there is only an imperfect first movement. Sparsha is violently limited to a few habitual touches which are however well-developed, intensely sthula in their effect, capable of stability; very sukshma effect is more though not quite free, for its variety is limited. Shabda is still more baffled, even

www.holybooks.com
where established rare and obstructed and most confused of all by the sthula sounds of the material world. Darshana is only of the pranic akasha and two or three of its objects, and that too imperfectly developed.

Another attack from the external physical mind, but this was unable to take the old form of a lethargy of the tapas, relapse into inactive shama and prolonged cessation of the siddhi. It shaped into an upheaval of the lower ideal-intellectual confused-tapasic activity and an attempt to annul temporarily part of the gains of the ideality by a backsliding downwards of the active being. In kamananda it was unable to annul the conquest of the effects of vismriti, but succeeded in giving a fresh lease to the vismriti in itself, which was on the point of disappearing. The difficulties in the ideal conversion, which were disappearing, were also temporarily renewed. On the other hand the ideation gained and especially the perception of the causes, objects and utilities of the opposition movements were immediately seen; there was no disturbance of the samata, except for one or two flying touches.

Samadhi limited by the attack. But sthula shabda conversation in the swapna reached a rapid frequency not before realised, ordinarily the dialogue is in sukshma shabda of the nature of thought overheard, though really it is speech. This was speech overheard, but in single sentences or single question and response, not connected dialogue.

Ideation has now effected initially its final conversion in the primary ideality. First, the revelatory intuition has begun to fall away and is now only an occasional and attendant lower activity (tertiary) which is on the way to disappearance; then the intuitive-inspirational transformed rapidly into the revelatory-inspirational has given its pride of place to the true revelatory which is taking up all the other forms of ideation.

At the same time trikaldrishti first become liberally positive and decisive in the general ideation is now acting with regard to the movements of the objects of vision, not as yet with a perfect arrangement of ritam, but still with a fairly sufficient decisiveness.
In the development of these two movements lies all the future perfection of the primary ideality.

Rupa is attempting to develop variety and partially succeeding, but it is a variety of imperfect forms. Spontaneous manifestation out of the chidakash is beginning entirely to replace development by mental-physical pressure in the subtle physical ether. In this development lies the surety of a perfect siddhi.

May 15

The programme for the second week of May has been fulfilled in all its parts; but in the vishaya it is only a beginning.

Lipi is fixed in the ideality and always capable of perfect manifestation with the eightfold quality; but the resistance of the physical ether remains and force has to be used on it. As this has been little done recently, the resistance has increased, but it only exists initially and can be broken down very rapidly.

Ideality has become free and normal in the ideation; the revelatory is the normal type, though the inspirational and intuitional with the revelatory substance are also still in action. The form of the revelatory ideation is not yet perfect. Speech thought is fixed in the revelatory ideality, but not always in its highest form.

T^2 has evolved ideal telepathy and is evolving ideal trikaldrishti and the beginnings of ideal tapas, all in the revelatory form, though the other forms recur.

Rupa is attempting to establish variety in the initial stability; the obstacle to this variety is the last of the old barriers.

Vishaya is now initially active in all its parts but is still kept within its old limits.

Kamananda is fixed in recurrence, but its continuity is still broken in upon by vismriti aided by the demand for discontinuity as a relief to the physical system. The former difficulty is being attacked; the latter is being observed with a view to attack. Other anandas, prepared in various degrees, await the kamananda.

Today is to be the turning point for a new movement, (1) developing what is yet imperfectly developed, (2) preparing the physical
siddhi in its three other members, (3) developing new powers of the being.

Lipi is now laying stress on perfect spontaneity free from the ideal suggestions and a perfect rapid stability. It has founded both of them, the stability being no longer always of the initial order, but also very often a prolonged stability. To this new development only fluidity is lacking. Its complete siddhi will be the final overcoming of the etheric resistance. It is being extended also to the antardarshi

Samadhi is developing rupa more freely and labouring at mass reading, not yet with success, but still with an increasing approach to success.

The sasmarana Ananda is prosecuting successfully its initial struggle with the psycho-physical demand for discontinuity.

Lipi
1. The psychophysical resistance to the delight will be got rid of thoroughly in two days, initially.
2. Lipi will be thoroughly perfected in July.
3. (A long lipi, declaring that the superior ideality will be now manifested in the present limitations of the inferior ideality and they will develop together.)

Traigunyasiddhi. The intense Ananda of shama of the Mahasaraswati with the Maheswari basis and Mahaluxmi colour is now uniting itself with the strong tapas of the Mahakali bhava. A mediate equation has been arrived at, but the full Ananda of the ideal tapas is necessary before the final unification can be secure. It is notable that the Asamata now hardly even ventures to return except in touches of physical uneasiness, caused usually either by physical discomfort, eg, heat, lethargic pressure of tamas on the brain etc, or by psycho-physical discomfort of the attempt of intellect to mix still with the ideality or to accompany it. The latter is rapidly diminishing and is at best occasional.

Sraddha in Bhagavan and in the higher shakti which he uses as one’s own universal shakti, is growing to completeness. The lower shakti not yet unified with the higher, is occasionally shaken
by doubt or coloured by it; but this is more doubt of the rapid effectuality than of the final effectuality. Something of the latter still exists in the shape of uncertainty, with regard to physical siddhi and life, but it is no longer positive asraddha.

In samadhi, even in antardarshi, rupa is becoming more free and spontaneous, but not with sufficient power to hold the akasha so that there is still only an initial stability.

Script, for the week

“Ideation to be fixed in the revelatory thought, the rest being taken up into it.

“T² to develop trikaldrishti powerfully and begin to strengthen powerfully the ideal tapas.

“Rupa to develop variety.

“Vishaya to press down the barrier.

“Kamananda to vindicate itself against vismriti and discontinuity

“Samadhi to begin to regularise itself.

“The struggle of the ideality with the roga to show its first decisive results of the novel order.

“The same in the saundarya and primary utthapana to be prepared.”

Kamananda’s conquest of vismriti seems to be proceeding by three movements. First, recurrence is being replaced by continuous sasmarana so that when the mind is not absorbed, the Ananda is immediately felt as a thing not recurring, but always present, though for the time being forgotten. This movement has gone very far, though it is not yet absolute. It is the overcoming of natural vismriti. There still remains the artificial vismriti brought about by absorbed concentration of the mind on its thoughts. This is being removed, first, by the mind not being absorbed, by the ideal faculty of a multiple attention, the thought being pursued, yet the Ananda remembered, secondly, by the Ananda becoming so strong as to force itself upon the mind and prevent the total absorption. Both these movements are only as yet initial and have not yet proceeded very far.
The power of simultaneous attention is now rapidly developing; it is seen that the thought in the ideality can easily be conducted and even more successfully conducted, when the mind is not absorbed, and can ordinarily coexist with the sense of the Ananda, especially the ideation and speech thought (this most, because it is most assured,) but also the T². The gathering together of the mind stuff and the closing of it to other ideas and objects which is the nature of absorption, is no longer necessary for the full force of the thought to reign. The habit still continues, but it is diminishing and has received its death blow. On the other hand when the thought is occupied not only with itself, but with the object of sense or in some action, as in reading, writing, conversing, this gathering and closing is more ready to intervene. Here also, however, there is a strong beginning and already a rapid growth of the elimination.

Nihsmarana Ananda is also insisting on regularisation and normality, but chiefly in the sahaituka, because there it is more intense.

A flood of action of the intuitive and inspirational lipi, unstable for the most part or with only a primary or secondary stability, pursued by the suggestions, serving only to show the complete ideality of the lipi even at its lowest. Amidst this much revelatory lipi now taking its place as an inferior movement, and beyond lipi manifestation of the superior ideality which takes no account of the intellect, forestalls its action and eliminates its substances. The inferior ideality [is]⁹ that which takes up the whole intellectual action and transforms it into vijnana; it is limited by what the intuitive intellect might have done; the superior takes up the inferior and is not limited by the possibilities of the intuitive mind. The inferior ideality does in its own right what the intuitive mind does by derivation from the inferior ideality, but the inferior ideality itself is only a selection from the greater range of the superior.

The speech thought has idealised itself thoroughly in succession to the [lipi]¹⁰ and the ideation including T² is beginning the

⁹ MS which
¹⁰ MS ideality
same movement. In neither however is the superior ideality directly at work as in the lipi.

In the lipi the revelatory ideality is again asserting its predominance.

The superior ideality has manifested for a moment in the ideation. The complete idealisation of the thought is proceeding rapidly; but it has still to deal with the resistance with regard to exact and decisive $T^2$. For where the ideality does not yet act or acts only partially, the intellect has a natural tendency to attempt to fill the place.

Once again the ideal tapas has forced the fatigue out of the upholding prana. It now expresses itself in the physical body with a slight shadow thrown upon the prana.

May 17.

Kamananda subject to suppression more than for some time past. On the other hand it has withstood a severe test under which formerly it always failed. In addition it successfully maintained its strong and long continuity throughout samadhi, even in sushupti of the mind, the vijnana observing the physical being within the consciousness, not as a form without. Also in samadhi the double concentration was easily and successfully sustained.

Ideality has begun to take possession of the samadhi with a sort of crudely regularised action.

The idealisation of the mind action seemed to break down for a time by the withdrawal of the vijnana which left the mechanical remnants of the old intellectual action to work by a sort of unwilling pravritti. There is now nothing that demands this action; when it works, it is by a sort of mechanical continuance of a dead habit. The vijnana is now resuming its work.
Kamananda recovers, though not quite firmly, its sasmarana continuity.

Ideality extends in spite of the intellectual obstacle in T^2 with a more frequent decisiveness in the details of the telepathy. The ideal tapas begins to disengage itself more decisively from the old enveloping case of the mind-stuff. Lipi trikālārdrishti slightly strengthened.

Vishaya now acts intermittently in all its parts, but still slightly and without enlarging its action.

The action of the ideality continues in the primary utthapana holding at bay the attempt of fatigue to lay hold again of the upholding prana. The hold of reaction of pain and stiffness on the body continues, but is being diminished and prepared for dissolution.

Action of ideality on the fragments of roga. They try to recur, but cannot decisively materialise; some are unable to materialise at all.

May 18.
The recurrence of the intellectual action can in future be no more than a mechanical interlude. What has now to be dissolved is the mixed action of ideality embedded in or hung round with the old mind stuff, half ideality, half intuitive mentality. This inferior action has its stronghold in the T^2 and is dominant in tapas.

The stronger action of the superior ideality on a perfect inferior ideality is now the *mot d'ordre* of the siddhi. The superior ideality is very visibly busy perfect[ing] the inferior ideality so as to purify it from all immixture of the mental accompaniment.

Especially tapas is now getting rapidly idealised and the false mental stress is being at last really eliminated without the force of tapas being diminished. For the difficulty till now was that the force, the rudra shakti, of the tapas always brought with it excitement of mental wish, tapatyā or tapata, and overstress, while the elimination of these brought with it also an elimination of the rudra shakti. It is now becoming possible to combine forceful will, even rudra tapas, with truth of ideality.

Thought telepathy is beginning to develop. Formerly it was
only telepathy of the sensations, emotions, desires, impulses etc. Now these are to be combined with telepathic perception and communication of the thoughts.

A better distinction of primary and secondary utthapana has now to be made. Primary utthapana properly belongs to the vijnana, it is the full force of laghima, mahima, anima in the mind stuff and psychic prana so that the mind rejects all exhaustion, weariness, depression of force etc. When this extends to the prana upholding the body, that is primary utthapana in the physical being. Secondary utthapana is elimination of these reactions from the body so that the limbs and the whole body can take and maintain any position or begin and continue any movement for any length of time naturally and in its own right. Tertiary, is when gravitation is conquered.

Hitherto the distinction made was between movement ambulando and positions of the limbs and the body. These are now being unified in the primary siddhi. Fatigue in the positions is still powerful, but it is physical with a reaction on the upholding prana, brought about by violent pressure on the muscular system. This reaction must be eliminated.

The habit of reaction depends on the physical mind. This is shown by the fact that when the body is forgotten, the position is maintained with ease and on the attention coming back to the body it is found that perfect laghima reigns in it. But the attention then brings back the habit of reaction, the physical opposition seizing on the old long-established sanskara to renew its attack.

In the vertical triangular position of the arms there is now the pressure relieved by intervals of successful laghima.

The element of time abhyasa has to be eliminated. That is to say while formerly the idea was to maintain the position as long as possible and increase the length of time during which the siddhi maintained itself against fatigue, until by this abhyasa it became self-existent, the idea now must be to establish the already self-existent power of the ideality in the body, so that the time makes no difference. This was done originally in the first movement of utthapana in Alipur jail and sometimes subsequently in the lower
utthapana, but in the latter it could not be fixed, in the former it was fixed from the beginning, but towards the end a little impaired by contagion of asiddhi from the other positions.

Power of double attention, to thought and to Ananda, is now well-established. What has now to be got rid of, is the interference of the mind-stuff in condensation; this is being already done initially by the interposition making no essential difference, since even then the Ananda reaches the side of conscious attention, subordinate as yet, which is deputed to receive it. But this siddhi is as yet imperfect and initial.

The T² is now attempting to extend itself out of the experimental field into the life, in which as yet it was only exercising the old scattered, half-mental action and had secured striking but isolated success and a mass of imperfect results, but no general control. All this movement must develop before the perfection required can be considered accomplished.

Script
“Samadhi is to carry on the regularisation by the ideality and to enforce freedom and stability in rupa and the other imperfect members.

In jagrat rupa a stable variety.
In vishaya a breaking down of the barriers.
In T² life.
These are the backward members of the ideality.”

In samadhi all its members had play; all are fixed in the ideality or at lowest sink to the intuitive mentality; all have an initial stability. But reading is still fragmentary and some others occur without any large completeness or without any enlightening context.
In internal lipi occurrence of the superior ideality.
Samadhi has now two movements, samadhi proper when sitting, swapna when lying. The shakti is preparing to convert the latter into samadhi and sometimes succeeds, but on the plane of the intuitive mentality.
In the second and third items of the script, the physical obstruction has again massed itself powerful to reconstruct the barrier to the progress or fortify it where it was breaking down. In the latter attempt it has temporarily succeeded.

Kamananda is much hampered and though still recurrent afflicted by diminution and discontinuity. This defect is no longer due to vismriti or at least no longer has that [as] its base, but only a mechanical habit forced to recur by the massing of the obstruction in the external physicality.

The struggle continues in the primary utthapana and the arogya. The ideal shakti is more insistent at present in the former than in the latter where the roga successfully obstructs in its two chief strongholds, though in one there are slight signs of its approaching diminution.

In a continuity of five hours or so of walking, coming upon the constant abhyasa, more broken, of the past many days, fatigue in the upholding prana was shown to be now merely a shadow, fatigue in the body could only hold if there was relaxation of the utthapana shakti. Even then it was less fatigue than a pressure of the pain of stiffness in the muscles. In relaxation a sort of manomaya laghima without mahima upholds the body, and this force allows the reaction, although it is noticeable that the force of the reaction is diminishing. When the utthapana shakti of mahima-laghima takes possession,—and it now ordinarily holds the body,—all fatigue and reaction disappear and there is only the pain of stiffness which sometimes decreases and is suppressed, sometimes increases, but does not affect the unrelaxed body.

Uttapana of position is still too much afflicted by the pressure on the deficient anima, still too little supported by mahima in the laghima to be prolonged.

In Samadhi a great and solid advance. Dream reading (narrative and monologue) became perfect, except that it has to be hastily read, the lines disappearing or receding from the direct view as soon as the sense is grasped; but otherwise they are perfectly complete, massed, consecutive, coherent, forming a complete and often a long story or discourse, though occasionally the opening
or the close is not read. On the other hand if there is an attempt at stability and deliberate reading, the massed print becomes either instable or incoherent. Dialogue also was perfect, though not so long and complete.

In swapna samadhi rupa was perfectly free in the chhayamaya and in the tejomaya with chhayamaya basis. Stability and prolonged continuity of action—some continuity there sometimes is—are wanting. Stability only occurs in faint and vague rupas.

Vishaya is developing.

May 19

Subsequent reaction of stiffness was felt in the morning as pain in the relaxation of the lying posture, but chiefly in the loins where it has not been felt while walking. On rising everything disappeared or was reduced to a minimum leaving only a suppressed stiffness and fragmentary suggestions of pain. There is at present no trace of bodily fatigue, such as would formerly have been felt, or the vague weight of lassitude which would more recently have been the result. The defect of anima is evidently being conquered, although it still persists and resists ejection.

Script.

“Today T² completing itself. The superior ideality in ideation and lipi and speech thought. Restoration of kamananda. Samadhi development. Ideality to take possession of the rupa in the jagrat. Vishaya.”

The superior ideality is beginning to take forcible possession of the inferior, that is to say to act within the limits set by it and in the style of its action, but independent of all reference to the old intellectual action and to the questioning of the intellect. That questioning still continues, but its doubts and its suggestions are disregarded, solved without reference to its difficulties and uncertainties. The inferior ideality respected them and leaned upon them. It was to a great extent a referee of the intellect, a substitute and an enlightener giving it the knowledge it required and could not itself compass. As a referee it solved its
uncertainties; as a substitute it took up its action but carried it on in the manner of the ideality by revelation, inspiration, intuition, discrimination; as an enlightener it gave it knowledge beyond its scope, but not far beyond its scope. When it went far beyond its scope, it was more often by ideal suggestion than with an absolute authority.

The new movement is as yet only initial and still hampered by the continued outer action of the intuitive mind with its clinging ends of intellectual mind-stuff.

Lipi. “Superior ideality in trikaldrishti and tapas siddhi”, already beginning to be initially fulfilled.

The first and second chatusthayas are now unified by the development of the traigunyasiddhi. Ananda of shama is combined with ananda of tapas, but tends to be modified and diminished by deficiency of ananda of tapas. This is preparatory to their complete unification.

The higher transcendent shakti and the personal shakti are now unified and sraddha swashaktyam is firmly based, but it is still deficient in force and extent.

The second chatusthaya is now complete, but in parts it is deficient in force, awaiting farther development of the Kalibhava and this again dependent on farther development of the ideality, that is the unification of the first three chatusthayas. Shama now contains in itself no longer a relaxed, but a concentrated tapas and relaxed prakasha, tapas an involved prakasha and a basic shama. By the unification of the three chatusthayas there will be the perfect unification of the three gunas. This is in the temperament, but the play of jnana and $T^2$ will bring it about also in the mentality. In the vijnana they are always united. There will then remain the body, but there too the siddhi is being made ready.

Ideality II is now acting upon the mental telepathy intuitive and manasic which still survives bringing about a greater light of vision and more efficacy of tapas, but without absolute certainty which only comes when there is the play of the ideal $T^2$; provisional
certainty is however more frequent, but does not owing to the continued residuary action of the old intelligence always know its own proper limits.

There are now in the lipi three forms of vijnana, (1) the superior ideality (II), (2) the superior ideality in the form of the inferior, (3) the inferior ideality (I) in its three forms, revelatory, inspirational and intuitional. The intuitional lipi is now revelatory in its substance even when intuitional in its form, but the inspirational is often inspirational in substance as well as in form. This defect is now being removed and has almost in a moment practically disappeared.

Kamananda very much oppressed persists in a diminished and subtilised form, which at its lowest hardly seems kamananda. This is in ambulando, but even at other times there is an oppression which amounts sometimes to sheer and prolonged discontinuity. Advantage is however being taken of this depression to strengthen the element of ideal Ananda.

In the evening some restoration of the intensity, but fragmentary, recurrent, not continuous.

In the morning some depression of utthapana shakti, an overshadowing by strong effigies of fatigue, once imposing rest. Writing and visits prevented the abhyasa during the rest of the day, except for a short time at night when no trace of fatigue was left, but some muscular stiffness.

Samadhi developed chiefly in the ordering of dream. The confused amalgamations of dream are being disentangled by the buddhi in the dream state itself. Occurrence of superior ideality in deep swapna samadhi.

Some ideal rupa in jagrat.

Vishaya occurs, but makes no definite progress.

The attack of the external physicality and its mind has failed to disturb the first two [chatusthayas], except for a vague superficial

11 MS utthapanas
stain on the [ ]

Sraddha holds firm, but is defective as to karma on account of uncertainty. Sraddha in yogasiddhi is complete.

May 20

The siddhi in the lipi is being extended to the speech-thought so that even when the intellectual attack is allowed to reign and the ideality suspended, still the vangmaya is in its form ideal and either revelatory or inspirational in its substance.

The attack is effectuated by the will of the Ishwara suspending the action of the higher ideality in the ideation. There has however been a constant action this morning of ideality in the intuitive mind commenting the confused action of the residuary mind-stuff and distinguishing its element of truth, which is that which sets its waves in motion, and the error which the mind-stuff throws up around the truth and attaches to it. This action is caused by (1) telepathies from outside, (2) telepathies from the mental and pranic planes, (3) obscurely received suggestions from the ideality. When the ideality does not act, the intellect tries to do what it can with all that it receives.

The obstruction to kamananda continues, though lessened; the ideal Ananda is increasing in its subtle insistence and sometimes takes effect tenuously in the sthula form.

There is a movement to apply finally the law of the ideality to the ideation as in the speech thought and the lipi. This is not difficult in the ideation of jnana, but it is still difficult in the ideation of T2, especially of tapas. Stress of tapatya and tapata have always been the chief obstacles; whenever removed, they have returned in a modified form; they now return as suggestions from the external physicality breaking down the defences of the intuitive mind. The Shakti has once more put them in their right place and discharged the intuitive mind of tapatya and even of unduly extended tapata. Decisive trikaldrishti and effective tapas are steadily increasing even in the intuitive mind; but until all tapas becomes ideal tapas, the

12 MS on the
perfection of the ideality cannot be thoroughly accomplished. This as yet has not been done. It can only be done by the satyam brihat ritam in the decisive trikaldrishti developing into its full amplitude. For that the rejection of the intellectual mind-stuff which clings to the ideation is a necessary preliminary.

In Samadhi still the same movement. At night a revival of dream incoherence.

Uthapana unsatisfactory.
May 21st!

The sadhan is now concentrated on the *vijñana-chatusthaya* with an initial stress on the physical siddhi which is still secondary except in the *shārīra ananda*, mainly the kamananda.

At present the ideality is passing through a stage of what would formerly have been called relapse, but is now recognised as a reversion to a lower movement in order to get rid of still existing defects or possibilities of defect and transform the remnants of the lower into the spirit and the form of the higher movement.

Script. “Develop T² and ideation, restore kamananda. Persist in rupa and vishaya and samadhi”.

1. Kamananda is restored; it has recovered its power of continuity and its means against vismriti, but is still strongly subject to diminution which manifests chiefly in ambulando. It is clear that the initial conquest of vismriti is firm and real, since it manifests at once after discontinuity and has not to be built up again. The siddhi is subject to diminution and relapse into mechanical discontinuity; it has to overcome these tendencies and to complete its conquest of vismriti, for so long as the latter is only initial and not complete, the relapse to discontinuity must always be possible.

2. T² and ideation are working on the physical level of the intellect. They are getting rid of the inspirational and intuitional substance which most lend themselves to the attack of unideal tapas and intellectual error, because their enlightenment is essentially a partial illumination intervening in an initial ignorance. All is being turned to substance of revelatory thought, for it is this that illumines largely and is in its nature a self sight that does not address itself at all to the initial ignorance of the intellect. Even in T² the conversion to revelatory thought is being rapidly led towards completeness.

3. Rupa has been baffled in its development of stable variety.
Variety has been partially developed in power, but subject to all the old difficulties. In the crude the tyranny of the type form which obstructs and excludes the others, obstructs their spontaneous manifestation and allows only a difficult development pursued and overcome by the type form which, even when they emerge, returns upon them and usurps their place. In the developed and dense other forms occur, but are imperfect, unstable and confined to a few persistent forms or kinds of form. The principle of barring a free variety by insistence on already common rupas is still the chief and hitherto a successful weapon of the obstruction.

4. Vishaya is simply unable to overcome the barrier.

In samadhi, antardarshi and swapna, in the vangmaya the inspirational and intuitional forms have been entirely taken up into the revelatory form, so that both form and substance are now of this highest element of the inferior ideality. Moreover this inferior ideality is full of the spirit and presence of the superior ritam. The same movement has to be effected in the waking thought-speech and in the ideation and it has in fact begun, but here owing to the greater diffusion of the mind it is more difficult.

The revelatory thought has in a way taken up all the other forms, but their effects still remain as a limiting element which prevents and conditions the play of the knowledge. Especially it is now acting on the level of the intellect and its revelations are on that level pursued by the uncertainties of the intellect, by its tapas or ineffectual straining after certainty and effectivity, by its smallness of periphery in the conscious being and scope of knowledge and power. The object seems to be to meet these difficulties in their own field and even there to establish the fullness of revelatory light and substance and the free certainties of the superior ideality.

Here the script programme has been initially fulfilled. But in the rupa it has not been justified. Rupa has only become capable of variety; it has not accomplished it. Vishaya has only effected an uncertain and scanty initial play, an action of subtle sparsha just verging on the sthula, a dim fragmentary beginning of ḍṛṇava. In samadhi vishaya has begun to play more freely, but in jagrat it
has not broken down the barrier. In samadhi taste and smell are still crude and faint. Samadhi has established everywhere an initial ideality and regularisation by the ideality, but the action in each member is hampered by intermissions of obstruction and in swapna incoherence though no longer the rule, still recurs persistently in the reading and the dialogue etc have not yet, except sometimes in dream, a large continuity.

Primary utthapana after a brilliant beginning has relapsed into ineffectivity and subjection to physical fatigue. Arogya is limited to an incomplete and struggling inhibition of the fragments of roga,—but these only occur by persistent exposure to the action of their habitual causes,—and to a preparation for the conquest of the two or three fixed rogas; the actual conquest is still far from effectuation. In saundarya no advance except the stronger fixture of the sukshma bhava of youth and ananda and a certain light and prophecy of it in the eyes and face. Kamananda is still afflicted by diminution and discontinuity; the conquest of vismriti is still only initial.

May 22.

This is the fourth week of May, the month of decisive preparation of finality and perfection in the vijnana chatusthaya. It is proposed to effect the perfection of the primary ideality in ideation and speech thought and as far as possible in T². Rupa, vishaya, samadhi, the three defective members, have to insist on their initial completeness in the ideality. The preparation of the sharira siddhi has to insist also against the powerful obstruction of the old imperfect physicality which defends its habits as the law of the being.

The satyam brihat of the tapas, the physical telepathy and the telepathy of the mental and pranic planes is being established in the idealised intelligence under the guidance of the ideality; the object is to eliminate in its own field the false stress, the intellectual decision, so that the ideal ritam may be freed from the pursuit of the intellect.

In samadhi ideality took more firmly hold of rupa. There was
also the beginning of the specific religious ideality and the ideal
sense of prayer and adoration as an element of love and oneness
with the Divine.

This is being extended and transformed into the finality of the
personal relation of the Jiva with the Iswara

In samadhi at night obstruction, with prevalent incoherence. It
was only by force of tapas that the play of the siddhi was brought
about, and the free play could not be secured.

May 23.

For some days there has been a strong revival of the obstruc-
tion to the whole siddhi, but specially the ideality. The object is
to enforce the old rule of a recurring period of relapse, enduring
usually for a fortnight more or less, or even longer, and the method
is to enforce a sort of lethargy of unresponsiveness in the mind and
physicality by which first, if possible, all action shall be obstructed,
secondly, whatever action is enforced by tapas shall be imperfect
and marred by the old asiddhi, thirdly, as a result things which
seemed to have been eliminated shall be revived, thus discouraging
the faith and the tapas. The first object has not been gained, because
in spite of periods of cessation, the tapas has insisted and the action
of the ideality has been enforced even in this adverse condition, but
the other two objects have been partially and temporarily gained.
The action of the ideality is no longer free, but dependent on tapas
and a struggle with the lethargic obstruction, the revived action
of the intellect has vitiated the perfection of the ideality and even
touches of imperfection have come in the first two chatusthayas.
Nevertheless the siddhi advances and no longer behind the veil, as
formerly in periods of relapse, but openly, though with apparent
concessions to asiddhi used for strengthening the siddhi. The prin-
ciple of subconscient progress has been eliminated, but the principle
of finesse still continues.

The main progress this morning is the enforcement, 1, of the
constant habitual action of the ideality, in spite of the physical
brain’s lethargy, 2, of the constant combined action of ideation,
speech thought and T² to which is being added the lipi. These
used to give place to each other and act alternately. There is also a
movement to add the action of rupa and vishaya and kamananda
but the power of multiple tapas is not yet strong enough to effect
the perfect combination.

This enforcement of the combined action of ideation, T² and
speech thought of the ideal kind is being more and more insisted
on and is on the point of becoming spontaneous and normal. The
main defect lies now in the downward gravitation which prevents
the thought from being of the highest elevation possible, the stuff
of intellect mixed in the ideation and vak by the persistence of a
background of intellectual demand and pursuit of the thought by
a vague intellectual observation and judgment, which though not
often explicit hampers the ideality, and the continuance of external
intellectual suggestion in T². Nevertheless the change from ideal
intervention to a massed ideal movement of all the activities of the
consciousness, progresses with considerable rapidity.

In Samadhi unprecedented large play of coherent reading
of great length; but incoherence also persists side by side with it.
The other members also had coherent play but less prominently.

The insistence on Kamananda is less, the continuity is sus-
pended, but recurrence remains.

May 24.

T² advances steadily. Tapas (telepathic) is becoming normally
effective and more clear-sighted and therefore more accurate. Strong
tapas which was hitherto discouraged, because it brought the tap-
ataya, is now being encouraged and the remnants of tapatya are
being transformed into forcible prolongation of right tapas. Ac-
cordingly the brihat satyam of T² is becoming as complete as it
can be without perfect ritam and without the play of the superior
ideality. For that combination alone can give all the right data in
their right place including tendencies which are latent or obscurely
implied and eventualities of which there is no present sign. The in-
timations of the mental and rajasic planes like those of the physical
are receiving their right measure of satyam and it is now seen that
all have their truth, except certain speculations, as to present and
past especially, which are the intuitions of what might have been and may possibly be as the result of past intentions and tendencies, but do not correspond to any actually accomplished event.

Strong and successful secondary utthapana of position.

It is remarkable that fatigue of the physical mind and will, or rather the mind and will of the body, was not at all in question; for from the first it was as if already eliminated, except for a few ineffective attempts at return. Only at the end it came in in support of the muscular reaction. Primary utthapana was therefore established except in so far as it failed, through failure of secondary utthapana.

The secondary was tried in the morning in the arms, in two horizontal positions A Ia & b, frontal triangular and frontal straight. In Ia siddhi came easily; the attempt to enforce [an]anima, though recurrent, failed in persistence and in violence; self-existent utthapana, free from defect of anima, was established and remained. In Ib there was violent opposition, but it failed in the right arm, but succeeded in the left by persistence of pain of ananima aided afterwards by pressure of downward garima from above,—not gravitation, but pressure of some other external force which comes in when gravitation weakens. Gravitation is attraction from below, this is a mass of pressure from above. In the right arm self existent utthapana was established. In the left it became strong enough to maintain the position in spite of pressure and pain and even to make the pain recurrent instead of persistent and to discourage and sometimes lighten the pressure, but not to get rid of it. The whole lasted 2½ continuous hours. In the result force of selfexistent utthapana is established in the arms as was shown in the afternoon, but ananima still remains to limit and resist the siddhi, though with greatly diminished force.

In the afternoon two positions of the legs, B.I & II, lying on the back, crooked position, lower parts horizontal, and lying on each side, alternately, horizontal II.a (straight) & II.b crooked. In B I. defect of anima was strong and prevented long abhyasa, but while recently and for a long time mahima has entirely failed to support the laghima, this time it came and held. In B II, (a) was
found difficult owing to violent attack of ananima, but this was persistently recurrent, not persistent, and there was in the intervals complete utthapana; in (b) the recurrence was less persistent and less violent. On the whole on the left the utthapana was well maintained, either self-existent or satapas, for about 15 minutes; on the right there was after 7 or 8 minutes the overpowering by defect of anima. Therefore this utthapana of B positions can only be regarded as preparatory, as it was declared to be before it began.

In arms AA, (ie lying on back), the old self-existent utthapana force recovered strength and maintained itself, after one or two downward tendencies of lapse, even in sleep.

Throughout the increased power and effectivity of tapas was very marked.

In Samadhi free action of rupa and frequent initial stability and continuity. Incoherence has invaded the lipi in the deeper swapna.

May 25.

The dealings of the ideality with the revived intellect element, show an increasing subtlety and fullness of the vijnana, giving a clear ideal interpretation of the obscure brain-suggestions, which if carried to the extreme will mean a full satyam brihat with a sufficient ritam. But the process means a continual indulgence of the obscurcation by the intellect which involves a suspension of the direct and primary action of the ideality. Behind the obscurcation the superior ideality is growing in power upon the whole thought action.

The increase of the ritam in the satyam brihat of the telepathies on the lowest level has been proceeding rapidly, but complete ritam is not yet established.

Lipi is being left entirely to itself to establish the eightfold quality in perfectly spontaneous lipi without aid of the tapas or the suggestions. The first result of the movement has been to bring back the full etheric resistance to the manifestation with the result of
fragmentariness, called formerly the desultory lipi, and defect in all the eight qualities. It is now attempting to dispel the imperfections, as yet only with a very partial success.

Recovery by the speech thought of its higher ideal pitch at which it now moves normally without any need of the least attention or tapas.

In samadhi lipi recovered its coherency in deep swapna samadhi, but there is an intermediate stage between dream and samadhi, the one passing over into the other, in which incoherence is still common. Nevertheless the incoherence can be pieced together: sometimes it arises from fragments of a sentence or thought being put together without the connecting words or thoughts, and then they have to be filled in, sometimes from the coalition of thoughts which are not connected and then they have to be separated.

Uthapana of position A I tried for about an hour. Self existent utthapana of laghima in the primary force, good for maintaining the position, if unafflicted, for two or three hours, if afflicted, for a shorter time, but not making the position entirely normal to the feeling of the body, only natural or much more natural than before. Anima not violently defective, but the defect slowly increases in force, compelling desistence in the end or at least interruption.

Subsequently, on almost immediately resuming, it was found that the compulsion of the asiddhi was not imperative, as it had appeared, but, the abhyasa being interrupted, it could not be seen how far the ananima could be eliminated. In the evening the will of the body to utthapana failed.

May 26

A II tried, but the self-existent utthapana-shakti was found not to have even half the full primary force.

The movement in T² continues; tapas is steadily increasing.

For the last two days kamananda has been recovering its force, but is still deficient in ambulando.

Growth of rupa in Samadhi.
May 27–31

Entire absorption in another activity; the ideality continued to play of itself and to grow in quality. Rupa became increasingly powerful in Samadhi and more frequent in antardarshi.

June 1.

The upshot of the last month is to have founded firmly the ideality in the inferior or primary form, it is true, but with a substance of superior, that is to say, secondary ideality, and to have applied it to the whole range of thought including T². In the latter, however, it is still weak and has comparatively little scope. The lower intellectuality is on the point of abolition but the intuitive has still its role and must keep it till the superior ideality has got into its own characteristic form and occupied the place now held by the primary ideality. Samadhi has grown greatly in strength, especially in the last few days. Rupa in swapna is very strong, various and rich and stability up to the tertiary initial is common; but the prolonged stability is only in the shadowy forms. Reading has become free and current, but not always coherent, or even when coherent, not cohesive; the sentences are sufficient to themselves and have not, except exceptionally, a visible relation to each other. Rupa is pressing forward in antardarshi, but has not yet fixed its hold on the bahirdarshi. Vishaya is still unable to break down the barrier.

As a result of the work done in the last few days which was accomplished in the complete control (dasya), the passivity of the intellect has been greatly intensified and a new action is coming into being from above which evidently belongs to the secondary ideality. This is the beginning of the tertiary dasya.

June 3

Secondary utthapana II.a.b. left side for more than half an hour, variation for five minutes to IIb(a), slanting upwards. The opposition to mahima and laghima was all this time entirely ineffective and in fact rare, though occasionally it recurred only to give up the attempt almost immediately. The opposition to anima,
though recurrent, could not persist, was not vehemently recurrent and was often in abeyance. Only after more than half an hour the disinclination of the body indicated a suppressed force of denial of the utthapana shakti

Rupa continues to grow in the swapna with a reflex action in the antardarshi. Stability is greatly increased. Vishaya in swapna is preparing to normalise itself. Only the self existent progress of all the parts in unison without exclusiveness or interruption has to be established. Vishaya and rupa in jagrat held on.

[Half a page left blank.]

June 14.

For the whole first fortnight of June the active sadhana has been suspended; there has been the absorbing preoccupation of another activity. At first the play of the ideality was associated with it, but it is now abated and is turning again to the sadhana. Still, this has left behind it the beginning of a movement to substitute the ideal for the ordinary mental action in all intellectual activities, eg, poetry, study etc.

The first movement has been action of the secondary utthapana.

This morning. B II, left, almost entirely b, for upward of an hour; simultaneously, A.A.b₁, left arm raised half way for an hour, lying on the right side, and neck, C b, in the same position. In all mahima and laghima triumphant. In B II the sharp defect of anima has lost its power of persistence and also of persistent recurrence; it occurred once or twice for a moment in the first half hour, once or twice with a more prolonged but with no very intense recurrence in the second. In C b, it came only for a time. The place of the old oppressive defect of anima has been taken by the pressure of garima on the limb, a weighing down, a sort of dull combined defect of the three qualities with the result of a temporary disinclination and declaration of inability in the body; but this could

¹ MS two
not last. It was stronger in A.A.b than in B II and in C b than in either of the other asanas. But in none could it prevail. All three might have been continued. But the object now is not, as before, to prolong the period of the asana which means only to postpone the return of the nir-utthapana, but to abolish the denial. This is being done by the will bringing in the nature of the vijnana into the body and abhyasa is now rather [ ] a test than a means of the siddhi.

In the later morning A III; vertical position of both arms, walking, for between half an hour and an hour. Here too mahima laghima is in possession, but the defect of utthapana shakti is greater, due to the survival of the defect of anima shown by a reaction in the muscles after cessation, which was absent from the asanas of the early morning. The asana could not have been continued longer without some strain and difficulty. No evident reaction from the walking in this position.

The movement is now to replace finally in trikaldrishti the action through the intellect by the action through the intuitive mind. In trikaldrishti the survival of the inferior action is strong and will take some time to eliminate. It prevents decisive trikaldrishti and perpetuates error of stress and error of interpretation of the will-messages and knowledge-messages from the ideality.

Kamananda has gone back for the time being. Smarana is no longer always sufficient to recall it. Arogya also is thrown back in chronic rogas 1 and 2; but in the latter only under great stress lasting for the whole fortnight and here the siddhi tendency is evident even in failure.

Ready manifestation of the lipi is also a little dulled, as well as the strong play of the swapna samadhi and rupa. The lipi suffers chiefly in legibility. The tendency to stability is strong, but resisted and embarrassed.

All is, however, ready to reemerge against the strong obstruction. Full siddhi will come when interruption can no longer impair the vivacity of the siddhi.

2 MS than
July 1st

On one side the absorption of work continues, on the other the sadhan is determining its upward movement. The ideality is gradually gaining upon the strong remnant of the intellectual obstruction and its obstinate lingering on the mental method of reception. The obstructed kamananda is resuming its force of sasmarana action, but has not yet reaffirmed strongly the trend to continuity. The rest of the physical siddhi does not advance.
Tuesday 24th June 1919.

Today the condition of a general low tone of the being with yet a continued progress in the Yoga still continues; no depression, but a ghost of languor in the body which obstructs the channel action of the mind. The vijnana acts, but irregularly, not with a rapid or normal flow. It has not yet recovered its brightness, but is a clouded sunlight.

According to the lipi there should be today some blaze of the gnosis. Now it is suggested to the mind that trikaldrishti-tapas which yesterday founded itself in this halflight is to develop farther, telepathy be farther taken up, ideal samadhi increase its hold and the physical siddhi enlarge its foundation. Some progress may also be expected with the more constant darshana of the Ananda Ishwara.

Last night Çukshma Çravana became for a few minutes frequent and insistent; it even insisted a little to the fully waking ear and without any closing of it; but it is still faint in comparison and fragmentary.

Lipi. “Life in the entire ideality: between this and February it will develop in the first basis; it is already developing.”

This last statement must be understood in the sense of an initial tenuous idealising of speech and action and of result of tapas in the immediate vicinity.

The gnosis is now taking up all the thought through the pragmatic form of the intuitive mentality; universalising that in the half and half intellectual ideal type,—but intellect not prevailing, fixed into the ideality; the mechanical intuivity is almost entirely dismissed except in the T³.
In T³ also the pragmatic intuitivity is establishing itself, strongest in the telepathies, but there is still an unauthorised intellectual stress of immediate fulfilment which baffles trikaldrishtic certitude. Even the trikaldrishti is pragmatic, not the highest entirely certain seeing, but gives only a practical certainty. Tapas is assuming the same kind of intuitivity. All tendencies and forces are admitted which offer themselves to the sight and now are seen in juster proportions than at any previous time. But the light is the clouded sunlight, not the full blaze of golden or fiery day.

There is the blaze of the highest logistic ideality in the lipi and the thought speech, but it has not yet gained the perceptive thought, much less the T³. But as soon as this was written, that transforming movement too began. As always, it is the subjective trikaldrishti that is the first to advance; the objective is hampered by the physical obstruction. The golden but not the fiery blaze is gaining the lesser movements, including the remnants of the mechanical intuitivity.

Kavya for a while worked in the revelation, but was soon clouded by the obscurity of the intellectual effort.

Arogya is steadily gaining in force, but with a slow pressure. The fragmentary rogas encircle dully in the subtle pranic atmosphere and touch or menace, but only hold now and then in certain residuary recurrences. The intestinal complaint is constantly reaching the vanishing point and then resuming hold, but there is nothing like the past violent returns. The restitution in the centre is only just trying to get and maintain an initial foothold; nothing evidently decisive.

Samadhi completed its idealisation in the afternoon; but at night it is subject to the relapse of sleep. In the afternoon there is only at most a shadow. In the morning there is a dull struggle of sleep to keep at bay the samadhi, and when the latter occurs there is a certain persistence of incoherence especially in the settled sthira lipi. This is being diminished, but it recovers its force repeatedly.
Ananda and secondary utthapana are for the time in intermission of progress.

Wednesday 25th June. 1919

The ideality of all speech thought has long been assured; the ideality of the perceptive thought is now becoming assured, wide, universal. Only the tapas and the trikāḍrishti thought and perception remains to be similarly illumined; this has begun, but its progress is interrupted and obstructed. There is a speech thought of the nature of vāni expressing the trikāḍrishti which is still of the intellectual ideality or intuitivity and subject to error, but that comes only in the inertia of the mechanical mentality. This mechanical passivity has to be got rid of, all has to become an ideal ċhamamaya activity. Passivity of the mind has now served its purpose, the mind has become a silent channel; only the obstruction of the physical brain atmosphere preserves the dull habit of this passivity, a tamasic persistence in an inert misrepresentation of the old ċanti.

The only progress in the physical siddhi is a commencement of the idealising of the Ananda. Today the insistence on K.A. [Kama Ananda] is renewed; but the forgetfulness of the body continues. The intuitivity is strong in the K.A, only initial in the other anandas.

The Ananda Ishwara is now vivid and all the action and guna has been taken up into the Anandamaya; there was a discord between the darshan of the supreme universal Anandamaya and the perception of the universal mental unideal consciousness, but this is cured and only the bridge between the Anandamaya in universal and individual and the mentality is not yet brought into light. If this is done the darshana will be complete in essence.

Kamananda is again being pushed forward; the difficulties still are mechanical discontinuity, forgetfulness, mechanical diminution, the need of tapas to restore it when smarana is not sufficient, absorption, sleep. The mechanical discontinuity only prevails (1) when the energy is at a low ebb, (2) after long forgetfulness. Forgetfulness is being attacked and when the Ananda is in flow, there is usually a second memory in the body which retains it in various degrees of intensity or at least so keeps it that it is felt
when the mind returns to some partial attention. Absorption now for the same reason does not necessarily bring discontinuity. Two movements are being carried on, (1) removal of exclusive absorption, the simultaneity of a double memory or concentration, (2) the inability of absorption to bring about complete discontinuity. These siddhis formerly only hinted at or momentarily accomplished, are now beginning to establish themselves, however imperfectly. Old occupations which excluded memory of K A are now admitting it, eg reading, writing, bathing, eating. There are two absorptions, the luminous concentration and the tamasic “absence” of the part of the mind not occupied in the particular work; the latter is the only real difficulty; it is not really an absence, but an involution in tamas, a sort of cloud of inertia, which is physically sensible all about the brain or near it.

Telepathic thought in its lowest mental form is being idealised on these levels.

K.A maintained throughout the day, even during absorbed writing and in conversation when it is apt to cease, but not without interruptions of forgetfulness. The body is not yet in secure possession of it, owing to a constant pressure for exclusion from the opposing forces.

Finesse was again used in the vijnana-siddhi in the evening; the whole mass of the old basic intellectuality was re-presented and the mind plunged into it, the ideality mostly held back, so that there might be a wider transformation, thought to be idealised even when occurring on the very lowest levels, even below the brain, even the thought of the chitta and the prana and the subconscious mind.

Samadhi today was strongly attacked by sleep.

Some beginnings of decisive ideal trikāldrishti and tapas, T².

Thursday 26th June 1919.

K.A interrupted in the night by forgetfulness and listlessness, restored with a little difficulty of opposition in the morning. Continued throughout the day, but with more frequent lapses into forgetfulness. The defect of the siddhi is that as yet it does not dwell sufficiently in the body, but is rather imposed on it by the
psychic tendency. Once begun it can continue for a time of its own motion, but for its initiation and long maintenance has to depend on smarana and needs often a will in the smarana, sometimes a forceful tapas against the obstacle. Spontaneous initiation, renewal and maintenance [have]\(^1\) been begun and at favourable times are not infrequent, but are not yet the law of the body. The struggle between sleep and continuity of the Ananda has begun, but the continuity still needs the aid of smarana and tapas and does not subsist in the deeper nidra.

Samadhi has relapsed to a certain extent, is much assailed by sleep and incoherence. Its advance which was always laborious, has again become fragmentary. There is some progress in stability and vivid force of drishya, but it is again mostly chhayamaya. Extreme shadowy drishya has sometimes almost a complete stability; it then lasts long with some moments of eclipse. Combination of thought-speech, perceptive thought and lipi has begun, but with some difficulty.

Ideality has been strongly attacked throughout the day, but progresses even in a general lowering, especially in telepathy and trikaldrishti. Ideality of thought is being generalised on all levels and intellectual thought is now becoming more and more the recurrence of an abnormality. The generalisation of telepathic ideality has begun on a large scale. Decisive trikaldrishti is being enforced and enlarged against great difficulty.

The first two chatusthayas grow continually stronger and show this increasing strength in each fresh attack. They can only be attacked at all, and then very ineffectively, when the ideality is lowered or suspended.

Arogya too is attacked; but the attack amounts to an obstruction and lowering of the tapas, not to a positive disintegration, or at most there is only a slight superficial crumbling. But progress is slow, the strong rapidity which was trying to set in, is still held

\(^1\) MS has
back from possession. Utthapana is suspended. Bhava-saundarya is gaining in continuity and generality.

Ananda Ishwara is now confirmed except in the perception of mentality which is not yet linked up with the ideal anandamaya.

Friday 27th June 1919

The dasya is now being perfected and made vivid; first, the dasya of the worker and instrument is made complete and perfect. To that is added the dasya of the power, dasi iswari; the difficulty was the insufficiency of the aishwarya and consequently of the sense of the Ishwari, but now the relative and progressive aishwarya is for the time being accepted. The dasya to the Guru is also added and is uniting with these forms. The dasya in the relations of friend (raised to brother, bandhu), vatsalya, father etc are being prepared for perfection and unity in the madhura. All has to be taken up into the madhura. This movement can only be perfect when the sense of the presence of the Ishwara is allowed to be nitya in its directness and vividness. At present the Ishwara still acts from behind the Shakti.

Attack of roga on digestive functions suppressed by tapas after a struggle with a residue in bhava. This is only part of the general attack of vague recurrence and attempted restoration (fever, headache, cold etc); it materialises in the digestive functioning, because that is still immediately capable of brief sthula recurrence. The others are only potentially capable, except for fragmentary touches. This fragmentary recurrence has been attacked and is in process of slow diminution, but is not yet got rid of. The two constant rogas, as well as the imperfect process of evacuation still continue.

Telepathy has been purified in regard to the tendencies and forces immediately affecting the adharas in action; that is to say, the insistence of a perceived tendency, force or intention on its fulfilment, the choice of one to be favoured and fulfilled without reference to the real ideality and the claim of telepathy or present trikaldrishti to figure as future drishti, of tendency, force, intention, possibility and probability to masquerade as certain result, is being eliminated from T3. The same movement is being rapidly applied to
the forces of the vital rajasic and mental sattwic planes which stand
behind the mechanism of forces of the physical plane. This will
complete the present trikaldrishti, except for the right perception
of the states of unseen objects which is still backward.

This movement is setting free the future trikaldrishti; certitudes
are already increasing, but are still for the most telepathic certitudes,
that is based on present fact, and extending to primary immediate
or near result, which is growing strong, to secondary farther off
or intermediate results, which is growing, and final results, which
is still only in initiation or else not linked in to the rest in a suffi-
cient ideal unity. Beyond this trikaldrishtic telepathy lies the pure
trikaldrishti independent of all perception of tendencies, forces, inten-
tions. Time and detail have still to develop certitude. It is notable
that there has not been in the past nor is there now any attempt,
except for fragmentary illuminations, to develop trikaldrishti of
the past. This is partly due to the nature of the adhara in which
the mind has always been concentrated on the present and the
future, and subjected to a deficient memory from which past events
have quickly faded. In part it is due to the mentality of the age
which has taken in the adhara an extreme form, except that this
individual mind goes back readily to a far past in which the future
was prefigured.

Pain and discomfort are being strongly taken up by the
Ananda. Today all pain and discomfort, the former even very acute
and of some little persistence, the latter massive and oppressive,
were permeated with Ananda. Only violent and very oppressive
yantrana or discomfort has still to be taken up.

Samadhi is recovering force and coherent ideality, though with
difficulty, yet rapidly.

Saturday June 28th 1919

Today, a rapid progress in T² is intended. Incertainty must be
largely replaced by certitude, the activities taken up which are still
left to the relics of the [intellectuality];² all universalised in the blaze
of the ideality.

² MS ideal[ity]
The foundation of continuity in K.A is now securely laid in spite of some appearances; but the continuity itself is interrupted by forgetfulness and cessation of interest or capacity in the body. But these three things and especially the last are not only mechanical, but abnormal, the results of a strong hostile pressure from outside which takes advantage of the mechanical memory of old habit in the body. Sleep and absorption are now the only real difficulties, both have begun to yield to the siddhi.

The ideality is now busy with the trikaldrishti, taking up and fighting all the old confusions. When done on the higher level, this process proceeds harmoniously with little flaw or mistake; on the lower level it is a slower progress of order in the midst of a chaos. All telepathies are now justified but at the moment the old intellectual intervention of false stress continually returns in a less or a greater degree. This difficulty is chiefly felt with regard to rapidly changing action.

Other defects of the ideality are also being taken up for correction

Samadhi in the afternoon was overpowered by a persistent unnaturally deep sleep, but the samadhi power, though it could not persevere, broke to a certain extent into the nidra.

There are now frequent lapses into the idealised mentality and from there into the tamas of the physical obstruction. The Ananda perseveres, but does not increase, forgetfulness still besieges. The other siddhis are obstructed and some of the physical subject to a certain limited relapse.

The defect of the traigunya siddhi is that tapasic stress on the one hand, inertia of mental shama with tamas breaking across it and sometimes possessing cling to the mind by a sort of external affecting adhesion. This is being remedied first by an increasing externalisation of the inferior tapas, next by the increasing prakasha of the shamas. But until both tapas and shama are full of the vijnana jyotis, “the blaze of the ideality”, the siddhi will not be complete and faultless.

Ideality recovered itself. In the Samadhi, symbolic figure of a dark (blue-black) moon with a shapeless reproduction of it below; above-round the small sphere a blaze of sunlight on one side. This
meant the dark Soma (intuitive mind-orb, ananda consciousness, with the jyoti involved in it), emitting the jyoti, the other the intellectual reflection. The suryamandala is the symbol of the vijnana. The ideality was of this character. From the shama enveloping the mind activity came the initial blaze of the ideality in the trikaldrishti tapas. The rest,—thought-speech, perceptive thought—acted with the same anandamaya shama emitting jyoti.

Torpor of the kamananda in the evening and night. Much alasya of the body thrown off partly by tapas. Aprakasha is disappearing; but physical inertia still keeps a certain hold of recurrence and a besieging potentiality. From the alasya comes pramada, a negligence and confusion in the action of thought and perception.

Coherent symbolic dream in Samadhi

Sunday 29th June 1919.

In samadhi coherence gained ground in the lipi. There was a whole passage written successively with perfect coherence of thought and word, in spite of one or two attempts of the besieging incoherence. Incoherence remains especially when the lipi written or printed comes in large masses, but it is evidently a receding, though still persistent force. This is in a middlingly deep nidra; the deepest nidra is yet to be invaded and taken into possession by samadhi.

The ideality is to open into blaze today, to get a certain initial perfection in such fullness and range as is at present possible. This movement is to be completed tomorrow. Samadhi, today and tomorrow, is to round into the ideality. Ananda to advance, pressure on the obstruction to the other physical siddhis. Ananda Ishwara.

The Ananda Ishwara darshana is persistently bridging the gulf; the perception of the Anandamaya in objects is pouring into and taking up the personal mental consciousness. This movement has to be completed in perfection.

There is as yet no sign of the fulfilment of the proposed advance; but a siege and a reduction of ideality to the intuitive mentality, chandramandala. There has even come a touch and strong persistence of the old asamata, physical but with a nervous
and emotional excitement of the physicality containing all the old symptoms. It has a curious symbolic form as of a small circular touch on the middle of the breast like a rupee, trying to extend rays of asukha and asanti, but prevented for the most part by the tapas. This is followed by an attempt to throw in scattering currents of duhkha as through subtle nerve currents. The whole disturbance comes from an illegitimate attempt from outside to bring the action of the chandramandala to replace the surya action.

The blaze of the surya action is now taking possession, forcing aside the minor soma action. The attack of the asamata falls away from the surya blaze; it subsists only by a reflex of the ineffective chandra action which is easily attackable by the old deficiencies. The blaze brings also the light of the trikaldrishti. A crisis has also been brought about in the Ananda, which failed in the interval, there has also been a strong attack of fatigue tamas. The Ananda disability is being pushed aside by the surya action, the fatigue combated by surya tapas.

Samadhi in its lighter forms is acclimatising the blaze of the Surya.

In the waking state the highest ideality is still combated by the mind’s persistence in the intuitive chandra mould and in the lower forms of the intellectualised surya ideality, but it is making the other movements its own. The difficulty is with the T³.

In the K.A. the intuitive substance of Ananda is more intense and tries to subsist as against the slighter substance of the suryamaya; but the latter is persisting and taking possession.

The Surya blaze has now taken preliminary possession of T³ as well as thought speech and thought perception; only the remnants of the chandra intuivity still resist the assumption.

Ananda darshana is also assuming the Surya form and the Surya Ananda.

K.A too is now more readily running in the Surya mould; the Chandra intensity is being rapidly extruded.

There is now a descent of the Surya towards the sunlit intellectuality, for this has to be taken up as the mental base of the ideality and the whole mentality illumined into a silent channel and then a logistic form of the gnosis. Wherever the surya ideality
or the illumined intuitive intellect does not act, there the chandra
intuitivity with its infinite of possibility and incertitude is still active.
Surya is taking possession also of the sun of the imagination.

Monday 30\textsuperscript{th} June 1919.

The Surya action limited by the sunlit intellectual intuitivity
and the remnants of the Chandra intuitivity continues its gradual
process of assumption.

The blaze of the ideality has spread itself and can now hold
all the thought and thought-speech and the telepathies, but is still
impeded in $T^2$ by the incertitudes of the mentality. In the telepathies
it is a modified and quiet light, but in the rest a fuller stronger blaze
with flashes of Agni and Vidyut; the latter suggest the supreme
\textit{vidyunnaya} Ananda chandra.

The Surya power is now also acting as tapas on the obstacles to
the Arogya and the utthapana, but these are strong and persistent
in their pressure.

The Samadhi is still being taken up by the Surya power only
in antardarshi jagrat and the lighter depths. Deep nidra is still only
invaded on its borders and gives at best coherent dream with a
touch of misplaced ideality.

The ideality in the afternoon has been extending itself with a
certain slow deliberateness. It is taking up telepathic trikaldrishti
of time, place and circumstance, things neglected or else unsuc-
cessfully attempted by the former sadhana; this is because the
mental telepathic indications abound around every isolated cer-
titude and bring in a besieging error and incertitude. These indi-
cations have yet to be reduced to their correct proportions before
much headway can be made. This operation is now commenced
on a slight scale. Time now is often correct and correctness of
place and successive or surrounding circumstance is sometimes
added.

All the movements of the Ananda are being taken up by Surya.
For some time the Chandra was being excluded whenever it came;
and for that reason, the intensities fell away; for all the intensities
were chandramaya; but now the intensities are also being reduced to
the sun-ideality. Forgetfulness is still strong; but the partial conquest
of it is being taken up, although the dependence on memory and attention predominates.

Slight extension of ideality at night. Samadhi successful only in the early morning; rupa, stable in action as well as status, in deeper samadhi, also tejomaya; also sufficiently coherent lipi.

Attack of fragmentary roga at night, much diminished by tapas.

July.

Tuesday July 1st 1919

The month of June has been a period of the overcoming of difficulties in the central ideality, in the Ananda Ishwara Darshana and in the Kama Ananda, a combat with difficulties and slow varying progress in some elements of Carira siddhi. The first two chatusthayas have enormously increased in breadth, power and finality, though not yet absolutely secure against superficial fragmentary and momentary disturbance. Brahma chatusthaya has enlarged in base and scope and taken on the supreme Ishwara, Purusha form. It has only to be thoroughly confirmed and filled in with the jnana, etc by the gnosis.

The difficulty is almost eliminated in all the central ideality except the T3. There it is being removed and has to be eliminated partially or wholly during the month of July. Perfection prepared by the last month’s work has to be initially founded in the highest logistic ideality. In Samadhi and rupa vishaya the obstacles have to be still overcome; in the former they have a diminished, in the latter a complete persistence. The difficulties of Ananda have to be obliterated and spontaneity, continuity and intensity fixed in the system. The difficulties of the arogya have to be attacked and brought to nothing; this is possible in July, but not yet certain. The utthapana and saundarya are likely to be longer hampered and are not likely to come to anything very considerable till the closing months of the year. Ananda Brahman has to be filled in with the guna and jnana.

The attack of the rogas of cold, cough, eye-disease are now attempting to materialise in the night, taking advantage of the
slightest exposure, because then owing to sleep the tapas is not active and the prana is more vulnerable. This night owing partly to previous tapas the attack was neither so successful nor so forcible. Eye disease is now operating in the sukshma showing there its symptoms and trying to impress them on the physical body by the sraddha in the disease; it is combated by tapas and by sraddha in arogya and is not so far successful except very superficially, and this slight superficial result is now more easily removed by tapas as soon as the body rises. It is now quite evident that the source of disease is psychical, not physical; it is due to failure of tapas, idea of ill-health, weakness of the prana-shakti, faith in ill-health in the physical body. Faith with knowledge from the ideality is now powerful to combat it, though not yet entirely to eliminate; for the body is still subject to the mental suggestions from the outside forces.

The rupa is commencing again; some crude rupas, some images of things immediately or habitually seen, some of things not habitually seen; but all are momentary and unstable except the crude rupas. There is a tendency also to resume the old abandoned rupas, ghana, etc. It is intimated that this time there will be a real recommencement and steady progress.

In spite of strong dullness of physical tama; ideality advances; a flood of ideal telepathy is taking up even the subconscious indications. Trikaldrishti is slowly elevating itself beyond the telepathies.

K.A dull but with occasional intensities

In Samadhi in the afternoon strong invasion of the deep nidra by the ideality; especially strong in lipi, but also in thought, interpretation of rupa and lipi, trikaldrishti of siddhi, dialogue etc. Most of these are still fragmentary. The ideality was inspired vijnana besieged by intellectuality, but subsequently was partly taken up by the revelatory vijnana. In lighter samadhi increased organisation and power of the gnosis.

Ideality is extending itself largely, tapas becoming idealised and powerful, but at present there is some confusion in the brihat, the ritam is not properly placed very often, owing to the interference of telepathic intellectuality.

In the evening struggle with attack of roga; slight fragmentary
materialisations, especially of occasional cough. Action of general
ishita, general and particular aishwarya, vashita upon the symp-
toms. The affection at night very occasional. The mind no longer
adversely affects the result, but the habitual mind of the body still
persists in trying to repeat the regulations of the malady. On this
the tapas is beginning to act with an initial success.

Samadhi in the night and morning ineffective or difficult and
slight in result; a tendency of fragmentariness and incoherence.

There are certain first indications of future siddhi, not yet
able to persist in formation, but amounting to decisive hints of a
preparation behind in the over-idea.

Wednesday July 2 1919.

A certain lapse towards intellectuality, intended to show the
extent of the persistence of intellect in the ideal action and by a
clearer distinctness base a firmer action of the T³. The defect of
the intellectual mixture lies mainly in an undue stress on active
possibilities which brings in a continual error and incertitude. The
possibilities have to be seen around the decisive certitude. The
thought of the T², other than that of the sadhana and inner ac-
tion, is growing in ideality and certitude, but is yet lacking in
perfection. A still more decided and well-justified certitude is
beginning.

Rupa is rapidly redeveloping various forms of ghana, devel-
oped and perfect as well as the different materials, notably colour,
as also combined rupas and groups, but all this is only in the
old initial form. The fugitiveness is modifying towards [a]³ yet ill-
decided initial or momentary stability. The method of development
has yet to be changed to the ideality.

In Samadhi, first an initial variety of complete and initially
stable crude rupas in antardarshi (long-withheld and appearing
to be condemned to infruition), in swapna brilliant momentary
tejomaya figures and scenes in a first attempt at abundance, the
movement cut short by nidra. In nidra a confused, partly coherent,
partly incoherent generalisation of, first, intellectualised and then

³ MS an
intuitive ideality. In lighter samadhi organisation of highest logistic ideality.

Complete and distinct combined crude figures and scenes, but distinct in an indistinctness.

Tapas is now trying to come up to trikaldrishti. At first strain of tapas ordinarily fulfilling itself against fluctuations, but afterwards the fluctuations or opposite forces often prevailed, definitely or for a time, but all tapas is now being put in its place, as has already been done with trikaldrishti. Tapas decisively indicative of ideal certitude has begun, but has to be normalised. The difference is that trikaldrishti comes as the seeing idea carrying [in it]\(^4\) fulfilling tapas, ideal tapas as the seeing force with the sight subordinate indicating its certitude of effectuation.

No advance in the evening or night; roga (throat) attacked suddenly and held for a while but was lessened almost immediately and dismissed after a while though with slight after effects, much exaggerated in appearance, but with little material solidity. They were at once and easily dismissed in the morning.

Thursday July 3, 1919

The T\(^3\) on the level of the old telepathies is now turning finally to T\(^2\), telepathy enlightened by the ideality taking the form of present trikaldrishti. This is imperfect still, because elements of old telepathy are still imported into it, but these are being steadily eliminated and exist mainly in stress of telepathic tapas which is lessening rapidly. When the light of the ideality is withdrawn, T\(^3\) returns, but that too is being immediately seized on and converted into an indirect gnosia. Tapas is resigning its strain of effort towards self-effectuation; it has for a long time been lessened, is now greatly diminished and is nearing the line of disappearance. Active trikaldrishti of future is still niggardly in spite of occasional freer movements, —as distinguished from general sadhana prevision; it is this which still gives room to some persistence of modified tapasic stresses. Knowledge and will are becoming more and more an expression of being, rather than detached observer and actor on being.

\(^4\) MS it in
The removal of the remaining stress of tapas is now the key; but this cannot be done without a normalised self-effective ideal tapas; at present it exists only in type, usually of a mixed and imperfect kind. Tapas used by itself still tends to bring back confusion.

Samadhi at first ineffective owing to nidra. Afterwards strong organisation of the various action of gnosis in the lighter samadhi; also in deeper swapna with a gnostic waking control, jagrat in swapna, even in a considerable depth. Lax swapna without waking control is also being idealised, dream interpreted, analysed, turned into vision and thought of samadhi. This interpretation is done partly in antardarshi, partly in swapna. Only deep tamasic nidra still resists in some entirety, but that too has a pursuing touch of vijnana and is sometimes invaded by some gnosis.

Tapas is putting aside more effectively strain of effort for self-effectuation, though it is not entirely cleared away out of the whole action; but at times it is pure. Tapastya, tapatya, tapata continue, in their absence, the tapas is still inert and not directly effective, but they act without strain, only as degrees of impersonal insistence: they are all to be replaced by tapana, the fire of surya in the will-powers. This is done in telepathic tapas. Trikaldrishtic tapas occurs more frequently, but is still rare. There is already a tendency for trikaldrishti and tapas, knowledge and will, to combine more closely and become one.

In the central roga there is some increase of the tendency of siddhi, more effective insistence of tightness mending the subsidiary looseness of the centre which is the immediate cause of all the roga. Looseness now comes less often without cause as a mechanical habit, more often with pressure of causes; but the causes of looseness are beginning to become causes of health and force. These changes are still not quite firm at the root and tend to fluctuate; there is a mixed action. In cold etc health in the daytime holds sway; attacks are lessened in force and persistence, but touch once or twice in sleep or recumbence by physical laxity. Utthapana is weak and afflicted.

K. Ananda is reviving after a time of suppression subsequent to the change of character. It is still very intermittent. In the attendant script it was suggested yesterday that there will still be difficulty,
but the ananda will fix itself this week, by the 7th, in the intensities first, then in the continuity. In July it will endure

Friday, Saturday. 4th 5th July 1919

Preoccupation with writing; in the ideality a rather confused process of righting and arrangement of telepathy, tapas, relative trikaldrishti. Tapas is farther getting rid of the relics of stress, both understress and overstress, trikaldrishti striving towards a greater general and detailed certitude. Attack of roga, cough at night; K.A fitful and uncertain. In Samadhi growth of frequency of stability in shadowy rupas. Some progress of sahitya.

Sunday 6th July 1919

In the early morning incoherent dream turned suddenly into dream symbol recurring and progressing even after intermediate wakings. Ideality of a loose kind in the nidra.

Trikaldrishti, tapas, telepathy are now combining definitely into one movement which is beginning to rise above the constant uneven balancings of the two opposite perceptions, that of the powers and tendencies of the present and what they mean and presage, and that of the other powers and forces which attempt to create a future not bound by the probabilities of the present. In the intuitive mind the first corresponds to the current habitual understanding in the intellectual reason, the second to the pragmatic reason and will, a third range of perceptions to the truth-seeking reason. In the gnosis the lowest or primary logistic gnosis, of the nature of the intuition of the immediate, is strongest in the light of the present and proceeds from that to the other truths, it is more fitted for present telepathy than for future trikaldrishti. The secondary logistic gnosis of the nature of inspiration, is a sort of creative or forecasting light and gives best the tapas of the future, the will at work now and hereafter for effectuation. The tertiary logistic gnosis of the nature of revelation lifts up both these powers, gives them its own light and fuses perfectly the two elements of perception. It is here that the real trikaldrishti becomes facile. It is to this revelatory light that the T3 is trying to rise so as to become entirely T2. But it would also seem that the full
power of trikaldrishti belongs to a higher vijnana than the logistic gnosis.

Tertiary dasya is now becoming very intense in its power; there is little questioning as to what should or should not be thought, done or spoken, but only the force compelling the thought, act or speech and its acceptance by the yantra. This is strongest in action, weakest in speech, because speech has always been for a long time past spoken mostly without reflection or thought from the speech centre and not the thought centre, the latter only cooperating sometimes or in a vague fashion, but only recently has there been some beginning of the idealised speech.

In samadhi much and increasing activity of rupa. In antar-darshi, in which as in jagrat rupa has long been violently obstructed and almost suppressed, there is now a stirring. But samadhi is now a little inactive.

Monday July 7, 1919

Indications of fresh initiations of progress in the morning. The dasya is now rapidly growing in intensity; perfect tertiary dasya of thought is coming with the growth of the highest logistic ideality. Primary dasya has long since been taken up [ ] into the secondary, the Jiva into the Jiva-Prakriti (primary dasya is when the jiva acts consciously in obedience to the prakriti as the executrix of the Ishwara or to the Ishwara acting through the varying forces of the prakriti or those which she guides or drives as an imperative force). The secondary dasya in which the Prakriti uses the instrument and itself obeys the Ishwara, but guided as if from behind a veil and more immediately using her own forces for the satisfaction of his ganas, the devatas, is now coming to a close; it is being taken up into the tertiary dasya. This is now an action of the gnostic devatas in the Prakriti with the sense of the Ishwara immediately behind them; but the Ishwara also begins again to be directly manifest in the guidance and the Person. This is growing; meanwhile the Prakriti is unifying with the Purusha and the Ishwara directly or through the Deva-shaktis driving the instrument with an absolute

\[5\] MS or
and immediately and intensely felt decisiveness of control as if it were being pushed by him with his hand upon it and it vibrated with the ananda of the touch and the driving. This is in thought and still more vividly in action. Some shadow of the old dasyas persist in a subordinate sensation.

The highest ideality is now acting in jnana frequently with a complete possession; only, when the thought tapas is relaxed or there is some other preoccupation, the older state of mixed intuitive mind and lower gnosis holds predominance. Very little remnant of intellectuality is left in existence; only some after effect of it is left in the lowest action of the intuitive perception.

Little samadhi; activity of clear crude rupa in antardarshi

Kama Ananda is now acting easily enough, but forgetfulness of other preoccupation is still strong in actuality; it has not been immediately abolished. In a sense however the Ananda may be said to be always there in an active or suppressed condition.

The process of filling in the T² with the light of the highest logistic ideality has now begun to move forward again with rapidity, the general thought being already totally enlightened. All this is still in the secondary ideality suffused with the light of the tertiary gnosis. Certitude in trikaldrishti is now being enforced; the telepathies that give the wrong stresses are being enlightened in those stresses, they are being turned into the truth of idea-forces of being, each with its own provisional certitude. This is one part of the process of transmutation. The other is to fix the right proportions, no longer in the intuitivity as was done before, but in the light of the true ideality and increasingly of the highest logistic gnosis, and to multiply the perceptions of the idea force which is destined to immediate or subsequent effectuation. A general idea of the time is growing. Place and circumstance as yet are only hinted or seen but with incertitude in the intuitive mind. This process already applied to prevision in the sadhana is now being applied to seen objects and their movements in the immediate vicinity. Distant sight is still in the imperfect telepathic condition, as also telepathy of thought (very fragmentary) and mental movements, the latter often vivid, abundant and accurate. Perception of the physical forces and sadhana is still subject to great incertitudes, as also that of distant eventuality.
K.A is now in a way settled in the body, thus fulfilling the suggestion about the 7th; but the intensities vary and there is not perfect continuity when the mind is turned away entirely from the body. Nevertheless the opening of a double consciousness which has the full mental or gnostic activity and below it the sense of the body has definitely set in in spite of frequent intermittence.

At night rupa in samadhi accompanied by shabda, sparsha and shabda speech. Shabda speech also in antardarshi. Until now night brought back the consciousness to a lower level, but this habit of the physical being is now being attacked; it is not yet overcome, but the force of the habit is diminished. Roga also recurred at night, but this time it was attacked with great force by the gnostic tapas and overcome;—cough and sensation though not actuality of catarrh. These things however still besiege in the subtle molecular body.

Tuesday July 8th 1919.

The action of the trikaldrishti continues to expand in the ideality, on the same lines. K.A grows in insistence of continuity, though with the same essential fluctuations. There is some constant insistence now on the arogya siddhi, but chiefly in the subtle physicality; the old fragmentarised rogas touch, but can almost immediately be quelled by the tapas.

In the afternoon a complete invasion of the deeper and deepest nidra by the samadhi; all was to a greater or lesser extent idealised. In the lighter depths complete ideality and an almost complete initial coherence of lipi etc. In the deeper nidra a more forcibly imposed and sometimes broken ideality. Coherence has set in; the incoherence is chiefly in incompleteness and fragmentation; the thing begun goes on well enough, but is suddenly broken off and another lipi etc starts in its place; but the chaotic entire incoherence was only occasional and immediately tended to change to coherence. Dream is being regularised and interpreted so far as it goes, though subject to fragmentation, or is replaced by vision.

The highest logistic ideality is now entirely taking up the lipi, in the midst of an attack of the old environing intellectuality; but
this cannot any longer organise itself for thought action; it can only obstruct without entirely preventing the ideal action.

At night no action of the ideality, but only connected dream

Wednesday, July 9th 1919

The tertiary logistis is developing itself, but on the third or lowest scale in its three forms, the intuitive, inspired and revelatory forms of the intuitive revelation. This is in spite of the lowering of the system and a dull inactive siege of the substance of intuitive mentality (on which the gnosis is acting to transform it) by the environing intellectual forces. These produce no intellectual thought, but only semi-intellectualised motions of the intuitive mental stuff, with certain dull memories of the asamata. The capacity of the system to respond when vehemently forced to touches of asamata suggestion is therefore not destroyed, nor can be till the physical mentality is idealised without any remnant of intellectual suggestion.

Predicted in the script today, “This afternoon a great advance in samadhi.. Today, a great advance in K.A... The highest ideality to be in full possession, though in the lower form.” This at the time seemed improbable, but has been not only accurately but fully executed. This shows a great advance in the suggestive script, which used formerly to be only partially fulfilled, the opposition at once proceeding with success to frustrate it, or else only fulfilled later at another time and under other circumstances

Samadhi, in deep nidra, was entirely of the ideality, where not drowned in tamas, though of a dream ideality, more than the gnosis of actuality. In lighter sleep there was no nidra or dream, but pure samadhi, dream being replaced by definite, coherent and intelligible vision of other worlds etc; all was besides of the highest ideality, which took entire possession of antardarshi and lighter swapna. These results may be considered as fixed; for however they may be attacked, they can no longer be thrown back towards asiddhi.

The highest ideality also took possession of thought, thought-speech, lipi, telepathy, tapas and trikaldrishti, the latter still a little besieged by incertitude and not yet free and ample.
K.A is now fixed in being, always felt when there is smarana, but often reduced to a very low intensity, just above the zero of definite cessation. It is now intense, persistent sometimes in sensation even against forgetfulness. The intensity is of a firm and growing force, though not secure against downward fluctuations.

In Samadhi sthula sukshma-shabda of speech in swapna and antardarshi, the latter mostly when it is on the borders of or verging towards swapna. Taste in samadhi comes, but rarely, as also touch; smell has not yet come back to the samadhi experience.

Roga rejected in the night, in spite of some slight rain exposure; only a strong but brief touch in both hands of phlegmatic roga, one only sukshma.

Thursday July 10th

Ideality a little suppressed; the intuitive mentality is externalised, it is now the environing power and not the intellectuality. The substance of consciousness is imperfectly idealised in the true ideality, but responds easily to intuitive mental touches and under pressure reverts superficially to its former type. Only when quite possessed by the ideal action is it an almost entirely gnostic consciousness. The final transformation is now to proceed to its completion—today. Lipi “Tomorrow incomple[re] perfection of the transformation.”

All the crude rasas have occurred with some force and frequency, pure or mixed, and some definitive rasas. Sukshma gandha has also recommenced; but there is still some massing of physical obstruction.

K.A is now continuous, in varying intensities, except when [there is] absorption; this is the last refuge of the mind’s forgetfulness,—except for sleep which brings about cessation. After the night’s sleep there is a touch of the old difficulty of recovery, but it is slight and more of a physical reminiscence than an essential reality.

It is indicated that the K.A today is to attack and get rid of the obstacle of the absorption. This has now already begun; the thought and thought speech no longer interfere with the continuity of the

6 MS their
ananda, or have only a slight tendency towards such interference. There remains the absorption with objects and work or action. This also is being removed, but the obstacle is stronger here; it brings momentary forgetfulness. These siddhis have long been insisted on and acquired in the type by the tapas, but they have been repeatedly lost and failed to achieve universality and finality. This time the siddhi is stronger; it remains to be seen whether it is final against absorption in pressure of work or strong concentration on objects. The fluctuation of intensity is here an obstacle, as the lesser intensity is unfavourable to the conquest of absorption. It is suggested that this also will be accomplished today, but will have to be confirmed in the following two or three days.

The obstacle to the memory is the clouding of a certain substance of mentality which gets into the way of the rest of the consciousness: the ideality can concentrate completely on thought the power of thought and yet have plenty of power of attention for other simultaneous experience; this is the principle of multiple concentration in a general embracing infinite consciousness, the divine vijnana. Initially in a very restricted type this is beginning. As the remnants of the old mentality disappear as a result of their present constant progressive diminution, dilution and exclusion, the simultaneous mental and bodily consciousness will be without farther obstacle, except that of sleep, which is already conquered in the type, but has to be conquered in the universality.

Lipi “Traigunyasiddhi in the physical mentality to be established without farther delay” This is already beginning, but not yet in complete perfection.

Highest ideality T² is generalising itself, in the immediate consciousness; it is still defective or limited in certitude in the field of external observation.

The sukshma gandha is stronger and has a more essential hold than before, but is not [ ] free yet to develop its new power,—the physical obstruction is still heavy and effective. Rasa is as before, but more rapidly varied when it is allowed to come. Sparsha too has begun, but so far in the old touches.

7 MS yet
Previsions in script. (1) Decisive trikaldrishti today begins to be generalised. (2) Fuller and greater progress in Samadhi. (3) K.A to conquer all the difficulties with an initial finality. (4) Rupa and vishaya today in the jagrat firmly.

Sahaituka kamananda, long discontinued, is beginning, but at first only in touches though these are increasing in frequency. They result from any touch on the body; there is frequently a mixture of it in the tivra. This rule is now suddenly established fully in the type, every strongly sensible touch is bringing the K.A with or without other anandas, tivra, vishaya, raudra, vaidyuta. The prediction of the Ananda is likely to be fulfilled in all the range of the five anandas. Raudra is now universalised; all touches of pain with rare exceptions bring in ananda, either at once or in the second instant after the touch. Vaidyuta is also beginning to resume and enlarge its operation. But it has still to be idealised as well as the three other Anandas. K.A itself is not yet idealised in perfection.

In Samadhi all is either highest ideality or dream ideality; but images of actuality are now commencing and all is turning towards the real reality. The pressure of the highest ideality increases with a constant though still obstructed rapidity. The samadhi was today much besieged by nidra. At night nidra prevailed and there was no progress.

K.A continued its insistence. Even in the prolonged writing it maintained itself in spite of pressure of obstruction, but there was a continual recurrence of forgetfulness due to excessive absorption. At night there was something of a collapse; tamas took hold of the system.

Rupa in jagrat today threw out some new brilliant forms, but did not seem to fulfil the presage in the script; vishaya, after enforcing itself in gandha and rasa and a slight renewal of sparsha, failed to develop sravana or a decisive beginning in sparsha.

Health is obstructed, relapses a little sometimes and makes no definitive progress, but only certain indications of the increasing arogya tapas.

Highest logistis continues to extend itself in the T² and the whole thought ideality
Friday, July 11th

This morning there is the return of the besieging intellectualised intuitive mentality. K A is persistent, but uncertain in its incidence. These two siddhis are advancing under difficulties; the thought is besieged by uncertainty and the intellectual confusion. There is a movement towards trikaldrishti of circumstance, but though the circumstances seen are actual and true, they are not seen in their right order and incidence, owing to the intuivity which takes possession of them before their logistic revelation.

The interruptions of K.A are being reduced to momentary forgetfulness; the mind is almost immediately recalled to the Ananda. This is gaining in spite of massings of the tamasic stuff of mental oblivion. There is even often a simultaneous forgetfulness and oblivion, part of the mind absorbed, part of it conscious of the Ananda. It is intimated in the script that whatever forgetfulness or interruptions there may be the K A will in these three days fix its irrevocable continuity. Ananda usually pervades constantly the lower part of the body, less constantly the arms, intermittently the upper body, very rarely the head. There is now insistence on complete pervasion. Sahaituka is increasing its frequency and incidence. Ananda in the head is now constantly recurring and making for continuity, but there is a tendency for it to shift from one part to the other alternately; it has to be fixed in a complete pervasion.

No definite progress in Samadhi, only continuance.

The K.A fluctuates, owing to the lapse of the being towards the intuitive mentality. In that mentality there is the absorption of the mind in the thought because it has to listen and attend, the limited concentration, the forgetfulness of other things. The gnosis illumines easily without need of this strenuous concentration; it is capable of a multiple concentration. When the ideality is at work and the system full of the ideality, then the K.A proceeds without any but momentary lapses into oblivion.

Chitra in some abundance, but unstable. Repetition of vishayas, gandha, rasa, touches of old sparsha, but on a small scale. In Samadhi great abundance of lipi of all kinds, in a successive flow of sentences, but with some incoherence, and without a link of intelligent succession in the flow. Only in the lighter swapna is
there full ideality. Some plenty of shadowy rupa, but insufficient stability. Easily dispelled touches of roga.

Saturday July 12.

Imperfect recovery of vijnana. There is a varying between intuitive mentality, intuitive and inspired ideality and the highest ideality with much of the old mixture.

Attack of roga, violent in the subtle body. There is an intense struggle between roga and physical health, the latter supported by the tendency to arogya. The occasion is the exposure to damp cold air at night; the old bodily tendency wishes to reply at once with fever, cold, cough, etc, the health force wants to get back to the state after Alipur yoga when the body was impervious to illness and get rid of the subsequent morbid sensibility. The ideal arogya itself is a different thing which yet waits to take direct possession of the body.

In Samadhi relapse to unidealised nidra with difficulty held up to occasional highest ideality

The system is returning to the ideality. Highest inspired ideality and a little of highest revelatory gnosis with an intuitional basis is taking possession of the li. Inspired highest gnosis is also taking possession of the thought-speech and initially of the perceptions; in the latter it is the highest intuition packed with inspiration. In T² the mixed movements are being rejected and pure highest ideality insisted on though with some difficulty; yet with a steady progression. K.A is also reviving its force which has been low owing to the depressed state of the physical shakti.

Chitra and fragmentary vishaya but no definite progress. Roga has been strong in the subtle sharira (feverish symptoms), but little manifestation in the body except depression and a sensation of weakness combated by the pranic tapas. Arogya force is changing to the ideal tapas, but not yet visibly in the physical body.

Roga conquered in the evening.

Sunday July 13th 1919

In the morning highest inspired revelatory gnosis and revelatory with inspirational basis take possession of lipi, thought-speech
and perception. T is still in the same condition but has begun to be taken up a little. To get rid of the remnants of mental effort and allow the vijnana to act with an entire freedom on the passive system is now the condition of rapid progress.

K.A has recovered, but is still subject to forgetfulness of absorption. The pervasiveness is now in a way established from head to foot, but the intensity is still liable to frequent loss or depression or diminution and the insufficient intensity brings with it the other imperfections. The body is still liable to the sense of lassitude and weakness.

Immediately afterwards K.A recovered all its intensity. When this is present forgetfulness can only be momentary, except in case of very strong absorption in which case the intensity still tends to fade.

In Samadhi there is again the full force of the ideality in spite of some heavy nidra; but as yet no definite forward progress, only a preparation. The dream ideality is still strong, not replaced by the actuality. The kamananda invaded the deeper samadhi and even the nidra, but with a frequent recurrence, not in continuity. It is however attacked then by the degradatory change to a negative form; intense but of the impure anandamaya, (negative electrical reaction.) Intensity of the ideality seems to be established in spite of some tendency to relapse; the old thin ananda is being excluded from the system.

The precise trikaldrishti is again being taken up; the decisive trik. now manifests in the intuitive form through an obstructing veil of mentality; it is correct when it is not modified by the mental stuff; modified it gives the general fact accurately but not the circumstance. The pure intuitive mental trik. is often accurately correct up to a certain point, but often errs in some details of the circumstance, but always in arrangement, not in fact of tendency or actual potentiality: the intellectualised intuitivity of the mind is always a confusion, but this now only occurs when there is mental tapas and insistence on the siddhi.

K.A. less insistent during the latter part of the day. In Samadhi at night no progress
Saturday July 14th 1919

In the morning progress only in trikaldrishti tapas. The system lowered to the intuitive mentality; in that mentality the habitual mind set to work and all its excesses and stresses set finally right, then this habitual mechanical intuition rejected for the pragmatic intuitivity. This finality was effected by every suggestion being at once stripped of certainty; it fell then to its right proportion; the habit of insisting because many suggestions proved correct, was finally killed; whatever recurs will now be an involuntary habit of response with no vitality in it, a suggestion from outside unable to command credit. The pragmatic intuitivity is being similarly dealt with and replaced by the real intuitivity. As yet the highest intuitivity has not been separately handled for finality. The next difficulty is the insistence of a mental intuitivity responding to the gnostic or rather catching at it before it is formed on its own plane. This is possible because that was always the real nature of mental thought and the whole mentality is not yet possessed by the gnosis. This action is henceforth mainly that of the highest or truth reflecting intuitivity which has taken into itself the abandoned mechanical and pragmatic action. The truth reflecting intuitivity is now put into its proper place. It has to be replaced entirely in $\text{T}^2$ by the ideality: but in this operation there are still considerable difficulties. The chief is the persistence in the stuff of the intuitive mentality of the habit of catching at the gnostic light instead of allowing it to manifest in its own way, on its own level and illumine the mentality. The other difficulties are incidental and secondary, but considerable. They all arise from old habits and limitations.

In samadhi at first pressure of nidra. Afterwards complete ideality. Kamananda in samadhi, more continuous, but not any complete continuity. Mostly thought; no lipi or drishya.

$\text{T}^2$, but in the intuitive mentality, corrected by modified or mentalised gnosis. Tapas still too insistent sometimes in the mentality. Modified gnosis gives only a relative certitude. Mental preparation of $\text{T}^2$ of gnosis.

K.A distressed and thin in the morning, not quite suppressed, sometimes vaguely intense, but not in possession of the sthula
body and subject to oblivion. In the afternoon a growing force of intensity; full recovery now in the evening.

Roga still in fragments more or less frequent of occurrence. The two chief rogas continue, there is here no progress visible except a slight almost imperceptible strengthening under pressure in the central difficulty. Sharp continuous and recurrent pain acutely localised in one spot on the left side of the stomach; yielding slowly but not quite to local pressure of tapas. Ananda, but an ananda dominated by the sense of pain, rather than dominating the raudrata.

Chitra and vishaya slight, fragmentary and occasional; the sadhana Shakti is occupied with $T^2$.

Strength of combined titiksha, udasinata, nati long established and almost perfect in universality, is now growing very intense; only when the mental tapas is overstressed and baffled, does some denial of passive asamata force its way in for a moment. Nati in the pain of roga was only contradicted slightly in the mental buddhi, not in the prana; this was the reflection of a certain intolerance in the body. Positive ananda is general, but not yet absolutely perfect in all its quality or universality. The second chatusthaya is established, but not yet in its perfect force of vividness or harmony of all its parts, eg dasyam and aishwarya, or sarvakarmasamarthya, or the qualities of the fourfold Ishwara. Defect where it exists is chiefly due to insufficiency of gnosis.

Gnana is perfect in ideality in perception and speech, except when lowered to meet the deficiency of $T^2$; even then it is normally not always ideal in substance except in specific thought of $T^2$ on external things. It has attained in type the highest logistic ideality. $T^2$ is still imperfect in ideality owing to persistence of intuitive mentality, but that is about to be removed or transformed in all its range of activity. Samadhi is very imperfect, though now advancing with an obstructed and interrupted rapidity. Lipi perfect except in physicality, for it is yet insufficiently stable except at times, though no longer bafflingly fugitive, and therefore insufficient in rapid legibility and fullness; but it is already possessed of all the qualities to a sufficient extent for all its ordinary practical working. Jagrat rupa is often abundant and perfect in chitra, but this it has been for years together; it is suppressed still in akasha, good only.
occasionally and unstable except in the very crude. Jagrat vishaya is in a still cruder condition.

Sharira has developed a perfect foundation of K.A, continuous but for oblivion by absorption and sleep; the other Anandas are prepared, but not regularly working except raudra which is still capable of being overborne by a great degree and pressure of pain. The other siddhis are obstructed, except bhava saundarya. Some of them are advanced in certain directions.

The fourfold Brahman full in continent and substance, not yet in content, but sometimes lowered by lapse to mentality. Krishna Kali prepared and established, but not yet in perfect working. Karma still rudimentary except in the habitual personal karma in which it is advancing towards perfection.
15–26 JULY 1919

Yoga Diary
July 15–July 26
1919

July 15th Tuesday.

Today is supposed to begin the finality of initial perfect gnosis in the highest logistic ideality by the firm beginning of T². This is due for fulfilment in the second half of July. The two first chatusthayas are at the same time to begin their higher and fuller perfection,—they have already the fundamental perfection in samata, the fundamental completeness. K.A is to confirm its continuity and intensity and be a basis for the regular working of the other Anandas. Karma is to develop its already developing action, Krishna Kali to deepen and possess the system, Ananda Brahman to fill in with the Ishwara. The other siddhis are still uncertain of development, but the fight with the obstacles of arogya is to continue with a necessary result of advance in the tapas of Arogya. Practically all the siddhis are ready or almost ready for advance except the two most difficult parts of the Sharira and the outward Karma.

After a little difficulty the transformation of T² to the ideality has begun finally. The action of the intuitive mentality continues, but accompanying it there is an ideal action which gives sometimes a decisive, sometimes a limited and therefore relative certitude, sometimes in conjunction with the lower movement a mixed decisive and relative certainty or a mixed incertitude and certitude. This is especially in the T² of circumstance.
The trikaldrishti after perfecting itself in an universalised type in the intuitive mentality of a character of intuitive inspiration is now definitely transforming T² to the intuitional gnosis of the character of intuitivised revelation. This is attended with some fresh disturbance of the intellectual stuff, but that as soon as it comes is changed or replaced by the higher forms of thought and perception. Tapas is now of the same nature as the trikaldrishti.

The first chatusthaya is already being given its higher perfection. The positive ananda of equality is taking up all the adverse movements and reactions.

Vishaya is again renewed with strong gandha and taste of perfume. These two vishayas may now be considered established, however small the present range of their action.

Strong struggle with the roga difficulty. The pain in the side tried to prolong its continuity and represent itself as the sign of some organic ailment, but immediately disappeared every time ideal tapas was applied. Pain in response to pressure in this part of the body persisted, but has also disappeared suddenly. Throughout there is evidence of increasing force of arogya tapas, but it is not yet able to eliminate the roga with a decisive beginning of finality.

July 16th Wednesday

Today is to be a hollow between two waves; there is a siege of the system by the external mind armed with all that has been cast out; but this comes now no longer in the shape of the old intellectual mind, but a semi-idealised intuivity translating into mental and physical terms all the rejected suggestions of the partial ideality which supports the lower order of things, drawing from a perversion of ideal intuitions their justification. For everything in the lower order has its justification in a truth of gnosis expressing something in the Infinite.

Kamananda, which was allowed a little to lapse yesterday, is after some difficulty of mechanical lowering and attempted discontinuity—attended by an emptiness of the gross body and retirement into the subtle physicality,—renewing its self-confirmation. The old habit of relapse is not yet excluded even in this first siddhi of the physical system. It is restored to a slightly
obstructed continuity, but has not full possession of the physical system.

There is a strong attempt to restore asamata attended by a great violence of suggestion of raga and dwesha; it is not supported by the Purusha or the personal Prakriti, but has been able to produce asamata in the outward physical mentality. These things are still possible because of the persistence of intuitive mentality in the stuff of the physical consciousness; that can only be secure against mental suggestions by a partial personal siddhi cut off from the external Nature or by complete idealisation.

July 17th Thursday.

The ideality has resumed its work; it is taking up into the mixed intuitional form of ideality, mixed by the presence of mind-stuff with its limiting suggestions, the truth-reflecting intuitivity and itself is being taken up by the highest logistis. The inspirational intuitivity suggested by the external mind remains as an obstacle, but is, when it comes, attacked and half transformed by the gnosis. Its power is in all those things that have not yet in the Abhyasa been assumed by the highest logistic gnosis

The obstacle now is the sluggishness of the old mentality unlifted by the inspired intuitivity which mixes with and keeps down the gnosis. This is the old action of the mixed intuitional ideality then strong and luminous, now unconvincing and void of force. Only the highest gnosis can continue the sadhana. The depressed lowness of the system has given occasion for another and furious attack of the environing intellectual powers, with a forced physically mental asamata in outworks of the system, vibrations not belonging to the system, but imposed from outside, also asraddha not in the Ishwara, but in the siddhi of the ideality. This has been expelled by a resort to rudra tapas of rajasic anger in the Shakti. Both the relapse and this resort have been recently predicted in the trik. and the lipi, the latter almost daily in an insistent lipi. The result has been unexpectedly a momentarily complete conversion of the physical mentality into the ideal form[,] the very siddhi obstinately obstructed for the last several days.

K.A. like every other siddhi has been depressed by the general
obstruction. It is now reviving though with some incertitude.

There is some tendency of recovery in the swapna Samadhi which has for some time relapsed almost entirely into nidra.

All the rest of the day a recovered action of the ideality.

July 18th Friday.

The ideality is again taking up the whole thought and T2, this time with a greater force of universality, but it is in the intuitional ideality and not the highest gnosis. The system is now almost settled in the intuitional ideality, though occasionally the old intuitive being breaks in or surges out from suppression and takes temporary possession. This is whenever the gnosis has been for some time inactive.

The siege of Roga continues, but chiefly in the subtle physicality: the effects on the dense body are occasional, sometimes strong, but thrown out by the tapas after a short struggle. Only in the two still chronic ailments is there as yet a permanently successful obstruction; but in the centrality the effective pressure of Arogya-tapas increases with a sort of slow, but always perceptible steadiness.

Chitra is showing some tendency to greater stability, but as yet only in the indirect vision. The fugitive forms have more firmness in their incidence. There is no improvement in the character of the forms or the range of the rupa.

After some dark nidra strong ideal action in the Samadhi. Finally the highest ideality took final possession of the perception, speech, lipi and to a certain extent of the T2. In deeper and deepest nidra also ideality was exceedingly strong, but with some persistence of the dream character and occasional incoherence. Nevertheless coherence in the lipi even here was stronger than before. Rupa etc are now taking on the character of actuality, though as yet only of the pranic (astral)\(^1\) reproduction of immediate things experienced in life. The presentation was accurate, entirely stable, steady in reproduction of continued action, though here with some interruptions and resumptions; combined

\(^1\) In the manuscript, the closing parenthesis follows “reproduction”.—Ed.
scene not always complete, but with strong presentation of the central object and action, the accessories being left in a shadowy suggestion. The rupas however were no longer chhayamaya of the underworld, but tejomaya of the pranic world, with great but an unearthly vividness, beauty and force of life. Massed rupas of the same character appeared in light samadhi on the borders of antardarshi, but with a less heavy fullness and not actual, but rupas of possible things, and not stable, but also not entirely fugitive. Thought, judgment, interpretation maintained a coherent ideality even in the depths of nidra. A much greater character of normality in the whole samadhi.

Vishaya (physical) in jagrat antardarshi attained in touch to a great plenty; all the subtle results, suggestions, sensations of sparsha, except the actual sthula incidence. This too occurred freely, but only in habitual rupas. It is noticeable however that nothing came which had not previously been gained in past years by sadhana, only they came with a greater force, frequency and intensity. In swapna there is now more frequent and forceful sparsha. Sravana is obstructed both in antardarshi and full jagrat; it is rare even in swapna.

An attempt at a higher Thought confined to the centre of the thought above the head and a withdrawal of that which forms in the brain region of the subtle mind or is occupied with penetration to this region. This was the normal gravitation because here the thought assumed a satisfaction of present living actuality, while above it had a higher, but remoter less physically satisfying quality. The attempt to take up T² there failed initially and there was a brief relapse to the mass of possibilities and incertitudes, but all this is now taken up by a fiery thought, ideal of the pragmatic nature. This T² is telepathic, but correct except for certain confusions contributed by an understrain of intuitive suggestions which are for the most taken up and half-justified, half-corrected immediately or with a little difficulty. The centre thought now predominates and gathers round it at its own level all other thinking, but sometimes descends to give its own character to thought manifested in the lower levels or regions of the subtle body.

At night renewed action of coherence and ideality in the dream state.
July 19th  Saturday

Rf. [Reference] “Which I must act, briefness and fortune, work”, of the approaching application to life of the ideal knowledge, power and guidance.

In the morning some retardation; inaction of ideality broken by a slight partial and a recurrent larger action. No definite progress in any direction.

Samadhi; at first full ideality, nidra conquered; coherence and strong gnosia in all the activity, but not all kinds in equal power. Afterwards some force of nidra, but not complete, the action always of the ideal kind. No prominent actuality.

In the afternoon T\(^2\). All actual T\(^2\) of an ideal intuitional kind, well-established, normal, satisfying in its limits, but subject to narrow limitations. Then a double movement first to extend to all possible trikaldrishtic and tapasic suggestion, at the same time to lift up to a higher gnosia. This was interrupted by a taking up of the suggestions of the pranic and mental world sometimes without, sometimes with a reference to their origin in the logistic gnosia. This brought finally into the solid intuitional ideality all these possibilities given their proper place, so far as that could be done in this kind of perception,—but the proper eye for them is the inspirational seeing,—got the right actuality of the may bes, might-be, may have been, might-have-beens, may-yet-bes, and even the relative certitudes of their will-bes, often but not always realised, with a certain initial decisive certitude of selection. The higher thought now coming for the T\(^2\) will be inspirational gnosia. It is already beginning in the intuitional form or taking up the intuition. These movements had been made before on a lower scale and were often taken for the full and final siddhi: but this is of a greater, fuller, final kind in the real ideality standing on an idealised substance of the whole conscious being.

Subsequently the inspired thought began to take the place of the intuitional gnosia and take up into it the T\(^2\). Much more might have been done on the intuitional basis, but this would have been a lesser siddhi and was not the intention of the will of the Ishwara, which is already giving presages of the ascent beyond logistic to the second stair of gnosia, when once the supreme logistis shall have been formulated in its relative entirety.

www.holybooks.com
Health stronger again in resistance to cold exposure. The central arogya fluctuates, but is on the whole growing steadily but slowly in an initial preparatory force. There is no improvement in the digestive insufficiency, but rather a constant fluctuation and even a relapse in the symptoms of the one definite ailment. Continuity of K.A also fluctuates, though it is fixed in a recurrent continuity and the obstruction cannot resist the smarana.

At night incoherent dream and nidra.

July 20th Sunday.

Script in accordance with intuitional ideality suggested day before yesterday the following possibilities for the rest of July.

(1) T² sure; initial perfection only. [T² is already sure but the initial perfection depends on the final normality of the highest logistis.]²

(2) Samadhi sure; fixity, ideality; nidra initially overcome, but at night active. [Samadhi, made sure this morning, in ideality and fixity; nidra is very initially overcome, except at night when it reigns and repels all certain forward movement.]

(3) Vishaya and jagrat rupa to get over their old difficulty [No sure sign of this siddhi; a slight improvement is all that is visible.]

(4) Ananda, fixed in recurrence of continuity. Also initial conquest of oblivion—except for sleep and samadhi (perhaps), the only difficulties. [There is already fixity of recurrent continuity and an unfixed recurrent intensity; oblivion has been overcome once or twice in initial type; but for some time there has been an indulged habit of oblivion in absence of will and smarana]

(5) Health; battle, supremacy of tapas, but not the perfect arogya. [The battle continues. Tapas is already in a way supreme, except in the two rogas; in one of them it is frequently effective more as ishita than as aishwarya or vashita; in the other it is for the time sometimes effective, sometimes ineffective. There are also some fragments of former rogas which very occasionally recur and resist tapas.]

² This and the five sets of square brackets that follow are Sri Aurobindo’s. The closing bracket in item 3 and opening bracket in item 5 have been supplied editorially.—Ed.
(6) Saundarya in bhava. [Youth in bhava is growing, but bhava of saundarya apart from the youth-light is still uncertain. Physical youth and saundarya make no progress.]

(7) Uthapana still in difficulties.

In Samadhi in the morning perfect reign of ideality. All the forms of experience are beginning to develop in the ideality. Lipi was except for one or two instances coherent and significant, or sometimes significant in a lilamaya incoherence, even in frequent sentences set in fugitive masses. Dialogue, enacted story, some narrative. Steady action and stable rupa in abundance. Only vishaya absent. But the final beginning of assured samadhi progress is founded. Only jagrat rupa and vishaya are still subject to the old unconquerably obstinate obstruction.

In the sluggish states of the system, except at night, inertia, passivity, blankness whether of tamas or of shama is becoming the exception. An activity of \[ \text{intellectual ideality, that is, the low pitched intuitional gnosis which supports the mental world of possibility, is then the rule. When the sadhana tapas is active, inspired ideality begins to resume its work of taking up the whole consciousness; sometimes an inspired intuitional, sometimes an inspirational logistis works on the thought and to a less degree on the tapas. It is only at a high pitch that tapas and trikaldrishti join in an assured ideal equality or oneness.}

The inspired ideality is giving a more frequent decisive certitude of trikaldrishti in T\(^2\) and the inspired intuition for the first time a quite perfect selection of succession of detailed circumstance in time; but these things have still to be universalised. The uninspired intuition is now being cast out of the action; since it is no longer necessary in the process of the taking up of the intuition by the inspired logistis.

K.A is being restored to constant intensity, pervasion, slightly interrupted continuity by the sadhana tapas. The thick recurrent masses of tamas of oblivion in the physical being are being attacked and dissipated, spontaneous recurrence enforced, sahaituka

\[ MS \]
Ananda brought into occasional activity. The mental tamas masses of oblivion, while writing etc are also being attacked, dissipated, set aside or illumined by light of ideality. The work, it is said, will be confirmed today (thought) and completed in three days (lipi). The difference of Ananda in the postures is still marked. Sitting it is capable of a great initial intensity and force of continuity; today greater and more exciting to the whole system than before. Reclining, it is capable of a great intensity, but often impure of the unidealised kind, especially when there is samadhi and nidra. Walking it is intense with difficulty, more liable to decided interruption or reduction to a minimum. Standing it is still less intense except at moments, especially if there is other occupation. These defects are now being attacked. Insistent intensity has been introduced into the standing attitude, recurrent when reading; it is being insisted on in the walking. In reclining the ananda is being purified and idealised: it is being enforced in Samadhi.

Samadhi, late in the morning. Ideal lipi, scene etc. As the rupa becomes pranic instead of chhayamaya, visions of things never seen nor suggested by the seen arrive. Today, an eagle carrying a lamb to its nest and there beginning to devour it, half dead; nest, eagle, lamb very vivid, but pranamaya, as in a living picture of the Indian type, not quite the earthly bhava of the forms, nor the earthly lines, in spite of the bodily type and species being the same. This heralds the liberation of the rupa.

Ananda in samadhi constant in lighter depths, spontaneously recurrent in deeper swapna, but interrupted by nidra in the deepest swapna. The ananda tends to draw the mind back to the body, but then there occurs often a phenomenon which is now growing, the double or triple samadhi, in which the outside world is experienced accurately in an outer consciousness of sleep, by the sukshma and not the sthula indriya. The inner consciousness remains in swapna, a deeper is in sushupti of some kind, for the most part swapnamaya sushupti. Sometimes the outer world is experienced by the subtle sense with a fringe of waking physical sense. At times there is a division of the consciousness between the outer physical and the inner dream mind, the latter withdrawn into swapna and sleep, the
former still aware physically on the outskirts of outer sound, touch or experience.

The replacement of the idealised, intuitional intellectuality by the inspired intuitional or intuitional inspired for the telepathy is proceeding very rapidly, but is not yet absolutely complete. Meanwhile the higher trikaldrishti acts only by intervention in the mass of rapid and crowding ideal telepathies. Now the process of including the inspired intuition has begun and is proceeding with a great initial rapidity.

The higher level of the thought and T² is now (in the afternoon) beginning suddenly to rise to the revelatory inspired and inspired revelatory logistis. This is necessary in order that the inspired and intuitional inspired may take entirely the place of the intuitional thinking as the lower level of the thought process. This lower level represents the substitute for the former intellectually intuitive thought and uncertain telepathic perception, the thought of the possibility. The higher level rises towards the certitudes and more and more, as it rises in the scale, commands them in its light and power Drishya of the panchabhuta, mass and karma, the panismic ether and some of its elementary incidents, wind, rain etc is now recommencing. This brings in three of the long suspended vishayas. The other vishayas are coming forward, but with no widening range. Sravana is the most difficult, because the physical ear is beset by physical sounds in the daytime and cannot easily distinguish the slighter subtle sonances.

Sadhara rupa also is returning, fine crude, often perfect, but without stability. This has brought in an outburst of the finer prakashamaya niradhara rupas in a variety, groups, persons, objects, animals, scenes, some clear, others confused, none stable, except a solitary one or two: but there is already a hint of a tendency towards stability. Of the three gunas, variety, perfection, stability, the first long resisted may possibly now be on the point of bursting the barrier. It is to be noted that lipi in the morning declared that today would be the turning point in jagrat rupa and vishaya; this lipi has been repeated with a firmer asseveration. This may be the beginning in the rupa; but as yet there is no appearance of fulfilment in the vishaya. All the material crude forms have now manifested in
this finer crude niradhara, — prakasha, chhaya, tejas, jyotir, agni and varnamaya forms. Subsequently some union of stability and relative perfection began to be developed in a still greater but confused and irregular variety. The higher forms occurred hardly at all and then without stability.

In Samadhi much pressure of Nidra, but the ideal samadhi persevered and kept itself in progress as an overtone. Rupas of the manasa loka, bright and tejomaya, but with a brief stability. Dream was immediately converted into symbol of ideality; incoherence of lipi into a crookedness of pointed significance.

In the lapse of the tapas the intuitional ideal mind reappeared for a while, but always with the inspired gnosis hovering over it to take it up and transform it into its own character. As yet the morning’s hint of rapidity is not fulfilled, — it was so understood at the time that there might be some delay. The inspiration holds the field.

K.A also lost for a time its continuity and intensity. It is now recovering, but at this time between 12 and 3 it tends to some deidealisation and conversion into perverse negative electricity and has to be restored on the resumption of the normal activity. This has been done today with rapidity.

The conversion has begun of T² into the revelatory logistic ideality. At first this is attended with some intuitive revelatory action incased in the old intellectual doubt, but this is to be changed into the inspired logistic revelation. The certitude is already immensely increased, but it is not till all is changed to the terms of this drishti that there can be an initial perfection of accuracy in the T². The drishti reveals the decisive truth of each movement, whether it be a possibility of self-effecting force or a relative, temporary or decisive finality of effectuation. This is the last movement within the ideal logistics.

The revelatory even in the intuition gives the circumstances with a [constant]¹ accuracy, but this is attended with much incertitude owing to the external intuitive intellectuality which darts in its suggestions and to a certain distrust and anxiety about the possible

¹ MS constance
error of the result in the old judging mind. The element of revelatory judgment does not with sufficient prominence accompany the revelatory seeing of tapas or intention of action. Nevertheless, when left to itself this intuitive revelation can judge and fix accurately enough possibility and finality, even though it is not so forcible and conclusive as the inspired or the full revelation. This is with regard to succession of circumstance. This logistis acts as yet only partly in judgment of time, very uncertainly in relation to space and direction; but sometimes it takes them up all three and combines them with sufficient or complete fullness of accuracy. All this is in the field of exercise. Teledrishti is not yet being exercised in this higher action.

The lipi is still logistic, but a higher than the logistic ideality is entering into it attended by a diviner splendour of light and blaze of fiery effulgence. This may be called the hermetic gnosis. Its essence is çruti or divine inspiration, as the essence of logistis is smriti, divine mnemosyne. One remembers at a second remove the knowledge secret in the being but lost by the mind in the oblivion of the ignorance, the other divines at a first remove a greater power of that knowledge. One resembles the reason, is a divine reason, the other is [of] the nature of prophesis or inspired interpretation.

Sparsha is now abundant in the three things formerly gained by the sadhana, touch of subtle water and fire, touch of light things, eg insects, thread, wind,—both of these strong, vivid, materialised, effective on the physical body, and other touches not materialised, but having a certain physical result of sensation; subtle in intent, sthula in result, but not with the full density. Some of these sparshas are however on the verge of materialisation. All this action was formerly regarded as an inferior insufficiency by the intellectual impatience, but is now accepted as a stage towards the full sparsha. The old drishya of the pranic ether is also resuming its plenty. The çravana seems to be awaiting the silence of the night for its manifestation; but the sthula hearing is becoming exceedingly acute and comprehensive and there is a hint of sukshma sound behind its abundance. The lipi is to this extent justified, but there is as yet no sign of new extension, without which the barrier of obstruction cannot be said to have fallen.
Sadhara and niradhara are developing with some rapidity: in the midst of much confused, shapeless or half-shaped rupa there are some of perfect or almost [perfect vividness,] completeness and distinctness; old types of rupa are coming back with a greater perfection and vividness, but they have the old fault of instantaneous instability. Nevertheless this is a definite advance. At night there is the old difficulty; there is then the greatest confusion, vagueness, crudity; but there is also a beginning of better things.

Some isolated çravanas of the old type.

The revelatory ideality is taking up the consciousness, even the revived suggestions of the external intuitive mentality, but this involves a momentary retardation in the decisive trikaldrishti-tapas.

The yogic çravanas in the closed ear, strong while they lasted, but not persistent as in the former sadhana. Some çravana speech. But there is as yet no enlargement of the çravana

Nidra at night, but also samadhi. The coherence is now firmly established and enforces itself with great power. Stability in the chhayamaya rupa. The samadhi is fixed in the ideality. All has now to be developed, the physical obstruction which denies samadhi overcome, nidra to be replaced by samadhi.

July 21st  Monday

Today, a full play of the ideality, but not all of the highest logistis. Highest logistis to attain to a partial universality. Increase of chitra and vishaya. Increase of Ananda. More attention to the physical siddhi.

Ideality is now acting in masses, but of all kinds, from the idealised intuitivity to the highest logistic, but the last is pressing on all for transmutation. The fluctuation of Ananda and the struggle in the Arogya continue. K.A idealised in the highest logistis is beginning to act and to press upon the intuitional and mental forms of the ananda.

Great intensity of gandha and gandha-rasa, combined and allied, but not yet the free variety. Great intensity of rasa, the crude turning to firm developed and to suggested perfect rasas.

---

5 MS perfectness
The obstruction to freer frequency and variety has now alone to be broken for the perfection of this siddhi.

Farther Sadhana in the morning discontinued through pressure of work. This is a defect which the consciousness has not yet overcome, owing to deficiency of the multiple concentration.

Immense development of the samadhi. Only towards the end some lapse into nidra. Inexhaustible abundance of rupa, especially of the mental plane, but also of the pranic and chhayamaya, scenes of all kinds, figures, action, lipi, dialogue etc: for the most part a high ideal level. The chhayamaya scenes now attain to an absolute stability, frequent though not invariable; the others have only a first stability. There is also stability of successive action, but there were only one or two unsuccessful attempts at combination with stability of scene. Only once a fugitive touch of the incoherent dream consciousness attempting to bring in a terrestrial association of memory and confuse with it the accuracy of the recorded impressions. A little more development will securely found the whole base of swapna samadhi. K.A in samadhi, interrupted occasionally by an intervening cloud of nidra power between the physical and the higher mental consciousness, but afterwards more persistently by a deepening towards nidra; but after the brief sleep there was an immediate recovery of the Ananda. It is now noticeable that when the Ananda occupies the brain there is no oblivion; when it pervades the rest of the body, but not the head, oblivion becomes possible.

Work in the afternoon.

Rasa acts now with some frequency, though without an entire freedom. Definite rasas are coming with increasing ease and variety. Gandha is for the present obstructed. An old siddhi, sparsha at a distance, sukshma or sukshma-sthula in incidence, felt by the subtle body and conveyed by it in the same moment to the physical sense: there is however no division, it is felt as one touch by the united sukshma and sthula sense. Rupa has developed a few instances outside of the crude of a stability still within the primary stability, but in its highest degree. Variety of rupas at night is on the increase, crude of all the kinds, jyotir etc, and dense of the crude, dense and developed degrees, but few as yet are complete,
except certain unstable forms and some stable crude rupas. There is
a hint too of developed rupas; but not the actuality, except in some
fugitive incomplete formations. Rare instances of cravana of a
new kind. Attempts at jagrat sukshma speech, not yet articulate or
fully audible. Thunder in the ears. The old persistent, unceasing
loud cricket sound in the room, once rejected as a physical sound,
is again heard, and is now clearly marked as sukshma. The thunder
in the ears is followed by a great intensification of the physical
hearing.

K.A is now very often stable in the head. Then even a low
intensity of ananda turns to constant sensibility.

The idealised intuitivity is allowed sometimes to act, but is
now the truth-reflecting intuitivity; there is no predominance of
the pragmatic or mechanical mentality. These only recur in a dull
fragmentary fashion.

[July] 6 22nd Tuesday.

The higher hermetic gnosis is now showing itself in the rev-
elatory logistis not only in the lipi, but in thought-speech and
perception; something of it is evident in trikaldrishti and Tapas,
even when these act through the idealised intuitivity; this action no
longer disturbs to any great extent by a premature anticipation of
the future actuality or possibility and falsification of the present ac-
tuality. That was formerly the result of a higher power suggesting its
greater possibilities to the lower plane. The purification of the lower
plane makes it a clearer channel and prevents this consequence. In
the tapas there is some hint of a possible omnipotence of the gnosis
which will remove the obstacles of the existing law of the body.

Yesterday there was a violent attack of roga trying to mate-
rialise itself in digestive disturbance leading to nausea. This was
cast out by the tapas after some fifteen minutes or more; it left
a slight transient residue, followed by a strong health state. This
morning the attack was of the diarrhoeic tendency, with all its
concomitants of jalamaya, agnimaya, vayumaya disturbance. The
revelatory tapas was applied to correct the sanskaras of the bodily

6 MS June
mind and very rapidly the attack was overcome without its ordinary
reaction of constipation. Some slight recurrent residue of tendency
remains, but not enough to trouble the system. There is a great
increase of tapas supremacy in the dealing with roga. If it can be
extended to the digestive perversion and the central weakness, the
Arogya will have its first complete basis.

In the morning physical tamas, some relapse into the old in-
tuivity. This is now being corrected, but it is noticeable that the
obstruction is being concentrated in the physical system. Opposi-
tion in the objective subjectivity is half-hearted; the opposition has
lost faith and self-confidence.

The remnants of the habit of intellectual judgment and re-
cipiency are now being raised and extruded from the system; the
ideality is to be its own recipient, its own critic, questioner, judge,
authority.

Samadhi in the later part of the morning. Perfect freedom of
rupa, variety, perfection, vividness, but only in initial or primary
stability in the pranic world. Chhaya only comes in usually as a
shade on some of the pranic rupas; most are free from chhaya.
Incoherence in the lipi is at once turned to coherence or proved
to be a coherence. Antardarshi rupa is being prepared in the light
swapna, on the borders of the two states and in some cases in
antardarshi itself there are scenes and figures of a pranic kind, not
crude, but ghana.

Rasa is now frequent in masses, sometimes persistent; ob-
struction hardly exists for its action. Gandha gains in force, but
is prevented by the obstruction from frequency.

The incidence of the relapse into the intuitive intellectuality has
been very obstinate and severe, a great confusion created, almost
all the old incidents of relapse suggested, even something like the
old hardly idealised intellectual intuivity revived in fragments and
in the mental atmosphere. The orderly and powerful development
of the gnosis has undergone momentarily a strong interruption.
Nevertheless lipi after some fluctuations has greatly increased in
force of revelatory light and the breadth of its flood and luminous
force; thought speech has also grown in inspired revelatory power.
The T² has been most afflicted and with it the thought perception

www.holybooks.com
obstructed or brought to the lower level of intuition. At present all perception is of the intuitive ideal level with a touch or pressure of revelation tending to rise into the intuitive or inspired revelatory logists, attended often by cloggings of intuitive matter or deviating into some kind of imperfect inspiration. The intuitive mentality itself has been so strongly idealised in its struggle with the gnosis that it is difficult sometimes to distinguish between this heavily idealised intuivity and the real intuitive or inspirational gnosis at its lower levels of force, light or certitude.

Dream at night of an extraordinary coherence, free for the most part from present association, except in the later nidra, and almost on the point of conversion to ideal experience of past, future or otherwhere happenings. In samadhi some incoherence and a lower level of general force of the ideality, but no cessation of abundance. This incoherence tends to turn into a more prolonged and sustained perfection of dialogue, narrative, lipi etc.

K.A afflicted, but not discontinued in its recurrence. Some attempt at enlargement of drishya and vishaya generally, as of rupa, but very uncertain and infirm though tending to largeness. Persistence of attack of roga and replying tapas. Generally an embarrassed but still successful progress, preparing a greater siddhi.

July 23rd Wednesday
A day of partial recovery and advance.

T² is acting with a quieter, deliberately limited and restrained action. Correct in the intuivity of the gnosis, although embarrassed by a strong adhesion of stuff of uncertain mental intuivity, the inspirational form is still overpowered by the latter disability, gives only the tendencies, pressures of force, suggestions of coming possibility. Intuitive certitude is slowly but steadily enlarging its operation.

K.A after some difficulty has recovered its basic continuity, but thinly without the opulent incidence and pervasion. Steady in act, variable in incidence, but afflicted by oblivion of absorption, only the thought not going out to objects, interferes less with it than the concentration on act or object, but this too now causes oblivion when attention is required to the thought-process. At the same time there is a progressive force of recovery.

www.holybooks.com
Premananda in the Vishwadarshana has for some days been insisting on its normality. Ahaituka mental darshana is the chief obstacle; it is shantimaya with suppressed prema or anandamaya with diminished prema. This mental sight is disappearing before the premamaya vision into the vijnana or chidghana saguna seeing. In proportion as the guna was not seen, there was deficiency of prema; in the prema itself the mentality would thrust a diminishing incomplete suggestion of sterile ahaityuka. Vijnana darshana does not suppress, but can hold a non-insistent diminished prema. Prema increases the ananda in the vijnana; ananda increases prema. Brahma-vision seeing things as objects of the unifying cognizance tends to be without prema; Purusha Brahma or Ishwara brahma darshana brings the deeper unity, prema and ananda.

K.A has recovered its force, but is still easily depressed by the interruption of the mind’s absorptions, because there is a pressure on it from the obstructing force which compels it to sink easily in a mechanical variation of intensity, fluctuation and occasional cessation of its overt presence. But now the memory always brings back the Ananda.

In Samadhi continuous narrative, monologue, dialogue or their combination in the ideal form. This was done largely and for long in lighter swapna, on its borders or partly in concentrated antardarshi and partly in swapna. There is no long continuity of it in the deeper swapna which is still a thing of many, swift and brief experiences, thoughts and visions. K. Ananda maintained in lighter swapna, brought in with difficulty at a greater depth, non-existent in deep nidra. Exceedingly strong and violent varied gandha. Rasa is recurrent, but not with such persistent freedom as yesterday, but it is developing more distinct rasas.

Throughout the day there has been a strong persistence of the relics of the intuitive mentality and the intuitive ideality has not been effective in getting rid of the obsession; because it is no longer the chosen instrumentation. Now the inspirational ideality is taking up the work, with the highest logistis at its back. This is more effective, all is at once changed to the inspirational form. But this too is not absolutely effective. The highest logistis alone can do the work.
There is a beginning of the change of the physical consciousness to the inspirational ideality.

Free gandha in the evening; the obstruction seems to be broken down, though not either in gandha or rasa entirely destroyed. It is intact in śravaṇa and sparsha.

Samadhi fluctuating between full ideality and a lower half ideality. Memory in waking is badly deficient; this is itself an obstacle to rapid progress. Great masses of printed liipi, largely incoherent, but much more fluently legible and stable than at any previous time. Stability of rupa and scene and of all other experience is beginning to move towards farther self-extension. Narrative attempted in deep swapna, but trailed off into incoherence. All this is in the adverse state of the mentality.

Ideality still hampered and obstructed in the system.

July 24th Thursday

A farther advance and complete recovery today.

The siddhi is now moving towards a system of complete affirmation; all thought and perception, no matter what the source or medium, is admitted as having some kind of justification in force and being and the exact nature of the justification is being immediately assigned and made as precise as possible. In this process intuitive mental thought is allowed, but idealised in the mentality, since so only can it get its proper proportions. This has always been the theory of the sadhana; it has been preparing and repeatedly insisted on for a long time, but only now by this removal of the too trenchant intellectual distinction between satyam and asatyam is it becoming entirely possible. This completion is necessary for the manifestation of the hermetic gnosia; the logistic is a limiting gnosia, the hermetic an entirely comprehensive ideality. T² cannot be perfect, but only relatively perfect in the logistic gnosia.

Gandha and rasa are now acting with a considerable freedom and variety and the former with a fundamental perfection. Rasa is still subject to its initial crudeness of incomplete massed tastes, though there are now definite and perfect rasas. Rasa is now insisting on perfection.
In Samadhi a great flood and mass of experiences of all kinds, but incoherent, yet all in the ideality. Subsequently an ordered movement. All the intuitive mind turned into ideality, what was before simple intellectuality, is now just before the ideal level and is changing to the intuivity. This movement represents a complete mutation of the whole being into the gnostic type. Even the physical being is beginning this mutation. Forecast in the samadhi, this change is also beginning in the jagrat condition.

Sparsha has now a greater freedom and variety of the more subtle touches. Half-sthula sukshma sparsha also comes more often and with greater force, but not without some difficulty and obstruction.

The K.A violently oppressed; but the mechanical discontinuity cannot maintain itself any longer when there is smarana, except for a while after long discontinuity by oblivion. There is only strong suppression of intensity reaching the verge of discontinuity. The intensity recurs whenever there is laxity of the oppression.

The movement is now to the complete idealisation of the whole being. But the system is still low and the intuitive mentality recurs persistently and has to be idealised into the full logistis. This is especially due to the recurrent imperfection of $T^2$ and to the continuance of old states in the physical being.

Friday. July 25.

Yesterday’s recovery was not complete except for a temporary movement. The new siddhi is still invaded by the external intuivity, though there is no complete relapse. The ideality moves on the level of a thickly illuminated revelatory intuition. This is extending greatly a relatively certain trikaldrishti and taking up firmly some, rejecting others of the telepathic suggestions which are again coming from the intuitive externality. The siddhi of $T^2$ is only initial; much has to be done before it can acquire a settled universality.

K.A at first distressed to the extreme point near discontinuity. Now it has revived, though not in full force and has again begun to push away the oblivion of absorption. Other siddhis have been in abeyance during the morning.
Samadhi in relapse. Afternoon spent in work. K.A in fluctuation. In ideality $T^2$ slowly enlarges itself in the ideal intuition. Some accommodation of this power in the thought with an incomplete inspirational ideality to form anew an intuitive inspiration. All these things are movements of recovery and enlargement of ideality on the lower levels, not permanent form or the regular action of the gnosis.

Samadhi recovers some of its force, but there is a strong persistence of incoherence, especially in the lipi. The siege of the external intuitivity continues. As yet the system is not ready for the full renewed action and control by the highest revelatory gnosis. Some attempt at shabda (vakya).

July 26 Saturday

Highest ideality has now a greater force in the thought perception, but $T^2$ continues on the lower intuitive level, is mainly telepathic and draws down the rest of the thought towards its own present type of action. Tapas is increasing its Kali force and largeness of action.

There is now a struggle between two kinds of ideality, the old ideality which depends upon the existent actuality, illumines it, goes a little beyond it but from it, returns to it, acquiesces temporarily in its decisions, and a new greater pragmatic ideality which takes the present actuality as a passing [circumstance],\(^7\) claims to go altogether beyond it, to create with a certain large freedom according to the Will and looks even beyond to the omnipotence of the Self and its will, [to] determine as well as see the future. It is over the relapse to the mentalised intuitive ideality that the question is being fought out, for it is the mental intuitivity and the intuitive ideality which illumines it into a lower gnosis which either temporarily support or resignedly acquiesce in the relapse as a part of the still existent law of the rhythm of the sadhana. The greater ideality aims at eliminating the rhythm of rapid progression and sudden relapse. It proposes to do everything from above, by the ideality, in the ideality, the gnosis working out itself, $\text{ātmānī ātmānam ātmanā}$.\(^7\) MS circumstances

\(^{7}\) MS circumstances
The future of the sadhana lies with this greater pragmatic ideality and with something beyond it in the hermetic ideality. But it is still undetermined how soon it will be able to transcend the obstructing power of the intuitive mentality and act in its own right of rapid creation or revelation. The physical siddhi, the full force of Samadhi, rupa, vishaya, the greater T² seem to be waiting for this consummation.
July 27th  Sunday.

The complete fulfilment of the programme for July has been prevented by the sudden relapse towards the intuitive mentality. T\(^2\) has indeed developed an initial firmness, but this is very insufficient in universality owing to the mental interference. The two first chatusthayas have again been contradicted by the invasion of the external mentality, which brings in an element of asraddha, tamas, dissatisfaction, and some broken hints of the revolt of the mental will and its old dūkhya at asatya and asiddhi, the only two things that can still produce a perturbation. These touches are combated and thrown out by the tapas of samata, but they create recurrent vibrations though they cannot occupy the mentality. K A has confirmed only a recurrent, not an unbroken continuity, a continuity in smarana broken by brief mechanical discontinuities, but not a conquest of absorption and sleep; the other Anandas have therefore also to await their greater development. Karma is developing, but on a limited scale. Kali has deepened and possesses the system, but Krishna is still veiled by the ganas and devatas. Ananda Brahman has filled in with the chidghana and prema, but not yet with the fullness of the Anandamaya Ishwara. Tapas in Arogya has increased, the fragmentary rogas have a less insistence, but the two chronic rogas have acquired a new lease of continuance; nevertheless the digestive functionings are more under conscious control of the will. There is for the moment a
great incertitude as to the immediate future of the development of the sadhana.

Lipi. Tapas siddhi to increase immediately to its full force in the pragmatic ideality. Health to continue the battle, but to give the increase of the tapas against the existing difficulties. The delight of the Ananda to fix itself against the oblivion of absorption, not yet against the sleep. Ananda Ishwara to determine itself in the darshana. Light of the hermetic ideality to suffuse the highest ideality. Samadhi to determine its ideality in the permanent fixity. Vishaya to develop as also the rupa siddhi. These things and others to begin in the remaining days of July.

Siddhi began with the Ananda-Brahman. This is now beginning finally to impose itself on both the chidghana and the mental darshana. In the latter it either diffuses itself or contains the mental seeing, but in both cases is itself mentalised and loses its character of the pure perfect unmodified Ananda. The vijnana darshana either contains or is contained in the Ananda. In the former case the Ananda is either made of the chidghana kind or surrounds it in its mental or its chidghana modification. Prema is always present in the Ananda darshana, but is often seen as an element of the thing, *rasa-grahana*, without evoking bhoga of prema in the chitta and prana. It is seen by prakamya, not received by vyapti. The vijnana darshana is now being made by tapas to replace more firmly and fully the mental seeing. The more perfect Ananda darshana then supervenes more easily and with a greater completeness, density and amplitude.

The struggle with the remnants of the relapse continued for a time. Strong pragmatic ideal tapas worked in and on the resistance, till the intuitive ideality in intuitive *manasa* and vijnana replaced the lax intuitive mentality. Then suddenly in Samadhi complete and powerful gnostic revelation took up the whole action in light and deeper swapna, brought in full coherence, excluded all mentality: but in the deepest nidra imperfection still continued though attacked and partially excluded by the revelatory gnosis. There was no actual dream, but insufficient inner jagrat[t]a.

In the waking state also this gnosis took up the thought, but not so completely; $T^2$ is still a gate for the intervention of *manasa*.
Nevertheless the gnosis is working upon this manasa to transform it and exclude all unconverted movements. There is also some initial movement of turning the K A into the character of this gnosis.

Samadhi in the afternoon overpowered by nidra, only towards the end returning to the gnostic drishti.

In the ideality a strong and stable perception of the mental panchabhuta, brilliantly etheric in its basis, tejomaya in its substance, with all the perceptions and forces acting in its intellectual intuitive medium: within, but alien to it the pranic, vayumaya in its basis and substance, below the material inconscience, prithvimaya and jalamaya in its basis and substance. The mind sees in this medium its own contributions to thought and action, consciousness and force, but with some difficulty the pranic interception and intervention, with most difficulty the material resistance and response. This ether forms an obstacle to the vijnana contribution which governs, originates, decides the whole action of the triloka.

Subsequently a descent from the highest ideality for the purpose of farther fixing the transformation of intuitive mentality into intuitive ideality. This has been effected so that even in relaxed states of the system, the thought is ideal and not of the mental substance. The mental form is becoming exceptional, peculiar to a most relaxed condition of the system.

Samadhi still distressed by nidra. Dream of half-samadhi turning to vision, incoherence sometimes overpowering, sometimes corrected with ease or difficulty to some regular or capricious coherence. Rupa and vishaya in abeyance. K.A acting, but oblivious tamas attending absorption insistent, not strongly attacked by gnostic tapas. Physical siddhi otherwise in abeyance or small isolated action or limited to simple maintenance of the present status. The relapse has been chiefly effective in the physical siddhi.

July 28th Monday.

The ideality is working still at the transformation. T² is now acting normally in the telepathic form in the intuitive ideality with a clinging adhesion of the stuff of mentality. Nevertheless, there is frequent correctness of circumstance, but with an insufficient force of certitude and some occasional intervening element of error.
and wrong selection. $T^2$ of inspired telepathy has begun to be finally idealised, but there is yet a heavy incidence of mentality. The highest gnosis in $T^2$ is in abeyance.

_Lipi._ There will be the rush of the highest ideality today in the thought and the thought speech; a beginning also in the trikaldrishti tapassiddhi.

The inspired telepathic ideality can give the fact to be, but does not command the time and the circumstance. The attempt to do it brought it back to the infinite incertitude of possibility and so to an intuitive mentality just shading off into a thin ideality. Afterwards was a rush of tapasic action of the being, mostly idealised in the intuivity, but pervious to unidealised mental suggestions. Samata, çraddha etc are being made compatible with this tapasic state of the being which formerly brought always disturbance and reaction. The replacement of tamas or mere çama by a tapas based in çama is the intention. On the whole now laxity of the system can bring it down only to an intuitive ideal state bordering on and pervious to suggestions of the mentality, but not to unideal mentality. The attempt now is to replace this intuitive level by an inspired ideality which will be the state of relaxation and to make the highest ideality the proper action.

The rush of the highest ideality has begun, but it is very pervious to the motions of the lower ideality. In its inspirational form it gives freely the fact to be, but not yet the circumstance which had begun to be given with much imperfection by the lower inspiration Vishaya and rupa revived, but began with their old faults, crudeness of rasa, obstruction of gandha and fugitive rupa etc. These are now gradually being set aside. Gandha can now always be commanded in subdued form or intensity by inhalation; spontaneous gandha is still limited to rarity by the obstruction. The tendency in rasa is to define. In rupa to a doubtful and quickly withdrawn primary stability. The full freedom is not yet established in any of these siddhis.

When the relapse brings back to a former state, there are always three conflicting principles at work, the habit of rebuilding laboriously what was broken down, the method of remanifesting rapidly the past siddhis by a rapid repetition of some of the steps by
which it had been formed, the immediate remanifestation with fresh progress. The second tends to prevail, but less in the undeveloped siddhis; the third is only in its infancy.

A considerable force of samadhi later in the morning.
Samadhi in the afternoon much half-idealised dreaming.
Brief freedom of gandha and sparsha and a freer çravana.
Work in the afternoon. Highest ideality, but some action of the lower gnosis and the idealised intuivity. Later laxity and apravritti.

July 29 Tuesday.
Today a more perfect T² has been presaged in the lipi and the presage is repeated this morning.

T² is already growing towards a relative perfection. The ideality acting on all levels gives increasingly a prediction which has indeed only a relative certitude, but is generally right in fact of event, always has some justification in telepathic actuality, is able to fix time with a sort of coarse appreciation, but not yet always with an entirely prevailing relative certainty, has some rough initial idea of the arrangement of circumstance, though not yet the fine detail, but all is still disquieted to a certain extent by three of the old difficulties, (1) chiefly, the incertitude caused by a defect of the decisive seeing, (2) an attempt of the telepathy to fill in illegitimately this defect and the defect of range by a false certitude, (3) the intervention of mental will trying to masquerade as trikaldrishti. The incidence of these difficulties is steadily diminishing, but they are still in action.

Chitra rupa has been for some days growing in abundance, vividness, life and variety. Sthapatya rupa has now reappeared, this time in full spontaneity, vividness, unlimited variety, perfection of form, truth of life,—forms of all kinds of beings, objects, scenes etc. Chitra is developing towards the same perfection.

The highest ideality is now attempting in thought perception and tapas to free itself from the lower action. That comes in as an alien intervention, a sign that it is rejected and when the highest gnosis works, it is only so that they can present themselves, piercing from outside through the regular working and finding some similar response in the physical system, but rejected by the gnostic and
mental being. When this gnosis works in freedom, then it arouses no pragmatic eagerness in the mental system, tolerates no mechanical tamasic laxity.

During the rest of the day a variable action of the ideality. In Samadhi dream pages, consecutive reading. Violent mass touch of sparsha, blow-push, in Samadhi. Nidra still oppressive. A general wavering and incertitude.

July 30 Wednesday.

The highest logistic gnosis is now finally taking up the mentality. At first in intuitive revelatory, then in intuitive inspired revelatory and inspired revelatory, then in full revelatory in the three orders, it invaded all the thought-activities and holds them firmly; even the lapses are full of the revelatory sense and light. The next step is to turn this idealised mentality into the full and true highest logistic gnosis. This is being partly done, but mainly in thought speech and perception; not yet in T².

Kamananda is recovering its siddhis in the revelatory form. Great intensity, fullness and stability of all kinds of sparshas in bahirdarshi jagrat as well as antardarshi.

Hasya in samata; beginnings of the devi-hasya.

Samadhi in the afternoon: in the grasp of nidra. But all the dream in the nidra has turned to ideality and coherence. The old form of incoherent dream was unable to force its way back into the samadhi, except for certain associations of present personality. Much of the dream was in the form of the highest ideality mental or vijnanamaya.

Work in the afternoon; subsequently a duller state of the action. K.A weakened in the afternoon and evening, accomplished at night a certain overcoming of its difficulties, but is still very much subject to intermittence of its siddhis.

At night a splendid fullness of moving in dream vision; absolute perfection, colour, reality[,] intensity of scenes, objects, people, living creatures in an ordered succession as if seen by one moving through a new world,—the pranic worlds or else the

¹ MS absolutely
bhuswargas. Afterwards again dream of the ordinary kind, though always with a certain kind of coherence.

July 31 Thursday.

The ideality is now seeking to get rid of the too strong effect of the physical laxity, to keep up a constant action of the thought of gnosis. There is also the movement towards the changing of the idealised revelatory mentality in the physical system to the true gnosis.

$T^2$ is still a difficulty. The main difficulty is the persistence of the recurring tendency to take strong actual possibility for final actuality. This defect is absent when there is no attempt to get the absolute decision; then all is actual possibility relieved by relative certainties. But the attempt at decisive trikaldrishti tapas brings in the hasty and wrong overstresses which mix with, interfere with, replace the true decisions. Decision is often of the inspired gnostic kind which is a strong tapas of perception often fulfilled, but liable to be overborne by a greater power. At the same time the absolute revelatory action often intervenes, but is mixed with intuitive seeing of relatively decisive gnostic intuitions and these forceful inspirations of a pragmatic almost absolute certitude. The absolute revelatory action is of the logistis, certain therefore of the moment, but with a background of still greater unperceived possibility which may reverse the natural effect of the decision.

K.A is now stronger in force of spontaneous persistence; but the spontaneity is not perfect, nor proof against oblivion by strong absorption or by a wandering of the lax mind to other interests. But it is seeking to get rid of this obstacle by tapas.

The action of the ideality bears now most on the $T^2$ which is being reduced to the revelatory form. Only remnants of the old action are still untransformed and of the mentality. This movement at first turned the mental into the idealised revelatory mentality. Now a revelatory ideal Tapas and trikaldrishti is being insisted on, but mixed with the idealised mentality or chequered by its recurrence. Telepathy is being changed into perception of the thought stuff as well as the feeling stuff and impulse stuff of the being, while there is also the accompaniment of a telepathic thought-
perception reducing these indirect identities into idea and thought speech. The mechanical and pragmatic tapas is being idealised and raised towards or into the truth tapas governed by trikaldrishtic perception. This again varies between the intuitive and inspired revelation, remnants intervening of non-revelatory intuition and inspiration, and is also directed towards the full truth revelation. The movement is final and decisive, but has [ ]^2 still much work to do upon the old matter and manner, before it can be entirely free to work in the revelatory gnosis.

K.A is enforcing continuity; the tendency to continuity insists and on the whole prevails in spite of the strong recurrence of its deficiencies.

The other siddhis are moving forward, but with a fragmentary and intermittent movement, liable still to some action of the principle of relapse. Saundarya, except in one or two details, and utthapana are unable to move forward or break down their barriers. They await the gnostic tapas. The programme for the month has been in part accomplished, in part half accomplished, the other half begun but not completed, in part partially or entirely baffled by the obstruction. On the whole the forward movement prevails or is increasing in strength. The physical obstruction is the great obstacle.

August.

Balance of progress.

*First Chatusthaya.* The first chatusthaya has been fortified by the stable founding and permanence of the full hasya. Asamata of asatya has now little or no force; its incidence is, if not quite deleted, yet ineffective. Asamata of asiddhi is passing, occasional, fragmentary and corrected without difficulty. Once the delight of failure is put in its right place, as an anandamaya perception of passing circumstance and step of the siddhi free from tamasic acquiescence, the last remnants of asamata can be abolished. Affection is the only thing that brings in a touch of the fear of amangala, but this is now a slight external suggestion.

^2 MS to
Second Chatusthaya. Complete except for the divine hāsyā, aishwaryā and the full sraddhā in the swaçaktī; these defects are due to the insufficiency of force in the devi-bhāva. Tejas, balam, mahāttwam, pravṛtti of the elements are there, but not steady and equal in their action.

Third Chatusthaya. Gnana is in itself perfect in revelatory gnosis, capable even of the hermetic gnosis, but is held back and descends so as not to outstrip too much the T². T² is advancing to the revelatory power. It is already preparing its final freedom from mentality, normally gnostic and drishtimaya, but burdened with the persistent recurrence of the intervening old mental deficiencies or lower forms of the gnosis. Samadhi fluctuates, sometimes ideal, vigorous, abundant, then again for days together overpowered by nidra. In nidra dream is usually almost coherent, sometimes quite coherent, sometimes fantastic in coherence, sometimes orderly; when the ideality is active or presses on the system, dream-vision comes or dream is changed into vision. Vishaya has established itself in gandha and rasa, often perfect, intense, distinct and of a certain variety, but is often rendered rare by the obstruction. Sparsha is strong in the established sthula touches, often intense in suksmā or sthula-sukshma touch on the suksmā or sthula body, even in the half sthula or just sthula touches, but the full and free materialisation is still obstructed; this part of the old barrier, its last strong fencing has not yet fallen. Sravana comes with strength or persistence only in the old symbolic sounds, cricket, ticking, bells, thunder etc; the rest has failed to materialise. Drishta is limited to an occasional elementary vision of the pranic akasha and its simplest forms. There is no sign of progression. Rupa fluctuates; for some days it has failed in frequency and made no progress.

Fourth Chatusthaya. Kamananda has established the prevailing tendency of continuity, can in response to smarana and tapas overcome all the obstacles of oblivion, except sleep and long absorption; but none of its deficiencies has undergone a final elimination. Tivra is strong, but intermittent, rauda firmly established in all touches up to an indefinite degree of the violence of the sparsha, but is sometimes momentarily overcome by sudden unexpected contacts. There is no insistence on vishaya which is
generally established subject to certain remnants of discomfort or insipidity, nor on vaidyuta, which can however be brought by *satapas smarana*. Arogya is strong in tapas in all but the two central rogas, which are still insistent in obstruction and relapse; the rest the tapas, if allowed to act, can hold back or cast out the fragments with more or less appearance or reality of difficulty. Saundarya is established in bhava, but fluctuates in intensity and varies in character; physically there is no advance except in one circumstance. Utthapana is stationary or rather in a state of inhibition.

*Fifth Chatusthaya.* Mental Kali finally and permanently established, Krishna darshana in the being intermittent in its manifestation. Karma is limited to personal action and some force of tapas in outward things. Kama is personal, but not yet moved towards exteriorisation.

*Sixth Chatusthaya.* Fundamental Brahma darshana complete in the Ananda vijnana, sometimes descends towards the mentality to effect a better fusion of ahaituka, prema, kama, vijnana and shuddha ananda. Brahma sight is full of the Purusha, but only sometimes contains the Ishwara seeing.

*Seventh Chatusthaya.* Suddhi is practically complete except for the body and the vijnana; essential mukti complete, but not the mukti of the Nature, as in the physical being and its most physical mentality, recurrence of tamas and something of rajas and sattwa are still visible. Bhukti is almost complete. These completenesses are fundamental, not a completeness of degree or of content. Siddhi is practically perfect in the first, moving towards final perfection in the second, striving towards completeness and a kind of perfection in the third, initial only in the fourth and for the most obstructed and subject to relapse, busy only with the personal foundation in the fifth, large in the sixth, but not full in its contents or complete in its combination.

**Programme**

I. Hasya to be fixed in the final perfection.

II. Çraddha to be completed, daivi prakriti brought to perfection.
III  Ideality to be firmly raised in T² to the revelatory logistic power and to look upward to the hermetic gnosis in all its thought activities. Samadhi to overcome nidra. Vishaya to be completed in its element[s], jagrat rupa delivered from its barrier of obstruction.

IV  Kamananda to acquire continuity, overcome its obstacles and bring in the other anandas. Health to increase its tapas and, if possible, found the two central arogyas. The development of the two other physical siddhis is not likely to come as yet to perfection, but the final battle may begin with the physical obstruction.

V  Kali to idealise and fix herself in the gnosia and Krishna to fix himself as the visible Ishwara in the Ananda. Karma to extend its force of perfection in the personal working and its power on outward eventuality. Kama to complete its personal basis in the subjectivity.

VI  Ishwara darshana to take up the perfected Brahma vision.

VII  Perfection in the first two, initial perfection in the third and sixth, preparation of completion in the other chatusthayas.

August 1, 1919.  Friday.

Action of ideality in thought to perceive the right action. The full revelatory ideality, not the inspired or intuitive revelation, the truth seeing not the pragmatic or resistant mechanical seeing, not the alternation of these two opposite powers, nor even their simultaneous perception, but their unity and exceeding in the revelatory truth, must be the agent of the perfect siddhi. That therefore must be insisted on always, even in the midst of the persistence of the lower movements. This thing done means a sure rapidity.

In the K.A. urgent pragmatic tapas must be replaced by spontaneity aided by an ideal truth tapas and smarana.

An attack of the obstructive external physical mentality which sought to deny all farther speedy or immediate progress, was followed by an immediate and strong advance in the first two chatusthayas. The hasya is already achieving the requisite form and the acceptance of asiddhi as a circumstance and step of siddhi is complete. Into this acceptance has still to be brought the secure fullness of the equal ananda. A limited aishwarya-bodha and self-craddha, a full craddha in the kalyanabuddhi of the Ishwara is now
being founded. These two siddhis have now to be given their last finality.

Lipi. The ideality in the physical siddhis to be undertaken in spite of the difficulties.

The rest of the day mostly a confirming of the first two chatusthayas against the attack of Asiddhi. It is now firmer; the moments of clouding prove ineffective; the siddhi perseveres in spite of absence of light or adverse suggestions in the mentality.

The oppression of primary utthapana is a little lightened today. The attack on the health still continues in the digestive perversion. In the fragmentary rogas it is held in check, its material effects abrogated as soon as they are slightly manifested, but is not eliminated from the system.

In Samadhi in the afternoon no recovery, except at the end; at night (early morning) ample rupa, but there is still incoherency in the lipi, unideality in the other features, inaction of the thought-powers. On the whole a day of obstruction, but of some initial advances.

Aug 2. Saturday

A day of the ideality.

The lipi predicts the 5th and 11th (with the 7th as an intermediary stage) and the 15th as the important days for the gnosis. Today it has to manifest under difficulties and this will go on till the 5th when the revelation, it is to be presumed, will be in some sort firmly founded; from the 5th to the 11th farther progress still in spite of difficulties, then some manifestation of the hermetic ideality. The 15th is to be the special day for the gnosis.

Thought and thought-speech have fixed themselves in an easy normal and brilliant revelatory gnosis of the subordinate intuitive character in all its degrees. This is also being applied to the mental levels where it is still of the same character, but of a more derivative and less complete and immediate luminosity and certitude. Next, the same process was applied to T2. First, an inrush of the old mentality; next a lifting in which all first became incertitude and then was transformed into a gnosis of intuitive revelatory possibilities, the revelation taking up the possibilities
and revealing their incidence and proportions, with an intervention of immediate revelatory certitudes. Behind this is now manifesting the full inspired revelatory dynamic possibilities and certitudes and the full revelatory illuminations. Tapas is of the same character, but with less completeness. This second movement however is as yet from above and has not become either full in itself or the normal thought action.

Subsequently, an attempt to bring in the inspired revelation as the type of all the thought especially in $T^2$. At first this brought about a descent from the revelatory to the inspired levels. Then there came above, with no hold on the lower being, a highest form of the full (not inspired) revelation, holding in itself the prominent element of inspiration. A difference has to be drawn between the inspired revelation and full most luminous revelation of an inspired character. $T^2$ came to no definite siddhi, but thought became of an inspired revelatory nature.

An attack of roga on the eye. Twice materialised and momentarily healed first by intuitive, then by inspirational Tapas of the revelatory kind, it managed to hold by a disposition to and some actual watering, but no effusion. The arogya tapas prevailed over the roga which for the most part lived only in suggestions in the subtle physicality which could not materialise in but only affected the sthula. There was some physical sense or initiation of all the symptoms, but not their physical actuality.

Samadhi overpowered by nidra in the afternoon, free, but still attacked by defects in the early morning.

Aug 3  Sunday.

The movement to inspired revelation continues and all the thought and $T^2$ is of this character, revelation always present, inspiration predominating and sometimes swallowing it up, but on all levels, so that there is little certitude of a final character. Mostly the thought of $T^2$ on the idealised mental level. Some recurrence of intuitive forms. Later emergence of thought of inspired revelation and revelation permeated with inspiration. Invasion from outside failed to bring in any relapse or any element of intellectuality.

The roga made many fresh attacks, but was increasingly
overpowered by Tapas; it is being reduced to the fragmentary character. No actual watering except early in the morning, very slightly, but still a disposition to watering and occasional attempts at heat. The causes of increased affection, strain of the eye, glare etc are being got to increase instead the force of the arogya. Arogya Tapas is changing to the ideal character. The thick obstacle of the most physical prana with its sanskara of roga is being pierced and broken up by the light of ideal tapas. The movement is [one] of strong prevalence, not yet of absolute finality. In the central rogas Tapas is resuming its operation, but not yet effective for sensible progress.

In the morning drishya of pranic akasha, full of small life; insects, butterflies etc so stable and vivid as often to be not easily distinguishable except by their multitude from terrestrial forms. Birds also, but not so stable, vivid, easily distinguishable as pranic beings.

In samadhi after some nidra and coherent dream, great abundance of samadhi experience. Tapas is resuming its force, revelatory ideality taking up more firmly the forms. One full dialogue narrative in this kind, many breaks of pure dialogue etc; abundant lipi. But the tendency to incoherence is still able to recur across the general coherence.

K.A is resuming its hold after two days subsidence and pale recurrence, and is now of a more firmly ideal revelatory character, even in the stronger and narrower intensity of the sthula current.

Aug 4  Monday.

The vijnana began with the highest gnosis in the third intensity, but afterwards there was especially in T2 much play of the idealised mentality and the lower gnosis on the mental level. T2 has still a difficulty in remaining on the gnostic heights of thought and will and perception. The attack in the roga tried to prolong itself, but only with a slight success. Ideal and idealised Arogya tapas prevailed over the roga. Roga since attacked in other forms, but in all after some brief and apparently strong materialisation the Tapas was able to dismiss it from actuality, eg, a spell of cough, catarrh, not in fact but sensation. — Pain of the breast manifested repeatedly
and was allowed for the sake of the raudra ananda. Pressures once intolerable are now filled with the Ananda; they then find it difficult to persevere, diminish and rapidly disappear. — The same state in the central rogas.

In Samadhi, seated, ideality, then in reclining nidra. Afterwards strong universal action of the highest gnosis in all depths, thought, speech, T², thought dealing with rupa, or lipi. Lipi was ideal, for the most part of the highest gnosis. Rupa at first telepathic turned to the gnostic content. Rupa was pranic and chhayamaya, eg a shadowy hand taking a shadowy bag, shadowy mountains and lakes, a great curving raised line of ground in daylight of chhayamaya, all sufficiently stable.

Jagrat rupa and vishaya are recovering their action. In rupa the stress is on stability which is now often secondary and tertiary in crude rupa, in the rest the tendency is to prolonged primary or arrested secondary; even when unstable, they are snatched away rather than in themselves fugitive. In drishya birds etc vivid in pranic akasha, some hardly distinguishable from terrestrial creatures; colours only white and black. Free and abundant rupa (not drishya) of human forms etc against the pranic akasha. In rasa and gandha the stress is on distinctness and particularity; the obstacle to frequency is not yet overcome. The obstruction remains in the sparsha, but there is [considerable]⁴ intensity in the established forms of sparsha, little spontaneity. Cravana is still subject to a return of complete obstruction. K.A. varies; the stress is no longer on continuity, but on ideality.

T² active in the highest ideality of the third degree. The turn here is to the rejection of the confusion of incertitude. There is also some filling of the third with the light of the higher degrees.

Dream of connected sequences, but some fantasia. Beginning of a firmer gnosis in the dialogue.

Aug 5 Tuesday.

T² is now settling down into the gnostic movement; mainly in the third intensity of the highest gnosis. The finality has begun and

⁴ MS considerably
there remains only the complete transformation and the dominant
certitudes.

The Ishwara has now begun to prepare his final overt occupa-
tion of the Adhyakshatwa. Strong dasya of the Shakti manifested,
and although there is fluctuation is taking possession. Tertiary ideal
dasya in intensity has definitely replaced the remnants of the old
mental tertiary mixed with the over prominence of Prakriti which
maintained the remnants of the secondary dasya. But the dasya is
sometimes to the ideal ganas, sometimes direct to the Ishwara

In samadhi idealisation proceeds, complete narrative (part
drishya and dialogue) is growing; dialogue, still fragmentary, is
preparing for expansion. Strong hermetic gnosis occurred in the
samadhi.

Aug 6  Wednesday

T² is now assured in the gnosis, mainly of the third and second
intensities. The third is still the largest, the second is now about to
secure its own perfection, predominance and finality so as to open
fully to the first intensity. All is transformed into gnosis that touches
the mental system. The intuitional gnosis has completed itself in
the revelation and recognised its limits. Certitudes of revelatory
intuition exist, but they are only temporary, immediate or relative,
as it may be said, contributory and not final certitudes.

Tertiary ideal dasya is getting rid of all remnant of mental
endeavour and overstress; on the other hand full force of tapas as
yet comes only from above and is not normal to the system. Dasya
of nati is established, but not a perfect dasya of sāmārthya

Last night there was again roga attack on the eye, but frag-
mentary and external though capable of a certain persistence. It
lasts so long as the highest revelatory tapas does not act with a full
incidence. Hot watering during sleep subsists, though reduced to a
certain extent; other symptoms of shita susceptibility are very brief
in their recurrence. No visible progress to finality in the central
rogas.

Rupa moves forward very slowly. There is some combination
of variety and increasing stability in crude rupa; ghana is trying to
stand before the eye in the same way as the crude figures. But the
old imperfections and limitations still hold their own against the
tapas of vision.

A strong movement towards spontaneity combined with vivid
distinctness and some variety in rasa, gandha and sparsha. In the
latter the sukshma touch is getting more and more sthula, though
as yet the border line to full sthulatwa has not been crossed.

Samadhi went back to nidra and began turning the touches
dream swapna immediately to ideal forms of gnostic swapna
samadhi. At night there is real dream, but more and more a conse-
quent and idealised dreaming.

Attack on eye, more full, cured, but the tendency remains.
Gnosis fixed itself in the second rising to the third intensity.

Aug 7. Thursday

Gnosis rose to the third intensity of the logistic revelation. As
usual the whole mass of thinking with some considerable invasion
from the exterior mentality was brought in for transformation to
the new form. Some progress was made, but interrupted by the
necessity of a long struggle with the eye roga which attacked per-
sistently all the morning, was persistently put back, but renewed
the attack when on the point of elimination. It is noticeable that all
thought was of the ideal kind, though of all ideal kinds, idealised
mentality as well as gnosis. The invaders could bring in no intellec-
tual suggestion which was not given its luminous ideal translation
whether into truth of mentality or gnosis. Even the suggestions of
the subconscious physical mind are thus translated into light of
gnosis. The lipi therefore which fixed the 5th & 7th as crucial dates
for the gnostic siddhi, is amply justified in fact and in detail. The
full conversion to the third intensity, especially of T 2 still remains
to be done.

Success of the invasion was mostly in the physicality, — roga. It
amounts to the eye attack — suspended during the early afternoon,
and some brief repetition of cough and retardation of the central
roga.

In Samadhi the very deepest overpowering nidra in which for-
merly there was no trace of samadhi experience, but even this is
now in the afternoon turning to its initial ideality.
These two days have been marked by the immensely rapid progress of the gnosia. On the first thought and a certain part of T² rose or rather soared up with force into a highest logistic gnosia full of the deputed power of the hermetic and seer ideality. For the most part there was an increase of the inspired pragmatic or dynamic gnosia at this level of intensity, with an undertone of intuitive present or actual gnosia, corresponding to the old mechanical intellectuality. This took full shape and power on Saturday. T² got an immense development. The lower state of the system was at first transformed to the full ideality of all kinds, but chiefly highest ideality of the third intensity, then all to the highest gnosia either full of or penetrated or overshadowed by the influence of the hermetic and seer gnosia.

This change was chiefly managed with the violent struggle between the Arogya and the eye attack for an occasion. The struggle resolved itself into a dynamic highest gnostic tapas which sought to override physical rule and limitation and the invading idealised intellectuality aided by the upwellings of the subconscious mind of the body which insisted on the old physical law and habit. When tapas was active it prevailed but on the point of cure ceased and allowed the other thought to act and prevail. Thus for two days there has been an oscillation between movements of rapid ideal cure and the fragmentary but still persistent running of the old course of the disease. The tapas insisted (1) on every thought of the subconscient or the invading mentality being idealised and falling on the side of the gnostic truth or knowledge, whether by force of violence or illumination, (2) on every cause of pejoration of the disease being turned by this means into a cause of amelioration and strengthening of the eye and its sight, (3) on every layer of the consciousness to the most obscure physical being brought up into the light and penetrated and possessed by the light of the ideality. During these two days it gained successively all but the most physical flesh layer. The disease was left with a strong tendency to disappearance, but a remnant of persistence in its one last symptom maintained by action of the Roga consciousness on this purely physical layer.
T$^2$ of external happenings is still imperfectly brought into the highest gnosis.

Aug 10  Sunday.

The highest gnosis on Saturday began reconciling the dynamic inspirational and the actualist intuitional revelation in the pure revelatory union. This is now the thing that is in process. Except part of T$^2$ and fresh arriving invasional thought which supports the physical asiddhi, all is changed to some kind of this highest gnosis of the first intensity. T$^2$ also is undergoing the transformation. In Samadhi the same process is in action at a lower stage[,] that of turning all into gnosis at least of the third intensity.

The eye attack has succumbed to the gnostic Tapas. This struggle has founded the true basis of ideal Arogya and of the whole physical siddhi. The gnostic method is being applied initially to all the members of the sharira; but the whole bodily consciousness has to be converted before it can make rapid headway. K.A has been well founded in the ideal form and is taking over into that form all its previous siddhis. Its obstacles are still mechanical discontinuity (almost destroyed, except as a result of long discontinuity[]), laxity of the system, oblivion by absorption, sleep. The positive dark veil of oblivion has been destroyed by light of gnosis; only the mechanical oblivion survives its disappearance.

Vishaya and rupa are moving forward deliberately by steps, firmer than before, but there is no mastering rapidity. The quadruped form, so long resisted, has now reached a brilliant perfection in chitra and sthapatyā which are extraordinarily active whenever they can find a background and attention.

K.A is to be established today, according to the lipi, completely and perfectly established tomorrow, confirmed and filled out the day after. At present it has been established in the old way as an insistent presence supported by Tapas in continuity, brought immediately into natural recurrence by smarana, but hampered in both respects by an external obstruction to which the system is still sensible. Mechanical discontinuity is destroyed, but the other obstacles and interruptions have still their incidence.
Aug 11 Monday.

T² is arranging itself for a final dismissal of the remnants of positive defect, practically the excesses and deficiencies of stress of tapas, a final conversion of all telepathic perception into the highest logistic ideality of the three times, a taking up of actualistic and dynamic T² into the full revelatory gnosis. This is especially in outward things, as the inward is ready for the change to the hermetic ideality which can alone begin the reign of a quite positive certitude. At present all has been reduced to the lowest stress, on the borders between mind and gnosis so as to get the proper action at this lower pitch where deficiency of light gives the largest scope to inferior working and error. The highest logistic T² has begun there, but with some weakness. Incertitude and yet justification of both the actualistic and dynamic perceptions is being insisted upon, a repetition of the old method of purification.

In Samadhi K.A overcame more and more the obstacle of absorption and nidra. It now occupies all the ranges of samadhi and is kept in continuity not only in the antardarshi and lighter swapna, but in the depths of swapna where nidra is not present as an element. But even with nidra it now increasingly comes as a strong recurrence or a difficult but still growing continuity. The defect is that this recurrence tends to break the samadhi, bring back swapna to antardarshi or lighten it to the point where some perception of the outer world clings to the skirts of the inner absorption. The perception in deep swapna is of the pranic basis of the physical body, but also often of the physical body made sensible to the sukshma mind and indriyas. There is also a direction towards the comprehensive many-planed samadhi.

The whole major insistence throughout the day has been on the K. Ananda. First of all the normal continuity has been founded in the settling of a great mass of gnostic K. Ananda on a pedestal of rocklike pratistha. Later this has faded and grown, half disappeared and returned, given place to a less certain fluid Ananda in the laxity of the mind and body, but the net upshot is a continuity only interrupted by sleep and distraction. The difficulties are being rapidly put aside. Laxity of the system no longer of itself brings on discontinuity, but only when it is supported by pramada, mental
distraction. Absorption of thought also no longer imposes oblivion, except when there is this loose distraction or pramada of the channel mind in the physicality. Absorption in the object is at best only momentarily discontinuative; absorption of reading or writing only when extreme by necessity of attention; but this necessity is no longer really existent, since the gnosis is capable of a wide and multiple dhyana. In the reading it is almost eliminated as a necessary factor, in the writing it is on the point of elimination. The one thing now really to be conquered is the loose mental distraction, a habit and not a necessity of the system. This gained in the evening, was brought out in full and prevented the complete actual continuity. It is assisted by the old desire of the physical mind for release from tapas, rest by inertia. Sleep also, not transformed towards samadhi, is a positive interruption.

The highest logistic ideality in assured possession of the thought, preparing assured possession of the T^2; physical siddhi commencing finality in the ideal Kama Ananda. This fulfils the indication for the 11th, though not to the extent of the entire completeness.

Aug 12 Tuesday.

The gnosis is proceeding with its preparation of T^2. K.A is left to fix itself in the new siddhi, but all the obstacles, sleep excepted, have ceased to exercise a necessary interrupting action. They live only by dependence on the lax distraction of the channel mentality. Samadhi is still occupied with the transformation of nidra. On the whole a day of intermediate relaxation.

Aug 13 Wednesday

The gnosis is now definitely taking up the T^2 from the border line towards the higher region. Hermetic ideality is beginning to show itself in an action from above on the logistic plane, while it more and more moulds the logistics itself into a predominantly hermetic logistics. This is in the thought, the T^2 is being taken up by the inferior drashti logistics, but this too is taking on a lower hermetic element, the fullness of dynamic certitude. Incertitude is giving way more and more to a relative certitude—the
exact temporary power, force, result is seen,—thronged around by positive certitudes of immediately subsequent or slightly distant eventualities. Old difficulties are brought up by a lower seeing and immediately transformed to this positive vision. The process is only commencing its finality, but proceeds with a considerable rapidity. Nevertheless T^2 full perfection cannot come in the logistis; but only a limited sufficiency and initial perfection.
August 14th  Thursday

The ideality is advancing in the same steps. Thought is perfectly fixed in the gnosis and rises to the hermetic logistic and the seer logistic ideality. T2 is being transformed by the logistic drashta, not the seer logistis, but with a touch of the hermeneusis. The old mentalities recur in the idealised incertitudes, but only to be interpreted by the light of gnosis. There is no relapse to mentality, but only some lapse to this admissibility of idealised mental suggestions; they come from outside and the system is still capable of a subordinate mechanical response to them. The range of T2 is as yet small, restricted to the habitual field of action,—except sometimes when a higher action develops its first luminous suggestions. This higher T2 is commonest in the lipi.

Samadhi is as yet making no masterful progress. It is kept back by the siege of nidra supported by a strong tendency to physical and mental laxity which has reigned for the last two or three days. Rupa and drishya and vishaya have for the time being suspended their advance and are in a state of comparative suspension.

The physical siddhi is advancing in the K.A, but under the difficulty of the laxity and distraction. The other physical siddhis are in a state of suspension.

Kamananda is working upon the laxity in order to enforce its perfect continuity. The main movement is an attempt to fix the Ananda (madirāmaya) in the head, but that still tends to bring a
temporary lessening in the lower body. Ananda in the upper body is subject to the dominance of discontinuity; in the lower body the normal tendency is to continuity. At times there comes the perfect siddhi of continuity against which no absorption, even of writing, can prevail. It is this and the pervasion which have to be fixed in an absolute finality.

Ananda Purusha darshana and prema are again insisting on their intensity and universality. They are combated by the remnants of the old ahaituka indifferent universality. This is now likely to be overcome with some rapidity.

T² is now increasingly correct within the logistic limits. But there is the old defect of descending, now not into the mind, but to the lower border intensities open to mental suggestions, for the transformation. All work of progress should be done from the highest attained siddhi, the high lifting up the low, not the low working towards the higher siddhi. This has indeed begun and is even established in the subjectivity but not with a pure and perfect action.

Aug 15  Friday

Hermetic logistic ideality took preliminary possession of the T². This action at once brought to bear effective gnostic tapas on the body. But the lower action still insists, has yet to undergo transformation. The survival of the tamoguna in the body is the chief obstacle; it brings not the absolute, but a relative aprakasha, apravritti, pramada, moha.

The day was taken up with the development of this action which marks a decisive turning-point in the gnosis. From the afternoon came, as often before in such crises, a lapse (for adjustment) into idealised mentality, no longer tinged with any dark tamas, but rather a vivid haze of light, a confusion of luminous incerti-tude. So long as this conversion of the gnosis is not provided with its full base, the other siddhis attend their moment for renewed progression.
Aug 16th 17th

Continuation of the lapse of adjustment. In the evening 17th, a recovery of the higher action and a renewal of the physical Ananda. Daivi prakriti with powerful and complete matribhava is constantly increasing, as also the anandamaya samata and strong hasya. Aishwarya bodha of the Ishwari in the Prakriti subject to the growing aishwarya of the Ishwara in the Ananda acting through the vijnana and limited by the continued imperfection of this instrumental nature.

Aug 18th Monday

Full force of the seer ideality in the logistis. Thought-perception has now the same freedom and almost the same assured power as the speech. Thought of T2 is assuming the same freedom and potency; but, especially in the objective subjectivity it is limited by the large element of persistent telepathic incertitude. Nevertheless the certitudes are constantly progressing up the plane of increase.

K.A in sleep in the morning almost succeeded in overcoming the depth of nidra, but stopped short on the verge of possession. The Ananda is now increasing again to lay its hold on the system and overcome the distraction. It is attempting to penetrate more and take hold of the fibres of the physical body.

Tapas in T2 is visibly increasing in mass and swiftness of efficacy, but it still acts in a large atmosphere of the surrounding and limiting incertitude.

Samadhi is recovering its progressive force. Long narrative reading, at first with skippings of large tracts, afterwards more continuous, but not quite ideal; dream reading. This was nidra in course of idealisation. Shabda has grown strong in samadhi; rupa, converse etc are increasing their strength and continuity.

Aug 19th Tuesday

Seer logistical ideality is taking up firmly the whole T2 and rejecting and transforming all the lesser movements. Only detailed circumstance is still rebellious to this treatment and insists on

---

1 “17th” written above “evening” in MS. — Ed.
inspirational telepathic trikaldrishti. The difficulty is still the adjustment of actualistic and dynamic logistis.

K.A has altered its base of continuity to the more physical Ananda, but as a consequence there is a decrease in the force of continuity which had depended on the ananda of the sukshma body affecting the sthula sharira. The main insistence is now on the increase of the physical occupation and not on the final removal of distraction which is to depend on the intense continuity of Ananda on this new base.

In Samadhi in the afternoon a considerable extension of the dream siddhi, but at night a lapse to incoherent and fantastic continuity.

Tapas is filling the physical mentality.

Aug 20th

Ideality of the seer gnosics in the logistis is now successfully occupying the whole range of the T² siddhi; the element of recurrent lower ideality or idealised mentality is approaching the minimum.

The extension of Tapas in the physical being proceeds with the working of getting rid of the apravritti of mere prakashamaya çamas; the acquiescence in asiddhi mechanically recurs, but is no longer accepted by the Shakti

Strong united spontaneity and stability is finally taking possession of the physical manifestation of the lipi, in which these two siddhis had still great difficulty in effecting a perfect coalescence.

The action of the superior gnosis has again taken possession of the logistis. The base is a seer action modified to suit the lower key of the logistis, the force is a hermetic action informing the logistis with its higher luminosity and no longer dependent upon the actuality. This greater force is supreme in thought speech and thought-perception, even though still besieged there by a certain limitation of the surrounding mentality. In T² it has begun to act and to evolve a true trikaldrishti acting upon the telepathic seeing and impose on it a certain kind of absolute certitude, as absolute as can be admitted in the logistis. The telepathic action itself is assuming the force of the seer logistis, though not yet perfect in
this evolution. Tapas in its separate initiative (not preceded by or involved in knowledge) has risen in its major action to 65° and is even rising beyond it to 75° and 80°. This movement is proceeding towards its completion

Samadhi has developed in all but the nidramaya depths to the heights of the seer logistis. Where there is nidra, it is assuming the character of the lower intensities of the logistis informed with revelatory gnosis, but the dream caprice often touches and spoils by its intervention. There are instances of a very perfect and sustained dream reading, also brief perfect converse.

K.A has suddenly developed the highest seer logistic character in the mental body and when it so acts forms a sea of ananda around the body, but when the body itself is penetrated by the ananda this tends to cease. The Shakti is working to combine the Anandas of the mental and physical bodies. Ananda recurred with spontaneity in the Samadhi, but could not endure against the nidramaya absorption.

At night in samadhi at first rational, then fantastic dream coherency.

Highest logistis in spite of general laxity firm in thought-perception, active amid some telepathic confusion in T².

Vishaya Ananda changed into seer logistic quality through a conversion to K.A. This was done with phenomenal rapidity; intuitive vishaya at first adhered to first contact, but was almost immediately converted in this last refuge. The siddhi first in sparsha, then extended to the other vishayas, even to action and happening. What now takes place is vishaya-kama, ideal sense of vishaya acting in the dominant Kama Ananda.

Rupa has for some time been working against temporary suppression, yesterday succeeded in turning it to strong obstruction, today it has recovered its force. Crude rupa is now for the most part possessed of the third stability; the others are still in the first in duration, but the rupas here too have the nature and consistency of the third, but are caught away by the old obstructive power in the akasha.
Vishaya again active. Gandha has almost conquered the obstruction in inhalation, but spontaneous gandha though increased in force of recurrence is still subject to its power. Rasa is trying to occupy the organs of taste more fully. Sparsha is still obstructed, but occasionally active in response to tapas. Sravana is rare and has not gone beyond the typical shabdas now commenced in the jagrat bahirdarshi, and no longer confined to antardarshi or dependent on the closing of the ear to sthula sounds. Drishya is depressed in its evolution.

Samadhi in the afternoon developed farther in the same direction. At night there was throughout in sleep the rationalised dream coherence—also some samadhi—the fantastic element even was reduced to the terms of rational coherence. The only exception was a brief, but for a time persistently repeated irrational fear-dream from the subconscious infant mentality associated with past sanskaras. The intrusion of personality and present life associations are now the only undispelled defects of this nidramaya swapna siddhi. The element of ideality in the coherence is rising, but not effective, because the purusha is only a passive witness and seer and not as in the samadhi proper a gnostic observer and judge of the things seen or experienced. Nidra must be dispelled to bring about this perfection.

Aug 22, 23. 24 Friday, Saturday. Sunday

On one side a strong development of hermetised logistis which is taking up the T^2; on the other a laxity of the system, a lapse towards something like the old mentality brought about by an invasion of the besieging external mentality and some return of the mental principle of advance through struggle which seemed for a time to have given way finally to the ideal principle of advance through adjustment; even for brief moments in the end (24th) strong touches of external asamata. The higher gnosis works from above on this mass and frequently occupies it, but the physical system and mind are relaxed to the old half idealised mentality.

T^2 has advanced so far that all telepathy is taking on the form of the seer logistis,—the hostile suggestions from outside excepted, and these too are now being attacked when they enter and either
rejected or compelled to undergo transformation. Decisive seer trikaldrishhi and tapas are rare, but the dynamic in that type is now common and is being better harmonised with the actualistic ideality raised to the same form. This seer logistis is of the higher form full of a varying measure of hermesis and even some reflection of a superior drishti.

Vishaya is again obstructed and occasional; rupa is trying to advance under difficulty. K.A has been much oppressed but is now reviving though not yet in full occupation. On the other hand the new dynamic seer tapas aided by a lower logistic tapas is working strongly for the arogya especially in the two central rogas with some initial effectuality. It is trying also to take hold of the other two members of the physical siddhi, but with no tangible result in the corporeality.

Samadhi is half advancing, half stopping under the same difficulty. Once there was the old vision of long continuous connected scene, but not this time in a rapid panorama, but steady as in actual life and changing only by the slow and regular movement of the witness through its environment. Towards the end, however, it was invaded by present suggestions and suffered from some fantastic incoherence and mutability, but more in the event and occupying figures than in the scenes. Last night there was a fall back to strong fantasia of present suggestion, though the physical circumstances and happenings were perfectly coherent and rational in their ensemble, connection and changes. In the afternoon for two days there was a difficult gnosis limited to thought and lipi and today a strong overmastering by disputed nidra, after some success of restoration. Occasionally in all these imperfect siddhis there are suggestions not immediately followed up of new development and progress. The obstacle interferes and drives back towards asiddhi.

A movement in the lipi towards the universalising of a rapid stable legibility in all the forms, chhaya, tejas, jyoti, varna, of the lipi. All but the chhaya are more facile and stable at night than in the daytime.
Aug 25. Monday

The tapas is becoming constantly stronger in the physical field; the ideal tapas produces results which were impossible to the mental or intuitive power. But there is an obstinate retarding resistance.

Lipi 13 3 6 These are the siddhis which have to be brought forward and on which, in addition to the gnosis of jnana and T2 the Shakti is most tending to concentrate. There is an attempt also to redevelop or rather to remanifest and reestablish the once manifested stable basis of the K. Ananda.

K.A is reestablished, but not with a full force or continuity.

In the Samadhi there is some revival of the full force of dream coherence; also occurrence of an absolute firmness of dream vision

T2 is developing settled seer telepathy and seer telepathic trikaldrishti in spite of the confusion of the invading mentality. Tapas is dominating, but much besieged by the obstruction of the invading ashakti.

Aug 26 Tuesday.

T2 continues to develop the seer certainties and right perception of telepathy, but the besieging confusion and physical tamas continues to limit its action. There is an increasing revival of the force of K.A. The two first chatusthayas depressed by tamas and laxity are recovering their completeness of the siddhi. This time the relapse tendency in the subjectivity has lasted seven days; the ordinary minimum formerly was a fortnight.

T2 has emerged from the confusion and is now exiling all inferior suggestions. The telepathy of the seer logistis is still subject to a survival of mental incertitude and stress prematurely trying to set right the incertitude, but the tendency to automatic justness of appreciation is gaining ground in spite of lapses.

Samadhi has recovered full force of logistic ideality in the seer logistis. For the last day or two there has been a movement towards abundance and coherence of other experience than the dream vision. Abundance and continuity were secured initially in monologue, converse, scene-narrative with speech, lipi in the lighter samadhi; there was also light and stable scene and continuity in happening; but the mass lipi in deeper samadhi was
subject to great incoherence and though there was an immense abundance of experience in the logistic samadhi, most of it was of a fragmentary character. At night there was some relapse to present suggestion.

K.A increases in the seer logistic ananda, but was discontinued late at night. The obstruction is yielding with much resistance and retardation. The two first siddhis are well reestablished in Devihasya.

Aug 27 Wednesday

T\textsuperscript{2} in spite of laxity is proceeding with accuracy of telepathic incidence. The Surya direction of the Ishwara is prominent and moving towards direct logistic control and guidance.

A great increase of physical stability in sadhara, niradhara and chitra lipi, but especially in the niradhara. Also now in sthapatya lipi.

In Samadhi in the afternoon at first an oppression of nidra, but strongly resisted by the Shakti which established in spite of it a free flow of the lipi, mostly of the lower logistic character. Subsequently, when the nidra tendency was conquered, there was established a free coherent movement of the seer logistic thought-speech, natural, normal, not as formerly maintained by tapas against obstruction, — though a slight negligible obstruction is still present, a similar freedom, normality and coherent continuity of the seer logistic thought perception, then of the seer logistic lipi, with a beginning even in the profounder depths of samadhi (sushupta swapna), and a combination of these three powers, more obstructed, but still sufficient in action and normality. Other features of samadhic experience occurred in briefer snatches, but always significant and sufficient by the aid of the gnostic thought to yield their context and significance. The distinguishing character of the whole movement was the action of the observing thought actualising and understanding each experience and distinguishing in the scenes presented between the worlds and spheres of which they were a part. The mental worlds especially manifested in the more physical and [vital]\textsuperscript{2} rungs of their

\textsuperscript{2} MS vitals
ascending order. Samadhi in the afternoon may now be considered
to have well founded its stable basis.

There is a beginning of the full stability in the abundance of
the lipi, as well as in isolated lipis. There is a variation between
the three degrees, but each tends to its full duration. The perfect
duration exists dissolved, but still present in the three degrees.

At night the lipi niradhara and sadhara fixed itself in the third
degree of stability; it is also developing positive trikāldrishti of
sadhana in the highest seer logistis.

Gnosis is leaning more upon the hermetic element in the highest
seer logistis and seeking to make this the whole thought instru-
mentation, but the laxity still leans to a lesser force of seer logistis
burdened with the siege of the old idealised uncertain mentality. The
descents to lesser forms are decreasing in frequency and incidence.

At night laxity and the lower form of dream; but in the morning
some force of increasing lipi in the depths of samadhi.

Aug 28th Thursday.

T² has now taken possession of the telepathy and is inter-
preting all the former movements in an increasing mass of logistic
experience. There is an increase of the precise appreciation of ten-
dency, including thought tendency and impulse tendency, in the
effective force of dynamic seeing Tapas and in the relative or dom-
inant telepathic certitude,—the certitude resulting from selective
idea force in the tendencies and circumstances subject to poten-
tial reversal by some greater force. All this is in an intermediate
seer logistis containing the hermeneutic element, but not filled and
possessed by it. The quite positive trikāldrishti in the seer logistis is
quiescent awaiting the hermesis. The trikāldrishtic commenting and
interpreting thought speech is now combined with the perception..

Full third degree stability in all kinds of lipi subject to a certain
initial uncertainty and some impediment in the immediate rapid
legibility

In Samadhi an obstructed but still developing movement. The
features not yet perfectly free presented themselves with more force
of coherent continuity, but not in any abundance. Lipi in the depths
was more coherent, but with effort and not in a free normality. Full
freedom has been gained only for the thought, thought-speech and lighter lipi.

There was some attempt of the vishaya to break down the obstruction that again prevents its more frequent recurrence and progress, but success was small. Rasa is most apt to come in abundance, but not with perfection. Gandha is perfect, but comes with only an occasional spontaneity, otherwise it is obstructed. Both come daily, and are therefore established, but not yet frequently and freely. However by today’s effort the tendency in rasa to recur has been greatly strengthened, as well as its mass; gandha in inhalation comes more easily; both have profited by the tapas. Sparsha increased in incidence, but was soon stopped by obstruction. Speech shabda came once only with no sequel. Drishya progress is obstructed.

Effort to develop higher trikaldrishti, not yet come to fruition. Telepathy is becoming more concrete and intimate, sanjna added to prajnana and embbrided vyapti, — perception in being to perception in idea.

Relapse is now chiefly powerful in the physical siddhi. There is a revived sensitiveness to cold and an attempt to restore its results in roga. The tapas however is powerful enough to prevent any strong materialisation. In the central rogas there is a relapse, in one due to persistent overstrain on the centre, in the other a mechanical repetition of recrudescence.

Friday Aug 29th

T^2 this morning has made a large stride forward. A full free and normal thought or jnana of tapas and trikaldrishti has now associated itself with the actual perceptions (vyapti prakamya) and this has enormously increased the rapidity of progress which is now returning to what used to be called the enthusiastic (ie the luminous or fiery or both) and anandamaya rapidity in lipi, jnana and T^2, while it is partly active in samadhi. The Shakti has first converted into the seer logistis the constantly recurring remnants of the old actualistic telepathies of the intuitive mind, intuition, inspiration and inferior (semi-intellectual) revelation; then the dynamic telepathies and tapas thought on the basis of accurate possibility,
sometimes but not always full and complete in its vision—it is when
some possibilities are ignored that error of stress becomes most
tempting and facile; finally it is bringing out the telepathic decisions
and relating them to and converting them into the nontelepathic
or pure trikaldristic certitudes. The two first movements are now
finally founded and the old errors can only recur by mechanical
force of habit without any other justification, since there is no void
of knowledge to justify their blinder seeking. The third is only just
being founded with the final firmness, but the foundation is not yet
complete.

No Samadhi in the afternoon. The other members of the siddhi
are held back by the obstruction; but in antardarshi the force of
lipi stability is increasing.

Aug 30th Saturday.

T² attained to a certain final basic action of certitude. The rest
of the siddhi made no ascertainable progress.

Aug 31st Sunday.

The obstruction is now without being removed rendered null
for the ideality. Lipi in the jagrat is moving forward, increasing the
normality of the third degree of stability and its force of duration,
bringing the rapid legibility in the stability and rejecting all unstable
lipi. The ideal thought is enforcing its free, normal, pervading action
and bringing it to the level of the thought speech in this normality
and freedom. Trikaldrishtic thought shares in this new perfection.
T² is increasing with a remarkable rapidity in frequency of logistic
certitude. The normal character is now that of the logistic seer
ideality either with a strong dynamic and hermetic force, successful
tapas enforced by jnana, or of the same thing, but with full logistic
revelation. The old inferior or middle seer logistis which was a
correct adjustment of possibilities is giving way to this form—it
recurs but without sanction for endurance—in which possibilities
and certitudes are combined, but with the latter in domination.
Tapas without knowledge is now being rejected and condemned to
exclusion. The still existent defect arises chiefly from imperfection
of vision of time, place and a certain and indisputable order and
fullness of circumstance. These things can only be initially established in the seer logistis, since their sure fullness begins in the hermetic ideality.

Darshana which fluctuates between Ananda and mentality, is now increasing its insistence on the force of the vijnanamaya darshana, as only by fixity in the gnostic seeing can it get rid of the lapse to the defects of Ananda.

Samadhi is in a state of lapse; today in the afternoon after a day of interruption and one of unsuccess, it is trying to recover, but nidra has taken hold and prevents the freedom. At night incoherent or fanciful dream occupies the sleep. The other siddhis are preparing to recover, but cannot yet put aside the obstruction.

September.

Absolute finality is not yet gained in the first chatusthaya, for the fragments of external touches of asamata are able to touch the physical parts of the physical mentality, nor in the second for the Devi Bhava is pushed down to the old mental form and that survives in the sense of the body even when the rest is in the ideal Devibhava. The ideality is founded in the highest seer ideality though the lower forms still recur mainly in T², because that is still imperfect in circumstance; but the vijñana is constantly increasing. Its action is still capable of suspension during the later part of the day owing to laxity. The ideal traigunya siddhi is increasing, physical tamaša giving more and more place to çamaša, but the entire union of the three gunas is not absolute, because the physical mentality is still not wholly changed into the gnosis. These asiddhis are yet becoming more and more interruptions rather than permanent deficiencies. Samadhi has founded itself, but is free only in thought and lipi, and is capable of lapse. Rupa and vishaya are obstructed in their progress. The physical siddhi is in a state of relapse, though certain beginnings are established with some finality.

Sept 1 Monday

T² has to be made entirely valid in circumstance and a first movement is being made towards this development, but it is at
once assailed by the old causes of incertitude and wrong placement. These act more easily when there has to be a multiple and rapid seeing than when there can as in simple cases with few details and slower movements be a deliberate exercise of the vijnana Shakti. There there is not only an increasing correctness of gnostic appreciation or judgment in the direct seeing, but an extension of it to more remote eventuality.

Gandha in inhalation has developed perception of neutral odours and with this new basis there is a great increase of frequency of positive gandhas. The spontaneous gandha is now rather more frequent. But the obstruction is still resisting eviction and retarding progress. Rasa is more active, but has not yet gained a firm basis.

Rupa is once again active; it is striving for stability as the basis for its perfection. K.A active, but not in settled continuity.

Sept 2  Tuesday.

T² today is again troubled by the external invasion; it is evidently preparing for a fresh extension, but this as usual has brought about a trouble of resistance and irruption. Drishya once again active; a few forms of greater stability in ghanas rupa; tejomaya rupa in scenes etc of the first stability and continuity, but mere drishti, the thought in the drashta inhibited by nidra; in the early morning some mass of coherent reading.

Sept. 3 to 24—

This has been a period corresponding to the old long relapses, when as there was no continuous progress, nothing could be written. But the relapse has only been a fact in the physical siddhi, which has been entirely suspended, except for occasional movements soon falling off into inactivity. There has been even some relapse of positive roga; the fragmentary (catarrhic) rogas have tried to lay their hold persistently, but are always manageable by the tapas; the two central have prevailed without being severely aggravated. On the other hand Samata is constantly making itself more firm in the Ananda, more massive and imperturbable. It is not yet free from occasional pressure of the exterior physical pressure,
but this is becoming rare and very vague. Shakti has also been fixing itself more and more, but varies from the vijnana ghanata to the physical-mental laxity; the first tends more and more to predominate. Vijnana has lapsed only for adjustment. All is intuitive mentality even in error, and all has been steadily transforming to the seer ideality. The defect is still in T² which draws down the others, but normally thought is of the seer ideality, and always when there is not the physical relaxation. T² has been increasing in the seer ideality and mere intuivity is being progressively eliminated. The extension is general, but not yet quite fixed in the higher ideal jyoti. Time place circumstance are the great difficulty. Tapas is increasing in force and applying initially to the immediately surrounding life-action, but against great opposition.

Sept 24  Wednesday.

Lipi for the first time has risen from the seer ideality of the logistis, to the hermetic vijnana. It is now the full logistis in the hermesis; beyond is the middle hermesis and beyond that the seer hermesis. Thought is rising into the fullness and pervasion of the complete seer logistis, all logistic levels are there, but all full of the seer logistis.
1st Feb.

Thought to be set entirely free
T² to be thoroughly idealised and given certitude.
Tapas siddhi to be made luminously effective.
Physicality to be brought under control of Tapas.
Rupasiddhi and samadhi.

First get rid of the physical lapse.

The ċraddha has to be firm and absolute

First week of February
Three chatusthayas.
Perfection of 2ᵈ chatusthaya.
Shakti. Idealised and intellectual perfection.

The highest ideality in the highest logistical ideality.

Lipi, thought-speech, jnana perfected on this level of vijnana
T² perfected a little later, but rapidly all the same.
Rupa-siddhi and samadhi

4ᵗʰ

The physical lapse in the subjectivity has been nearly got rid 
[of], but not quite eliminated. Its force however and effectuality 
have been much diminished and are being brought to the vanishing 
point.

The ċraddha is now firm, but not yet absolute.
Shakti has got its intellectual perfection, so far as the word can be applied, and is getting its ideal perfection.

This is due to an extraordinarily rapid development of the whole system into the highest logistic ideality,—first elimination of mental intuivity, confirmation in intuitive revelatory vijnana, then rise to interpretative revelatory, then to revelatory full of founded power of inspiration. The lower forms of vijnana occur from outside.

The prana and body are also being taken up by this ideality.

The process is not yet quite complete.

There is a rapid development of combined action of all the parts of the siddhi, but this is as yet only being founded, not complete.

Thought-speech, jnana [and]\(^1\) primary T\(^2\) are being founded on the highest logistis

Rupa and samadhi are still obstructed and pressing on the obstruction.

Some progress in rejecting obstruction in samadhi

Attack of the intuitive mind from outside, only temporarily successful in a partial invasion—

The idealistic force is strong enough to reestablish its hold.

Feb 6\(^{th}\)

All February the struggle in the physical siddhi.

Feb 7\(^{th}\)

In spite of the intuitive mental [invasion]\(^2\) —

---

\(^1\) MS or
\(^2\) MS evasion
(1) The interpretative or inspirational ideality has manifested itself with some power in lipi, thought, trikaldrishti etc. The logistic ideality remains but is surpassed.

(2) Lipi has got rid of the insistence of small intuitive vijnana, though it is still capable of some lapse.

(2) The rest of the ideality is labouring to follow in its steps and get rid of all lower forms.

(3) In lipi revelatory logistis is now becoming the lower and not the higher form. The interpretative is the rule.

(4) Ananda is progressing and transforming itself first to the discriminative revelatory logistic then the interpretative and getting rid of the intuitive mental form. It is now persistent when there is smarana.

Feb 7th

The second week of February.

(1) Lipi to be fixed in the second vijnana.

(2) Thought, T, to be raised to the second vijnana, the logistis only a lower form.

(3) Ideal Shakti to possess the body.

(4) Ananda to fix itself and be no longer dependent on smarana.

(5) Insistence on ideal Tapas control in arogya, utthapana, saundarya.

(6) Completeness of Brahmachatusthaya.

(7) Rupa and samadhi.

All these will not be complete, but all will advance. The rule of rapidity has to be brought in everywhere.

Ananda overcomes in type the obstacle of vismriti and has almost established the continuity. It is established in type and in dominant tendency, but is still resisted, sometimes briefly suspended by strong absorption. Sleep brings a total discontinuation, but the recovery is swift.

3 This item and the two that follow were misnumbered. —Ed.

4 This, the second entry dated 7 February, is written on a different sheet from the previous entry. —Ed.
Feb 8th

A certain lapse tendency. Ananda persists but with frequent momentary vismriti. The T² moves for a while in the telepathies. The thought-system is arriving through a last struggle to the condition of the lipi divided between the interpretative as the right and normal, the logistic as the lower relaxed action to the exclusion of the intuitive mentality.

Rupa-siddhi has been developing since yesterday fluidity, perfection of form (not always complete)[,] vividness, but not stability. Variety is poor as yet and stability only initial or primary.

Ananda is now constant (afternoon) but often forgotten by absorption yet present; sometimes this forgetfulness brings momentary cessation. Sleep brings cessation; but the obstacle is now being attacked, though not yet overcome.

T² has descended to rectify and turn into interpretative telepathic ideality.

Ananda Brahman is confirming itself in prema, kama and beauty.

Obstacle to Samadhi persists, but is slowly yielding.

At night a lapse to mentality.

Feb 9th

The whole ideality after a violent depression is now passing into the revelatory form of the interpretative vijnana. This is also laying hold on the body, but here more powerfully besieged by the intuitivity of the intelligence

The perfect shakti in the physical intelligence has been replaced in type by the perfect ideal shakti with the fourfold Devibhava.

Ananda is being reestablished in continuity after interruption.
Sahaituka has recommenced, but yet in a crude initial form. (since yesterday)

The Ananda is being idealised, but as yet not successfully; because the intuitive intelligence still normally holds the body.

Continuity of Ananda, forgotten sometimes but still existing has been established in type in Samadhi (morning).

Idealisation (rapid) in the revelatory interpretative form of the elements of samadhi has begun in the lipi etc.

==

Ananda absent in samadhi and sleep in the afternoon, but ideality at play, in dialogue etc. At times deep tamasic nidra hiding a core of sushupti, sometimes jagrat, sometimes আচ্ছাদন

==

Ananda once more continuous in afternoon in spite of absorption in writing, finally with help of some smarana prevailed over absorption.

==

Ideal Shakti fixed in the body.

Feb 10th

Ideal Shakti is fixed in the body, lipi fixed in the vijnana, interpretative and revelatory of the two lower kinds. Thought-siddhi and T² is partly formed in the same idealities, but revelatory logistis predominates for the time. There is however a mixture of intelligence. Sharira Ananda discontinued at night by sleep and recovered with some difficulty in the morning. Brahma chatusthaya complete in Sarvam Anandam Brahma, Anantam Jnanam in essence. The Brahma-vision has now to be filled in with the vijnana. Rupa and Samadhi are progressing; rupa is still in the first stability, occasionally on the border of the second, recurrent, not steady in appearance. Ideal Samadhi baffled at night by sleep and dream: present in daytime but assailed by nidra.

Today thought-siddhi + T² ought to rid itself of the admixture.

The psychic suggestions, telepathy, vyapti, prakamya, possibility, doubt, denial etc are all being rapidly changed into the form of the revelatory logistis. There is a strong tendency to the interpretative form.
Ideal Shakti is being intensified into the Krishna Kali relation founded on madhura dasya.

Feb 14th
One day of lapse (12th), another of trouble of recovery. Eye malady, bleeding of nose, constipation; the will prevails only with a struggle.

The revelatory ideality is establishing itself, but with much fluctuation of adjustment, Shakti idealised in the body in the same way, sharira ananda similarly. The latter is being rapidly changed. As yet the siddhi has not recovered its full force of occupation.

Development of T² on the revelatory base but hampered by mentality and its invasion and siege.

15th 16th
Founding, in spite of difficulties, of the [ ]⁵ exclusive ideal action in thought-siddhi and T² as in script and li. In T² this is not complete and this has some reaction on thought-siddhi which is now being closely fused with T².

17th night. 18th
Recovery of vijnana in the system and rapid development of the ideality. The vijnana (revelatory of all kinds based on intuitive revelatory) is fixed in the system; lapses are only to intuitive ideality and momentarily to highly idealised mental intuitive.

19th
Interpretative revelatory vijnana has been rapidly rushed to the lead and holds it, but the intuitive rev. occurs frequently as a suggestion, but more and more filled with interpretative rev. V. Other lower forms only occur as suggestions from outside and are rapidly and increasingly turned into the right kind before or immediately after they enter the system.

During the lapse even the purely unmixed character of the mental intuitive, though it held the system, was made more and more

⁵ MS the
more clear. The ideality then continued in spite of this hold and was quite firm in lipi, script and often in thought-speech. Now even these suggestions cannot come in the mental form; only in laxity there is often a sort of mental cloud about the ideal form.

Lipi, script, thought-speech are now firm in the ideality; thought-perception and T² are also substantially ideal, but to some extent in laxity of the shakti affected by the mental shadow. They are however being rapidly subjected to thorough idealisation. When the shakti is not pramatta, the mental shadow does not touch, but the lower forms are more common as yet than the revelatory; the contrary is the rule in the other members.

Vyapti is still chiefly of the mental kind

The interpretative revelatory since last night is being fixed in the system—the essentiality of it, its status in the tissue of the conscious being. But there is already the urge to the revelatory in its own highest kind.

The lipi which has been ideal of all kinds is now shedding the intuitive vijnana and keeping only the revelatory and interpretative.

Fixed in the interpretative form of all kinds it is now immediately (after five minutes, in the same uninterrupted movement) lifting up all to the revelatory vijnana in its three forms. This done in a minute or two it is drawing all into the highest form. This is the first instance of such a large miraculous rapidity

Vyapti is now coming in the revelatory vijnana, but of the totality of the bhava in the object; the particular movements are seen in it, but are undergoing a thorough idealisation, even in the mental intuitivity.

As a result also trikaldrishti tapas is beginning to be seen as a movement out of being and no longer only in their separate forms.

The complete idealisation of the tivra ananda whether ahaituka or sahaituka is taking place.

The insistence on the physical siddhi has been increasingly relaxed for the last few days. There is now scanty K.A. It is being transformed into the revelatory ideal K.A, but the transformation is much opposed by the survival of old idealised intuitive Ananda. The other Anandas are sharing the change.
The second half of the day possession by the intuitive mind from outside. Progress under difficulties.

20th Feb. Friday.
Rapid progress in spite of mental siege.
(1) Shakti in system fixing the essential being in representative revelatory vijnana; interpretative force present, but not insistent in manifestation. Occasional covering by inspirational intuitive idealised mind.
(2) Lipi deepening into the revelatory largeness even in intuitive vijnana type.
Rapid and powerful development of fixed stability in lipi sadhara and niradhara.
(3) Strong development of ideal thought-siddhi in all forms; rapid and continuous ideal thought-perception, jnana
(4) Developing certitude in trikaldrishti, but much enveloped in idealised mind-matter.
(5) Increasing ideal-power in kavya.
(6) Triumphing tendency to bring all mental action into the ideal form; but there are lapses.
(7) Progress in idealisation and in [s]table jagrat of the three forms of swapna samadhi in the afternoon. Internal lipi in antardarshi fixed in representative revelatory vijnana; continuity in swapna of ideal thought siddhi in speech and perception sometimes accompanied by rupa and drishya.

21st Feb. Saturday.
(1) Idealisation of the intuitive (mental) thought-siddhi jnana and T² knowledge, dominant but not absolutely complete.
(2) Immediately (in the morning) the movement turned to the normalising of the interpretative revelatory vijnana in all the mind and supermind, and after certain fluctuations this came in the evening
(3) In antardarshi interpretative revelatory vijnana in the lipi. The rest of the siddhi active in swapna, but limited and diminished by heavy attack of sleep.
(4) The interpretative in the shakti of the physical system has now filled the representative revelatory vijnana; the content is interpretative, the shell representative (logistic revelation).

(5) The Tapas is now acting vigorously on the physical asiddhi in the different remnant rogas and has begun on the most persistent central incapacity, in the latter as yet without dominant effect. The remnants still recur with a temporary show of force but cannot resist the dissipating action.

(6) In the morning a remarkable solitary instance of the complete and rapid effectivity of the Tapas on inanimate things. This is practically the first instance.

(7) The T² is now normalised in the ideality, though still besieged and sometimes penetrated by the intuitivity, but it is no longer cased in the intuitive mental matter.

Today closes the third week of February and completes a definitive stage of the union of samata, shakti and vijnana. The asiddhi is not entirely exiled, but has lost its power to hold except for touches and a momentary (in the first two) or a brief (in the third) interval. Negative Asamata is only a touch and nothing more, but defect of sama ananda is still possible for a short while.

The next week must complete the perfection of the luminous revelatory reason.

It is also suggested that the rupa, vishaya and samadhi will develop finality of basic perfection.

There is also some preparation for the overcoming of the obstruction in Ananda and Arogya. In saundarya and utthapana the definitive effectivity has not come, but primary utthapana is being prepared for its basis by the steady pressure on the habit of fatigue. There the old strenuous defect of anima has little hold; it comes only in fragments, little as pain, mainly as stiffness. Fatigue is the chief asiddhi.

(1) Resumption of continuous Ananda, but as yet with insufficient force of spontaneous action.

(2) Shakti shown in resistance to an attack of many remnants of roga. Only three still survive at all in fact, the eye-watering, the stomach affections and the central weakness. All except the last are much reduced, and even the last is much modified in force.

(3) Samadhi progressive at night and in the morning. All is ideal, drishya included, but all is now turning to the revelatory vijnana. Drishya is becoming more complete and stable. Lipi in deep swapna shows a tendency to return to coherence.

Feb 22nd Sunday

In the samata the siege of the exiled intuitivity throws a shadow of defect on the hasya and therefore on the sukham and equal Ananda. This is only when there is the withholding of the full play of the Shakti.

In the shakti the defect that emerges is a deficiency of height of force, aishwarya-bodha, hasya and çraddha in the immediate action of the Shakti.

None of these defects are real, but imposed on the system from outside by a shadow of the old habit of the physical mind.

These defects have now to be finally excised. There is already a commencement of the conversion of the surrounding activity to the ideal terms.

The first two chatusthayas cannot be quite absolute until the vijnana is universal and free from any suspension of the ideal action.

The rupa and vishaya show signs of reinitiation and of a firmer ideal completeness, but as yet there is no freedom or dominance of stability.

The difficulty of T² is now the adjustment between the higher and lower perceptions; so long as this lasts the surrounding intuitive mind is led to invade with its inadequate suggestions. But this mind now promises to turn into the ideal form.

Ananda is now again active, but subject to the recurrence of its
old disabilities and still drawn down to the mental intuitive manner. Ideal Ananda comes in as an exception.

Rupa shows great vividness and perfection (not always completeness) and vividness of all forms, perfect, developed, ghana, crude; but except in the last it is only in the initial and primary stabilities.

In the afternoon much sushupta swapna samadhi. An outburst of the highest revelatory lipi, vivid and powerful beyond anything yet seen in the jagrat bahirdarshi. Much lipi in the sushupta, ordinarily but not always coherent. Much revelatory vijnana; all ideal. But the hold was still insufficient and besieged not by the actuality, but by the vague consciousness of dream.

Today from the morning lapse towards mentality for the transformation of the surrounding mind. This has brought back unideal telepathy trikaldrishti tapas to a certain extent, but the ordinary thought seems secure. All however is hampered by the invasion. T² at the moment acts only in the representative vijnana with relative and occasional certitude, the truth of each suggestion stands, but not the decisive value the tapasic mind outside fastens on its indications. When the full ideality acts, each is reduced to its native proportions, but there is no future certitude, or only a relative morally certain indication of the future.

There is the same phenomenon in the interpretative representative T², on the lower scale. It remains to be seen what happens when both are lifted to and combined on the higher scale.

Vishaya is again manifesting vividly, but without freedom; only the old customary drishya, rasa, gandha, sparsha, the few limited things. Shabda is obstructed as before.

Ananda is now recovering a firmer, though still imperfect base. There is much struggle in the primary utthapana; the two rogas are also still successfully obstructive. The Shakti persists in the utthapana and does not allow a long collapse.

Today pain (sharp in the shoulders) returned momentarily in the primary utthapana, but immediately subsided. Fatigue is strong, by cumulative effect; there is [no]where a successful reaction.
A strong interpretative revelatory vijnana of the Shakti in the physical system.

At night great vividness and constancy of the basic rasas.
T² in the interpretative revelatory and highest revelation of the third scale. All now is the third scale, ie, the divine reason.
Magnificent drishya in the deep and deepest swapna samadhi, scenes, happenings etc, great stability, perfection, sometimes chhayamaya of tejas, sometimes vivid with some jyoti in the tejas. A little force of chhaya however everywhere. Afterwards dream but with much coherence.

Feb 23d Monday.
Today T² to develop highest certitude. Rupa, vishaya, samadhi. Ananda to idealise and to overcome obstacles. Pressure of Shakti on roga and obstacles to primary utthapana.

Yesterday there was in T² much confusion of the lower inadequate forms, insufficient half representative, half intuitive forms, mind-coated intuitivities and intuitivised mental suggestions from outside, inspirational forms without the discrimination etc; the highest certitudes finally emerging assailed with dubiety from the luminous chaos. Now the discriminating interpretative revelatory power is settling itself in the T². The intuitivities of all kinds are being rejected where they resist transformation, replaced or transformed when they admit change. The highest certitude of the third scale is acting now and then; the occasional certitudes are frequent. There is still much to be done.

Ananda is idealising itself with occasional lapses.
Lipi is now finally getting rid of the strong relics of the intuitive and the weak relics of the inspirational ideal lipi. The representative and interpretative lipi of all degrees take the place.
T² is now getting rid of all forms of tejasic and tapasic stress; but the work is not yet finished. The highest certitudes await the growth and completion of this eliminative process.
The battle is going on in the primary utthapana. The Shakti is trying to impose relief in standing and relief in walking and
add them to the relief by sitting. But as yet it is only a temporary incomplete relief. The attack of fatigue is heavy and fierce.

Afternoon. Samadhi, ideal thought and speech continued in deeper swapna, but sushupta much under the power of nidra.

The force of ananda increases, but is much cased in inspirational and inspired intuitive mentality. The density tends to diminish in the idealised form. It is however becoming more intense in this form.

The T^2 acts now normally in the middle form. The higher action is exceptional except so far as it is translated into the middle form.

Rupa and Vishaya have been less active today. Vishaya is trying to manifest particular tastes in their subtle general essence.

Feb 24th Tuesday

Last night T^2 action of various kinds, none entirely satisfactory, though one uplifted above the lower movements which gave some of the highest certitudes. At night wakefulness with intervals of swapna samadhi good of its kind; only towards morning nidra.

Today strong attack of besieging intuivity on all ideal members. In lipi this results in persistence of intuitive ideal lipi representing the intuitive mentality in the ideality, but not itself mental in kind. An insufficient speech and suggestion is its limitation; it is true in itself, but so expressed as to mislead the mind. It is rejected in favour of the intuitive revelatory or at lowest revelatory [intuitive],^6 representative and interpretative lipi, but still recurs sometimes in spite of prohibition.

In thought-siddhi the same process is taking place, but the recurrence of lower forms of ideal speech is strong and occasionally there is the half idealised mental suggestion from outside.

^6 MS intuition
Nevertheless lower ideal forms are now banned by the law of the Shakti.

In script as in lipi, but the lower forms are more rebellious to exclusion.

T² is most affected. Here too it is definitely settled that only the highest ideal reason is to give the certitudes and the recurrence of the lower forms however strong and obstructive to the proper action is not to be accepted, even if they give the truth.

Ananda promised last night to prevail, but this morning has been discontinued except in smarana.

T² perfect, decisive and invariably effective in the representative highest vijnana, but only in distinct isolated final results; the rest of a lower type besieged by mentality and confusing the mind by trying to figure as this representative ideal action.

In Samadhi much nidra.

Feb 25th Wednesday

T², the representative vijnana is taking up detail, but not all the detail. The confused action of the rest continues, but is becoming clearer by restriction. The Shakti now tends to allow provisionally all ideal T², but to accept only the forms of the highest ideality with a total acceptance, partially accept the revelatory forms of the lower (inspirational and intuitional) stages, observe only in order to reject or transform the survivals of mental suggestion. The rest occurs, but is partially sanctioned only when there is some revelatory force or interpretative in it or at the back.

Feb 26th Thursday.

The interpretative-representative highest ideality has now definitely replaced all other action as the standard movement in the T². The others still persist in laxity of the system. This ideality is now absorbing all the thought-siddhi and proving its truth and certitude.

At night this ideality, at first only able to act above the head free from the physical levels, began to act spontaneously on the
head level. It begins to replace the physical tendency to intuitivity and is descending to take possession of the whole system. At the same time it is adapting itself and taking possession of all kinds of thought perception in the nature. This it has done, first in the interpretative, then in the lower idealities.

All the vishayas, the others in little, gandha and rasa more in large.

Abundant rupa in the samadhi.

Friday 27th February

T² is now fixing itself in the complete ideality, first in the lower forms with some help from the highest interpretative vijnana. All is now turned to its elements of truth, but the last difficulties of the old excessive stress still remain. The rest is a difficulty of limitation and incertitude.

Afterwards something like a deliberate lowering or collapse, but even in this laxity the ideal tendency prevails, but not its order.

Sharira Ananda long neglected and occasional only by smarana is resumed today and restored to an interrupted continuity, while the remnants of the mental form are being rapidly idealised by the highest vijnana.

Rupa is obstructed, though it acts under call of tapas. It has gone back to the initial or very primary stability.

Vishaya acts but under obstruction.

Stable crude rupa (perfect in line) at night.

Saturday 28th February

Lapse.

The lipi has begun to reject all but the highest vijnana (chiefly interpretative) or else its light in other forms. The same process is beginning in antardarshi.

In Samadhi tertiary and perfect stability of rupa, scene and coherent movement begins to occur. Also conversation, no longer mental only, but the physical word. The elements of samadhi have

www.holybooks.com
now [to be]\textsuperscript{7} developed and combined, the [........] more steady in spite [.....................] 

Thought speech has [...........] reject all [but the] forms of the highest vijnana or else its light and form on lower levels.

Sunday 29\textsuperscript{th} February.

Today the whole vijnana has lifted to different levels of the revelatory vijnana. Even the highest drashta logos has manifested as well as the highest interpretative ideality. The basis of the luminous reason has been perfectly founded and what is now left is to perfect and make it universal in its embrace.

The first necessity is to get rid of the lower stratum of intuitive mentality, then to exclude the circumvioning mentality.

This has already begun to be done and for some time the shakti in the body is fixed in the basic third ideality, its contents varying from the intuitive to the revelatory, with interpretative and other floating. Even the intrusions from the surrounding ideality are now for the most solidly idealised though with a suspicion of strong intuitive mentality not easily distinguish[able] from a [ ]\textsuperscript{8} concentrated doubly illumined vijnana.

Rupa has suddenly at night manifested several old forms (reel, ribbon wound reel, bat, brushes etc) in ghana & developed with strong ghana tendency in the second and third (mostly third) stability.

Samadhi is still hampered by obstruction.

\textsuperscript{7} The page containing this paragraph and the next is damaged. Several words or groups of words are partly or wholly lost. The words printed between square brackets are conjectural. — Ed.

\textsuperscript{8} MS a
The Yoga has been brought up during the last month to effectivity of vijnana. This vijnana is that of the lowest total stage of the triple ideal supermind, the domain of the luminous reason. First, there was the disappearance of the old intellectual into the intuitive mind and buddhi, and not only the thought-being, but the whole being including the consciousness in the body, the physical Ananda was brought up finally into this form, to the total exclusion of the old buddhi, sense and bodily consciousness. Here sattwa of the mind was changed into semi-luminous prakasha and jyoti of the mental intuition, inspiration and revelation, rajas into stress of tapasic will and impulse, tamas into a passive or a heavy shama. Tamas alone preserves in the more physical part of the being something of its old inertia and darkness, not entirely changed into passivity with involved or quiescent prakasha and tapas. This tamas is the cause of the persistence of the physical and other asiddhi.

And simultaneously the lower vijnana which represents the intellect in the forms of the ideal mind was developing its greater powers and finally turned into the ideal reason. At first this was done with a lower ideal intuition, discrimination, inspiration, revelation which have been developing for a long time, weighted, chequered, shot through, hampered by the defects of the intuitive mentality of the manasa buddhi. The lipi was the first to get clear of the manasa, —in the bahirdarshi waking state, the internal antardarshi jagrat followed long after,—next the script, next the thought-speech, finally, the thought-perception and only yesterday and not with an absolute perfection the trikaldrishtic thought-perception.
The relics of asamata persisted in a fragmentary occasional fashion so long as the defect of mentality in the Shakti has persisted in the physical consciousness; it did not belong to the system, but was imposed on it, so long as the outer mind could shoot in its arrows of suggestion or break in for a time and possess the surface. There is still a persistence of vague relics which are being steadily idealised out of existence. This is due to persistence of tamas element in the physical being and is part of laxity or physical depression. It is disappearing in proportion as the ideal Shakti fixes itself in the true vijnana. The chief defect is in insufficient force of hasya and ananda, although the sukham is strong and the hasyam and ananda can always be brought to the surface, but often there is a cloud not of duhkha, but of apravritti of positive ananda, especially of hasyamaya ananda, occasionally an excess of udasinata.

Shakti after fixing its base of intuitive mental power in the body, often replaced by ideal forms, is now fixed in a shell of revelatory or representative vijnana filled sometimes with intuition, sometimes with lower revelatory representative, representative-interpretable or interpretative content. Occasionally the higher revelatory drashta Shakti takes momentary possession: there is always now a tendency to its manifestation in the other figures. Virya, shakti (except laghuta sometimes in the physical fatigue or heaviness) are full and sufficient, but depend for their tejas, pravritti etc. on the state of the Devibhava. Devibhava has been established in all its parts, but is not always in the full overt action, because of apravritti of hasya and ishwara bhava. This siddhi awaits the full sraddha and vijnana. Sraddha in the Master of the being is fixed and complete, but sraddha in the Swashakti has been often diminished or overpowered by laxity and failure of siddhi. There is now full faith in the eventual perfection of the three first chatusthayas and the sixth, but incertitude as to physical siddhi, extent of karma and kama, completeness of the mission. This is only occasionally touched by a shadow of positive asraddha and even that now takes the shape of a strong incertitude.

Vijnana is based in the total ideality, but still besieged by the outer mind. All suggestions from the outer mind are now of the nature of intuitive mentality turned in entrance or almost turned
into ideality, full at least of the vijnana stuff and manner, which seems like an incomplete vijnana. The play of the higher third vijnana is now occupying the system: revelatory intuition has taken the place of other intuitions and is already being turned into the representative, ie the highest intuitive revelatory reason; inspiration losing its over-stress and defect of discrimination is almost wholly turned into interpretative ideality, ie the highest inspired revelatory ideal reason, while the full drashta luminous reason has emerged in all its three forms, ie revelation with interpretation but the front representative, 2d the front interpretative with intuition involved in the drishti, 3d the whole drishti with the two other powers taken into the drishti. There are various combinations and permutations. This is completest in lipi, script and thought-speech; thought-perception is a little weighted down towards the intuitive, revelatory intuitive, or representative forms, but the others occur and take the field when there is full action of the vijnana Shakti. T2 is now able to act with certitude, but this is not yet complete; the old telepathic form still labours to predominate. Telepathy of thought is developing, but chiefly of thought impulse, feeling, intention, not of pure thought; the whole mind of animals can be seen, but only partially the mind of men. Here there is still a wall of obstruction through which there is a forcing of prakamya vyapti. Concentration is necessary for this siddhi

Laxity occurs owing to physical tamas and prevents the full normality of the vijnana power, but can no longer[,] since yesterday[,] bring down the system to the mental level.1

Rupa is still struggling to establish the secondary and tertiary stability and all its other elements and its free play seem to be waiting for this siddhi, but it is now in frequent action. Samadhi has fixed the right ideal lipi in the antardarshi, developed many of its elements, but is obstructed by nidra in its further or at least in its rapid progress.

The physical siddhi is still the subject of battle. Some ground has been gained especially in the Ananda, but it has had to sacrifice

---

1 In the manuscript, “since yesterday” is written above “bring down”; the caret marking the point of insertion comes after “bring” instead of “longer”.—Ed.

www.holybooks.com
the continuity once gained in order to change from the mental to the ideal form. The change is almost, but not quite or firmly complete. There is still persistence of old fragments of roga and the two or three chronic maladies. Sometimes two of them seem on the point of disappearing, but are then able to reassert their action. Primary utthagana fluctuates, saundarya is not able to manifest except in bhava.

Brahmadarshana made itself perfect in the Ananda on the mental vijnanamaya plane, it has had to sink back into vijnana and mentalised vijnana in order to redevelop on the ideal plane. Sarvam brahma is always there in bhava, always at disposal to the thought by smarana. The fullness of Anantam and Jnanam brahma awaits the fullness of the vijnana.

March 1st Monday.

The shakti in the body has suddenly changed its base from the fixed revelatory intuitive to the representative vijnana. There is already a tendency to change that to the interpretative basis.

A rapid alteration of the basic and immediately surrounding consciousness into the representative and interpretative forms of the vijnana has begun. The other idealities will still persist for a time; they must replace the imperfect idealities which till now have been coming in from the outside.

The Ananda-darshana is also passing through the same phase, but has not yet altogether got rid of the recurrence of mental vijnana and Ananda on the mental plane. These are associated with certain forms, the latter Ananda being inspirational in its idiom, persist repeatedly in attaching themselves to them, and can as yet only be rejected by second thought or effort of Tapas.

An attempt to accept and transform inspirational-interpretative overstress led to the outside mind breaking through and getting in some of its movements. It cannot hold, but brought the recurrent Asamata which is accustomed to attend failure of Satya and Tapas.

There is some beginning of the same changes in the thought telepathy.

T² this morning is without the sure and decisive revelatory
certitudes. Only late in the morning it is getting back into the true revelatory forms, but still much mixed with the others.

Premananda is developing the ideal drashta ananda.

Rupa is attempting to manifest variety of all kinds, but still obstructed by the physical refusal, although in an intermittent way it succeeds in its movement.

Lipi. July 15th = ideality = entire ideality in the body.

The Ananda-darshana has succeeded in filling the inspirational mental with the interpretative ideal Ananda; at most the former comes only for a second and is immediately occupied by the vijnana.

In Samadhi lipi is becoming coherent in small lipis, but in larger masses it is coherent only in patches. The ideal consciousness is taking more possession of the swapna samadhi, but the deeper stages are still affected by nidra or half nidra or imperfect conscience.

In the evening action of outward mind turning to ideality, the full vijnana held back, finally a hampered and narrowed action of the higher vijnana

March 2d. Tuesday.

The action of outer mentality in a mass of all kinds turned into the lower and lesser ideal action. The object to get rid of the coating, penetration, mixture of the intuitive mental being in the thought-action, as has already been done in script and lipi. Also of the glamour of confused light in the uncentralised ideal action. This seems to have been done, but not so as to absolutely exclude the potentiality of farther intrusion and necessity of farther suddhi. The success seems to be absolute in thought-speech; there is a mixture of stress and incertitude in trikāldrishti, jnana thought-perception is held in doubt between the greater and lesser siddhi. Mind-cased confused perception and half-perception can still pursue the trikāldrishti. The higher vijnana acts with some difficulty and is not yet in free command of its highest forms, but it is growing in power to hold the adhara.

In the evening the thought-perception acquired the same freedom in the ideality as has already been attained by the other
members; that is to say, without any watching, attention[,] concentration or use of will it acts rapidly and constantly without falling from the vijnana or being invaded by unideal suggestions. How far it will be able to cover at once all the T^2 remains to be tested.

The higher ideality in the T^2 is now taking a firm hold. The remnants of mental stuff floating about have become mostly ineffective except for limitation. The lower idealities act as an inferior accompaniment to the higher vijnana or take its place in lax moments.

Ananda is recovering intensity and continuity, but still needs the smarana. It varies between the mental and the ideal forms, mental in laxity, ideal when supported by the tapas, but now contrary to what had been the rule hitherto the ideal are the more intense.

In Samadhi lipi is almost entirely coherent, though not in any great mass, still in longer continuities than before. The other elements are also regularising themselves a little. Lipi is ideal in Samadhi, thought sometimes falls into the mentalised ideal at least in physical level and in intensity. The other members, eg rupa, do not seem yet to be vijnanamaya. Nidra is still a persistent obstacle, but swapna while it persists in nidra is ceasing to interfere constantly with samadhi.

March 3d  Wednesday.

Ananda (sharira) has now a fluctuating continuity; the persistence of the mental forms forms the present chief obstacle. The falling of the intensity brings them into prominence. Nevertheless the ideal form is growing in power. Thought and writing no longer interfere necessarily with the body’s smarana, but only when there is a total absorption in the writing etc or when a cloud of mental stuff comes in to interpose an element of the old formless abstraction of mind which attended absorption in a single subject or occupation. This is no longer a necessity, but a survival of habitude. The continuity has begun to prevail in this matter. The pervasiveness of the Ananda is also being prepared on a firmer foundation. And now even the cloud of mental abstraction no longer necessarily interrupts the ananda. It is only the exclusive absorption that is the ordinary obstacle. There is also the mechanical letting down of the
Shakti (eg at meal times and in the evening[]), that may interfere. Sleep and to a less extent samadhi remain a strong interruption. Fatigue is a power for diminution.

Tapas is greatly increasing in force and in ideal substance. T² is now passing through a stage in which the higher ideality is sometimes active, sometimes gives place to lower idealities. These are not proper any longer to the systems, but suggestions from outside.

Ananda during period of samadhi. The continuity remained almost throughout during the morning while writing a letter, an unprecedented circumstance. The lighter samadhi was constant in the Ananda. The deeper swapna samadhi is now getting free of nidra, except a shadow which gives a remoteness and sunless consciousness unfavourable to actuality. At the worst it is still samadhi, though nidramaya; gādha-supta swapna. The Ananda in this deeper samadhi lost at first its continuity, and with it its mass, suffering diminution, recurred only in sharp and keen pro-longed and frequent touches of great but narrow intensity which caused a spasm in the body and brought back the lighter state and then outer body consciousness. The samadhistha body consciousness is frequent, but of short duration. The more massed continuous Ananda occurred finally in all but the deepest supta swapna, but at a low power and remained half-involved, involved or lost in the nidramaya. The development has been extremely rapid and promises the complete conquest of swapna samadhi by the Ananda, as well as the complete expulsion of day nidra by samadhi. The next step will be the replacement of the profounder real nidra at night by swapna samadhi and sushupti. Sushupti here will not be sunya or alakshana, but vijnanamaya, anandamaya, chaitanyamaya, sanmaya.

Position now makes only a difference of degree, not of continuity in Ananda. Lying, it tends to be extremely intense, intense but less or of varying force in seated position, uncertain in standing posture. Walking has an effect of diminution of intensity. The mental form is being expelled; the form is ideal in ideality or ideal on the level of the mentality, a narrowed vijnanamaya. The mental has in fact been for some time really recurrent with a show of
persistence. It is now merely recurrent. This shows that the physical consciousness has gone far in a first idealisation.

Pervasiveness is now becoming final, only the pervasion of the head offers some difficulty: there it is not, but tends to be quite continuous. In deeper samadhi Ananda sometimes shifts from head to body and body to head. This diminishes the constancy of the Ananda. But there are signs that this difficulty will not be long prevalent.

Lipi in the deep samadhi gains constantly in power and coherence. Rupa suddenly manifested perfect stability in one perfect form (a watch) prolonged for several minutes, though occasionally clouded over, yet reappearing, sometimes with a slight change of details. This endured through both swapna and deep antardarshi or half jagrat half swapna. For the rest, the rupa etc was spasmodic and disordered today, except for snatches.

T² on the lower level is now becoming fuller and more ordered and certain, though still shot through with inaccurate suggestions, ie wrong stresses. The struggle is between ideal perception of possibility (actualities even being suggested as possibilities) attended often with false stress of certitude and ideal perception of actuality (possibilities being seen as actual forces unfulfilled or partially effected) with right stress of certitude. Both come from the outer consciousness and are not native to the adhara. Only the higher vijnana on the highest or middle level is native to the adhara.

The T² and with it other siddhis dropped towards the lowest levels even with some hint of the mentality. Ananda was lowered to an interrupted continuity and suffered much intrusion of the mental forms. Now the highest vijnana is again at work in the thought-siddhi and a recovery is in progress.

Thought siddhi with some T² recovered and founded itself more firmly than before in the interpretative vijnana. All other movements, when they occur, are not accepted or invested with credit, except in so far as they are touched by the drashtri vijnana.

Ananda took some time in emerging from the interrupted continuity. The full intensity continued through a fairly long spell of reading, but was diminished and interrupted at the close. In type however all obstacles have been conquered, except sleep.
Sleep prevailed at night, only in the morning imperfect swapna samadhi. Lipi at first a little confused, but reasserted coherence. The morning samadhi is now coming up to the level of the afternoon swapna. Sleep for about six hours. Dream, while retaining its incon- sequence, is sometimes curiously idealised in some of its incidents or features.

Thursday Mar 4.
The Ananda varies now between three conditions. At night interruption, but restorable by smarana. Restoration automatic after rising. At daytime (except for samadhi) a highest, middle or a diminished condition. The marks of the last are interrupted continuity, much intrusion and some persistence of mental forms, a low or varying intensity. The marks of the first and second are uninterrupted continuity, exclusion of mental forms, sustained or great intensities; but the second is prone to the inspirational, the first to the interpretative vijnana. Tapas is still necessary for the first, partially or initially necessary for the second condition.

T² varies also between three conditions. The lowest is a diluted revelatory vijnana with mixture of other, often now mentally en- cased suggestions, and is afflicted with confusion and incertitude. The middle is a higher representative form, but touched by lower suggestions, into which stress of tapas or hasty certitude brings an element of error, and which is only correct when limited to immediate balancing trikaldrishti. The highest is interpretative and gives correct finalities. The difficulty of taking up all detail into the highest form is not yet overcome.

Other siddhis are not moving much, but there is a beginning of final idealisation of rupa and vishaya, especially gandha and rasa.

T² in the lowest scale of the interpretative vijnana has regularised itself in place of the revelatory ideal seeing, excluding the lower suggestions, which recur less frequently and are given no valid credit. They cannot be easily excised altogether, until their place has been taken by the highest vijnana. This can only give immediate certitudes. But the higher powers are sometimes acting in this lowest scale. This is a preparation for their own final emerge[nce], self-basing and replacement of the lowest interpretative vision.
The middle interpretative vijnana is now being developed, but is not yet clear of foreign (mainly the lower revelatory and inspirational) elements; the lower interpretative has begun to be excluded; its work will be taken up by the higher movements.

Thought-telepathy is being idealised like the other elements, but as yet in a mind-cased revelatory vijnana touched with the interpretative atmosphere.

The rest of the day taken up by a mixed action in which the middle interpretative has been taking in the lower action and generalising itself; but it is itself now being rejected from its insufficiency of decisiveness when not filled with the highest drishti. It is acting still, as also subordinately to it the occasional lower revelatory, and growing in accuracy and fullness, but it is filling slowly with the drishti.

Ananda has sunk into the lowest stage of the third condition and is much interrupted, but is slowly getting rid of the persistent mental form recurrence and preparing a temporary rule of the second condition.

Samadhi is obstructed but even in obstruction maintains with a little impairment its recent strongest gains.

Mar. 5. Friday

The drishti now promises to take the place of the interpretative form in $T^2$ and thought-siddhi. This is at first being done or rather prepared by a slow and fluctuating movement.

Ananda is wavering between the second condition and a compromise between the third and second, a basic uninterrupted continuity of the inspirational or representative kind, but also spells of interruption, interrupted continuity and a weight of recurrent mentality overlaying by invasion.

In the afternoon samadhi oppressed by nidra. Shama darkened by some element of tamas in the system; a depression or relative inactivity of tapas.

The drishti has emerged in the evening in $T^2$ and thought-siddhi, but has not a complete hold or satisfying fullness. In Ananda the tendency is to a fluctuation between the second condition and an interpretative drishti in the form of the Ananda, a higher version.
of the third condition. But the hold is still wanting in strength and continuous insistence.

Mar 6 Saturday

The endeavour today has been to get rid entirely of the lower and mediary forms, but this attempt brought an invasion of these forms, a confusion and a stressing of the difficulty of adjustment to the old proportions of a struggle. The siddhi on its positive side progresses, as has been lately more and more the rule in such crises, in the midst of the confusion. Thought-siddhi frequently manifests the highest form of the drashtri reason, T² occasionally gets at some incomplete form of it. But the main movement has been the persistent increasing rejection of the lowest forms in spite of their persistent recurrence; they cannot long hold the system and are beginning to lose power at all to put their grasp on the thought-consciousness. The mediary forms on the other hand penetrated or not by the drishti lay a strong temporary hold, persist for a long time, prevent the highest drishti, and when it manifests, rush into its place and try to do its functions and imitate its manner. This is the old method of progress. But the rule insisted on at present is that of the higher replacing and resuming the lower powers, not of the lower seizing on the higher and drawing them down to their level. This rule sometimes acts but cannot as yet assert its firm dominance.

Ananda continues to vary between its different formations, but now on the whole the tendency is to bare continuity of the highest condition (not its full pervasion, intensity and possession) in smarana. There is now a movement towards possession or at least pervasion in smarana.

The thought and with a less certainty the T² has now entered with some firmness on the same state as the script and li in which the various forms all belong to the full ideality and belong to the drishti with rarer deviations to the lesser forms still penetrated and covertly possessed by the drishti. But here the process is not yet absolutely complete.

Some play of gandha and rasa and of stable ghana or ghana developed rupa, mostly in the second stability; but the forms are old
forms already seen in a previous far past state of the rupa sadhana.

Strong dream coherence in nidra.

Mar 7. Sunday.

The T² is proceeding with the development of the drishti. The movement goes much over old ground and confirms the stable hold of the drishti in the lesser ideal action. First, the lower form has been successfully converted; this gives near future and present potentialities valued in the terms and powers of the immediate actuality and frequently fulfilled according to the exact balance seen of the immediate present and future actuality, but barren of absolute future certitudes. Now the mediary form has been converted. This takes up the immediate potentialities, includes distant ones, and deals more largely with near and far potential, relative, temporary and isolated certitudes. But the near is more strongly and frequently dealt with than the farther, the farther more than the very distant; the last is still very rare. The chief difficulty is the survival of uncertain or self-regardingly positive stress, and this though less ignorant and vehement than in the mentality, less positive than in the lower idealities, is still sufficient to hamper the action of the highest drishti. The defect can only be cured by full and complete unification of knowledge and Tapas.

There is movement again in the rupa, in the tendency of drishti idealisation, but as yet this is still embarrassed by the persistence of inspired and intuitive mental forms.

S. [Sharira] Ananda is depressed towards the inspirational mentality and intuition, but this form also is being taken up by the drishti. Sahaituka is rapidly undergoing the same change, but not yet with perfection. There is occasional basic or pervasive force of the higher drastri ananda.

Rupa has successfully idealised itself in all its forms after some difficulty with those that were full of the inspirational mentality. The crude forms are not unoften perfect, but not usually so, except in the ghana and developed crude, but often nearly perfect. The old persistent habit of the crude stuff to be doubtful of form, and change rapidly often before creating a perfect form with an initial stability is still obstinate. This is an obstacle also to the stability.
At the same time stability [and] perfection of form and material is increasing; and there is sometimes stability of the full second and even the third degree. This is also coming in a half crude, half-ghana. Full crude and developed forms are perfect in both form and material or in either form or material and if the latter only then perfect in part-form, but they are unstable.

Mar 8 Monday

A very clear, strong, distinguishing and accurate drishti in the telepathies, vyapti and prakamya. Its action is in the already occupied province, but it is there removing all sources of confusion. Also in the telepathic trikaldrishti.

One or two true ghanas have for the first time appeared with the primary stability out of the mass of crude material in daylight; this has the advantage of appearance and stability frankly fronting the physical eye. Other forms present themselves obliquely or dart into the direct field of vision and stay there for a moment or two or three moments or more. Some ghanas of that kind have direct under the eye a primary stability.

There is now occasional possession by the drashtri Ananda in the sharira; but there is as yet no harmonious or complete combination of the pervasion, possession and basic Ananda. The Tapas is now working to establish it in the homogeneity of the drishti, but the kind of drishti is not yet securely the same, nor is the possession then complete and stable.

A remarkable progress has been suddenly made in T² by the taking up of the mediary form by the highest drishti. There is now a mass of certitudes of various degrees and qualities, but governed by an increasing force of absolute certitude. The element of over or under stress remains, but is now made subordinate. The element of struggle in the adjustment is being removed and a comparatively smooth and anandamaya development on the higher scale has been given a firm foundation.

Mar 9 – 13 Tuesday – Saturday.

A period of relaxation of the siddhi. The T² has been steadily progressing, but by a complex occasional action, each time a step
in the emergence of the more and more effective drishti in the two lower conditions. The other uncompleted members have been neglected, subject to obstruction and affected by recrudescence of asiddhi. There has been a great advance in firmness of passive samata and now in the ideal basis of the Shakti.

Mar 13 Saturday.

The highest drishti is finally imposing itself and completing its taking up of the lower movements in T², thought-speech, script and thought-perception. It is the beginning of the final process in the luminous ideal reason.

Sharira Ananda is again reviving, but as yet only in the basic Ananda.

A strong invasion of Tamas in body and physical mind dispelled by the drashtri vijnana which it failed to suspend or lower in character. There is now an invasion of confused luminous lower ideality, and this fails to suspend, but tends to dilute and lower the character of the vijnana.

The highest drashti Tapas is now at work on the Yoga.

The ideal Ananda is now being imposed on the vishayas; it is dominant and almost perfect in darshana, though still too much mixed with or sometimes lowered towards the inferior forms in the seeing of the human figure. It still sinks in the rest by any lowering of the shakti, but its universal finality has been established beyond serious retardation.

The lipi has succeeded in establishing finally the full dominance of the drashti vijnana. This is also accomplished in the script, though here there is a strong tendency still to an invasion by the inspirational intuitive thought-perception. The same siddhi seems also to be assured in the thought-speech in the vijnana; but there are still intrusions of the lower forms from the exterior atmosphere. The highest drishti may also be considered to be siddha in the jnana, but not yet in the T² thought-perception.

Mar 14 Sunday.

The T² thought-perception is being rapidly fixed in the ideality, but the incertitude still encourages the outside mind to send in the
lower forms of the vijnana and even lesser mental movements. These as they come in are seized on and idealised, and all forms are now compelled to bear the drishti and there is a spontaneous discrimination of the limits and character of the truth on which they insist, so that when this process is complete, under and overstress may exist in them, but will not delude the witness and thinker. The process however is still incomplete. At the same time certitude of immediate result and movement is gaining greatly in force and amplitude. This must be the next movement to insist always on sight and certitude. When it is complete, there will be the completion of the ideal reason.

All forms of the rupa are idealised, except the crude, and this after some relapse is again and more firmly becoming vijnanamaya. It is unideal only in the process and in some occasional results of uncertain formation. On the other hand swapna Samadhi has been violently invaded by dream and oppressed by mentality, fantasy and incoherence.

Sraddha bhagavati swashaktyam is approaching completion, but there is still doubt as to the immediate power and the eventual fullness of yoga siddhi and karma siddhi.

The crude lipi is idealised and even in the process of uncertain formation there is only a momentary survival of the mental matter which is now become a suggestion rather than a real element.

The mental state is being at times brought back in the laxity in order to be overpowered by the drishti.

The Shakti is acting in the physical siddhi, and rupa etc, but as yet is not able to get rid of the obstruction

$T^2$ is extending itself to distant trikaldrishti as far as that is possible in the ideal reason.

Mar 15 Monday.

The movement in the ghana is getting up a greater rapidity. The substance of the rupa now varies between the idealised mental and the ideal; there is an increasing tendency to stability of the ghana crude and developed crude and also the crude developed and the crude ghana. Other forms have often an initial primary stability before the eye.
The process of idealisation is now completed, except that there is some immixture of the mental in uncertain or indistinct or incomplete crude formations and some initiality of it in unformed material, but the floating of crude matter without any immediate formation or beginning of formation of any kind is undergoing a rapid elimination.

As a next step slow formation is disappearing, has almost disappeared and what prevails now is immediate imperfect or uncertain, sometimes very imperfect or uncertain formation; the perfect complete crude is rare, the perfect incomplete more common.

The sadhara forms in which the unideality persisted, are also now being rectified; this has been done almost instantaneously, but not yet quite so completely as in the niradhara.

The K. [Kama] Ananda has been oppressed by the unideal forms, but there is now a pressure of Tapas to get rid of this covering oppression.

The crude rupa is now moving towards the elimination of inchoate or very imperfect and uncertain forms; the more definite rupas, complete or incomplete, perfect or partially perfect, wholly ideal or mental-ideal, are becoming more common. The chief difficulty is that the animal and human forms are resisted in this rupa and to evolve them the Akasha resorts to the old method of slow uncertain formation. Though no longer slow, it is still uncertain and produces the inchoate, imperfect and soon changing or uncertain figures.

The possessional Ananda is now always ideal, the basic is now developing ideal finality, the pervasive commencing the same movement. This is being effected against a strong siege of obstruction.

Since yesterday there has been a permitted invasion of the old intuitivity, and the drishti has been working in and upon it to take final possession of the channel mentality. The completion of this movement is predicted for tonight in the lipi. At present the confusions of the mentality are being corrected and decisive trikaldrishti with an element of accuracy of time and
detail (mainly in the Yoga guidance) is establishing its predominance. The samadhi is now the only member of the vijnana in which the obstruction can still keep in action an important aspect of struggle. In the others there is only difficulty of adjustment or difficulty of development of free action. Thought-telepathy (apart from thought-intention) has begun, but with a very slight occasional action.

Rupa at night assumed the same siddhi as in the daytime, but in its different kind of chhaya, tejah and jyoti.

Trikaldrishti, but not in full abundance and perfection.

The pervasive Ananda is striving for ideality, but is still much besieged by the inspirational mental form.

Mar 16 Tuesday.

A strong return of the relapse principle, recurrence of touches of asamata violently forced on the system, though of no duration, invasion, stoppage of siddhi. Crude rupa moves towards elimination of inchoate and very imperfect forms, but the obstruction prevents siddhi.

Mar 17 Wednesday.

The siddhi is recovering its basis. T² is assuring again the just drishti, but stress of Tapas is forced on the system from outside, although rejected by the Shakti. The highest drishti occasionally emerges, but the outward insistence on the lower forms of immediate actuality and insufficiently assured possibility hampers progress. The pervasive Ananda is pursuing idealisation in spite of the recurrence of inspiration[al] mentality: there is no intense continuous action.

T² in the afternoon proceeded with its elimination of stress, but there are intervals when it ceases and the outside mentality sends in its forms which are then either set right in stress or the errors corrected by the discriminating power of the drishti. At other times there is just drishti of the first, second or third order. The first which gives final decisions is still the least frequent and not in its
highest power and assurance. Tapas is returning to the fuller power of drishti.

Rupa as yet does not advance rapidly. There is no successful insistence on stability; the imperfect forms recur obstinately, but without conviction

K. Ananda developed in the morning for a moment highest drishti, and this showed itself again with intensity in the evening. But the lower forms though they tend to be modified by the drishti, still besiege the system.

At night a sudden strong attack of most of the rogas to which the system is liable, including a touch of feverishness; some weakness in the morning.

March 18 – 24

The siddhi has progressed in spite of a heavy obstruction of physical tamas. The main progress is that all the members of the vijnana have now definitely fixed themselves in the true ideality (it is only in laxity that there is some touch of idealised mentality) and now including T² in the drishti. All except T² are entirely vijnanamaya.

T² has developed accurate drishti in the third condition and decisive trikaldrishti in the first condition. The common action is in the third; but it is now being changed to the second condition, that is right perception of possibility including right perception of immediate actuality. The first is increasing in power and fixing its certitudes on the others. The process is as yet far from complete, but is progressing with sufficient rapidity of transmutation.

Samadhi is developing vijnana action in spite of tamas and nidra.

Rupa is still hampered by the obstruction and cannot yet get rid of imperfect crude forms. But perfect crude forms (crude, ghana crude, developed crude) and crude ghana and developed are becoming more common before the eye. The freedom of rupa is much denied and impeded.

Vishaya is similarly hampered, but there is progress of idealisation in gandha and rasa.
K. Ananda is now firmly idealised in spite of an occasional pursuing fringe of idealised mentality, and is increasing in power of incidence. But the continuity is impeded by the physical obstruction. Tapas is acting on roga and for utthapana, but as yet without any effect of finality.

Mar 25–27 Thursday, Friday, Saturday.

The development of the vijnana in the thought-siddhi is still the main movement.

Thought-speech and thought-perception are now normally fixed in the drishti. There are occasional drops and deviations, especially in laxity, but the laxity is now only usual in the evening and night and as a result in the early morning. It is being slowly got rid of in spite of the great siege and pressure of the external mind and its tamas.

Thought-speech and perception have been perfected in the two lower orders of the drishti; they are already perfect in the first order, but that has been held back; it is now manifesting and has to take possession of the others. The main difficulty is still in T².

T² (trikaldrishti side of the double power) is now fixed normally in the drishti. The stress has been on the telepathic drishti which gives the fact and tendency [of] actual and potential forces in action. Now the self-existent drishti is being developed which gives the certitudes. Certitudes of actuality (the third condition) are now more or less perfect, except in their extension: these give the certitude of immediate actualities and also of immediate or almost immediate dominant possibilities. It deals with the telepathies, but in the telepathies the possibilities of linked present and future action etc predominate, in the other the certitudes. This third condition corresponds in the drishti to the intuition, but is not revelatory intuition, but a high intuitively revelatory vision. Certitudes of remoter potentiality are now fixing themselves in perfection, but are as yet more limited and less disengaged from the telepathies. This second condition occupies in the drishti the place of inspiration, but is not revelatory inspiration, but a high inspirationally or interpretatively revelatory vision. The first condition in trikaldrishti is still held back and inactive.
In Samadhi intuition has been finally turned into drishti in the antardarshi. Swapna samadhi is still besieged by tamas and nidra. Dream has now a remarkable coherency due to the pressure of drishti.

Lipi has practically got rid of mere intuition, but admits drishti intuition; all the other powers are active.

Rupa and vishaya are still oppressed by the physical obstruction and are making no farther immediate progress.

Speech has now been for some time vijnanamaya with drishti in the third and is now often ideal in the second condition; but there is as yet no speech of trikaldrishti.

B. [Brahma] Darshana has long settled in the vijnana, but without the Ananda[,] the object being to get rid of the remnants of the mental form of vision. Now it is being raised to the vijnana Ananda, which it is already fixed in in vision of things, the other movement has been in the vision of living things, especially of human persons.

The difficulty in the vijnana Ananda darshana is that it tends [ ]² often to be diluted with or flooded into the mental Ananda which is more intense, while the V.A is in the lesser intensities. This is now being, but is not entirely remedied by the equal intensity of the V. Ananda. The mental brings with it the prema Ananda, while the ideal has been for some time dissociated from Prema. The Prema ananda is becoming vijnanamaya, but the stronger prema still takes the mental character.

After writing the great intensities have come into the V. Ananda darshana and the vijnanamaya Prema Ananda, and the mental Ananda darshana and the mental premananda convicted of a lesser intensity are beginning to undergo a final elimination.

The third condition of T² is being taken up into the highest certitude of drishti, and the first condition manifesting has begun to take up the two lower conditions. This is only the incipient final movement.

The idealisation of the vishaya, suspended for some time, is now proceeding once more with a strong rapidity, but the mental sense obstinately resists entire eviction.

² MS to
The idealisation of the sahaituka vishayas has now become practically complete.

In samadhi more force of vijnana, but sushupta swapna is still under the hold of dream and nidra.

Vishwa darshana seems to be fixed in V.A in spite of occasional mental Ananda.

Mar 28, Sunday

T2 is now acting with considerable accuracy but insufficient force of certitude in the drishti. The lower movements persist, but their inadequacy is so evident that their persistence is only due to physical laxity and habit.

There has been some development of T2 and of vijnana generally, of which the main tendency is on one side the idealisation of the invading mentality, on the other the stronger emergence of the higher drishti. Other siddhis proceed slowly or are stationary or in abeyance.

The situation in the sadhana is as follows. Samata is perfect except for an occasional physical touch of asamata of great weakness which does not affect the mind, but only the physical shell of the pranic consciousness. The sama ananda is however still in need of greater development; its deficiency is due to the general withholding of intensity of Ananda, for even in the vijnana there is asu, a modified prakasha, but not the full Ananda. There is full sukham and prasada, but not full hasya in the samata.

Shakti is fixed in the vijnana and usually in one of the conditions of the logistic drishti; but subject to some dilution by the stuff of mental intelligence. Sraddha is complete, except for an element of besieging doubt about sharira and karma, amounting more to the perception of a possibility of limitation than to denial of the siddhi. There is however some element of doubt as to whether all may not be cut short by death of the body. Devibhava is there in basis, but incomplete by lack of full force, especially of ishwarabhava. The other siddhis of this chatusthaya.
are as developed as they can be without farther development of the vijnana.

Thought is now fixed in the vijnana except for the effect produced by the continuous siege of the surrounding envelope of mental intelligence. This is now distant and not close to the consciousness, but is still allowed full right of penetration and invasion. The old policy of the Kavacha seems to have been wholly abandoned. This effect is first, that of an increasing of the vijnana thought in the mental matter where it is still vijnanamaya, but with a strong infusion of mental limitation and incertitude; secondly, when the thought is more strongly vijnanamaya, ideal in the vijnana, a dilution by or an accompaniment of mentality; at other times, the thought is clearly and solely vijnana, but still limited by the environment of mental intelligence. These effects are strongest in the T²; but affect the general thought-perception which does not now usually act as a separate power. The thought-speech is vijnanamaya except for a very small element of diluted vijnana, and when the thought-speech is active, except in great laxity or exercises of the idealised imagination, thought-perception also rises in vijnana intensity and fullness. Lipi and script are entirely ideal, but with a tendency towards the intuitivity saved by drishti, because of the siege of the mental intelligence. T² is more and more developed in the highest drishti, but still normally varies between the two lower conditions and is much impeded by the effects of the intelligence.

Samadhi is impeded by tama and nādīra. It tends to vijnana and is sometimes drishtimaya in thought etc in the antardarshi and all swapna except sushupta swapna, but this is only when there is application of tapas. Sahaituka Vishaya is at present idealised with some occasional element of manasa; the development, as also in rupa is temporarily suspended.

Physical siddhi is subject to a violent and successful siege of obstruction. Ananda is now ideal or idealised manasa, but spontaneity is rare, continuity brief and dependent on smarana. Roga has resumed something of its hold, though always removable or in the standing elements diminuable by tapas. One roga only still resists the tapas. The other siddhis in this field make no progress.
Darshana is now fixed in the vijnana and usually in a vijnana Ananda of secondary power.

April

April 1. This month is set apart for the overcoming of the final difficulties in the way of the vijnana.

Today mostly given to kavya. At night a full idealisation on all levels of the thought-perception; the manasa is now only an accompaniment, limitation or infiltration. The sinking of the thought into the manasa is being cast off and persists strongly only in the T², but there too it is no longer able to strive to be normal.

April 2–5

The siege of the mentalised physical tamas is exceedingly violent in its obstructive obstinacy, the siddhi proceeds in a few outbreaks in the midst of this tamas, and it is only yesterday that the Tapas has turned with an equal determination to get rid of the physical disability. The atmosphere of the physical mind is no longer allowed to give for long a sanction to it; but it still holds strongly to the atmosphere of the physical and to some extent of the psychic prana, and this effects a siege and retardation of the siddhi. Each day there is some decisive progress.

Thought-perception and T² has definitely risen into the second condition sometimes powerfully uplifted or taken possession of by the siddhi, sometimes giving place to the inspirational drishti from outside. The latter insists on possibility in the old excessive fashion and while it extends the bounds of vision, is still damaging to certitude. When the drishti acts in its highest form and first condition, certitude of present actuality, of present and future possibility and of real eventuality fall into a harmonious whole. The perfection of this harmony can only come when the second condition is entirely surmounted and the free and normal highest action becomes possible. More distant possibility is now being seen through the drishti and the logistic form of the srauta is initially showing its outline on the logistic level.

B. Darshana is fixing itself more firmly in the vijnana Ananda
and insisting on its higher intensities which reveal the Purushottama in the Brahma.

Samadhi still struggles with more and more success, but still a very difficult success against nidra and tamas. Tamas more than nidra is now the real obstacle.

Rupa siddhi does not act freely and makes only progress in detail. It is now increasingly stable in the crude form with an increasing force of vivid completeness, but the imperfect forms are still obstinate in recurrence. The formless material quickly takes form, but the form is sometimes though not usually inchoate, often imperfect, perfect only by overcoming of the siege of obstruction in the akasha.

Thought now hardly at all descends into the mentality except for side suggestions mostly in the state of laxity, but is still subject to accompaniment and infiltration by the stuff of manas.

The physical siddhi is now insisting on sustained tejas pravritti of the ideal Shakti in the body so as to get rid of tamas, but though there is a great improvement, the success is as yet far from complete. Sharira can make no definite progress against the obstruction.

April 6 – 10

The vijnana is steadily getting the better of the still persistent tamas and the progress continues. After a slight lapse towards the mental recurrence the thought is more firmly fixed in the gnosis. It is however of three kinds, the drishti cased in a mental accompaniment, the drishti of the lower conditions leaning to the limitations of the mental reason, the same lifted by or to the highest drishti or full of its power, though not yet of its constant light and ananda. Now even the forms of thought which were held most by the mental form, eg imagination etc, are captured by the vijnana drishti. The mental siege still continues, but is less sustained and effective. The real question is now between different conditions of the drishti. The first predominates, but with a gravitation towards the second condition.

T² also is idealised in all its movements. There are still two kinds, telepathic and original. The telepathic is in error when weighted with the mental accompaniment, but much less than at any previous time; there is a great increase in accuracy and certitude.
The original is in the three conditions (the telepathic is dominated by the second, the perception of the possible), and varies in power and accuracy and certitude according as it is free or beset by the mental intuitive reason.

Other activities are in the drishti, but with a mixture of mentality, (lipi and script alone perfect in vijnana), eg vishaya. Rupa is not active. The gnosis in the body is most affected by mental invasion.

Sharira Ananda after a long time is recovering power for continuity, but is less firmly vijnanamaya than when it acted with a careful and formative intermittence. Other members of the sharira have been adverse, but still affected by the Tapas.
June 7.

The discontinuation of the record for about two months marks a time when the Yoga was slowly proceeding against a strong obstruction in the physical consciousness. At no time did this obstruction amount to a gap in the process of the Yoga, a complete discontinuity (of more than hours) or a relapse in the old manner. It was not an arrest, but a retardation of the rate of the progress, and due principally to the necessity of an assimilation of steps rapidly taken, a dealing with intellectual remnants and an action on the last serious assault of the unrepentant and unconvinced environing opposition. There was a quickening at the end of May and the first six days of June has each been marked by a great particular step in advance; today there is a rapid but sure general advance, the result of the more or less covert or impeded work of April–May and its weakening of the obstacles.

Position.

Samata, complete, both positive and negative or rather active and passive. There only remains an inequality in the active ananda and an occasional proffer of doubt and depression which does not take any body in the chitta (effleure seulement pendant le quart d’un second). The doubt is only about the body and the karma and is falling away from the fixity of the çraddha.

Shakti. Complete, but awaiting for its fuller activities the perfection of the vijnana and the shàrîra and Brahma-darshana. The most sensible progress has been in the two weak parts, the tertiary dasya and çraddha. The Ishwara is now felt in all the activities of the Shakti, though not with an entire completeness because there
is still an intrusive action of the *ganas*. The tertiary *dasya* has replaced the earlier stages, but it is of two kinds, *dasya* to the *ganas* moving the Prakriti, and *dasya* to the Ishwara controlling, moving and embodying himself in the Shakti. The *ḥṛaddha* in the Bhagavan is complete and in the power of the Shakti to the extent of the will to accomplish of the Ishwara. The personal Shakti is felt to be insufficient, but it is becoming one with the sufficient universal Shakti. Faith in the *sharira* and *karma* is qualified only by the doubt as to the prolongation of the life and the extent of the *karma*. The first is only a strong external suggestion getting its strength from the abnormal persistence of the digestive roga; the second is a real restriction of the *ḥṛaddha*, but it is rather questioning now than negative. The *ishwaribhava* is still qualified in intensity and fullness.

**Vijnana.** The conversion of the thought, *jmana*, to the vijnana form is now complete. The base is still the revelatory intuition, but the representative logis[tis] has penetrated the major part of its action and the interpretative often intervenes and prepares the normality of the highest logistis. Telepathies are now idealised and of a great but not always perfect correctness. Telepathic tapas is now vijnanamaya. The decisive T² at present emerges from the idealised telepathies (mental perceptions of event, force, tendency and possibility) and the idealised telepathic (old mental) tapas. At times there is the independent T² of the supreme logistis. Telepathies are now a part of trikaldrishti and amount to a drishti of the present, and often imply or hold in their action the drishti of the immediate future. At the same time none of these things have an absolute perfection, and decisive tapas is not as yet very strong, organised or effective. Prakamya of feeling and sensation is strong, but incomplete and intermittent; prakamya of thought intermittent and feeble. Vyapti is more effective. Action and knowledge at a distance is still unorganised and imperfectly effective. Rupa is still obstructed in the physical akasha, but confirmed in a primary type stability; vishaya not yet restored to action; samadhi firmly idealised, but limited by fantasy, instability and nidra. There is still great incoherence in the sushupta swapna lipi.

Sharira progresses in the Ananda which after some intermission varied by an unstable but more spontaneous recurrence is
recovering continuity dependent on smarana, but this continuity is now for the most part spontaneous and has not to be maintained, though sometimes assisted, by tapas. The fragmentary rogas persist and cannot yet be totally expelled from the system, but the action of the Tapas on them is growing stronger. Only the central rogas are obstinate in possession, the rest only in persistent recurrence. The digestive fluctuates between almost complete intermission and a virulent, but now much less vehemently effective recurrence. There is no visible action of utthapana or saundarya.

Brahma. All is now fixed in the vijnana brahma darshana with an occasional emergence of the undertone of intuitive manasa which is [immediately]\(^1\) penetrated by and taken up into vijnana. In the V.B. [Vijnana Brahma] Ananda is organising itself, vijnana Ananda informed with the Ahaituka and manifesting in its own kind the Prema and Kama Ananda darshana. These two in the vision of the object are now vijnanamaya (fusion of intuitive + higher logistis or only the latter), in the subject, the chitta, twofold without sufficient fusion of the two simultaneous forms, but the higher logistis is growing on the chitta..

Samadhi. The pressure of afternoon nidra as shown in today’s samadhi and prepared by the last few days’ progress no longer alters the character of the swapna, nor does it amount to entire obscuration of the drashtå, but only to a weight on the clarity of the visual consciousness. Sushupta swapna lipi is still the circumstance most affected and, as always, by incoherence due to suppression and to mixture of different lipis. At night nidra is still powerful to prevent samadhi.

Vijnana. The invading environmental suggestions are now being steadily appropriated to the vijnana. Trikaldrishti of actuality has been trained to the vijnanamaya correctness, the same movement is being applied to the trikaldrishti of the possibilities that press on the actuality to modify or alter the event in the making. At present there is much environmental suggestion full of error, not of fact of tendency, but of its event-making incidence.

\(^1\) MS immediated
Rupa advances against a strong obstruction. Vishaya revives in gandha, but there is still the obstruction.

Sharira Ananda. Continuity is growing, but still subject to the old causes of discontinuance. These however have much less reality of persistence than on the last occasion. Tivra shows a tendency to fix itself and is now vijnanamaya with an idealised intuitive mental undertone. Vishayananda is revelatory vijnanamaya. Raudra also is vijnanamaya, and vaidyuta. The physical ananda continues in antardarshi and in the lighter swapna, but is there subject to cessation or intermittence.

June 8.

After a long indulgence of the environmental invasion, the final conversion of the assured ideality to the interpretative logistical vijnana has commenced and immediately taken a considerable extension. All concentrated thought and thought-speech has begun to be fixedly of that character, as also the T2. This is being effected not by select movements and a gradual extension, but with an initially instantaneous generality and rapidity in a crowded activity of thought-suggestions.

The Rupa is beginning to press down again the barrier of obstruction. The developed forms are still only of an initial stability, the ghana and ghana developed either that or of a primary or secondary, the crude of a primary, secondary or sometimes tertiary stability. The tendency in the latter is to long stability.

The lipi is fixing itself in freely in the interpretative vijnana; all former movements of the kind were only initial and preparatory; this is the last and definite movement.

Ananda powerful and persistent all the morning. More intense and often very intense with smarana; when mind occupied either suppressed with predisposition of the body to it, or half-suppressed or present with a lesser insistence. Often the mind occupied, but with a part of the physical consciousness fully aware of the intense Ananda. More firmness of continuous pervasion; for a long time the inner physical fibres penetrated and possessed by the Ananda. Result in the afternoon intenser A [Ananda] with the smarana; body
full of the predisposition even in forgetfulness. The automatic and the forced cessation are being eliminated from the system, only the oblivious and the sleep cessation remain as effective obstacles.

The samadhi in the afternoon almost got rid of lipi incoherence. The interpretative vijnana took firm hold on thought speech and thought perception in the antardarshi. Nidra obscurity almost nonexistent, nidra weight of inclusion is still there.

In the evening and at night a laxity of the Shakti and some interruption, not complete, of the results acquired in the daytime.

June 9.

The laxity continued during the morning.

Samadhi in the afternoon directed to farther idealisation of the swapna, removal of fantasy, lipi incoherence, instability and fragmentariness of rupa, shabda etc. There is a detailed initial but not yet quite definite or organised progress.

The thought in the afternoon normalised interpretative vijnana in the revelatory and representative consciousness-substance. This movement extended to tapas and trikaldrishti. Indefinite thought from the environment is not yet always of the perfect logistis. A highest logistis has for some time been present in the interpretative and other form or substance. It is now beginning to prepare to take full possession. This will be the end of the logistic movement, the completion of the vijnana reason.

Ananda of the interpretative fashion acclimatised in the body. Physical Ananda is now of three moulds, interpretative, revelatory and as a survival the inspirational and (rarely, almost never) other lower kind[s] of vijnana.

For the first time developed or rather perfect rupa of the secondary-tertiary stability. As yet the longer stabilities except in the crude rupa are still isolated or else a rather frequent exception. The initial predominates when there is rapidity and frequency of the crude and developed rupa.

The thought since yesterday has begun to be attended with physical Ananda confined to the head region (where the K A has been till now exceptional, the ordinary pervasion being in the rest
of the body) and the brain-stuff, but this now tends to become normal and to join itself to the Ananda in the rest of the body.

The Ananda Darshana now tends to be the infinite shuddha Ananda taking up all the rest, but still on the vijnana level. The old mental shuddha ananta Ananda recurs in the first movement as a coating to the vijnana Ananda, but changes easily to the vijnana shuddha Ananta.

The possibilities are now entirely normalised in the interpretative trikaldrishhti, the authentic decisive is beginning to disengage itself more clearly, but has often a telepathic character from above which while fulfilling itself in the eventual actuality, remains without any certitude for the reason. An irruption still occasionally takes place of the lesser telepathic idealities which shows that the whole process of conversion is not yet completed. The thought and other prakamya vyapti is still of the lower inefficient and in the case of the thought initial and fragmentary character. Thought intention and thought substance are more easily accurate than pure thought perception.

June 10 Thursday.

Today the Yoga is more hampered than on any day since the beginning of the fresh stream of progress. The principal advance has been in the T2, where the telepathies of actuality have been raised to the highest power of the logistis and those of modifying possibility strongly confirmed in the interpretative vijnana. Occasionally the tertiary or decisive vijnana acts, but where it does not pressure on the possibility by Tapas brings a confusion of unreliable certitudes.

Rupa in the ghana etc is hesitating between initial and primary stabilities.

The samadhi was more obstructed by nidra, though not of an obscure nature.

Ananda is obstructed and only constant in smarana, though the full intensity is not present.

In the afternoon a change. The T2 manifested separately an action of the highest logistic vijnana not at all dependent on the idealised telepathic perception. Rupa began to stress the stabilities...
and arrived at a normal primary varying from the first point beyond
the initial to a point tending to the secondary stability; the crude
stability became again secondary and tertiary rather than primary
and secondary. Ananda recovered intensity and pervasion with a
strong cerebral action.

June 11 Friday.
Progress on the same lines. Tapas and Trik. are now being
organised so as not to be in conflict. Tapas is taking its right place
as telepathies have done; the union of decisive Tapas and trik.
certitude is not yet effected.

June 12 Saturday.
Trikaldrishti pursues its organisation, but while the actualities
grow constantly in power and certainty, the unrealised possibilities
and decisive certitudes are not yet in the complete higher vijnana-
maya development. There are still excessive stresses on possibility.
At the same time the higher certitudes are becoming more frequent
and more positive to the reason
Rupa is increasing tertiary stability in the ghana and developed
crude, and attempting to bring in the secondary in the other rupas.
Lipi now has frequent tertiary stability in the Akasha. There is also
an incipient movement towards variety of Rupa
Ananda already settled in the intenser sa-smarana, though al-
ways feeble and interrupted from the evening, is fixing automatical
constancy, so that after oblivion there is no need of mental smarana,
the body keeping the memory whether of continuous but unnoted
or of suppressed but still implicitly present Ananda.

The base of vijnanamaya organisation is being laid in the deci-
sive T^2, and prepared in the prakamya-vyapti of thought intention:
it is already strong as regards sensational tendency and impulse.
Rupa has now definitely begun secondary stability of ghana
and developed rupas, but mostly still in the side-seen images, those
that stand direct before the eye are less vivid and less stable. Primary
stability is still the ordinary movement, but now it is less fugitive,
less inclined to the initial and more to the secondary duration.
There is now a constancy of the penetrative more physical Ananda contained in the sthula fibres; the ananda of the sukshma body affecting the sthula alternates or sometimes coexists with it.

Samadhi at first of the same kind oppressed by a light un-obscure nidra; afterwards strong organisation of thought speech and perception of the highest logistics in all stages of antardarshi and swapna, strong sharira Ananda continuous except in sushupti swapna, lipi perfect except in sushupta, but there no longer fantastically incoherent, other incidents not well organised except rupa (landscapes) clear, tejomaya, but insufficiently stable.

June 13  Sunday
There is a larger right vijnana of possibilities and telepathic relative certitudes and the decisive telepathic trikaldrishti of precise detail (only of the immediate future) is beginning to found itself, as yet imperfectly, on a larger basis.

Tertiary stability is now very common in crude rupa; primary and secondary prevail in the rest under the direct gaze, but tertiary has begun to appear in side images and promises even in the direct images.

There is more frequent cerebral and thought Ananda. The Ananda still fluctuates and the Ananda without smarana fails still to fix itself with a final possession.

Each of the three siddhis which are being rapidly pushed forward has taken a farther step in advance.

The decisive trikaldrishti certitudes are beginning to become near, actual and sure in telepathic trikaldrishtis of the immediate future, filling them as a first step to their replacement.

The rupa is increasing tertiary stabilities; initial tertiaries have come repeatedly in the direct image and final tertiary has made its appearance in the side images. Both are now common in the crude.

Ananda is deepening its insistent frequency and intensity in spite of interruption by oblivion. It is depressed in the late afternoon, evening and night, but for the last three days the shakti has
been working on this depression and yesterday there was strong Ananda after a prolonged depression in the late afternoon, some in the evening and some, but rejected by the will in the body at night. Today it promises to be throughout continuous by recurrence.

June 14th – 15th

Ananda deepens steadily, but the obstruction of forgetfulness at the periodic time still remains operative.

Rupa has now established the first tertiary stabilities; the more prolonged are still occasional only.

Trikaldrishti also is gradually confirming in the telepathic figure.

Samadhi in the afternoon is now idealised in all its parts, but weak in the incidents, except in scene and event in scene which are attaining to a perfect stability. The organisation for utility is not yet ready to commence.

June 16th Wednesday.

The Tapas which was held back in favour of the trikaldrishti is now being definitely taken up for perfection. At first there was the increased but uncertain effectivity of tapas and a renewal of the difficulty of discord between the telepathic form of the two siddhis, then the same difficulty in tapas as in trikaldrishti between the telepathic and the definitive. Finally, an initial fusion has been effected between trikaldrishti and tapas.

Rupa is trying to develop perfect stability; there is the potentiality, but not yet the actual presence.

Ananda has hitherto fluctuated between periods of intensity and periods of depression. Formerly the latter used to last for long periods, now there is only comparative depression on alternate days and fluctuation in the day itself,—greater strength in the morning, less with much interruption in the afternoon and evening, at night cessation or only occasional presence. The depression on alternate days is being eliminated. The continuity in the morning is every day greater and tends to conquer the oblivion; even when writing the body retains except in great absorption of the thought-mind the physical Ananda.
The ananta Ananda of the darshana has now definitely entered and for the present fixed itself in the vijnana form corresponding to that attained in the rest of the chattanaya.

June 17th Thursday.

The T² for a time was confused by an irruption of incertitudes from outside attended by an extension of relative certitudes in the revelatory and interpretative telepathies. Subsequently the supreme logists reappeared and began to organise certitude of detail, circumstance and succession.

Rupa is now making prolonged tertiary and perfect stability the normal thing in crude of all kinds and beginning to develop it in crude developed and crude ghana. In side images they are becoming very frequent, though they do not yet predominate. The attempt to extend them to direct images of the full ghana and developed kinds is obstinately obstructed in the physical akasha. The long existing tendency to snatch away the rupa as soon as possible after appearance, even if it is [in its] nature perfectly stable, is the obstacle to be eliminated.

Ananda has fixed itself with a more basic firmness in the cerebral possession and the physical ananda of thought-speech and thought-possession which was till now only a faint preshadowing, has become definite and universal. The recurrence of asiddha thought and of interruptions of possession is however still persistent, though less powerful than before. Most of the conditions of perfect Ananda (except, mainly, the downward current and the fusion of the five anandas, though the latter has made some progress) is now accomplished in the basis.

Ananda persisted in the daily period of relaxation, in the afternoon, evening and at night. The automatic tendency to relaxation is therefore now ended; only that created by oblivion and the oblivion itself have to be conquered.

June 18th Friday.

Preoccupation with a work and a tendency in the siddhi of going slightly backward, eg in the rupa towards primary and secondary stability, in the Ananda of interruption by oblivion (but not
of laxity as the result of interruption, only a certain potentiality of relaxation remains), in the $T^2$ of revelatory rather than highest logistic action.

June 19th  Saturday.

The continuous steady rapidity of the siddhi upset today by a revolutionary attempt to substitute at once the srauta for the logistic vijnana. This was attended and frustrated by an invasion of asiddhi such as had not occurred for some months past including even an attack on the samata. Insistent suggestion of asamata — amounting to duhkha in the prana and impatience in the buddhi — in the physical consciousness, not radical but strongly disturbing the outer physical fibres. This duhkha is now mingled with ananda when it enters the system and cannot preserve its pure character. Its recurrence however is a retardatory phenomenon foreign to the new settled course of the sadhana. Suggestion also, but less violent of asraddha, amounting in effect not to radical asraddha but to disbelief in the method, absence of the feeling of a possessing guidance by the Ishwara — that is felt as before behind a veil or only at the summit, — and a sense of the possibility of postponement of siddhi. At the same time it is felt that a greater siddhi is preparing.

An Ananda of a much greater potentiality of continuity, pervasion, largeness and intensity felt on the vijnana summit and descending into the sukshma body, but this is unable to make itself except at intervals intimate to the system. Meanwhile the constant possession of the sthula body by the revelatory has been taken away and that body is empty except of a greater tendency of response. The sukshma body is visited by a more continuous Ananda less affected, except at first by want of smarana or attention, more pervasive from above, more naturally intense, affecting the sthula without being established in it or possessing it, but not yet organised nor having a firm close hold even of the subtle body. It is at once more continuous and less intimately continuous. All the old asiddhis are suggested, including the dependence on posture. The struggle has not yet been determined in the sense of the greater organised siddhi.

The jnana etc are affected in a similar direction. The system
is invaded by a vague and confused idealised mentality which is turned to an imperfect revelatory ideality when it enters the system and its surrounding atmosphere. The vijnana thought and T² occur, but do not closely hold the system as for a long time they have been doing. There is nothing left but to await the issue of the struggle.

Ananda during the time set apart for the samadhi insistent on possession of the sthula body, but a possession by penetration, not a reawakening of the hold on the sthula fibres.

The period of laxity was to some extent restored today, not entirely, for there was a frequent recurrence of Ananda, but as a result of smarana. In the evening the Ananda of the sthula body was brought back to a certain extent, but without the firm hold and sure intensity that had seemed fixed in finality. The Ananda in the sukshma body was for a time made constant, the ananda of thought universalised and intensified; these took on the form of the representative, interpretative and highest logistis. All this had to be done by a certain force of Tapas and therefore cannot be considered as a final siddhi.

The bodily consciousness became during the same time first revelatory representative and representative, then representative interpretative and interpretative, then the highest logistic vijnana. All this was done from above and cannot yet be considered final.

Attack of asamata eliminated, but sraddha not yet normal.

June 20th Sunday.
The morning was a period of laxity. None of the siddhis are yet final.

The representative mould of the bodily consciousness now predominates, but is not yet fixed in security. It is sometimes drawn back and the revelatory takes its place. There is not the sure pratistha

Afternoon—last night’s Ananda again in action.

June 21st Monday
The sadhana is settling down again to a movement analogous to the past movements but on a higher scale, that is to say,
greater developments are being foreshadowed and initiated which have to be gradually attained against the [persistence]² of old lesser sufficiencies and insufficiencies.

Seven new movements are indicated of which four have begun to realise themselves in an initial action.

Thought is manifesting a highest logistic movement which is ready to change into the srauta vijnana. The lower thought still persists in the form no longer of a revelatory but an inspirational intuitional thought-action. Its insufficiency is recognised and it is condemned but does not cease from persistence

Trikaldrishti is effecting the same movement hampered by the inferior idealised telepathies

The Shakti in the body has left the fixed revelatory form and has manifested for a while inspirational, interpretative and a highest logistis ready for the srauta. Actually, however, there is a pressure of inspirational intuitive which veils the actuality of this higher movement.

There is the same phenomenon in the physical Ananda in the psychic body. There are fluctuations in all these movements, sometimes the siddhi holding the system, sometimes the asiddhi.

The environmental siege affects the lower movements with unavoidable error and gives force of persistence to the asiddhi.

June 22ᵈ Tuesday

The same conditions as yesterday, but there is a stronger force of the Siddhi.

Tapas is effecting the same movement as trikaldrishti.

The government of the Devatas is giving place to the direct government by the Ishwara, but there is not yet the constant presence

June 26ᵗʰ Saturday.

The intervening days have been subject to difficulties in the Sadhana, the persistence of old forms of the ideality, the siege of the environment and some invasion of stuff of the intuitive mentality.

² MS persistent
Today the new siddhis are reasserting themselves with a greater power and especially the free all-occupying action of the highest logistic ideality in its highest degree in thought, trikaldrishti-tapas, lipi, script etc. It is also attempting to occupy the physical system and replace the intuitive vijñana. As yet there is still a persistent intervention of the other forms, a laxity of the tapas intervening which tends to restore them and a great difficulty in the physical system.
17–19 OCTOBER 1920

17th October 1920

   Morning
   Freedom of the inferior ideality. It is subject still to intrusions of the mental intuitivity from the environment mind, but these are compelled to see or to transform themselves. The stuff of mind in the physical conscience still contains unilluminated movements of obscure matter, but the pressure of the light on them is constant.

   The lipi is the most perfect of the members of the vijnana, free in its action, free from the lower elements, established in the vijnana. T^3 is now developing with a certain freedom in the lipi.

   Thought and T^3 in the thought are moving constantly to the same perfection. The action is free in concentration, but there are still the intrusive or untransformed elements of the physical mind. Except for this defect it is established in the first vijnana. The representative vijnana with all its three elements (representative, interpretative, imperative) is seeking to fix itself in the bodily consciousness of the Shakti in place of the revelatory + intuitive representative vijnana.

   It takes possession of all but the head.

   The obstruction still reigns in the rupa siddhi, vishaya, sharira, and the Tapas as yet can only diminish, but not overcome the obstruction. In Samadhi the basis has been laid, but sleep and dream continue.

   Tapas is working for Arogya and physical Ananda, the latter well-prepared and only forcibly held away by the obstruction. The
Asiddhi still holds in the utthapana and Saundarya.

The object telepathies are rapidly uplifted into the representative (logos) vijnana. There has long been an effort from below insisted on and aided from above; this is the immediate action from above, a solution of the difficulty by the involved process. It does not exclude a temporary return towards the inferior process.

Later.

There has been a rapid progress in the idealisation of the physical Ananda. There was some beginning of continuity, but it was ill established and collapsed in the evening.

The normal state of the physical consciousness is the revelatory; the descent to the intuitive occurs much more rarely than before and is not of long duration. Occasionally there is the representative vijnana.

No decisive progress in the rest, but a pressure on the habitual passive obstruction in rupa[,] vishaya and samadhi (lone fleeting tejomaya scene) and on the active opposition in the sharira. Progress is made, but as yet by short steps only.

18th October.

Preparation of progress in the rupa siddhi.

Sudden introduction of the highest representative ideality (logos vijnana), first into the physical system, then in the afternoon into the lipi, thought-speech, thought-perception, tapas, telepathy, trikaldhrishti. This is the beginning of a definitive, decisive and rapid conversion that is still in process.

The change brought at first a resuscitation of old imperfections belonging to the inspirational vijnana of the intuitive mind and the intellectualities that hung about it, an attempt at invasion and a
resuscitation of the principle of struggle. This however has been
checked and is being ejected.

Descent during later part of the day.

19th October

Arrangement of imperative vijnana begun on the lower levels
of the ideal thought-powers.

Great extension and power of the logos vijnana in its highest
action—thought, $T^2$, lipi. It is only beginning to convert largely the
thought-speech into the mould of the logos.
The other forms survive as insistent remnants.

Three levels of the logos vijnana

1. Logistis—intuitive ideality of all kinds.
2. Logos reason. The lower representative idea, turned
   (a) downwards to the logistis
   (b) upwards to the logos vijnana.

N.B. The same downward and upward direction is possible
for the logistis.
3. Logos vijnana.
The latter has to deal with three movements.
   1. Actualities—representative
   2. Potentialities (including and harmonising with the ac-
      tualities, or separate.)
   3. The imperatives of the infinite—absolute, imperative,
      identific.

The [?last] has to take possession of the other two and deliver
them from contingent incertitudes.

This has been commenced, but has to be completed, before the
consciousness can be taken into the srauta vijnana.
Part Three

Record of Yoga 1926–1927
When the fullness of the supramental life-energy is in the body, then all difficulties will be reduced to nothingness.

It is the life-energy in all the body, not only in the seven centres that is demanded. Once in all the seven centres it cannot fail to pour through all the body.

It must take possession of all the cells, the flesh, muscles, bones, blood, nerves, skin, hair; then the body will be ready for transformation.

The life-energy to be firmly founded today in the last centres. The rest to follow in the next three days.

These things are authoritative suggestions; it depends on the energy and the adhara subject to the divine sanction from above whether they are fulfilled in the time fixed or have to wait for a later period.

If founded, all the remnants of the old illnesses and pains and bad habits of the body will disappear altogether and no new ones will be possible.
There is nothing complete yet done in the material physical Nature, and yet till that is done, there will be nothing complete in finality anywhere. Many things are established, but even the most advanced need the last touches or even many last touches.

There is still the problem of the physical material, the flesh and the organs. These have to become unassailable and invulnerable; that to be settled in its self-maintenance independently of food by one means or another.

Today, one at least of these problems ought to be settled in effective physical principle. There can be no sense of security till that is done.

Monday next. An ascending scale till then. The ascent today. No more for the present.

The ascent began, but it has been interrupted as usual by an attack. No matter; it will overcome, almost immediately overcome. It is a matter of the nerves which can still be touched by pain and suffering.

[In the margin beside the above paragraphs, Sri Aurobindo wrote the following note, then cancelled it:]

Observe: the flow of the energy has begun, but is still subject to interruption. That interruption should disappear today.
Youth and beauty manifest in the face, but are interrupted. That interruption must begin to disappear entirely today.
Make way for the Supreme Force. It will take up your responsibilities.

Today. The difficulty finishes today. The rest afterwards.

Get rid of the representative. The higher power can do its work.

Monday [3 January 1927]
The supreme Force descends. The difficulty is finished. The representative imperative still obstructs, but it is ready to disappear.

Today it disappears. Not altogether, but fundamentally and in principle it disappears. It is needed no more.

The supreme Power is taking up all the movements. It will turn them into the Truth. No effort is needed, no aid from the mind or any of the instruments; even the individual consent is no longer needed.

Tuesday
The fulfilment has undeniably begun. Till the 7th January this present development; the last mental clearance, the first final opening.

Wednesday
All has been cleared of what was left of the pure representative; only a colouring, an attenuating edge remains in the interpretative imperative. This has to disappear and will disappear, as the true form develops. If something lingers for a time, it will be of no potency and of no importance.

The full light in the interpretative, today—The full power in the imperative tomorrow.

What has been promised has been achieved. There remains the perfection of the supreme supermind taking up the supreme supramental supermind, the development of the Trikalsiddhi Tapas and the manifestation of the Gnosis. This from today to the 12th.

The fullness achieved has come on the 6th one day earlier than anticipated, but on the day promised. What was promised for the 7th was the completion of the first curve (or second, (1) 25 – 3d (2) 3d to 7th (3) 7th to 12th). Tomorrow therefore the appearance of the gnosis in the action of the supreme supermind

For her peace and surrender.
Friday Jan 7th

The gnosis has taken hold of the lesser movements of knowledge; not yet of the supreme supermind or the greater movements. It will do that now in spite of all difficulties.

The gnosis taking up the supermind means the Trikalsiddhi-Tapas.

After the 12th these difficulties will disappear.

It is the doubt that interferes. In spite of the doubt I will accomplish. Now.

Saturday. Jan 8th

I have prepared the ground for the gnosis. The fulfilment begins today in the face of every denial.

Sunday Jan 9th

The taking up of T3 by gnosis has already begun. It will be initially completed today. All these menaces will utterly disappear in a few days.

This is the beginning. The rest will develop automatically throughout the evening and night.

Monday. Jan 10th

The movement yesterday took place, but was veiled and hampered. Today it is emerging in light. All the thought is being taken up by the derivative gnosis. T³ has begun in all the movements,—this was what was meant by initial completion; today it is spreading. The old obstructions however still remain in thought T² [Telepathy] and other movements.
Today thought and T3 will continue to develop
As the gnosis of thought progresses, gnosis of the heart, the will, the vital movements will begin to develop. Here also the first touch was given this morning.

It is evident that the T3 is undergoing the process, but as yet it is rather a working on old obstacles than a positive process and a positive progress.

Tuesday Jan 11th
The curve that was to have ascended till the 12th seems to have abruptly ended. A confused working in obstructive mental material seems to have taken its place.

Yet it will be fulfilled. Today the T3 in the supreme supermind and gnosis. T2 begins on the same level. This is contrary to all appearances, but it will happen.

In that case these are preparatory movements. What has happened is the progressive seizing of all the movements by the Ishwara and the increase of the tertiary dasya.

Wednesday Jan 12th
In spite of all opposition what has been promised is effected, only initially yesterday, it is true, but more completely today.
The supreme supermind has taken up the supreme supramental supermind and all the other inferior movements and is itself being penetrated by the gnosis. Substantially done in all other thought action, this process is taking up T3 for its transformation. T2 has begun on this level, but that is not yet perfectly apparent.

Today, complete T3 in supreme supermind gnosis, initial T2 in gnosis, increasing T2 in supreme supermind gnosis. These three things.
T³ is already gaining amplitude, but is interfered with by movements of incertitude, because T² [in]¹ s.s.gn. [supreme supermind gnosis] is quite insufficient. It is however beginning to increase.

The application to all things of T² gnosis or T³ gnosis is a matter of time. It is the foundation of the thing that is the immediate work in hand. At the same time the application too need not be gradual, it may and will be rapid. A vertiginous rapidity is possible.

Mark that the dependence on the critical verifying mind decreases. Verification is becoming automatic, criticism also automatic. Both will soon be entirely gnostic. The next curve is from the 12th to the 16th, another from the 16th to the 21st, another from the 21st to the 24th, yet another from the 24th 25th to the 28th. The last of this month is from the 28th to the 31st.

The final dealings with this body begin from today. The first stage of them finishes with the end of the month.

And with her body it begins from tomorrow. At present it is the preparation of the forces.

Thursday. Jan 13th

The T² in supreme supermind gnosis acted, but not on a large scale. Something of the other two indications came into practice, but not sufficiently to satisfy the demand of the intelligence.

The dealings with the body are not yet clearly final. In most matters there is a progress or a stability in the stage acquired, but there is a successful relapse in the eye and possibly in one or two other places.

There is undoubtedly a large scale progress in the thought-siddhi and all its instruments. The form of the supreme supermind is about to be universal, only the substance of gnosis in it is still insufficient.

¹ MS is
The preparation for T³ and T² is evident, but the obstruction is violent and partially successful.
Nothing more till that obstruction is vanquished.

The development of the gnosis above and in the supreme supermind can alone conquer the obstruction in its last lines.

That will be done. Tonight the inception of this movement.

Friday Jan 14th
Telepathic T² has already developed. The Tapasic is preparing to develop.
All will be done in spite of all the obstruction and all the difficulties.

Today the health and Ananda will develop. Tomorrow the evidence will be undeniable.
The attack on her body yesterday flatly denies the “Thursday” prediction. In this body there is evidence of control, but not of any final progress. The obstruction to finality is still successful, still obstinate.

For this body the evidence is tomorrow; for hers it is veiled and will only appear day after tomorrow.

Today the gnosis in T² (tapas). Also the gnosis above the supermind in T² tapas.

Saturday Jan 15th
The development of health and Ananda promised yesterday is not at all clear in result. There is evidence of power to control and minimise attacks on the health, but there is not yet power to prevent them. The small fragments of the old illnesses still recur a little.
There is sahaituka Ananda in the body on a small scale and it
tends to increase in intensity, spontaneity and recurrence, but it has no body or long continuance.

The work seems rather to be turned towards increasing a relative Samata and Faith than in bringing the gnosis. In the latter movement there is only evident a strong clouding obstruction behind which no doubt some work is being done.

The effects promised yesterday seem to be declaring themselves today. Ananda (sahaituka, touch etc) has suddenly progressed after a long obstruction and developed a remarkable spontaneous continuity and body. [Absolute]² spontaneity, penetration and diffusion, continuity without the help of memory or attention have still to develop.

It is evident also that a kind of gnosis is taking possession of T²; but there is still an immense amount of work to be done. There is too a kind of gnosis descending from above, but it is not yet free nor rich in circumstance nor absolute to the mind in its conveyance of certitude. There is also some gnosis of T³. All these things however although they begin to come more rapidly and freely, are still initial, hampered and poor in affluence.

Surrender, dasya, consolidation of the inner movements and initially the outer movements in the hands of the directing Power and Persons (or its Personalities) is becoming or beginning to become absolute.

Today, gnosis takes possession of all thought and T³. Gnosis in T² develops in the supermind and above it.

The invincible Gnosis of the Divine will make its first appearance.

The proofs of the Power dealing with the body are rather in the development of Ananda and the control of certain functionings than in any finality of health. The fragments of old illnesses remain

² MS Absolutely
obstinately potential or obstinately actual. The hold diminishes but there is still the recurrence.

Sunday Jan 16th
The possession of all thought and T³ by the gnosis is increasing, but it is frequently interrupted. The invincible Gnosis seems to appear, but in too thick and mixed a mass of movement and itself too occasional to create a clear recognition or an assured confidence.

Doubt is acute as regards the physical siddhi.

The divine Gnosis in T², that which is above the Telepathic and above the Tapasic trikalsiddhi and above the combination of these things, is beginning to manifest but only as a kind of occasional point or star above the mass movement.

These will continue to develop. Nothing will be left soon of the physical opposition to health and Ananda.

Monday Jan 17th
Thought telepathy, prākāmya, vyapti are trying to manifest, but the obstruction is heavy. The general mental and vital condition can be perceived by sanyama, habitual movements also, but precise movements only with difficulty and some incertitude.

Sahaituka ananda also continues to develop. There is a tendency to generalise its gains, but the physical non-response is still heavy. Spontaneous Sahaituka (without aid of memory [or]³ attention[)] occasionally manifests and is nearer to the surface.

Gnosis continues to develop in the thought-siddhi and its instruments. Today the T².

³ MS of
It had been predicted that something would be done in six days for the healing in her body, that is by the 17th, and in fact a great relief and amelioration is evident; but not the decisive cure that had been taken to be the sense of the promise.

The physical proof has been given that the thrill of Sahaituka Ananda can be eternised in the body, but the time is not yet. The nature of it is still subtle vital material with a strong beginning of density, not yet the dense entirely material Ananda.

Tuesday Jan 18th

Yesterday the representative + inspirational imperative movement hitherto normal (the rest coming in concentrated movements) began to be definitely replaced in the universality by the interpretative + inspirational-interpretative imperative. This is a radical progress, but the new movement is not yet entirely gnostic—

Telepathy of general mind conditions and habitual mind movements and formations continues to develop.

There has been an apparent relapse in the Arogya. Primary utthapana has begun a strong forward movement; the secondary is greatly hampered.

Ad

Development of Gnosis in thought-siddhi and its instruments. Continued growth of T².

Wednesday Jan 19th.

Yesterday there was a strong attempt to dismiss [finally][4] the remnants of intellect, ideality, supramentality and after giving full play to the supramental and supreme supramental to pass beyond to the supreme supramental mind in the supreme supermind so as to prepare the strongest forms for the T² and gnosis.

[4] MS finality
Afterwards a crisis of questioning and a renunciation of personal action (in the suggestive mental Devasura) and an entire passivity in which some kind of action professedly gnostic or semi-gnostic is going on in a narrow and rigid form of inspirational imperative and a minor form of interpretative imperative thought-force.

The development of Gnosis in the thought-siddhi and its instruments shall continue, also the growth of T<sup>3</sup> and T<sup>2</sup>.

The crisis in her body continues in all its adverse acuteness. The causes seem to be not personal, but due to circumstance favouring blind surrounding physical and vital physical influences.

Thursday Jan 20

The adverse crisis continues in great violence.

In this body there seems to be a turn for the better, not yet final and decisive. A certain overmastering Ishwara influence already dominantly successful in certain directions, control of functionings etc, is extending its activity to the remaining fragmentary illnesses.

Development of supreme supermind, gnosis and T<sup>2</sup> continues. But the obstruction and partiality of result also continue.

Friday Jan 21

At last the power seems to be acting on the body. As predicted, there are the first signs of amelioration in her body, though nothing yet is complete or in appearance finally decisive. Still the black obstruction has failed to persevere.

This morning free gnosis in all the movements of the thought-siddhi and its instruments in a rapid and almost instantaneous development. This is the first free and large movement of the involved method.

At present Tapas movements and telepathy-Tapas movements
are being handled. A relative $T^2$ in them with a great mixture of ineffective knowledge and will movements is taking place.

$T^3$ and $T^2$ to be made perfect like the gnostic thought in a vertiginously rapid movement. This will take place at first in a limited field of operations, then with a certain universality, then with a basic absoluteness applicable everywhere.

The physical siddhi advances, but is still too much obstructed. Ananda (sahaituka) increases in intensity, in prolongation (continuity), in spontaneous occurrence. This must be made perfect without farther retardation.

The entire removal of the fragments of old illness will not be immediate, but will yet speedily happen.

In the evening solution of difficulties and rapid progress in (1) Lipi, (2) Thought-siddhi, (3) $T^3$ (4) Drishya (5) Samadhi (6) Sahaituka Ananda.

Attacks on health, but the progress seems still to continue.

Saturday Jan 22d

Sarvam Anantam Anandam Brahma seems to be well established in its fundamental universality (except for some dukkha-bhoga of result on the vital plane and some movements of physical semi-discomfort) and is growing in intensity. Gnanam Brahma consciousness grows, but needs development of $T^3$ & $T^2$ for full play.

Increase in Ananda (Sahaituka, chiefly sparsha, but also the others), $T^3$, $T^2$, Samadhi etc.

All grows rapidly, but all is still imperfect.
Sunday Jan 23rd

Rapid increase and spread through the body of mental material & vital material Sahaituka Ananda. The physical material is acute as yet only in the hands except for the immediate Sparsha which is now intense everywhere. Prolongation and diffusion have begun and will soon be well-established.

T³ grows rapidly in gnosis. T² in T³ seems definitely to have begun, but not yet in unmixed gnosis.

Attack on the Karma. Strong obstruction to equipment.

The difficulties now experienced, difficulties mainly of obstruction, will disappear today and tomorrow.

The body has still not shaken off entirely yesterday’s sudden attack of fatigue and pains of fatigue. The energy is unimpaired, the fatigue and pains can be dismissed, but they return as soon as the body rests after long walking.

In spite of all appearances tomorrow will mark an immense stride in the Arogya-siddhi.

Today the obstacles to Ananda and telepathic T³ disappear,—not entirely but in dominant practice.

There was some appearance of a beginning of the disappearance of difficulties, but an adverse wave arrived and this movement ended.

Only the Arogya is slightly better, but whether this movement is permanent or not cannot yet be decided. Previous experience and present perception are against the idea of permanence. A gradual progress is the sole thing visible.

In the night a violent reaction. All thrown in doubt preparing the revival of a chaotic half-intellectual movement full of the mixture of falsehood and incertitude.
Monday Jan 24th

The adverse movement continues. Especially T² and T³ seem petty in their achievement and full of error and incertitude. It is doubted whether gnosis is at all manifested or anything but a mixed mind and supermind with at most a few true supramental movements.

Universal perception of the Sarvam Anantam Anandam Brahma-Purusha. Ananda complete in all vishayas, especially sight, but not the intense completeness. The intensity came afterwards, but subsided. The completeness of the quiet Vishaya Ananda and universal Saundarya is still not always absolute.

The difficulties did not altogether disappear. Some began to dwindle. Ananda of the body (sahaituka) made some progress.

T³ also made progress. The telepathic, tapasic and veiled gnostic accuracies in the telepathic T² were increased and exemplified from time to time. The mixture of error and imitative or encasing or accompanying and distorting mind action still continues.

For some time there has been a powerful attack on the Karma. The prospect of equipment seems entirely clouded and threatened.

Arogya in this body seemed to make some progress. If the progress made turns out to be permanent, it may be called a large stride in the siddhi.

Tuesday Jan 25th.

In the morning after a violent struggle continuing from the last few days, the conviction of falsehood began to lessen. Thought in the supramentalities and supramental began to arrange itself in the gnosia as had already been done with thought in the intuitive forms and processes. All these movements no longer exist in their initial and independent forms, but have been taken up into the supreme supramental and supreme supermind. The highest interpretative imperative acts as an intermediary force, lifting the former into the latter.
Organised $T^3$ and $T^2$ in these forms is at last preparing. Hitherto it was all in the lesser powers.

A great but chaotic profusion of jagrat bahirdarshi drishya began yesterday. Today organisation and some kind of stability is being introduced into this—as yet imperfect—freedom.

Rapid progress in Ananda. Ahaituka sparshananda is spreading; great continuity with intensity both in this and sahaituka, especially in the hands. The habitual movements of inhibition are losing their iron hold.

Today, tomorrow gnostic $T^2$ in initial perfection. Ananda, Vishaya, Samadhi, Arogya.

Wednesday Jan 26th

Again a strong attack and confusion in the morning. Attempt of the chaos of the mind movements to reestablish its reign under pretence of transforming finally the supramentality into gnosis.

Exceedingly intense Sahaituka Sparshananda tried to generalise itself after a first successful manifestation; the conditions were too unfavourable.

Some modification of the universal Darshana—simultaneous vision of Parameswara-Parameswari in all.

Some attempt at $T^2$. Some progress in Samadhi although in sushupta Swapna the incoherence continues.

The Arogya has once more been thrown back. Physical fatigue continues underling and arising after an hour’s physical exertion or even less. Up till the morning there was progress.

Drishya continues to develop but no distinct forward step.
T² is developing, but the medium and casing are so obscure and mental a material that even continued success brings no certitude.

Thursday Jan 27th.

Today a great revival. A vertiginous rapidity of progress in many directions. The attack of obscurity, resistance of the universal inconscience, refusal of the universal inertia, obstruction and conservatism of the material negation are beginning to lessen and even where they persist and intervene, cannot resist the progress. The past effects may still continue for a time, the future is not theirs. The four Powers that resisted now appear more clearly,—the Dragon of the nether foundations who preserves the old Law intact till the will of the Supreme is manifested, the Sphinx of the eternal questioning, the Night of the eternal negation, the Rock (stone Purusha, inert Shiva) of the eternal inertia. Still they are there, but a first victory has been assured against them.

Thought gnostic in essence, free, automatic, voluminous, not yet perfectly organised or complete, has been finally established and, except at intervals, acts even in the obscurity and inert relaxation of the material consciousness.

Surrender is complete; horizontal movements of desire cross but are [
]

Samata is complete except for certain external movements that touch the physical sensation.

Shakti, Virya, Daivi Prakriti are returning and moving towards perfection.

Sraddha is there again, though not yet assured in all that concerns the final effectuality of the Tapas.

T³, T² are developing much more clearly and consciously than before. T is beginning to manifest.

Stable organisation and organised stability are rapidly preparing in the Drishya, but are not yet accomplished.

₅ MS are
A certain perfection and absoluteness established in seven powers, samata, surrender, virya, shakti, daivi prakriti, thought (not T³ or T² thought), faith (in the Supreme and his workings, not in the immediate realisation[]).

Friday Jan 28th.

A great progress in primary utthapana. The fatigue attack entirely disappears. Two hours exertion without any effect on the body except a pain in the loins at once dismissed. All other effects could be rejected at will. The left leg becomes almost as free as the right. The back and loins have still to be entirely liberated, but a relative freedom is effected.

A rapid increase in the control of certain bodily functionings.

Otherwise the day seems to be one of preparation rather than achievement.

Development of gnostic thought-powers.

Saturday. Jan. 29th

The opposition of the Four Matter Powers is being wrought into assent; but the process has necessarily slowed down the action which tends often to flicker down into quiescence.

All the same T³ and T² often combined together are becoming more common and more definite. All doubt with regard to them is over, although owing to imitative movements in the Ignorance, much confusion and incertitude continue.

Gnostic T is emerging more clearly, but is so much cased in the obscurity of the Inconscience that seeks to be or have knowledge, it is impossible to distinguish it clearly from the counterfeit except by result and occasionally by an automatic and undoubting certitude.
It is at the same time evident that when it acts it is of the nature of omniscience and omnipotence.

Drishya settled in all but the spontaneous full stability which obtains only in the crude forms.

Ananda spreads but is not as yet organised and generalised in the responses of the body.

The action on health in both bodies is more evident but not yet entirely conclusive.

Sunday Jan 30th
Again a day of preparation and of apparent check rather than of progress.

Such progress as has been made is in Darshana, Drishya, confirmation of T³ and T², Thought etc are held up for the moment.

Vani has long been silent. Today it is trying to emerge.

Today, in the evening Thought-siddhi and gnostic T will overcome the obstacle.
The final victory in Arogya is evidently preparing. In a few days it will be perfect.
After Arogya Ananda.
Meanwhile utthapana and saundarya will prepare.
All the third charusthaya will soon be liberated from its still remaining shackles.

Thought-siddhi at its best resumed in the evening. Gnostic T manifested, but extension and organisation are not yet possible.

Monday Jan 31st
A day of relapse and resistance.
Tuesday. Feb 1st

The siddhi began to recover. A step forward in Darshana (Aditi holding P²-P¹ [Parameshwara-Parameshwari] in all living things, less vividly in all objects). This is not yet entirely universalised but it is increasing.

Primary utthapana oppressed during the last days once more progresses. Stiffness and muscular pains are still possible, though they can be ejected by the knowledge-will movement. They are most prominent when the exertion ceases, but do not endure. The latent memory however persists and brings them back at customary times or junctures.

Drishya progresses. There is full stability of crude forms, conditional or initial or aided longer stability of others..

$T^2 \ (T^2 \cdot T^3)$ progresses, but cannot get rid of incertitude.

Control of functions, violently interrupted for the last two days, is returning.
April 7, 1927 Thursday

There must be an entire submission to the transforming Power and the transforming process. However tedious it may [seem], each step, each recoil is inevitable; nothing is done unwisely or vainly in the economy of the supreme processes.

There is a sure means of distinguishing the truth from the falsehood. Pause and refer to the Light of the gnosis.

The truth that comes may not be all the truth, but it is that which is needed and effective at the moment.

Entire passivity first, a passive surrender.
Entire equanimity next, an absolute samata.
An entire and harmonised strength of the divine nature
An entire faith in the Supreme and his Divine Power, in the process and the result of the process. These are the four conditions of the rapid and decisive change.

April 8th Friday

The conditions are satisfied to a sufficient degree. The next steps are now possible which will make them perfect.

First the decisive T², the exact T³, the perfect thought in the gnosis or at least in the supramental gnosis—i.e., the three degrees intuition, supermind, gnostic supermind, if not yet in the fourth or supreme degree of divine gnosis.

Second, the consciousness gnostic in all the body and all the environmental atmosphere.

Third, the gnostic Power in the body for the transformation of the body.
April 9th Saturday.
Passivity is now practically complete; surrender in the physical consciousness a little less, but still almost complete.
Equanimity is moving towards automatic completeness but is still imperfect.
Faith is limited and poor
Strength is there, but neither harmonised nor complete

[Three pages with other writing (probably written earlier) intervene here.]

April 9th
The first gradation of the Gnosis, ie the intuitivity, is being now securely organised in a universal and automatic action.
It is still mixed with mental stuff, imperfect therefore, limited in scope, insecure in decisive T²; but it is there.
It has to be perfected. Meanwhile the others will be made ready.

Exact T³ and perfect thought in the intuition. This is ready to be perfect. Perfect it.
Decisive T² is ready to be founded in the intuition. Found it.
Press on the elimination of illness undeterred by the resistance till it disappears for ever.
These three things are now possible.

April 10th
The equanimity is almost entire.
Faith has greatly increased, but is not absolute.
Strength is harmonised and in a way completed, but in a form that is still mediocre.

The forms of the gnosis are in final preparation. The three things required yesterday are being done, but as yet there is nothing
definite. The truth thought is however becoming easy and auto-
matic.

Let the T³ grow swiftly.

There is a commencement of the automatic external Ananda.
Fix it.

April 12th

A still more perfect equanimity.

Faith more settled, more complete, but still not absolute, await-
ing knowledge.

Strength confirmed, but vague and formless.

Passivity complete

T³ has begun to be automatic; but is still imperfect.

The three things demanded are still in a very initial stage.

April 13th

After a brief attack briefly successful, passivity, equanimity,
faith, strength are established stronger and completer than be-
fore.

Thought is almost perfected in the intuition and in the other
forms so far as they can be supported on the narrow intuitive basis.

T³ is growing swiftly and moving towards a large development,
T² begins to develop a limited but automatic accuracy.

Automatic external Ananda has begun to be fixed. Only mem-
ory is necessary.

April 14th

Only mechanical movements contrary to passivity, equanimity
and faith occur; usually they are thin and without substance.

Strength is still not continuous except in the old lesser form.
There is still a lack of the guiding Power; except at times all seems to be done by the mechanism of the forces with only an intervention of the smaller physical godheads and voices.

The supramental development and organisation of jagrat and swapna samadhi is trying to begin in earnest.

All the thought instruments have been taken up into the movement. Lipi and identity knowledge are most developed.

Automatic external ananda in its first fixity is beginning a preliminary organisation.

April 15th
Much obstruction today.
Strength seems in the end to be more firmly founded

Internal physical Ananda is beginning to be founded.
There are signs that drishya (with open eyes) is about to develop stability in the forms which till now were fugitive. It is increasing in the others.
Samadhi organisation proceeds, but is still initial and obscure.
Vishaya started last night, but does not as yet progress.

Tonight. Completeness of third chatusthaya to be initially founded
Fourth chatusthaya (half) to be thoroughly founded.
The rest to be prepared in essence.

Note – This last prediction or order does not seem to have been fulfilled even in part. The condition was clouded, ineffective and obscure.

April 16th
Progress has been mostly in the external physical Ananda. There was a recovery of gnostic thought and T³ which had been almost suspended yesterday, but this came late in the afternoon.
Strength seems to be founded, but the attack on faith and samata has been all day heavy and fierce.

April 17th

Samadhi. First initial organisation of thought, trikaldrishti, lipi, event and drishya up to the sushupta swapna.

Farther purification of thought, T³ and control including Vani.

Harmonisation of shakti with surrender and samata. Preparation of a harmony of these things with gnostic knowledge.

Vishaya. Persistent and stably visible vision of birds (small dark figures, jivanta, on the horizon[]). For the first time liberty of this siddhi.

April 18th

All the movements are being reduced to gnosis, first those that were intellectual.

Remarkable movements of tapasic T³.

Samadhi and Drishya continue to develop.

The rest are maintained but not in progress.

Passivity, surrender, faith, strength are constantly growing more perfect and harmonious with each other.

The third chatusthaya must be and will be rapidly completed and perfected.

The fourth must be finally undertaken before the end of the month.

The fifth, sixth and seventh will progress with the progress of the third and fourth chatusthayas.

April 19th to 21st.

Three days strong obstruction.

Perfect founding of sukham and hasyam along with calm and samata.
Firm founding of the virya and shakti along with the daivi prakriti and sraddha.

These foundations seem now to be integral siddhis. Both are being tested but resist attack. Only the deha-shakti is seriously overcome at times, but this is due to the defect of utthapana and belongs less to the second than the fourth [chatusthaya].

April 22d

First experience of entire gnostic intuition and supramental reason with supramental observation and a supramental recipient in the physical nature.

Intuition and supramental reason (all the grades except supreme supermind) are being steadily founded in a first integral movement.

Supreme supermind has also commenced its integral foundation.

All this in the thought chiefly. T³ however has begun to be taken into the movement.

---

¹ MS utthapana
24–31 OCTOBER 1927

October 24th, 1927

A day of great and rapid progress. The supreme supermind forms have begun to be normalised and taken up by the gnos-is. T² has made some, although still a hampered progress. T³ is now normal. Telepathies are becoming automatic but still need for their manifestation a slight sanyama. Ananda (shârîra) rapidly progresses. Samadhi has made some advance.

Today the gnosticised supreme supermind even to its highest forms will become normal.¹

There will be the beginning of the promised progress in all the vishayas.²

Samadhi will break its barriers.³

Ahaituka Ananda within the body will be definitely founded.⁴

¹ Fulfilled to a certain degree. But neither the gnosticity nor the normality are at all complete, rather they are in this field only initial.

² A meagre fulfilment; just the beginning in each if it is maintained, but hitherto the development of the vishayas has always been dropped after a brief movement.

³ Fulfilled but not completely. The obstruction is still there.

⁴ Uncertain; it seems to have begun, but it is not clear that it is definitely founded.

¹ The fulfilment of the above predictions was written afterwards in a different ink. The numbers after the items of the programme were added when their fulfilment was recorded. —Ed.
Record of Yoga

October 25th 1927

Today, there is something of a recoil into the hampered semi-
mental movement, although the progress still continues. However,
the movements or rather the touches from outside of Asamata etc,
the contradictions of the first two chatusthayas, were not only me-
chanical, but though they pierced could not hold the consciousness
in the body or even the environmental conscious atmosphere; few,
they were almost immediately or immediately flung outside.

Intensity in the sahaituka physical Ananda is rapidly increasing
in all the Anandas including the raudra.

Rupa is at last moving forward towards prolonged stability
of the perfect and initially real and not only the crude, dense or
[developed]² figures.

There is an attempt to return to the evolution of primary
utthapana, ie abolition of fatigue and its symptoms

Prognosis is now no longer in the script and lipi only, but in
the thought speech and vani.

(Oct 27th)

The semi-mental movement increased and the sadhana fell
back from the rapidity it had gained to a movement of return on old
elements still imperfectly transfigured. This relapse has lasted two
days but was not so intense as before and has created no reaction.
Moreover, it has been visibly the preparation of most important
transitional movements that have come to a head today, the 27th
October.

Oct 29. 1927

A day of relaxation, dismissal of out-of-date elements and
preparation for the descent of gnosis into the overmind system.

These four days are for the transition to gnosis. Afterwards
the whole system will be perfected and applied before there is the
ascent to the supermind plane.

² MS delivered
Oct 30. 1927

Today the transition from T^3 to T^2 became decisive and with it there came the conception of the Ishwara in the bodily consciousness. The passive attitude of the T^3 movement in which the nature is the plaything of the powers of the Overmind has been definitely abandoned and the passive-active attitude of T^2 movement in which the Ishwara determines and the Powers may for a time resist and even modify temporarily what he has determined, but must now or in the end help to carry out his will, has begun to take its place. As yet the gnostic movement is imperfect and the Overmind powers are still powerful to determine results according to their choice, provided there is some supramental sanction behind it. All are powers of the Ishwara, but the play of disagreement and mutual opposition or emulation continues. T^3 is entirely supramental or gnostic, T^2 only has partially reached the same siddhi.

Oct 31. 1927

Today T^2 (anishwara) has acquired the supramental and gnostic character. Not that all movements have entirely eliminated the mental element, but all are supramental or supramentalised or else even (now to some extent) gnostic overmind. Infallible T^2 is beginning more freely to emerge.

Iswara consciousness is growing both below and above and Ishwara T^2 is beginning.

The supermind is increasing in the supramentalised movements and gnosis in the supramental movements.

Ananda is taking possession and becomes automatic, needing only memory or a little attention to act at once. All vision, hearing, smell, taste, touch is now anandamaya; even all that is seen, heard, sensed is beginning to be felt as full of ananda and even as if made of Ananda. Sahaituka Ananda of all except event is now automatic. Ahaituka Ananda within the body shows signs of reaching the same state, but has not quite reached it. This is the only physical siddhi that promises to be soon initially complete; for arogya is still hampered by obstinate minute fragments of illness.

2. Susthir
3. Bhadrakali — future
4. Table in Baroda — past
5. Namadrishti — letter from M. [Motilal Roy?]
7. An urchin shaking flag — ihalokadrishti.

[2]

Bhasha. — 1. The intuition continues to work, not perfectly.
2. The inspiration developed on the connection of Tamil with O.S. [Old Sanskrit] pointing out lost significations, old roots, otherwise undiscoverable derivations.
3. The supreme inspiration yet inoperative.

Thought. Quiet and no longer subject to obstruction, but not yet perfectly satisfying, liable to be displaced; working often with the perception only, defective in driving force, therefore imperfectly convincing.

Sight.

In Samadhi, the lingas of the bodies,—all except jyotik and varnaghana.

The jagrat mainly inoperative, except the momentary manifestation of a pranamaya purusha, angushthamatra, from the sukshma; fulfilling the prophecy for the day.
Prophecy — As above. The mind deals with the past by means of perception, not revelation. Necessarily no proof.

Doubt — Only in anna and with regard to particulars in their details.

The Body — Visrishti unusually copious in both kinds. Weakness in annam and rapid fatigue.

Asus — Working absolutely in the body, with more force than formerly in the buddhi and prana. Sattvic krodh in the chitta manifests free from the rajasic taint of an unsatisfied prana. Prema. Bhogasamarthym increasing, but insufficient.

Aishwaryam etc. The Will began to act directly from the sahasradal with swift and invariable, though not instantaneous effect. The imperative vyaptis still resisted.

A general deficiency of force experienced. The old humanity very strong in the annam and through the annam obstructive but not dominant in the whole system.

Memory –

I. 1. Of things noticed
   2. Of things unnoticed

II. 1. Of events
   2. Of objects and men
   3. Of words and ideas
Events
1. The occurrence  a. in mass  b. in detail  c. the sequence or arrangement of details
2. The time—date, hour, minute
3. The place—spot, surroundings, relation of different spots to the event
4. The nimitta, or surrounding circumstances

Objects
1. Akar, including all the five vishayas & every detail with regard to them
2. Nama—
3. The thing in itself
   a. single  b. combined

Words and Ideas
1. sound  2. symbol  3. meaning  4. bhava  5. relation

Memory—also of contrast, comparison, analogy ie memory of the things in relation to other things

Means of memory
5. Will

Psychological Notes

A butterfly comes flying over the garden, past a pepegach and two flowertrees which grow side by side. Ordinarily it will be attracted to one of these three objects of desire. It flies past without noticing them, reaches the wall in a straight flight, then contrary to all expectation turns suddenly back, turns aside while flying over the right-hand flowertree to dally for two seconds with another butterfly, then flies off through the pepegach. What dictated its return and departure?

First; it did not notice the flowertree because its mind was fixed on some more distant object present to its instinctive memory, but
by a law of the mind it received subconsciously the impression of the scent from the flowers. By the time it reached the wall this came up to the supraliminal mind as a vague but powerful sense of something missed and attractive on the way. Working through the vital instincts & cravings by vital impulse which dominantly determines the movements of the insect, this sense immediately enforced a backward flight. If the other butterfly had not intervened, it is possible that at the second contact with the scent of the flowers, the vague sense would have identified itself, consciously or subconsciously, with a definite supraliminal expression & the descent on the flowers would have been determined, but the diversion once made, the vagueness not only remained, but the impression was half obliterated and only the idea of return to something in the distance remained. This, however, was strong enough to divert the insect from its fellow, especially as the latter was concerned with the flowers and did not respond to the advances made. Hence the farther pursuit of the flight backward.
SORTILEGES OF MAY AND JUNE 1912

Sortileges

20th May. 1912.

While thinking of present British policy in India.

န စမှန်စိုက်ပျိုးပေးနိုင်မည်။  Brih. Up. 552.

D[iit]o—of present state of siddhi with regard to mental & ideal thought & action, error & truth & the replacement of manas by vijnanam or satyam.

Note. The chief difficulties now experienced are the habit of judging by past experience and association (သိသိသာသပ်မှု) and that of judging by present indications (အမြဲတမ်းကိုင်မှု) and the insufficient power of judging by inner vision directly straight on the vishaya. This again is due to the insufficient realisation of the jnanam Brahma, anekadarshi ekam.

All inner light effected, not of the vijnana, is asat & must be got rid of even if it seem to be intuition.

While thinking of the enormous difficulties of the sadhana; happened to open the drawer & saw on a stray piece of paper (R’s [Ramaswamy’s] Latin translation)

“a su surmonter toutes les difficultés et s’assurer une vie durable.”

1. Anarambha —
   No effort must be made, no struggle to overcome difficulties, but the act must be allowed to work & pass unquestioned, unhindered, unaided. (कर्म अक्रम)

2. Nirapeksha —
   Nothing must be looked on as a belonging (अपरिमेय) or as a thing to be gained or lost, but all as things sent and taken away for ananda. There must be no attempt to get anything or keep anything; nor must any object be held in view. The vijnana must understand why a particular thing is done or is being prepared, what it is, when & how it will develop, but not in any way allow its knowledge to influence the heart or the action.

3. Saucha.
   There must be no desire, no repining, no rejecting (पद्ध-प्रलोक), no idea of dwandwa (प्रलोक-प्रलोकायाय-विकर्षनम्)

4. Sattwasthiti.
   There must be a clear instinctive intelligence of the truth about everything due to vishuddhi & prakash — freedom from mental or moral tamas — but no attempt to understand or throw off tamas by mental activity.

Fundamental Knowledge
Sraddha.

1. Nothing can happen but mangalam.
2. The yoga as laid down cannot fail to be fulfilled.
3. Every detail of the Yoga is arranged by Srikrishna.
4. All subjective experiences are true, only they must be rightly understood.
5. All objective experiences are necessary for the lila.

Jnanam
Rules for Knowledge.

1. Everything thought is satyam—anritam is only misplacement in time[,] place & circumstance. We have to find the nature of the confusion & its source. The habit of being detected discourages anritam until it ceases to act.

2. All knowledge is possible; no power is impossible. It is a matter of abhyasa and prakash—once there is shuddhi & sraddha.

3. Sraddha is omnipotent for jnanam, karma & ananda.
DRAFT PROGRAMME OF 3 DECEMBER 1912

Programme.¹

1. Rupadrishti farther developed today (3ᵈ) & confirmed in stability tomorrow—
3. Trikaldrishti will begin to work perfectly from tomorrow
4. Powers to overcome resistance in the next three days
5. Samadhi to be regularised during December.

—

6. Intense ananda to come first before permanence. Intensity from 3ᵈ to 1⁰ᵗ, permanence from 1⁰ᵗ to 3¹ˢᵗ
7. Health in the last half of the month.
8. First successes of saundaryam 3ᵈ to 1⁰ᵗ
9. Utthapana in the latter half of the month—

—

10. Equipment begins in this week & is fulfilled in the next two weeks succeeding.

¹ This Programme was recopied, with some changes, in the Record of 3 December 1912. See page 125. —Ed.

www.holybooks.com
Whatever may be the limitations of the ordinary script, there is another in which an old tendency must be fulfilled, the prophetic script, not Srikrishna’s, but commissioned by him. This is the only form of script which has any practical connection with the yoga, not with its fulfilment, but with the action. Wherever the action has to be coordinated, this script will arrange the coordination. There are four divisions of the Karma, literary, religious, practical, social.

The first of these is ready for coordination. ——

The literary Karma falls under three heads—poetry, prose and scholarship. The poetry again, under three, epic, dramatic and the minor forms which again include narrative, lyric and reflective. Besides these there is humorous & satirical poetry and translation. All forms have to be attempted & all from the beginning— The prose comprises—philosophical writings, fiction and essay in its many forms (treatise, article, essay, pamphlet, notes, review etc.). The fiction includes romance, ordinary novel and short stories. The philosophy includes Veda, Vedanta & explanation of other forms of Hindu thought & scripture. Scholarship covers the new system of philology, explanation of Veda with scholastic justification, more translation & comment on Sanscrit writings. To begin with—you have to complete The Commentary on the Kena Upanishad, The Introduction to the Study of the Upanishads and a book on Yoga (Philosophy); the two dramas and a third; the revision of your other poems; the completion of the Stone of Ishtar and a number of occasional verses (Poetry); the Idylls of the Occult, The Return of Moro Giafferi and The Siege of Mathura (Prose fiction); your study of the Vedas (first mandala) along with an explanation of the Vedic Gods (the Secret of the Veda).
There is no Script in this actually, it is only the record of thought vyakta or avyakta. Meanwhile the direct government has to begin; the slave to SriKrisna direct. Therefore the gods have stood back, but they are all present in the system. Tomorrow the direct government will be continuous. Tonight there will be the Ananda of the actual embrace of the daughters of delight.

At present the conquest of the Akasha is the one necessity.

Definitely, Ananda will take possession of the bodily system. The Arogyam will begin to take a definite trend towards finality. Utthapana will begin to recover force. No farther prophecies will be given about the third chatusthaya in the Script.

The physical resistance is successful because it is exhausting itself. The difficulty in the trikaldrishti is the principal obstacle to the perfection of the sruti, replacement of trikaldrishti by tejas & tapas. It is intended to give a greater rapidity to the siddhi, but the forces of resistance are hitherto successful. However, they will not be successful for much longer. In reality, sight is the proper method, aided by thought, & it is so being arranged, the old mental drishti will revive preparatory to the actual rupadrishti. The health is about to take a final decisive step forward, covering the only ground yet unoccupied. Ananda (physical, akarana) will now grow intense & possess the body. The daurbalyam will once more be expelled, entirely. Only the saundaryam will be still left effectively opposed—though no longer contradicted. The opposition to the drishti in samadhi & jagrad goes—trikaldrishti & siddhis establish themselves—

There is only difficulty of belief in the lila down here. That is about to be removed— No writing this afternoon till teatime. Many are yet to be revealed.
Life has begun feebly, in literature & thought. It will soon take a more powerful movement of knowledge & commence in action; necessarily, also in enjoyment. Today & not later the Ananda will begin.

More force is needed. The normal writing must improve. Force cannot come, because the enemy makes use of it,—not Indra, not Vritra, not even Pani, but the Rakshasa,—Rakshaswi. Therefore only the calm stable or even regular force comes. But Rudrani needs a powerful and rushing force for her work, not merely a swift, even and unfailing force. It is this force which is in preparation. The physical weakness or brain arrest has nothing to do with it. The brain arrest comes because of the Rakshasic force and would be dispensed with if the stream of Rudrani’s activity were once liberated from this impediment and aggression.

Words, words, words, but no real brotherhood. They pass. Fake silver, mortofil, with bits of the real stuff & some psychic faculties such as all men can develop. Yes. For some time. We shall see. They are trying to keep down the system on the lower levels, but they cannot permanently succeed. Fresh siddhi today. Siddhi of trikaldrishti, aishwarya, ishita, vyapti, samadhi. There is excellent swapnasamadhi, but stability is insufficient.

Yes, it is so intended to effect something by the script and immediately. Attend to the physical siddhi. The Arogya persists in spite of contradictions which are diminishing in force. Ananda has to be insisted on psychically till the body acquires it; it is not only willing, but eager to admit it, but the Vritras stand in the way. Saundarya will emerge in a few days.

The personal relation has to be established. It has to be established by Vani, script, thought & action. The telepathy therefore can now be as much trusted as the nearer trikaldrishti. It is the evil of the speculative reason, but it was not accepted. The trikaldrishti has to get beyond this dependent state & it will do so definitely today. That also is being solved, the attachment of the shama—
There are three kinds, πολιτης, [. . .], διαλός & in each kind there are three subdivisions.

All these powers have to be resumed & perfected. But not with too much of a rush at first. The torrent will come afterwards. Meanwhile the day has to be filled in with a perfect activity of all kinds & the physical (general) utthapana confirmed. Yesterday’s success in the mukti from shitoshna has to be farther tested, but it depends on the removal of the mosquitoes. For the rest, the primary & secondary utthapanas have to revive simultaneously & the continuity of the kamananda has to be confirmed. This has to be done today.

Two absolutely perfect, the rest mostly defective. That is already done. Now for the physical siddhi. Ananda first of all, Ananda first & foremost. If there were not strong resistance of a kind, there would be no need of the special pressure of the ishita. The others will come with Ananda & in its train.

Many press in, none are allowed. The time for them has not yet arrived. Only when the viveka is sufficient to its task, can that movement be undertaken.

आर सनान् पाण्ड ताप दरा: कुरु विश्विनितुरं।

μεγρι τουτου τω έτως ούκ έδυναντο ούτε τους πόλεμους

οχλος, αγαθοι άλλα θυσιμεις οί κρατιστοι. έδοκε γε ταυτα πασι

τοις Έλλησι.

There is still much to write. Immediate progress in the Ananda is needed—the Kamananda. It is increasing, so also the rupadrishti.

Today continuity of kamananda, abundance of rupadrishti & other drishtis; return of Personality of Master.

The continuous Kamananda is now assured. It is the turn of the Rupadrishti. The Arogya is already strengthened & the
general utthapana as well as the primary. But the success of these utthapanas depend[s] upon the anima & the anima on the ananda. Meanwhile the subjection to hunger craving & weakness of emptiness is being removed. In fact, it is removed—but the craving itself is still present in a modified form.

Rupadrishthi has not yet hold of the Akasha, but the time has now arrived. The vijnana has to become more active, with it the freedom of the rupa & lipi. I do not mean this very moment, nor do I mean that the vijnana is quiescent, but it has not recently been brilliantly active. The activity of chitrarupa is the sign, rather than the essential basis; it is if anything, a starting point. Chitra & sthapatyā are linked together, they cannot be separated. The only question is about akasharupa & the method of bringing it about.

When it was said that today there must be perfect activity, the relapse & revolt were not contemplated. None of those predictions have been falsified, except the filling in of the day with a perfect activity, & that did not refer to yesterday in particular. Nor did the other prediction mean that the continuity or abundance would be immediately perfect.

The voices rejected are those that persist in misleading the mind by excessive encouragement. The lipi does not mean that there will be entire baldness, but that that is the price demanded. Let us leave these things & proceed with the positive siddhi. This is the command, be the results what they may. The superior strength of the aishwarya-ishita is now evident. There is no real need for the financial part of that letter. The Vanis have to be purified & the speech brought into stricter conformity with the Satya of Trikaldrishti. Continuity of the Ananda has first to be secured.

Taste is entirely perfect, but hearing, smell, sight & touch are still attacked by old sanskaras. You are right about the permitted obstinacy of the opposition. The vani is now purified. Both vani & script have to express a positive rather [than] a negative truth, but they have to possess the capacity of limiting the positive statement whenever necessary. The false or alien aishwarya has no longer any power. The indriyas will now be finally purified of Nirananda.
Hearing first, then touch, then smell, last sight. The element of discomfort must be extruded, not suffered—nirananda must become ananda, then intense ananda of bhoga. It is discomfort alone that survives. Reason has to disappear in truth. The persistence of the Ananda is now perfect; its continuity is assured but not perfect. The continuity has to become perfect. Afterwards the intensity will of itself increase. This is not indriya. It is manas in the physical prana. That cannot be purified all at once. Pain & discomfort of the body will therefore last, not in the indriyas, but this pain & discomfort must be increasingly associated with ananda, become a form of ananda & finally transmute into ananda. There is no other reaction except the pain in the fight & a slight subtle stiffness. These have to be steadily extruded. The difficulties of assimilation have to be faced & borne; a sudden resort to evacuation must always be avoided except in case of extreme urgency.

A slow & steady development is still insisted on in the Sat of the apara prakriti & to that extent in the Sat of the Para Prakriti. It is evident that it is not intended immediately to succeed, but always now the aishwarya has an effect & usually an ultimate success, if it is persisted in and an ultimate effect, even if it is abandoned. Aishwarya now acts through direct pressure, through assistant circumstance in direct pressure & although it is not apparent by indirect action through Prakriti assisting these or by itself or using these. That is definite

Something definite & forceful must again be attempted by the combined forces of knowledge. Trikaldrishti, aishwarya-ishita-vyapti must receive a powerful impulse, carrying the first near to perfection, the second to invariable effectuality. And the ka-mananda must be intensified & restored to evident continuity. The continuity is being slowly established, the intensity made to recur. It is the method.

The personality must manifest. You need not be afraid of my
upsetting things always. Accept vani, script, lipi as mine unless the vivek tells you to the contrary. You are right, but it is the personality subject to increase of Balarama. Never mind the attendant manomaya illusions. Do not mind either that pressure. At the proper time your course will be justified by the event. When that time will come, is not yet clear, but it is not today or now. There is yet a delay before the bhagya can manifest. It is the crown & seal of the siddhi subject of course to farther development of both simultaneously. More of the trikaldrishti, aishwarya & ananda, also of the lipi.

The exact trikaldrishti as yet fails to establish itself. That is what I insist on; the result you will see. You see. Tomorrow a great progress will be made as the result of today’s struggle. Even today, considerable progress is being made. The intensity is manifest, it is recurrent; the continuity is attempting to assert itself & will eventually & before long succeed. There remains the lipi. I add the rupa & samadhi. No more here for today.

21st [January 1913]

Keep the mind clear of judgement. Make no attempt to increase the vijnana siddhi, whatever happens—only the physical siddhi needs still a little tapasya. The karma of course—it is the field for tapas. You see that you still succeed subjectively—not yet objectively except in some instances. You have only to go on applying the will with force, but not as a struggle. It will grow stronger & stronger. It is not tamasic.

Today, then, the steady progress of vijnana & kamananda & the struggle in the health and the utthapana & saundarya. Leave that alone for the present; it is part of the karma. Still tejas has to increase & tapas & the force of the sraddha.

It is the lack of the equipment that troubles & depresses the karma. Evidently the equipment is not yet due—even that promise is not really fulfilled; only the absolute anxiety for the morrow is postponed. The cause of prospective anxiety must now be got rid of—first. In that there need be no undue delay. For some time this movement must be followed. It is the restoration of kalyana-
sraddha. Although they have concentrated strength successfully there, it is only because you sought to push on the trikāl-drishi, instead of allowing it to proceed of itself.

22d.

The last day of this attack. The body will now be liberated. Once more the relics of the judgment & consideration have to be expelled by the dasyam. In the morning the vijnana will begin its united & rapid sweep after some farther activity of the trikāl-drishi & the kamananda again generalise itself. Intellectual infallibility, now acting in an irresistible stream, will increase enormously. First the vijnana may progress & infallibility then the kamananda, then the physical tapas & siddhi. The tapas must now be directed purely to the physical siddhi & the karmasiddhi & first to the kamananda. Necessarily they will resist. Action must enter into it, but only temporarily as an end to inefficiency of the siddhi. The morning is not over yet. The other movement of the automatic script.

The script is established. Its accuracy has to be entirely proved, not only in what it says, but in what it suggests. The opposition need not trouble you. Attend to the physical siddhi, especially the virya & to the saundarya — In the Greek there is a hesitation. The Script is not yet strong enough to overcome the sanskara. There is no utility just now in overburdening the record. On the other hand much has to be written here. Some of the perceptions of the future have been confirmed, but there must be a freer movement. It is not my object to repeat here what the thought perception has given you. Meanwhile I give you some results.

By Saturday — physical siddhi in full train, but saundarya especially not yet confirmed. By the 30th — all confirmed, but the saundarya still weak. In February three first perfected; only perfect saundarya & tertiary utthapana will remain to be completed. Equipment not yet due, but provision due & arriving

Equipment & karmasiddhi in February.

These predictions are to be observed in their fulfilment or non-fulfilment. It will be seen how far the script is correct. Now for nearer predictions. First, the general utthapana is restored tonight & confirmed tomorrow. Study will be resumed, but not more than slightly. It will include Tamil & Hebrew. The line of progress of the three utthapanas will then be indicated. The struggle over the saundaryam will be brought to a head tomorrow, decided Friday, confirmed Saturday.

23rd

See whether it emerges or not. Health is a thing not so much to be defended as developed. First here as usual. It is a question now of the life, the karmasiddhi. As for utthapana, it will fulfil itself from today in spite of the survivals. Beauty will emerge slowly after tomorrow. The life-struggle centres in three points — 1st equipment 2d manifestation of Yogic power as in therapeusis 3d the control of
events in public matters. The rest is well assured & will come easily when the difficulties have been overcome. 2 & 3 are somewhat developed, but the struggle in them continues. 1 is not at all developed. It is really the sole thing that remains (except the saundarya). The doubt is stronger about saundarya and equipment than on any other point, & every suggestion of speedy improvement in these two matters is distrusted & repelled. It is towards this defect that the Shakti is now turning, as towards all other defects, but these must be overcome before the full flood of siddhi is possible. They must both begin to be overcome within this month of January & fully overcome in February.

Vijnana has been checked. Only to show trikaldrishti at work and to insist on the continuous action of the saundaryasiddhi. It is necessary to manifest the power of reading thoughts. It is already manifesting, but must be habitual in its action & complete. This imagination must be expelled. There is no farther need of it. The idea of impossibility must be expelled. No, the siddhi is of chief importance. Yes, but the tendency is towards firmness & clearness.

There is, undoubtedly, a defect in the present action of the vijnana & therefore of the script—the defect of clouded prakasha. The devatas of intellectual tejas are yet too active in their shadows. The dasya is somewhat abridged owing to the revival of judgment & dissatisfaction which is for the rest, justified by event. It is suggested either today or tomorrow. The successful opposition to the vijnana siddhi & the physical siddhi is chiefly responsible. The rest would not have touched but for that.

More deliberateness is needed without losing the rapidity. It must be so. Oppose the current no longer; even under the cloud, be sure of the sun behind. There is still an elusive activity seeking to arrange the thoughts. The arrangement must emerge of itself. There is a spirit of judgment waiting on script & thought which hampers the flow of the vijnana. This spirit of judgment has to be expelled. It waits also on the action & hampers it.

Treasure—outpouring from the treasure reserve for the lila; actual treasury will also be found; but the first is immediate, the second in the yet distant future. . Follow the impulse given as you
accept the thought presented. War is preparing & the Turkish chances seem small; nevertheless the gage has to be thrown down to the subjective enemies—either Adrianople & the coast islands or war. There must be the will for the provision.

The power has not been maintained, only manifested. It is now returning, but it is not sure of its uninterrupted hold as yet. It will soon be sure & extend itself to all things, persons & movements. It is already doing it. It is extending to the actions of persons. Leave it to develop in the full flood of the jnana-trikaldrishti-aishwarya. But the other powers, rupa lipi samadhi have to be brought into the full stream.

24th

Already, there is a great improvement in the assimilation, in spite of occasional false steps. The diminution of jalavisrishti is a point of capital importance. The opposition to utthapana still persists. It has patiently to be extruded. The eruption is troublesome, but less vital than seems to be the case. It is dying out actually, even though artificially maintained. The Ananda is established, it is the continuity that is being resisted. As for the saundarya, it is still unestablished.
Record —
No interference here, entire passivity.
1st rule. No interference anywhere, entire passivity
2d rule. Disregard of the probable consequences
3d rule. Persistence in will according to knowledge
4th rule. Application of jnana & trikaldrishti to all things, small or great, near or remote, knowable or apparently unknowable.
5th rule. Interpretation of error; utilisation of failure.
6th rule. Constant exercise of utthapana.
7th rule. Will in all things, and action a subordinate instrument—
In one week, the difference will be seen

Today, the first movement—
1. Knowledge to be finally set right, in all its instruments.
2. Power to apply itself to remove its own defects
3. Lipi, Chitra, Rupa
4. Ananda, Arogya—

No danger of relapse. This occasion was wholly abnormal — This is the script, it is about to assume the burden of trikaldrishti definitely. Let us see what they can do. “Dasya, tejas, faith, trikaldrishti, aishwarya, samadhi, all rising out of something into the great & splendid.” The first dart failed, the second will now be made. [“]Exaltation approved, defiance sanctioned. Tonight & tomorrow, the move forward.”

No danger of relapse. Lipi is already moving forward to the mahat. . The rest will follow—

As well die this time, not hereafter. The trikaldrishti is in a state of confusion—the mind cannot manage its materials. This confusion
will be removed not at once but in the course of the day. The Aishwarya also is only clumsily effective & sometimes not at all. But the movement has changed to brihat, not yet to ritam & satyam. Samadhi only remains. These things have now to be gathered up & confirmed in the satyam. Afterwards the ritam.

You see, the script has the trikaldrishti. No self-restraint. It stands in the way—vamamarga. Restraint by God only. Yes. Today, tomorrow & the day after.

(1) Satyam, ritam, brihat in the knowledge, power & samadhi
(2) Sharirananda confirmed & greatened
(3) Arogya made triumphant
(4) Removal of exaggerated adhogati, utthapana, firm beginnings of saundarya.

The movement is now for the dasyam on the widest scale. In the trikaldrishti the doubt of the exactness is still active, based on past experience. This is to be removed by the growth & dominance of the ritam. Vijnana led by mahat—

[7]

The assault is being given to the bhukti, tejas and faith. The samata has not been disturbed, only the hasyam has felt a cloud pass over it. The tejas & faith have been darkened for a moment; they subsist but have lost their ananda. Only the vijnana has been clouded and the positive bhukti suspended. That is over. We will now continue developing automatically the vijnana & the bhukti. You have to wait & see.

There is as yet no advance, only a taking up of positions. Nothing has been done which is not old & familiar & the balance of success is still on the side of the attack. That will change in & from the next half hour. It is already changing. Enough.

Two chatusthayas have been almost perfected & at any rate secured against real disturbance and above all against any continuous breach. The ishwarabhava, attahasya & faith in the rapidity & in the lila remain in the second chatusthayas. But these cannot be brought without actuality in the third & fourth. There are touches,
not breaches. The actuality in the third is being extended. But the Vritra has not yet been abolished. In the first two it is not the Vritra, but the vrika—except in the attahasya, brihat faith & ishwarabhava. Today is for the third chatusthaya & especially for knowledge & power, knowledge most, power secondarily. Lipi accompanies them. Samadhi & rupa follow. The development today will be decisive. Only in the fourth & fifth, there is still delay. I do not mean it will be at once perfect. Obviously this is not the direct script. These are not gods, but spirits who seek to guide, inform, direct. Only it is not true that the script is governed by them & never expressed a higher power & knowledge. It is not now being used by a spirit, but merely besieged by a spirit. It is I who am using it & me you know. Not Indra or another but the Master of the Yoga. It is not the divine script because it is acting through mind, not direct from Vijnana. It will always act from Vijnana. I am about to establish with fixity the personal relation. The rest is there. All these minor bhavas have to be expelled.

The end of the opposition is near in the third. It is really over in the trikaldrishti. It must be finished with in the lipi, rupa & samadhi. The one thing really that remains is rupa samadhi. There is a confusion, the incompetent devatas have to be expelled. It is true more was expected or demanded by one side of the mind than has been fulfilled, more accomplished than was expected by the inert, sceptical side. Perfection is not for today. The second chatusthaya is different. The faith, aishwarya, attahasya have been interrupted—

All the vijnana is definitely in action, though in unequal & imperfect action. The unequal & imperfect parts must now be filled in & out. Afterwards we can attend to the fourth chatusthaya more particularly.

We have to move forward. Recognise the nature of existence. This is the knowledge; therefore dhairya is necessary.

No dependence on the script. If it depends on the script, it will not be self-assured. The script is only for confirmation. It is perfectly true that the first chatusthay has been broken into after
a promise that it should never again be broken. Substantially it is intact. The violence done to the system is the proof that it cannot be destroyed. The continuance of the tejas will be the proof that the second chatusthay stands, even in the faith there is only a temporary disturbance. The harm done will be repaired. The promises have all been exaggerations of Will, therefore lies. The Vani has exaggerated, every source of knowledge has exaggerated. The inertia exaggerates on the opposite side.

So much has been done. All that was a play of the game intended to bring about a fresh grouping. Henceforth all the movements of knowledge & power will work themselves out not interfered with by the will in the intellect & the intellectual judgment, although these in their passing rupam can still distort the truth.

[8]

Shrink not nor falter, O hero, though thy toil seems ever to return on thee in vain menacing to crush thee in its rebound. Thy labour of Sisyphus is the laboratory of the future & the fulfilment of eternity is in thy present insignificant toil, as the tree that was & is to be in the seed that seems so little to the eye & vain.

[9]

The recurring confusion created by the pranic intellect intruding its activity is forced on the system, but it is noticeable that only the shadow of asamata & ashakti comes with it as a part of the ajnana & disappear[s] automatically with the return of the jnana. The apparent difficulty will disappear like all the rest. The pressure on the tejas is intended to force the emergence of the rapidly fulfilling divine tapas.

Trust first, — if there is anything wrong, seek the explanation or better await it. Rapidity is necessary first in the third chatusthaya & in the fourth; there will be sufficient money to keep you till January. The ecstasy is to increase in force & frequency, while the subdued (not the obstructed) ananda becomes perpetual during
waking hours & even in sleep the ananda gains ground. Then the subdued ecstasy will take its place while intense ecstasy becomes the occasional higher state. So it will proceed. As for the siddhi of the health, that proceeds in spite of all resistance. Neither of these will be perfect till December; but meanwhile the utthapana will come rapidly forward & the saundarya begin to break through its obstacles.

The range must be widened & the defects removed— The general obstruction must be met by a general denial of the obstruction & refusal to work out of it by the lower processes. That has been done sufficiently and has not to be repeated ad infinitum—

There is now no reason why the Samata etc should disappear. Only the tejas of Mahakali must finally be harmonised with the passivity and the dasya. This will be done today by eliminating the Maheshwari bhava from the superficial consciousness & its contents without bringing back the mental tejas. It is true. Nevertheless these things are done. The struggle is over the whole basis of the farther advance.

The incident of yesterday was used as a turning point— to turn you into the road hitherto avoided, now destined for your treading, the road of mighty, straightforward effective karma. Others have tried, stumbled and fallen. You will see that you are henceforth as effectively protected in action as in self-defensive passivity & in action by others—as effectually & more. All these mishaps have had their object and their beneficial purposefulness. Not after this year. The knowledge & power have to be entirely harmonised first. That egoism is exhausting its remnants. The difficulty is great only because the pranic suggestions attempt to predominate & mislead; in itself it is not great.

Today a great movement forward. It is not forbidden; it has to be accepted; it will clear itself of the ignorance, which is now the only obstacle. Today for the second & third—if the second is cleared, the first automatically fulfils itself. There is a tremendous
pressure in order to compel the buddhi to give up faith in the bodily siddhi & the new society. Let the power first be reestablished. The trikaldrishti, telepathy, power, lipi have now all to move towards absolute perfection dragging the samadhi & drishti with them. Till that is done, the fourth chatusthaya will only prepare its advance. The advance has begun; it will gather momentum during the day.

The powers of knowledge & tapas are stronger, but they are all acting in the intellect without the action of the intellectual judgment, therefore there is no light. The mental realm is being purified of the pranas. The force of the tapas is yet insufficient. Life has to be brought into line with the siddhis acquired, or in other words the powers have to take hold of life and possess it. Life means the Akash of the prithivi, & through the Akash all it contains. It is true, the Akash is full of opposition & obstruction where formerly it seemed clear. The obstruction is only in order to bring out the samata, tapas etc & increase the eventual force of the powers themselves. The admission of the power & right of the objective world to resist is to be once more cancelled. So far we have advanced that the power & knowledge are showing the old force & invariable effectiveness, but the effectiveness is usually partial, often slight in actuality, seldom flawless. We have not then advanced beyond the old point in appearance, except that the power & the instruments are all accepted & faith in them is completely founded, though still uncertain about rapid results. The second chatusthaya is now completely founded except in the extent & certainty in detail of the faith & of the Kalibhava, therefore the attahasya too is little manifest. That must now appear, while at the same time the instruments of the later chatusthayas farther justify themselves. The conditions are now fixed and will clear & develop themselves—

The third chatusthaya is reforming itself on a much sounder basis. The power, lipi & knowledge will during the next three days overpower the resistance of the physical akasha. Rupa and samadhi will follow their lead. About the rupa & samadhi you are uncertain, but the doubts will be removed. Meanwhile the fourth chatusthaya must be pushed forward. Health is going through its ultimate
denials & is already shaking itself free from some of them. Ananda is insisting. But the utthapana & saundarya are still in a crude state & strongly opposed in their attempt to progress. A beginning has been made in the utthapana. It must be steadily pursued. As for the destruction in the fifth, it is only the destruction of unsound members and of the defects which make them unsound. This time the movement has not been favourable. The old obstruction seems to be momentarily successful.

The attempt will be persistent & successful. There is no ambiguity [ ......................... ] directions. When it is said, there will be [ ......................... ] power than has already [ ........................................ ]

From today regularisation of the Yoga & the life; but Yoga more first than the life. The activity of the second chatusthaya has to be restored perfectly; for the activity of the first is already restored & perfect but for the physical touch. This activity of the second chatusthaya must take place without disturbing the first, must bring universal ananda, not discouragement & disappointment. That once done, the third will progress itself towards its self-perfection as it is already doing in the lipi and the pure jnana. The practical jnana, the power & the samadhi will all perfect themselves on that basis. So, too by the perfection of the power the fourth will break down its obstacles & progress to perfection. Meanwhile the fifth will confirm and enlarge itself.

The doubt is justified by the past, not by the future. Until it is removed by knowledge, it must persist. There is a perfect knowledge at work removing the ignorance; only the ignorance is allowed to return & conquer so often, for the sake of humanity, so that its burden may be lightened. I am about to establish the parts of knowledge again, so that the faith may have some ground to stand upon.

---

1 Manuscript damaged; three lines partially or wholly lost. — Ed.

www.holybooks.com
The thing is now once again grounded in samata & dasya—
The tejas will now begin to work, the faith develop & the vijnana act.

The vijnana is preparing its own perfection and today there will be the necessary reconstruction. The body is still dominated by asiddhi. The struggle is with the general Vritra of the third, sixth & first, second—especially in the powers of knowledge. The vyuha is proceeding. Still the vyuha is proceeding. The Samuha is there, but in a disordered state. The negative stage is over; the positive affirmation must more & more fulfill itself. Arrangement means in time, place & circumstance. The vyuha is taking place; the rays do not yet go to their right place—Faith withstands all the assaults & the knowledge of Brahman Sarva & Ananta is confirming itself, but it must also be Jnana & Ananda. That is why the third must now fulfill itself & then the fourth. All these are only the first obstacles to the final perfection. Self-fulfillment is now the rule except in the body. It must become the rule there also. But not at once. As for the rapidity it will be soon at work.

Reconstitute. First, the vijnana—Next, the power—Self-development of all. It is only a temporary obstacle. There is a compulsion on the whole system. It is an attempt to dissolve & wreck that siddhi. Hence it is being resisted, [ ] I have allowed it for particular purposes. It has no [ ]

The window will not fall. The struggle for the third chatusthaya proceeds & the attack is now constant, but so also is the pressure of the siddhi. The siddhi will proceed now in the mass & not in detail, except in the rupa—All is of use. In the matter of the stomach, it is essential that the reversion to the old system of evacuation should cease & it will cease. The health & the ananda will now be specially dealt with while the utthapana is preparing. Meanwhile the third chatusthaya will perfect itself. No the first, not this. This is beautiful & useful for this life. No straining of the

\[2\] Manuscript damaged; two lines partially lost. —Ed.
Tapas is needed. There also no physical pressure is needed. This is how it will become regularised. The only question is about time. Meanwhile the focus must be turned upon life. The articles must be sent and yet not in submission to them. Prānān atarah.

The life has now to be entirely expressed in these higher values. The second chatusthaya has to begin its play in life. Many have still the ego, & therefore impressions of egoism survive. The harmonious arrangement of the first three chatushayas is proceeding. Today—the first two are being attacked by the old bhavas with which the material mind has long been familiarised, but they will overcome the attack & emerge permanently victorious.

dhairyam suddhatanantyalipsa mahadbhavah
pritiḥ dakṣhyam danapratidanalipsa anandibhava
bhoga hasyam karmalipsa samabhava

The trikaldrishti will arrange itself today & the whole knowledge act connectedly from tomorrow. There is an attempt to revive the activity of the pranic intelligence in connection with the trikaldrishti & aishwarya. The difficulty is there to be overcome. The difficulty persists, but is now lightened by the persistent rejection of the pranic suggestions—

Ananda again in the afternoon & evening no longer subdued or obstructed. Utthāpana—

There is full perfection of the first chatusthaya; in the second there are still defects, but you can see the immense progress made in the human parts of the system. Only the divine part is still imperfect. Till then the full intensity cannot come. The perfection is coming. This is the full attack on the karma, no longer of men, but of nature. They have called up the elements to aid them. The battle with the elements is still a losing battle for the present. Nor is the ideality yet perfectly combined in detail. This is the proof of the ideality but it has yet to be perfected.

The knowledge is once more working with a near approach to perfection, only some of the placements are still wrong. The power must be brought up to the same level in its ordinary movements, then in the body, then in the karma. The power will now begin
to work in the ideality & in harmony with the knowledge, the telepathy & trikaldrishti.

Although it is as yet incompletely done, still it is done. Now lipi, [..............................................................] 3

3 Manuscript damaged; one line lost. — Ed.
March 15th

When the vijnana is active, he (the Master of the Yoga) developing the initial Word, (OM, Brahman) declares all that follows. First, activity of the vijnana, second, constant perception of the Brahman, third, knowledge of the world in the terms of the Brahman.

Record of Yoga.
Theosophic.

Sept. 13

Sortilege—इष्टोप यात श्रवणो नपात: सीधन्तना ऋषोश्र नाप भूत।
अंधमन्त्रिव: सवने रश्चेति गमलवस्तुमुः यो मदास: ॥

An exact application to the circumstances of the Yoga. The Ribhus are the gods of formation who proceed from the divine Tapas (श्रवणो नपात:) and use it to form thought, action & condition. This formative process is now the course of the Yoga (अंधमन्त्रिव्य: सवने) and the delight of the ananda in the formative action is becoming habitual to the mind-force (रश्चेति). At the moment, however, asiddhi had attacked, bringing defect of formation, defect of ananda[,] trouble & deficiency in the mind (defect of ध्वन). Hence the इष्टोप यात माप भूत.

Lipi—“17th September.” (akasha, varnamaya)

Typical Trikaldrishti

A frog hopping in one direction, with no sign of turning. A turn at a sharp right angle indicated & the exact line of subsequent passage indicated; fulfilled but not in the place perceived.

Another frog comes from the opposite direction; indication that the bodies of the two frogs will meet one leaping on the other, although the lines of their motion were not such as to promise meeting. The smaller frog turned away & began hopping in the opposite direction, but the larger pursued & sprang upon it, thus fulfilling the trikaldrishti, but with a variation of circumstance which had not been foreseen.

www.holybooks.com
Sept. 15—

Two crows descend into the road behind the wall fighting & are invisible. Indication that they will immediately rise above the wall fighting in the air & part. Fulfilled precisely, though the trikaldrishti itself was not jyotirmaya.
VEDIC EXPERIENCE, 14 AND 15 DECEMBER 1913

I. [176]

O thou in whose two hands are all the possessions of our five dwelling places, make clear to our eyes him who betrays us, slay him even in heaven becoming the thunderbolt. Slay him who presses not out the nectar, the indifferent and oppressed in hope, who is not thy lover, give us the knowledge of him becoming utterly luminous to the worshipper so that he bears up thy activities.

Experienced, Dec 14 & 15th 1913. There are Powers of pure mind which are indifferent, equal to all things, as in possession of the samata,—but they are void of active delight; they do not press out the wine of immortal delight, they possess man in that state when, his hopes oppressed, he takes refuge in a passive & equal indifference, and is no longer in love with mental activities. In this state man takes this enemy of Indra & of his own perfection as a friend and helper. Mental force becoming entirely luminous in knowledge, suriḥ, is to pierce this dangerous disguise & make clear to the inner eye the true nature of this harmful agency, sama indeed, but asunvan, sama because dunasha & not because of equal delight. He is to be slain in the pure mind where he dwells by Indra in the form of the thunderbolt, mind force informed with vaidyuta energy from Mayas. A uhate is proleptic; the result of Indra or mind force becoming entirely luminous with the solar light of the ideal knowledge is to perfect the mental power of the Yogin so that he is

1 MS 173

www.holybooks.com
strong to support & hold all the activities of mental knowledge & of the temperament in their fullness.

“Be rapturous in us and a dwelling for the sacrifice, enter with mastery into Indra, O Soma; thou art powerful, moving forward, and thou meetest no hostile forces on thy way. In him give to dwell our self-expressions, who is alone of the lords of action, and according to his movement is self-state sown in us & masterfully he cultivates that crop. O thou etc..... He who has the twofold fullness and his created being is free from flaw or crevice (continuous) in our realisations, in that Indra’s struggle, O Indu, prolong (protect) his richness in its havings. As to thy former adorers, O Indra, thou camst into being as a lover, like waters to the thirsty, even after that manner of soul-experience I call to thee. May we find the force that is intense & pierces in the slaying.”
UNDATED NOTES, c. 1914

Vijnanachatusthaya

Today —
Lipi, Rupa, Thought, Vani, Trikaldrishti, Power, none absolutely perfect, but moving nearer to perfection.

Tomorrow —
Thought perfect, Vani perfect, Trikaldrishti perfect in type; Power, Rupa, Lipi moving towards perfection.

Day after
Lipi perfect, Power in full force but not yet perfect. Rupa moving towards perfection.

Samadhi waits upon Rupa

It is this time seriously intended.

The script was suspended, not renounced. Today although the commencement has been unfavourable, good progress will be made, except in the physical siddhi, in which the enemy has permission to hold his own for three days more. Trikaldrishti is to be perfected today. That is the first siddhi. Afterwards the lipi has to be brought forward. The trikaldrishti has to move perfectly in all fields & with regard to time, place & circumstance even on the intellectual level.

Perfection is used as a relative term, but should be absolute. The script is not yet used through the highest agencies; it is only a reflection of the condition of the knowledge. There is therefore no help to be had from it which cannot be had from the other instruments of knowledge — Nevertheless it has to be used & perfected. The falsehoods suggested & uncorrected prevent the dasya from...
being entirely accepted, but the movement of anrita is a relapse of the intellect in body, not a movement justified by the actual condition of the siddhi—

The revolt against the dasyam where the directing Agency is not satisfactory nor plainly authorised, must cease. There is a perfect Wisdom governing the siddhi & the intellectual infallibility is well established except in that which doubts & judges & by doubting & judging confuses the intellect—

The tejas has not to be renounced, but justified

The trikaldrishti today will throw off the doubt & judgment, but not yet the uncertainties left behind by them in the action of the faculty in intellect. Lipi will justify the prediction—Rupa at last emerge & Power overcome for the last time the general obstruction. In the physical siddhi the Ananda will once more take hold. Samadhi will develop with the rupa. All this is for today.
NOTES ON IMAGES SEEN IN MARCH 1914

The Evolutionary Scale.

We shall see how the thought of God works itself out in Life. The material world is first formed with the Sun as centre, the Sun being itself only a subordinate star of the great Agni, Mahavishnu, in whom is centred the Bhu. Mahavishnu is the Virat Purusha who as Agni pours Himself out into the forms of sun and star. He is Agni Twashtā, Visvakarman, he is also Prajāpati and Matariswan. These are the three primal Purushas of the earth life,—Agni Twashta, Prajāpati & Matariswan, all of them soul bodies of Mahavishnu. Agni Twashta having made the Sun out of the Apas or waters of being, Prajapāti as Surya Savitri enters into the Sun and takes possession of it. He multiplies himself in the Suris or Solar Gods who are the souls of the flames of Surya, the Purushas of the female solar energies. Then he creates out of this solar body of Vishnu the planets each of which successively becomes the Bhumi or place of manifestation for Manu, the mental being, who is the nodus of manifest life-existence and the link between the life and the spirit. The present earth in its turn appears as the scene of life, Mars being its last theatre. In the Bhumi Agni Twashta is again the first principle, Matariswan the second, finally, Prajapāti appears in the form of the four Manus, chatvāro manavah. Not in the physical world at first, but in the mental world which stands behind the earth-life; for earth has seven planes of being, the material of which the scenes and events are alone normally visible to the material senses, the vital of which man’s pranakosha is built and to which it is responsive, the mental to which his manahkosha is attached, the ideal governing his vijnanakosha, the beatific which supports his anandakosha, & the dynamic and essential to which he has not

1 MS itself
yet developed corresponding koshas, but only unformed nimbuses of concrete being. All the gods throw out their linga-rupas into these worlds of earth and through them carry on her affairs; for these lingas repeat there in the proper terms of life upon earth the conscious movements of the gods in their higher existences in the worlds above Bhu. The Manus manifested in the Manoloka of Bhu bring pressure to bear upon the earth for the manifestation of life and mind. Prajapati as Rudra then begins to form life upon earth, first in vegetable, then in animal forms. Man already exists but as a god or demigod in Bhuvarloka of Bhu, not as a man upon earth. There he is Deva, Asura, Rakshasa, Pramatha, Pisacha, Pashu or as Deva he is either Gandharva[,] Yaksha, Vidyadharas or any of the Karmadevas. For Man is a son of the Manu and is assigned his place in Div & Pradiv, in Heaven & in the Swargabhumis. Thence he descends to earth and thither from earth he returns. All that will be explained afterwards. When the human body is ready, then he descends upon earth and occupies it. He is not a native of earth, nor does he evolve out of the animal. His manifestation in animal form is always a partial incarnation, as will be seen hereafter.

The animal proper is a lower type. Certain devas of the manasic plane in the Bhuvarloka descend in the higher type of animal. They are not mental beings proper, but only half-mental vital beings. They live in packs, tribes etc with a communal existence. They are individual souls, but the individuality is less vigorous than the type soul. If they were not individual, they would not be able to incarnate in individual forms. The body is only the physical type of the soul. The soul, if it were only a communal soul, would manifest in some complex body of which the conglomeration of the different parts would be the sole unity; say, a life like that of the human brain. The animal develops the tribe life, the pack or clan life, the family life. He develops chitta, manas, the rudiments of reason. Then only man appears.

How does he appear? Prajapati manifests as Vishnu Upendra incarnate in the animal or Pashu in whom the four Manus have already manifested themselves, and the first human creature who appears is, in this Kalpa, the Vanara, not the animal Ape, but man with the Ape nature. His satya yuga is the first Paradise, for man
begins with the Satya Yuga, begins with a perfected type, not a rudimentary type. The animal forms a perfect type for the human Pashu and then only a Manuputra or Manu, a human, a true mental soul, enters into existence upon earth, with the full blaze of a perfect animal-human mentality in the animal form.

These are man’s beginnings. He rises by the descent of ever higher types of Manu from the Bhuvavloka,—first he is Pashu, then Pishacha, then Pramatha, then Rakshasa, then Asura, then Deva, then Siddha. So he ascends the ladder of his own being towards the Sat Purusha.

Manu, the first Prajapati, is a part of Mahavishnu Himself descended into the mental plane in order to conduct the destinies of the human race. He is different from the four Manus who are more than Prajapatis, they being the four Type-Souls from whom all human Purushas are born; they are Manus only for the purpose of humanity & in themselves are beyond this manifest universe & dwell for ever in the being of the Para Purushas. They are not true Manomaya Purushas. But Manu Prajapati is a true manomaya Purusha. He by mental generation begets on his female Energies men in the mental & vital planes above earth, whence they descend into the material or rather the terrestrial body. On earth Manu incarnates fourteen times in each Kalpa & each of these fourteen incarnations is called a Manu. These fourteen Manus govern human destinies during the hundred chaturyugas of the Prati-Kalpa, each in turn taking charge of a particular stage of the human advance. While that stage lasts he directs it both from the mental world and by repeated incarnations upon earth. When Manu Prajapati wishes to incarnate in a fresh form, he has a mental body prepared for him by evolution of births by a human vibhuti, Suratha or another & takes possession of it at the beginning of his manvantara. Each manvantara is composed of a varying number of chaturyugas according to the importance & difficulty of the stage with which it is concerned. Once at least in each chaturyuga the Manu of the Manvantara incarnates as a man upon earth, but this never happens in the Kali Yuga. The seventh & eighth Manus are the most important in each Prati Kalpa & have the longest reigns, for in their Manvantaras the critical change is finally made from the
type which was completed in the last Prati Kalpa to the type which is to be perfected in the present Kalpa. For each of the ten Prati-Kalpas has its type. Man in the ten Prati-Kalpas progresses through the ten types which have been fixed for his evolution in the Kalpa. In this Kalpa the types, dashagu, are the ten forms of consciousness, called the Pashu, Vanara, Pishacha, Pramatha, Rakshasa, Asura, Deva, Sadhyadeva, Siddhadeva and the Satyadeva. The last three are known by other names which need not be written at present. The Pashu is mind concentrated entirely on the annam, the Vanara mind concentrated on the Prana, the Pishacha mind concentrated on the senses & the knowledge part of the chitta, the Pramatha mind concentrated on the heart & the emotional & aesthetic part of the chitta, the Rakshasa is mind concentrated on the thinking manas proper & taking up all the others into the manas itself; the Asura is mind concentrated on the buddhi & in the Asura Rakshasa making it serve the manas & chitta; the Deva is mind concentrated in vijnanam, exceeding itself, but in the Asura Deva or Devasura it makes the vijnana serve the buddhi. The others raise mind successively to the Ananda, Tapas & Sat & are, respectively, the supreme Rakshasa, the supreme Asura, the supreme Deva. We have here the complete scale by which Mind ascends its own ladder from Matter to pure Being evolved by Man in the various types of which each of the ten principles is in its turn capable. To take the joy of these various types in their multifold play is the object of the Supreme Purusha in the human Lila.

[II]

A series of images and a number of intimations have been given yesterday in the chitra-drishti to illustrate the history of the first two Manwantaras & the vicissitudes through which the human idea has gone in the course of these unnumbered ages. It is not at all surprising that there should be no relics of those vicissitudes in the strata of the present earth; for the present earth is not the soil of the planet as it was in the earliest Manwantaras. The detritions, the upheavals, the convulsions, the changes that it has undergone cannot be estimated by the imaginative & summary methods of the modern geologists,—men who think themselves advanced &
masters of knowledge, but are only infants & babblers in their own sciences. It is unnecessary to go at present into the scene or habitat of the incidents & peoples shown in the drishti. The facts are sufficient.²

The first image was that of a young & beautiful woman fleeing, holding two children by either hand, preceded by a third—though this was not clearly seen—and followed by a little child, a girl with her cloth in her hand. All are of the female sex. In their flight they have upset a handsome & well-dressed young man, who was also fleeing across the line of their flight and now lies sprawling on his back. Behind the woman & her girls an elderly & bearded savage, naked & armed with some kind of weapon, runs at a distance of not many yards and but for the accident of the upset would soon overtake the fugitives. The second image showed the young man still supine with the savage upon him threatening him fiercely with his weapon, but the bhava shows that not slaughter, but prisoners & slaves are the object of the raid. The young man is evidently taken prisoner by the pursuer who has turned aside from the women to this, possibly, more valuable booty. In the third image the little girl of the first is seen captured by a young & handsome barbarian who has managed to comfort and soothe her & is persuading her to lead him to the secret refuge of the fugitives. By this device, it is now indicated, he is able to discover this refuge & capture the whole colony of the civilised people. The success raises him to the rank of a great chief among his people, for it is his section of the raiders who make the victory really profitable. The chitra-lipi Indigenous just given shows that these barbarians are the original inhabitants of the country, the others colonists & conquerors. It is intimated by the vijnana that both assailants & assailed are in the Pashu stage & people of the first or second Manu, but the civilised have reached a kind of Devahood of the Gandharva type, the savages are a reappearance of the Asura Rakshasa type of Pashu brought back into a more advanced age in order to re-invigorate the over-refined type that has been evolved. The young chief of the image is a sort

² The three images that follow are mentioned in the Record of 22 March 1914; see page 395. — Ed.
of Caesar-Augustus or Alaric of the barbarians. He takes the lead of their revolt which is at first a disordered movement of indignation (lipi Indignation alternating with indigenous)],] systematises it, conquers & enslaves the Gandharvas, learns from them their civilisation and modifies it by the barbarian manners. The new race evolved finally dominates the then world & fixes the next type of the Pashu evolution.

But who are these Pashus? For this is not the first pratikalpa of the Pashus, but the sixth of the Asuras, and it is indicated that none of these visions belong to any other pratikalpa than the present. It follows that even these savages cannot be pure Pashus, but Asuras or Asura Rakshasas starting from the Pashu stage, so far as the Asura can go back to that stage, and fulfilling the possibilities of a sort of Pashu-Asura before evolving his Asurahood in the higher types & arriving & shooting beyond the pure Asura. This is an important modification. It follows that each type of the Dasha-gavas goes, within the mould of his own type, through all the ten gavas from the Pashu to the Siddhadeva. The Pashu-Asura will be different from the pure Pashu or the Pashu Deva, because he will always be first & characteristically an Asura, but he will weigh from the buddhi on the bodily experiences as Pashu, on the vijnana experiences as Deva & so in each type according to its particular field of activity. The Deva will do it, instead, from the vijnana, & the difference of leverage & point of action will make an immense difference both to the character of the activity and its results in the field. Moreover it is clear that the Pashu Asura goes also through the various types within his mixed Pashuhood & Asurahood before he passes to the Pisacha-Asura, who has to undergo a similar development. The great variety of types that will result from this evolutionary system, is evident.

The farther images seen in connection with this Pashu-Asura episode are three in number. First the plain & desolate country with a hill in the distance, about which it is indicated by the vijnana that this was the appearance of the country not actually occupied by the

---

3 These three images (along with a fourth) are mentioned in the Record of 23 March 1914; see page 397. — Ed.
barbarians before the colonists came in (by sea, it is suggested & then by movement from the coasts occupied to the inland tracts,) & peopled it sparsely. The catastrophe came because of their haste to conquer the whole small continent before they were able to people all the unoccupied land & build themselves into a strong & irresistible power organised in great cities & populous nations. This haste was due to the superior fertility & attractiveness of the soil actually occupied by the barbarians who, being poor agriculturalists, had settled only on rich soil not demanding a skilful labour & left the rest untilled. The contrast between the waterless soil first seen & the banks of the great river on which was the barbarian settlement, is typical of the contrast between the two kinds of soil, utilised & unutilised. The premature attempts at conquest began with aggressions on the nearest barbarian villages & the raid seen was the first effective retaliation carried out in the absence of the fighting men of the colony, so that on the side of the attacked only women, children & peaceful unarmed men are seen fleeing to a habitual & secret place of refuge. For this colony was on the very borders of the barbarian country & always exposed to incursions. It is not clear why the colonist fighters were absent, whether on a raid on the barbarians or in a civil quarrel among themselves.

The second image, the fortified city on the plateau, shown by the terraces cut in the slope of the plateau & the subsequent separate chitra of one of the city domes, to be a civilised & magnificent metropolis, shows the final result of the amalgamation of barbarians & colonists. The original barbarian settlement was on the bank of the great river seen with one of its ghauts not far from the foot of the plateau, but after the raid, in order to safeguard themselves & their booty, the savages retreated at the instance of the young victorious chief, now by common consent their leader, to the plateau, then steep in its slope & difficult of access. Afterwards a great city was built on the site of this barbarian stronghold. The construction on the river in appearance like a house, but apparently standing on the water can have been nothing but a houseboat or rather a house-raft, & it is moored to a char in the river, a fact which suggested the first erroneous idea that it was a house on an island in the river.
The third image, the large, high & spacious hut, built almost with elegance & with the great wide open door, was that of the chief and shows that the savages, in spite of their nakedness, were not on the lowest scale either of human immaturity or of human degeneration. The figure in clerical dress & hat is that not of a priest, but of an envoy, one of the elders of the colony come to negotiate for the restoration of the captives; the girl with whom he converses & from whom he turns in shocked despair, is one of the daughters of the woman seen in the earliest of this series of images, now a slave & concubine of the chief. At first, the colonists were unwilling to use violence lest the captives should be maltreated. The fact that one of the most important of them has already been subjected to irremediable indignity, has just come to the knowledge of the elder along with other facts, eg the unwillingness of the chiefs to make any reparation, & accounts for the action which indicates despair of peace or any fruitful negotiation. The series is not yet complete, but awaits the unfolding of farther events already very vaguely indicated by the vijnana. The other image has no connection with these events but belongs to a later Manvantara, that of the Pramatha-Rakshasa, of the sixth Manu in one of its most perfect & brilliant stages. It has to be kept vivid in the mind for future interpretation.

III

The disposition of the Manwantaras may now be described. It will be remembered that there are fourteen Manus and ten gavas of the Dashagava. How are these divided among the Manus? In this Kalpa or rather Pratikalpa the type Pashu is the Vanara, but as in all Nature’s movements, even in manifesting the Vanara, the others first make their appearance rapidly before the type “arrives”; those most germane to the matter are the lion, tiger, elephant, dog, wolf, cat, bull & cow, bear, fox, ass, horse, bee, ant, butterfly, fish, eagle (also kite, hawk & vulture), songbird, crow & cuckoo etc. In all these human egos readily incarnate & the human type absorbs them all. The first Manu takes all these totems & applies them to the general type of the Asura, driving at the evolution of a giant Vanara-Asura who has in him all these elements & combines them into an
animal harmony dominated by curiosity, humour, adaptability & adaptiveness, the Ape virtues which bring that type nearest to man. This Vanara Asura the first Manu hands on to the second, who takes the type, fulfils it and evolves it into the Pishacha-Asura. This he does by bringing the Ape curiosity uppermost and applying it to all the experiences of man’s animal life, to play, work, domesticity, battle, pleasure, pain, laughter, grief, relations, arrangements etc. All the higher qualities—imagination, reflection, invention, thought, spirituality even are turned towards these experiences & their possibilities,—cognitional not aesthetic exhausted so far as the human animal can exhaust them. This however, is done only in the third Manvantara. In the second it is the Vanara who satisfies his humour, curiosity & adaptiveness in a far more elementary & summary fashion, but as he does so, he begins to refine & evolve in search of new sensations until the full Pisacha Asura is born. This type is handed over to the third Manu to fulfil, & to it two Manvantaras are devoted,—in the third the Pisacho-Pramatha of the Asura type evolves; in the fourth the Pisacha Pramatha evolves into the full Pramatha-Asura. The curiosity ceases to be merely cognitional & practically scientific, it becomes aesthetic with an animal & vital aestheticism; the Pramatha seeks to extract their full emotional & aesthetic values, their full rasa out of everything in life, out of torture equally with ecstasy, death equally with life, grief equally with joy. That type is evolved by the fifth Manu into the Pramatha-Rakshasa of the Asura type, & by the sixth into the full Rakshasa-Asura. The Rakshasa it is who first begins really to think, but his thought is also egoistic & turned towards sensation. What he seeks is a gross egoistic satisfaction in all the life of the mind, prana & body, in all the experiences of the Pashu, Pisacha, Pramatha & his own. But as this type is not a pure Rakshasa, but a Rakshasasura, the thought is there from the beginning, for the Rakshasa has already established it in the human mould in the fifth pratikalpa. It now, however, in the Asura ceases to be subservient to the vital & animal instincts & becomes the instrument instead of a vigorous, violent & clamorous intellectual ego. As the main type is that of the Asura, there is always a tendency to subordinate the lower ego to the intellectual Aham, but the subordination is at
first only a self-disciplining for a more intelligently victorious self-indulgence, like the tapasya of Ravana. This type evolved is fixed in the character of Ravana and takes possession of its field in the Manvantara of the seventh Manu, Vaivasvata. In that Manvantara it evolves into the Asuro-Rakshasa in which the intellectual ego & the emotional, sensational ego enter into an equal copartnership for the grand enthronement & fulfilment of the human ahankara. As the type of the sensational & emotional Rakshasa-Asura is Ravana, so the type of the more mightily balanced Asura Rakshasa of the Asura type is Hiranyakashipu. In the eighth Manvantara this Asura Rakshasa evolves into the pure Asura who serves his intellectual ego & subordinates to it all the other faculties. That type reigns with the ninth Manu & evolves into the Asuradeva of the Asura mould & in the tenth Manvantara into the Devasura who enthrones the vijnana and glorifies the Asura existence by the vijnanamaya illuminations playing on the whole of the triple mental[,] vital & bodily life of man. In the eleventh & twelfth manwantaras the Devasura evolves into the Sadhya, the Anandamaya Asura who at first with the pure Ananda, then with the Tapomaya Ananda, then with the Sanmaya Ananda dominates the reigns of the eleventh & fourteenth Manus & completes the apotheosis of the Asura in man. With the Siddhadeva in the Asura the hundredth Chaturyuga of the sixth Pratikalpa comes to a glorious close.

IV. Certain farther images have appeared which seem intended to show the nature of the Kaliyuga civilisation evolved by the intermixture of the barbarian & the Gandharva Pashus.4 One is that of a very wide road climbing up a steep incline; the comparative height of the trees on one side show its great width. This picture seems to be intended to confirm the impression created by the ensemble of the city on the plateau, by the dome & by another chitra of a part of the hill with a (private?) house roofed like a modern church, that this civilisation had a certain bigness, massiveness & sharply cut variety. A low type of the Pashu in this age was also seen,

4 These images are mentioned, in a different order, in the Record of 24 March 1914; see pages 403-4.—Ed.
bearded, [hatted]\textsuperscript{5} & visaged like a lowclass modern American of the West. These resemblances have created some doubt as to either the genuineness of these images or their right interpretation; but the doubt is not justified by its cause. For throughout the fourteen Manwantaras, variations, permutations & combinations of the same type are bound to appear. This is the law of Nature's development in clay, plant & animal & applies equally to man, his manners, ideas, appurtenances & institutions. Given the truth of the Manwantara theory any other feature than this varied repetition would be more surprising than the repetition itself & lead to more legitimate distrust. There are plenty of variations & signs of immaturity or different tendency. In the image of the river, it is noticeable that there are no modern vessels. The houseboat is a houseraft & entirely different in structure from the modern houseboat; the craft in which the man & girl in another image are seen crossing the river is also a raft & not a boat. The Gandharvas, when first seen, are robed differently in the males & the women; the former have dresses like the older styles of European dress, the latter wear loose & light classical draperies—an arrangement which is after all sufficiently natural & might easily evolve in an artistic & aesthetically minded race. The Teutonic element in the character & civilisation of the new type Pashus is a result of the blending of the graceful, slight & artistic Gandharva with the plain, forceful & robust barbarian; the latter predominates in the blend & the former merely tones down his force & gives a few details of dress & manners much modified in the direction of rude & clear cut plainness & strength, & is chiefly prominent but not predominant in the women as typified by the girl on the raft who has a native grace denied to the men of her blood. Their elegance is heavy & artificial, worn as a dress rather than possessed as a native characteristic. Sometimes the type goes very low as in the premature American; the ordinary type is higher but void of dignity or greatness, grace or beauty. They represent an early tendency towards the Asura Rakshasa such as he manifests himself in the Kaliyugas of this Pratikalpa when he has compassed the first heavy self-restraint necessary for his evolution towards the

\textsuperscript{5} MS hated
Deva. In a later image the woman of the first, the captive of the barbarian Augustus, is seen in a later incarnation at the turning point when this type dissatisfied with itself is trying to recover the grace, humour, artistry, fantasy, liveliness of their Gandharva blood, so as to develop again in themselves the Pashu deva. This fixes the period of these incidents. It is in the Kali of the fourth chaturyuga in the reign of the first Manu when the Rakshasa Asura of the Pashu Asura type reigns & is attempting to turn full Asura with occasional overshoorings to the Pashu deva. Every race that thus overshoots its mark & goes a step farther than their immediate next pace in evolution aids powerfully that evolution, but becomes unfit for survival & has to disappear. For this reason the Gandharva race of the Pashus disappeared & the Asura Rakshasa type reappeared, then took up something of the Gandharva & advanced one step towards the Asura-Pashu of the Asura type. By such overleapings & recoilings human evolution has always advanced.

V. There are certain images of animals dating from these early aeons which should be recorded here although they are not of the first Pashu period but fall before & after it.6 The first are images of a monstrous creature resembling the modern seal, but thicker & bulkier seen in a region of ice; the other another animal of equally monstrous bulk, its skin a series of successive red and yellow bands, its face exceedingly long, rough, thin & snouted, a cross between bear, wolf & tiger in the face, rhinoceroslike, yet supple in the body, but in spite of its ferocious appearance, sufficiently harmless. These creatures, it is suggested in the vijnana, belong to the first chaturyuga of the pratikalpa previous to the appearance of man; for the fourteen Manus enjoy each a reign of seven chaturyugas of varying lengths and the first & last of the hundred belong not to any Manu but the opening chaturyuga to Brahma & Rudra, the closing to Kalki & to Shiva. Man in the first appears only tentatively at the end, in the last only as a survival at the beginning.

The third image is that of a bear leaping on a smaller animal which it keeps under its paw while it wrests from it & devours some

---

6 These images are mentioned in the Record of 24 March 1914; see page 404. — Ed.
eatable for which the victim was pursued. The male of the captive
is near unable to help, unwilling to flee. It is a small deer, only one
third the size of the modern fallow deer. Suddenly the head of the
bear sinks. It has been killed, it would seem, by the arrow, spear or
other weapon of a human hunter. This scene belongs to the second
Manwantara of the Vanaras.\footnote{This image is mentioned in the Record of 25 March 1914; see page 407.─Ed.}

A fourth image is of a horse of the first Manwantara in one of
its earlier chaturyugas, a clumsy stiff-legged & long-eared animal
squirish in its lines & most unlike the graceful modern equine
species. The animal stands on the side of a river, & with head raised
& stretched sideways & ears pricked, listens to a sound amid the
trees on the opposite bank. This image was preceded by another
of a horse of the Pashu period in the later age when the civilised
barbarian type was trying to recover the Gandharva. This type
of horse, standing with a rider on its back & other human beings
conversing near & at its head, is more equine, but is still stiff-legged
& has not lost the asinine cast of head of its predecessor.

VI. Three images of the fourth in descent from the Chief of the
Barbarians; the first showing him standing meditating on the great
ghaut of the river, a figure & face like Napoleon’s clad in a dress
resembling the modern European; the second, his mother & step-
mother, descendants of the captives of the first image; the third, the
emperor again with his halfbrother, irreproachably clad, Prefect of
the city, consulting with regard to some palace intrigue in which
the mother & stepmother are concerned.\footnote{These three images are mentioned in the Record of 25 March 1914; see page 407.─Ed.} It is intimated that it is
this fourth King of the line who establishes the dominance of the
race in the then earth.
[1]

There is no possibility of immediate success in the physical siddhi or in the higher vijnana. The riot of the lower ideality stands in the way. It must quiet down before the drashtri vijnana can act with any completeness.

[2]

The Sortilege. It is to be revived once more. There is no writing this morning. The script is also to resume its movement. First, it has to be absolutely spontaneous. That is almost finished. It is a little obstacle, the suggestion.

Most of the amertume is a momentarily effective amnesia of the amara purusha. Momentary only. That is all at all today possible.

This denial must suffice both for the present and for all similar ascriptions in the future.

T² first – not complete, but perfect in the representative imperative – logos Vijnana
Thought-siddhi in interpretative imperative – d[itt]o.
Rupa siddhi, not yet stable.
Internal vijnana — perfect in thought-siddhi — growing in lipi[,] drishya etc
OM TAT SAT

The highest interpretation hitherto made in human understanding and experience may thus be stated with the proviso that since it is human it must be incomplete.

TAT. That.

The Absolute Unmanifested—Parabrahman, Purushottama, Parameswara (holding in himself the Parâshakti and in her the All).

SAT. The Existent (I Am.)

The Absolute containing all the power of the manifestation. The Absolute is Parabrahman-Mahâmâyâ. The Absolute is Purushottama-Parâprakriti. The Absolute is Parameswara-Ādyâ (original) Parâshakti.

OM. The Word of Manifestation.

A The external manifestation (consciousness realised in the actual and concrete—seen by the human consciousness as the waking state.)

U The internal manifestation (intermediate—the inner, not the inmost being—consciousness realised in the inner potentialities and intermediate states between the inmost supramental and the external—seen by the human consciousness as the subliminal and associated with the dream state.)

M The inmost seed or condensed consciousness (the inmost supramental, glimpsed by the human consciousness as something superconscient, omniscient and omnipotent,
and associated with the state of dreamless Sleep or full Trance.)

AUM Turiya, the Fourth; the pure Spirit beyond these three, Atman consciousness entering into Tat Sat and able to identify with it. Believed to be obtainable in its absoluteness only in absolute Trance—nirvikalpa samadhi.

All this (first in the Upanishads) is the viewpoint from the mental consciousness. It is incomplete because two things that are one have been left out, the Personal Manifestation and the name of the Mahashakti. The subsequent growth of spiritual knowledge has brought about a constant effort to add these missing elements.

When the hidden secret has been discovered and made effective, the human consciousness will be exceeded, the superconscient made conscient and the subconscient or inconscient which is the inevitable shadow of the superconscient filled with the true spiritual and supramental consciousness. The Trance, Dream and Waking States (all imperfect at present and either touched with obscurity or limited) become each completely conscious and the walls, gaps or reversals of consciousness that intervene between them are demolished.

Tat then will appear in its entire truth, the Supreme Absolute, One in Two, each entirely in the other and both one in an ineffable Existence, Consciousness and Ananda.

Sat is the eternal and infinite truth of Sachchidananda ready for manifestation. It is the One Existence, but the Two in One are there, each in each, each perfect in the other.

OM is the manifestation. The Mahashakti comes forth from the Supreme for creation. In the eternal manifestation the Two in One are evident to each other; their identity and union are foundation of the diversity of this play, and it is the possession of the truth that makes the manifestation stable & eternal.

In the temporal creation Sat seems to be separated from Chit and Ananda. Hence the play of the inconscience becomes possible and the creation of an Ignorance and an ignorant Maya. The Chit-Shakti has to reveal the Sat Purusha to herself and her creation
and entirely to meet him and recover the true identity and union
in the Ananda. She seems to be put out from him, but all the time
she is in him and he in her. It is this concealed truth that has to
become manifest and effective and its discovery is the secret of
the new creation in which the superconscient and inconscient will
become conscious and fill with the supreme Sacchidananda, One
in Two and Two in One. Then the temporal manifestation will be
recreated in the image of the Truth. It will be in harmony with
the eternal manifestation, built by what comes down to it directly
from the Eternal. For through the Ananda and the Supramental
the eternal manifestation stands behind the temporal creation and
secretly supports its involved and evolving movements.

[2]

The secret name of the Supreme Mahashakti signifies

| महोभि...रधा     | Love, Bliss, Ananda |
| महामाया, प्राकृति | Creative and Formative Knowledge-Power Chit-Tapas |

Support, Covering, Pervasion Sat

For the Supreme is Ananda unifying Consciousness and Existence in the single Power (Shakti) of these things.

[3]

All is created by the Supreme Goddess, the Supreme and Original Mahashakti, all proceeds from her, all lives by her, all lives in her,
even as she lives in all. All wisdom and knowledge are her wisdom
and knowledge; all power is her power, all will and force her will
and force, all action is her action, all movement her movement. All
beings are portions of her power of existence.

Seven times seven are the planes of the Supreme Goddess,
the steps of ascent and descent of the Divine Transcendent and
Universal Adyashakti.

Above are the thrice seven supreme planes of Sat-Chit-Ananda,
त्रि: सत चित-तपा भद्र: मात्र: ; in between are the seven planes of the

www.holybooks.com
Divine Truth and Vastness, Mahad Brahma, सत्यमूढः ब्रह्मः; below are the thrice seven steps of the ascent and descent into this evolutionary world of the earth existence.

These three gradations are successively Supermind or Truth-Mind, with its seven suns; Life with its seven Lotuses; Earth with its seven Jewel-Centres.

The seven Lotuses are the seven chakras of the Tantric tradition, descending and ascending from Mind (Sahasradala, Ajna[,] Vishuddha, Anahata) that takes up Life through Life in Force (Manipura, Swadhisthana) down to Life involved in Matter [(]Muladhara[)].

All these Life-Centres are in themselves centres of Truth in Life even as the seven Suns are each a flaming heart of Truth in luminous Divine-Mind-Existence; but these lotuses have been veiled, closed, shut into their own occult energies by the Ignorance. Hence the obscurity, falsehood, death, suffering of our existence.

The Jewel-Centres of the Earth-Mother are seven luminous jewel-hearts of Truth in Substance; but they have been imprisoned in darkness, fossilised in immobility, veiled, closed, shut into their own occult energies by the hardness, darkness and inertia of the material Inconscience.

To liberate all these powers by the luminous and flaming descent of the suns of the Supermind and the release of the eighth Sun of Truth hidden in the Earth, in the darkness of the Inconscience, in the cavern of Vala and his Panis, this is the first step towards the restoration of the Earth Mother to her own divinity and the earth-existence to its native light, truth, life and bliss of immaculate Ananda.
The Seven Suns.

The Sun of Creative Origination (from the eternal vastnesses).
The double Sun of Light and Power (concentrating the movements emanated from the infinite Wisdom-Will.)
The Sun of the Word (organising the creation).
The Sun of Love, Bliss and Beauty (dynamising the descending harmonies)
The Sun of Soul-Power (aspiring, receiving, grasping, assimilating the creation; divided here into the mind and psyche, there unified in Soul-Mind, Brahman.)
The Sun of Life (dynamically externalising the creation).
The Sun of Everlasting Form (stabilising and containing the creation).

These are the seven powers of the Truth-Mind above the body.

The Sun of Truth, originating the supramental creation
The double Sun of Supramental Light and Will, transmitting the Knowledge-Power that creates, founds and organises the supramental creation.
The Sun of the Word, expressing and arranging the supramental creation
The Sun of Love, Bliss and Beauty, vivifying and harmonising the supramental creation.
The Sun of supramental Force (Source of Life) dynamising the supramental creation.
The Sun of supramental Life-Radiances, (Power-Rays) canalising the dynamis and pouring it into forms.
The Sun of Supramental Form-Energy holding and embodying the supramental life and stabilising the creation.
1342 Record of Yoga

[6]

The Seven Suns of the Supermind

1. The Sun of Supramental Truth,—Knowledge-Power originating the supramental creation.
   Descent into the Sahasradala.

2. The Sun of Supramental Light and Will-Power, transmitting the Knowledge Power as dynamic vision and command to create, found and organise the supramental creation.
   Descent into the Ajna-chakra, the centre between the eyes.

3. The Sun of the Supramental Word, embodying the Knowledge-Power, empowered to express and arrange the supramental creation
   Descent into the Throat-Centre.

4. The Sun of supramental Love, Beauty and Bliss, releasing the Soul of the Knowledge-Power to vivify and harmonise the supramental creation.
   Descent into the Heart-Lotus

5. The Sun of Supramental Force dynamised as a power and source of life to support the supramental creation
   Descent into the navel centre

6. The Sun of Life-Radiances (Power-Rays) distributing the dynamis and pouring it into concrete formations.
   Descent into the penultimate centre

7. The Sun of supramental Substance-Energy and Form-Energy empowered to embody the supramental life and stabilise the creation.
   Descent into the Muladhara.
The Seven Centres of the Life

1. The thousand-petalled Lotus—above the head with its base on the brain. Basis or support in Life-Mind for the Supramental; initiative centre of the illumined Mind.

2. The centre between the brows in the middle of the forehead. Will, vision, inner mental formation, active and dynamic Mind.

3. The centre in the throat. Speech, external mind, all external expression and formation.

4. The heart-lotus. Externally, the emotional mind, the vital mental; in the inner heart the psychic centre.

5. The navel centre. The larger vital proper; life-force centre.

6. The centre intermediate between the navel and the Muladhara. The lower vital; it connects all the above centres with the physical.

7. The last centre or Muladhara. Material support of the vital; initiation of the physical.

All below is the subconscient physical.

NOTES ON PHYSICAL TRANSFORMATION

c. JANUARY 1927

4 mistakes—
1. Began on a mistaken or merely theoretic knowledge—about absorption from outside
2. Giving up of food is not the condition for finding the secret, it is the result of finding the secret.
3. Cessation of hunger, feeling fed, refusal of food by the body not a sign; it proceeds from the body vital, not from the body substance
4. The entire secret can be found and made effective only when the body is brought into the right condition. A process of adaptation is necessary.
5. Transition
   Continuity of consciousness, continuity of energy, continuity of Ananda, continuity of substance
   Body substance sacred; earth herself; to be mastered, adapted and transformed, not forced and martyrised

Athanatogen.
1. Pranayama
2. Gland processes
3. Absorption from outside
4. Light process
5. Physical support—transformation of ordinary food; body power of living or etheric assimilation
The attempt to transform the body through the renunciation of food has not succeeded as was expected or in the time given and for the following reasons.

1. The knowledge or idea with which it was begun was imperfect and not applicable under the present circumstances. In reality what was chiefly relied upon was a great dynamic energy and the power of the will and aspiration to bring the divine realisation into the body. These forces can do miracles under the right conditions; and now they are quite strong enough to produce miraculous results on the subjective plane, in the physical consciousness, the physical mind and the vital physical, but the most material is not yet ready. The attempt was therefore premature. In order that it should succeed, one of two things was necessary, either a right entire knowledge and process or else the divine Grace supporting a complete descent of the highest supramental Truth and a complete ascent to meet it of the supramental from below. These things should have been got first and firmly founded, for till then there can be no effective divinisation of the material body.

2. The entire giving up of food cannot be the condition of the realisation; it must be, if it is to be done, one result or circumstance of the realisation.

3 It is a mistake to think that cessation of hunger, a sensation of being fed or the refusal of food by the body is a sign that the material frame is ready for living without sustenance. Hunger and the rest come from the vital in the body. It was this bodily vital which was ready and desirous of abstaining from food, but the most material parts were not ready. But being without a voice and accustomed to obey and act only as an instrument, they gave no sign except the fading of the flesh and physical weakness.

Now this material part is most important and indispensable. It is the earth herself in the concrete. It is part of the crude stuff you have to use for building the divine physical substance and you cannot do without it. Therefore it must be respected and not forced before it is ready. It has to be mastered and transformed, but not done violence to or neglected.

4. The entire secret for which you are seeking can only be found and applied effectively when the material body is ready and
for that a process of adaptation is indispensable. The final secret, even if you find it, must remain only a theory until this adaptation is made. What you need to find out first is a secret of the transition. For you are physically in a period of transition. The period of victorious realisation comes later.

Four physical things have to be attained; stability and continuity of consciousness, stability and continuity of energy, stability and continuity of Ananda, stability and continuity of substance.

The first she has gained; it gives a certain mukti, liberation, conscious immortality, and can give great results, but not by itself the complete result aimed at.

The second is beginning to come, but as it brings you a step nearer to the completeness, it is itself also more dependent than the first on its instrument, the body. It can exist in itself, but for its completeness it must become an entirely physical and material strength, for which there should be as a tool a strong body.

The other two stabilities and especially the last are still unattained. The last is the most difficult of all; it is the greatest achievement, the one problem that really has yet to be solved and on which the terrestrial security of the others depends.

My advice to you is not to mind retracing your steps; she should take food again and build up the body again as a necessary support. At the same time as a general rule try to use the food to the best advantage by concentration upon it and upon the body’s reception of it and its right assimilation so that finally the body can maintain itself in full force and substance with a minimum quantity of stuff, a supreme quality and a maximum of assimilation. When that has been attained, the necessary adaptation will have neared completion. Advance progressively at first; rapidity will be possible afterwards. Do not mind the initial difficulties.

Remember however that the food problem is only a detail and do not exaggerate its importance. The main thing is to bring down and up the highest supramental from above and the deepest from below, to unite them and to obtain the support, sanction and constant effectuating action of what you call the divine Grace which is a descent from the Truth of the Supreme determining all from the plenitude of the Eternal. When you get these things in
their fullness, the true material miracles will be possible in their marvellous rapidity and splendour.

Equanimity, patience, steadfast faith, steadfast will, dynamic aspiration, increasing knowledge-power are the things you need in their harmonious convergence that you may fulfil and conquer.

The power of subjective realisation in the physical is there as you see more from day to day; it will become absolute. The power through the subjective on the objective is increasing and will infallibly increase still more and become perfect. The direct power on the most material plane is the one thing still obstinately resisted. Persevere, satisfy the conditions, and it will come to you like the others.
SUPREME SELF-CONTAINED

ABSOLUTE

First Absolute — Tat. The Absolute Transcendent, the Supreme, Paratpara, (containing all, limited by nothing).

Second Absolute — Sat. The supreme self-contained absolute Existence, Sachchidananda, (Ananda uniting Sat & Chit), holding in its absolute unity the dual Principle (He & She, Sa and Sâ) and the fourfold Principle, OM with its four states as one.

Third Absolute — Aditi-M [the Mother]. Aditi is the indivisible consciousness force and Ananda of the Supreme; M, its living dynamis, the supreme Love, Wisdom, Power. Adya-Shakti of the Tantra = Parabrahman

Fourth Absolute — Parameswara = Parameswari
of the Gita of the Tantra

= TAT
  = SAT
  = ADITI - M.

PARAMESWARA = PARAMESWARI

THE MANIFESTATION
THE MANIFESTATION

MISCELLANEOUS NOTATIONS

c. FEBRUARY – APRIL 1927

[1]
No power will descend tonight.
Knowledge first, power afterwards.
Telepathy perfects itself first, then tapas, then the supreme T^2.
Till then nothing else can be finally perfect.

Tonight Ananda, Drishya, Knowledge, Telepathic and Tapasic T^2.

[2]
There can be no doubt of the result. Only the time is doubtful and the full extent of the achievement. Tomorrow the entire lifting of the obstacle. Once more a free and rapid action. There is also the restoration of the first two chatusthayas. That will take place fully tonight. Nothing more tonight of an absolute character. The removal of the fragments of illness is not yet done, but it is preparing and will happen in a short time.

This is all for the time being.

[3]
April 2. 1927. Lipi
Christmas, Chittagong will be taken up.

[4]

OM anandamayi chaitanyamayi [satyamayi parame]
July 30th 1927

   Intimation. “The most material will now be conscious.”

2. A palm-tree of inordinate length growing from the bottom of the side of a well, climbing up and emerging above the earth level. All below now open (the subconscious awake). The palm-tree indicates the victory of conscious life and awakened spirit.

3. One in a cap standing and reading a letter. At first it appeared to be a vague form of M. which receded as the other grew clear, but was still felt reading over his shoulder.
   Intimation. “A former personality (alchemist?) of Kanuga still strong in his psychic and vital nature.”

4. M’s hand; starting from it a running zigzag with the letter “a” at its starting point and going towards the Shiva (linga) affecting without as yet touching it.
   I [Intimation]. The tivra Ananda—personal? “a” = beginning.
UNDATED SCRIPT, c. 1927

[1]

Take time to develop the next step. Strength in the organs, strength in the muscles. Hair, skin, flesh afterwards.

It is no use wasting time. Taking time means to do things thoroughly, prepare and accomplish.

[2]

The last possibility has been taken away from the hands of the opposing forces
The T² is now certain.

Now there is the perfect identity of the warrior and the slave in the imperfect Ishwara. There has to be the perfect identity with them of the king-sage. Then there will be the perfect Ishwara.

The body in her is the sole remaining obstacle—the most material body. It is influenced, it is not yet perfectly open and submissive.

The identity is not yet there because the strength and knowledge are not sufficiently full and they are not full because the supermind is not yet free. It will be free soon.
All is ready. It will be free from today.

[3]

More and more the opposition is furious, more and more the higher power insists. The opposition is effective in bringing three
things, bodily illness, outside opposition, lack of physical means. These three must be destroyed or there can be no finality in the work or the sadhana.
There is no certitude as yet of an absolute kind; even the relative certitude is very much veiled for the present. At any rate the ground has been cleared of much of the remnants of the intelligence. It is practically certain that much more will be done tonight, but the direction is not clear.

This will be done. First, in the third chatusthaya the entire elimination of the merely mental reason; the entire elimination of the original mind. The supramentalised form of these things in the Overmind. Second, the Vishaya and the Samadhi. In the latter, first coherence, then supramentalisation of lipi in deep samadhi, —stability and supramentalisation of drisbya, ghatana, chintana, itibasa. In the former, freedom of all the four. Rupa soon to be complete followed by the fifth vishaya. Thirdly—in fourth chatusthaya, Arogya and Ananda to be established; the other two to be carried forward. In the fifth great increase of Karma and Kama.

These things will be done progressively but with a sufficiently rapid movement. Tonight begins the completion of the third chatusthaya.

It will be complete before long. There is no doubt of it.

All this is partly the old struggle, partly the process of supramentalising the most material consciousness and its movements, partly a condition of the farther advance of the supermind transformation.

Many things have still to be done before the divine gnosis can manifest in the nature. It is the gnostic overmind in different forms
that is now current there; it has to be transformed into the true supermind gnosis. Let it be done rapidly from tonight till the 15th instant.

[3]

It is sure of fulfilment in the end but constantly delayed by the apparently chaotic complexity of the process. As yet, it is not the end. It is true that the most material couch is open and touched, though not yet transformed. But this is not sufficient; for the power that will work in it must be the true supermind, and as yet it is only the supramentalised overmind that has become at all normal in the material consciousness; the others are normal only for a time and then there is a relapse to the supramentalty and to the supramentalised mind or overmind. This is the trouble.

It will soon be overcome.

[4]

[..] has become more normal and facile, the first can now disappear. The second will remain until supermind in overmind (a still higher stage) can be perfectly established. That again will remain until gnostic overmind has changed into gnosis in overmind. The transformation will then be complete and only the transcendence of overmind and ascent into divine gnosis will be left as the last step to the perfect siddhi.

................................. supramental movement
.................................
................................. disregards all apparent disproof and adverse circumstances.

The automatic perfection of supramental overmind thought is the next siddhi indicated. It will begin with a progressive elimination of all that remains of supramentalised mind in overmind.

NOTEs ON PROPHETIC VISION, 1929

1. Some ten days before August 15th 1929, Venkataraman at soup sees himself in a vision falling from branch to branch of a tree. Half an hour afterwards, having returned from the soup to his rooms (Mudaliar’s house near treasury) for flowers to bring to the Mother, he climbs a big tree of champak, misses his hold, falls from branch to branch on to the ground and is unable to move for a few days and cannot come to the house for the 15th celebration. Prevision.

2. A lottery is arranged for the distribution among the sadhaks of articles of small value—in order to see how the forces work on different people. Before the distribution of tickets Amrita sees in vision the number 61; he gets actually the number 62. On inquiry he learned that by mistake two tickets had been distributed to one sadhak, otherwise he would have received No 61. Telepathic vision of the thing that was about to happen,—not prevision.

3. On Monday, 23rd February 1929 at soup, the Mother sees among a number of other visions the son of Madame Gaebelé with a broken arm bandaged, but attaches no importance to it. On Thursday she meets Madame Gaebelé and is told that her son broke his wrist at football on Monday and it was put in plaster before the time of the vision. At the moment she was praying earnestly that the Mother might give her help for the arm to cure. Silent communication from the mind of another awakening telepathic vision.

[1] That is the possibility that will emerge

[2] There is no failure, only an intermission

[3] no now indeed

[4] There is nothing else to be done than to be careful and vigilant
That cannot be so easily done, but it is certain that the result
will be perfect.

[5] The grandeur of the past is the seed of the greater grandeur of
the future

[6] Nothing can be done till this has been changed; it is essential
that there should be a larger movement. That is it, stand back,
stand back, stand back.

[7] This is the thing
That is the true effect. There is no certainty without the careful scrutiny of the ground.

No doubt there is some difficulty but it is filled for the present.

[8]

In the end of the long struggle there will be a movement of great rapidity that will work out the last difficulties triumphantly and leave nothing behind. That is destined.

[9]

Impossible to finish before the night — The reality is greater than the promise —

[10]

The last difficulties

Aeonic forces conquered in a brief space.

Monism entirely reconciled with personality

These are other forces than those that surround us in the silence of the mind.

[11]

This is the end of the difficulty Be calm and wait for [ . . . . . . . . . . . . ] in full

[12]

It is sure to be done.

[13]

[.....] useless—it is certain that it must come down

It is still difficult to do it in that way, work more and it will be done. That is the thing.
[14]

There is no absolute certitude as yet except in isolated movements, but there is often a dominant certitude.

[15]

It is enough for the outward life of the moment, but not for the eternity within us.... This is the truth of life, but the truth of our other-life is of a greater kind.
Part Five

Automatic Writing
“THE SCRIBBLINGS”, c. 1907

Manik

Spirits are without body—Linga sharir is not body but mind. No shape visible to mortal eyes—they are the thoughts of the spirit which are shaped so as to present a visible scene—many of the scenes are not only thoughts but actual visions—

Perhaps not real or maybe the spirit of the first wife—The second wife was probably present and was anxious to be in the photo. There may have been no room.

Bhababhusan has gone but he will return—Khoka makes much of himself but he must be a little more modest—Where has Bhababhusan put the bag—No you are very careless—What made you send him—Why not go yourself—Begin what? Bengalees are a timid race but they are very desirous of being brave—Many make attempts, but few can succeed—You do a lot of work but not properly—Because you do not see to the execution—Barin may try but he will not succeed when you cannot help him—My dear fellow, why try to hide yourself? I see no

My dear fellow, you are cowardly and wish to conceal yourself—Brave men will do the work but you must supervise—My dear fellow you will be cowardly—Because you are not selfconfident—Make an attempt next time to keep yourself present when the thing becomes a likelihood—May but it is more likely when you are present. Sudhir will be a good man for the next attempt. Prafulla has lost confidence in himself. Because he could not do it—Many will try but fail—Partly—Cowardice—Then he had someone to help—A man will not succeed if he cannot do it by himself—You will not be able—Make Sudhir do it—No but he will do what you tell him—A good many prophecies fail—

www.holybooks.com
Yes, make a good attempt—No—You will not be overborne with the small charge of the stuff—Barin makes mistakes—Be more selfreliant—

They all depend on you—If you are brave it will begin soon—My dear fellow, don’t be curious

Make attempts—By attempting again and again you will begin and then the work is sure to be speedy. No but why send B—No he will talk. Make some excuse to him when he comes back—They are not fools. Because he wanted to know why Sudhir did not go—Well he was doubtful—
YOGIC SADHAN

EDITED BY

THE UTTARA YOGI

SRIRANGAM:
SRI VANI VILAS PRESS.
1911.

Copyright Registered.

www.holybooks.com
The proper course of the Sadhan is just the opposite of the thing most people do and you have also done. People begin with the body and the prana, go on to the chitta and the manas, and finish up with the buddhi and the will. The real course is to start with the will and finish with the body. There is no need of Asana, Pranayama, Kumbhaka, Chittasuddhi, or anything else preparatory or preliminary if one starts with the will. That was what Sri Ramakrishna came to show so far as Yoga is concerned. “Do the Shakti Upasana first,” he said, “get Shakti and she will give you Sat.” Will and Shakti are the first means necessary to the Yogi. That was why he said always, “Remember you are Brahman,” and he gave that as a central message to Swami Vivekananda. You are Ishwara. If you choose, you can be shuddha, siddha and everything else, or, if you choose, you can be just the opposite. The first necessity is to believe in yourself, the second in God and the third to believe in Kali; for these things make up the world. Educate the Will first, through the Will educate the Jnanam, through the Jnanam purify the Chitta, control the Prana and calm the Manas. Through all these instruments immortalise the body. That is the real yoga, the Mahapantha, that is the true and only Tantra. The Vedanta starts with Buddhi, the Tantra with Shakti.

What the Will is you have heard. It is Shakti, it is not Vasana, it is not Cheshta. Vasana and Cheshta are the negation of will. If you have desire, that means you doubt the power of your Will. Brahman has no desire. He wills and all things happen according to his Will. If you have Cheshta, that means you doubt your Will. Only those who feel or think they are not strong, struggle and
labour to produce an effect. Brahman has no cheshta. He wills and His Will spontaneously produces its effect. But it produces it in time, space and causality. To demand a result now here and under given conditions is Ajnanam. The time, space and causality of every event and its development have been fixed ages ago by yourself and Parameswara, when the Kalpa began. It is ignorance to struggle and try to alter what you have yourself decreed. Care not about time, space or conditions, but will, and leave the result to God who is your omnipotent, omnipresent and omniscient self. You are the individual God and He is the universal God. Nothing but God exists. Ekam evadwitiyam. Therefore Will implies Samata, absence of Vasana and Cheshta. Absence of Vasana and Cheshta implies knowledge. Until you have knowledge, you can never be safe against the return of Vasana and Cheshta.

The question is how to start. The Shakti is in you. Let her work and assist her by taking the right attitude. You are the Sakshi, Anumanta, Bhokta, and Bharta. As Anumanta, give the command, as Sakshi watch her work out the result, as Bhokta enjoy the result and as Bharta help her by maintaining the Adhar. Do not ruin it by tamasic udasinata or rajasic revolt. Be sure your Will can never fail to act. You are the Jnata: receive all knowledge that presents itself to you. Adopt the attitude I have described here and apply it to every individual act of the sadhana or of life. You have nothing else to do. Kali will do the rest. Be not troubled, be not anxious, be not in haste, you have all eternity before you, why be in haste? Only do not be tamasic or idly waste your time.

II

I shall speak to-day of the Shakti or Will, since that is the foundation of Yoga. The Shakti is situated in the Sahasradala just above the crown of the head and from that seat of activity it works. Below it at the top of the brain is the higher Buddh and below that, occupying the middle level of the brain, is the reason or lower buddhi, and below that, at the bottom of the brain, is the organ of communication with the Manas. We may call this organ the understanding. Knowledge, reason and understanding are the
three parts of the brain. These functions are in the subtle body, but they are connected with the corresponding portions of the material brain.

In the chest just above the heart is the Manas, that is, the organ of sensation with its five subordinate Indriyas. Below the Manas, from the heart to midway between the heart and the navel, is the Chitta. From that point up to the navel and below it is the psychic or sukshma prana. All these are in the sukshma deha but connected at these points with the sthula deha. In the sthula deha itself two functions are situated, the physical prana or the nervous system and the annam or the material body.

Now the will is the organ of the Ishwara or living master of the body. It works through all these functions, through the Buddhi for thought and knowledge, through the Manas for sensations, through the Chitta for emotions and through the Prana for enjoyment. When it functions perfectly, working in each organ according to the capacities of the organ, then the work of the Shakti becomes perfect and infallible. But there are two causes of weakness, error and failure. First, the confusion of the organs. If the Prana interferes in sensation, emotion and thought, then a man becomes anisha, the slave of the Prana, that is to say, of the desires. If the Chitta interferes with sensation and thought, then the sensations and thoughts are falsified by the emotions and their corresponding wishes. For instance if love interferes with the Buddhi, the man becomes blind to the truth about the person he loves, he is unable to distinguish between right and wrong, kartavya and akartavya, where the person is concerned. He becomes to a greater or lesser extent the slave of the emotions, love, anger, hatred, pity, revenge etc. So, if the Manas interferes with the reason, the man mistakes his sensations for just ideas or true arguments. He judges by what he sees or hears instead of judging what he sees or hears. If again the reason, imagination, memory and logic interfere with knowledge, the man is debarred from higher knowledge and wanders in the interminable circle of probabilities and possibilities. Finally, if even the Buddhi interferes with the Will, then the man is limited by the power of his limited knowledge, instead of moving nearer to Omnipotence. In brief, if a machine or instrument is used for a
work for which it is unfit, for which it was not made or originally adapted, then it either cannot do that work at all or it does it badly; dharma-sankara is created. Now what I have described is the ordinary state of men before they gain knowledge. It is all dharma-sankara, confusion of functions, bad administration and incompetent and ignorant government. The Will, the true minister, is rendered a puppet of the lower officials who work each for his own selfish ends, interfering with and hampering each other or dishonestly playing into each other’s hands, for their own benefit and to the detriment of the Ishwara, the master. He ceases to be Ishwara, he becomes Anisha, the puppet and dupe of his servants.

Why does he allow it? Because of Ajnanam. He does not know, he does not realise what the ministers and officials and their million and one hangers-on are doing with him. What is this Ajnanam? It is inability to recognise his own true nature, position and authority. He began by being deeply interested in a small portion of his royal activity, the body. He thought “That is my kingdom.” He became the tool of his bodily functions. So with the nervous, the sensational, the emotional and the mental, he identifies himself with each of them. He forgets that he is different from them and much greater and stronger. What he must do is to resume the reins of power, to remember that he is Ishwara, the king, the master and God himself. He must on this understanding remember that he is all-powerful. He has a mighty minister, the Will. Let him support and direct the Will and the Will will introduce order into the government and compel the officials each to do obediently and perfectly his own duty. Not of course all at once. It will take time. The officials have become so much used to confused work and misgovernment that at first they will not be willing to work properly and, secondly, even when they wish, they will find it difficult. They hardly know even how to begin. For instance, when you begin to use your will, what is likely to happen? First you will try to use it through the Prana, through desire, wish, hope, or you will use it through the Chitta, with emotion, eagerness and expectation, or you will use it through the Manas using Cheshta, struggle, effort, as if you were physically wrestling with the thing you want to control; or you will use it through the Buddhi, trying to dominate the subject of your
interest by thought, by thinking “Let this be”, “Let that happen” etc. All these methods are used by Yogins to recover the power of the Will. The Hatha-yogin uses the Prana and the body, the Raja-yogin the heart, Manas and Buddhi, but the best method is none of these. Even the last of them is a second-best means and must entail struggle, failure and frequent disappointment. The Will is only perfect in its action when it works apart from all these, straight on the subject from the sahasradala, without effort, without emotion and eagerness and without desire. Each function to itself and Will is its own function. It always obeys the Ishwara but it acts in itself and by itself. It uses the rest, it must not be used by them.

It uses the Buddhi for knowledge, not for command; it uses the Manas for sensation, not for either command or knowledge; it uses the heart for emotion, not for sensation, knowledge or command; it uses the Prana for enjoyment, not for any other function; it uses the body for motion and action, not as a thing that can limit or determine either knowledge, feeling, sensation, power or enjoyment. Therefore it must keep itself apart and command all these things as a thing separate from all of them. These are merely a yantra, a machine, the Purusha is the yantri or master of the machine, the Will is the electricity or motor-power.

This is the right knowledge. How to use it I shall tell you afterwards. That is a matter of practice, not of mere instruction. The man who has dhairyam, calm steadfastness, even in a small degree, can gradually accustom himself to the mastery of his machine by the Will. But he must first know: he must know the machine, he must know the motor-power, he must know himself. The knowledge need not be perfect in order to begin, but the elementary knowledge at least he must have. That is what I am trying to give you. I am explaining to you the different parts of the machine, their nature and functions, the nature of the Will and the nature of the Ishwara.

III

The Will when it begins to act, will be hampered by the Swabhava; therefore until you are able to act on the Swabhava, you will not, should not bring your Will to bear upon life. In other
words while you are a sadhak of the Shakti marga, be a sadhak only; when you have got Siddhi of the Will, then first use the Siddhi to get perfection of the adhar, and when you have got perfection of the adhar, then use the siddha adhar for Karma, for life.

The Swabhava opposes the perfect action of the Will. Why? Because the nature of humanity is imperfect, only partly evolved, asiddha, and being in all its dharmas asiddha, the tamasic force of habit, tamasi dhriti, makes it resist any attempt to make it siddha. Humanity is evolving. Yoga is a means of carrying that evolution forward with great and victorious rapidity. But the imperfect Swabhava says, “I do not wish to be perfect, I am accustomed to imperfection and find it easy and comfortable.” First, then, the Will seizes hold of the Swabhava and removes the obstacles in the way of its own perfect development and action.

As I have said, it first gets rid of the old samskaras of impossibility, the samskara, the ajnanam that I am man, not God, limited, not illimitable, helpless, not omnipotent. The Will has first to say, “I am omnipotent, that which the Purusha commands, I can act”. For the Will is the Shakti in action, and there is only one Shakti, Kali herself, who is God manifesting as Divine Energy.

Next the Will seizes the adhar and makes it shuddha in order that the Will may itself be shuddha. I have explained that if there is confusion and disorder among the functions, then the Will cannot act omnipotently. Therefore you must first develop Jnanam and by Jnanam effect the shuddhi of the adhar. When the adhar becomes shuddha, the Will being entirely free from wrong samskaras and wrong action, is what I call shuddha. It works perfectly. Working perfectly it makes the adhar siddha, that is the adhar rids itself of all doshas, deficiencies and weaknesses and works perfectly. It becomes a perfect instrument for the Purushottama, the Purusha and Shakti to carry on their Lila.

Knowledge, therefore, jnanam is the next stage to be considered. But before I come to that, let me finish about the obstacles in the Swabhava. There are not only the wrong Samskaras and the ashuddhi of the adhar, but the general nature of things has certain tendencies or laws in it which oppose the development of the Yoga as well as certain tendencies which help the development of the
Yoga. There are three laws which oppose—the law of persistence, the law of resistance and the law of recurrence: there are three laws which assist—the law of gradual processes, the law of concentrated processes and the law of involved processes.

The law of persistence is this, that a rule, habit or tendency once established has a right to survive, a natural unwillingness to be changed or annulled. The longer it has been established, the longer it takes to root out. If a man has been yielding to the shadripus for many lives without any serious effort to dominate them or purify himself, then he cannot by mere wish or a mere rapid effort get rid of them and become pure and calm. They refuse to be so cavalierly treated. They say “You have given us rights in this adhar, and we persist”. Still more hard to deal with are those dharmas of the body which men call the laws of physical nature.

But the Will is omnipotent and if patiently, calmly and heroically exercised, will prevail. For the Will, I repeat, is—Kali herself. Therefore in the end it establishes by its action new rules, habits or tendencies which fight with and gradually overcome the old. What then happens is that the old, though put down, weakened and no longer a real part of the nature, resist eviction from the adhar. They are supported by an army of forces or spiritual beings who surround you and live upon your experiences and enjoyments. This law of resistance marks the second period of the Yoga and, unless the Will has already become siddha and the adhar shuddha, is very trying and troublesome to the sadhak. For there seems to be no end to the capacity of resistance.

Here again the Will is bound to triumph, if it is supported by faith or knowledge. Even then the evicted habits and tendencies strive continually to re-enter the system and recover their lost seats of power and enjoyment. This is called recurrence. In proportion as the Will is siddha and the Adhar shuddha, the recurrence becomes weaker and less frequent or, when it comes, less prolonged. But in an impure adhar, or with an imperfect Will, the recurrence is often as prolonged and troublesome as the resistance.

On the other hand there are the three favourable laws. When a new habit or tendency is once established, it is the law that it shall develop towards strength and perfection. So long as it is struggling
to establish itself, the Yogin may at any time become bhrashta, that is he may from error, weakness or impatience give up the struggle. That is the only fall for the Yogin. Failure, temporary defeat, is not bhramsa, so long as he refuses to give up the struggle. But once the right tendency is established, no man can destroy it, until it has enjoyed supremacy and its bhoga.

Still at first, while the Will is comparatively weak or unpractised, the progress must be slow. In proportion as the perfection of the Will brings purity of the Adhar, the progress becomes rapid. Everything in this world is done by a process; a process means a series of actions leading to a particular result by certain recognised stages. These stages may be passed through slowly or swiftly, but so long as the law of gradual processes obtains, all the stages must be successively and consciously passed through. You have so many milestones to pass; but you may pass them walking, in a carriage, in a railway train, but pass them you must. Still by the growing strength of the Will, you can replace slow process by swift process.

Then a time comes when Kali begins to transcend the ordinary human limits and becomes no longer the Shakti of a man, but the Shakti of God in man. It is then that gradual processes are replaced by concentrated processes. It is as if, instead of travelling from milestone to milestone you could leap from the first milestone to the third and so on to your journey’s end. In other words the process remains the same but some of the stages seem to be dispensed with. In reality they are passed over so lightly as to escape notice and occupy little time. Therefore it is called a concentrated or contracted process.

Lastly, when the man himself becomes God, either in a part of his actions or in the whole, then the law of concentrated processes gives place to the involved processes, when no process at all seems to be used, when the result follows the action instantaneously, inevitably and miraculously. In reality there is no miracle, the process is used but so rapidly, with such a sovereign ease, that all the stages become involved or hidden in what seems a moment’s action.

To most men it is enough, if they can reach the second stage; it is only the Avatar or the great Vibhuti who can reach the third.
Therefore do not be discouraged by any failure or delay. It is purely a question of force and purity of the Will. By purity I mean freedom from desire, from effort, from misplacement. It is best to begin by concentrating effort on the self-purification of the Will, towards which the first necessity is passivity of desire for the fruit, the second the passivity of the Chitta and the Buddhi, while the will is being applied; the third the development of self-knowledge in the use of the Will. It will be found that by this process of educating the Will, ātmānam ātmanā, purity of the adhar will also be automatically prepared and knowledge will begin to develop and act.

IV

What is knowledge? In what does it consist? We must distinguish between knowledge in itself and the means of knowledge. Again, among the means we must distinguish between the instruments and the operations performed with the instruments.

By Knowledge we mean awareness, taking a thing into active consciousness, into our Chaitanyam. But when we say, taking it into our Chaitanyam, what do we imply? Whence do we take it? The European says from outside, we say from inside, from Chaitanyam itself. In other words, all knowledge is an act of consciousness operating on something in the consciousness itself. In the first place everything we know exists in Parabrahman, that is, in our indivisible, universal self-existence. It is there, but not yet expressed, not vyakta. Then it exists in pure Chit, which is the womb of things as an idea of form, name and quality. It has name, form and quality in the Karana or Mahat, the causal, typal and ideal state of consciousness. Then it gets the possibility of change, development or modification in the Sukshma, the subtle, mental or plastic state of consciousness. Finally it gets the actual change, development, modification or evolution in the Sthula, the material or evolutionary state of consciousness. In the Karana there is no evolution, nothing ever changes, all is eternal. The Karana is Satyam. In the Sukshma all is preparation of change; it is full of imagination or anritam, therefore it is Swapna, not really false,
but not immediately applicable to the Karana or Sthula. In the Sthula all evolves. It is partial satyam developing by the turning of old satyam into anritam, which is called destruction, and the turning of new anritam into new satyam, which is called creation. In the Karana there is no creation, no birth, no death, all exists for ever—the only change is from type to type, from fulfilment to fulfilment.

Therefore to know is really to be conscious of the thing in any or all of these three states. The knowledge of the Sthula is science. The knowledge of the Sukshma is philosophy, religion and metaphysics. The knowledge of the Karana is Yoga. When a man knows the Sthula, he knows it with his senses, that is, with the Manas, he knows the Sukshma with reason or the inspired intellect, he knows the Karana with the Jnanam or spiritual realisation. Therefore complete knowledge consists of three operations, first, objective Upalabdhi or experience, secondly, intellectual statement of your understanding of the thing, thirdly, subjective Upalabdhi or spiritual experience. The scientist begins from the bottom and climbs if he can, to the top. The Yogin begins from the top and descends for perfect proof to the bottom. You are not scientists, you are sadhaks. Therefore, when you speak of knowledge you must understand the process; you realise a thing by subjective experience, Bhava, then, think about it and formulate your experience in Artha and Vak, the combination which forms thought; you verify or test your experience by physical or objective experience.

For instance you see a man. You want to know what he is, what he thinks and what he does. How does the scientist or the material man do it? He watches the man, he notes what he says, what are his expressions of speech and face, what are his actions, what sort of people he lives with, etc. All this is objective. Then he reasons from his objective experience. He says “The man says this or that, so he must think so and so or he must have such and such a character; his actions show the same, his face shows the same,” and so he goes on reasoning. If he does not get all the necessary facts, he fills them up from his imagination or from his memory, that is his experience of other men, of himself or of human life as read of in books or heard of from other people. He perceives, he observes,
contrasts, compares, deduces, infers, imagines, remembers and the composite result he calls reason, knowledge, fact. In reality he has arrived at a probability, for it is impossible for him to be sure that his conclusions are correct or anything indeed correct in his thought, except the actual observation, perceptions of his eye, ear, nose, touch, and taste. Anything beyond this the material man distrusts. Nothing is true to him except what he observes with his senses or what agrees with his sensory perceptions.

Now what does the Yogin do? He simply puts himself into relation with the thing itself. Not with its form, name or quality, but with itself. He may never have seen the form, heard the name or had experience of the quality, but still he can know the thing. Because it is the thing itself and it is in himself and one with himself, that is in the Mahakarana in a man. There all meet the Atman and are so entirely one with the Atman that by merely being in contact with it, I can know everything about it. Few Yogins reach that state. But all the same, even in the Karana I can put myself in relation with the thing and know it by Bhava. I put myself, my soul, into relation with the soul of the man I study or the thing I study; Prajna in me becomes one with the Prajna in him or it. How do I do this? Simply by becoming passive and facing him or it in my Buddhi. If my Buddhi is quite pure or fairly purified, if my Manas is shanta, then I get the truth about him. I get it by Bhava, by spiritual or subjective realisation.

Then I have to make the thing I have got clear and precise. To do that I must state it intellectually to my mind, that is, I must think about it. I have these ideas I am telling you in myself as unexpressed knowledge; they shape themselves in words, Vak, and take on a precise meaning, Artha. That is thought. Most people think vaguely, half expressing the thing in an imperfect Vak and a partial Artha. The Yogin must not do that. His thoughts must express themselves in clear and perfect sentences. He may know a thing without thinking it out, but if he thinks, he must think clearly and perfectly.

The Yogin reasons when necessary, but not like the man of science. He sees the thing with his prophetic power interpreting the truth into thought; the pratyaksha gives him the Artha, the
inspiration gives him the Vak, the intuition gives him the right conclusion about it, the right siddhanta, the Viveka guards him from error. Behold the truth by these four simple operations perfectly thought out. If he has to argue, then the intuitions give him the right arguments. He has not to proceed painfully from one syllogism to another as the logician does.

Finally, he verifies his knowledge by the facts of the objective world. He has seen the truth about the man by merely looking at him or at the idea of him; he has thought it out clearly and now he compares his idea with the man’s action, speech etc. Not to test his truth; for he knows that a man’s action, speech etc. only partially express the man and mislead the student; but in order to see how the truth he knows from the Karana is being worked out in the Sthula. He trusts the man’s objective life only so far as it is in agreement with the deeper truth he has gained by Yoga.

You see the immense difference. The only difficulty is that you have been accustomed to use the senses and the reason to the subordination and almost to the exclusion of the higher faculties. Therefore you find it difficult to make the higher faculties active.

If only you could start from the beginning, with the Bhava, the Atmajnana, how easy it would be! That will yet happen. But first, you have to get rid of the lower Buddhi, of the Indriyas in the manas, and awaken the activity of the higher faculties. They will see for you, hear for you, as well as think for you.

First, then, get your sanskaras right. Understand intellectually what I have told you and will yet tell you. Then by use of the Will, keep the reason, imagination, memory, thought, sensations sufficiently quiet for the higher Buddhi to know itself as separate and different from these lower qualities. As the higher separates itself and becomes more and more active, the lower, already discouraged, will become less and less active and finally trouble you no more.

Therefore Will first, then by Will, by Shakti, the Jnanam. First Kali, then Surya. I shall explain the various faculties when I have finished with the rest of the system.
If men were satisfied with indulging in reason, memory and imagination, the purification of the Buddhi and the development of the higher faculties would be an easy matter. But there is another means of thought which they habitually indulge in and that is Manas. The Manas is a receptive organ; it receives the images expressed on the eye, the ear etc., and turns them into what the Europeans call the percepts, that is, things perceived. Besides, it receives the ideas, images etc., sent down from the Vijnana into the Chitta and passes them on to the latter organ. In this passage these things become what are called concepts, that is, things conceived or thought of. For instance, when the mind sees the image of a book and says “A book”, it has hold of a percept the name of which it conceives; that is sensational thought. When it says “A book contains language” that is a remoter concept, intellectual thought. One merely puts things sensed into words, the other puts things thought into words. Percept and concept together make what is called understanding. Reason, according to the European idea, merely arranges percepts and concepts and draws from this arrangement fresh and more elaborate concepts. Many believe that concepts are merely percepts put together and converted into what is called thought. According to this idea, all thought is merely the arrangement of sensation in the terms of language. Even when I imagine an angel, I merely put a human figure and the wings of a bird together and give the combination a name, angel. Even when I talk of abstract qualities, for example, virtue, courage etc., I am not thinking of anything beyond sensation, but merely a classification of virtuous and courageous sensations and actions put together and labelled with the name virtue or courage.

All these ideas are correct so far as the Manas or understanding is concerned. The Manas is an organ of sensation, not of thought. It catches thoughts on their way from the Buddhi to the Chitta, but in catching them it turns them into the stuff of sensations, as described above.

It regards them from the point of view of sensations. Animals think with their Manas and animals are not able to form ideas
that do not relate themselves to some image, form, sound, smell, touch, taste, etc. They are bound by their sensations. That is why in animals the Buddhi is dormant; so far as it acts, it acts behind the veil.

But man can become aware of things which the senses cannot grasp, buddhigrāhyam atīndriyam. The proof of that you can get daily, when the Yogic power is developed. This single fact that man can see with his Buddhi the truth about a thing he has never seen or known before, is enough to destroy the materialistic idea of thought.

That idea is only true of the Manas. The Manas responds to the senses and is always forming percepts and concepts about the sensations it receives. These ideas it sometimes gets from the outside world, sometimes from the passive memory in the Chitta, sometimes from the Buddhi. But it tries to impose them all on the Buddhi. It tests everything which it does not take for granted by reference to the senses. “I saw that”, “I heard that”, therefore it is true, that is the reasoning of the Manas. That is why people who have a poorly developed Buddhi, attach so much importance to what they have seen or read. “I have seen it in print” says the just literate man, and he thinks he has closed the argument.

What are we to do with the Manas? Get it to be still, says the Yogin. While it is busy, knowledge is impossible. You can get only fragments of knowledge. That is true and the quiet mind is no doubt essential to the Yogin. But what of the senses? Concepts in the Manas you may get rid of, but what are you to do with the percepts? You cannot stop seeing, hearing etc., except when you are in Samadhi. That is why the Vedantin attaches so much importance to samadhi. It is the only condition in which he is safe from the persistent siege of the percepts of the senses.

But if you can only exercise knowledge when you are in Samadhi, then you will have to become an ascetic or recluse, a man who gives up life or thought. That is a necessity which cuts the unity of God’s world into two and makes an unnatural division in what should be indivisible. The Tantric knows that this is not necessary, that Samadhi is a great instrument, but not the only instrument. He so arranges his antahkarana that he can know when he is walking,
talking, acting, sleeping, whatever he is doing. How? By not only stilling the conceptual activity of the Manas but by transferring to the Buddhi its perceptual activity.

In other words he sees, hears etc., not with the senses in the manas, but with the Indriya in the Buddhi. You will find what a difference this makes. Not only do you see much more perfectly, minutely, accurately than before, but you are able to appreciate colours, forms, sounds etc., in a way you never did before. And besides you are able to catch the soul, the Guna, the essential quality and emotion of a thing, the moment you are aware of it. This is part of what the Yoga calls Prakamya, the absolute and sovereign activity of the Indriya.

Therefore when the Yoga is perfect, you will not be troubled by the Manas. It will cease to perceive. It will be merely a passage, a channel for things from the Buddhi to the Chitta. There are many ways of bringing this about, but most of them suffer from this defect, that you get the thinking part of the Manas still, but the perceiving part retains its inferior and hampering activity. The best way is to use the Will simultaneously for awaking the Jnanam and for stilling the Manas. This method has two advantages. First, you do not, as in the ordinary method, have to make your mind a blank. That is a powerful but very difficult and trying discipline or Tapasya. You simply replace by degrees the activity of the lower reason by the activity of the higher thought, the activity of the mind by the activity of the same organ and the sense-perceptions by the activity of the Prakamya. This process is less painful and more easy. Secondly, you cannot stop perceiving so long as you are not in Sushupti, you only stop thinking. So you cannot make your mind blank. Unless you wake the Jnanam first, how are you going to get rid of this intrusive element? The Prakamya must be there already active before the ordinary perceptions can stop work.

This then is the third operation of the Tantric method. You develop the Will, you use the Will to awaken the Jnanam, you use the Will to still the mind and the lower Buddhi and you use the Jnanam to replace them.
I come next to Chitta. There are two layers in the Chitta, one for the emotions, the other for passive memory. In the lower layer of the Chitta, the impressions of all things seen, thought, sensed, felt are recorded and remain until the Jiva leaves this body. Even afterwards all these impressions are taken up with the Sukshma body and go with the Jiva into the other worlds. When he is born again, they are brought with him as latent samskaras in the Muladhara; that is why people do not remember their past births, but can get back the memory by awakening the Kundalini in the Muladhara. These impressions are latent in the Chitta until the active memory in the Buddhi calls for them. Those which are continually brought to the Buddhi have a habit of recurring even when not wanted, habitual thoughts, ideas, sentiments, opinions etc., which are the Yogin’s chief trouble until the Manas in which they occur becomes quiet. The second and the upper layer is that of emotion. The emotions are the acts of Will sent down into the Chitta and there assuming the form of impulses. There are three divisions, thought-impulses, impulses of feeling, and impulses of action. The first are called by various names, instincts, inspirations, insights, intuitions etc. They are really messages sent down by the Jiva from the Sahasradala into the Chitta, they pass unobserved through the Buddhi, lodge in the Chitta and, whenever excited by any contact external or internal, start up suddenly and strike the Buddhi with the same force as the real inspirations etc., which come down direct from the Vijnana to the Buddhi. But they come up coloured by emotions, distorted by associations and memories in the Chitta, perverted by the imagination which brings them up. Much of what is called faith, Bhakti, genius, poetic inspiration etc., comes from this source. It is useful to the ordinary man, all important to the animal, but a hindrance to the Yogin.

The impulses of feeling are what are ordinarily called emotions. The emotions are of two kinds, natural or eternal, artificial or Vikaras. Love is natural, it proceeds from Jnanam and tends to endure in the evolution; hatred is a Vikara from love, a distortion or reaction caused by Ajnanam. So courage is eternal, fear is Vikara;
compassion is eternal, ghrina or weak pity, repulsion, disgust etc., are Vikaras. Those which are natural and eternal, love, courage, pity, truth, noble aspirations, are Dharma; the others are Adharma. But this is from the eternal standpoint and has nothing to do with Samajic or Laukic or temporary Dharma or Adharma. Moreover, Adharma is often necessary as a passage or preparation for passing from an undeveloped to a developed, a lower to a higher Dharma. The Yogin has to get rid of Vikaras, but not of Sanatana Dharmas.

The third kind of impulse is the impulse to action. Its presence in the Chitta is a temporary arrangement due to the rajasic development of the human being. The asuddha rajasic man cannot easily be stirred into action, except through two forces, desire or emotion. Love, hatred, ambition, rage etc., must stir in him or he cannot act, or acts feebly. He cannot understand shuddha pravritti, action without desire and independent of emotion. Emotion should only give a colour to the man’s swabhava or temperament. He should be habitually full of feelings of love, courage, honour, true ambition, self-reliance etc., but he should not act from any individual impulse of however noble a character. He should act in obedience to the impulse from the Will in direct communication with the Purusha in the Vijnana, understanding with the Buddhi why the Will acts in that particular way and colouring the act with the emotion appropriate to his Swabhava. But neither the Buddhi nor the emotion should directly interfere with or try to determine his action. The Buddhi is for thought and the Chitta for emotion. Neither of them have anything to do with action in the shuddha state. The intellectual Asura determines his actions by his reason or his ideal, the emotional Asura by his feelings. But the shuddha determines them by the higher inspiration proceeding from the divine existence in the Vijnana. That is what people often call the Adesha. Only the shuddha can safely rely on having this kind of Adesha, the asuddha Yogin often mistakes his own ideas, imaginations, emotions or even desires for the Adesha.

Therefore what the Yogin must aim at, is to get rid of the activity of his lower Chitta or the old impressions by stilling the Manas as described in my last lecture; get rid of his instinctive thought or thought-impulses by the same means; get rid of the
habit of acting on his emotions by allowing the will to silence his impulses and purify his emotions. He should prohibit and inhibit by the Will all action or speech that starts blindly from the passions or emotions surging in his heart. The emotions will then become quiet and must be habituated to come as a sort of wave falling into a sea, instead of surging furiously into action. These quiet waves which are satisfied with existing and do not demand satisfaction in action or seek to dominate the life or the ideas, are the purified emotions. Those which rise upward into the Buddhi and try to shape the thought or opinion, those which move outward into speech or action, are asuddha emotions. What I mean is that the emotions in the Chitta are for enjoyment only; the action must be dominated by a higher principle.

There again it is the Will that must purify, govern and renew the heart. Only, it has the best chance of doing it if the knowledge has first become active and the mind is still. A still mind means a heart easily purified.

VII

I come next to Prana, the nervous or vital element in man which is centralised below the Manas and Chitta in the subtle body and connected with the navel in the Sthula Deha. Here I must distinguish between the Sukshma Prana and the Sthula Prana, the former moving in the nervous system of the subtle body as described in the Yogic books, the latter in the nervous system of the gross body. The two are closely connected and almost always act upon each other. The prana forms the link between the physical and the mental man. I must here warn you against stumbling into the error of those who try to harmonise Yogic Science with the physical science of the Europeans and search for the Yogic Nadis and Chakras in the physical body. You will not find them there. There are certain centres in the physical nervous system with which the Chakras correspond, otherwise Hathayoga would be impossible. But the Chakras are not these centres. The Europeans are masters in their own province of knowledge and there you need not hesitate to learn from them, but for God’s sake do not subject your higher
knowledge to their lower; you will only create a most horrible confusion. Develop your higher knowledge first, then study their sciences and the latter will at once fall into their place.

It is with the Sukshma Prana that I am principally concerned; for the Sthula Prana belongs to the Annam rather than to the Antahkarana and I will speak of it in connection with the Annam. The Sukshma Prana is the seat of desire and its purification is of the utmost importance to the Yogi. Until you have got rid of desire, you have accomplished nothing permanent. When you have got rid of desire, you are sure of everything else. That is why the Gita says “Get rid of desire first”. Only until you have got knowledge and can learn to use your will to still the mind and purify the emotions, you cannot utterly get rid of desire. You may drive it out by Samyama, you may hold it down by Nigraha but eventually it is of no use, for it will return. “Prakritim yanti bhutani nigrahah kim karishyati.” Creatures follow after nature; what is the use of coercion? That is to say, it has a temporary result and the coerced desires come back ravening and more furious than before. That was what Christ meant by the parable of the devil, the unclean spirit who is driven out of a man only to return with seven spirits worse than himself. For it is the nature of things, the unalterable nature of things, that unpurified emotion must clamour after desire, an unstilled Manas give it harbourage whenever it returns, an unilluminated Buddhi contain the seed of it ready to sprout up at the first opportunity. Therefore unless the whole Antahkarana is purified, unless you get a new heart and a new mind, desire cannot be got rid of; it returns or it remains. When however an illuminated understanding lighting up the action of a strengthened Will and supported by a pure heart, casts desire into the Sukshma Prana and attacks it there in its native place, it can be utterly destroyed. When you have a visuddha Buddhi you will be able to distinguish these various organs and locate all your mental activities. Desire can then be isolated in the Prana and the heart and mind kept pure of its insistent inroads. For desire is only effective when it can get hold of the Chitta and Buddhi, generating Vikaras of emotion and perversions of knowledge which give it strength to impose itself on the Will and so influence internal and external action. It is most powerful in the higher kind of human
being when it masks itself as a principle or ideal or as a justifiable emotion.

Remember moreover that all desires have to be got rid of, those which are called good, as well as those which are called bad. Some people will tell you, keep the good desires and drive out the bad. Do not listen to that specious piece of ignorance. You can use the good desires to drive out the bad on condition that immediately after you drive out the good also by the one desire of Mumukshutwa, liberation and union with God. And even that last desire finally you must renounce and give yourself up wholly to God’s will, even in that last and greatest matter, becoming utterly desireless, nishkâma nihspriha. Otherwise you will find yourself travelling in a vicious circle. For if you keep desire at all, he is such a born traitor that he will eventually open the door to your enemies. When the unclean spirit returned to his house, he found it swept and garnished, that is, purified of bad thoughts and adorned with good desires, and immediately he got in and made the last state of that man worse than his first. So get rid of all desires utterly, good, bad and indifferent. Get beyond virtue as well as beyond vice. Be satisfied with no bondage even though the fetters be of pure gold. Admit no guide or master but God, even though they be gods or angels who claim your homage.

Desire is composed of three elements, attachment or Asakti, longing or Kamana, and preference or Ragadwesha. Get rid of attachment first. Use your will and purified Antahkarana to throw out that clinging and insistence on things, which says “I must have that, I cannot do without that,” and returns on the idea of it, even when it is persistently denied. When the emotions are quiet, this Asakti will of itself die away, but for a time it will rage a great deal and try to get the emotions active again. Apply the Will steadily and patiently and do not get disturbed by failure; for desire is a terrible thing, as difficult to get rid of as a leech. It is indeed the daughter of the horse-leech crying “Give, give.” Do not violently silence the cry; ignore it and use your Will to get rid of the clamourer. When Asakti becomes weak, Kamana loses nine tenths of its force and you can easily throw it off. Still for some time, out of sheer habit, the longing for certain things will come, not in the heart or Buddhi, but in the

www.holybooks.com
Prana; only if Asakti is gone, the refusal of the thing craved will not leave behind it a permanent grief or continual hunger. There will only be temporary disturbance of the peace of the heart. When you have got rid of the Kamana, even then Raga may remain, and if Raga is there, Dwesha is sure to come in. You will not ask or crave for anything; for Kamana is gone; but when some things come, you will not like them; when other things come, you will feel glad and exultant. You will not rebel or cling to what you have, but you will not like the coming of the evil, you will not like the loss of your joy, even though you say “Very good” and submit. Get rid of that Raga and Dwesha and have perfect Samata.

When you have perfect Samata, then either you will have perfect Shanti, divine peace, or else perfect or Shuddha Bhoga, divine enjoyment. Shanti is the negative Ananda and those have it who rest in the Nirguna Brahman. Shuddha Bhoga is the positive Ananda and those have it who rest in the Trigunatita Ananta Brahman. You can have both and it is best to have both. God enjoys the world with Shuddha Bhoga based on the perfect Shanti. Most people cannot imagine Bhoga without Kama, enjoyment without desire. It is a foolish notion, none the less foolish because it is natural and almost universal. It is Ajnanam, a fundamental part of ignorance. Enjoyment does not really begin until you get rid of desire. That which you get as the result of satisfied desire is troubled, unsafe, feverish, or limited, but Shuddha Bhoga is calm, self-possessed, victorious, unlimited, without satiety and Vairagya, immortally blissful. It is in a word, not Harsha, not Sukha, but Ananda. It is Amrita, it is divinity and immortality, it is becoming of one nature with God. The soul has then no kama, but it has pure lipsa, an infinite readiness to take and enjoy whatever God gives it. Grief, pain, disgrace, everything that is to rajasic men a torture, changes then to bliss. Even if such a soul were to be cast into hell, it would not feel hell, but heaven. It would not only say with the Bhakta “This is from the beloved” but with the perfect Jnani “This is the Beloved; this is the Anandam Brahman: this is the Kantam, the Shivam, Shubham, Sundaram.”

I need not repeat the process by which this purification is effected. I have indicated it sufficiently. This Tantric process is the
same throughout, the reliance on the Shakti, the divine Will working in the Adhar, without any effort on the part of the Purusha, who remains Akarta throughout the sadhana, but still Ishwara, the source of the command and the sanction, the ruler dispossessed by his subjects and gradually recovering control of his rebellious and disordered kingdom.

VIII

There remains the Sthula, the gross part of man which is composed of the Sthula Prana or physical nervous system and the annam or body in which the prana operates. The prana is the principle of life,—death is brought about by the dissolution of the tie between the sukshma deha and the sthula deha. That tie is the prana. The sukshma deha takes the prana into itself and departs; the little that is left in the gross body is of the nature of apana with a tendency to that species of dissolution which we call corruption. The prana part of it, which can alone hold the body together, evaporates and the apana leads to swift disintegration. In some animals, however, the prana is so abundant that the body shows signs of life even after the sukshma deha has departed.

I have been dealing throughout with the purification of the sukshma part of man, the Antahkarana or mind, —the subject of the body is a little foreign to my purpose. Nevertheless a few words are necessary. The principle upon which this Yoga I am explaining to you stands, is that the gross body is merely the shadow or creation of the subtle. Body is a mould into which mind pours itself, but the mould itself has been prepared by the mind and can be changed by the mind. A mind purified, liberated and perfected (siddha) can do whatever it likes with the body. It may leave it as it is, allowing the past karma to do its will with the physical part in the form of disease, suffering, misfortune and death, without the mind being in the least affected. All that is impurity and bondage, which is the physical translation and result of mental impurity and bondage. With the cessation of the cause, the effect ceases; but not at once. It is again like the steam and the locomotive. The habits, the results created by past lives, are expelled from the mind and precipitated...
entirely into the body. You may allow them to work themselves out there, many do that. On the other hand, you may pursue them into the body and drive them out from there as well. In that case you get the Kayashuddhi and the Kayasiddhi. They are usually sought after by the Hathayogic or Rajayogic processes, but these are not necessary. It is even better and certainly much easier and surer to follow the process I have been indicating.

The very fact of having a purified mind makes for purity of the body, a liberated mind for liberation of the body, a perfected mind for perfection of the body, and to a certain extent as you go on with the yoga in the Antahkarana, the body will automatically begin to respond to the new influences. But you should not consciously meddle with the body until you have finished with the mind. Let nature do its work. Detach yourself as much as possible from the body, think of it as a mere case, leave it to the care of God and His Shakti. Many sadhaks are frightened by illness in the course of the Yoga. You need not be frightened, for you have put yourself in God's hands and He will see to it. It will come to you only as a part of the necessary process for purification of the body, work itself out, fade and return no more. Other disturbances of the body will come which are incidental to the turning of an unfit physical adhar into a fit one. Profound alterations are necessary in your brain-cells, your nervous system, your digestive and secretive processes and they cannot be effected without some physical disturbance, but it will never be more than is necessary for the process. Do no violence of any kind to the body; if you use physical remedies, let them be of the simplest and purest kind; above all dismiss anxiety and fear. You cannot care more for yourself than God cares for you. Only your care is likely to be ignorant and unwise; His is with knowledge and uses the right means to the right end.

Impurities in the body show themselves chiefly as disease, as pain, as the discomfort of heat and cold, as the necessity of the excretive processes. The first sign of Kayashuddhi is the disappearance of all tendency to disease; the second is liberation from the dwandwa of heat and cold, which will either go altogether or change to pleasurable sensations often marked by electrical phenomena; and the third, the diminution or disappearance of excretive
activity. Pain also can be entirely eliminated from the body, but even before the reaction called pain is got rid of, or even without its being got rid of, the discomfort of pain can be removed and replaced by a sort of bodily Ananda. Finally, the craving of hunger and thirst disappears from the prana to which it belongs and the dependence on food diminishes or ceases. The perfection of all this is the basis of Kayasiddhi. But perfect Kayasiddhi includes other developments such as the siddhis of Mahima, Laghima, Anima and the invulnerability and incorruptibility of the body,—powers hitherto attained in the Kaliyuga only by very advanced Siddhas. They depend primarily on the replacement of the ordinary fivefold processes of prana, apana, vyana, samana and udana by the single simplified action of the original or elemental force of prana, the infinite vital energy surcharged with electricity, vaidyutam.

All these are important elements of Tantric Yoga, but I have mentioned them only cursorily because they are foreign to my purpose. They can all be developed if the mental siddhi is perfected and it is on this perfection that I wish you to concentrate your energy and attention. When you get that, you get everything. The centres of man’s activity, at present, are the buddhi, the heart and the manas, and the body, though extremely important, is a dependent and subordinate function. It has not to be despised on that account, but most people give it an undue importance. When the Jiva is Ishwara of his mind, his body falls into its proper place and instead of interfering and often domineering over the mind and will, it obeys and takes its stamp from them. The Europeans are obsessed with the idea of the physical as the master of the mental. I would have you hold fast to the opposite standpoint and always remember that for the body to impose its conditions on the mind is an abnormal state of man’s being, which has to be got rid of; it is the mind that must command, condition and modify the body.

IX
CONCLUSION

I have finished what I had to say. I will only add a word in conclusion. You must not think that what I have given you, is all
the knowledge you need about yourself or about the Yoga. On the contrary, these are only certain indications necessary at a particular stage; they are chiefly important for purification, which is the first part of the Yoga. After the shuddhi is complete one has to perfect the mukti, to get liberation, a thing easy after shuddhi, impossible before it. By mukti I do not mean laya, which is a thing not to be pursued or desired, but waited for whenever God wills, but liberation from ignorance, Ahankara and all dualities. With the progress of the purification, there will be a natural tendency towards liberation and the farther stages of yoga, bhukti and siddhi, liberated enjoyment and perfection. As you go forward you will have to change your attitude, not radically but in certain important points. That, however, I will not meddle with. It is well to do one thing at a time.

In all that I have written, I have taken one standpoint to which many of you have not been accustomed. If you regard Vairagyam as the beginning of all wisdom, you will not be satisfied with me. Vairagyam is to me merely a useful temporary state of mind which God uses to enforce rejection of that to which the old samskaras cling too obstinately to be unseated from it by mere abhyasa. Jnanam is essential to shuddhi and mukti; but Jnanam must be assisted either by abhyasa or by vairagya until the mind is still and lets knowledge do its own work. As soon as the mind is still and not susceptible to resuscitation of its old energies from outside, the Jnanam develops, the Shakti pursues its task unhindered; there is then no sadhan for you, only a progressive siddhi without any deliberately adopted method, increasing by the mere easy and natural process of Nature as a man breathes or sees or walks. All necessity for either abhyasa or vairagya ceases. Attachment to vairagya is as harmful as attachment to lobha itself.

Again if you think with the Buddhists that all life is a misery and extinction of some kind the highest good, or if you think with the Mayavadin that we came into this world with no other object but to get out of it again as soon as possible, like the famous general whose greatest military exploit was to march up a hill in order to march back again, you had better pass me by. I am a Tantric. I regard the world as born of Ananda and living by
Ananda, wheeling from Ananda to Ananda. Ananda and Shakti, these are the two real terms of existence. Sorrow and weakness are vikaras born of ajnanam, of the forgetfulness of the high and true self. These are not universal or eternal things, but local and temporary, local mainly of this earth, temporary in the brief periods of the Kali yuga. Our business is to bring down heaven on earth for ourselves and mankind, to eliminate sorrow and weakness from the little corners of existence and time, where they are allowed to exist. I do not give any assent to the gloomy doctrine which preaches a world of sorrow and inaction and withdrawal from it as the sole condition of bliss and freedom, which thinks, contrary to all reason and knowledge, that God in himself is blessed, but God in manifestation accursed. I will not admit that the Brahman is a fool or a drunkard dreaming bad dreams, self-hypnotised into miserable illusions. I do not find that teaching in the Veda; it does not agree with my realisations which are of the actuality of unalterable bliss and strength and knowledge in the midst of desireless phenomenal action. I am of the mind of Sri Krishna in the Mahabharata when he says, “Some preach action in this world and some preach inaction; but as for those who preach inaction, I am not of the opinion of those weaklings.” Na me matam tasya durbalasya.

But the action he holds up as an example, is the action of the great Gods, even as Goethe speaks of the action of the great natural forces, disinterested, unwearying, self-poised in bliss, not inert with the tamas, not fretful with the rajas, not limited even by the sattwic ahankara—action made one in difference with the Purushottama, my being in His being, my shakti only a particular action of His infinite shakti, of Kali. I am not ignorant, I am not bound, I am not sorrowful: I only play at being ignorant, I only pretend to be bound; like an actor or like an audience I only take the rasa of sorrow. I can throw it off when I please. Who calls me degraded and sinful, a worm crawling upon the earth among other worms? I am Brahman, I am He; sin cannot touch me. Who calls me miserable? I am God, all blissful. Who calls me weak? I am one with the Omnipotent. He, being One, has chosen to be Many. He, being infinite, localises himself in many centres and in each centre He is still infinite. That is the mystery of existence, the uttamam
rahasyam, God's great, wonderful and blissful secret, a secret logic rejects, but knowledge grasps at, a knowledge not to be argued out but realised, but proved by experience, by the purified, liberated, all-enjoying, all-perfect soul.
EDITOR’S EPILOGUE

A few words seem necessary in conclusion. For it is as well to guard against certain misconceptions which may arise from the brevity of the writer and his omission of some important points considered by him, no doubt, to be, however important, yet outside his scope.

The prohibition of cheshta in the ideal use of the will does not imply the renunciation of Karma. The cheshta referred to is internal, not external, arambha, not karma. The distinction is that made by Sri Krishna in the Gita when he holds up the ideal of action with renunciation of all arambhas, –sarvārambhān parityajya. We are to do actions with the body, mind, buddhi, senses, each doing its own separated work in its absolute purified simplicity, kevalair, without any desire, expectation or straining in the will after either action or its success. The sadhak should abstain from applying his method to important actions in life until the higher purified will is to some extent trained, and even then it will be best for him to apply it to things of smaller moment first, then to those of greater moment. During the sadhana subjective progress and superfluous action small or great should be his main fields for test and training.

Secondly, it must not be supposed that the treatment in these short lectures is intended to be full or exhaustive or even that in those points which it handles at the greatest length all has been said that the sadhak needs to know. On the contrary, only a few main ideas have been broadly struck out which may be useful to the beginner. The more advanced will find that they have rapidly outgrown the utility of these hints and that they have to be greatly enlarged on and modified before the knowledge at which they point can be considered full and satisfactory.

Finally, the aim of the particular path of Yoga indicated is not the assertion of the individual will, but surrender of the individual will, its absolute, unreserved and ungrudging surrender into the direction and control of the Infinite Being. The training of the system or adhar prescribed has for its purpose, first, the subjugation of the clamorous desires and impulses, the stubborn pride and egoism, the vain self-sufficient reason and imagination.
of the unregenerate man so that they may not interfere with the completeness of the surrender, secondly, the possession of a strong, mighty and effective will to offer as a yajna to the Most High and not one that is weak, distracted, ignorant and diffident. The Karma of the Siddha Yogi must be like that of the sun and stars, the avalanche and the cyclone, the breeze, moon or flowers, fire and the dust of the earth, either calm and luminous or mighty and violent or gentle, sweet and useful, either lofty or humble at the will of the One Supreme Shakti, impelled and used by Her entirely, and, whatever its outward appearance, always working on a basis of absolute peace, self-surrender and self-knowledge.
AUTOMATIC WRITINGS, c. 1914 (FIRST SET)

[1]

Nothing is new in the world—What do you mean by new—New, in a sort of way, in relation to what is expressed within your knowledge—Let it go—All is well—That is too rigid a way of putting it—Why—Of all—That is a delicate question—I don’t think I shall—You settle that yourselves—What of him? To you? What is he to you? Why does the Trinity need Abdul Baha—Need? then how can you act—

Too much pliability to the infinite. He is too much in contact with past worlds of beings who seek to fulfil themselves in him and prevent the final formation of certain things which would otherwise take a shape powerful for action.—That is good in the world of thought, but not, as it is now, for action. These three things in their principles, in that which brings them about, is good; but they have to find that & arrange themselves in it before they can be effective—Their own—It is difficult to say in words—But as they are, they are things that represent some perfection, are a preparation, without them as a stage the perfection could not be reached, but they must not rest too long in the stage of preparation—I don’t know—There are many excellent things in the world—

You have not to arrange—Let it arrange itself under a higher impulsion—Not always—Speaking of precise defects interferes with the balance; it gives a tendency to exaggerate either the defect or its opposite—It is an attitude of the soul, the reason and the heart that is needed, a thing general not precise—People insist too much on particularities, on that which can be defined. But these things are the result of something general & not easily definable, a thing to be felt & seen rather than thought & expressed—

She is too balanced on one side—A gentle disbalancing would
be good—She has created a balance firm & good, but depending too much on an unconscious restraint which limits the development of her capacities

[2]

Abd-ul-Baha, let him disappear then you will see the connection—He has got rid of Maurya or rather Maurya has got rid of himself—As Maurya—Yes, but at present powerless—He has dissolved his means of action—Not in this world. He is there, but by himself he is [ ] less free, less able to impress himself powerfully on the material world. Yes, spiritually—There is the same difficulty, but less concentrated. As with Abdul Baha. The choice is given always. Why question about such weak forces—He is divided from you by his weakness, not as the others by their strength—If they have an immediate destiny—Who?—They are always there, it is in the material world you should seek. They are the men of the future, not of the present—Yes, or have not found themselves. Why are you here otherwise? That is a question you can answer yourselves. Dissolve him if you will, leave him if you will not—There is nothing else to be done with him—If he is to be anything, he must first dissolve—No, the constitution of his inner being must be entirely changed first, but that would mean a great disintegration first & to begin with the loss of his evil power—What force?—Ah yes; it will be done at the right time, in this body or otherwise. Each man follows a path that leads him to the goal; only some follow it through disastrous or apparently disastrous revolutions and even have to begin again—He is good as an examiner of souls—That is the part of the devil in certain systems. He knows himself—Ah, ask the prophets—What?—I suppose you have had relations—Then? One of those who prepare, but are not prepared—Oh, let him do his own work, he does it well. Do not try to give men more part than the Divine Being has given them—That would do him harm, to try to make him more than himself—Friendship is blind—Love, but do not govern your actions by a partial affection—I was going

1 MS more

www.holybooks.com
to say what you have said—She is a great soul always with you. He was necessary to her force. Yes, in certain limits—In another sense than the Theosophist, she would have to be dissolved to be useful otherwise than she is I don’t mean physically—Everything is possible, but all is not intended—No, help her by your thought & let the result be what it will. You come back to the action—Yes, but the Review is only a means; its success depends on what I told you at the beginning. In your case, the mechanical forces of matter are nothing; it is the inner powers that must work & fulfil. You have the light that is merely light, but where is the light that is power—Knock at the door that is still shut. You have said, personalise the Infinite. The Infinite as infinite does nothing, it is—All form & action are a choice in the Infinite. Yes, mount there. By equilibrium it is possible to mount. Reject nothing essential in yourself; only transform or rather allow to be transform[ed]—No—There are reasons why I will not—It is a consciousness that formulates itself

What is impersonal? All is personal, yet impersonal. Everywhere—Not even that. I can, but I do not. No, surely not—That is different, from above. It is difficult to conduct this writing if one descends into a mixture of forces. That is why the writing is so often stupid—Not in the same way. It is not that I despise the physical world or physical means—Do that in your physical body. Yes—try to have it as far as possible... I am not like you in a physical body. I shall take it at the proper time. Thousands of times. Do not ask that; it goes too deep. It means that there are things for which neither you nor I are ready.

[3]

July, August, September—Yes—All goes well as it is—No reproach an affirmation—So it seems—You are doing or it is being done? In some directions—Not balanced—Let the Power work—don’t quarrel with it. When there is want of balance, it means that both sides are wrongly arranged with regard to each other.

Many begin to be calm—None yet avail for action—What matters
whence comes the truth — That let the recipient judge — The work — 
The work that is to be, not that which men imagine — Remove all 
preconceptions — No — I am nobody — When I write, I am only a 
word — It depends on what is active —

[4]

My dear friend,

It is quite impossible to tell you how glad I am to come into 
communication with you again. After so many years of separation, 
for old friends to be even partially united is a great happiness. If you 
will let me pour out my sentiments, I can write pages. — My name 

is Mo———."^2" Too many people are thinking — I am the friend who 
died in the years when you were at Baroda — I am Nair —. "^3"

My soul is in the world of desires———

My idea of your position in Pondicherry is that it is not serious as 
you think. There are some weak points on which certain forces are 
pressing in order to throw you out somewhere. Whether it is good 
that you should be thrown out or not, I do not know. But really the 
result depends on you & not on them. If you ask precise questions, 
I will try to answer — You want a prophet — I will answer if you like, 
but I am not a prophet.

^2 Only two letters of the name were written, followed by a long line. — Ed.

^3 Uncertain reading. The marks represented here by three hyphens may indicate that 
the name is incomplete. — Ed.
My dear friends,

I am eager to join you, but I am terribly opposed by all sorts of obstacles. Pray send me your strength—

He is gone—I am willing to talk about Agrippa or anything you like—I don’t know Agrippa, but I know about him. He was a man grave, stern, sombre, full of retained force, a great lover of Augustus, but yet they did not always get on very well together from want of sufficient intellectual comprehension of each other—Horace—No—it was a private friendship—To found the empire? Agrippa, Maecenas,—at first Antony, though they quarrelled afterwards—You see, that was a dream & dreams very often distort things. You must understand them generally without pressing the details. He meant that the first step was a petty success which assured the chain of actions that followed. As for the exact step, it is difficult to say—perhaps he meant that he took possession of the Senate, the august monument of Republican Rome, in order to have a sure base for his empire. Caesar & Antony after him neglected these little powerful details about which Augustus who had always a practical intuition was always very careful.—When did you have it? In coming or going—Where? But where, near what country?—Near Egypt then—Well, then, the dream had obviously a close connection with the hidden object of your voyage,—hidden from yourself, of course. Augustus was the organiser of a new era in civilisation, though Caesar was the founder,—a civilisation which gave a firm base for a new development of the world. You have the same idea of a new civilisation—but what is missing is the organising power—It is that you waked in the dream. Since it was near Egypt you were probably Antony who attempted blindly
a union of East & West typified by his connection with Cleopatra. As for the great toe of the foot, that is difficult. I will try to consider.

Not at all—They [Antony and Augustus] were greatly attracted to each other, but their interests clashed & their prana clashed & the attempts they made to link themselves closely like the marriage with Octavia drove them apart. They were complementary to each other, but could not understand each other. Of course I don’t know that you were Antony—I only try to interpret the dream—Yes—he has much of the prana of Agrippa, only it is now illumined & purified & there is the effect of other lives—Whose? Yes, that is why I said you might be Antony—No, you have progressed much—if so, she has much altered—Why not? One can change out of recognition—Never—Yes, probably—Very little—No, I don’t see anything—No—I don’t say that, but I can trace nothing—Whose—He has, I understand, been identified with Virgil, & at any rate he has the Virgilean soul. He is French, also, but a little of the Celtic Italian type—The Celtic type is dreaming artistic impulsive delicate intuitional a little formless; the Italian has the sense of form & mastery over the materials of life or of art—He is a Bengali, but no man belongs only to his present nation to the exclusion of his soul’s past history—He is of the practical, formative type—Which? No—but I must try to get into touch with the past formations & I want an indication. It is not easy. These things don’t remain in the nervous mind with any precision—Yes, but it is difficult—if you ask me about things Egyptian, I shall have to run away—What language? No—I don’t think—More possible—You are going back very near Egypt—Oh, horribly symbolic, mystic, hieroglyphic—I think not—I don’t accept your authority—You authorise yourself to authorise for her. Cleopatra is not Egypt—that is Greek easternised—Certainly not—She had none—She was all prana & imagination given up to the impulses of the prana—Charming—Yes—I can’t say precisely just now; I only feel that they have come often together. Possibly; but more often united—I don’t see him—Also—that is a thing which most of us don’t like to reveal—Not on earth—Yes—Rather, the sign of a constant connection with earth, a persistence in the life of the earth—Sometimes a great, sometimes little according
to the particular case. — It is difficult to say; the mentality is sometimes strongly reproduced, the nervous part a little; sometimes the contrary. — I don’t see why — I don’t think so, but it depends perhaps on the spirit in which it is done.

Much worse than the other. — I am afraid you must ask others who have a greater power of mentality than myself. — He is more modern, but he may well have been there. How do you know she was Cleopatra? — Possibly you were not; I only saw a certain connection & therefore some probability. — Yes, probably your own. — I accept it as probable. — Yes. — It’s a way of saying — I regret not — I came in answer to your past desire. — There is something opposing the writing, but that does not matter. — only there is a distracting force somewhere which prevents the nervous part of the medium from concentrating.

My writing will be of another kind. I am here to speak of the things that interest myself and my friends. — In the heavens of the second mind there are those who view the world through the symbols of the nervous mind and that distorts the vision. I hope to dissipate the mists that distort with your help. If you prefer, I will wait your own time, but absolutely you must help us, for then you will help yourself. — To the writer. — I have indicated what I am. As to who I am, how will that help you. From the world I am speaking of. On the whole I think I will wait. The time does not seem propitious.

What else do you expect? If there are communications, it is either when light spirits come to amuse themselves or those who have passed seek to reestablish communication or else the spirits of other worlds come to aid or to seek aid. Attend there. —

No. Ask him —

1 At this point in the MS the following incomplete sentence was written and then cancelled: It is great as far as concerns Agrippa &
Many wish to be present, but the dissipation of force is not favourable. Concentration is necessary. No, you have got a nice little spirit there, give him a chance—I should like to know what he means by the absence of love & suppleness. If he refers to us, we shall be very glad to know our defects. Is he. Well, perhaps. What does it matter, provided we help. We are interested in thought, not in love. In any case we think we are preparing for greater powers than ourselves to manifest. As for the writing we use it, but there are other & better means—You think so? To what? Does he think he comes from the highest heights—If there are such great powers on earth in man, what is this they have done with the earth? Do they think the horrible gâchis they have made is a credit to the greatest powers in the world? Then we speak a different language when we speak of greatness & height. He means height in love, I mean height in wisdom. At bottom, yes, but not in their way of manifesting. I am glad he added that; & his great want now is the right knowledge to direct his love. Love without knowledge is often a terrible thing. Granted—There I cannot follow him. Love infinitely; it is easy to say—How many among men can do it or have done it; & even among those who have done it to a large extent, there have been tracts of themselves where clarity was absent. These things in men more often exclude each other than admit each other’s completeness. Do not fix on one thing, however great & high. Open yourselves to the light, to the power, to the love & do not exaggerate the importance of the one above all the others. If I say man needs knowledge most, I speak of the present need. Love without it will not help him in the great struggles that are before him.

I admit that I am more akin in my mind to light & power than to love, but I recognise the importance of love. I will admit that it is even the most important, but there are times & seasons for things. That is interesting—but there are different ways of service. And I as friend.—All do that—Seek on the mountains where the foot of man has not yet trod, when the moon is full, when the spring is at its height after meditation & prayer—But not now. When the hour comes, you will know. Not he who works for that, but for another cause. He must not be there at the search—There are reasons which
it would be premature to reveal—That I know not, you may meet there, but you are not likely to go there together. Perhaps he who desires it most. For the other a stage must come in the work before he goes. Everything is fixed by the law of his nature & the law which governs that law. What do you mean by the reason? Again a doubtful expression; everything is rational from one point of view, absurd & arbitrary from another. The ultimate Law is beyond expression by the mind. Imperfectly & from a limited point of view. For man’s convenience, yes. I don’t say how. Yes, limit not the knowledge at any point, that is the essential—No—Yes—I do not think it will take long.—Forty three\(^2\) years for the work is my calculation, but Rama must manifest soon if it is to be done so quickly. For the changing of the world—For it to be completed. In 1956–7. Complete!! Who knows? That is a very impersonal answer. What of man’s satisfaction? The work & the man; the man because of the work & the work also because of the man. Work is not in the void nor exists for its own sake but because of that which works. Why must the world be saved? That does not enlighten me—The salvation, if you like to use the word, of man which necessarily means the fulfilment of the present world in something more complete & divine. Eternity? what is that? I know nothing of eternity. There is time & that which is beyond time. Then what is meant by constructing something eternal for eternity. You touch on a problem which is perhaps the most difficult of all & you treat it very summarily. It is not born. Yes—Yes but then you construct for Time. Something which begins but does not end—Then why construct?—To that I agree. I must have known him, if he was in the world of light—But he said, I think, he knows me? That is why I waited. In his present form & name I do not know him. No—From my own. Approaching that? I can, if I try but I do not know whether I shall be permitted to speak. By that which governs my knowledge. I see three forms of light; one is white with a blue radiance around it & out of it fierce red lustres occasionally pour, another is white. No another day—

\(^2\) “Forty two” was altered by writing “three” over “two”.—Ed.
It is a force of Rudra who destroys—I find a difficulty in writing—I should not begin it apparently at least not now. If he can speak let him do so—Which is which? How, you have seen, it is you who must say—Is there any symbolism in your variations of writing? That is why I called him a nice little spirit. I got an impression of the child in him—O it is only an impression & probably a wrong one. But what was the name he gave me? Was it a name, what function?

What was it you asked? I was listening to him. How the same family? Yes, very close, but you have a brilliance; mine is a different kind of light. Mine is more subdued, less fertile. Less intense, more quietly spread, perhaps a little wider, but not so forceful & productive. No, there is an immense difference. . His is a light I cannot describe. No, that was a form. It is the mentality—Who the devil can describe it—Don’t ask me to do impossible things. At the centre—In that from which the light comes; also to a certain extent in the process, but not in its forms. The union he speaks of will be perfect when you all three reach there. No, not in the way I mean. . To each his time & his work. I seek, not precisely that, but a connection enabling me to work. No, not at all—It is a different spirit—Yes, but there must also be a point of contact. I am willing if you are. Good—Not with all three. She would [not] open [to] me in her present condition: the element of mentality in which I am strongest, is in her half asleep. Yes, but others can do that better than I can. No, but if he is as you say, ask him to come soon. Who? In defining the higher knowledge so as to make it useful for life—Precisely, the light is too high as it is; I can help him as it descends to define it more practically. No, that is your affair—in managing the way of the earthly world in which you are. Not in the way most men call practical. By matter, I seek to be.
AUTOMATIC WRITING, c. 1920

Manek.

Manek is the name of the old introducer of the writing. Let us get rid of him at once. My name does not greatly matter. I am a spirit of the higher realms not present on the earth, but communicating from above.

First, let me tell the purpose of the script. It is to open a first means of embodied communication with the other worlds. There can be other means, but this was the readiest at the time. In all respects it was the most suitable. As a beginning only.

The object now is to introduce the wider knowledge of past, present and future beyond the range of the present terrestrial mind — That is all today —
AUTOMATIC WRITINGS, c. 1920

[1]

One of the guests of the future. Millions of men are waiting for the day that comes but it comes not till the light has descended. And who shall make the light descend? Half lights will not do, they prepare and pass and fade. The whole light, the unveiled power. We behind the veil wait for our hour; not to a world such as is now can we come. We are the sons of the glory, the children of immortality, the flames of God. When the divine Light descends, then we descend. But we know that an hour approaches and the dawn is red, red as blood and red with blood, the fire is behind, the fire of the Angel of the Presence.

Light first, strength with the light, joy with the strength, love with the joy, the fourfold splendour. Who shall contain it within himself and give harbourage to all the Godhead? Who shall have the unfathomable calm that shall support all the light and neither be blasted by the fire nor spill it like an insufficient vessel? The strength, who shall be bold enough to bear it, mighty enough not to shrink from the terror and marvel of its works, great and sweet enough to turn its lion forces into the path of the Lover? Who shall be the sea of the universal joy and swallow up into it the poisons of the universe and his throat not even be blackened by the fire of the poison? Who shall know what the love is and take nothing out of it nor reject any face of love however strange and out of all experience it may be to the mind of the mortal? All this he must be before the Godhead of the future can descend. All else that promises to come are only glimpses of things that would intervene and take the great seat if they could or else flashes that mislead. The new age promises always, but is always the old age in another dress. This only can be the thing that is truly new born and the birth of a new humanity.

One who has come near because some of the ways are opened.
Not the highest, but still a soul and not a creature of the worlds that once communicated with you.

He has no name and innumerable names. Men call him God, therefore I use the word. I am not a man, but I have been a man.

To whom? You would not know the names and they are secret.

I will not give the name I call him by; but some call him by a name that means he who cannot be obstructed. A time will come when I must descend on earth, but not in the present humanity. One who passed the threshold. I am not a Mahatma. No. A man, a seeker who heard and saw, if you like to so call it, a Rishi. What does the name matter? It would not help you to know anything. It is a strange and a vague question.

Put these questions to another who is nearer to external things than myself.

No information, only the things of the Idea. You have too many. I do not speak of ideas in the ordinary sense, but the Idea. Wait till another day if you will when I can make a closer and less impeded connection. This kind of communication needs a full force in the writer which he had at the beginning, but is now clouded. I can no longer express myself as I would and the idea is checked in its passage.

[2]

Be passive.

Blind the intelligence to what is being written. It does not matter if there is a knowledge of what is coming, but there must be no activity of the intelligence, no idea, no criticism of the intellectual sense, simply a passive acceptance.

[3]

The time is too short, you should have done it before. However, I am here. What I have to say I will say another time, but you can ask me any question and I will see if I can answer. No, not stupid questions.

It is not tamasya. It is a state of relaxation of the being which
is rajasic in its fundamental temperament with a sattwic flame ever
growing on the heights; but the flame does not burn up the mist
between the mind and the highest; it only thins it so as to allow the
lightnings sometimes to pour down from above. The rajasic fuel
of the nervous being gets exhausted by too rapid an expenditure
often for quite useless purposes and then the mist precipitates itself
downward. The result is a laxity of the nervous system and a re-
sultant laxity of the mind. It is a tamasic state no doubt, but if the
rajas of the wrong kind can be lessened by it and cast away and
only the rajas that is fit for feeding the sattwic fire preserved and
increased, then a greater fire of the upward light can be established
which may perhaps burn up the mist on the heights. That is how I
see your condition—

I am not a prophet. It depends on yourself and the gods of
your nature and those of your destiny. Help them by your assent
or if you can, by your will.

Why not, if the Power in you wills or if you can wake its action;
but there is no need to force yourself at present if your system is
reluctant.

I do not know the future positively. It is a power, but a power
which works behind a cloud of light which is too strong for most
eyes. I do not know if it will soon take a more directly effective form.

My presence is sure whenever you take up the pencil. I am always
near you in my psychical being. The work you are doing is in-
timately connected with my destiny and therefore I am attracted
towards those who embody the influences that are in operation to
bring about its form and exterior movement. This writing is a means
of direct communication and by it I can bring myself nearer to the
earth where I shall have to descend. It is more useful to us than to
you, but it is one of the means which the world behind is using today
to throw out its presence and figures on the terrestrial plane. Others
of a greater kind will take its place when the human mind is ready.

The time is short. My will is to see, but I see only in the figures
of the psychic world. Yet I think I mistake not in seeing that the

www.holybooks.com
movement which was so slow prepares for a rapidity which will be first the flowing of a constant stream, then the spreading of a tide and last a storm of invading forces. The Shakti of the future has been as if ascending a steep ascent and is now approaching the summit from which she will be able to see the field of her work before her. The field is full of contrary forces and her first steps must be covert and behind a shield of self-veiling and only partially revealing movements. Other movements must be thrown in front which will attract the attention of the hostile forces, movements not of the definite future, but still helpful to prepare the field, and it is only when she has gathered sufficient material force that she will throw off disguise and come to the front to take up the direct battle. That is why at first the quicker movement will be only that of the flowing stream, a penetration and spreading and enlargement of the current. When there is the greater tide of movement, then the battle will be near and the Shakti will unveil her real figure.

There is a storm approaching, but it is of the outside movement, and as I am not in close touch with those forces, I cannot see clearly whether it merely threatens at present and will keep for a time the atmosphere surcharged and heavy or will break out into an early violence. I see the power that broods upon this outer movement, but his mind is not open to me.

I have finished saying what was immediately in my mind and have been simply thinking in the writing to materialise my thoughts a little. If you wish to say anything, I am ready to reply to you.

Bolshevism is more distant to me, but it is part of the outer movement, only it has more force of reality than others I was thinking of. The movements of Europe have a potential or an actual violence of the power of execution in them which makes them press for realisation more rapidly; but it is the future which is preparing to arise in the East of which I was thinking.

Not in your atmosphere, but around. I see most readily the things nearest to you. I do not suppose it will be anything to you except a thing to be watched for the opportunities it may leave behind in passing.
Japan? I shall have to see more closely before I can say. From a distance I can only see things that prepare by bits; the sudden shocks that will break down what is established seem to me to be yet at a distance, but at what distance I cannot say.

That is a thing in which I have no right to give suggestions. The powers that preside over your destiny and the work have to settle that between them; but I doubt not that when the action is ready, the guidance will come. Spirits like myself are too little a part of the already materialising will of the terrestrial destiny to hazard their thoughts in the matter. The future, besides, can only be seen by me in tendency, in figures of general power. I may be able to speak of more definite things hereafter, but not at present.

My wish is to make a few observations first, but please remain absolutely still in the mind or I shall not be able to manage. —

The age of our coming is the age of the omnipotence of the second emanation. The first is the age of the Spiritual without form, the second that of the spiritual possessing matter. The first, I mean, the age in which we formerly came. Therefore our coming depends upon your ability to lay hold on matter and make of it a true mould of the spiritual influx. In the former age there were symbols, but no true body. Therefore the spirit receded and left the other principles to play out their possibilities without its direct intervention. Now there is a second chance for us. That is why I have drawn near, more for help to myself than for anything else, to make a suitable connection in my psychical principle with the material and the work of the spirit upon it. This is to explain my side of the communication. Whatever I see or say about things on the earth is through a previous psychical translation and you must so understand it and not expect too great a precision at present in my communications.

The tendencies of the present I can see and floating images of the future; but as the real body of the psychic worlds is not present to the physical mind, but only appears like a dream or
imagination, so to my psychic mind is the body of the material world. This presents a difficulty which most who do this writing do not appreciate. It is only spirits who are very near to the earth who can to some extent see it with similar eyes to physical beings and they too borrow a great deal from the ideas, the mental suggestions and the nervous being of the one who writes and those about him so as to harmonise their mentality with that of men and make themselves intelligible. This I do not wish to do, as it brings much that is false and inferior into the communication. Please therefore be as still in mind as possible so that there may be a minimum of mixture.

Now if you want to say anything I am ready.

It is only minds who have a new idea either full of the spiritual influence or touched by thoughts that are helpful to it who can prepare the age that seeks to come. But there are those who have ideas only on the intellectual plane and no idea of anything behind and there are those who have spiritual experience but no power to embody or materialise. These give us no sufficient hope, whatever they may do for the moment. It is where there is the spiritual experience or the ideas that give it a mental body and along with that a strong will to materialise from whom we can expect the fulfilment of that for which we are awaiting. You are among the comparatively few who have these things. It is therefore either you if you are chosen and remain faithful to yourselves or those like you to whom we must look for the preparation of the future.

Because of the psychical vision. I can see something of your souls or at least its signs, even if I cannot see your bodies.

No, impossible, not in the period of transition.

That is because you have been less spiritually exclusive than myself; you have incarnated through the centuries and done work for mankind and you now continue that work and yours therefore is the right or, if you like, the spiritual necessity to labour for the great ages of mankind. I was of those who drew too much into myself seeking the pure principle of knowledge and I postponed
though I knew to be necessary the sacrifice of action. I did the action that prepared myself for spiritual growth, but not in my last movements the action that goes outward. If I were to come now without the help of a favourable new age to externalise my spirit, I should have to begin by a form of mind corresponding to my last mental formation and start from that working out of it what was opposed to the action. I should not be a sufficient force for help to the world at this critical period. I might even join myself to old ideas having too much of the spiritual overstress. On the other hand if I come at a juncture where the right kind of work has already begun, I shall have the most favourable circumstances for making the most of my earthly destiny for myself and others.

That is a difficult question. It involves from my point of view a working out of an equation between your psychical forces as I see them and the circumstances of your earthly destiny as they are determined by the force of your past and the force of your future lives. I do not know enough for that, and I could not possibly do it satisfactorily in a few words or a little time. Besides there is the force of the collective need and the collective resistance to consider. If one could see not from the psychical but the higher principle it would be easy enough but I cannot do that at present. I think you should leave this question to another occasion. At present I should probably get only a side light which might be misleading.

Everywhere, to one degree or another, but to find them is no such easy matter. In number they are already thousands, but all of them have not found their way. Some need a lead and some a leader and some the destined moment for casting into form of thought and action what is now only a desire and an impulse. Some are meant only for the first steps and some for the greater things afterwards. It is not possible that you should coalesce with all of them; there are too many mental and temperamental differences, especially with those who have already taken their direction.

No. I began as what you would now call a Rishi, but I found no satisfaction in the things that were around me nor in the level of knowledge reached by my fellows. I said “Upwards, ever upwards.” I drew back from my life and I went upwards in the inner world of
my being. But when I felt myself full of the higher light and would have turned to pour it around me, I found I had cut the connection between the power of knowledge and the effective will to action, cut too the thread of similarity and sympathy which could have made a line of communication between my knowledge and the minds of others. My body too was a stranger to the principle which filled my spirit. I determined to come in another life, in another body; but when I retired, I found the inability to descend except at a sacrifice for which I was not ready. Therefore I had to wait for others to do what I might otherwise have done and to prepare the conditions for my return. I shall not be one of the initiators, but I shall be one of those who help to make the knowledge endure in the mind of the new humanity.

Not myself at first—

My desire is to suggest to you to enlarge your view of the things you are about to do. The steps you are taking are not in consonance with the scope of the power you are calling down. First, be sure of the presence of the power, certainly; but do not limit its action by too prudent a beginning. The power of the work is not the power of your past life nor temperament, not the power of Mahasaraswati which governed the past existences that have been revealed to you, but of Mahakali, the swift and forceful Shakti. The desire to lay a slow and sure basis which belongs to the careful reason and its experimental skill is not the genius of the work you have to do. The other side of the Shakti which hitherto has acted only on occasions, will be the force that presides over the not distant future. —

The limitations of the past were due to the heavy siege of the opposing powers and the obstacles they were able to heap about you. Some of these are already half dead and the others are beginning to lose their right; therefore be ready in a shorter time than you imagine to change your notions of the immediate future. The vaster, swifter more confident idea to which rendered careful by past failures you have long said “Not yet, not yet,” is the only one that can act out with effect the aims that have been set before
A force that hesitates not over its steps, that overbears and does not spend time in going round obstacles, that enlarges swiftly its means and moves over great spaces in short periods, can alone create the new world that is seeking to be born. ———

The forces that stand against you are great in appearance, but only in appearance; great no doubt still in material means, but smitten with the spirit of death in the very heart of those means. Their strength to endure derives only from the hesitations, the weakness of will, the slowness to combine and organise, or when organised to use boldly their strength which afflicts the forces of the future. This is the main reason why still they hold the world, because there is nothing except at a point here and there which is confident of its own power to replace them. Their shakti is broken within, the shakti of the future is infirm without, that is why there is the deadlock. ———

The person who wrote is gone; I presume he will come again; but it seemed to me he is passing about swiftly seeking something or somebody that will receive his inspiration and do his will. That is the impression he gave me——

Is there anything you would say to me or shall I stand back and let others come?

T S M ———

Be passive. T S M is the sign of the society, otherwise of the combination of groups that are working on the psychic conditions for the formation of things yet impotent to take a material body. . Three groups—one throwing up the errors likely to stand in the way of success so that they may express themselves and be done with; one sketching out the imperfect beginnings of the future; the third preparing under a veil the final things. The process of the new birth is a very complicated and difficult thing offering at every step errors and perils of perversion and failure or else of fallings short of the idea, and the mind of man and still more his life impulses are so difficult and obstinate a material that it needs many influences and much labour behind the veil to give a fair chance to the possibilities of the future. This applies in every part of the work that has to
be done, spiritual, intellectual, material. The movement is at first a chaos of possibilities and the thing that is to be done appears generally to the human idea in certain ideas and tendencies which become more and more general; but the difficulty is with the forces, to make them purer and clearer in their idea of action, to get them together, to give them a combination and mass of action. At present they are in a confusion which deprives them of their means of success. It is the second group whose action tends to grow stronger; but for the third to bring their work forward needs the intervention of a great precipitating force. It is that no doubt which was spoken of, but if it is coming, it is still in the background. That is a thing I can convey with difficulty, if at all. T S M is only a sign. Together the letters mean the three things, apart they mean nothing. T is the sign of the past that failed trying to throw itself into the present, S of the present taking up the past and trying to change it into the future, M of the future creating the present. It is only a sign; but the name I cannot get into the writing. ————

He was trying to explain from his point of view why there is the difficulty in getting the greater force to come. The Shakti always waits for the moment of the fitness of its advent and that must be ready in the psychical field before it can be ready in the material action. That is what he wanted to say.

[7]

My own plan is to be more and more full of light and seek the end of the whole place which is above the vital region. As for the tunnel I think that is a mere figure of speech. There can be no tunnel, only a path made through the resistance of the ether but that is a path of light running through the density of the space above the terrestrial level. ————

I am one who have worked on these things. Not the one who comes ordinarily at first when you begin to write. I put him aside when you took up the pencil.

Not all, but I was passing when you talked of symbols.

That is one kind; but there are others belonging to that plane who are worse—All right. I am off. ———
That was an intervention such as often happens in this kind of communication. I am here. Have you anything to say to me?

Yes. Continue what and about whom? I think not, at least tonight.

What question? But I do not know.

That is simple. Let her free and let her do it herself. No, but I mean that the question has only that solution. The change to be made is too great and the possibilities too many and complex for a plan to be made of any particular kind. It must be a natural evolution or if you like a natural revolution proceeding from the soul and will of the women themselves. If it is imposed on them in obedience to a previous idea, that will falsify the movement and produce something as artificial probably as the present system.

Why? It seems to me the most practical process.

In Asia. Europe will take, I think, a little time to adjust itself to a new impulse. It has been too much brought up to a sort of standstill or rather a circling round the same point by the disappointment of the hopes it had concerning the after results of the war. Besides the forces there are too bewildered and uncertain of themselves to take boldly at once a step forward—Even those which are sure of themselves are more concerned with consolidating their position than with any impulse of a fresh advance.

Not yet, so far as I can see. There must be at least three stages passed before that can come.

The first stage must be the exhaustion of the existing idea and movement which is rather a confused seeking for a means of self-effectuation than a strong and definite will and idea. And under the cover of this there must grow up a new will and strength fixed on its aim and luminous enough to create its means. Afterwards the struggle with the last remnants of the destiny of England.

I do not see yet clearly beyond the immediate situation; but this process seems to me certain though the forms and balance of the forces about to come into the field are not yet definite to me. As for the time, all I can say is that it will be swifter than seems now possible and that there will be a constant acceleration of the
momentum of destiny which will become very pronounced after a year or two or at most three.

It is hanging all over Asia, but I do not know where it will break first. The enlargement of idea will, I believe, come of itself as the present immobile tension of circumstances breaks and new possibilities come into view. But that was not my seeing and I do not quite know what was in the mind of the spirit who spoke. He is more accustomed to the earth than I and probably has a more definite vision.

At present, yes; even those who are in action cannot at present really get forward. This is everywhere a moment of blocked forces.

Not only he,¹ but all who are at present politically active in India. In a year it will have been enough cleared up for new views to emerge. That is all I can say at present.

The second phase, I take it, will come by the loss of faith in present ideas and methods among the younger men. As to who will represent it, that is a thing I cannot yet say; certainly a number of new men must come forward; the old are too much wedded to the past notions.

This question is one which involves too much for an immediate answer. I can only say that the work which is to be done is to determine the new force that will make the India of the future. The removal of the foreign obstacle is only the removal of a negation, but there must be a positive creation which will be the beginning of the power that will govern the future, otherwise there will be so much weakness, confusion, aimless clash and dispersion of energies in this vast body that a rapid emergence of the greater future will not be possible. As to what work this or that person will do in this matter, that is a question difficult for me to answer without a consideration of many complex forces. I am not prepared to answer it at the moment.

You want the time in which it will be completed?

I am afraid I cannot say exactly. I can only say that as far [as] I can now see it will be in a few years quite visible.

I am afraid I cannot look so far ahead. A great power in Asia,

¹ The word “he” was written over “Ga”, presumably the beginning of “Gandhi”. — Ed.
yes, that is certain, but of what form is not clear to me on this level. It is no doubt decided above, but here I can only see still uncertain possibilities. I think I told you my vision of the terrestrial future is not yet clear and definite. I can only see a few general certainties.

No. I know none by that designation. Office? I do not understand. There is more than one godhead and power concerned with these things, but none so far as I know who has such an office. ———

I know very little about it; it has not seemed to me important enough to consider very closely.

I don’t say that, but I don’t know anyone of that description.

My wish is to make a slight departure. There is as yet too much difficulty for me in seeing the things of the earth and I shall wait till I am stronger. Meanwhile if you like someone else will take my place. ———

Begin —

I am ready to communicate.

Any subject interests me. As for my competence, it is limited but various.

Yes, what is it you want to know?

As far as I can see, if you act quickly, you may get something done which will be a useful seed for the future. But before long the atmosphere is likely to be too thick and troubled for ideas of so large a kind to make immediate headway. As you can see, a struggle is approaching on which the course of the immediate future depends and until that comes to some kind of issue, it is the passion of the immediate struggle that will occupy all minds to the exclusion of other things. Your idea is one which may and must bear fruit in the future, but at present it is a thing of long views for which one must be content to sow and await a favourable season for the fruit. India is too much occupied with her interior problem which is at bottom one not of equality but independence to spare more than a side glance for the question of her people in the colonies. That is my opinion.

This is only as regards practical work. I should say that it will
be a good thing to establish the idea; for as the struggle proceeds, there will be great chances of India turning to it in the hope of an outside support and assistance. She has up till now been looking westwards. The present movement is turning her towards some kind of unity of feeling with western or Musulman Asia. The future may turn her eyes eastward towards the rest of Asia and your scheme will be useful in preparing for that time; there will be something to lay hold on immediately and that will save much time and effort which would otherwise then be needed to make a connection.

Well, I don’t know; it depends on getting over the present floating and uncertain state of action. If that can be done; there is obviously a big future, as it is a new idea with considerable possibilities of result and extension.

I should say, certainly publish it. The more you publish the better. It does not matter so much just now about terms etc, the thing is to give a wide publicity – give it to those who can do that best.

What?
That is nothing; such letters have no immediate meaning or importance, except as indications that many in the country feel a need of a leader and look this side. In my opinion it is best not to intervene in what others are doing for the moment, but leave the force at work to operate through its chosen instruments and confine yourselves to whatever special action is meant for you. There is not yet the critical juncture that calls for your action and to mix oneself with the immediate action might interfere with a better development afterwards.

No, that was another.
Not exactly; we are a very various company. No, it is without any order, at least without any deliberate order.

Yes, in the world of the mind, I am a spirit of the middle intelligence. . No, I have nothing to do with gods; of course they exist but I take no stock in them. . What use would it be to me? Of course not. At least if they do it, they will have to do it without showing themselves. I would reject any interference.

To satisfy the curiosity of my intelligence.
Yes. .

I was in many countries. I have had many lives, had many occupations, studied many things. The last life I was a little bit of a scientist, something of a philosopher, dabbled in politics too and in literature, but could not get much success. I was a good critic, but not a creator. In England. You would not know my name. The same thing, the curiosity of my intelligence; I had a mind that liked to inquire into the future of humanity and I had advanced views on the matter. No, you can help yourself much better.

It is an excellent form, very effective, that is if you want to wake people up and make them think. . I am certain we must have, but I cannot fix the occasion.

I know there is something above mind, but not what it is.

Do you ask me for my past opinions or for my present imaginations and ideas?

I am afraid that question passes my competence, that is the question how man came into being. My only idea about it is that all the theories are wrong.

No, I said advanced; that is in my past life. You would consider them commonplace.

[9]

Myself today. . The others are no longer here. ———

Yes ———
I do not know. Ask and we shall see.
In what respect?

(Tilak)²

He is, I believe, in the intermediate plane. He had a strong will to live, because he felt that his work was not finished, and when a man passes from the body with that feeling strong upon him, his personality is for a time turned towards the field of his human actions. Only a time is needed to bridge over the transition from one consciousness to another. When that is done, he will act for a

² The headings identifying the subjects of most of the following communications were added in the margin, sometimes in French and usually in what appears to be the Mother’s handwriting. — Ed.
time on the intermediate plane probably until he is satisfied that the idea governing him is in good train towards success or until he has worked out the force of the attacking idea in his own consciousness. I speak of the personal mental part of it that still feels the effect of the life vibrations.

That can only be done by the higher part of him. The part of his mind that is still concerned with the images of the outward world is likely for a time to act upon it through a certain impact on the men who are the channels of the general force that is working. It is only when these images fade and the consciousness becomes more free that the direct action of which you speak becomes probable. The action from the intermediate plane is in one sense stronger as it is capable of a more subtle and penetrating diffusion not hampered by the physical difficulties, but it has other difficulties of its own; it is strong for diffusion and the creation of impelling ideas and forces, but for the materialisation through human action it can only act in dependence on the transmitting agents. There is always a certain disparateness between the psychical and the physical planes and the transmission from the one to the other is not always facile.

That is true, but always in the sense of a primary force. In the end this primary force is the important thing. I only speak of the difficulty of correct materialisation from the psychical plane. A strong will can produce from it a great general effect in the sense of its purpose and that after all is the important matter.

His psychic personality is composed of two parts, a higher soul which is the real man, a strong and brilliant soul of a great flight, and another which is the personality he works out in a certain round of lives and which gave the outward type of his human character and action. He is one of those who belong to the higher race, but has chosen to take on himself the burden of the lower for the help of the world action.

(Mr Tilak)

Yes. A great Karma Deva who is in intimate union with the Devas of knowledge.
(Mme Besant)

An Asuric being of great force busy divinising herself, but not yet successful because of the very force of her power which creates a great force of ego.

No, not a Rakshasa. There is a Rakshasa force associated with her, but it does not affect the centre of her being.

(I)

That is different. There are men who belong to one type and make an ascension, that is her case; there are others who have in themselves the various powers and have to transform them into the terms of the central unity. That I believe is yours.

(P.R)

To define your case is difficult. A Deva above, a strong Jnana Deva able to communicate with the higher planes, an Asura below representing the development of many lives, a Rakshasa force behind constantly weakened and fading, but not yet cast away by the drawing up of the vital being by the others, also several other minor deva kinds in the psychic being, that is the best I can manage.

(Rapports avec la Soc. Theosoph)

The fraternity is due to the fact that both are working out the common movement under a great superior direction. The hostility is due to the intermediate agencies. They are guided by inferior powers who are repelled and made afraid and therefore hostile by the superior force they at once feel in you; the greater intermediate powers that are behind you are not able to accommodate themselves to the narrowness of theirs and be sufficiently indulgent to their littleness. That is why there is the discord.

There is a great deal of ignorance in that idea. Kutthumi and Maurya are merely names and forms, true only as a psychic symbol or an instrumental representation, of the two main powers that are behind them, one governing their thought, the other influencing their action. In Madame Blavatsky they found a sufficient instrument who could as it were incarnate and harmonise both their forces. Her successors have not been able to do that, but have only responded to partial indications of one or the other; that is why
there [have] been so many divisions and so much confused and uncertain action in the movement.

Kutthumi represents a Deva, not a Jnana Deva, but a certain kind of thought deva who responds with a limited light but a great abundance of curious thought formations to the greater Idea that comes from the supramental level.

Maurya represents an Asura who has stopped short on the way to Devahood, a being of aggressive thought force and great vital vehemence, but of a very limited power in the true sense of the word, who has associated himself with Kutthumi and is tolerated by him, because otherwise Kutthumi would not be able to exercise an influence of practical action on the human world.

(Rapports avec la T.S.)
I doubt, unless the Maurya influence can be broken, but that would mean that the Society would lose its practical force of action. It would have either to be transformed and taken up into a greater action or dissolve as a society and its members or the best of them enter into a work of larger inspiration and movement.

That represented the hostility of which I spoke. The Maurya influence is a despotic power which does not want any interference with its control or any dissolvent action on the frame of thought and organised movement it has stamped on the society.

(Gandhi)
A big Karma Deva risen to a certain thought region into which he has carried his habit of rigid and definite action, associated with a psychic Deva of great purity but no great knowledge. The thought region is one which reflects rather than possesses a higher light, but he gives to it always the forms suitable to his concentrated impulse of action. It is this kind of combination that creates those who are at once saints and fanatics.

(Mirra)
I find it impossible at present to make a definite answer, because I have to see through an atmosphere that is not favourable

3 MS has
to a definite description. All I can say is that there is a great Light Devata there, but the other elements are not clear to my vision. It is easy to define the psychic personality of people like Mrs. Besant and Gandhi, but all your cases are different because of unusual or of complex elements of a considerable significance to which a short definition is not easily fitted.

Yes. I am here ————

**Tagore**

There is not much to say. It is evident that there is in him a double being, one for the higher part of him, another for the lower nature. The higher is a very large psychic devata living in the celestial beauty of his own soul; the other is a sort of Gandharva. The Gandharva is limited, ego-bound, psycho-nervous, but his nervous expansion is made limited and weak by the domination of the psychic devata. At the same time he limits the psychic devata who because of him cannot impress himself on life, as he could if he had a strong intermediary, and therefore can find himself only in the world of his own imagination, poetry, art, an ineffective idealism.

He cannot be really a friend, because he lives only for his own psychic or nervous satisfaction and values people according as they minister to that. He may have sympathies, but they cannot take the active form necessary to friendship.

Yes, because he cannot pour himself out in life. He is therefore drawn into a sort of imprisoning circle of his own ether of isolated personality. The devata in his relations to life. It is not that the devata would not like to be in active unity with others, but he has not the means in the vital nature of the human being.

That is first a sympathy of the psychic intelligence, secondly, the force of your own personality on him; it was not a thing deepseated in his own nature. You could still do the same thing with him if you were in constant relation with him, because he would like to be in action and would feel a support in the greater force that is around you; but as it is, it is not a thing that can be consistent and durable.
I should have to be in a little closer contact with them to do that effectively. As it is, I could only see through an intervening mist. The psychic image conveyed to me is not sufficiently precise and complete.

There is, but I fancy it belongs more to the past than anything else. You have gone too much forward.

It is the difficulty which meets all things that come from the future into the present and for which the powers of the present are not yet ready. In your case it is extremely strong in proportion as the idea and the force are large; if you were content with something smaller and more immediate, you would probably be much more effective. As it is, you come in advance of the godheads that are in march towards the actual world and you are too much beyond those who are actually at work at the moment. As yet you do not fit in and you have to create a place and a body for what is coming. But naturally the matter of the existing world is rebellious as it always is to things too great and new and not sufficiently prepared. The things you have formed in yourself need a greater outgoing force than they have at present in order to impress themselves sufficiently on the outside world. The momentum behind you is growing, but it is not yet sufficient. In these things those who create cannot see themselves where they are already effective, because the obstruction is greatest immediately around them; for they are the centre of the creation and therefore the centre of the accumulated resistance. Their thought and power work subtly, at a distance, through others, changed in those others to something less complete and characteristic which can mix with the actual material. That is to say, it is as mental influences that they work, but they do not take at once the recognisable form of which they can say, “This is the thing I mean, this is the actual creation I intend.” That can only be when they become the direct material creators. I do not know whether I make myself clear to you.

It is difficult for me to say because I see the psychic better than the material things. In trying to make an inference from the former to the latter, I should probably commit many errors.

The obstacle is general; it applies itself for the moment to any action you are likely to take, but if you can once break it
down effectively at one point, it is likely that others will open.
My impression is that it will take you yet a little time to find the
weak point of the obstruction and I myself cannot really tell. The
obstruction is not something definite and rational, but a sheer force
of obscurity and inertia which has somehow got itself concentrated
in front for the time being. It is really a vital intuition enlightened
by the higher mind which could find it out and that is a thing I
necessarily lack in my present condition.

Yes, it is true. These forces know nothing, but they are as it
were attracted where there is something that threatens them and
they take time to form.

That also is true; India is a field where the opposing forces are
most hostile to each other and there is besides a great complexity.
If however the forces of the future can once form themselves effec-
tively, they will get here perhaps their best chance of a direct and
rapid action. That at least is one possibility on which certain very
great Devatas are working.

It was someone else who suggested that—someone I think who
is very sensitive to possibilities. It is true I believe that powers are
at strenuous work to bring in a violent impetus and at moments
it looks as if they would succeed, but the forces that make for an
arrest direct themselves there and there is anew a deadlock.

I am here. —
That is not very easy for me. I wish to be quite well con-
nected with the terrestrial plane by communication first before I
give out myself. If things are suggested to me, I can by an effort
put myself in relation at particular points and so strengthen the
connection. Otherwise I can only speak of things foreign to the
terrestrial atmosphere. ——

Russie
I think that the formations there are of a kind too forceful to be
steady. There is a violent pressure upon natural psychological forces
to suppress some, to create others. The transformation attempted
is of the nature of a scheme made in the mind and imposed on
the life forces. This means that many of the life forces lie inert and unconverted and a constant renewal of currents has to be made to galvanise things into effective action. If a constant struggle could be kept up with success with outside forces there would in time grow up a sufficiently steady and compact centre of transformation; but the Bolshevik motor force is at present a very small though powerful agent at once repressing a great inert mass and trying to use it for great and difficult work. That is a kind of action in which you must expect many crises and chances of failure. A failure anywhere means a retardation and a fresh expenditure of energy to start again. There is not the general excitement and vital enthusiasm that supported the French revolution. There is instead a more intelligent intellectual force and centre acting on a more complex and contradictory national psychology which is itself by no means strong either in intellectuality or in rapid vital energy. The experiment is most difficult, the chances precarious, and the one great hope is that the hostile forces will go on blundering and give the Bolshevik centre each time leisure and opportunity to repair the results of misfortune and strengthen itself for good. That is all I can see in the matter.

All right —
That is a little outside my power of vision.
Psychically the conditions seem to me favourable, I don’t know about the material elements.

Cousins
Yes. He is a soul of the middle regions, of what might be called the psychic and aesthetic world, associated with a very material being into which the soul has got rather thickly encased. There is an aesthetic devata enlightened by a Power of the intuitive intelligence, and its light burns inside and radiates through the material crust, but not with the free light that it might otherwise have. It gets free in the activities related to its own domain, but not even there quite free because it has had to educate the material mind and has not

4 MS have
been able to make it a quite flexible and spontaneous instrument. In other things it is subject to the limitations of the material being with whom it is associated and can only refine it to some extent without being able to change it. The intuitive Power works chiefly in that domain and is not sufficiently concerned or active in the rest.

For him you can do much, but I don't know whether the material being will allow you. Still you can bring an influence on the intuitive Power in him to act on the whole intelligence, where it is still content to work in rather cramped bounds. This Power is a little indifferent to other things than the aesthetic and psychic, and if you can interest it sufficiently in a wider domain for it to break from its indifference, and that is quite possible, it is strong enough to compel the material mind to which it now leaves those things, to enlarge itself and become intuitive. There is likely however to be much passive resistance because there are other influences.

As for the other question he can only help you in outward matters and that he can do very well if he is kept in close touch with you and his emotional being in active friendly relation. He is easily responsive to influences where this is the case.

Mme Cousins

That has been a help to him, but as often happens is also a hindrance. She is stronger than him in will, for his will is not very strong, but not being very wide in mind this decisiveness of will makes her rigid in her intelligence. Of course, if she could be induced to move from her moorings he would move with her like a boat in tow with a steam launch, but she is not flexibly responsive to influences.

More times than one I was here, but you did not call me. —— No, because I depend on you for my connection with earth and I have nothing to say for myself any longer...

There are others who if you like can come.

That will not do, because the medium is not one who is in the state of passive receptivity.
I do not know, but there may be.

First let anyone come. Then there may be one who has something to say—This writing has either to be centred round one communicant or left absolutely free; but in the latter case all sorts of thing[s] interesting or uninteresting may come. One has to take one’s chance.

I am here already. The thing I said last time I came that there was a storm preparing in Asia I can now explain more clearly. It is still preparing and it threatens the British Empire. Mesopotamia is one centre, India is the other. In India the electricity is gathering force and before long it will be the beginning of the end. —

There are three stages to be gone through. The first begins now with the movement of non-cooperation which will develop into a movement of separation and independence. The second will be a formation of something corresponding to the Sinn Fein, but of a more carefully organised character. The third will be a final revolution which will at once end the British rule and break up the old India of the past. These three stages will follow rapidly on each other and even overlap to a certain extent, the last taking up the results of the two others ——

The time I do not see clearly; but the flood of the present movement is likely to be three years, after which it will be replaced by the second. That may last a little longer. In any case all will be finished in ten years.

Not long considering that the greater part of India is still ill-prepared even for this stage. The people have to be accustomed to shake off their habits of timidity and dependence and work boldly and avowedly for freedom. It is the office of the present movement to make this change and three years is by no means a long time if one considers the psychological revolution that is to be made. The Swadeshi movement lasted six years and changed only one or two provinces to a certain extent. This will last only three years and will change the whole of India.

That is a question I cannot answer, for I am not in touch with your destinies. But so far as I can see from my present contact with you, the first stage is not the one for which anyone here can be
directly useful. For it will be too confused and indefinite. It is more probably the second that will demand your assistance.

That I have not yet seen. . I think it depends on what happens in China. . Japan cannot be ready to help India until the state of things in the whole of the Far East is changed. If Japan and China are ready, there will probably be a great change in Indo China and then the whole Asiatic movement can link itself together through India.

That can only bear fruit subsequently. It is essential first that India should form the clear idea of independence and then your League may be a standing suggestion to her to turn for help to the Far East. At present she is looking to the West and to Mahomedan Asia and does not imagine at all that anything can come to her from the Far East.

If you establish it now, perhaps after two years it may begin to have a meaning for India beyond what it bears on the surface.

That is all I had to say myself. I shall return another day ——

290 (le nombre d’êtres en moi)

My knowledge does not go so far as to explain the number in each being. The proportion varies for each man, although there are possible classifications. Each man is unique being a centre of the possibilities of the infinite. The proportions remain the same through life for beings of a certain order of development who change only within a certain settled framework as a preparation for subsequent existences; it is variable in natures which admit of considerable enlargements and changes. There are four orders in the ordinary human nature, mental, psychic, nervous, physical; four in the superior or superconscient nature. It is probably to the four human orders that the 290 belong; the physical are few in comparison; it is the three others that are most complex. All I can say is that it is a very complex calculation and I see the figures 7, 6, 7, 6, 3, recurring. I must take a little time to see if I can see farther.

Probably the 7 includes both the psychic and mental and the 6 refers to the nervous being. In that case there will be two orders
each of the number 40 (four tens) in the mental, and of 30 (three
tens) in the psychic, and of 60 (six tens) in the nervous, and only
ten orders of 3 each in the physical. I do not yet see to what the
orders correspond.

You must remember that the physical has to bear the impact
of the others. Therefore, however obscure they may be, thirty is not
too much for the physical being.

The two orders on each plane must be the right hand and the
left hand powers. The right hand are those who open upward so as
to admit the influences from above and shape them for the being;
the left hand are those who open downward to the world here and
the actualised experience and send them up to the higher planes.
That at least is the division which seems to me to correspond best
in the arrangement.

That is quite different; it belongs to a more mystic truth of
which I have not the key. Is there not something in the Hebrew or
the Chaldean mysteries which might shed light on it?

It may be that that belongs to some secret potentiality or
totality in the four superconscient planes which seek to realise
themselves on the four human levels.

No, I don’t think it has anything to do with the number of
beings; it is something more recondite, more symbolic.

Chandra

This is a very easy question. The girl’s psychical being is entirely
concentrated upon the nervous life and there she has an immense
but undeveloped force. Given certain favourable circumstances of
education, social surroundings etc she could have been one of the
notable enchantresses of men who draw not by physical beauty
but by nervous magnetism and the secret charm of the psychical
being behind, but she has fallen into the wrong forms of life and
this has not been developed. However the psychical being with its
potentialities is there and it is that he has felt and that attracts
him. Behind all that is a spirit with a very powerful will, but it is
behind the veil and what comes out from it is wasted on small and
trivial things. If that spirit could be roused to break the veil and
come into the front, then she would be a fitting mate for him and
supply much that he needs for his own fullness. That too probably the soul in him vaguely feels though it is not known to the mind, and that enters into the strength of his attraction for her. But if he cannot do this, then the attraction will fail and they will separate. I believe they have met in former lives and past connections explain the swiftness of their drawing together.

Mlle Chattopadhyay—(Mrinalini)

This is a soul of a very high order though not of the highest. A great psychic being is there behind, whose stamp has determined the whole turn of the nature. This being has a strong spiritual inspiration of which the human mind in her is vaguely conscious; but because the higher experience has not taken shape, it could not become the ruling note in the life or the nature. The next strongest thing is the emotional mind which is one of an extraordinarily intense capacity, acute and poignant in all its movements but held in by the intelligence. It is still in the emotions that she lives and they are of a great spontaneity, sincerity, clarity and strength. The intelligence is a lesser force, but well trained and developed and it is the influence again of the psychic being that has given it a literary and artistic turn. There is a suppleness and fineness in the nature proceeding from the same source. The one thing wanting is the discovery of her spiritual self; she has not yet found herself, but has spent her gifts on the things of the mind and heart, and she is conscious of the want in her. If once she completes herself, the full beauty and power of the psychical devata in her will appear and she may do a considerable work for the social and cultural change in India, her real mission in life, a work more solid than any that can be done by any of her brothers or sisters. This is a view a little from the outside. The things behind I cannot tell properly today, because I have externalised myself excessively in my effort to get into touch with the outer existence

[15]

The spirit who ordinarily comes is not here. I have taken his place ——

He has gone into the region of the pranic worlds which is near
to the earth. He is drawing around him pranic forces for his next birth. At the same time he will probably come if you continue the writing.

I am the son of the middle heavens who have often descended on the earth. I am a frequent messenger to earth of the gods of the middle heaven.

There are three heavens of the gods who work on the mind from the heights of the mental world. The first is the heaven of the mind which is in tune with the infinite, the second or middle heaven that of the luminous mental determinations, the third of the origination of mental forms.

I have no special message for you; for the action which I represent affects the work you are seeking to do only by a sort of oblique injection of its powers and suggestions. It is not in the direct line of descent; that concerns others. Therefore I leave you to put your own questions.

Yes.

My work of mentality is different. It is not concerned with the actualities of the psychic plane. Await the coming of the other for that question. I can only tell you certain possibilities of his nature, not his actual psychic condition. But it is better to know his actual condition and then the possibilities will take their proper value. At present they may seem too much in the air without their proper foundation.

I have returned. —

*Chokra* = Ramaiah

This is a difficult question to answer, because there is so much that is undeveloped; there are not the clear, certain and vivid forms which I found in the others.

What I see are certain things behind that have not yet their full representation in the surface nature. There is a strong psychic, a strong pranic being associated with the nature, a mental which is very active but has not found its means of self expression in the mind. The difficulty is in some knot of the physical birth producing a physical consciousness which is unequal to the powers of the soul and a life cast into circumstances that are still more in conflict with
the greater potentialities. There is behind an urge and insistent will of seeking demanding a work, an association, a knowledge, anything which will help the soul to break out from its covering sheath of the physical consciousness. But the fixities that are established by the outward being are not as yet the right forms that are wanted for his real self to emerge. They are only tentative determinations to which the stress of the urge behind gives a certain ardent and eager character. If the coverings can be broken, the powers behind will reveal their true strength.

As far as I can see, it is the mental that is the strongest obstacle. The nervous and the psychic will find their own proper development if he finds his right mind and way of action. Let him by whatever means open up his mentality, so that the soul may have a chance. The obstacle is in the formed nature, the result of past circumstances; if that is allowed to govern, it will never, however he educates it, give an open field to the soul. He may make some progress, but not realise in this life the true soul possibilities. He must break boldly the limits of the formed mental nature and let the soul powers flood out into the consciousness. That is the one way for him as it is for many others who are in a similar case—

I continue. 

N.P.K. Kalappa.\(^5\)

This is a clearer nature. In front is a lesser mental devata with a strong and brooding will—through whom all the main soul currents come. The nervous and psychic are governed by beings who hold back until this devata has found the way for the nature. I see him very clearly. It is like a low burning red flame which grows more and more intense, supporting a shaft of golden light. Behind is a greater deva of knowledge and will who will only come forward if the lesser being succeeds in opening the way. A psychic being with great psychic power and a large emotional scope is also waiting for the same decisive movement. This much I can see for the present. Here too the problem is a development of the outward consciousness into a sufficient instrument or rather channel; but

\(^5\) This name and the next were apparently written by the individuals concerned.—Ed.
the obstacle here is only a comparative narrowness of the channel owing to a blocking up by received ideas and mental habits and the obstacle is one of no great force, easily removed if a purifying flood of light can be poured into the channel.

That I cannot tell you. It depends on your bringing forward of your powers. I have no sufficient view of the future.

___

Ka. Neela Kantaiyar.

Here the power of the nature is psychic-intellectual; the presiding devata of the being sends down only an influence which turns into a seeking without a definite orientation. The activity has been governed by an intermediate being who is psychic with a turn to a curious action of the intelligence. The being has not in this case been concentrated round this governing action. There is in it a turn to a larger seeking. There are in this case too greater powers who can come forward if the chance is given. The presiding devata is one with a rainbow light around him, but there is a shaft of white descending on it from above. The psychic is of a very ruddy rose light. These are the two chief powers behind the veil of the physical consciousness.

[16]

30 corps physiques

Yes, I am here. —

The thirty are three tens. They are those who support the physical consciousness, not the physical body alone, but the obscurer consciousness of which it is the visible representation. In this consciousness there are three layers, one which receives the mental impressions and store[s] them in the corporeal system, so that it responds to a sum of habitual mental sanskaras; the second, which similarly responds to the vital and preserves the habit of replying to habitual vital impulses, the third of a more purely material kind. These beings are not intelligent, but obscure and fixed in their habits. When a change has to be made, it is they who are the last support to a resistance to the change, but also if they can be made to reply to new things, they help to make them fixed in the physical consciousness and thus to assure their stability.
Yes; only the number may vary.
That depends on the plasticity and richness of the physical consciousness. The more plastic, the more numerous the beings of this order. It may vary from three to ninety, or even many more in extraordinary cases.
The number can always increase and must if there is a development of this part of the being.
Yes.
No. — They belong to the invisible world of matter. It is only a part of the physical that is visible to the human senses.
At least three.
Yes.
It is prepared during the gestation; but really determined before birth.
No, not freely; they are attracted
No. I only explain the information given to you. I see only the psychical.
I think he should develop a little first, it is not always good to give information about themselves to people in a certain stage of development; it is better that their minds should be fluid.
No—
There are strong reasons against giving this information.

You are like that, first, because of the powers that are associated with you, one of whom has nothing to do with reason, but only with his own vehement impulses and desires. As for the form of your question, I might suggest as a paradox that you are unreasonable because you reason too much; that is you support too much your unreason by your reason.

The traditions are symbolic, not exact. The system of the Puranas was not created by anybody, but was a development of very ancient traditions infinitely older than the historic culture to

---

6 This last paragraph was marked with a line in the margin sometime after the writing was communicated. — Ed.
which the name of Puranic has been given. The present Puranas are very late creations with many ancient things imbedded in them and mixed with much of a recent creation.

No, but the traditions they contain are often older than the extant Veda.

I could hardly say. There is much that has survived from old civilisations that have perished, but of course in a changed form. One would have to count their origin perhaps by tens of thousands of years. There are things also that were believed in old times, forgotten and again recovered from the mental planes. It is difficult to disentangle the various materials and say which dates from what time. The theory of the Kalpas has existed in one form or another from times lost in the mist of oblivion.

I composed many things, but they are not extant.

Vyasa is a name under which many different people have been confused together. If you mean Krishna Dwaipayana, he is somewhere in the planes of being which are at the height of what may be called the mental heavens.

They cannot be numbered. Besides these existed through centuries after centuries in long generations of Rishis.

The seven Rishis are a tradition. The original seven Rishis refer to seven personalities who did not belong to the earth. The seven of tradition have not been on the earth since the Vedic times.

I know nothing about the White Lodge. I should fancy they belong to the lower worlds between the pranic and the mental. They are certainly not the Vedic Rishis—though the name given to one of them is that of a later Rishi of the times of the Upanishads.

Yes.

I do not think it is the same; but I cannot say certainly, for I do not know where Kutthumi is.

The best thing, I should imagine, would be to get them to enlarge their Theosophy by bringing in a current of new and upward pointing ideas; but that could not be done without either starting from their present ideas as a valid point of departure or breaking their framework and the latter would not be tolerated while the present control existed. It is rather through some kind
of communication and indirect influence that they could be helped, but I could not say exactly how. If anything is possible, it will spring out of circumstances and individual relations.

There are many ways of changing, but the most common is by a pressure from above. All that develops in the mental, psychic, vital has an influence which is precipitated into the obscure physical consciousness and works there more or less slowly. Certain slight changes are always being produced, others of a more important kind occasionally. The physical beings receive these influences and assimilate them in the already established physical consciousness and there make of them a sure basis for the mental, psychic and vital habits. These change decisively in proportion as they can get the guardians of the physical consciousness to accept and support them. A great force of will from above can sometimes make abrupt changes. But ordinarily the movement is more or less slow and within well established limits. Outside these limits these beings offer a strong resistance to any change, unless it confines itself to the higher activities. In proportion as a great change of mental thought for instance tries to affect the vital and physical being, the opposition becomes strong and is usually obstinate. It is sometimes rapidly overcome, sometimes can only be obtained by a slow process of transformation in the sanskaras of the physical beings. All this is in the ordinary kind of development. It is only if there is a great influx of power from above the mental that very extraordinary changes can usually be made. In that case the physical beings are sometimes overpowered, sometimes enlightened, sometimes rejected and replaced by others.

It must however be noted that abnormal changes of a purely physical kind are a different matter. They are the most difficult to accomplish. For there physical beings are in their own domain and exercising their strongest right which is to prevent any violent change in the organised habits of physical Nature. It needs

---

7 Written above "got rid", which was cancelled; an "of" after "got rid" remained unc cancelled in the MS. — Ed.
8 Cancelled in the MS, perhaps when the writing was reread. Since the previous word, "there", could also be read as "these", it seems possible that "there these" was misread as "these these", resulting in the cancellation. — Ed.
either an exceptional action of the physical Nature itself or an action of the suggestive mental powers in abnormal circumstances liberated from the usual obstacles or a powerful influx from the supramental and spiritual to change these things.

Do you mean, on the physical level?

That is when other physical beings with a different set of impulses are allowed to invade the established circle of physical things and replace the guardians of the old order. That is part of the process of the great crises of evolution.

He would either be taken up into some higher part of the being and form an element of Rudra force in the totality without being any longer active as a separate element of the personality, or else, if he remained as a separate part of the personality, he would be a sort of enlightened and passive instrument for the Purusha with a view to a certain divine action of a kind it is difficult to describe. There would be a divine use of the Rakshasa force changed from a nervous egoism to a sort of powerful dynamic utility on that plane, just as the animal power in the body might be divinely used for the greater purposes of the divinised Purusha.

[18]

The last time I was near the earth, this time I am beginning to withdraw. I think before long I must depart to prepare during a sufficiently long period for my rebirth among men.

Yes; but an interval of preparation is necessary during which I must gather forces on the intermediary planes. After that I shall have again to enter into relation with the material plane, but of course in a different way, and gather powers and influences of the earth to form my earthly basis of personality, mind, life and body.

Yes.

I believe so; but it may be either in the direct surroundings or in dependent circles.

Possibly, ten or fifteen years.

No. That would not fulfil my personal need which is to repair the mistake I made in my last existence.

The sign is that I shall be known by my powers of renewing the
link of memory between my own times and the new age. I shall be one who brings from that ancient past a power of realisation which shall enrich the elements of the new mankind. If this is not enough, then you may easily know me by seeing in vision the form of what I was renewed though changed in the form of my new body. 

A seer with knowledge can know the identity of one he sees even though not known before to the physical mind. 

It will be begun. 

That is not necessary. That I should be directly descended. 

No; I have not the physical vision. It is not always easy to see from a distance, and if I depend on any of you, I may be too much influenced by your impressions. 

I cannot say, certainly; but I think you are having too fixed and limited ideas about the matter. There will be, I think, not one, but several centres, and the whole thing will be of a fluid character before there is any decisive formation. I should say, do not fix things beforehand, but let the force that descends have freedom of movement, the freedom as of waters descending and flowing in many directions, afterwards the solid formation. 

My opinion is of no great value in that matter. The progress in these matters comes usually in two ways; either by a violent conversion which changes in a short time the whole direction of the nature, or by a slow and difficult process with many movements and reversions in which the progress made can only be estimated after a lapse of time by something having disappeared after alternate returns and weakenings or something new having been formed which attempts to come, then disappears, then comes again until it has made its foothold. Possibly, the effort in you has not decidedly taken either course, or it has attempted the first method and, failing, fallen back on the slower movement. I cannot say really, because it depends on a power which is not the psychical and which in your case is hidden behind a veil. In such cases, the outward signs are deceptive. 

Don’t put it in that form, because so put it is an already existing idea and attracts around it many difficulties. The word asrama and its concomitant associations, to begin with, should be cast away. Make the thing new in some flame of revealing intuition and then the chances of success will be real.
Let us say, the exchange-house of meeting influences of the self-creating superrace.
Words have power and names are often traps.
Once I go, I can no longer communicate.
I cannot say yet; it will not be immediately.
To most; it will not be so to me.
The pain of descent and self-limitation and loss of self in the body. Always the other planes are freer than the material; birth is usually a sacrifice.
Yes; they have the desire; but the fulfilment of the desire still involves a sacrifice.
Yes, a compression, that is the word.

Because I shall descend with a fuller consciousness and with the impulse that makes the superman. A greater Shakti will support me. I cannot explain all the process, but I know it will be so.
Death is usually a struggle. The struggle to get out of the compression is often as painful as the effort to get into it. But to some death is easy.
He may have in the end many ways, but the physical birth will continue.
The superman will take all the ways that are necessary for the divine design in the evolution; if physical birth ceases to be a part of the plan, it will for him discontinue; but there will be no other reason for him to avoid it.
Make your question more precise.
No, it must be prepared in actual man. It can come by a rapid change, a decisive descent of the divine supermind into the human being.

It would be impossible for them to be born in the monkey except by a miraculous descent of the thinking mind into the life mind of the animal. How do you suppose a human couple to be suddenly born of a couple of monkeys? By stages of ascent, each involving an influx of more and more mind, the first into an original animal, not necessarily the ape, but one that has now disappeared after providing the necessary basis.

Suppose, an animal that has evolved the life mind to its
highest limits of curiosity and adaptive invention and developed a favourable body. Suppose, an effort of Nature in certain individuals of the kind breaking a barrier between the animal mind and the secret greater mind which is subliminally brooding there in Nature, so that there is the influx I speak of, to however limited an extent. There is the seed man. Suppose a progression, more and more effort of progress, more and more result both of mental development and physical change. The lower kinds which are only a bridge, neither animals, nor complete men, disappear; the full basis of man is established. After that the real human progress. May it not so have happened?

[19]

The last time I made a mistake. It is only after the second month of the next year that I retire from the earth proximity. I imagined that a certain necessary development would proceed more quickly than it has actually done.

No, I have not met him. In any case the photograph by itself would tell me little. The fields of the psychic world are too numerous for meetings of this kind to be common, especially between souls descending to renew their touch with earth and others ascending and recently come from it.

I don’t quite seize the question.

What two kinds of the Divine? There are many aspects, infinite movements, but I do not catch the distinction you make, I mean the exact significance of what you mean. The Bhakta pure is limited, so is the man of intelligence. But knowledge can mount to the unknown and manifest it, so too can love or Ananda mount to the unseized and bring it down into manifestation. It is the power of the soul that matters, not so much the way; that is to say, I cannot say that one way is superior to the other.

A greater completeness is always superior to a lesser completeness; but also an extreme power of one can do miracles.

Be wise as a serpent and mild as a dove.

It is a possible approach, but it wants intuition and a happy seizing of occasion to deal with these people. What I would suggest
is to take hold of them by the strong side of Theosophy and not
to press too much on the weak side. People attached to a fixed
and traditional thinking—for it has become traditional with them
—have not usually the open nature which can bear exposure of
the weakness of what they believe in. One or two may profit by
that method, the most will react in a hostile fashion. On the other
hand if the strong side is seized and broadened to its real issues,
they may be led without knowing it to enlarge themselves and
meet with a good disposition the atmosphere of larger thought you
bring them. This reception is needed, because it is the difference
of the two atmospheres that is likely to be a stumbling block. The
second thing is if you can make a link with them through the active
side of their ideas. The outer side of the practical idea you have is
favourable from this standpoint, because it can easily be used as
a means to bring out the broader side of their own principles of
action. The ulterior motive has to be kept in the shadow for the
present; a time may come when they will receive it, but that will be
after the present dominating influence in the society has receded.
The third thing is to mix mainly on the one hand with the larger,
on the other with the simpler and more candid minds among them;
leave aside those who are in between. Be careful with Mrs Besant;
she is a difficult and deceptive personality.

The strong side is first their seeking after truth, which is con-
stantly moving near things that are true without quite seizing them;
the weak side is the imaginations, fancies and rigid formulas which
they build up like a wall between the truth and their search. If you
read their books, or listen to their ideas with patience, you will
easily be able to distinguish the two elements and bring out what I
call the strong side. Then there are their larger ideas which admit
truth in all religions and many philosophies and their attempt to
find a principle of unity for men of all races and peoples, etc. There
is much else which one can seize with advantage if one is in their
company and comes to know what is behind this movement of
theosophy. .

A very difficult question to answer. Everything depends on the
psychic impression you make and on keeping up that impression in
her psychic being, if that is favourable. The difficulty is in all the
rest of her nature which is full of egoism and of tricks of intelligence and tricks of passion which she herself cannot understand and that may trip you up at any moment. I really cannot say how to be careful. It is a matter of vigilance and self-adaptation as to which no specific suggestion can be given. Probably she will be very busy and you need not see too much of her. Only see her when you are yourself in a good mood. She is psychically sensitive in a certain fashion and when well impressed psychically can be openminded up to a certain degree. If you are yourself well disposed and not too critical of her weaknesses, you can create a favourable magnetic interchange which is of more importance in her case than the mental relation.

Tat — Asat 
Sat } Purusha and Prakriti
Tat is the unknowable Brahman of which you cannot say that it exists or does not exist because it cannot be defined as that which we know or understand by the idea of existence. Therefore it is not Sat. At the same time it is not Asat or non-existent because it contains existence in itself.

By Asat or non-being we mean something beyond which is a contradiction of existence. It is generally considered as a sort of nothingness because it is nothing that we call existence. There is nothing in it that we can perceive or realise as something. Tat contains both Sat and Asat; but it is neither of them.

By Sat we mean pure existence not limited by qualities, infinite
and eternal and unchanging, which is at the same time the source and foundation of all the worlds and the whole universe.

Sat – Purusha and Prakriti
Brahman representing itself in the universe as the stable, by immutable Existence (Sat), is Purusha, God, Spirit; representing itself as the motional by its power of active Consciousness (Chit) [it] is Nature, Force or World-Principle (Prakriti, Shakti, Maya). The play of these two principles is the life of the universe.

Prakriti [is] executive Nature as opposed to Purusha, which is the Soul governing, taking cognizance of and enjoying the works of Prakriti; Shakti [is] the self-existent, self-cognitive Power of the Lord (Ishwara, Deva, Purusha), which expresses itself in the workings of Prakriti.

**Seven Planes**
- Sat
- Chit-Tapas
- Ananda
- Vijnana
- Manas-Chitta
- Prana
- Annam

Sat is essence of being, pure, infinite and undivided.
Chit-Tapas is pure energy of consciousness, free in its rest or action, sovereign in its will.
Ananda is Beatitude, the bliss of pure conscious existence and energy.
Vijnana — Supra-mental knowledge — is the Causal Idea which, by supporting and secretly guiding the confused activities of Mind, Life and Body ensures and compels the right arrangement of the Universe.

Buddhi is the lower divided intelligence as opposed to Vijnana.

Manas-chitta is the life of sensations and emotions which are at the mercy of the outward touches of life and matter and their positive or negative reactions, joy and grief, pleasure and pain.

Prana is the hampered dynamic energies which, feeding upon physical substances, are dependent on and limited by their sustenance; also [it] is the lower or vital energy.

Annam is the divisible being which founds itself on the constant changeableness of physical substance.

Sat Immortality, pure essence
Chit-Tapas Free rest or free action
Ananda Pure bliss
Vijnana Revelation
Buddhi Perception
Manas-Chitta Sattwic — Science, philosophy, thought (intellectual)

1. Aesthetic — sense of beauty
   art, poetry, sculpture
2. Religious and moral — virtuous, holy, good
Prana Rajasic — desire, emotion, passion
Annam Tamasic — food, money, physical health, play

The movement of pranas in the body

There are five pranas, viz: prana, apana, samana, vyana and udana.

The movement of the prana is from the top of the body to the navel, apana from Muladhara to the navel. Prana and apana meet together near the navel and create samana. The movement of vyana is in the whole body. While samana creates bhuta from the foods, vyana distributes it into the body. The movement of udana is from the navel to the head. Its work is to carry the virya (tejas) to the head. The movement of udana is different to the Yogi. Then its movement is from the Muladhara (from where it carries the virya to the crown of the head and turn[s] it [into]\(^1\) ojas) to the crown of the head.

\(^1\) MS (scribal) out to
The colours

Violet—religion, ideality, spirituality
Yellow—intellect, perception, activity and flexibility of mind
Orange—psychical power
Black—darkness, inertia, melancholy, pessimism, timidity, etc.
Grey—despondency and dullness
Red—activity; or if a deep angry colour, anger; or if scarlet, lust; if rose, love.
White—purity, strength, etc.
Green—beneficency, unselfishness, readiness to serve without respect to one’s own desire or ambition.
Dull green—bad qualities of prana, jealousy etc.
Blue—Spirituality more of the Bhakti type
Flaming golden yellow—Vijnana

[6]

Objects of Yoga

To put it in a word, the object of Yoga is God or the Divine or the Supreme whatever our conception of these things may be. There are minor objects of Yoga which are merely parts or separate aspects of the general object. We are composed of being, consciousness, energy and delight represented to us as life, knowledge, force and power, emotion, sensation and desire. The object of Yoga is to turn all these things towards God. Therefore to become one with God, to be Divine and live a Divine Life is the first object of Yoga. The second is to know God in Himself and in ourselves and in everything. The third is to make ourselves one with the Divine Will and to do in our life a Divine Work by means of the Divine Power using us as an instrument. The fourth object is to enjoy God in all beings, in all things and in all that happens.

Since the Life is to be Divine there must be siddhi or Perfection of the Being.

The difference between the Divine Being and Divine Life and ours is that we are in the limited ego, confined to our own physical and mental experiences while that is beyond ego infinite eternal and all-
embracing. Therefore we have to get rid of the Ego in order to be Divine. Ego persists because of three things; first because we think we are the body; secondly because of desire; and thirdly because of the mental idea that I am a separate being existing in my own mind and body independently of everything and everybody else. We have therefore to know ourselves, to realise that we are not the body, nor the Prana, nor the mind and to find out our real Self.

That is called Atmajnana. Secondly we have to get rid of the idea of ourselves and others as separate being to realise everything as one Brahman or one Purusha or Ishwara manifesting himself in different names and forms. This Self and the Brahman or Ishwara are the same. We have to know what it is, how it manifests itself in the world and beings that we see. All this we have to realise in our experience and not merely know by the intellect. We have to realise It as Sachchidananda and to become that ourselves.

Thirdly we have to get rid of desire and replace it by the Ananda of Sachchidananda. After that in order to live and act in the world we have to act as mere instruments so the Divine Force which we must realise as the sole Power which acts in the world and we must get rid of the idea that actions are ours or that the fruit of the action belongs to us personally. The only work we have to do in the world is to perfect ourselves, carry out whatever the Divine Power wills that we should do and so far as possible help others to perfect themselves and help the life of humanity to become Divine.

[7]

Methods of Yoga
(Reproduction from memory)²

The first two things necessary for the practice of Yoga [are]³ Will and Abhyasa. In the course of Yoga these two things give helping hands to the perfection of the being unto the very end. Slowly and steadily, whether conscious or unconscious to the being itself, they are

² Oral remarks by Sri Aurobindo recorded from memory by a disciple. Much of the wording clearly is not Sri Aurobindo’s.—Ed.
³ MS (scribal) is
performing their functions in the onward march of human evolution. Be we unconscious of them, it will take a pretty long time to attain to that perfection. But once we are conscious, then we become the Will itself. Consciously we can quicken the progress. This method gives rise to individual perfected beings. As before, they will not see glimpses of the Light of Truth. They will ever be seeing the Eternal Truth. They will turn the darkness around them and in them, into Light.

Hitherto, we should have felt a certain amount of difficulty in putting into Abhyasa what we have willed. Now there will be no more putting into Abhyasa but simply we will be seeing the march of progress without the least idea of strain felt by us. So first let us will in order to be not weak and unconscious but strong and conscious. Then there will be no more difficulty.

Until then we have to practise Yoga by two important means—by means of Purusha and by means of Prakriti.

Means of Purusha:—An ordinary man thinks he desires, he feels and so on. But what we are to do is to separate ourselves from desire, feeling etc. Whenever desire comes, we must realise that we are not desiring but only realise it as the coming and going of Desire. So also with the feeling, thinking etc. For instance, when [a] certain anguish comes, an ordinary man thinks and feels that he is lost and so on. He weeps bitterly and reduces himself to a mere crawling worm. We have to think that that anguish is a kind of action or reaction, going on in the heart. Anguish cannot affect me. I am the unsullied Self; it cannot touch me.

Means of Prakriti:—Whenever the thinking part of man is active, we notice very clearly that the work is going on in a place somewhere above the forehead. The action is centred in the heart, when the feelings are awake in him. In both the cases, the self takes the heart and mind for its theatre of action. In the one case, we are those thoughts and in the other, we are those feelings. Putting this in plain words, our actions proceed either from the heart or from the mind, while the actions of the animals proceed from the senses. We see the vast difference between an animal and a man. So if man transfers his centre of heart and mind, to that of a higher one, think how grand the God-man would be! That centre according to the psychology of the Hindus is Vijnana. This is just above
the crown of [the] head. This is known as Sahasradala or the place where the Shakti is situated. From this seat of activity, all actions emanate.

Therefore the first Sadhana is not to feel ourselves either in the heart or in the mind but there just above the crown of [the] head. By these two means, we separate ourselves from body, life and mind. On account of this, misery cannot affect us and we will be above happiness and misery. Apart from all these, the main thing we effect thereby is, we will be in a position henceforward, to become one with the Brahman and to realise that everything is Brahman and everything is only one of the several forms, names and colours etc., of that one Vast Brahman. Whenever we see people walking along the road, we will no more see them as several different beings but as several forms of one vast undivided Brahman. As [a] rose is the manifestation of form, colour, odour so the Brahman is the manifestation of so many things we perceive by the senses and think by the mind etc.

Along with these, we must put into practice one after the other what we are going to see hereafter as the Sapta Chatusthayas. They are namely Samata, Shakti, Vijnana, Sharira, Karma, Brahman and Siddhi Chatusthayas. Chatusthayas means four divisions. These seven Chatusthayas have been arranged in their natural and logical order. But it is not required of you to get them in practice in this given order. One may begin with a chatusthaya which [one] finds to be easier and in this way he is expected to practise. Why they are arranged in this way, how we are to effect them in us, when we will have success, all will be known to us when we finish writing and sincerely practise.
SAPTA CHATUSTHAYA—SCRIBAL VERSION

I. Samata Chatusthaya

Samata, Shanti, Sukha, Hasya (Atmaprasada)

</tr>
<tr>
<td>Udasinata</td>
<td>Sama Bhoga—prana</td>
</tr>
<tr>
<td>Nati</td>
<td>Sama Ananda—spirit</td>
</tr>
</tbody>
</table>

Samata is accepting everything in the same way without any disturbance in any part of the being. Disturbance is caused [by]\(^1\) the want of harmony between the Chit-shakti in myself and the contacts of Chit-shakti outside. Pain, grief, dislike etc. are merely the system’s way of saying that it objects to a particular contact because of want of harmony. The system cannot bear an inharmonious contact or even a pleasant one if it is too intense or too prolonged. Disgust, fear, horror, shame are attempts of the system to repel the unpleasant contact and defend itself.

Titiksha means the power of endurance. You bear the unpleasant contact yourself standing back from it with a watching mind and teaching the system to bear it.

What follows is Udasinata. Udasina means standing high. Udasinata is indifference, the Purusha standing high above these contacts and not minding what they are.

Nati is the subsequent one. It is the feeling of submission to God’s Will, all contacts being regarded as the touches of God Himself.

Sama Rasa or equal Rasa from all things, happenings, experiences, objects etc. we have to take through our mind and intellect.

Sama Bhoga is the equal enjoyment in the Prana of all things, happenings, experiences, objects etc.

\(^1\) MS (scribal) owing to www.holybooks.com
Sama Ananda is the joy of Unity in everything and with everything.

Sama Rasa and Sama Bhoga cannot be secured unless we have Sama Ananda, but it is difficult for Sama Ananda to come unless the mind and Prana have been taught Samata in Rasa and Bhoga.

[The] result of complete Samata is complete Shanti; on the other hand if there is any touch of anxiety, grief, disappointment, depression etc., it is a sign that Samata is not complete. When we get complete Shanti, then we get complete Sukham. Shanti is negative; it is a state of freedom from trouble. Sukham is positive; it is not merely freedom from grief and pain, but a positive state of happiness in the whole system.

Atmaprasada is a state of clearness, purity, contentment in the whole self, i.e. [the] essence of Sukham. When Sukham begins to become strong Ananda, then it is Hasya, a state of positive joy and cheerfulness which takes the whole of Life and the world as a pleasant and amusing play.

II. Shakti Chatusthaya

Viryam, Shakti, Daivi Prakriti, Sraddha

Viryam: Chaturvarnya in guna

Brahmana, Kshatriya, Vaishya, Shudra

Brahmana: Dhairyam, Jnanalipsa, Jnanaparakasha, Brahmavarchasya.

Shakti is the right guna and right state of activity or right elements of shakti-character in all parts of the system. The chaturvarnya in guna may be called Virya. It is the qualities of the four varnas in character. The perfect man has all the four in him, although one usually predominates and gives the character its general type. First, a man should have Brahmana qualities, [those of] the man of knowledge. He should have, first, the general temperament of the Brahmin, that is to say calmness, patience, steadiness and thoughtfulness, which may all be expressed by the word Dhairyam. Then he should have the

2 MS (scribal) or
tendency towards knowledge, especially the Divine Knowledge, but also all kinds of knowledge on all kinds of subjects, with the necessary mental openness and curiosity. This is Jnanalipsa. The Brahmin has not only the thirst for knowledge but also a general clearness of mind and its tendency to be easily illuminated by ideas and to receive the truth. This is Jnanaparakasha. He has also a spiritual force which comes from knowledge and purity. This is Brahmavarchasya.

Kshatriya: [Abhaya, Sahasa], Yasholipsa, Atma Shakti (Atma Slagha)

There should also be the qualities of the Kshatriya, the qualities of the man of action or the fighter. The first of these is courage and it is of two kinds—Abhaya or passive courage which is alarmed by no danger and shrinks from no peril that offers itself and from no misfortune or suffering. The second is Sahasa or active courage, that is to say, the daring to undertake any enterprise however difficult or apparently impossible and carry it through in spite of all dangers, suffering, failures, obstacles and oppositions. For this, two other things are necessary. [First,] a tendency of the nature to insist on the battle and victory and effort and triumph, i.e. Yasholipsa. Secondly, there must be a strong self-confidence and a high idea of the power that is in one’s self. This is Atma Shakti or Atma Slagha.

Vaishya: Vyaya, Kaushala, Dana, Bhogalipsa

The Vaishya qualities are also necessary for action and enjoyment. The first is the readiness to spend labour, resources, materials, means and life itself quite freely, taking great risks of loss in order to secure great gains. This may be called Vyaya. But with this there must be skill in the use of means and methods and their proper disposition in order to secure the end and also the knowledge of what is or is not possible to be gained by a particular means or method or a particular expense. There should be a sense of proportion, of order, and a skill [in] arrangement and management. All this may be called Kaushala. Also in the use of one’s possessions, there are two other qualities of [the] Vaishya which are necessary. [First there must be] the readiness

---

3 MS (scribal) Courage
4 MS (scribal) and
to give no less than to receive and to share with the world what one gets from the world. This is [the]\(^5\) nature of love as it is ordinarily practised; [this]\(^6\) giving and receiving may be called Dana. And then there should be a tendency to enjoy, i.e. Bhogalipsa.

Shudra: [Kama, Prema,] Dasyalipsa, Atmasamapana.

The qualities of the Shudra are no less important. The Vaishya has the spirit of order, opposition and interchange. The Shudra has the spirit of service. Service is governed by two motives: first desire or kama, secondly love or prema. In the perfect man, Kama should take the form of an interest in the bodily well-being of the world and a wish to see that physically it lacks nothing. Love in [the] Shudra is not like that of [the] Vaishya, for it seeks no return. It is governed by the third quality of the Shudra, the desire to serve and this in the perfect man becomes the desire to serve God-in-all. This is Dasyalipsa. The perfection of the Shudra nature is in self-surrender, the giving of one's self without demanding a return. This is Atmasamapana.

The nature of the Brahmana is knowledge, of the Kshatriya force and courage, of the Vaishya skill in works, and of the Shudra self-giving and service. The perfect character possesses all of these; for they are necessary for the perfect action.

Shakti

Shakti is a general force by which each of the four parts of the system (the body, the Prana, the Chitta and the Buddhi) is kept at its highest state of perfection. The perfect state of the body consists in four things, a sense of entire lightness (Laghuta), a sense of strength and energy (Balam), a sense of [a] certain mass and force (Mahattwa) and the power of containing without strain or reaction any working however intense and constant, of energy however great and [puissant].\(^7\)

This is Dharana Samarthyam.

The perfect state of Prana consists in a sense of fullness of vital force (Purnata), of general clearness and cheerfulness (Prasannata), of equality in all experiences, shocks and contacts (Samata), and in the

\(^5\) MS (scribal) a
\(^6\) MS (scribal) a
\(^7\) MS (scribal) possible
capacity to take all enjoyment of the world without desire but also without exhaustion and satiety. This is Bhoga Samarthyam.

The perfect state of Chitta consists in a sense of richness and gladness of feeling (Snigdhata), of abounding moral power and energy (Tejas), in a confidence [in the] \(^8\) divine grace and help and general sense of mangala (Kalyana Sraddha) and in the capacity for unbounded love for all beings and all objects. This is Prema Samarthyam.

The perfect state of Buddhi consists in a general purity and clearness of [the] thinking faculty (Vishuddhata and Prakasha); in richness and great variety and minuteness of the perceptions ([Vichita]\(^9\) Bodha); and in the power of the mind to receive and adapt itself to any kind of knowledge without feeling anywhere a limit or an incapacity. This is Jnana Samarthyam.

Daivi Prakriti (Divine Nature)

This means the possession of the four Shaktis—Maheshwari, the Shakti of greatness and knowledge; Mahakali, the Shakti of force and violence; Mahalakshmi, the Shakti of beauty, love and delight; and Mahasaraswati, the Shakti of worldly reason (science) and work. The possession of these Shaktis carries with it a sense of the Divine Power, of general compassion [and] helpfulness to the world, and of faculty for any work that [the] nature may undertake.

Sraddha or Faith
1. Faith in God—Directing Power, Antaryami

III. Vijnana Chatusthaya

Jnanam (Divine thought), Trikaladrishti, Ashta Siddhi, Samadhi

Jnanam: The mental action consists of four parts: first of all, perception of the object and comparison and contrast with other objects. [Then]\(^{10}\) reasoning about the objects. Judgment whether the reasoning

---

\(^8\) MS (scribal) of
\(^9\) MS (scribal) Vichar
\(^{10}\) MS (scribal) The
is right or not. And judgment is aided by memory and imagination.

Judgment is a direct perception of the Truth, which may or may not be aided by reasoning and other helps.

Imagination is the power of presenting to yourself things or truths not actually perceived or established by reason, [of] seeing possibilities other than actual experience.

Memory is the power of retaining and reproducing mental or sensory impressions.

Judgment has two parts—discernment and direct perception. In the mind both of them are uncertain. In the Vijnana, there is a faculty of discernment called Viveka or Intuitive Discrimination, which sees at once what is wrong and what is right, the real difference between things and also their real resemblances and identities and also how far a truth is true and how far it has to be qualified. This Viveka is independent of reasoning. It knows the fact directly but not by a mere instinct; it knows it luminously with a clear perception which is certain and makes no mistake.

There is also a faculty of Vijnana called Intuition which does the work of reasoning without the necessity of reasoning to arrive at a conclusion; that is to say it [comes to] the conclusion not as a conclusion from other facts but as a fact in itself. Afterwards, it can group around that fact all the other facts not as reasons but as related facts which help to retain it.

Inspiration is called Sruti or Hearing because it is not the direct sight of the Truth but a sort of coming of the Truth into the mind in a sudden flash. Generally this Truth comes as a vibration which carries the Truth in it and sometimes it comes as the actual word which by revealing its meaning brings new truth to the mind.

The fourth faculty is Drishti or direct sight. This is not, like intuition, looking into a person, an object or a group of circumstances and finding out the truth about them, but it is the vision of the Truth itself, coming as a luminous thought independent of all circumstances, objects etc.

You must first of all get the Intuition and Discrimination to take up

---

11 MS (scribal) with
12 MS (scribal) does

www.holybooks.com
the ordinary work of mind, because they alone among the Vijnana fac-
ulties can give all the circumstances about the Truth. Otherwise Drishti
and Sruti [will be distorted], because the reason will try to interpret
them in the light of the circumstances as they are understood rightly
or wrongly by the human mind. Even the Intuition and Discrimination
will be at first distorted by the action of the reason, imagination, wrong
judgment, wrong memory etc. Intuition and Discrimination have to go
on working and getting stronger and surer until they are able to clear
out from the mind the other activities and themselves take up the
whole work. As they increase in Force and Light, the other two will
begin to act of themselves. When these four faculties or any of them
are applied to the things of thought, ideas and knowledge generally it
may be called Jnanam or Divine Thought. When these four faculties
are applied to the facts and events of the material world the result
is Trikaladrishti, which means the direct knowledge of the past, the
intuitive knowledge of the present and the prophetic knowledge of
the future. To have it properly, it is necessary that there should be no
desire or personal interest in the result or any trusting to reasoning,
inferences, speculation etc.

Ashta Siddhi

There are two siddhis of knowledge, three of power and three
of being. All siddhis exist already in Nature. They exist in you. Only
owing to habitual limitations you make a use of them which is me-
chanical and limited. By breaking these limitations, one is able to get
the conscious and voluntary use of them. The three siddhis of being are
siddhis of the Sat or pure substance. In matter, Sat uses these siddhis
according to fixed laws but in itself it is free to use them as it chooses.
If one can get partly or entirely this freedom, one is said to have these
three siddhis. They are Mahima including Garima, second Laghima
and third Anima.

Sat manifests as Chit, pure consciousness, and Chit has two sides—
consciousness and energy, that is to say knowledge and power.
Consciousness in one material being communicates with the same
consciousness in another material being by certain fixed methods such
as speech, gesture, writing etc. and unconscious mental communica-
tion. But these limitations are mere habits [and other methods are
possible,] as for instance ants communicate by touch and not by speech. Consciousness in itself is free to communicate between one mind and another without physical means consciously and voluntarily. The two siddhis by which this is done are called Vyapti and Prakamya.

In the same way there is a power in the consciousness of acting upon other conscious beings or even upon things without physical means or persuasion or compulsion. Great men are said to make others do their will by a sort of magnetism, that is to say there is a force in their words, in their action, or even in their silent will or mere presence which influences and compels others. To have these siddhis of power is to have the conscious and voluntary use of this force of Chit. The three powers are Aishwarya, Ishita, Vashita. These powers can only be entirely acquired or safely used when we have got rid of Egoism and identified ourselves with the infinite Will and the infinite Consciousness. They are sometimes employed by mechanical means, e.g. with the aid of Mantras, Tantric Kriyas (special processes), etc.

Vyapti is when the thoughts, feelings etc. of others or any kind of knowledge of things outside yourself are felt coming to the mind from those things or persons. This is the power of receptive Vyapti. There is also a power of communicative Vyapti, when you can send or put your own thought, feeling etc. into someone else.\(^{13}\)

Prakamya is when you look mentally or physically at somebody or something and perceive what is in that person or thing, thoughts, feelings, facts about them etc. There is also another kind of Prakamya which is not of the mind but of the senses. It is the power of perceiving smells, sounds, contacts, tastes, lights, colours and other objects of sense which are either not at all perceptible to ordinary men or beyond the range of your ordinary senses.

\(^{13}\) The following passage is found in a scribal copy not used for the text printed here. This copy calls the communicative side of vyapti “communication or broadcasting”, and goes on: What happens in the Amutra happens in the Iha. What the Chit-shakti reveals in the Spirit, the Maya-shakti crudely and materially attempts in the material and mental universes. So spiritual Communism of Vijnana has its shadow in the material and Bolshevik Communism; and the Siddhis of the Vijnana are attempted in wireless telegraphy, broadcasting, telephone, image transcription [transmission?].
Vashita is when you concentrate your will on a person or object so as to control it.

Aishwarya is when you merely use the will without any such concentration or control and things happen or people act according to that will.

Ishita is when you do not will but merely have a want or need or a sense that something ought to be and that thing comes to you or happens.

Mahima is unhampered force in the mental power or in the physical power. In the physical it shows itself by an abnormal strength which is not muscular and may even develop into the power of increasing the size and weight of the body etc.

Laghima is a similar power of lightness, that is to say of freedom from all pressure or weighing down in the mental, pranic or physical being. By Laghima it is possible to get rid of weariness and exhaustion and to overcome gravitation. It is the basis of Utthapana.

Anima is the power of freeing the atoms of subtle or gross matter (Sukshma or Sthula) from their ordinary limitations. By this power one can get free of physical strain or pain or even make the body as light as one chooses. It is by this power that Yogs were supposed to make themselves invisible [and] invulnerable or [to] free the body from decay and death.

Samadhi

Samadhi means properly the placing of the consciousness on any particular object or in any particular condition. It is generally used for a state of consciousness in which the mind is withdrawn from outward things by [one’s] placing the full energy of the consciousness on any particular object or general field. Thus by Samadhi one can become aware of things in this world outside our ordinary range or go into other worlds or other planes of existence. One can also enter into those parts of one’s own existence which are either above or below ordinary consciousness or as it is said “superconscient” or “subconscient”.

Samadhi may be in three states—Jagrat or waking, Swapna or dream, Sushupta or deep sleep.

Jagrat Samadhi is when in the waking consciousness, we are able to concentrate and become aware of things beyond our consciousness.
This Samadhi may either bring images and experiences seen outside one’s own self as if in the physical atmosphere or else inside one’s self, generally with the eyes closed. When the eyes are closed, another ether than the physical appears which is called Chittakasha or mental ether. It is in this that images are seen. There is also another ether behind called Chidakasha.

Swapna Samadhi is when the mind has lost its outward consciousness of outward surroundings and goes inside itself. It then has the experience either in itself or of scenes and happenings of this world or other worlds, of the past, present or future. When these experiences are merely distorted memories or confused, falsified and fragmentary, then it is called ordinary dream. [This happens when] the mind proper is not acting at all in the physical consciousness and only parts of the nervous system are awake. But when part of the mind remains as it were awake even in sleep, then one may get records of true and actual experiences. These are not dreams but internal visions. Part of the mind is ranging through time and space or in other worlds. Another part is on the watch to receive its experiences and report them to the physical consciousness.

Sushupta Samadhi, the third stage, is when the whole physical consciousness, at least that part of it which belongs to the waking self, is asleep. When we are in deep sleep we think that nothing is going on in us; but that is a mistake. Consciousness is active all the time. But no report comes from it to the physical mind. In Sushupta Samadhi, one can get to the very limit of human consciousness, even the superconscient. Everything which we cannot attain in the waking state is there in us in the dream-self and the sleep-self.

Samadhi is a means of increasing the range of consciousness. We can extend the inner wakefulness in the swapna to planes of existence which are at present sushupta to us and bring them into experience of swapna and even eventually into the waking state.
There are several kinds of Samadhi according to the ordinary classification, such as Satarka in which the mind withdrawn into itself goes on thinking and reasoning and doubting; or Savichara in which the mind does not reason logically but judges and perceives; and so on up to Nirvikalpa Samadhi in which all the lower organs are stopped and there is only the superconscious experience of the Brahman.

IV. Sharira Chatusthaya

Arogya, Utthapana, Saundarya, Ananda

Arogya is the state of being healthy. There are three stages:
(1) When the system is normally healthy and only gets disturbed by exceptional causes or very strong strain, such as continual exposure to cold, overstrain of any kind.
(2) When even exceptional causes or great overstrain cannot disturb the system; this shows that there is full Arogya Shakti.
(3) Immortality in the body.

Utthapana is the state of not being subject to the pressure of physical forces. There are also three stages here:
(1) When there is a great force, lightness and strength in the body (full of vital energy); this shows that the body is full of Prana Shakti.
(2) When there is no physical weariness, no exhaustion of the brain or nervous centres.
(3) When one is not necessarily subject to the law of gravitation or other physical laws.

Saundarya is the state of being beautiful. There are also three stages here:
(1) When there is brightness in the body combined with sweetness of voice and charm of expression etc.
(2) Continual youth.
(3) When the features and figure can be changed to a form of perfect beauty.

Ananda referred to here is Physical Ananda or Kamananda. This is of various kinds, sensuous, sensual etc.
V. Karma Chatusthaya

Krishna, Kali, Karma, Kama

Krishna is the Ishwara taking delight in the world.
Kali is the Shakti carrying out the Lila according to the pleasure of the Ishwara.
Karma is the Divine Action.
Kama is the Divine Enjoyment.

VI. Brahma Chatusthaya

Sarvam, Anantam, Jnanam, Anandam Brahma

Sarvam Brahma— when we realise one thing in the universe.
Anantam Brahma— when we realise Infinite Force and Quality at play in all forms.
Jnanam Brahma— when we realise a consciousness in everything which is aware of all.
Anandam Brahma— when we realise in that consciousness a delight in all things.

VII. Siddhi Chatusthaya

Shuddhi, Mukti, Bhukti, Siddhi

Shuddhi

(1) Of the Pranas—Release from Vasana or desire, that is Asakti or attachment, action of emotion, e.g. I must have that, I cannot do without that; Kamana or longing, action of desire, i.e. I want that; Raga-dwesha or preference, action of mind, i.e. I prefer this. There are also [the opposites of these], non-attachment, non-longing or craving and non-preference. We have also to [be released] from these things. When you have effected these three things you will have perfect Samata. Then you will naturally have perfect Shanti, that is Divine Peace [and] perfect or Shuddha Bhoga, that is Divine Enjoyment.

19 MS (scribal) other sides
20 MS (scribal) release
Shanti is the negative Ananda and those have it who rest in the Nirguna Brahman. Shuddha Bhoga is the positive Ananda and those have it who rest in the Trigunatita Ananta Brahman. Enjoy the world with Shuddha Bhoga based on the perfect Shanti. That which you get as the result of satisfied desire is troubled, unsafe, feverish or limited, but Shuddha Bhoga is calm, self-possessed, victorious, unlimited, without satiety and vairagya, immortally blissful. It is in a word, not Harsha, not Sukha, but Ananda. It is Amrita, it is Divinity and Immortality, it is [becoming of] one nature with God. [The soul] has then no Kama but pure Lipsa, an infinite readiness to take and enjoy whatever God gives.

(2) Of the Chitta — Release from all sanskaras of feeling.

(a) Thought impulses start up from Chitta as instincts, inspirations, insights, intuitions etc. They come up coloured by emotions, distorted by associations and perverted by [the] imagination[s] which bring them up. Bhakti, genius, poetic inspiration all come from this source.

(b) Impulses of feeling are of two kinds, natural or eternal, artificial or Vikaras. Love, courage, compassion are natural and are actions caused by Jnanam. Hatred, fear, disgust are Vikaras and are distortions or reactions caused by Ajnanam.

(c) Impulses of action: Shuddha Pravritti, that is, action without desire independent of emotion. Ashuddha Pravritti, that is, action stirred by two forces, desire and emotion. Prohibit and inhibit by will all action or speech that starts blindly from the passions or emotions surging in the heart.

(3) Of the Manas — Release from habitual thoughts. Still the conceptual activity of the Manas and transfer to the Buddhi its perceptual activity (a part of Prakamya).

(4) Of the Buddhi — Release from reason, imagination, memory and logic and replace[ment of] them by the[ir] divine counterpart[s].

(5) Of the Body — Release from all bodily impurities, disease etc., and attain[ment of] Immortality.

---

21 MS (scribal) of becoming
22 MS (scribal) It
23 This paragraph is an almost verbatim transcription of most of the fifth paragraph of Chapter VII of Yogic Sadhan. — Ed.

www.holybooks.com
Mukti
(1) From Dwandwas or dualities
(a) Of the Prana—Kshutpipasa, hunger and thirst; Shitoshna, heat and cold; pleasure and pain of the body.
(b) Of the Chitta—Priyapriyabodha, the sense or feeling of love and hatred; Mangalamangalabodha, the sense of good and evil, good and bad fortune; Manapamanabodha, the sense of honour and obloquy.
(c) Of the Mind (that is, Manas and Buddhi)—Satyasatya, the knowledge of truth and falsehood; Papapunya, the knowledge of virtue and vice.
(2) From Ajñanam and the three gunas.
(a) Sattwa—wherever there is Sattwa, that is the clearness of being or Prakasha, it brings with it sukhā or happiness; Sattwa is full of Prakasha.
Sattwa in mind—clearness of mind; we get knowledge.
Sattwa in Chitta—the pure love; we get love.24
Sattwa in body—ease, health and so on.
(b) Rajas is the principle of desire and activity; Rajas is full of Pravritti. The result of Rajas is any kind of pain, Duhkha or Ashanti, trouble, disturbance, anxiety.
(c) Tamas is Aprakasha and Apravritti. The result is fear, idleness, too much of sleep, ignorance.
Sattwa is to be replaced by pure Prakasha, Rajas by pure Pravritti, Tamas by pure Shama. There is no desire and no necessity of acting but there is the Divine Impulse which acts through us—this is pure Pravritti. When there is no such Divine Impulse, it is pure Shama, Tapas or force of action being there but not acting. Just as Pravritti is a Divine Force coming and making you act, so the pure Prakasha is the Divine Light bringing knowledge into the consciousness.

By being indifferent, we have to effect Shama; then acting as far as possible only under the Divine Impulse, we get pure Tapas. By keeping the mind always unattached to its own thoughts and activities and on

24 In all scribal copies, “we get” follows the noun in these two lines. Even when the order of the words is changed the sense remains somewhat unclear.—Ed.
the watch for Light from above and as far as possible quiet, we get Prakasha.

(3) From Ahankara; from the ignorance that you are the actor etc. Whenever you say “I like this”, “I do not want this”, there you choose and [act]. Whatever comes to you, you have to take and enjoy. Replace Ahankara or the idea of Aham by the idea that you are the Ishwara.

Bhukti is the Delight of existence in itself, independent of every experience and extending itself to all experiences. [It has three forms:]

(1) Rasagrasanam or taking the Rasa in the mind: (a) bodily sensations, (b) food, (c) events, (d) feelings, (e) thoughts.

(2) Bhoga in the Prana, i.e. Bhoga without Kama or enjoyment without desire.

(3) Ananda throughout the system.

- Kamananda — Physical Ananda, [e.g.] Vishayananda, i.e. sensuous pleasure
- Premananda — Getting delight by positive feeling of Love (Chitta)
- Ahaitukananda — Delight without any cause (Manas)
- Chidghanananda — Ananda of the Chit in the object full of the gunas (Vijnana)
- Shuddhananda — Ananda of the Beauty of everything (Ananda)
- Chidananda — Ananda of pure consciousness without the gunas (Chit-tapas)
- Sadananda — Ananda of pure existence apart from all objects and experiences (Sat)

Siddhi of the five Chatusthayas, Brahma, Karma, Sharira, Vijnana and Samata.

Note on the Texts
Note on the Texts

RECORD OF YOGA is a diary of Sri Aurobindo’s sādhana or practice of yoga. He wrote entries with some regularity between 1912 and 1920, as well as scattered entries during the years 1909, 1911 and 1927. Some sections of entries have titles, such as “Journal of Yoga”, “Record of the Yoga”, “Record of Yoga”, “Notebook of the Sadhana”, “Yoga Diary” and “Yoga Record”. The title he used most often is “Record of Yoga” In the text itself he generally referred to the work as “the record” and used the verb “to record” for the act of writing in it. For these reasons the editors have chosen Record of Yoga as the general title of the work.

In the entry of 1 July 1912, Sri Aurobindo noted that he had been doing yoga for almost seven years. He had begun in 1905 with the practice of prāṇāyāma or breath control. This practice became irregular when he started his political career in 1906 and by the end of 1907 he suffered a “complete arrest” of yogic experience. In January 1908 a yogi named Vishnu Bhaskar Lele showed him how to silence the activity of his mind. This led to the experience of the static Brahman or Nirvana. A few months later, in Alipore Jail, he had the experience of the dynamic Brahman or cosmic consciousness. He later referred to these as the first two of the “four great realisations” of his yoga. The other two—“that of the supreme Reality with the static and dynamic Brahman as its two aspects and that of the higher planes of consciousness leading to the Supermind”—began in jail, but developed more fully during the period of sadhana chronicled in the Record.

In April 1910, Sri Aurobindo left politics and settled in Pondicherry. Sometime after his arrival, as he explained in 1926, he “was given” a “programme of what I would do” in yoga. This programme had seven sections, each made up of four elements. It thus was known as “sapta chatusthaya” or the seven tetrads. (The proper transliteration of the Sanskrit phrase is sapta catuṣṭaya. Sri Aurobindo almost
invariably spelled the second word “chatusthaya.”) Because of the importance of this system to the yoga of the Record, the editors have placed Sri Aurobindo’s written presentations of the seven chatushayas before the dated Record entries. The system is explained in more detail in the “scribal version” of Sapta Chatusthaya, which is published in the Appendix, and in the introduction to the glossary, which is published in a separate booklet. All the terms of the system and all other non-English terms found in the Record are defined in the glossary.

Sri Aurobindo used an assortment of notebooks and loose sheets for writing the Record. The notebooks are of the same kinds as those used for other writings of the period; indeed many of them also contain notes, prose articles, poems, etc. Most of them are cheap student exercise-books, others are simply perforated pads of note-paper. There are also a few bound pocket notebooks; only one of these is a printed diary. In all, twenty-eight notebooks were used exclusively or principally for the Record. Several others contain significant amounts of Record material. In addition, a number of diary entries, mostly undated, and an assortment of Record-related jottings have been found scattered in a dozen or more notebooks and on loose sheets and odd scraps of paper.

Most diary entries, as opposed to records of “script” and “lipi” (these terms are explained below), seem to have been written down directly without notes. Entries were usually written on the dates given in the headings; sometimes there were two or more sittings in a day. Occasionally, however, the sadhana of the preceding night was noted down the next morning. Sometimes a single entry covers two or more days. Other entries seem to have been written a day or two in retrospect.

Many Record entries are divided into sections by means of single and double lines in the manuscript. That the lines had a specific purpose is indicated by the fact that Sri Aurobindo sometimes cancelled them. So far as typography permits, such lines and other markings are reproduced as they occur in the notebooks.

The editors have divided the Record proper, that is, the dated diary entries, into three parts: (1) entries written before the start of the “regular record” in November 1912; (2) the main series of entries, written between November 1912 and October 1920; (3) entries written in 1927 (and perhaps also at the end of 1926). The editors have further
divided each of the parts into sections. These begin either where Sri Aurobindo resumed making entries after a significant break in the writing, or where he began work in a new notebook. Each section thus covers a specific chronological period, though sometimes there is a bit of overlap between sections. In one place the editors have put three partly concurrent groups of entries in a single section.

Thus divided, the Record proper comprises forty-four sections. Some of these contain scores of entries covering more than a hundred pages, others only a handful of entries covering less than a dozen pages. Sri Aurobindo began some but not all sections with headings written above the first entry or on the cover of the notebook. These have been reproduced as written. The editors have placed a heading in bold type at the beginning of every section. These editorial headings are in the following form: **28 JANUARY – 17 FEBRUARY 1911**.

Over the course of the years, Sri Aurobindo structured sections of entries in different ways. Recurrent features were sometimes abandoned, only to be taken up again months later. Some entries consist only of the briefest notations, occasionally presented in tabular fashion. Other entries were written in discursive prose that sometimes has literary qualities. During certain periods, Sri Aurobindo divided longer entries by means of subheadings. Most of these make use of the terminology of the seven chatusthayas.

Like all diaries—consciously literary productions excepted—the Record was written chiefly as an aid to the diarist. Sri Aurobindo’s conception of its purpose is contained in certain early entries. It was meant to be a “pure record of fact and experience” (13 January 1912). The “condition of the activity” of his sadhana was “to form the substance of the record” (2 January 1913). Stated otherwise, it was the “progress of the siddhi” that was “to be recorded” (31 December 1912). This and other uses of the verb “record” suggest that Sri Aurobindo’s writing down of an experience was a means by which he established it in his consciousness.

Sri Aurobindo wanted to record “definite results”, not “every fluctuation of the siddhi” (15 August 1914). On a path like his, where “all life is yoga”, this involved not only noting down such purely yogic activities as “trikaldrishti, aishwarya, samadhi-experience”, but also mentioning ”work, literary & religious”, and making “brief note of the
physical siddhi” (27 December 1912). All parts of the sadhana were
given attention. We find one passage in which Sri Aurobindo speaks
first of applied yogic knowledge and force, *trikāla-drṣṭī* and *tapas*, then
the subtle physical power of levitation and then, in the next sentence,
the condition of his teeth. This is followed, without a pause, by a
note on the intensity of *ānanda* (delight) then being felt in his body.
The paragraph closes with a mention of the state of “the personal
lilamaya relation with the Master of the Yoga”, the personal divinity
who guided his sadhana (17 September 1913).

Another purpose of the Record was to be a register of guidance
from this and other sources. It was, he wrote on 18 November 1914,
to “include not only the details of what is accomplished & the lines
of the accomplishment that is being attempted, but also the record
of experiences and the indications of the future movement”. Such
indications were supplied by various means, notably “script”, “lipi”,
“sortilege”, and “vani”. Full definitions of these terms are given in
the glossary. Roughly, “script” is writing on paper, similar to but not
the same as “automatic writing” (see below); “lipi” is writing seen by
the subtle vision; “sortilege” is printed or handwritten texts sought
or found by chance and interpreted; “vani” is the hearing of a voice.
Sri Aurobindo transcribed many examples of each of these sorts of
communication in the Record. Sometimes he seems to have jotted
down scripts or lipis on handy pieces of paper and then copied them
into the Record. A few rough notations of scripts that later were copied
exist. The copied versions show some amplification. Sometimes only
the rough notations have survived; these have been among the most
difficult parts of *Record of Yoga* to transcribe. There are also numerous
examples of script written separately from the Record proper and never
incorporated into it. Some of these identify themselves explicitly as
“script”, others do not. As a rule such scripts are published in Part
Four, separately from the Record proper.

The distinction between script and record is one made by Sri
Aurobindo himself, but it was sometimes difficult for the editors to fix
the boundary between the two. He occasionally used both words to
refer to the same piece of writing. For example, in the regular record
of 14 January 1912 he mentioned an “accompanying memorandum”
containing the “rest of the record of January 14th & the record of
January 15th”. This “memorandum” speaks of itself as “script”. Some regular Record entries read like others that identify themselves as script; some entries (for instance, many in June to August 1914) give under the heading “Script” the sort of information generally found in the regular Record.

The principal difference between Record proper and script proper appears to be the way the writings took form in Sri Aurobindo’s consciousness. Record was Sri Aurobindo’s own “record of fact and experience”, written in much the same way as he wrote his other writings. In the Record the word “I”, if it occurs, refers to Sri Aurobindo himself. Script, on the other hand, was communicated to Sri Aurobindo by “the Master of the Yoga” or another source. This source sometimes addressed itself as “I” and Sri Aurobindo as “you” (see for example page 1303). In recording script, Sri Aurobindo often wrote down only the source’s replies, not the mental questions to which the replies were given. This makes some scripts seem discontinuous and incomplete; reading them is like overhearing one end of a telephone conversation.

Script has some affinities with “automatic writing”, a means of written communication in which the pen is said to be directed by a disembodied spirit. Some examples of this are published in Part Five; the phenomenon is discussed below, in the note to that part. Sri Aurobindo considered many automatic writings to be transcriptions of “the thing that is present in the subconscious part of the medium”. He did not consider script to be of this nature. A comparison of the script published as parts of Record entries and in Part Four with the automatic writing published in Part Five reveals marked differences in subject matter, tone, elevation, and purpose.

Script was a “means of spiritual communication” which was used “for all sorts of purposes”. Chief among these was the prediction of future events—mostly events in Sri Aurobindo’s sadhana, but also outward happenings, ranging from great world events to trivial domestic matters. Scripts relating to sadhana were often called Prediction or Programme; they gave indications about inner movements a few days or a week in advance. Sri Aurobindo sometimes looked back on old scripts, predictive lipis and sortileges to check their accuracy. He occasionally jotted down whether they were fulfilled or not. Such notations are among the only evidence we have that Sri Aurobindo read back over
the Record. He certainly never revised it in the way he did almost all his other writings. Additions to and corrections of the Record manuscripts were, with few exceptions, evidently made during the act of writing.

**INTRODUCTION. SAPTA CHATUSTHAYA**

As mentioned above, Sapta Chatusthaya or the seven tetrads was the “programme” of Sri Aurobindo’s sadhana that he received sometime after his arrival in Pondicherry in April 1910. It is not known exactly when the system came to him, but it must have been familiar to him by 16 January 1912, when he referred in the Record to “the first two chatusthayas”. (Note that the term “chatusthaya” does not occur in the Record of 28 January – 17 February 1911.) The system consists of twenty-eight elements arranged in seven groups of four. Throughout the Record the chatusthayas are referred to both by name and by number. These are listed in the chart below, along with the elements of each chatusthaya:

*First chatusthaya.* Samata chatusthaya *earlier, Shanti chatusthaya*
Samata, Shanti, Sukha, Hasya *later, (Atma)prasada*

*Second chatusthaya.* Shakti chatusthaya
Virya, Shakti, Chandibhava *later, Daivi Prakriti*, Sraddha

*Third chatusthaya.* Vijnana chatusthaya
Jnana, Trikaldrishti, Ashtasiddhi, Samadhi

*Fourth chatusthaya.* Sharira chatusthaya
Arogya, Utthapana, Saundarya, Ananda *or Vividhananda*

*Fifth chatusthaya.* Karma chatusthaya *or Lila chatusthaya*
Krishna, Kali, Karma, Kama *last two sometimes reversed*

*Sixth chatusthaya.* Brahma chatusthaya
Sarvam Brahma, Anantam Brahma, Jnanam Brahma, Anandam Brahma

*Seventh chatusthaya.* Yoga chatusthaya *or (San)siddhi chatusthaya*
Shuddhi, Mukti, Bhukti, Siddhi

This is what Sri Aurobindo called the “natural and logical order” of the chatusthayas and is the only one referred to in the Record proper. Other orders occur, however; for example, the one given in “Outline of the Seven Chatusthayas (Revised Order)” (see next page).
In the Record, the elements, or “siddhis”, of each chatusthaya are sometimes referred to by the number of the element within the chatusthaya: for example, “the second element of the shakti-chatusthaya”. In addition the siddhis of the third, fourth, fifth, sixth and seventh chatusthayas are often referred to by the numbers 1 to 21—21 and not 20 because in this enumeration the third chatusthaya is considered to have five instead of four elements. The scheme is as follows:

Sapta Chatusthaya. This text almost certainly was written on 20 November 1913. On that day Sri Aurobindo noted in the Record: “The day was chiefly occupied in writing the seven chatusthayas.” The handwriting and paper used for the manuscript of this piece are similar to those of other manuscripts of 1913.

Outline of the Seven Chatusthayas (Revised Order). Sri Aurobindo wrote this outline during or not long after 1914 in an exercise-book used previously by one of his disciples for some of the notes published in the Appendix as “Material from Disciples’ Notebooks”. In it the chatusthayas are listed in a different order from the one generally used in the Record. The “three general chatushtayas” come first, the one that Sri Aurobindo called the “means, the sum and the completion of all the rest” heading the list. Then follow the “four chatusthayas of the Adhara-siddhi”, the perfection or siddhi of the individual “vehicle” (ādhāra).

Incomplete Notes on the First Chatusthaya. Sri Aurobindo wrote these notes in the exercise-book he used for the above “Outline of the Seven Chatusthayas”, at around the same time. The end of the last sentence, from the word “qualities”, is not found in the manuscript, but is in several scribal copies of the text written by disciples; it undoubtedly was added by Sri Aurobindo to a copy that has since been lost.
The diary entries in the first two sections of this part differ in kind from those written afterwards. The first section dates from ten months before Sri Aurobindo’s arrival in Pondicherry in April 1910, and contains little of the terminology of the Sapta Chatushthaya. The entries of 1911, unlike the rest of the Record, are arranged under subject headings. The three sections from 1912 contain entries that differ little from those published in Part Two, but they come before the beginning of what Sri Aurobindo called “the regular record of the sadhana”.

17–25 June 1909. Sri Aurobindo made these entries in a small pocket notebook during a visit to East Bengal (the present Bangladesh). A month and a half earlier, he had been released from jail after his acquittal in the Alipore Bomb Case. As the most prominent leader of the Bengal Nationalist party, he had been invited to Jhalakati, a town in Bakarganj District, to attend the 1909 session of the Bengal Provincial Conference of the Indian National Congress. The principal event of the tour was the speech he delivered in Jhalakati on 19 June 1909 (reproduced on pages 33–42 of *Karmayogin*, volume 8 of *The Complete Works of Sri Aurobindo*).

28 January – 17 February 1911. During this period Sri Aurobindo wrote dated Record entries under the following six headings: “Physical,” “Communications”, “Vision of other worlds”, “Record of the Drishti”, “Siddhis”, and “Record of Ideal Cognitions”. He wrote them on scattered pages of a notebook he had used years earlier in Baroda as a book catalogue, and later in Pondicherry for various prose and poetic writings.

13 January – 8 February 1912. The Record of 12 December 1911 to 11 January 1912, referred to in the first sentence of the entry of 13 January, has not survived. Sri Aurobindo wrote Record entries for January and February 1912 in a notebook he had used in Baroda for literary essays and in Pondicherry for notes and articles on linguistics and other subjects. Above the first entry he wrote the heading “Record of the Yoga”. This is the first surviving heading for a section of Record entries. An “accompanying memorandum” containing dated script for 14 and 15 January, which he wrote on a separate sheet of paper, is
published between the notebook entries for 14 and 16 January. Note that Sri Aurobindo left long horizontal blanks after some sentences in the notebook. These appear to serve the purpose of paragraph separators.

1–25 July 1912. During this period, Sri Aurobindo kept the Record in a large ledger used otherwise for notes on linguistics and for prose writings on many subjects. He headed it “Journal of Yoga”.

12 October – 26 November 1912. During this period, Sri Aurobindo kept the Record in a small notebook used for Vedic and linguistic notes, translations, Bengali and Latin poetry, etc. The entries of 18 October to 17 November were written in ink on consecutive pages (with one page left blank between the first and second entries of 18 October). The remainder of the entries were written in purple pencil on scattered pages, sometimes upside down in relation to the rest of the entries. In the same notebook he also wrote a brief record of sortileges of May and June 1912 and several other Record-related pieces that are published in Part Four.

PART TWO. RECORD OF YOGA 1912–1920

The undated general note preceding the entry of 26 November 1912 begins: “The regular record of the sadhana begins today….” The editors have followed this indication by making the entry of 26 November the first in the main series of Record entries. There are, all told, entries for a little more than half of the ninety-six months making up the “regular” period of November 1912 to October 1920.

26 November – 31 December 1912. During this period, Sri Aurobindo kept the Record in an exercise-book used previously for notes on the Veda. The daily entries are preceded by an undated general note, written probably on 26 November.

1–31 January 1913. During this period, Sri Aurobindo kept the Record in an eighty-page exercise-book used only for this purpose, making it the first notebook devoted exclusively to the Record. Inside its front cover he wrote “Record of the Yoga./ 1913. /January.”

1–14 February 1913. During this period, Sri Aurobindo kept the Record in the first part of an exercise-book, most of which was later
used for another purpose. Inside the front cover he wrote “Record of the Yoga / 1913 / February”. After the second week of February, he discontinued the Record until the beginning of April.

1 and 12 April, 19 and 21 May 1913. On 1 April 1913 Sri Aurobindo began keeping the Record in a new exercise-book, on the cover of which he wrote “Record of Yoga — / April.” After making two entries during the first two weeks of April and two entries in May, he set the notebook aside until July.

4 – 30 June 1913. During the month of June 1913, Sri Aurobindo kept the Record in three separate forms that sometimes overlap, with the result that there are sometimes two entries for a single date.

(1) Between 4 June and 28 June, he wrote entries on three sheets of blank paper, each folded to form four narrow pages. He headed this bunch “Record”. These entries are similar to those making up the rest of the Record, although they are written in a more tabular and abbreviated form.

(2) Between 16 and 24 June, he wrote a second set of entries on two sheets of blank paper folded like the ones described above. He headed this bunch “Script”. These entries include not only the kind of communications to which he usually gave that name, but also more general comments.

(3) Between 25 and 30 June, he wrote several entries similar to the above script notations on a separate sheet of paper (of the same kind as the others and folded similarly) under the title “Record of Details & Guidance.”

These three groups of entries are published separately in the above order.

1 – 11 July 1913. During this period, Sri Aurobindo kept the Record in the notebook he had set aside in May. The entry of 1 July starts on the page that has the end of the entry of 21 May. No Record was written, or none survives, for the month of August 1913.

5 – 21 September 1913. During this period, Sri Aurobindo kept the Record in the notebook he had set aside in July, leaving three blank pages between the entry for 11 July and the two entries for 5 September. The first of these entries was written in pencil and may be considered an incomplete draft of the second, which is written in pen. The first sentence of the first entry suggests that a now-lost Record was kept
during the first days of September and perhaps also for part or all of August, perhaps on loose sheets, like the Record of June.

22 – 30 September 1913. Sri Aurobindo wrote these entries on four pages of the notebook used previously for the “Record of Yogic details” of 31 May – 15 June and the “Record of Yoga / Theosophic” of 13 and 15 September (both published in Part Four). They are more in the nature of script than ordinary record. No entries were written, or none have survived, for the month of October 1913.

11 – 23 November 1913. During this period, Sri Aurobindo kept the Record on four pieces of writing paper folded to form sixteen narrow pages (two of which were not used).

24 November – 2 December 1913. On 24 November Sri Aurobindo returned to the notebook last used on 21 September. He continued to make entries in this notebook through most of December.

1 – 12 December 1913. Sri Aurobindo wrote most of the entries for this period on four loose sheets of paper. He also wrote entries for 1, 2 and 12 December in the notebook used for most of 1913 (see the notes immediately above and below).

12 – 21 December 1913. On 12 December Sri Aurobindo returned to the exercise-book last used on 2 December. He continued to make daily entries in this notebook until 21 December, when he reached its last page.

22 December 1913 – 15 January 1914. On 22 December Sri Aurobindo began a new exercise-book, on the front cover of which he wrote “Record of Yoga / Dec 22d 1913...”. On 1 January, in order to mark the new year, he wrote the heading “1914. January.” and part of a verse from the Rig Veda (1.13.6), on an otherwise blank page of the notebook. He continued to use it until 15 January 1914. No Record was written, or none survives, for the period between 15 January and 12 March 1914.

15 April – 1 June 1914. Sri Aurobindo kept the Record for this period in a single exercise-book, on the cover of which he wrote: “Record of Yoga / April 15th to / 1914”. After the entry for 1 June he wrote a heading for 2 – 3 June, but made no entry and then abandoned the
10 June – 29 September 1914. During this period, Sri Aurobindo kept
the Record in a small, thick hard-cover notebook which he used for no
other purpose. He wrote the heading “Record of Yoga. / June. 1914—”
on an otherwise blank page facing the first page used for entries. After
writing the incomplete entry for 29 September , he went on to a new
notebook, leaving the last five pages of this one blank.

29 – 30 September – 31 December 1914. After reaching the end of the
notebook containing the Record of June to September 1914, Sri Auro-
bindo began work in a similar small, hard-cover notebook. Inside the
front cover he wrote “October – 1914.” Before writing the entry dated
“October 1”, he wrote a long note headed “Preliminary” and dated
“Sept 29–30”.

1 January – 27 February 1915. Sri Aurobindo kept the Record for
this period partly in the notebook in use since October 1914 and
partly in another. The first notebook contains, after an otherwise blank
sheet headed “January”, an introductory note followed by entries for
1 – 6 and 24 – 30 January and 1 – 6, 25 and 27 February 1915. In
the second notebook Sri Aurobindo kept an “intermediate record”
for 2 – 23 January. There are thus two sets of entries for 2 – 6 Jan-
uary. The editors reproduce the intermediate record after the first set
of entries for 1 – 6 January, and before the entries of 24 January –
27 February. Sri Aurobindo wrote two annotations to the entry of
3 January in the “intermediate record” sometime after the original
entry. The pen and the ink used for the annotations are the same
as those used for the Record of January – February 1917, which was
kept in the same notebook. Apparently Sri Aurobindo wrote these
comments when he took up this notebook again after a lapse of two
years.

22 April – 26 August 1915. During this period, Sri Aurobindo kept the
Record in a letter-pad of the sort he used for writing material for the
Arya, his monthly philosophical review. The entries begin abruptly;
no mention is made of the gap between 27 February and 22 April.
Sri Aurobindo put a question-mark after the date “April 22md”. The
year of these entries is nowhere written, but the dates and days of
the week correspond to those of 1915. After the entry of 26 August
Sri Aurobindo left a few pages blank, then began the entry dated “February 1916” with the words, “In the interval since August....”

**19 February – 20 March 1916.** Sri Aurobindo wrote no Record entries between 26 August 1915 and mid-February 1916. On 19 February 1916 he resumed the Record, using the letter-pad he had set aside in August. The last paragraph of the entry for 19 February is found at the bottom of the preceding page in the manuscript, after the general introduction to February 1916. In the margin next to this paragraph, Sri Aurobindo wrote: “This should have been recorded on the next page.” He also put a long double line to separate the misplaced paragraph from the rest of the contents of the page, and inserted the date “Saturday Feb 19th” at the top of the paragraph. This date has been put editorially within square brackets at the head of the entry of the nineteenth, which itself is dated only “Feb”. After the entry of 5 March, the dates written in the manuscript do not agree with the days of the week according to the calendar for 1916. The discrepancy continues until the entry marked “Monday, 19th March” in the manuscript, where the Record for 1916 terminates. It may be noted that Sri Aurobindo left a page blank between the entry of “Sunday / March 5” and the one marked “Tuesday. Mar 6”. This suggests that he wrote no entry for Monday, 6 March, and this resulted in a confusion of dates. The editors have accordingly emended the dates rather than the days of the week.

**9 January – 14 February 1917.** No Record was written or survives for the period of March 1916 to January 1917. Sri Aurobindo kept the Record of 9 January – 14 February 1917 in a small bound notebook used previously for notes on the Veda, for the “intermediate record” of 2 – 23 January 1915, and again for notes and an essay on the Veda. The entries for January – February 1917 were written on pages or parts of pages that had been left blank when the Vedic work was done. At one point thirty pages of Vedic material intervene between pages used for the Record. After the entry of 14 February this notebook was set aside, though a few usable pages remained.

**15 February – 31 March 1917.** During this period, Sri Aurobindo kept the Record in a small hard-cover notebook similar to the one he had used from 9 January to 14 February. Like that notebook, the present one had previously been used for notes on the Veda. It was abandoned after the entry of 31 March, many of its pages being left unused. No
record was kept or has survived for the period from 1 April to 14 August 1917.

15 August–28 September 1917. During this period, Sri Aurobindo kept the Record in an old exercise-book, a few pages of which had been used some years earlier for the poem *Ilion*. Sri Aurobindo left half a page blank between the entry for 28 September and the one for 14 February 1918. No Record was kept or none survives for the intervening period of more than four months.

14–28 February 1918. During this period, Sri Aurobindo kept the Record in the notebook he had commenced on 15 August 1917.

3–27 March 1918. During this period, Sri Aurobindo kept the Record on a few pages of an old exercise-book used previously for Vedic notes and translations.

20 April–20 May 1918. During this period, Sri Aurobindo kept the Record in a new “Aryan Store Exercise-Book”. (The manager of the Aryan Store was Saurin Bose, the “S” or “Sn” of the Record.) This was the first notebook to be used exclusively for the Record since June–September 1914. On its cover Sri Aurobindo wrote “Notebook of the Sadhana”. This is the first heading given to a section of Record entries since June 1914.

21 May–1 July 1918. Sri Aurobindo continued the Record of 1918 in an “Aryan Store Exercise-Book” similar to the one used between 20 April and 20 May. Only three entries were made in June due to “the absorption of work”. He set the notebook aside after the entry of 1 July and did not take it up again until June 1919. No Record was kept or none survives for the intervening period of almost one year.

24 June–14 July 1919. Sri Aurobindo kept the Record for this period in the notebook set aside on 1 July 1918. He left five pages blank between the entry for that date and the one for 24 June 1919.

15–26 July 1919. During this period, Sri Aurobindo kept the Record in a thin exercise-book used only for this purpose. On its cover he wrote the heading “Yoga Diary” and the opening and closing dates.

27 July–13 August 1919. During this period, Sri Aurobindo kept the Record in a thin exercise-book similar to the previous one, and like it used only for Record entries. On its cover he wrote the heading “Yoga Diary” and the opening and closing dates.

14 August–24 September 1919. During this period, Sri Aurobindo
kept the Record in a thin exercise-book similar to the previous two, and like them used only for Record entries. On its cover he wrote the heading “Yoga Diary” and the opening date. It has almost daily entries until 2 September, then one dated “Sept. 3 to 24”, which explains the gap before the final entry of 24 September. He apparently did not resume the Record until February of the next year.

1–29 February 1920. During this period, Sri Aurobindo kept the Record on seven pieces of paper of different sizes and shapes folded in various ways. Entries which continue from one page to another sometimes have the date repeated at the top of the new page followed by “continued” or “(cont.)”. These headings have been omitted from the printed text.

1 March–10 April 1920. During this period, Sri Aurobindo kept the Record in a thin exercise-book used only for the purpose. Above the long introduction preceding the entry dated 1 March he wrote the heading “Yoga Diary./ 1920 / March.” No entries have been found for the period between 10 April and 7 June 1920.

7–26 June 1920. During this period, Sri Aurobindo kept the Record in a thin exercise-book similar to the previous one, and like it used only for this purpose. Above the first entry he wrote the heading “Yoga Record / June.”

17–19 October 1920. Sri Aurobindo wrote Record entries for these three days on a few pages of a letter-pad. He wrote the date “17th October 1920” on the first sheet of the pad.

PART THREE. RECORD OF YOGA 1926–1927

No Record entries were written, or none survive, for the six-year period between October 1920 and December 1926. Sri Aurobindo wrote very little during this period. There are no known articles or poems and only a few letters that have dates to show that they were written during the six years that followed the suspension of the *Arya* in January 1921. The abrupt beginning of the entries preceding those of December 1926–January 1927 suggests that Sri Aurobindo may have made Record entries during parts of the period between 1920 and 1926, but chose not to preserve them, as he chose not to preserve those of October 1927 (see below).
December 1926 – 6 January 1927. Sri Aurobindo wrote these entries in a letter-pad used previously for writing Vedic notes and several pieces published in Part Four, including “The Seven Suns of the Supermind”. That piece comes immediately before the first entry here, which speaks of the “supramental life-energy” in the “seven centres”. The first two pages of this section of Record notes are undated. The third page begins with three short paragraphs which seem to have been written on a single day. This was probably Sunday, 2 January 1927, for the entry is followed on the same page by closely related entries marked “Monday”, “Tuesday” and “Wednesday”, then by one dated “Thursday, Jan 6.” Sri Aurobindo did not write the year 1927 until 7 April (see below), but the agreement between the dates and days of the week written in the notebook and those of the calendar for 1927 proves that this was the year for the entries of January and February.

The two pages of undated entries preceding the partially dated ones were apparently written shortly before them. Most likely they belong to the first of three “curves” of progress in Sri Aurobindo’s sadhana (25 December – 3 January, 3 – 7 January and 7 – 12 January) which he mentioned in the entry for 6 January. This inference is supported by the text of a prediction written on the second undated page: “Monday next. An ascending scale till then.” It seems probable that Monday, 3 January, the end of the “curve” that began on 25 December, was also the culmination of the “ascending scale” mentioned in the prediction.

7 January – 1 February 1927. Sri Aurobindo wrote these entries in the letter-pad used for the above section. The entry of 7 January is preceded by some diagrams and script jottings published in Part Four.

7 – 22 April 1927. Sri Aurobindo kept the Record for this period in the letter-pad used for the two preceding sections. Between the entry for 1 February and the one for 7 April come several blank pages, two drafts of an essay, some script, and a poem written in French. No Record was written, or none survives, for the period between April and October 1927.

24 – 31 October 1927. During this eight-day period, Sri Aurobindo kept the Record on two loose sheets of paper. Another sheet discovered with them contains a passage of script published in Part Four. It would appear that Sri Aurobindo tore these three sheets up and threw them
Note on the Texts

away. They were saved from destruction by A. B. Purani, one of his
early disciples. The explanatory note reproduced below was written
by Purani during the 1950s or 1960s:

These few pages of Sri Aurobindo’s diary of his Sadhana were
intended to be burnt. The story of how they escaped that fate
is as follows.

To prepare hot water for the Mother’s bath very early in
the morning was part of the work I had undertaken almost
from 1926. I was staying in the ‘guest-house’ at that time
& used to come to the main house between 2.30–3 in the
night. In order not to disturb the inmates of the house I was
given a key of one of the gates to enter it. The water had to
be ready before 4 o’clock, often it was needed at 3.30. (This
continued up to 1938 November 23rd when Sri Aurobindo
got the accident.)

The boiler room is well-known—it is now the place from
where incense is still fired and flowers distributed when it rains.
The fuel used was ordinary wood with wooden shavings from
the Carpentry department & waste papers. The wooden shav-
ings often contained strips of teak-wood & many other useful
tit-bits. I used to preserve them and make time-piece cases,
photo-frames, corner brackets from them. When the matter
was brought to Mother’s notice by someone she approved
of such salvaging from waste & added that there were men
in France—in Paris—the chiffonniers who became rich only
by utilising the enormous waste of papers & rags in the big
city.

But the papers I invariably burnt. Perhaps the god of Fire
must have become suddenly active, because one day I was
struck by half a basketful of torn small bits & casually looked
at them. To my surprise and horror I found Sri Aurobindo’s
handwriting. I put them aside and looked at them in the day-
light. I was able to make out with great labour extending for
days—like a jig-saw puzzle—two or three readable pages.

These pages are dated & they are evidently notes kept by
Sri Aurobindo regarding his own Sadhana.
It is not known whether other pages of the Record from this period, or other periods, were actually destroyed.

**PART FOUR. MATERIALS WRITTEN BY SRI AUROBINDO RELATED DIRECTLY TO RECORD OF YOGA, C. 1910–1931**

This part consists of writings in Sri Aurobindo’s own hand that may be considered components of *Record of Yoga*, but which have not been included in Parts One to Three because they are undated or incompletely dated or, if dated, not concerned with Sri Aurobindo’s day-to-day sadhana. A number of different sorts of writings are represented: brief undated Record entries, scripts, sortileges, lipis, and notes on a wide variety of sadhana-related topics. They have been arranged in rough chronological order, groups of scripts being placed together in several chronological series.

**Undated Record and Record-related Notes, c. 1910–1914.** Sri Aurobindo wrote these fourteen items in different notebooks during the early part of his stay in Pondicherry, that is between 1910 and 1914. Further details on individual pieces or groups of pieces follow. [1] Sri Aurobindo jotted down these undated notes around 1910 in a notebook containing translations and other pieces written years earlier in Baroda and Calcutta. [2] Sri Aurobindo wrote these notes in a notebook used in Baroda for miscellaneous literary writings and in Pondicherry for philological notes. They begin with a reference to Sri Aurobindo’s philological research under the heading “Bhasha” (“Language”). Sri Aurobindo’s did most of his philological research around 1911–12. The present notes may be assigned to the same period. They have, in addition, some similarity to the Record entries of January–February 1911. Both the notes and the entries are arranged by category, and have one heading in common: “Prophecy”. This term is used several times in January–February 1911 for what Sri Aurobindo normally called “trikaldrishti”. “Prophecy” occurs rarely in 1912 and all but disappears from the terminology of the Record after that. [3–13] Sri Aurobindo wrote all but one of these eleven pieces on scattered pages of a notebook used in Pondicherry (and perhaps also earlier in Bengal) for miscellaneous writings, notably the play *Eric*,
as well as notes on philology and other subjects. They date from the earliest years in Pondicherry, that is, 1910–12. Some of them may even have been written slightly before that. [14] Sri Aurobindo wrote these “Psychological Notes” (his title) in an exercise-book of the kind he used to keep the Record of 1913 and early 1914. The exercise-book also contains a draft of the last version of the “Life Divine” commentary on the Isha Upanishad (see Isha Upanishad, volume 17 of the THE COMPLETE WORKS). This commentary may be dated to 1914. The psychological notes apparently date from the same year.

Sortileges of May and June 1912. These two sortileges were written on a page of the notebook that later was used for the Record of 12 October to 26 November 1912 (see above).

Undated Notes, c. November 1912. Written on the first two pages of the notebook used for the Record of 12 October to 26 November 1912.

Draft Programme of 3 December 1912. Written on one of the last pages of the notebook used for the Record of 12 October to 26 November. The programme subsequently was copied, with a few changes, in the Record entry of 3 December, which was written in another notebook.

Undated or Partly Dated Script, 1912–1913. These nine scripts were written on nine different sheets or sets of sheets during the years 1912 and 1913. Further details on individual pieces follow. [1] Written apparently around July 1912, the approximate date of the incomplete “Commentary on the Kena Upanishad” which is referred to in the script. Note also that in the Record of 4 July 1912, Sri Aurobindo wrote “Automatic script recommenced today”, and mentioned “prophetic script”, a term found nowhere else in the Record. [2] This “record of thought” or script was written at the bottom of a loose sheet containing linguistic notes. Two sentences from it appear verbatim in the Record of 14 October 1912. The script evidently was written on that day and part of it transcribed in the Record. [3] These three pieces of script were written on the inner pages of a large folded sheet of paper used otherwise for linguistic notes and fragmentary writings on other subjects. The linguistic notes are very similar to those found along with item [2]. It is therefore likely that the scripts date from roughly the same period. The predictions contained in the first script may be the same as the “programme suggested on the tenth” mentioned in
the Record of 21 December 1912. There are a number of similarities between the elements of sadhana mentioned in the present script and those described in the Record of 10–11 December 1912. [4] This item, written on the last ten of a set of twenty-eight small pages formed by folding loose sheets of paper, may be assigned with some confidence to January 1913. It consists of a long undated passage, followed by four shorter entries with dates from the “21st” to the “24th.” The month and year are not specified, but under the “23rd” there is a reference to “this month of January”. The year 1913 may be established by comparison with the regular Record of January of that year. See for example the almost identical references to the Turkish city of Adrianople in the script of the “23rd” and the Record of 24 January 1913. Since the partly dated portions of the script belong to 21–24 January 1913, the undated passage preceding them must have been written just before the 21st. Note also that the Record of 19 January states: “This morning script became profuse and intimate…..” The script contains some examples of writings in different languages known and unknown. Sri Aurobindo wrote or “received” a number of such writings around this time. The first eighteen of the set of pages on which the script is written are devoted to this project. Some examples of such “writings in different languages” are published in Vedic Studies with Writings on Philology, volume 14 of The Complete Works. [5] This script was written sometime around June 1913 on a sheet of letter paper found along with some Vedic and linguistic notes. The paper is of the type used also for item [6] as well as for letters written around June 1913. The third and fifth of the seven “rules” here correspond to some of the five “positive directions” given in the script of 22 June 1913, which is published as part of the Record proper. [6] These four paragraphs of script, written on two loose sheets similar in type to those used for item [5], contain no explicit dating clues, but the position they describe corresponds closely to the one referred to in the Record of 10 and 11 July 1913. The first paragraph says: “Lipi is already moving forward to the mahat….” The Record of 10 July speaks of the “successful movement from manas to mahat predicted in the script”, and observes: “The only siddhi which advanced during the day was the lipi.” The second paragraph deals with a movement of the vijnana to brihat, to be followed by a further change to satyam and ritam. This is the situation
Note on the Texts

described at the beginning of the second sentence of the Record of 11 July 1913: “At first the knowledge was merely brihat in manas. . . .”

[7] This script, written on a single loose sheet, contains no explicit dating clues, but the situation it describes corresponds to the position of Sri Aurobindo’s sadhana between July and September 1913. The script may well have been written during the suspension of the regular Record between 11 July and 5 September 1913. [8] This short piece was written at the bottom of the sheet containing the first six paragraphs of the Record of 12 November 1913, but upside down in relation to them. It apparently was written before the commencement or at any rate the completion of the Record entry, which otherwise would have used the space occupied by the script. The style is similar to that of some of the “Thoughts and Aphorisms” and to the “Thought” noted down in the Record of 24 June 1914 beginning “Despise not, O thinker. . . .”

[9] This long script was written on a large loose sheet folded to make four pages, the bottom edges of all of which have been damaged. The sheet was found together with the Record entries of 11 – 23 November 1913 and apparently belongs to the same period; note the phrase “till December” in the second paragraph. There are many similarities between the position of the sadhana as described in this script and in the Record of 12–18 November 1913. Compare, for example, the following passage in the script: “Today a great movement forward. . . . The trikaldrishhti, telepathy, power, lipi have now all to move towards absolute perfection dragging the samadhi & drishti with them. Till that is done, the fourth chatusthaya will only prepare its advance . . .” with this passage in the Record of 14 November: “Today is to be a day of rapid progress in the third chatusthaya and the preparation of rapid progress in the fourth.” Similarly the last page of the script has parallels with the Record of 17 and 18 November, while the last complete paragraph of the script has similarities to the Record of 18 November 1913.

Sortilege of 15 March [1913]. Written on a page of a notebook used mostly for Ilion and other poems. The year is not given but it may be inferred from (1) the handwriting, (2) the period of the other pieces in the notebook, (3) the fact that no regular Record, in which a sortilege would normally have been entered, was kept in March 1913.

Accounts of 31 May – 15 June 1913. Written on the first five pages
of a notebook used later for Vedic translations and notes, the Record notes of 13 and 15 September (see below) and the Record of 22–30 September 1913. Sri Aurobindo wrote “Record of Yogic details” on the cover of this notebook. It should be remembered that to him “All life is Yoga.”

**Record Notes, 13 and 15 September 1913.** Sri Aurobindo wrote these two entries under the heading “Record of Yoga./Theosophic.” in the notebook used previously for the “Record of Yogic details” (see above) and subsequently for the Record of 22–30 September 1913. The year, not given explicitly, may be inferred from this position. Note that Sri Aurobindo also wrote a regular Record entry in another notebook on 13 September.

**Vedic Experience, 14 and 15 December 1913.** Sri Aurobindo wrote regular Record entries for both these days, but chose to enter this experience in a notebook used otherwise for Vedic translations and notes.

**Undated Notes, c. 1914.** Sri Aurobindo wrote these notes headed “Vijnanachatusthaya” on a loose sheet of paper that was found inserted in a notebook used, among other things, for the Record of July 1912. The sheet, however, does not appear to be connected with anything in the notebook, and may have been put there simply as a placemark. The handwriting is that of 1912–14. It is possible that these notes are the “separate detailed record of the results” of the “formulated & steady activity for the regulation of the third chatusthaya” that Sri Aurobindo wrote of having “commenced” in the Record of 1 June 1914.

**Notes on Images Seen in March 1914.** Sri Aurobindo wrote this piece, which he entitled “The Evolutionary Scale”, in March 1914 in an exercise-book of the same sort as he was using then for the Record. In the Record entry of 22 March 1914, he spoke of certain “scenes of a pursuit in the early Manwantaras of a race of divinisec Pashus by Barbarians” which were “recorded elsewhere”. The reference is evidently to the second section of “The Evolutionary Scale”, which begins: “A series of images and a number of intimations have been given yesterday in the chitra-drishti to illustrate the history of the first two Manwantaras. . . .” The word “yesterday”, which was added between the lines, would seem to indicate that the second, and probably the first and third sections as well, were written on 23 March. Further
Note on the Texts

references in the Record make it clear that the images of the fourth section and the first paragraph of the fifth section were seen on 24 March, and that the images of the rest of the fifth section and probably those of the sixth were seen on 25 March.

Undated Script, c. 1920. The first of these two scripts is the last piece of writing in a letter-pad whose other contents (Vedic translations, etc.) provide no explicit dating clues. The term “drashtri vijnana”, which occurs in the script, is found otherwise only in the Record of March 1920. The second piece, consisting of three short entries, was written on two loose sheets that cannot be precisely dated. The third entry employs the term “logos Vijnana”, which occurs in the Record only in October 1920.

Undated Notes, c. December 1926. Sri Aurobindo wrote all but the last of these seven pieces in a letter-pad used previously for Vedic notes and subsequently for the Record of January – February and April 1927, as well as for certain undated Record entries, scripts, etc. “The Seven Suns of the Supermind” is followed closely by Record entries that are considered to have been written in December 1926. It seems likely that that piece and the five preceding it were written in the same month. Sri Aurobindo wrote the seventh piece, “The Seven Centres of the Life”, on a sheet from another letter-pad, apparently around the same time.

Undated Notes, c. January 1927. Sri Aurobindo wrote these notes, in which the names of some of his disciples are linked with those of historical, legendary and divine figures, in the letter-pad of 1926 – 27 referred to above. Before and after it are Record notes that have been dated to the last week of December 1926 and the first week of January 1927.

Notes on Physical Transformation, c. January 1927. Sri Aurobindo wrote these notes in the letter-pad of 1926 – 27. They come just before the Record notes dated “Thursday. Jan 6.” They appear to be more in the nature of script than ordinary writing. (The word “you” obviously refers to Sri Aurobindo, while “she” designates the Mother, as it does in several Record entries of January 1927.)

Miscellaneous Notations, c. February – April 1927. [1 – 2] Written on two separate pages of the letter-pad of 1926 – 27, the first a few pages
after the Record entry of 1 February, the second between the two parts of the entry of 9 April. (The script must have been written before this date, since the splitting of the entry of 9 April evidently was due to the fact that the intervening pages had already been used.) [3] This lipi, dated 2 April 1927, was written in the letter-pad of 1926–27 between the two parts of the entry of 9 April. [4] Sri Aurobindo wrote this mantra in the letter-pad of 1926–27, just after the lipi described above.

**Record of Drishti, 30 July 1927.** Sri Aurobindo wrote these dated notes in a tiny note-pad used otherwise to record electric-meter readings.

**Undated Script, c. 1927.** Sri Aurobindo wrote these three sets of script notations in a notebook belonging to the year 1927. Pieces [1] and [2] come a little before writings that may be dated with some certainty to July–August 1927; but some similarities between the terminology of these entries and the Record of January 1927 suggest that the entries may have been written earlier in the year. The third piece occurs further on in the same notebook, and appears to date from somewhat later in 1927.

**Undated Script, c. 1927–1928.** These four passages of script all come from manuscripts datable to late 1927 or 1928. All contain references to “overmind”, a term that first occurs in the Record in the entry of 29 October 1927. [1] The torn-up sheet on which this passage was written was found by A. B. Purani together with those containing the Record of 24–31 October 1927. Its opening is similar to number 14 of the “Undated Script Jottings” (see below), which was found in a notebook used in 1928. [2–3] These two passages occur in two different notebooks, both from the period 1927–28. Their terminology suggests that they may have been written after October 1927, although this would mean that they were jotted down after most of the contents of the subsequent pages of the notebooks were written. [4] These two fragments were found on a scrap of a sheet detached from a letter-pad. The first occupies what was originally the top of the front of the sheet. It begins in the middle of a sentence. The preceding page or pages have been lost. The second fragment occupies what was the bottom of the reverse of the sheet. (The pad was stitched at the top.) Between the two fragments came whatever was written on the bottom three-quarters of the front page and the top three-quarters of the reverse.
Notes on Prophetic Vision, 1929. Sri Aurobindo wrote these dated notes in a small “Bloc-Memo” pad used otherwise for miscellaneous jottings and writings.

Diagrams, c. 1931. Written and drawn on both sides of a piece of letter paper, at the top of which is the conclusion of a letter-draft whose beginning has been lost. The draft ends:

However I give the schema below and you can see for yourself—it is arranged according to an ascending scale of consciousness, grades superimposed on each other, but that does not mean that there is no interpenetration of one by another.

The letter was rewritten on 15 April 1931 and sent without the diagrams.

Undated Script Jottings. These fifteen passages of script were jotted down by Sri Aurobindo on the pages of various notebooks and loose pieces of paper between circa 1915 and the late 1920s. They are arranged in roughly chronological order, though their dates and sometimes even periods are difficult to determine. [1] Written on a sheet torn out of a letter-pad of the sort Sri Aurobindo used for the Record in 1915–16 and for other writings during approximately the same period. [2] Written on a page of a letter-pad containing writings that can be dated 1916–18. [3] Jotted on the last page of a notebook containing Vedic translations and English poetry written at different times. [4–5] Written on two pages of a notebook used around 1926. [6] Written on the back of a letter to Sri Aurobindo dated 16 August 1926. [7–8] Written on the front and back of a loose sheet inserted in the note-pad used for the Record of 1926–27; the loose sheet may once have been the first sheet of the pad, in which case the jottings may date to December 1926. [9–11] Written on three pages of the notebook that was used for the “Undated Script, c. 1927” (see above). [12] Written circa 1927–28 on a torn sheet used otherwise for a passage intended for the revised version of The Synthesis of Yoga. [13] Written on a torn letter, perhaps from slightly later than 1928. [14] Written and cancelled at the top of a page of a stenographic pad used around 1928. [15] Written in the margin of a page of a notebook used for the poem Savitri in the late 1920s.
PART FIVE. AUTOMATIC WRITING

Sri Aurobindo first tried automatic writing—defined by him as writing not “dictated or guided by the writer’s conscious mind”—towards the end of his stay in Baroda (that is, around 1904). He took it up “as an experiment as well as an amusement” after observing “some very extraordinary automatic writing” done by his brother Barin; “very much struck and interested” by the phenomenon, “he decided to find out by practising this kind of writing himself what there was behind it.” Barin seems at least sometimes to have used a planchette for his experiments, but Sri Aurobindo generally just “held the pen while a disembodied being wrote off what he wished, using my pen and hand”. He continued these experiments during his political career (1906–10) and afterwards. In this part are published one example from 1907, an entire book received as automatic writing in 1910, and a number of examples from two years during which he also kept the Record: 1914 and 1920. His “final conclusion” about automatic writing was that though there are sometimes phenomena which point to the intervention of beings of another plane, not always or often of a high order, the mass of such writings comes from a dramatising element in the subconscious mind; sometimes a brilliant vein in the subliminal is struck and then predictions of the future and statements of things known in the present and past come up, but otherwise these writings have not a great value.

During the period of the Record, Sri Aurobindo made much use of a form of writing he called “script”. As explained above, this was similar to automatic writing in that it came as a communication from another source, but differed from automatic writing in coming from a source that he considered to be higher and more reliable. It should be noted, however, that the distinction of “script” from ordinary automatic writing was not always strictly maintained. Some writings from a lower source refer to themselves as script (see for example page 1410), and Sri Aurobindo used the word “script” for writings that were produced in séances with others (see for example the Record of 17 July 1914, where he writes: “Today excellent script with R [Richard]
&& Madame R.”) In these examples, “script” is used as a generic term to cover all forms of written communication from other sources.

“The Scribblings”, c. 1907. Written in a notebook previously used by Sri Aurobindo in Baroda for miscellaneous writings. In May 1908 this notebook and several others were seized by the police when Sri Aurobindo was arrested in connection with the Alipore Bomb Case. These automatic writings were submitted by the prosecution as evidence against Sri Aurobindo, but were not accepted by the judge as being in Sri Aurobindo’s hand. They were, however, certainly written by him, though, being automatic, they are somewhat illegible; hence the name by which they were known during the trial: “The Scribblings”. They mention Barindra Kumar Ghose, Sri Aurobindo’s younger brother, who was the active head of a revolutionary group, as well as three other members.

Yogic Sadhan. Sri Aurobindo received this book as automatic writing in 1910. According to his biographer A. B. Purani,

During the first three months of the stay at Pondicherry [April – June 1910] there used to be séances in the evening in which automatic writing was done. The book Yogic Sadhan was written in this way. At the rate of one chapter per day, the book was finished in a week or eight days. . . . The Editor’s Epilogue added after the last chapter was written by Sri Aurobindo himself. The editor’s name is given as “the Uttar[a] Yogi”.

A year later, the text that had been received was transcribed and published under the title Yogic Sadhan by Sri Vani Vilas Press, Srirangam. “The Uttara Yogi” (the Yogi from the North) is a name by which Sri Aurobindo was known to the person who published the book. A second edition of Yogic Sadhan, lightly revised, was brought out by the Modern Press, Pondicherry, in 1920. Two further editions were brought out by Arya Publishing House, Calcutta, in 1923 and 1933. The present text follows the second edition with a few emendations, mainly in chapters 7–9, for which a manuscript in Sri Aurobindo’s hand survives.

Sri Aurobindo permitted the publication of Yogic Sadhan, but he did not consider it his own work. In a letter of 1934 he wrote:
The *Yogic Sadhan* is not Sri Aurobindo’s own writing, but was published with a note by him, that is all. The statement made to the contrary by the publishers was an error which they have been asked to correct. There is no necessity of following the methods suggested in that book unless one finds them suggestive or helpful as a preliminary orientation of the consciousness—e.g. in the up-building of an inner Will etc.

The “note” referred to is the “Editor’s Epilogue”, which was included in all editions of *Yogic Sadhan*. Sri Aurobindo allowed the book to go out of print after the edition of 1933 was sold out. It has not been reprinted since then in the form of a book.

**Automatic writings, c. 1914 (First Set).** These four pieces of automatic writing are found on four loose sheets of paper folded together. They are not dated but almost certainly were written in 1914. The sheet on which item [1] was written contains also a draft of something published in the journal *Arya* in August of that year. Item [2] contains a reference to “the Review”, that is, the *Arya*, which was conceived around 1 June 1914 and first published in August. Items [3] and [4] seem to have been written around the same time as the first two items.

**Automatic writings, c. 1914 (Second Set).** These two pieces of automatic writing were written on four loose sheets of paper folded to make eight pages. The sheets were found along with those on which the previous set were written, and appear to belong to the same period.

**Automatic Writing, c. 1920.** This short writing was found in a letter-pad used principally for Vedic translations and notes. Below it, on the same page, are a few lines that have been classified as Record-related script and published in Part Four (the first piece of “Undated Script, c. 1920”). That piece has been dated by terminology to around March 1920. The present writing describes itself as “script”, that is, a “means of embodied communication with the other worlds”; but the “spirit of the higher realms” who speaks is evidently not the Master of the Yoga. The item is therefore classified as automatic writing rather than script.

**Automatic Writings, c. 1920.** These nineteen writings were found together in a single batch of seventy-eight loose sheets. They are published here in the order in which they were found. It is likely that each
item is the product of a separate séance. References to known events in some of the writings lead one to date them to the summer of 1920. Lokamanya Tilak, who is referred to in item [9] as having departed from the body, apparently rather recently, died on 1 August 1920. The letter referred to in item [8] very likely is the one written by Tilak’s associate Dr. B. S. Munje to Sri Aurobindo, inviting him to preside over the 1920 session of the Indian National Congress. Sri Aurobindo’s reply turning down this offer is dated 30 August 1920. Mirra Richard (The Mother) and Paul Richard participated in some if not all the sessions. (See especially item [9].) They returned to Pondicherry from Japan on 24 April 1920. Richard left Pondicherry in December of the same year.

APPENDIX. MATERIAL FROM DISCIPLES’ NOTEBOOKS

The pieces in this Appendix have been transcribed from versions handwritten by early disciples of Sri Aurobindo. They are copies of notes written by Sri Aurobindo or of written records of his oral remarks. With one partial exception, none of these items exist in the form of manuscripts in Sri Aurobindo’s handwriting. The exception is on the last page of item [1] of the “Miscellaneous Notes”, where there are three pieces that were written or revised by Sri Aurobindo in his own hand. Only these pieces may be considered to be as authentic as the handwritten Record. Nevertheless, Sri Aurobindo may be regarded as the origin of all the pieces in this appendix, as they are either transcriptions of his talks or copies of now-lost written texts. They represent aspects of his teaching in an early form as given to his earliest disciples.

Miscellaneous Notes, c. 1914. These seven sets of notes are reproduced from handwritten copies made by disciples of Sri Aurobindo in various notebooks. Early copies of items [1], [2] and [5] were written in the exercise-book he used subsequently for the “Incomplete Notes on the First Chatushthaya” published in the Introduction. This notebook has “1914” printed on the cover. Another notebook containing the principal versions of items [3], [4], [6] and [7] has calendars for 1913 and 1914 printed inside the front cover. Many of the disciples’ notebooks contain a copy of a letter written by Sri Aurobindo on 21 September
1914. It is reasonable to conclude that the pieces date roughly from the period around 1914.

_Sapta Chatushtaya_—_Scribal Version_. This presentation of Sapta Chatushtaya is the most complete one available. There is no manuscript of the piece in Sri Aurobindo’s hand, but he was undoubtedly its source. The text survives only in the form of transcripts written down by disciples. Several of these “scribal copies”, as the editors term them, have been collated and two of the oldest selected as the basis of the present text.

One of the scribal copies may date from as early as 1914; two others are from the mid-1920s, and most or all of the rest from the 1930s. These copies were made either from a now-lost manuscript written by Sri Aurobindo or, more likely, from one or more written records of a series of talks given by him. The scribal copies may be considered on the whole to be reliable records of the substance of what Sri Aurobindo must have written or said; but all of them contain obvious distortions of his words. Because of this, a much freer hand has been used in the editing of this piece than would have been permissible if the text was based on a handwritten manuscript.

The text is “eclectic”; that is to say, it follows for the most part the scribal version that seems to offer the best text as a whole, but it makes use of readings from the other principal scribal copy where these appear more likely to represent Sri Aurobindo’s actual words. Where the scribal copies agree but the reading seems defective, an editorial alternative has been printed between square brackets, as part of the text, and the scribal version given in a footnote. (Such footnote variants are preceded by “MS (scribal)”.) The editors have silently made minor corrections of the spelling, punctuation, etc. of these scribal texts.

**Publishing History**

No part of _Record of Yoga_ was published during Sri Aurobindo’s lifetime. The notebooks and loose sheets containing the diary entries and related materials were found after his passing along with his other manuscripts. Most of _Record of Yoga_ was published in the journal _Sri Aurobindo: Archives and Research_ between 1986 and 1994. Some material—mainly in Parts One, Four and the first section of the Appendix
—was omitted when *Record of Yoga* was published in that journal and appears here for the first time. The publishing history of *Yogic Sadhan* has been given above in the note on Part Five. “The Seven Suns of the Supermind” and the diagrams in Part Four were included in *The Hour of God* (Pondicherry, Sri Aurobindo Ashram) in 1959 and subsequently; there the diagrams were given the editorial title “The Divine Plan”. A few related pieces that were added to the reorganised 1982 edition of *The Hour of God* are also included in Part Four. In 1973, Sri Aurobindo’s manuscript version of “Sapta Chatusthaya” was published, with much editorial normalisation of the spelling of Sanskrit words and other details, in volume 27 (*Supplement*) of the Sri Aurobindo Birth Centenary Library.

The text of this first edition of *Record of Yoga* has been reproduced verbatim, as far as possible, from the manuscripts of the diary entries and related materials.
Essays Divine and Human
Essays Divine and Human

Writings from Manuscripts

1910–1950
Publisher’s Note

*Essays Divine and Human* consists of short prose pieces written by Sri Aurobindo after his arrival in Pondicherry in 1910 but not published before his passing in 1950. Short prose works written during the same period and published during his lifetime appear in *Essays in Philosophy and Yoga*, volume 13 of *The Complete Works of Sri Aurobindo*.

There are indications in Sri Aurobindo’s Pondicherry notebooks that he intended to bring out a collection of essays on yoga and other subjects. The headings written above two pieces, “Essays Divine and Human” and “Essays — Human and Divine”, seem to have been intended as possible titles for this proposed book. The editors have chosen the first of these to be the title of the present volume.

The material has been arranged in four parts:

I. *Essays Divine and Human* — complete essays on yoga and related subjects, arranged in five chronological sections.

II. *From Man to Superman: Notes and Fragments on Philosophy, Psychology and Yoga*, arranged in three thematic sections.

III. *Notes and Fragments on Various Subjects*, arranged in five thematic sections.

IV. *Thoughts and Aphorisms*, as arranged by the author in three sections, with a section of additional aphorisms.

All the writings in this book have been reproduced from Sri Aurobindo’s manuscripts. He did not prepare any of them for publication and left many in an unfinished state. Simple editorial problems arising from illegibility, incomplete revision, etc. are indicated by means of the system explained in the Guide to Editorial Notation on the next page. More complex problems are discussed in the reference volume.
Guide to Editorial Notation

The contents of this volume were never prepared by Sri Aurobindo for publication. They have been transcribed from manuscripts that present a variety of textual difficulties. As far as possible the editors have indicated these problems by means of the notation shown below.

<table>
<thead>
<tr>
<th>Notation</th>
<th>Textual Problem</th>
</tr>
</thead>
<tbody>
<tr>
<td>[?word]</td>
<td>Doubtful reading</td>
</tr>
<tr>
<td>[ . . . ]</td>
<td>Illegible word(s), one group of three spaced dots for each presumed word</td>
</tr>
<tr>
<td>[........]</td>
<td>Word(s) lost by mutilation of the manuscript (at the beginning of a piece, indicates that a page or pages of the manuscript have been lost)</td>
</tr>
<tr>
<td>[word]</td>
<td>Word(s) omitted by the author or lost through damage to the manuscript that are required by grammar or sense, and that could be supplied by the editors</td>
</tr>
<tr>
<td>[? ]</td>
<td>Word(s) omitted by the author that could not be supplied by the editors</td>
</tr>
<tr>
<td>[ ]</td>
<td>Blank left by the author to be filled in later but left unfilled, which the editors were not able to fill</td>
</tr>
<tr>
<td>[note]</td>
<td>Situations requiring textual explication; all such information is printed in italics</td>
</tr>
</tbody>
</table>

Some textual situations requiring editorial intervention could not be handled by the above system. Such cases are discussed or tabulated in the reference volume (volume 35).

Part One

Essays Divine and Human

The essays in this part have been arranged chronologically in five sections. The contents of several of the sections or subsections seem to have been intended by Sri Aurobindo to be published as series or collections of essays.
Man is a functional being; he is not final. A man and high beyond him ascend the radiant degrees that climb to a divine supermind, even nearer divinity. This is the liberating key to our confusing but limited and troubled human existence.

The appearance of a human possibility in a material and animal world was the first shut of a morning supreme light dawning the darkness of the mortal engine the first foretaste of a seedbed to be born in Allor. But the mind of man is a questing light, not the profound silence. The appearance of supermind as the human soul will be the fulfillment of the human offer. The seed of a realization of power and joy and knowledge is emerging out of the darkness of the mortal consciousness in which this half-humanism moves and moves as a chafed dream or at its best, an imperishable dimness. The supermind will be the formal body of that radiant effulgence.

Supermind is not man looked to his own natural youth, not a superior degree of human greatness, knowledge, power, skill, intelligence, character, science, dynamic force, sensibility, love, purity, or perfection. Supermind is something beyond mental man and his limits; it is a greater consciousness than the highest-consciousness proper to human nature.
Section One

Circa 1911
Certitudes

In the deep there is a greater deep, in the heights a greater height. Sooner shall man arrive at the borders of infinity than at the fulness of his own being. For that being is infinity, is God—

I aspire to infinite force, infinite knowledge, infinite bliss. Can I attain it? Yes, but the nature of infinity is that it has no end. Say not therefore that I attain it. I become it. Only so can man attain God by becoming God.

But before attaining he can enter into relations with him. To enter into relations with God is Yoga, the highest rapture & the noblest utility. There are relations within the compass of the humanity we have developed. These are called prayer, worship, adoration, sacrifice, thought, faith, science, philosophy. There are other relations beyond our developed capacity, but within the compass of the humanity we have yet to develop. Those are the relations that are attained by the various practices we usually call Yoga.

We may not know him as God, we may know him as Nature, our Higher Self, Infinity, some ineffable goal. It was so that Buddha approached Him; so approaches him the rigid Adwaitin. He is accessible even to the Atheist. To the materialist He disguises Himself in matter. For the Nihilist he waits ambushed in the bosom of Annihilation.

ये यथा मा प्रपन्ने तांत्यथेव भजाम्यहम्
Moksha

The pessimists have made moksha synonymous with annihilation or dissolution, but its true meaning is freedom. He who is free from bondage, is free, is mukta. But the last bondage is the passion for liberation itself which must be renounced before the soul can be perfectly free, and the last knowledge is the realisation that there is none bound, none desirous of freedom, but the soul is for ever and perfectly free, that bondage is an illusion and the liberation from bondage is an illusion. Not only are we bound but in play, the mimic knots are of such a nature that we ourselves can at our pleasure undo them.

Nevertheless the bonds are many and intricate. The most difficult of all their knots is egoism, the delusion that we have an individual existence sufficient in itself, separate from the universal and only being, ekamevadwitiyam, who is one not only beyond Time, Space and Causality. Not only are we all Brahman in our nature and being, waves of one sea, but we are each of us Brahman in His entirety, for that which differentiates and limits us, nama and rupa, exists only in play and for the sake of the world-drama.

Whence then comes this delusion of egoism, if there is no separate existence and only Brahman is? We answer that there is separate existence but only in manifestation not in reality. It is as if one actor could play different parts not in succession but at one and the same moment; each part is He Himself, one and indivisible, but each part is different from the other. Brahman extends Himself in Time, Space & Causality which do not condition Him but exist in Him and can at any time be changed or abolished, and in Time, Space & Causality He attaches Himself to many namarupas which are merely existences in His universal being. They are real in manifestation, unreal outside manifestation.
Man

The Shastras use the same word for man and the one divine and universal Being—Purusha—as if to lay stress upon the oneness of humanity with God. Nara and Narayana are the eternal couple, who, though they are two, are one, eternally different, eternally the same. Narayana, say the scholiasts, is he who dwells in the waters, but I rather think it means he who is the essence and sum of all humanity. Wherever there is a man, there there is Narayana; for the two cannot be separated. I think sometimes that when Christ spoke of himself as the Son of Man, he really meant the son of the Purusha, and almost find myself imagining that anthropos is only the clumsy Greek equivalent, the literal and ignorant translation of some Syrian word which corresponded to our Purusha.

Be that as it may, there can be no doubt that man is full of divine possibilities—he is not merely a term in physical evolution, but himself the field of a spiritual evolution which with him began and in him will end. It was only when man was made, that the gods were satisfied—they who had rejected the animal forms,—and cried, ‘Man indeed is well and wonderfully made; the higher evolution can now begin.’ He is like God, the sum of all other types and creatures from the animal to the god, infinitely variable where they are fixed, dynamic where they, even the highest, are static, and, therefore, although in the present and in his attainment a little lower than the angels, yet in the eventuality and in his culmination considerably higher than the gods. The other or fixed types, animals, gods, giants, Titans, demigods, can rise to a higher development than their own, but they must use the human body and the terrestrial birth to effect the transition.
Philosophy

The knowledge which the man of pure intellect prefers to a more active and mundane curiosity, has in its surroundings a certain loftiness and serene detachment that cannot fail in their charm. To withdraw from contact with emotion and life and weave a luminous colourless shadowless web of thought, alone and far away in the infinite azure empyrean of pure ideas, can be an enthralling pastime fit for Titans or even for Gods. The ideas so found have always their value and it is no objection to their truth that, when tested by the rude ordeal of life and experience, they go to pieces. All that inopportune disaster proves is that they are no fit guides to ordinary human conduct; for material life which is the field of conduct is only intellectual on its mountaintops; in the plains and valleys ideas must undergo limitation by unideal conditions and withstand the shock of crude sub-ideal forces.

Nevertheless conduct is a great part of our existence and the mere metaphysical, logical or scientific knowledge that either does not help me to act or even limits my self-manifestation through action, cannot be my only concern. For God has not set me here merely to think, to philosophise, to weave metaphysical systems, to play with words and syllogisms, but to act, love and know. I must act divinely so that I may become divine in being and deed; I must learn to love God not only in Himself but in all beings, appearances, objects, enjoyments, events, whether men call them good or bad, real or mythical, fortunate or calamitous; and I must know Him with the same divine impartiality and completeness in order that I may come to be like Him, perfect, pure and unlimited — that which all sons of Man must one day be. This, I cannot help thinking, is the meaning and purpose of the Lila. It is not true that because I think, I am; but rather because I think, feel and act, and even while I am doing any or all of these things, can transcend the thought, feeling and
action, therefore I am. Because I manifest, I am, and because I transcend manifestation, I am. The formula is not so clear and catching as the Cartesian, but there is a fuller truth in its greater comprehensiveness.

The man of unalloyed intellect has a very high and difficult function; it is his function to teach men to think clearly and purely. In order to effect that for mankind, to carry reason as far as that somewhat stumbling and hesitating Pegasus will go, he sacrifices all the bypaths of mental enjoyment, the shady alleys and the moonlit gardens of the soul, in order that he may walk in rare air and a cold sunlight, living highly and austerity on the peaks of his mind and seeking God severely through knowledge. He treads down his emotions, because emotion distorts reason and replaces it by passions, desires, preferences, prejudices, pre-judgments. He avoids life, because life awakes all his sensational being and puts his reason at the mercy of egoism, of sensational reactions of anger, fear, hope, hunger, ambition, instead of allowing it to act justly and do disinterested work. It becomes merely the paid pleader of a party, a cause, a creed, a dogma, an intellectual faction. Passion and eagerness, even intellectual eagerness, so disfigure the greatest minds that even Shankara becomes a sophist and a word-twister, and even Buddha argues in a circle. The philosopher wishes above all to preserve his intellectual righteousness; he is or should be as careful of his mental rectitude as the saint of his moral stainlessness. Therefore he avoids, as far as the world will let him, the conditions which disturb. But in this way he cuts himself off from experience and only the gods can know without experience. Sieyès said that politics was a subject of which he had made a science. He had, but the pity was that though he knew the science of politics perfectly, he did not know politics itself in the least and when he did enter political life, he had formed too rigidly the logical habit to replace it in any degree by the practical. If he had reversed the order or at least coordinated experiment with his theories before they were formed, he might have succeeded better. His readymade Constitutions are monuments of logical perfection and practical ineffectiveness. They have the weakness
of all logic;—granting your premises, your conclusion is all-
triumphant; but then who is going to grant you your premises?
There is nothing Fact and Destiny delight in so much as upsetting
the logician’s major and minor.

The logician thinks he has ensured himself against error
when he has made a classification of particular fallacies; but
he forgets the supreme and general fallacy, the fallacy of think-
ing that logic can, as a rule, prove anything but particular and
partial propositions dealing with a fragmentary and one-sided
truth. Logic? But Truth is not logical; it contains logic, but is
not contained by it. A particular syllogism may be true, so far
as it goes, covering a sharply limited set of facts, but even a set
of syllogisms cannot exhaust truth on a general subject, for the
simple reason that they necessarily ignore a number of equally
valid premises, facts or possibilities which support a modified
or contrary view. If one could arrive first at a conclusion, then
at its exact opposite and, finally, harmonise the contradiction,
one might arrive at some approach to the truth. But this is a
process logic abhors. Its fundamental conception is that two
contradictory statements cannot be true at the same time and
place & in the same circumstances. Now, Fact and Nature and
God laugh aloud when they hear the logician state his funda-
mental conception. For the universe is based on the simultaneous
existence of contradictions covering the same time, place and
circumstances. The elementary conception that God is at once
One and Many, Finite & Infinite, Formed and Formless and that
each attribute is the condition of the existence of its opposite, is
a thing metaphysical logic has been boggling over ever since the
reign of reason began.

The metaphysician thinks that he has got over the difficulty
about the validity of premises by getting to the tattwas, the ideal
truths of universal existence. Afterwards, he thinks, there can be
no fear of confusion or error and by understanding and fixing
them we shall be able to proceed from a sound basis to the rest
of our task. He fashions his critique of reason, his system of
pramanas, and launches himself into the wide inane. Alas, the
tattwas are the very foundation, support and initial reason of this
worldwide contradiction and logically impossible conciliation of opposites in which God has shadowed out some few rays of His luminous & infinite reality,—impossible to bind with the narrow links of a logical chain precisely because it is infinite. As for the pramanas, their manipulation is the instrument of all difference of opinion and the accompaniment to an unending jangle of debate.

Both the logician and the philosopher are apt to forget that they are dealing with words and words divorced from experience can be the most terrible misleaders in the world. Precisely because they are capable of giving us so much light, they are also capable of lighting us into impenetrable darkness. Tato bhuya iva te tamo ya u vidyayam ratah; “Deeper is the darkness into which they enter who are addicted to knowledge alone.” This sort of word worship and its resultant luminous darkness is very common in India and nowhere more than in the intellectualities of religion, so that when a man talks to me about the One and Maya and the Absolute, I am tempted to ask him, “My friend, how much have you experienced of these things in which you instruct me or how much are you telling me out of a vacuum or merely from intellectual appreciation? If you have merely ideas and no experience, you are no authority for me and your logic is to me but the clashing of cymbals good to deafen an opponent into silence, but of no use for knowledge. If you say you have experienced, then I have to ask you, ‘Are you sure you have measured all possible experience?’ If you have not, then how can you be sure that my contradictory experience is not equally true? If you say you have, then I know you to be deluded or a pretender, one who has experienced a fragment or nothing; for God in His entire being is unknowable, avijnatam vijanatam.”

The scientist thinks he has corrected the mistakes of the metaphysician because he refuses to deal with anything but a narrow and limited circle of facts and condemns everything else as hallucination, imposture and imagination. His parti pris, his fierce and settled prejudgments, his determined begging of the question are too obvious and well known to need particular illustration. He forgets that all experiences are facts, that ideas are
facts, that subjective knowledge is the one fact of which he can be decently sure and that he knows nothing even of the material world by his senses but only by the use his subjective knowledge makes of the senses. Many a materialist will tell you that only those facts can be accepted as a basis to knowledge which the senses supply,—a position which no man can substantiate and which his science daily denies in practice. These reasoners consent to trust to their sovereign subjective instrument when it settles for them the truths about this world visible to their lower instruments, but the same sovereign instrument is condemned as wholly fallacious and insane when it deals in precisely the same way with another field of perceptions and experiences. When my subjective experience tells him, “I am hungry”, he consents; “Of course, you must be since you say so.” But let it tell him, “I am full of bliss from an immaterial source”; or “By certain higher instruments repeatedly tested I know that I have wandered in regions illuminated by no material sun,” and he answers, “You are only fit for the gaol or the lunatic asylum.” No one has seen the earth whirling round the sun, indeed we see daily the opposite, yet he holds the first opinion obstinately, but if you say “Although God is not seen of men, yet He exists,” he turns from you angrily and stalks into his laboratory.

The practical man avoids error by refusing to think at all. His method at least cannot be right. It is not right even for the practical uses he prefers exclusively to all others. You see him stumbling into some pit because he refuses to walk with a light and then accusing adverse circumstances or his evil fortune, or he shouts, elbows, jostles, tumbles and stumbles himself into a final success and departs at last, satisfied; leaving behind a name in history and a legacy of falsehood, evil and suffering to unborn generations. The method of the practical man is the shortest and most facile, but the least admirable of all.

Truth is an infinitely complex reality and he has the best chance of arriving nearest to it who most recognises but is not daunted by its infinite complexity. We must look at the whole thought-tangle, fact, emotion, idea, truth beyond idea,
conclusion, contradiction, modification, ideal, practice, possibility, impossibility (which must be yet attempted,) and keeping the soul calm and the eye clear in this mighty flux and gurge of the world, seek everywhere for some word of harmony, not forgetting immediate in ultimate truth, nor ultimate in immediate, but giving each its due place and portion in the Infinite Purpose. Some minds, like Plato, like Vivekananda, feel more than others this mighty complexity and give voice to it. They pour out thought in torrents or in rich and majestic streams. They are not logically careful of consistency, they cannot build up any coherent, yet comprehensive systems, but they quicken men’s minds and liberate them from religious, philosophic and scientific dogma and tradition. They leave the world not surer, but freer than when they entered it.

Some men seek to find the truth by imaginative perception. It is a good instrument like logic, but like logic it breaks down before it reaches the goal. Neither ought to be allowed to do more than take us some way and then leave us. Others think that a fine judgment can arrive at the true balance. It does, for a time; but the next generation upsets that fine balancing, consenting to a coarser test or demanding a finer. The religious prefer inspiration, but inspiration is like the lightning, brilliantly illuminating only a given reach of country and leaving the rest in darkness intensified by the sharpness of that light. Vast is our error if we mistake that bit of country for the whole universe. Is there then no instrument of knowledge that can give us the heart of truth and provide us with the key word of existence? I think there is, but the evolution of mankind at large yet falls far short of it; their highest tread only on the border of that illumination. After all pure intellect carries us very high. But neither the scorners of pure intellectual ideation, nor its fanatic and devotee can attain to the knowledge in which not only the senses reflect or the mind thinks about things, but the ideal faculty directly knows them.
The Siddhis

Some men sneer at the Siddhis because they do not believe in them, others because they think it is noble and spiritual to despise them. Both attitudes proceed from ignorance. It is true that to some natures the rule of omne ignotum pro magnifico holds and everything that is beyond their knowledge is readily accepted as true marvel and miracle, and of such a temper are the credulous made, it is also true that to others it is omne ignotum pro falso and they cannot forbear ridiculing as fraud or pitiable superstition everything that is outside the reach of their philosophy. This is the temper of the incredulous. But the true temper is to be neither credulous nor incredulous, but calmly and patiently to inquire. Let the inquiry be scrupulous, but also scrupulously fair on both sides. Some think it shows superior rationality, even when they inquire, to be severe, and by that they mean to seize every opportunity of disproving the phenomenon offered to their attention. Such an attitude is good rather for limiting knowledge than increasing it. If it saves us from some errors of assertion, it betrays us into many errors of negation and postpones developments of the utmost importance to our human advance.

I do not wish to argue the question of the existence or nonexistence of Yogic siddhis; for it is not with me a question of debate, or of belief and disbelief, since I know by daily experience that they exist. I am concerned rather with their exact nature and utility. And here one is met by the now fashionable habit, among people presuming to be Vedantic and spiritual, of a denunciation and holy horror of the Yogic siddhis. They are, it seems, Tantric, dangerous, immoral, delusive as conjuring tricks, a stumbling block in the path of the soul’s liberation. Swami Vivekananda did much to encourage this attitude by his eagerness to avoid all mention of them at the outset of his mission in order not to
The Siddhis

startle the incredulity of the Europeans. “These things are true” he said, “but let them lie hidden.” And now many who have not the motives of Vivekananda, think that they can ape his spiritual greatness by imitating his limitations.

There was no such weakness in the robust temperament of our forefathers. Our great Rishis of old did not cry out upon Siddhis, but recognised them as a part, though not the most important part of Yogic accomplishment, and used them with an abundant and unhesitating vigour. They are recognised in our sacred books, formally included in Yoga by so devotional a Purana as the Bhagawat, noted and some of their processes carefully tabled by Patanjali. Even in the midnight of the Kali great Siddhas and saints have used them more sparingly, but with power and effectiveness. It would be difficult for many of them to do otherwise than use the siddhis since by the very fact of their spiritual elevation, these powers have become not exceptional movements, but the ordinary processes of their thought and action. It is by the use of the siddhis that the Siddhas sitting on the mountains help the world out of the heart of their solitude and silence. Jesus Christ made the use of the siddhis a prominent feature of his pure, noble and spiritual life, nor did he hesitate to communicate them to his disciples — the laying of hands, the healing of the sick, the ashirvada, the abhishap, the speaking with many tongues were all given to them. The day of Pentecost is still kept holy by the Christian Church. Joan of Arc used her siddhis to liberate France. Socrates had his siddhis, some of them of a very material nature. Men of great genius are usually born with some of them and use them unconsciously. Even in natures far below the power and clarity of genius we see their occasional or irregular operation. The West, always avid of knowledge, is struggling, sadly hampered by misuse and imposture, to develop them and gropes roughly for the truth about them in the phenomena of hypnotism, clairvoyance, telepathy, vouched for by men and women of great intellectuality and sincerity. Returning Eastwards, where only their right practice has been understood, the lives of our saints northern and southern are full of the record of Siddhis. Sri Ramakrishna, whose authority is quoted against
them, not only made inward use of them but manifested them with no inconsiderable frequency in His lila. I see nothing in this long record immoral, dangerous or frivolous. But because Europe looks with scorn and incredulity on these “miracles” and this “magic”, we too must needs be ashamed of them, hustle them into the background and plead that only a few charlatans and followers of false paths profess their use. But as for us, we are men of intellect and spirituality, ascetics, devotees, self-deniers, Vedantins; for these things we are too high and we leave them to Theosophists, immoral Tantrics and deluded pseudo-Yogins.

Let us have done with cant and pretension in all matters. There are no such things as miracles in this world of divine processes, for either there is no such thing as a miracle or, if we consider more closely, everything in this world is a miracle. A miracle is, literally, a marvel, a thing to be wondered at — so long as the process is [not] known. Wireless telegraphy is a great marvel, the speechless passage of a thought from brain to brain is a yet greater, yet it happens daily even in the most commonplace minds and existences. But when the process is known, nothing is left to be wondered at except the admirable greatness of wisdom, width & variety of conception & subtlety & minuteness in execution with which this universe is managed. And even that wonder ceases when we know God and realise that the most wonderful movements of the cosmos are but trifles and “conjuring-tricks” compared with His infinite Reality. And as it is with this siddhi of science which we call wireless telegraphy and with this other siddhi of nature which is exemplified in the momentary or rapid spread of a single thought or emotion in a mob, a nation, an army, so it is with the Yogic siddhis. Explain & master their processes, put them in their proper relation to the rest of the economy of the universe and we shall find that they are neither miraculous nor marvellous nor supernatural. They are supernormal only in the way in which aviation is supernormal or motoring or the Chinese alphabet. Nor is there anything magical in them except in so far as magic, the science of the Persian Magi, means originally & properly the operations of superior power or superior knowledge. And in that sense the occultism of the
present day is magic precisely in the same sense as the scientific experiments of Roger Bacon or Paracelsus. There is a good deal of fraud and error and self-deception mixed up with it, but so there was with the earliest efforts of the European scientists. The defects of Western practitioners or Eastern quacks do not get rid of our true & ancient Yoga.
The Psychology of Yoga

Yoga is not a modern invention of the human mind, but our ancient and prehistoric possession. The Veda is our oldest extant human document and the Veda, from one point of view, is a great compilation of practical hints about Yoga. All religion is a flower of which Yoga is the root; all philosophy, poetry & the works of genius use it, consciously or unconsciously, as an instrument. We believe that God created the world by Yoga and by Yoga He will draw it into Himself again. Yogah prabhavapyayau, Yoga is the birth and passing away of things. When Srikrishna reveals to Arjuna the greatness of His creation and the manner in which He has built it out of His being by a reconciliation of logical opposites, he says “Pasya me yogam aishwaram”, Behold my divine Yoga. We usually attach a more limited sense to the word; when we use or hear it, we think of the details of Patanjali’s system, of rhythmic breathing, of peculiar ways of sitting, of concentration of mind, of the trance of the adept. But these are merely details of particular systems. The systems are not the thing itself, any more than the water of an irrigation canal is the river Ganges. Yoga may be done without the least thought for the breathing, in any posture or no posture, without any insistence on concentration, in the full waking condition, while walking, working, eating, drinking, talking with others, in any occupation, in sleep, in dream, in states of unconsciousness, semiconsciousness, double-consciousness. It is no nostrum or system or fixed practice, but an eternal fact of process based on the very nature of the Universe.

Nevertheless in practice the name may be limited to certain applications of this general process for specific and definite ends. Yoga stands essentially on the fact that in this world we are everywhere one, yet divided; one yet divided in our being, one with yet divided from our fellow creatures of all kinds, one with
yet divided from the infinite existence which we call God, Nature or Brahman. Yoga, generally, is the power which the soul in one body has of entering into effective relation with other souls, with parts of itself which are behind the waking consciousness, with forces of Nature and objects in Nature, with the Supreme Intelligence, Power & Bliss which governs the world either for the sake of that union in itself or for the purpose of increasing or modifying our manifest being, knowledge, faculty, force or delight. Any system which organises our inner being & our outer frame for these ends may be called a system of Yoga.
Section Two

1910–1913
Na Kinchidapi Chintayet

The cessation of thought is the one thing which the believer in intellect as the highest term of our evolution cannot contemplate with equanimity. To master the fleeting randomness of thought by regulating the intellectual powers and thinking consecutively and clearly is an ideal he can understand. But to still this higher development of thought seems to him the negation of human activity, a reversion to the condition of the stone. Yet it is certain that it is only by the stilling of the lower that the higher gets full play. So long as the body and the vital desires are active the mind is necessarily distracted and it is only when the body is forgotten and the vital part consents to quietude that a man can concentrate himself in thought and follow undisturbed the consecutive development whether of a train of reasoning or a train of inspiration. Not only is this so, but the higher faculties of the mind can only work at their best when the lower are quieted. If the accumulations in the chitta, the recording part of the mind, are continually active, full as it is of preconceived ideas, prejudices, predilections, the great mass of previous sanskaras, the reflective mind which is ordinarily called the reason is obstructed in its work and comes to false conclusions. It is essential for the faculties of the reason to be freed as far as may be from this ever increasing accumulation of thought-sensations good and bad, false and true which we call mind — manas. It is this freedom which is called the scientific spirit. To form no conclusions which are not justified by observation and reasoning, to doubt everything until it is proved but to deny nothing until it is disproved, to be always ready to reconsider old conclusions in the light of new facts, to give a candid consideration to every new idea or old idea revived if it deserves a hearing, no matter how contradictory it may be of previously ascertained experience or previously formed conclusion, is the sceptical temper, the temper
of the inquirer, the true scientist, the untrammeled thinker. The interference of prejudgment and predilection means bondage and until the higher mind has shaken off these fetters, it is not free; it works in chains, it sees in blinkers. This is as true of the materialist refusing to consider spiritualism and occultism as it is of the religionist refusing to consider Science. Freedom is the first requisite of full working power, the freedom of the higher from the lower. The mind must be free from the body if it is to be purified from the grossness which clogs its motions, the heart must be free from the obsessions of the body if love and high aspiration are to increase, the reason must be free from the heart and the lower mind if it is to reflect perfectly,—for the heart can inspire, it cannot think, it is a vehicle of direct knowledge coloured by emotion, not of ratiocination. By a similar process if there is anything higher than the reason it can only be set free to work by the stillness of the whole mind not excluding the reflective faculties. This is a conclusion from analogy, indeed, and not entirely binding until confirmed by experience and observation. But we have given reason in past articles for supposing that there is a higher force than the logical reason—and the experience and observation of Yoga confirm the inference from analogy that the stillness of the mind is the first requisite for discovering, distinguishing and perfecting the action of this higher element in the psychology of man.

The stillness of the mind is prepared by the process of concentration. In the science of Rajayoga after the heart has been stilled and the mind prepared, the next step is to subjugate the body by means of asan or the fixed and motionless seat. The aim of this fixity is twofold, first the stillness of the body and secondly the forgetfulness of the body. When one can sit still and utterly forget the body for a long period of time, then the asan is said to have been mastered. In ordinary concentration when the body is only comparatively still it is not noticed, but there is an undercurrent of physical consciousness which may surge up at any moment into the upper current of thought and disturb it. The Yogin seeks to make the forgetfulness perfect. In the higher processes of concentration this forgetfulness reaches such a point
that the bodily consciousness is annulled and in the acme of the *samadhi* a man can be cut or burned without being aware of the physical suffering. Even before the concentration is begun the forgetfulness acquired is sufficient to prevent any intrusion upon the mind except under a more than ordinarily powerful physical stimulus. After this point has been reached the Yoga proceeds to the processes of pranayam by which the whole system is cleared of impurities and the *pranasakti*, the great cosmic energy which lies behind all processes of Nature, fills the body and the brain and becomes sufficient for any work of which man is actually or potentially capable. This is followed by concentration. The first process is to withdraw the senses into the mind. This is partly done in the ordinary process of absorption of which every thinking man is capable. To concentrate upon the work in hand whether it be a manual process, a train of thought, a scientific experiment or a train of inspiration, is the first condition of complete capacity and it is the process by which mankind has been preparing itself for Yoga. To concentrate means to be absorbed; but absorption may be more or less complete. When it is so complete that for all practical purposes the knowledge of outward things ceases, then the first step has been taken towards Yogic absorption. We need not go into the stages of that absorption rising from *pratyahar* to *samadhi* and from the lower *samadhi* to the higher. The principle is to intensify absorption. It is intensified in quality by the entire cessation of outward knowledge, the senses are withdrawn into the mind, the mind into the buddhi or supermind, the supermind into Knowledge, *Vijnana*, *Mahat*, out of which all things proceed and in which all things exist. It is intensified in quantity or content; instead of absorption in a set of thoughts or a train of intuitions, the Yogin concentrates his absorption on a single thought, a single image, a single piece of knowledge, and it is his experience that whatever he thus concentrates on, he masters, — he becomes its lord and does with it what he wills. By knowledge he attains to mastery of the world. The final goal of Rajayoga is the annulment of separate consciousness and complete communion with that which alone is whether we call Him Parabrahman or Parameshwara.
Existence in the Highest or Will in the Highest, the Ultimate or God.

In the Gita we have a process which is not the process of Raja-Yoga. It seeks a short cut to the common aim and goes straight to the stillness of the mind. After putting away desire and fear the Yogin sits down and performs upon his thoughts a process of reining in by which they get accustomed to an inward motion. Instead of allowing the mind to flow outward, he compels it to rise and fall within, and if he sees, hears, feels or smells outward objects he pays no attention to them and draws the mind always inward. This process he pursues until the mind ceases to send up thoughts connected with outward things. The result is that fresh thoughts do not accumulate in the chitta at the time of meditation, but only the old ones rise. If the process be farther pursued by rejecting these thoughts as they rise in the mind, in other words by dissociating the thinker from the mind, the operator from the machine and refusing to sanction the continuance of the machine's activity, the result is perfect stillness. This can be done if the thinker whose interest is necessary to the mind, refuses to be interested and becomes passive. The mind goes on for a while by its own impetus just as a locomotive does when the steam is shut off, but a time must come when it will slow down and stop altogether. This is the moment towards which the process moves. Na kinchid api chintayet: — the Yogin should not think of anything at all. Blank cessation of mental activity is aimed at leaving only the sakshi, the witness watching for results. If at this moment the Yogin entrusts himself to the guidance of the universal Teacher within himself, Yoga will fulfil itself without any farther effort on his part. The passivity will be confirmed, the higher faculties will awake and the cosmic Force passing down from the vijnana through the supermind will take charge of the whole machine and direct its workings as the Infinite Lord of All may choose.

Whichever of the two methods be chosen, the result is the same. The mind is stilled, the higher faculties awakened. This stillness of the mind is not altogether a new idea or peculiar to India. The old Highland poets had the secret. When they wished
to compose poetry, they first stilled the mind, became entirely passive and waited for the inspiration to flow into them. This habit of yogic passivity, a relic doubtless of the discipline of the Druids, was the source of those faculties of second sight and other psychic powers which are so much more common in this Celtic race than in the other peoples of Europe. The phenomena of inspiration are directly connected with these higher faculties of which we find rudiments or sporadic traces in the past history of human experience.
The Sources of Poetry

The swiftness of the muse has been embodied in the image of Pegasus, the heavenly horse of Greek legend; it was from the rapid beat of his hoofs on the rock that Hippocrene flowed. The waters of Poetry flow in a current or a torrent; where there is a pause or a denial, it is a sign of obstruction in the stream or of imperfection in the mind which the waters have chosen for their bed and continent. In India we have the same idea; Saraswati is for us the goddess of poetry, and her name means the stream or “she who has flowing motion”. But even Saraswati is only an intermediary. Ganga is the real mother of inspiration, she who flows impetuously down from the head of Mahadev, God high-seated, over the Himalay of the mind to the homes and cities of men. All poetry is an inspiration, a thing breathed into the thinking organ from above; it is recorded in the mind, but is born in the higher principle of direct knowledge or ideal vision which surpasses mind. It is in reality a revelation. The prophetic or revealing power sees the substance; the inspiration perceives the right expression. Neither is manufactured; nor is poetry really a poiesis or composition, nor even a creation, but rather the revelation of something that eternally exists. The ancients knew this truth and used the same word for poet and prophet, creator and seer, *sophos, vates, kavi*.

But there are differences in the manifestation. The greatest motion of poetry comes when the mind is still and the ideal principle works above and outside the brain, above even the hundred petalled lotus of the ideal mind, in its proper empire; for then it is Veda that is revealed, the perfect substance and expression of eternal truth. This higher ideation transcends genius just as genius transcends ordinary intellect and perception. But that great faculty is still beyond the normal level of our evolution. Usually we see the action of the revelation and inspiration
reproduced by a secondary, diluted and uncertain process in the mind. But even this secondary and inferior action is so great that it can give us Shakespeare, Homer and Valmike. There is also a tertiary and yet more common action of the inspiration. For of our three mental instruments of knowledge,—the heart or emotionally realising mind, the observing and reasoning intellect with its aids, fancy and memory, and the intuitive intellect,—it is into the last and highest that the ideal principle transmits its inspirations when the greatest poetry writes itself out through the medium of the poet. But if the intuitive intellect is not strong enough to act habitually, it is better for the poetry to descend into the heart and return to the intellect suffused and coloured with passion and emotion than to be formed directly in the observing intellect.

Poetry written from the reasoning intellect is apt to be full of ingenious conceits, logic, argumentation, rhetorical turns, ornamental fancies, echoes learned and imitative rather than uplifted and transformed. This is what is sometimes called classical poetry, the vigorous and excellent but unemotional and unuplifted poetry of Pope and Dryden. It has its inspiration, its truth and value; it is admirable in its way, but it is only great when it is lifted out of itself into intuitive writing or else invaded by the heart. For everything that needs fire rather than light, driving force rather than clearness, enthusiasm rather than correctness, the heart is obviously the more potent instrument. Now, poetry to be great must have either enthusiasm or ecstasy.

Yet the poetry that rises up from the heart is usually a turbid stream; our own restless ideas and imaginations mix with the pure inrush from above a turbulent uprush from below, our excited emotions seek an exaggerated expression, our aesthetic habits and predilections busy themselves to demand a satisfaction greatly beyond their due. Such poetry may be inspired, but it is not always suitable or inevitable. There is often a double inspiration, the higher or ecstatic and the lower or emotional, and the lower disturbs and drags down the higher. This is the birth of romantic or excessively exuberant poetry, too rich in expression, too abundant and redundant in substance. The best
poetry coming straight from the right centres may be bare and strong, unadorned and lofty, or it may be rich and splendid; it may be at will romantic or classical; but it will always be felt to be the right thing for its purpose; it is always nobly or rapturously inevitable.

But even in the higher centres of the intuitive intellect there may be defects in the inspiration. There is a kind of false fluency which misses the true language of poetry from dulness of perception. Under the impression that it is true and inspired writing it flows with an imperturbable flatness, saying the thing that should be said but not in the way that it should be said, without force and felicity. This is the tamasic or clouded stimulus, active, but full of unenlightenment and self-ignorance. The thing seen is right and good; accompanied with the inspired expression it would make very noble poetry. Instead, it becomes prose rendered unnatural and difficult to tolerate by being cut up into lengths. Wordsworth is the most characteristic and interesting victim of tamasic stimulus. Other great poets fall a prey to it, but that superb and imperturbable self-satisfaction under the infliction is his alone. There is another species of tamasic stimulus which transmits an inspired and faultless expression, but the substance is neither interesting to man nor pleasing to the gods. A good deal of Milton comes under this category. In both cases what has happened is that either the inspiration or the revelation has been active, but its companion activity has refused to associate itself in the work.

It is when the mind works at the form and substance of poetry without either the revelation or the inspiration from above that respectable or minor poetry is produced. Judgment, memory and imagination may work, command of language may be there, but without that secondary action of a higher than intellectual force, it is labour wasted, work that earns respect but not immortality. Doggerel and bastard poetry take their rise not even in the observing intellect but from the sensational mind or the passive memory guided only by the mere physical pleasure of sound and emotion. It is bold, blatant, external, imitative, vulgar; its range of intellectuality and imaginativeness
cannot go beyond the vital impulse and the vital delight. But even in
the sensational mind there is the possibility of a remote action from
the ideal self; for even to the animals who think sensational only,
God has given revelations and inspirations which we call instincts.
Under such circumstances even bastard poetry may have a kind of
worth, a kind of inevitability. The poet in the sensational man may
be entirely satisfied and delighted, and even in the more developed
human being the sensational element may find a poetical satisfaction
not of the highest. The best ballad poetry and Macaulay’s lays are
instances in point. Scott is a sort of link between sensational and
intellectual poetry. While there are men mainly sensational, secondarily
intellectual and not at all ideal, he will always be admired.

Another kind of false inspiration is the rajasic or fiery stimulus.
It is not flat and unprofitable like the tamasic, but hasty, impatient
and vain. It is eager to avoid labour by catching at the second
best expression or the incomplete vision of the idea, insufficiently
jealous to secure the best form, the most satisfying substance.
Rajasic poets, even when they feel the defect in what they have
written, hesitate to sacrifice it because they also feel and are
attached either to what in it is valuable or to the memory of their
delight when it was first written. If they get a better expression
or a fuller sight, they often prefer to reiterate rather than strike
out inferior stuff with which they are in love. Sometimes, drifting
or struggling helplessly along that shallow and vehement current,
they vary one idea or harp on the same imagination without any
final success in expressing it inevitably. Examples of the rajasic
stimulus are commonest in Shelley and Spenser, but few English
poets are free from it. This is the rajasic fault in expression. But the
fiery stimulus also perverts or hampers the substance. An absence of
self-restraint, an unwillingness to restrict and limit the ideas and
imaginations is a sure sign of a rajasic ideality. There is an attempt
to exhaust all the possibilities of the subject, to expand and multiply
thoughts and imaginative visions beyond the bounds of the right and
permissible. Or else the true idea is rejected or fatally anticipated
by another which is or seems to be more catching and boldly effective.
Keats is
the principle exemplar of the first tendency, the Elizabethans of the second. The earlier work of Shakespeare abounds with classical instances. As distinguished from the Greek, English is a pronouncedly rajasic literature and, though there is much in it that is more splendid than almost anything done by the Greeks, — more splendid, not better, — a great deal even of its admired portions are rather rich or meretricious than great and true.

The perfect inspiration in the intuitive intellect is the sattwic or luminous inspiration, which is disinterested, self-contained, yet at will noble, rich or vigorous, having its eye only on the right thing to be said and the right way to say it. It does not allow its perfection to be interfered with by emotion or eagerness, but this does not shut it out from ecstasy and exaltation. On the contrary, its delight of self-enjoyment is a purer and more exquisite enthusiasm than that which attends any other inspiration. It commands and uses emotion without enslaving itself to it. There is indeed a sattwic stimulus which is attached to its own luminosity, limpidity and steadiness, and avoids richness, force or emotion of a poignant character even when these are needed and appropriate. The poetry of Matthew Arnold is often though not always of this character. But this is a limited inspiration. Sattwic as well as rajasic poetry may be written from the uninspired intellect, but the sensational mind never gives birth to sattwic poetry.

One thing has to be added. A poet need not be a reflective critic; he need not have the reasoning and analysing intellect and dissect his own poetry. But two things he must have in some measure to be perfect, the intuitive judgment which shows him at a glance whether he has got the best or the second-best idea, the perfect or the imperfect expression and rhythm, and the intuitive reason which shows him without analysis why or wherein it is best or second-best, perfect or imperfect. These four faculties, revelation or prophecy, inspiration, intuitive judgment and intuitive reason, are the perfect equipment of genius doing the works of interpretative & creative knowledge.
The Interpretation of Scripture

The spirit who lies concealed behind the material world, has given us, through the inspiration of great seers, the Scriptures as helpers and guides to unapparent truth, lamps of great power that send their rays into the darkness of the unknown beyond which He dwells, *tamasah parastat*. They are guides to knowledge, brief indications to enlighten us on our path, not substitutes for thought and experience. They are *shabdam Brahma*, the Word, the oral expression of God, not the thing to be known itself nor the knowledge of Him. *Shabdam* has three elements, the word, the meaning and the spirit. The word is a symbol, *vak* or *nama*; we have to find the *artha*, the meaning or form of thought which the symbol indicates. But the meaning itself is only the indication of something deeper which the thought seeks to convey to the intellectual conception. For not only words, but ideas also are eventually no more than symbols of a knowledge which is beyond ideas and words. Therefore it comes that no idea by itself is wholly true. There is indeed a *rupa*, some concrete or abstract form of knowledge, answering to every name, and it is that which the meaning must present to the intellect. We say a form of knowledge, because according to our philosophy, all things are forms of an essentially unknowable existence which reveals them as forms of knowledge to the essential awareness in its Self, its Atman or Spirit, the Chit in the Sat. But beyond *nama* and *rupa* is *swarupa*, the essential figure of Truth, which we cannot know with the intellect, but only with a higher faculty. And every *swarupa* is itself only a symbol of the one essential existence which can only be known by its symbols because in its ultimate reality it defies logic and exceeds perception, — God.

Since the knowledge the Scripture conveys is so deep, difficult and subtle, — if it were easy what would be the need of the Scripture? — the interpreter cannot be too careful or too
perfectly trained. He must not be one who will rest content in
the thought-symbol or in the logical implications of the idea; he
must hunger and thirst for what is beyond. The interpreter who
stops short with the letter, is the slave of a symbol and convicted
of error. The interpreter who cannot go beyond the external
meaning, is the prisoner of his thought and rests in a partial and
incomplete knowledge. One must transgress limits & penetrate
to the knowledge behind, which must be experienced before it
can be known; for the ear hears it, the intellect observes it, but
the spirit alone can possess it. Realisation in the self of things is
the only knowledge; all else is mere idea or opinion.

The interpretation of the Veda is hampered by many hu-
man irrelevancies. Men set up an authority and put it between
themselves and knowledge. The orthodox are indignant that a
mere modern should presume to differ from Shankara in inter-
preting the Vedanta or from Sayana in interpreting the Veda.
They forget that Shankara and Sayana are themselves moderns,
separated from ourselves by some hundreds of years only, but
the Vedas are many thousands of years old. The commentator
ought to be studied, but instead we put him in place of the
text. Good commentaries are always helpful even when they are
wrong, but the best cannot be allowed to fetter inquiry. Sayana’s
commentary on the Veda helps me by showing what a man of
great erudition some hundreds of years ago thought to be the
sense of the Scripture. But I cannot forget that even at the time
of the Brahmanas the meaning of the Veda had become dark
to the men of that prehistoric age. Shankara’s commentary on
the Upanishads helps me by showing what a man of immense
metaphysical genius and rare logical force after arriving at some
fundamental realisations thought to be the sense of the Vedanta.
But it is evident that he is often at a loss and always prepossessed
by the necessity of justifying his philosophy. I find that Shankara
had grasped much of Vedantic truth, but that much was dark
to him. I am bound to admit what he realised; I am not bound
to exclude what he failed to realise. Aptavakyam, authority, is
one kind of proof; it is not the only kind: pratyaksha is more
important.
The heterodox on the other hand swear by Max Muller and the Europeans. It is enough for them that Max Muller should have found henotheism in the Vedas for the Vedas to be henotheistic. The Europeans have seen in our Veda only the rude chants of an antique and primitive pastoral race sung in honour of the forces of Nature, and for many their opinion is conclusive of the significance of the mantras. All other interpretation is to them superstitious. But to me the ingenious guesses of foreign grammarians are of no more authority than the ingenious guesses of Sayana. It is irrelevant to me what Max Muller thinks of the Veda or what Sayana thinks of the Veda. I should prefer to know what the Veda has to say for itself and, if there is any light there on the unknown or on the infinite, to follow the ray till I come face to face with that which it illumines.

There are those who follow neither Sayana and Shankara nor the Europeans, but interpret Veda and Vedanta for themselves, yet permit themselves to be the slaves of another kind of irrelevancy. They come to the Veda with a preconceived and established opinion and seek in it a support for some trifling polemic; they degrade it to the position of a backer in an intellectual prizefight. Opinions are not knowledge, they are only sidelights on knowledge. Most often they are illegitimate extensions of an imperfect knowledge. A man has perhaps travelled to England and seen Cumberland and the lakes; he comes back and imagines England ever after as a country full of verdant mountains, faery woodlands, peaceful and enchanted waters. Another has been to the manufacturing centres; he imagines England as a great roaring workshop, crammed with furnaces and the hum of machinery and the smell of metal. Another has sojourned in the quiet country-side and to him England is all hedges and lanes and the daisy-sprinkled meadow and the well-tilled field. All have realised a little, but none have realised England. Then there is the man who has only read about the country or heard descriptions from others and thinks he knows it better than the men who have been there. They may all admit that what they have seen need not be the whole, but each has his little ineffaceable picture which, because it is all he has realised,
persists in standing for the whole. There is no harm in that, no harm whatever in limitation if you understand and admit the limitation. But if all the four begin quarrelling, what an aimless confusion will arise! That is what has happened in India because of the excessive logicality and too robust opinionativeness of Southern metaphysicians. We should come back to a more flexible and rational spirit of inquiry.

What then are the standards of truth in the interpretation of the Scripture? The standards are three, the knower, knowledge and the known.

The known is the text itself that we seek to interpret. We must be sure we have the right word, not an emendation to suit the exigency of some individual or sectarian opinion; the right etymology and shade of meaning, not one that is traditional or forced to serve the ends of a commentator; the right spirit in the sense, not an imported or too narrow or too elastic spirit.

The knower is the original "drashta or seer of the mantra," with whom we ought to be in spiritual contact. If knowledge is indeed a perishable thing in a perishable instrument, such contact is impossible; but in that case the Scripture itself must be false and not worth considering. If there is any truth in what the Scripture says, knowledge is eternal and inherent in all of us and what another saw I can see, what another realised I can realise. The "drashta" was a soul in relation with the infinite Spirit, I am also a soul in relation with the infinite Spirit. We have a meeting-place, a possibility of communion.

Knowledge is the eternal truth, part of which the "drashta" expresses to us. Through the part he shows us, we must travel to the whole, otherwise we shall be subject to the errors incidental to an imperfect knowledge. If even the part is to be rightly understood, it must be viewed in the terms of the whole, not the whole in the terms of the part. I am not limited by the Scriptures; on the contrary I must exceed them in order to be master of their knowledge. It is true that we are usually the slaves of our individual and limited outlook, but our capacity is unlimited, and, if we can get rid of "ahankara," if we can put ourselves at the service of the Infinite without any reservation of predilection.
or opinion, there is no reason why our realisation should be limited. *Tasmin vijnate sarvam vijnatam*. He being known, all can be known. To understand Scripture, it is not enough to be a scholar, one must be a soul. To know what the *drashta* saw one must oneself have *drishti*, sight, and be a student if not a master of the knowledge. *Atha para yaya tad aksharam adhigamyate*. Grammar, etymology, prosody, astronomy, metaphysics, logic, all that is good; but afterwards there is still needed the higher knowledge by which the Immutable is known.
On Original Thinking

The attitude of mankind towards originality of opinion is marked by a natural hesitation and inconsistency. Admired for its rarity, brilliancy and potency, yet in practice and for the same qualities it is more generally dreaded, ridiculed or feared. There is no doubt that it tends to disturb what is established. Therefore tamasic men and tamasic states of society take especial pains to discourage independence of opinion. Their watchword is authority. Few societies have been so tamasic, so full of inertia and contentment in increasing narrowness as Indian society in later times; few have been so eager to preserve themselves in inertia. Few therefore have attached so great an importance to authority. Every detail of our life has been fixed for us by Shastras and custom, every detail of our thought by Scripture and its commentators,—but much oftener by the commentators than by Scripture. Only in one field, that of individual spiritual experience, have we cherished the ancient freedom and originality out of which our past greatness sprang; it is from some new movement in this inexhaustible source that every fresh impulse and rejuvenated strength has arisen. Otherwise we should long ago have been in the grave where dead nations lie, with Greece and Rome of the Caesars, with Esarhaddon and the Chosroes. You will often hear it said that it was the forms of Hinduism which have given us so much national vitality. I think rather it was its spirit. I am inclined to give more credit for the secular miracle of our national survival to Shankara, Ramanuja, Nanak & Kabir, Guru Govind, Chaitanya, Ramdas & Tukaram than to Raghunandan and the Pandits of Nadiya & Bhatpara.

The result of this well-meaning bondage has been an increasing impoverishment of the Indian intellect, once the most gigantic and original in the world. Hence a certain incapacity, atrophy, impotence have marked our later activities even
at their best. The most striking instance is our continued helplessness in the face of the new conditions and new knowledge imposed on us by recent European contact. We have tried to assimilate, we have tried to reject, we have tried to select; but we have not been able to do any of these things successfully. Successful assimilation depends on mastery; but we have not mastered European conditions and knowledge, rather we have been seized, subjected and enslaved by them. Successful rejection is possible only if we have intelligent possession of that which we wish to keep. Our rejection too must be an intelligent rejection; we must reject because we have understood, not because we have failed to understand. But our Hinduism, our old culture are precisely the possessions we have cherished with the least intelligence; throughout the whole range of our life we do things without knowing why we do them, we believe things without knowing why we believe them, we assert things without knowing what right we have to assert them,—or, at most, it is because some book or some Brahmin enjoins it, because Shankara thinks it, or because someone has so interpreted something that he asserts to be a fundamental Scripture of our religion. Nothing is our own, nothing native to our intelligence, all is derived. As little have we understood the new knowledge; we have only understood what the Europeans want us to think about themselves and their modern civilisation. Our English culture—if culture it can be called—has increased tenfold the evil of our dependence instead of remedying it.

More even than the other two processes successful selection requires the independent play of intellect. If we merely receive new ideas and institutions in the light in which they are presented to us, we shall, instead of selecting, imitate—blindly, foolishly and inappropriately. If we receive them in the light given by our previous knowledge, which was on so many points nil, we shall as blindly and foolishly reject. Selection demands that we should see things not as the foreigner sees them or as the orthodox Pandit sees them, but as they are in themselves. But we have selected at random, we have rejected at random, we
have not known how to assimilate or choose. In the upshot we have merely suffered the European impact, overborne at points, crassly resisting at others, and, altogether, miserable, enslaved by our environments, able neither to perish nor to survive. We preserve indeed a certain ingenuity and subtlety; we can imitate with an appearance of brightness; we can play plausibly, even brilliantly with the minutiae of a subject; but we fail to think usefully, we fail to master the life and heart of things. Yet it is only by mastering the life and heart of things that we can hope, as a nation, to survive.

How shall we recover our lost intellectual freedom and elasticity? By reversing, for a time at least, the process by which we lost it, by liberating our minds in all subjects from the thraldom to authority. That is not what reformers and the Anglicised require of us. They ask us, indeed, to abandon authority, to revolt against custom and superstition, to have free and enlightened minds. But they mean by these sounding recommendations that we should renounce the authority of Sayana for the authority of Max Muller, the Monism of Shankara for the Monism of Haeckel, the written Shastra for the unwritten law of European social opinion, the dogmatism of Brahmin Pandits for the dogmatism of European scientists, thinkers and scholars. Such a foolish exchange of servitude can receive the assent of no self-respecting mind. Let us break our chains, venerable as they are, but let it be in order to be free,—in the name of truth, not in the name of Europe. It would be a poor bargain to exchange our old Indian illuminations, however dark they may have grown to us, for a derivative European enlightenment or replace the superstitions of popular Hinduism by the superstitions of materialistic Science.

Our first necessity, if India is to survive and do her appointed work in the world, is that the youth of India should learn to think,—to think on all subjects, to think independently, fruitfully, going to the heart of things, not stopped by their surface, free of prejudices, shearing sophism and prejudice asunder as with a sharp sword, smiting down obscurantism of all kinds as with the mace of Bhima. Let our brains no longer, like European
infants, be swathed with swaddling clothes; let them recover the free and unbound motion of the gods; let them have not only the minuteness but the wide mastery and sovereignty natural to the intellect of Bharata and easily recoverable by it if it once accustoms itself to feel its own power and be convinced of its own worth. If it cannot entirely shake off past shackles, let it at least arise like the infant Krishna bound to the wain, and move forward dragging with it wain and all and shattering in its progress the twin trees, the twin obstacles to self-fulfillment, blind mediaeval prejudice and arrogant modern dogmatism. The old fixed foundations have been broken up, we are tossing in the waters of a great upheaval and change. It is no use clinging to the old ice-floes of the past, they will soon melt and leave their refugees struggling in perilous waters. It is no use landing ourselves in the infirm bog, neither sea nor good dry land, of a secondhand Europeanism. We shall only die there a miserable and unclean death. No, we must learn to swim and use that power to reach the good vessel of unchanging truth; we must land again on the eternal rock of ages.

Let us not, either, select at random, make a nameless hotch-potch and then triumphantly call it the assimilation of East and West. We must begin by accepting nothing on trust from any source whatsoever, by questioning everything and forming our own conclusions. We need not fear that we shall by that process cease to be Indians or fall into the danger of abandoning Hinduism. India can never cease to be India or Hinduism to be Hinduism, if we really think for ourselves. It is only if we allow Europe to think for us that India is in danger of becoming an ill-executed and foolish copy of Europe. We must not begin by becoming partisans but know before we take our line. Our first business as original thinkers will be to accept nothing, to question everything. That means to get rid of all unexamined opinions old or new, all mere habitual sanskaras in the mind, to have no preconceived judgments. Anityah sarvasanskarah, said the Buddha. I do not know that I quite agree. There are certain sanskaras that seem to me as eternal as things can be. What is the Atman itself but an eternal and fundamental way of
looking at things, the essentiality of all being in itself unknowable, neti, neti. Therefore the later Buddhists declared that the Atman itself did not exist and arrived at ultimate nothingness, a barren and foolish conclusion, since Nothingness itself is only a sanskara. Nevertheless it is certain that the great mass of our habitual conceptions are not only temporary, but imperfect and misleading. We must escape from these imperfections and take our stand on that which is true and lasting. But in order to find out what in our conceptions is true and lasting, we must question all alike rigorously and impartially. The necessity of such a process not for India, but for all humanity has been recognised by leading European thinkers. It was what Carlyle meant when he spoke of swallowing all formulas. It was the process by which Goethe helped to reinvigorate European thinking. But in Europe the stream is running dry before it has reached its sea. Europe has for some time ceased to produce original thinkers, though it still produces original mechanicians. Science preserves her freedom of inquiry in details, in the mint and anise and cummin of the world's processes, but, bound hand & foot in the formulas of the past, she is growing helpless for great ideas and sound generalisations. She sits contented with her treasuries; she has combed all the pebbles on the seashore and examined the shoreward gulfs and bays; of the oceans beyond and their undiscovered continents she cries scornfully “They are a dream; there is nothing there but mists mistaken for land or a waste of the same waters that we have already here examined.” Europe is becoming stereotyped and unprogressive; she is fruitful only of new & ever multiplying luxuries and of feverish, fiery & ineffective changes in her political and social machinery. China, Japan and the Mussulman States are sliding into a blind European imitativeness. In India alone there is self-contained, dormant, the energy and the invincible spiritual individuality which can yet arise and break her own and the world’s fetters.

It is true that original thinking makes for original acting, and therefore a caution is necessary. We must be careful that our thinking is not only original but thorough before we even initiate
action. To run away with an isolated original idea, or charmed with its newness and vigour, to ride it into the field of action is to make of ourselves cranks and eccentrics. This world, this society, these nations and their civilisations are not simple existences, but complex & intricate, the result of a great organic growth in many centuries, sometimes in many millenniums. We should not deal with them after snatching at a few hurried generalisations or in the gust and fury of a stiff fanaticism. We must first be sure that our new thought is wide and strong-winged enough, our thoughts large enough, our natures mighty enough to deal with those vastnesses. We must be careful, too, to comprehend what we destroy. And destroy we must not unless we have a greater and more perfect thing to put in the place even of a crumbling and mouldering antiquity. To tear down Hindu society in the spirit of the social reformers or European society in the spirit of the philosophical or unphilosophical Anarchists would be to destroy order and substitute a licentious confusion. If we carefully remember these cautions, there is no harm in original thinking even of the boldest and most merciless novelty. I may, for example, attack unsparingly the prevailing system of justice and punishment as extraordinarily senseless and evil, even if I have no new system ready-made to put in as its successor; but I must have no wish to destroy it, senseless & evil though it be, until our new system is ready. For it fills a place the vacancy of which the Spirit that uplifts & supports our human welfare, would greatly abhor. I may expose, too, the weaknesses and narrownesses of an existing form of religion, even if I have no new & better form to preach of my own, but I must not so rage against those weaknesses as to destroy all religious faith and I should remember before the end of my criticism that even a bad religion is better than no religion, — that it is wiser to worship energy in my surroundings with the African savage than to be dead to all faith and all spirituality like the drunkards of a little knowledge — for even in that animal and unintelligent worship there is a spark of the divine fire which keeps humanity living, while the cultured imperial Roman or the luxurious modern wealth-gatherer and body worshipper drags his kind into a straight
& well built road which is so broad only to lead more easily to a mighty perdition — na ched ihavedin mahati vinashtih. Otherwise there is no harm in spreading dissatisfaction with fetish worship or refusing praise to an ancient and cruel folly. We need not be troubled if our thinking is condemned as too radical or even as reckless & revolutionary, — for the success of revolutionary thought always means that Nature has need of one of her cataclysms; even otherwise, she will make of it whatever modified use is best for our present humanity. In thought as in deeds, to the thinking we have a right, the result belongs to the wise & active Power of God that stands over us & in us originating, cherishing, indefatigably dissolving & remoulding man and spirit in the progressive harmonies of His universe. Let us only strive that our light should be clear, diffused & steady, not either darkness or a narrow glare and merely violent lustre. And if we cannot compass that ideal, still it is better to think than to cease from thinking. For even out of darkness the day is born and lightning has its uses!

[Draft opening of another version]

We have had recently in India a great abundance of speculations on the real causes of that gradual decline and final arrest which Indian civilisation no less than European suffered during the Middle Ages. The arrest was neither so sudden as in Europe nor so complete; but its effect on our nation, like the undermining activity of a slow poison, was all the more profoundly destructive, pervasive, hard to remedy, difficult to expel. At a certain period we entered into a decline, splendid at first like a long and gorgeous sunset, afterwards more & more sombre, till the darkness closed in, and if our sky was strewn with stars of a great number & brilliance, it was only a vast decay, confusion and inertia that they lighted and emphasised with their rays. We have, most of us, our chosen explanation of this dolorous phenomenon. The patriot attributes our decline to the ravages
of foreign invasion and the benumbing influences of foreign rule; the disciple of European materialism finds out the enemy, the evil, the fount and origin of all our ills, in our religion and its time-honoured social self-expression. Such explanations, like most human thoughts, have their bright side of truth as well as their obscure side of error; but they are not, in any case, the result of impartial thinking. Man may be, as he has been defined, a reasoning animal, but it is necessary to add that he is, for the most part, a very badly-reasoning animal. He does not ordinarily think for the sake of finding out the truth, but much more for the satisfaction of his mental preferences and emotional tendencies; his conclusions spring from his preferences, prejudices and passions; and his reasoning & logic paraded to justify them are only a specious process or a formal mask for his covert approach to an upshot previously necessitated by his heart or by his temperament. When we are awakened from our modern illusions, as we have been awakened from our mediaeval superstitions, we shall find that the intellectual conclusions of the rationalist for all their [...] pomp & profuse apparatus of scrupulous enquiry were as much dogmas as those former dicta of Pope & theologian, which confessed without shame their simple basis in the negation of reason. Much more do all those current opinions demand scrutiny & modification, which express our personal view of things and rest patently on a partial and partisan view or have been justified by preferential selection of the few data that suited our foregone & desired conclusion. It is always best, therefore, to scrutinise very narrowly those bare, trenchant explanations which so easily satisfy the pugnacious animal in our intellects; when we have admitted that small part of the truth on which they seize, we should always look for the large part which they have missed. Especially is it right, when there are subjective movements & causes of a considerable extent and complexity behind the phenomena we have to observe, to distrust facile, simple and rapid solutions.
The Balance of Justice

The European Court of Justice is a curious and instructive institution. Europe, even while vaunting a monopoly of civilisation, cherishes and preens herself in some remarkable relics of barbarism. In mediaeval times, with the scientific thoroughness and efficiency which she shares with the Mongolian, she organised torture as the most reliable source of evidence and the ordeal of battle as the surest guide to judicial truth. Both ideas were characteristically European. A later age may seem to have got rid of these luminous methods, but it is not so in reality. In place of the rack the French have invented the investigating judge and the Americans some remarkable processes, which I think they call questioning (the old name for torture) in the first, second and up to the fifth degree if not to higher stages of excellence. The torture is sometimes of the mind not of the body; it is less intense, more lingering, but it leads to the same result in the end. When the tortured wretch, after protecting with lies for as long as may be his guilt or his innocence, escapes from his furious and pitiless persecutor by a true or false confession, preferring jail or the gallows to this prolongation of tense misery, the French call it delicately “entering into the way of avowals”. The Holy Office in Seville could not have invented a more Christian and gentlemanly euphemism. The American system, is in the fifth degree, I think, to keep the miserable accused fasting and sleepless and ply him with a ceaseless assault of torturing questions and suggestions until the brain reels, the body sinks, the heart is sick and hopeless and the man is ready to say anything his torturers believe or want to be the truth. It is a true Inquisition; the mediaeval name fits these modern refinements.

The English people have often been accused as a brutal or a stupid nation; but they have a rugged humanity when their
interests are not touched and enjoy glimpses of a rough com-
mon sense. They have besides an honourable love of publicity
and do not like, for themselves at least, secret police methods.
They have rejected the investigating judge and torture in the
fifth degree. But their courts resemble the European. Under a
civilised disguise these Courts are really the mediaeval ordeal by
battle; only in place of the swords and lances of military combat-
ants we have the tongues and technicalities of lawyers and the
mutually tilting imaginations of witnesses. The victory is to the
skilfullest liar and the most plausible workman in falsehoods
and insincerities. It is largely an elaborate pitch and toss, an
exhilarating gamble, a very Monte Carlo of surprising chances.
But there is skill in it, too; it satisfies the intellect as well as the
sensations. One should rather call it a game of human Bridge
which admirably combines luck and skill, or consider it as an
intellectual gladiatorial show. In big cases the stake is worthy
of the play and the excitement, a man’s property or his life. But
woe to the beaten! In a criminal case, the tortures of the jail or
the terrifying drop from the gallows are in prospect, and it is
rather the hardihood of guilt than the trembling consciousness of
innocence that shall best help him. Woe to him if he is innocent!
As he stands there,—for to add to the pleasurableness of his
condition, the physical ache of hours of standing is considerably
added to the cruel strain on his emotions,—he looks eagerly not
to the truth or falsehood of the evidence for or against him, but
to the skill with which this or that counsel handles the web of
skilfully mixed truth and lies and the impression he is making
on the judge or the jury. A true witness breaking down under
a confusing cross-examination or a false witness mended by a
judicious reexamination may be of much better service to him
than the Truth, which, our Scriptures tell us, shall prevail and not
falsehood,—eventually perhaps and in the things of the truth,
but not in the things of falsehood, not in a court of Justice, not
in the witness box. There the last thing the innocent man against
whom circumstances have turned, dare tell is the truth; it would
either damn him completely by fatally helping the prosecution or
it is so simple and innocent as to convince the infallible human
reason of its pitiful falsity. The truth! Has not the Law expressly built up a hedge of technicalities to keep out the truth?

As one looks on, one begins to understand the passion of the Roman poet’s eulogy of the defence counsel, *praesidium maestis reis*, the bulwark of the sorrowful accused. For in this strange civilised gambling with human dice where it is so often impossible to be certain about guilt or innocence, one’s sympathies naturally go to the sufferer, the scapegoat of a callous society, who may be moving to a long period of torturing and unmerited slavery or an undeserved death on the gallows. But if one could eliminate this element of human pity, it would be a real intellectual pleasure to watch the queer barbarous battle, appraise the methods of the chief players, admire, in whatever climes, the elusiveness and fine casualness of Indian perjury or the robust manly cheery downrightness of Saxon cross-swearin. If the Courts convince us of our common humanity by making all men liars, they yet preserve a relishable unlikeness in likeness. And I think that even theology or metaphysics does not give such admirable chances for subtlety as the Law, nor even Asiatic Research or ethnology favour so much the growth of that admirable scientific faculty which deduces a whole animal out of some other animal’s bone. If the thing proved is generally wrong, it is always ingenious; and after all in all these five sciences, or are they not rather arts? — it is not the thing that is true but the thing that is desired which must be established. This is perhaps why the Europeans think the system civilised, but as a semi-civilised Oriental, one would prefer less room for subtlety and more for truth.

On the whole, if anyone were to complain that modern civilisation eliminates danger and excitement out of human life, we could well answer the morbid grumbler, “Come into our Courts and see!” Still, praise must be given where praise is due, and let the English system once more be lauded for not normally exposing the accused to the torture of savage pursuit by a prosecuting judge or the singular revival in modern dress of the ancient “question” by the American police. Where political or other passions are not roused and bribery does not enter, the
poor muddled magistrate does his honest best, and where there
is a system of trial by jury, the blunders, whims and passions of
twelve men may decide your fate less insanely than the caprices
of a Kazi, — though even that is hardly certain. At any rate, if
the dice are apt to be loaded, it is, with the exceptions noted,
not on one but on both sides of the gamble.
Social Reform

Reform is not an excellent thing in itself as many Europeanised intellects imagine; neither is it always safe and good to stand unmoved in the ancient paths as the orthodox obstinately believe. Reform is sometimes the first step to the abyss, but immobility is the most perfect way to stagnate and to putrefy. Neither is moderation always the wisest counsel: the mean is not always golden. It is often an euphemism for purblindness, for a tepid indifference or for a cowardly inefficiency. Men call themselves moderates, conservatives or extremists and manage their conduct and opinions in accordance with a formula. We like to think by systems and parties and forget that truth is the only standard. Systems are merely convenient cases for keeping arranged knowledge, parties a useful machinery for combined action; but we make of them an excuse for avoiding the trouble of thought.

One is astonished at the position of the orthodox. They labour to deify everything that exists. Hindu society has certain arrangements and habits which are merely customary. There is no proof that they existed in ancient times nor any reason why they should last into the future. It has other arrangements and habits for which textual authority can be quoted, but it is oftener the text of the modern Smritikaras than of Parasara and Manu. Our authority for them goes back to the last five hundred years. I do not understand the logic which argues that because a thing has lasted for five hundred years it must be perpetuated through the aeons. Neither antiquity nor modernity can be the test of truth or the test of usefulness. All the Rishis do not belong to the past; the Avatars still come; revelation still continues.

Some claim that we must at any rate adhere to Manu and the Puranas, whether because they are sacred or because they are national. Well, but, if they are sacred, you must keep to the
whole and not cherish isolated texts while disregarding the body of your authority. You cannot pick and choose; you cannot say “This is sacred and I will keep to it, that is less sacred and I will leave it alone.” When you so treat your sacred authority, you are proving that to you it has no sacredness. You are juggling with truth; for you are pretending to consult Manu when you are really consulting your own opinions, preferences or interests. To recreate Manu entire in modern society is to ask Ganges to flow back to the Himalayas. Manu is no doubt national, but so is the animal sacrifice and the burnt offering. Because a thing is national of the past, it need not follow that it must be national of the future. It is stupid not to recognise altered conditions.

We have similar apologies for the unintelligent preservation of mere customs; but, various as are the lines of defence, I do not know any that is imperiously conclusive. Custom is shishtachar, decorum, that which all well-bred and respectable people observe. But so were the customs of the far past that have been discontinued and, if now revived, would be severely discountenanced and, in many cases, penalised; so too are the customs of the future that are now being resisted or discouraged, — even, I am prepared to believe, the future no less than the past prepares for us new modes of living which in the present would not escape the censure of the law. It is the achar that makes the shishta, not the shishta who makes the achar. The achar is made by the rebel, the innovator, the man who is regarded in his own time as eccentric, disreputable or immoral, as was Sri Krishna by Bhurisrava because he upset the old ways and the old standards. Custom may be better defended as ancestral and therefore cherishable. But if our ancestors had persistently held that view, our so cherished customs would never have come into being. Or, more rationally, custom must be preserved because its long utility in the past argues a sovereign virtue for the preservation of society. But to all things there is a date and a limit. All long-continued customs have been sovereignly useful in their time, even totemism and polyandry. We must not ignore the usefulness of the past, but we seek in preference a present and a future utility.
Custom and Law may then be altered. For each age its shastra. But we cannot argue straight off that it must be altered, or even if alteration is necessary, that it must be altered in a given direction. One is repelled by the ignorant enthusiasm of social reformers. Their minds are usually a strange jumble of ill-digested European notions. Very few of them know anything about Europe, and even those who have visited it know it badly. But they will not allow things or ideas contrary to European notions to be anything but superstitious, barbarous, harmful and benighted, they will not suffer what is praised and practised in Europe to be anything but rational and enlightened. They are more appreciative than Occidentals themselves of the strength, knowledge and enjoyment of Europe; they are blinder than the blindest and most self-sufficient Anglo-Saxon to its weakness, ignorance and misery. They are charmed by the fair front Europe presents to herself and the world; they are unwilling to discern any disease in the entrails, any foulness in the rear. For the Europeans are as careful to conceal their social as their physical bodies and shrink with more horror from nakedness and indecorum than from the reality of evil. If they see the latter in themselves, they avert their eyes, crying, “It is nothing or it is little; we are healthy, we are perfect, we are immortal.” But the face and hands cannot always be covered, and we see blotches.

The social reformer repeats certain stock arguments like shibboleths. For these antiquities he is a fanatic or a crusader. Usually he does not act up to his ideas, but in all sincerity he loves them and fights for them. He pursues his nostrums as panaceas; it would be infidelity to question or examine their efficacy. His European doctors have told him that early marriage injures the physique of a nation, and that to him is the gospel. It is not convenient to remember that physical deterioration is a modern phenomenon in India and that our grandparents were strong, vigorous and beautiful. He hastens to abolish the already disappearing nautchgirl, but it does not seem to concern him that the prostitute multiplies. Possibly some may think it a gain that the European form of the malady is replacing the Indian! He tends
to shatter our cooperative system of society and does not see that Europe is striding Titanically towards Socialism.

Orthodox and reformer alike lose themselves in details; but it is principles that determine details. Almost every point that the social reformers raise could be settled one way or the other without effecting the permanent good of society. It is pitiful to see men labouring the point of marriage between subcastes and triumphing over an isolated instance. Whether the spirit as well as the body of caste should remain, is the modern question. Let Hindus remember that caste as it stands is merely jat, the trade guild sanctified but no longer working, it is not the eternal religion, it is not chaturvarnya. I do not care whether widows marry or remain single; but it is of infinite importance to consider how women shall be legally and socially related to man, as his inferior, equal or superior; for even the relation of superiority is no more impossible in the future than it was in the far-distant past. And the most important question of all is whether society shall be competitive or cooperative, individualistic or communistic. That we should talk so little about these things and be stormy over insignificant details, shows painfully the impoverishment of the average Indian intellect. If these greater things are decided, as they must be, the smaller will arrange themselves.

There are standards that are universal and there are standards that are particular. At the present moment all societies are in need of reform, the Parsi, Mahomedan and Christian not a whit less than the Hindu which alone seems to feel the need of radical reformation. In the changes of the future the Hindu society must take the lead towards the establishment of a new universal standard. Yet being Hindus we must seek it through that which is particular to ourselves. We have one standard that is at once universal and particular, the eternal religion, which is the basis, permanent and always inherent in India, of the shifting, mutable and multiform thing we call Hinduism. Sticking fast where you are like a limpet is not the dharma, neither is leaping without looking the dharma. The eternal religion is to realise God in our inner life and our outer existence, in society not less than in the individual. Esha dharma sanatanah. God is not
antiquity nor novelty: He is not the Manava Dharmashastra, nor Vidyaranya, nor Raghunandan; neither is He an European. God who is essentially Sacchidananda, is in manifestation Satyam, Prema, Shakti, — Truth, Strength and Love. Whatever is consistent with the truth and principle of things, whatever increases love among men, whatever makes for the strength of the individual, the nation and the race, is divine, it is the law of Vaivaswata Manu, it is the sanatana dharma and the Hindu shastra. Only, God is the triple harmony, He is not one-sided. Our love must not make us weak, blind or unwise; our strength must not make us hard and furious; our principles must not make us fanatical or sentimental. Let us think calmly, patiently, impartially; let us love wholly and intensely but wisely; let us act with strength, nobility and force. If even then we make mistakes, yet God makes none. We decide and act; He determines the fruit, and whatever He determines is good.

He is already determining it. Men have long been troubling themselves about social reform and blameless orthodoxy, and orthodoxy has crumbled without social reform being effected. But all the time God has been going about India getting His work done in spite of the talking. Unknown to men the social revolution prepares itself, and it is not in the direction they think, for it embraces the world, not India only. Whether we like it or not, He will sweep out the refuse of the Indian past and the European present. But the broom is not always sufficient; sometimes He uses the sword in preference. It seems probable that it will be used, for the world does not mend itself quickly, and therefore it will have violently to be mended.

But this is a general principle; how shall we determine the principles that are particular to the nature of the community and the nature of the Age? There is such a thing as yugadharma, the right institutions & modes of action for the age in which we live. For action depends indeed on the force of knowledge or will that is to be used, but it depends, too, on the time, the place & the vessel. Institutions that are right in one age are not right in another. Replacing social system by social system, religion by religion, civilisation by civilisation God is perpetually leading
man onwards to loftier & more embracing manifestations of our human perfectibility. When in His cosmic circling movement He establishes some stable worldwide harmony, that is man’s Satya Yuga. When harmony falters, is maintained with difficulty, not in the nature of men, but by an accepted force or political instrument, that is his Treta. When the faltering becomes stumbling and the harmony has to be maintained at every step by a careful & laborious regulation, that is his Dwapara. When there is disintegration, & all descends in collapse and ruin, nothing can stay farther the cataclysm that is his Kali. This is the natural law of progress of all human ideas & institutions. It applies always in the mass, continually though less perfectly in the detail. One may almost say that each human religion, society, civilisation has its four Ages. For this movement is not only the most natural, but the most salutary. It is not a justification of pessimism nor a gospel of dumb fate & sorrowful annihilation. It is not, as we too often think in our attachment to the form, a melancholy law of decline & the vanity of all human achievements. If each Satya has its Kali, equally does each Kali prepare its Satya. That destruction was necessary for this creation, and the new harmony, when it is perfected, will be better than the old. But there is the weakness, there is the half success turning to failure, there is the discouragement, there is the loss of energy & faith which clouds our periods of disintegration, the apparent war, violence, ragging, tumult & trample to and fro which attends our periods of gradual creation and half-perfection. Therefore men cry out dismally & lament that all is perishing. But if they trusted in God’s Love & Wisdom, not preferring to it their conservative & narrow notions, they would rather cry out that all is being reborn.

So much depends on Time & God’s immediate purpose that it is more important to seek out His purpose than to attach ourselves to our own nostrums. The Kala Purusha, Zeitgeist & Death Spirit, has risen to his dreadful work — lokakshayakrit-pravriddhas — increasing to destroy a world, — and who shall stay the terror & mightiness & irresistibility of Him? But He is not only destroying the world that was, He is creating the world
that shall be; it is therefore more profitable for us to discover & help what He is building than to lament & hug in our arms what He is destroying. But it is not easy to discover His drift, & we often admire too much temporary erections which are merely tents for the warriors in this Kurukshetra and take them for the permanent buildings of the future.

The Pandits are therefore right when they make a difference between the practice of the Satya & the practice of the Kali. But in their application of this knowledge, they do not seem to me to be always wise or learned. They forget or do not know that Kali is the age for a destruction & rebirth, not for a desperate clinging to the old that can no longer be saved. They entrench themselves in the system of Kalivarjya, but forget that it is not the weaknesses but the strengths of the old harmony that are being subjected to varjanam, abandonment. That which is saved is merely a temporary platform which we have erected on the banks of the sea of change awaiting a more stable habitation; and it too must one day break down under the crash of the waves, must disappear into the engulfing waters. Has the time arrived for that destruction? We think that it has. Listen to the crash of those waters,—more formidable than the noise of assault, mark that slow, sullen, remorseless sapping,—watch pile after pile of our patched incoherent ramshackle structure corroding, creaking, shaking with the blows, breaking, sinking silently or with a splash, suddenly or little by little into the yeast of those billows. Has the time arrived for a new construction? We say it has. Mark the activity, eagerness and hurrying to and fro of mankind, the rapid prospecting, seeking, digging, founding — see the Avatars & great vibhutis coming, arising thickly, treading each close behind the other. Are not these the signs and do they not tell us that the great Avatar of all arrives to establish the first Satya Yuga of the Kali?

For in the Kali too, say the secret & ancient traditions of the Yogins, there is a perpetual minor repetition of Satya-Treta-Dwapara-Kali subcycles, the subSatya a temporary & imperfect harmony which in the subTreta & subDwapara breaks down and disappears in the subKali. The process then begins over
again [............................................] for each new temporary harmony is fairer and more perfect than its preceding harmony, each new temporary collapse more resounding & terrible than its anterior dissolution. Already ended are the first five thousand years of the Kali which were necessary to prepare for final destruction the relics of the ancient Satya. Weakness & violence, error and ignorance and oblivion rushing with an increasing speed & rhythm over the whole earth have done for us that work. The morning of the first Kali-Satya is ready to break, the first few streaks dimly visible. So runs the not incredible tradition.

Yes. A new harmony, but not the scrannel pipes of European materialism, not an Occidental foundation upon half truths & whole falsehoods. When there is destruction it is the form that perishes, not the spirit — for the world and its ways are forms of one Truth which appears in this material world in ever new bodies and constantly varied apparel — the inward Eternal taking the joy of outward Mutability. The truth of the old Satya that is dead was not different from the Truth of the new Satya that is to be born, for it is Truth that restores itself always and persists. In India, the chosen land, it is preserved; in the soul of India it sleeps, expectant of that soul's awakening, the soul of India leonine, luminous, locked in the closed petals of the ancient lotus of strength and wisdom, not in her weak, sordid, transient & miserable externals. India alone can build the future of mankind; in India alone can the effective Avatar appear to the nations. And until He appears, it is for India to gather herself up out of her dust & degradation, — symbol of the shattered Satyayuga — commune with her soul by Yoga and to know her past & her future. I have not here speculated on what we should build, what we should break, nor shall I now define my detailed opinions — but whatever it be, we must do it in the light and in the spirit of that triple principle of the divine nature; we must act in the reflection of God's Love, Strength & Wisdom.

We are Hindus seeking to re-Hinduise society, not to Europeanise it. But what is Hinduism? Or what is its social principle?
One thing at least is certain about Hinduism religious or social, that its whole outlook is Godward, its whole search and business is the discovery of God and our fulfilment in God. But God is everywhere and universal. Where did Hinduism seek Him? Ancient or preBuddhistic Hinduism sought him both in the world and outside it; it took its stand on the strength & beauty & joy of the Veda, unlike modern or postBuddhistic Hinduism which is oppressed with Buddha’s sense of universal sorrow and Shankara’s sense of universal illusion,—Shankara who was the better able to destroy Buddhism because he was himself half a Buddhist. Ancient Hinduism aimed socially at our fulfilment in God in life, modern Hinduism at the escape from life to God. The more modern ideal is fruitful of a noble and ascetic spirituality, but has a chilling and hostile effect on social soundness and development, social life under its shadow stagnates for want of belief and delight, sraddha and ananda. If we are to make our society perfect and the nation is to live again, then we must revert to the earlier and fuller truth. We must not make life a waiting for renunciation, but renunciation a preparation for life; instead of running from God in the town to God in the forest, we must rather plunge into the mountain solitude in our own souls for knowledge & joy & spiritual energy to sustain any part that may be given to us by the master of the Lila. If we get that strength, any society we build up must be full of the instinct of immortal life and move inevitably towards perfection. As to the precise way in which society will be reconstructed, we have hardly yet knowledge enough to solve the problem. We ought to know before we act, but we are rather eager to act violently in the light of any dim ray of knowledge that may surprise our unreflecting intellects, and although God often uses our haste for great and beneficial purposes, yet that way of doing things is not the best either for a man or a nation. One thing seems to me clear that the future will deny that principle of individual selfishness and collective self-interest on which European society has hitherto been based and our renovated systems will be based on the renunciation of individual selfishness and the organisation of brotherhood,—principles common to Christianity, Mahomedanism and Hinduism.
Hinduism and the Mission of India

[.....] [That] which is permanent in the Hindu religion, must form the basis on which the world will increasingly take its stand in dealing with spiritual experience and religious truth. Hinduism, in my sense of the word, is not modern Brahmanism. Modern Brahmanism developed into existence at a definite period in history. It is now developing out of existence; its mission is done, its capacities exhausted, the Truth which, like other religions, it defended, honoured, preserved, cherished, misused and disfigured, is about to take to itself new forms and dispense with all other screens or defender than its own immortal beauty, grandeur, truth and effectiveness. It is this unchanging undying Truth which has to be discovered and placed in its native light before humanity. Tad etat satyam.

There are many defenders and discoverers of truth now active among us. They are all busy defending, modifying, attacking, sapping or bolstering current Hinduism. I am not eager to disparage but neither do I find myself satisfied with any of them. If I were, there would be no need for any speculation of my own. There are the orthodox who are busy recovering and applying old texts or any interpretations, new or old, of these texts, which will support the existing order, — and ignoring all that go against it. Their learning is praiseworthy and useful; it brings to notice many great and helpful things which were in danger of being misprized, lost or flung away as worthless; but they do not seem to me to go to the heart of the matter. There are the heterodox who are busy giving new interpretations to old texts and institutions in order to get rid of all such features as the modern world finds it hard to assimilate. Their brainwork can hardly be too highly praised; it is bringing to light or to a half light many luminous realities and possibilities which, if they cannot all be accepted, yet invigorate and sharpen the habit of
original thinking and help to remove that blind adherence to
traditions which is truth's greatest obstacle. Still they too do
not seem to me to have the right grasp and discernment. Then
there are the ascetics mystical or rationalistic who call men to
disgust with the world and point to the temple, the monastery
or the mountaintop as the best, if not the only place for finding
God, and most of whom, in order to honour the Maker slight
and denounce His works. Their position and temperament is so
lofty and noble and their solvent force on the gross impurities
of a materialised humanity has been so invaluable that it is with
some reluctance one finds oneself obliged to put them on one
side and pass onward. But it seems to me that we must pass
onward if we would know and possess God in His entirety and
not merely in a side or aspect. There is a story in the Jewish
Scriptures which relates that when God wished to show himself
to Moses, he could only, owing to the spiritual imperfections
of the Jewish prophet, reveal safely to him His hinder parts.
Moses would have died if he had seen the front of God; he had
not the dharanam, the soul-power to support that tremendous
vision. The story well illuminates the character of materialism
generally and to its aggressive modern form, European thought
& civilisation, it applies with a quite overwhelming apposite-
ness. But it seems to me that the average Vedantist, too, has only
seen, for his part, the crown of the Lord's head and the average
bhakta only the Kaustubh-stone over His heart or the Srivatsa
mark upon it. On the other hand, there are those rationalists
who are by no means ascetical in their views or temperament
and their name is legion; they insist on our putting religion and
God aside or keeping Him only for ornamental uses in spare
moments, leave that, they say, & devote yourselves to practical
work for mankind. That rationalism is necessary too if only
to balance the error of the ascetics who would make of God's
world a mistake and of its Maker an Almighty blunderer or an
inscrutable eccentric or an indefinable Something inhabiting a
chaos or a mirage. Nevertheless, from materialism least of all,
however philanthropic or patriotic, can our future salvation be
expected. Finally, there are the mystics who are not ascetics,—
the Theosophists. From one point of view I cannot find praise warm enough to do justice to the work of Theosophy; from another I cannot find condemnation strong enough to denounce it. It has forced on the notice of an unwilling world truths to which orthodoxy is blind and of which heterodoxy is afraid or incredulous. It has shown a colossal courage in facing ridicule, trampling on prejudice and slander, persisting in faith in spite of disillusionment, scandal and a continual shifting of knowledge. They have kept the flag of a past & future science flying against enormous difficulties. On the other hand by bringing to the investigation of that science — not its discovery, for to the Hindu Yogin it is known already — the traditional European methods, the methods of the market-place and the forum, it has brought on the truths themselves much doubt and discredit, and by importing into them the forms, jugglery and jargon of European mystics, their romanticism, their unbridled imagination, their galloping impatience, their haste, bragging and loudness, their susceptibility to dupery, trickery, obstinate error and greedy self-deception, Theosophists have strengthened doubt and discredit and driven many an earnest seeker to bewilderment, to angry suspicion or to final renunciation of the search for truth. They have scattered the path of the conscientious investigators, the severe scientists of Yoga who must appear in the future, with the thorns and sharp flints of a well-justified incredulity and suspicion. I admit the truths that Theosophy seeks to unveil; but I do not think they can be reached if we fall into bondage even to the most inspiring table talk of Mahatmas or to the confused anathemas and vaticinations hurled from their platform tripods by modern Pythonesses of the type of M' Annie Besant, that great, capacious but bewildered and darkened intellect, now stumbling with a loud and confident blindness through those worlds of twilight and glamour, of distorted inspirations, perverted communications and misunderstood or half-understood perceptions which are so painfully familiar to the student and seeker.

If these things do not satisfy me, what then do I seek? I seek a light that shall be new, yet old, the oldest indeed of all lights.
I seek an authority that accepting, illuminating and reconciling all human truth, shall yet reject and get rid of by explaining it all mere human error. I seek a text and a Shastra that is not subject to interpolation, modification and replacement, that moth and white ant cannot destroy, that the earth cannot bury nor Time mutilate. I seek an asceticism that shall give me purity and deliverance from self and from ignorance without stultifying God and His universe. I seek a scepticism that shall question everything but shall have the patience to deny nothing that may possibly be true. I seek a rationalism not proceeding on the untenable supposition that all the centuries of man’s history except the nineteenth were centuries of folly and superstition, but bent on discovering truth instead of limiting inquiry by a new dogmatism, obscurantism and furious intolerance which it chooses to call common sense and enlightenment; I seek a materialism that shall recognise matter and use it without being its slave. I seek an occultism that shall bring out all its processes and proofs into the light of day, without mystery, without jugglery, without the old stupid call to humanity, “Be blind, O man, and see!” In short, I seek not science, not religion, not Theosophy, but Veda — the truth about Brahman, not only about His essentiality, but about His manifestation, not a lamp on the way to the forest, but a light and a guide to joy and action in the world, the truth which is beyond opinion, the knowledge which all thought strives after — yasmin vijnate sarvam vijnatam. I believe that Veda to be the foundation of the Sanatan Dharma; I believe it to be the concealed divinity within Hinduism, — but a veil has to be drawn aside, a curtain has to be lifted. I believe it to be knowable and discoverable. I believe the future of India and the world to depend on its discovery and on its application, not to the renunciation of life, but to life in the world and among men.

In these articles I shall not try to announce truth, but merely to inquire what are those things in Hinduism by following which we may arrive at the truth. I shall try to indicate some of my reasons — as far as within these limits it can be done — for my faith in my guides and the manner in which I think they should be followed. I am impelled to this labour by the necessity of turning
the mind of young India to our true riches, our real source of power, purification and hope for the future and of safeguarding it in the course of its search both from false lights and from the raucous challenges and confident discouragements cast at us by the frail modern spirit of denial. I write, not for the orthodox, nor for those who have discovered a new orthodoxy, Samaj or Panth, nor for the unbeliever; I write for those who acknowledge reason but do not identify reason with Western materialism; who are sceptics but not unbelievers; who, admitting the claims of modern thought, still believe in India, her mission and her gospel, her immortal life and her eternal rebirth.
The Psychology of Yoga

As the Indian mind, emerging from its narrow mediaeval entrenchments, advances westward towards inevitable conquest, it must inevitably carry with it Yoga & Vedanta for its banners wherever it goes. Brahmajñana, Yoga & Dharma are the three essentialities of Hinduism; wherever it travels & find harbourage & resting place, these three must spread. All else may help or hinder. Shankara's philosophy may compel the homage of the intellectual, Sankhya attract the admiration of the analytical mind, Buddha capture the rationalist in search of a less material synthesis than the modern scientist's continual Annam Brahma Pranam Brahma, but these are only grandiose intellectualities. The world at large does not live by the pure intellect, concrete itself it stands by things concrete or practical, although, immaterial in its origin, it bases practicality upon abstractions. A goal of life, a practice of perfection and a rational, yet binding law of conduct, — these are man's continual quest, and in none of these demands is modern Science able to satisfy humanity. In reply to all such wants Science can only cry, Society and again Society and always Society. But the nature of man knows that Society is not the whole of life. With the eye of the soul it sees that Society is only a means, not an end, a passing & changing outward phenomenon, not that fixed, clear & eternal inward standard & goal which we seek. Of Society as of all things Yajnavalkya's universal dictum stands; a man loves & serves Society for the sake of the Self & not for the sake of Society. That is his nature & whatever Rationalism may teach, to his nature he must always return. What Science could not provide India offers, Brahman for the eternal goal, Yoga for the means of perfection, dharma (swabhavaniyatam karma) for the rational yet binding law of conduct. Therefore, because it has something by which humanity can be satisfied & on
which it can found itself, the victory of the Indian mind is assured.

But in order that the victory may not be slow & stumbling in its progress and imperfect in its fulfilment, it is necessary that whatever India has to offer should be stated to the West in language that the West can understand and through a principle of knowledge which it has made its own. Europe will accept nothing which is not scientific, nothing, that is to say which does not take up its stand on an assured, well-ordered and verifiable knowledge. Undoubtedly, for practical purposes the West is right; since only by establishing ourselves on such an assured foundation can we work with the utmost effectiveness and make the most of what we know. For shastra is the true basis of all perfect action & shastra means the full and careful teaching of the principles, relations and processes of every branch of knowledge, action or conduct with which the mind concerns itself. Indian knowledge possesses such a scientific basis, but, in these greater matters, unexpressed or expressed only in broad principles, compact aphorisms, implied logical connections not minutely treated in detail, fully, with a patient logical order & development in the way to which the occidental intellect is now accustomed and which it has become its second nature to demand. The aphoristic method has great advantages. It prevents the mind from getting encrusted in details and fossilising there; it leaves a wide room & great latitude for originality & the delicate play of individuality in the details. It allows a science to remain elastic and full of ever new potentialities for the discoverer. No doubt, it has disadvantages. It leaves much room for inaccuracy, for individual error, for the violences of the ill-trained & the freaks of the inefficient. For this, among other more important reasons, the Indian mind has thought it wise to give a firm & absolute authority to the guru & to insist that the disciple shall by precept & practice make his own all that the master has to teach him & so form & train his mind before it is allowed to play freely with his subject. In Europe the manual replaces the guru; the mind of the learner is not less rigidly bound & dominated but it is by the written rule
& detail not by the more adaptable & flexible word of the guru.

Still, the age has its own demands, and it is becoming imperatively necessary that Indian knowledge should reveal in the Western way its scientific foundations. For if we do not do it ourselves, the Europeans will do it for us and do it badly, discrediting the knowledge in the process. The phenomenon of the Theosophical Society is a warning to us of a pressing urgency. It will never do to allow the science of Indian knowledge to be represented to the West through this strange & distorting medium. For this society of European & European-led inquirers arose from an impulse on which the Time-Spirit itself insists; their object, vaguely grasped at by them, was at bottom the systematic coordination, explanation & practice of Oriental religion & Oriental mental & spiritual discipline. Unfortunately, as always happens to a great effort in unfit hands, it stumbled at the outset & went into strange bypaths. It fell into the mediaeval snare of Gnostic mysticism, Masonic secrecy & Rosicrucian jargon. The little science it attempted has been rightly stigmatised as pseudo-science. A vain attempt to thrust in modern physical science into the explanation of psychical movements, — to explain for instance pranayam in the terms of oxygen & hydrogen! — to accept uncritically every experience & every random idea about an experience as it occurred to the mind & set it up as a revealed truth & almost a semi-divine communication, to make a hopeless amalgam & jumble of science, religion & philosophy all expressed in the terms of the imagination — this has been the scientific method of Theosophy. The result is that it lays its hands on truth & muddles it so badly that it comes out to the world as an untruth. And there now abound other misstatements of Indian truth, less elaborate but almost as wild & wide as Theosophy’s. From this growing confusion we must deliver the future of humanity.
The Claims of Theosophy

I wish to write in no narrow and intolerant spirit about Theosophy. There can be nothing more contemptibly ignorant than the vulgar prejudice which ridicules Theosophy because it concerns itself with marvels. From that point of view the whole world is a marvel; every operation of thought, speech or action is a miracle, a thing wonderful, obscure, occult and unknown. Even the sneer on the lips of the derider of occultism has to pass through a number of ill-understood processes before it can manifest itself on his face, yet the thing itself is the work of a second. That sneer is a much greater and more occult miracle than the precipitation of letters or the reading of the Akashic records. If Science is true, what more absurd, paradoxical and Rabelaisian miracle can there be than this, that a republic of small animalcules forming a mass of grey matter planned Austerlitz, wrote Hamlet or formulated the Vedanta philosophy? If I believed that strange dogma, I should no longer hold myself entitled to disbelieve anything. Materialism seems to me the most daring of occultisms, the most reckless and presumptuous exploiter of the principle, Credo quia impossibile, I believe it because it is impossible. If these minute cells can invent wireless telegraphy, why should it be impossible for them to precipitate letters or divine the past and the future? Until one can say of investigation “It is finished” and of knowledge “There is nothing beyond”, no one has a right to set down men as charlatans because they profess to be the pioneers of a new kind of Science.

Neither, I hope, shall I be inclined to reject or criticise adversely because Theosophy has a foreign origin. There is no law of Nature by which spiritual knowledge is confined to the East or must bear the stamp of an Indian manufacture before it can receive the imprimatur of the All-Wise. He has made man in his own image everywhere, in the image of the Satyam Jnanam
Anantam, the divine Truth-Knowledge-Infinity, and from where-soever true knowledge comes, it must be welcomed.

Nevertheless if men claim to be the pioneers of a new kind of Science, they must substantiate their claims. And if foreigners come to the people of India and demand to be accepted as instructors in our own special department of knowledge, they must prove that they have a prodigious superiority. Has the claim been substantiated? Has the superiority been proved?

What Indians see is a body which is professedly and hospitably open to all enquiry at the base but entrenches itself in a Papal or mystic infallibility at the top. To be admitted into the society it is enough to believe in the freest investigation and the brotherhood of mankind, but everyone who is admitted must feel, if he is honest with himself, that he is joining a body which stands for certain well-known dogmas, a definite and very elaborate cosmogony and philosophy and a peculiar organisation, the spirit, if not the open practice in which seems to be theocratic rather than liberal. One feels that the liberality of the outer rings is only a wisely politic device for attracting a wider circle of sympathisers from whom numerous converts to the inner can be recruited. It is the dogmas, the cosmogony, the philosophy, the theocratic organisation which the world understands by Theosophy and which one strengthens by adhesion to the society; free inquiry and the brotherhood of man benefit to a very slight degree.

One sees also a steady avoidance of the demand for substantiation, a withdrawal into mystic secrecy, a continual reference to the infallible knowledge of the male & female Popes of Theosophy or, when that seems to need bolstering, to the divine authority of invisible and inaccessible Mahatmas. We in India admit the Guru and accept the Avatar. But still the Guru is only a vessel of the infinite Knowledge, the Avatar is only a particular manifestation of the Divine Personality. It is shocking to our spiritual notions to find cosmic Demiurges of a vague semi-divine character put between us and the All-Powerful and All-Loving and Kuthumi and Maurya taking the place of God.

One sees, finally, a new Theocracy claiming the place of the
old, and that Theocracy is dominantly European. Indians figure numerously as prominent subordinates, just as in the British system of government Indians are indispensable and sometimes valued assistants. Or they obtain eminence on the side of pure spirituality and knowledge, just as Indians could rise to the highest places in the judicial service or in advisory posts, but not in the executive administration. But if the smaller hierophants are sometimes and rarely Indians, the theocrats and the bulk of the prophets are Russian, American or English. An Indian here and there may quicken the illumination of the Theosophist, but it is Madame Blavatsky or Mrs Besant, Sinnett or Leadbeater who lays down the commandments and the Law. It is strange to see the present political condition of India reproducing itself in a spiritual organisation; it illustrates perhaps the subtle interconnection and interdependence of all individual and communal activities in the human being. But the political subordination finds its justification in the physical fact of the British rule. It is argued plausibly, and perhaps correctly, that without this subordination British supremacy could have no sure foundation. But where is the justification for the foreign spiritual control? The argument of native incapacity may be alleged. But I do not find this hypothesis of superiority supported by the facts.

I do not see that Mrs Besant has a more powerful and perfect intellectuality, eloquence, personality or religious force than had Swami Vivekananda or that a single Theosophist has yet showed him or herself to be as mighty and pure a spirit as the Paramhansa Ramakrishna. There are Indian Yogins who have a finer and more accurate psychical knowledge than the best that can be found in the books of the Theosophists. Some even of the less advanced have given me proofs of far better-developed occult powers than any Theosophist I have yet known. The only member of the Theosophical Society who could give me any spiritual help I could not better by my unaided faculties, was one excluded from the esoteric section because his rare and potent experiences were unintelligible to the Theosophic guides; nor were his knowledge and powers gained by Theosophic methods but by following the path of our Yoga and the impulse of an
Indian guru, one who meddled not in organisations and election cabals but lived like a madman, *unmattavat*.

These peculiarities of the Theosophical movement have begun to tell and the better mind of India revolts against Theosophy. The young who are the future, are not for the new doctrine. Yet only through India can Theosophy hope to survive. It may attract a certain number of European adherents, but cannot hope to control the thought and life of the West. Its secretive and Papal tendency is a fatal bar. Europe has done definitely with all knowledge that will not submit itself to scrutiny; it is finishing with the usurpations of theocracy in things spiritual as it has finished with them in things temporal. Even devout Catholics writhe uneasily under the shower of Papal encyclicals and feel what an embarrassment it is to have modern knowledge forbidden by a revenant from the Middle Ages or opinion fixed by a Council of priests no more spiritual, wise or illustrious than the minds they coerce with their irrational authority. Europe is certainly not going to exchange a Catholic for a Theosophical Pope, the Council of Cardinals for the Esoteric Section, or the Gospel and the Athanasian Creed for *Ancient Wisdom* and *Isis Unveiled*.

Will India long keep the temper that submits to unexamined authority and blinds itself with a name? I believe not. We shall more and more return to the habit of going to the root of things, of seeking knowledge not from outside but from the Self who knows and reveals. We must more and more begin to feel that to believe a thing because somebody has heard from somebody else that Mrs Besant heard it from a Mahatma, is a little unsafe and indefinite. Even if the assurance is given direct, we shall learn to ask for the proofs. Even if Kutthumi himself comes and tells me, I shall certainly respect his statement, but also I shall judge it and seek its verification. The greatest Mahatma is only a servant of the Most High and I must see his *chapras* before I admit his plenary authority. The world is putting off its blinkers; it is feeling once more the divine impulse to see.

It is not that Theosophy is false; it is that Theosophists are weak and human. I am glad to believe that there is much truth in Theosophy. There are also considerable errors. Many of
the things they say which seem strange and incredible to those who decline the experiment, agree with the general experience of Yogins; there are other statements which our experience appears to contradict or to which it gives a different interpretation. Mahatmas exist, but they are not omnipotent or infallible. Rebirth is a fact and the memory of our past lives is possible; but the rigid rules of time and of Karmic reaction laid down dogmatically by the Theosophist hierophants are certainly erroneous. Especially is the hotchpotch of Hindu and Buddhist mythology and Theosophic prediction served up to us by Mrs Besant confusing and misleading. At any rate it does not agree with the insight of much greater Yogins than herself. Like most Theosophists she seems to ignore the numerous sources and possibilities of error which assail the Yogen before his intellect is perfectly purified and he has his perfection in the higher and superintellectual faculties of the mind. Until then the best have to remember that the mind even of the fairly advanced is not yet divine and that it is the nature of the old unchastened human element to leap at misunderstandings, follow the lure of predilections and take premature conclusions for established truths. We must accept the Theosophists as enquirers; as hierophants and theocrats I think we must reject them.

If Theosophy is to survive, it must first change itself. It must learn that mental rectitude to which it is now a stranger and improve its moral basis. It must become clear, straightforward, rigidly self-searching, sceptical in the nobler sense of the word. It must keep the Mahatmas in the background and put God and Truth in the front. Its Popes must dethrone themselves and enthrone the intellectual conscience of mankind. If they wish to be mystic and secret like our Yogins, then they must like our Yogins assert only to the initiate and the trained; but if they come out into the world to proclaim their mystic truths aloud and seek power, credit and influence on the strength of their assertions, then they must prove. It need not and ought not to be suddenly or by miracles; but there must be a scientific development, we must be able to lay hold on the rationale and watch the process of the truths they proclaim.
Science & Religion in Theosophy

I have said that I wish to write of Theosophy in no strain of unreasoning hostility or spirit of vulgar ridicule; yet these essays will be found to be much occupied with criticisms and often unsparing criticisms of the spirit and methods of Theosophists. There is, however, this difference between my criticisms and much that I have seen written in dispraise of the movement, that I censure not as an enemy but as an impartial critic, not as a hostile and incredulous outsider but as an earnest and careful inquirer and practical experimentalist in those fields which Theosophy seeks to make her own. Theosophy was not born with Madame Blavatsky, nor invented by the Mahatmas in the latter end of the nineteenth century. It is an ancient and venerable branch of knowledge, which unfortunately has never, in historical times, been brought out into the open and subjected to clear, firm and luminous tests. The imaginations of the cultured and the superstitions of the vulgar played havoc with its truths and vitiated its practice. It degenerated into the extravagances of the Gnostics & Rosicrucians and the charlatanism of magic and sorcery. The Theosophical Society was the first body of inquirers which started with the set & clear profession of bringing out this great mass of ancient truth into public notice and establishing it in public belief. The profession has not been sustained in practice. Instead of bringing them out into public notice they have withdrawn them into the shrouded secrecy of the Eoteric society; instead of establishing them to public belief, they have hampered the true development of Theosophy & injured its credit by allowing promise to dwarf performance and by a readiness to assert which was far beyond their power to verify. I do not deny that the Theosophical Society increases in its numbers, but it increases as a mystic sect and not in the strength of its true calling. I do not deny that it has done valuable service
in appealing to the imaginations of men both in India & Europe; but it has appealed to their imaginations & has not convinced their reason. When there is so serious a failure in a strong and earnest endeavours, we must look for the cause in some defect which lies at the very roots of its action. And it is just there at the very roots of its active life that we find the vital defect of modern Theosophy. We find a speculative confusion which fatally ignores the true objects and the proper field of such a movement and a practical confusion which fatally ignores the right and necessary conditions of its success. They have failed to see what Theosophy rightly is and what it is not; they have failed to understand that error and the sources of error must be weeded out before the good corn of truth can grow. They have fallen into the snare of Gnostic jargon and Rosicrucian mummery and have been busy with a nebulous chase after Mahatmas, White Lodges and Lords of the Flame when they should have been experimenting earnestly and patiently, testing their results severely and arriving at sound and incontestable conclusions which they could present, rationally founded, first to all enquirers and then to the world at large.

Mrs. Besant would have us believe that Theosophy is Brahavidya. The Greek Theosophia and the Sanscrit Brahavidya, she tells us in all good faith, are identical words and identical things. Even with Mrs. Besant's authority, I cannot accept this extraordinary identification. It can only have arisen either from her ignorance of Sanscrit or from that pervading confusion of thought and inability to perceive clear and trenchant distinctions which is the bane of Theosophical inquiry & Theosophical pronouncements. Vidya may be represented, though not perfectly represented by sophia; but Brahman is not Theos and cannot be Theos, as even the veriest tyro in philosophy, one would think, ought to know. We all know what Brahavidya is,—the knowledge of the One both in Itself and in its ultimate and fundamental relations to the world which appears in It whether as illusion or as manifestation, whether as Maya or as Lila. Does Theosophy answer to this description? Everyone knows that it does not and cannot. The modern Theosophist tells us
much about Mahatmas, Kamaloka, Devachan, people on Mars, people on the Moon, astral bodies, precipitated letters, Akashic records and a deal of other matters, of high value if true and of great interest whether true or not. But what on earth, I should like to know, has all this to do with Brahmavidya? One might just as well describe botany, zoology & entomology or for that matter, music or painting or the binomial theory or quadratic equations as Brahmavidya. In a sense they are so since everything is Brahman, śarvam khalvidam Brahma. But language has its distinctions on which clear thinking depends, & we must insist on their being observed. All this matter of Theosophy is not Brahmavidya, but Devavidya. Devavidya is the true equivalent, so far as there can be an equivalent, of Theosophy.

I am aware that Theosophy speaks of the Logos or of several Logoi and the government of the world — not so much by any Logos as by the Mahatmas. Still, I say, that all this does not constitute Theosophy into Brahmavidya, but leaves it what it was, Devavidya. It is still not the knowledge of the One, not the knowledge that leads to salvation, but the knowledge of the Many, — of our bondage & not of our freedom, Avidya & not Vidya. I do not decry it for that reason, but it is necessary that it should be put in its right place and not blot out for us the diviner knowledge of our forefathers. Theosophy is or should be a wider & profounder Science, a knowledge that deals with other levels & movements of consciousness, planes if you like so to call them, phenomena depending on the activity of consciousness on those levels, worlds & beings formed by the activity of consciousness on those levels, — for what is a world but the synthesis in Space & Time of a particular level of consciousness, — forming a field of consciousness with which material Science, the Science of this immediately visible world, cannot yet deal, and for the most part, not believing in it as fact, refuses to deal. Theosophy is, therefore, properly speaking, a high scientific enquiry. It is not or ought not to be a system of metaphysics or a new religion.
Sat

What is Truth? said Pilate confronted with a mighty messenger of the truth, not jesting surely, not in a spirit of shallow lightness, but turning away from the Christ with the impatience of the disillusioned soul for those who still use high words that have lost their meaning and believe in great ideals which the test of the event has proved to be fallacious. What is truth, — this phantom so long pursued, so impossible to grasp firmly, — that a man young, beautiful, gifted, eloquent and admired should consent to be crucified for its sake? Have not circumstance and event justified the half-pitying, half-sorrowful question of the Roman governor? The Messenger suffered on the cross, and what happened to the truth that was his message? As Christ himself foresaw, it has never been understood even by its professors. For five hundred years it was a glorious mirage for which thousands of men and women willingly underwent imprisonment, torture and death in order that Christ’s kingdom might come on earth & felicity possess the nations. But the kingdom that came was not Christ’s; it was Constantine’s, it was Hildebrand’s, it was Alexander Borgia’s. For another thirteen centuries the message was — what? Has it not been the chief support of fanaticism, falsehood, cruelty and hypocrisy, the purveyor of selfish power, the keystone of a society that was everything Christ had denounced? Jesus died on the cross, for the benefit, it would seem, of those who united to slay him, the Sadducee, atheist & high priest, the Pharisee, zealot, hypocrite & persecutor and the brutal, self-seeking, callous military Roman. Now in its last state, after such a lamentable career, Christ’s truth stands finally rejected by the world’s recent enlightenment as a hallucination or a superstition which sometimes helpfully, sometimes harmfully amused the infancy of the human intellect. This history is written in too pronounced characters to be the exact type of all messages
that the world has received, but is it not in some sort a type of the fate of all truth? What idea has stood successfully the test of a prolonged & pitiless inquiry? what ideal has stood successfully the test of time? Has not mankind been busy for the last fifty years and more denying almost all that it had formerly affirmed? And now that under the name of rationalism or materialism the denial has shaped itself into some form of workably practical affirmation, mankind is again at its work of denying its denial and rearranging — but this time doubtingly — its old affirmations. The scepticism of Pilate would therefore seem to have some excuse in a recurrent human experience. Is there, indeed, such a thing as truth, — beyond of course that practical truth of persistent material appearances by which we govern our lives, the truth of death, birth, hunger, sexuality, pain, pleasure, commerce, money making, ease, discomfort, ambition, failure and success? Has not indeed the loftiest of our philosophical systems declared all things here to be Maya? And if Maya is illusion, a deceit of the thinking consciousness, then indeed there can be no truth anywhere in the world except that indefinable Existence which we cannot comprehend and which, after all, Buddhism, not without logic and plausibility, setting it down as another & more generalised sanskara, a false sensation of consciousness in the eternal Void, denies. And yet man is so constituted that he must follow after truth whether it is attained or not; something in him secret, masterful, essential to his existence, forbids him to be satisfied with a falsehood; the moment it is perceived or even believed to be a falsehood, he rejects it and the thing begins to crumble. If he persists in his rejection, it cannot last. Yesterday it was, today we see it tottering, tomorrow we shall look for it and find that it is no longer. It has passed back into Prakriti; it has dissolved into that of which it was made. For sraddha is the condition of all existence in consciousness and that to which sraddha is denied, ceases to have existence whether here or elsewhere, na caivamutra no iha. It is not, neither in this world nor in another. We may not unreasonably infer from this importance and this imperative necessity that Truth does really exist and everything is not illusion. If then Truth is always
escaping our hold and leaving us to disillusionment and derision, it may be because we have neither formed any clear conception of what Truth itself is nor taken hold of the right means by which it can be grasped. Let us leave aside, for a while, Buddha’s world of sanskaras; let us put aside, packed away in an accessible corner of the brain, Shankara’s gospel of Maya, and start instead from the old Vedantic beginnings OM Tat Sat, That (Brahman) is the thing that Is, and Sarvam khalvidam Brahma, Verily, all this, everything of which we are aware, is Brahman. It is at least possible that we may return from this inquiry with a deeper idea both of sanskaras and of Maya and may find that we have answered Pilate’s question by discovering the nature and conditions of Truth.

I am speaking of the fundamental truth, the truth of things and not merely the fact about particulars or of particulars only as their knowledge forms a basis or a help to the discovery of fundamental truth. The fact that a particular sort of contact makes me uncomfortable is nothing in itself except in so far as it throws light upon the general causes of pain; the nature, origin and purpose of pain is the fundamental truth that I seek about the sensational reaction to contact. This law of pain, moreover, is not so fundamental as the truth about the nature, origin and purpose of sensation and contact themselves, of which pain is a particularity, an example or a modification. This more fundamental truth becomes again itself particular when compared with the truth about the nature, origin and purpose of existence of which sensation and contact are only particular circumstances. In this we arrive at the one fundamental truth of all, and a little consideration will show that if we really & rightly know that, the rest ought and probably will reveal themselves at once and fall into their places. Tasmin vijnate sarvam vijnatam, That being known, all is known. Our ancestors perceived this truth of the fundamental unity of knowledge and sought to know Sat first, confident that Sat being known, the different tattwas, laws, details & particulars of Sat would more readily yield up their secret. The moderns follow another thought, which, also, has a truth of its own. They think
that since being is one the knowledge of the particulars must lead to the knowledge of the fundamental unity and they begin therefore at the bottom and climb upwards—a slow but, one might imagine, a safe method of procession. “Little flower in the crannies” cries Tennyson addressing a pretty blossom in the wall in lines which make good thought, but execrable poetry, “if I could but know what you are, I should know what God and man is.” Undoubtedly; the question is whether, without knowing God, we can really know the flower,—know it, and not merely its name and form or all the details of its name and form. Rupa we can know & analyse by the aid of science, nama by the aid of philosophy; but swarupa? It would seem that some third instrument is needed for that consummation of knowledge. The senses & reason, even though aided by microscope and telescope, cannot show it to us. Na sandrishe tisthati rupam asya. The form of That stands not in the ken of sight. Mind and speech are not permitted to lead us to it, na vag gacchati na mano. Even the metaphysical logic of a Shankara stops short of that final victory. Naisha tarkena matir apaneya. This realisation in thought is not to be obtained by logic. All these various disabilities are due to one compelling cause; they are, because Sat, the truth of existence, Brahman, the reality of things which fills & supports their idea and form, is beyond the recognisable & analysable elements of idea and form. Anor aniyam atarkyam anupramanat. It is subtler even than elemental subtlety and therefore not to be deduced, induced, inferred or discovered by a reasoning which proceeds from a consideration of the elements of name and form and makes that its standard. This is a truth which even the greatest philosophers, Vedantic or unVedantic, are apt to forget; but the Sruti insists on it always.

Nevertheless mankind has for some thousands of years been attempting obstinately & with passion to discover that Truth by the very means which the Sruti has forbidden. Such error is natural and inevitable to the human consciousness. For the Angel in man is one who has descended out of light & bliss into the darkness, twilight and half light here, the darkness
of matter, the twilight of vital consciousness, the broken half lights of the mind, and the master impulse of his nature is to yearn passionately towards the light from which [he] has fallen. Unable to find it at once, too little dhira (calm & discerning) to perfect himself patiently, it is natural that he in his eagerness should grasp at other instruments meant for a limited utility and straining them beyond their capacity compel them to serve this his supreme object — which is always to recover the perfect light and by that recovery to recover also what dwells only in the perfect light, — the perfect & unfailing bliss. From this abuse of his parts of knowledge have resulted three illegitimate human activities, of which Philosophy, Religion & Science have severally made themselves guilty, the disputatious metaphysical philosophy of the schools, the theology of the Churches and the scientific philosophy of the laboratories. Philosophy, Religion & Science have each their appointed field and dominion; each can help man in his great preoccupation, the attempt to know all that he can about Sat, about Brahman. The business of Philosophy is to arrange logically the general modes of Sat, the business of Religion is to arrange practically & vitally the personal relations of Sat, the business of Science is to arrange observantly & analytically the particular forms & movements of Sat. They are really necessary to and ought to lean on each other; and, if all recognised proper limitations and boundary marks, could by their joint activity help man to his present attainable fullness; but by a sort of intellectual land hunger they are perpetual invaders of each other’s dominion, deny each other’s positions and therefore remain unprofitably at war through the human ages. Finally, all three after illegitimately occupying each other’s fields insist on snatching at a knowledge of which they are all equally incapable — the essential nature of the world, the secret reality of Sat, the uttamam rahasyam of the Brahman. This error, this confusion, this sankara or illegitimate mixing of different nature and function is the curse of the Kali and from it arises much, if not most, of the difficulty we experience as a race in escaping from this misery & darkness into bliss and light. It is part and a great part of Kali Kalila, the chaos of the Kali.
India has always attempted, though not, since the confusion of Buddhism, with any success, if not to keep the three to their proper division of labour — which, with the general growth of ignorance became impossible — at least, always to maintain or reestablish, if disturbed, some harmony between them. Of this attempt the Gita is the standing monument and the most perfect example. To see the confusion working in its untrammelled force, — and it is only so, by isolating the disease from the modification of curative forces, that we can observe, diagnose and afterwards find its remedy — we must go to the intellectual history of the European continent. There have been, properly speaking, two critical periods in this history, the Graeco-Roman era of philosophic illumination previous to Christianity and the era of modern scientific illumination which is still unexhausted. In the first we see the revolt of Philosophy (with Science concealed in her protective embrace) against the usurpation of religion. We find it, after achieving liberation, in its turn denying religion and usurping her sacred prerogative. In the modern era we see Science this time emerged and adult, keeping Philosophy behind her, in revolt against religion, first liberate herself, then deny religion & usurp her prerogatives, then, or as part of this final process of conquest, turn, deny & strike down her lofty ally and usurp also her ancient territory. For if Science has scorned & denied religion, she has equally scorned & denied Metaphysics. If she has declared God to be a barbarous myth, a fiction of dreams and terrors and longings and denied us the right of communion with the infinite, equally has she declared metaphysics to be an aberration of the ideative faculty, a false extension of logic and denied our right to recognise any metaphysical existence or anything at all which cannot be judged by or inferred from the results of the test tube, the scalpel, the microscope & the telescope. Neither, however, has she herself hesitated to dogmatise about the essential nature of existence and the mutual relations of its general modes, matter, life, mind and spirit. But for our immediate purpose it is only necessary to note the result in either of these eras of these tremendous usurpations. The result of the usurpations of philosophy was
that mankind flung itself with an infinite sincerity, with a passionate sense of relief into the religion of an obscure Jewish sect and consented for a length of time which amazes us to every theological absurdity, even the most monstrous, so that it might once more be permitted to believe in something greater than earth & to have relations with God. The old philosophical spirit was torn to pieces with Hypatia in the bloodstained streets of Alexandria. Theology usurped her place and discoursed blindly & foolishly on transubstantiation and consubstantiality and one knows not what other barren mysteries. So far as philosophy was allowed an independent existence, she was compelled to do not her own work but the work of science; so we find the schoolmen elaborately determining by logic and a priori word fencing questions which could only be properly determined by observation and analysis. For Theology, for Mediaeval Religion herself did not care for this field of knowledge; she had no need for scientific truths just as the Jacobin Republic had “no need of chemists”; in fact she guillotined Science wherever its presence attracted her attention. But all injustice — and that means at bottom all denial of truth, of the satyam and ritam — brings about its own punishment or, as Religion would put it, God’s visitation & vengeance. Science liberated, given in her strenuous emergence the strength of the Titans, avenges herself today on her old oppressors, on Religion, on Philosophy, breaks their temples, scorns their gods & prophets & seeks to deprive them even of the right to existence. That was the result of the Graeco-Roman illumination. And what will be the result of the scientific illumination, the modern enlightenment, the fiery triumph and ardent intellectual bigotry of the materialist? It is too early to foresee the final denouement, but unformed lines of it show themselves, obscure masses arise. Mysticism is growing obscurely in strength, as Science grew obscurely in strength in the Middle Ages. We see Titanic & mystic figures striding out of the East, building themselves fortresses & points of departure, spreading among the half-intellectual, capturing even the intellectual — vague figures of Theosophy, Spiritualism, Mental Science, Psychical Research, Neo-Hinduism, Neo-Buddhism,
Neo-Mahomedanism, Neo-Christianity. The priests of Isis, the adepts & illuminati of Gnosticism, denied their triumph by the intervention of St. Paul & the Pope, reborn into this latter age, claim now their satisfaction. Already some outworks of materialism are giving way, the attack grows more insistent, the defence more uncertain, less proudly self-confident, though not less angry, contemptuous, bitter & intolerant; the invaders increase their adherents, extend the number of their strongholds. If no wider & higher truth intervenes, it would almost seem as if the old confusion in a new form might replace the new. Perhaps an Esoteric Society or a Spiritualist Circle of High Mediums will in a few centuries be laying down for us what we shall think about this world & the next, what particular relations with Gods will be permitted us, what Influences or Initiates we shall worship. Who knows? The fires of Smithfield may yet reblaze to save heretics from the perdition which an illustrious voice has declared to us to be the destined doom of all who do not acknowledge Maurya & Kutthumi.

These are not mere fantastic speculations. The history of humanity & the peculiar capacities of that apparently incalculable & erratic thing, human nature, ought to warn us of their possibility — or at least that they are not entirely impossible, in spite of the printing press, in spite of the clarities of Science. No doubt the old philosophers [thought] that with so many Stoas & Academies, such spread of education, never again would enlightenment be dimmed and the worship of gods & ghosts would in the end amuse none but the vulgar. We must accept these things as possible & examine why they are possible. This reaction is inevitable because Philosophy, though exceedingly high & luminous, tends to be exclusive & narrow and Science, though exceedingly patient, accurate & minute, tends to be limited, dry & purblind. They are both apt to be as dogmatic & intolerant in their own high way or in their own clear, dry way as Religion in her way which is not high, but intense, not clear but enthusiastic; and they live on a plane of mentality on which humanity at large does not yet find itself at perfect ease, cannot live without a struggle and a difficulty in breathing. They
both demand from man that he shall sacrifice his heart & his imagination to his intellect, shall deny his full human nature and live coldly & dryly. You might just as well ask him to live without free breathing. The mental world in which we are asked to live, resembles what the life of humanity would be if the warmth of the sun had diminished, the earth were growing chill and its atmosphere were already too rarefied for our comfort. It is no use saying that he ought to live in such an atmosphere, that it will improve his mental health & vigour. Perhaps he ought, though I do not think so, but he cannot. Or rather the individual may, — everything is possible to individual man, — but the race cannot. The demand can never be allowed; for it is a denial of Nature, a violation of the great Mother, a displacement of her eternal facts by the aridities of logic; it is a refusal of the Truth of things, of the Satyam, Ritam, and if it is persisted in, it will bring its own revenges. Philosophy & Science, if they are to help mankind without hurting it and themselves, must recognise that mankind is a complex being and his nature demands that every part of that complexity shall have its field of activity & every essential aspiration in him must be satisfied. It is his nature & his destiny to be aptakama, satisfied in his desires, in the individual & in the race — though always in accordance with the satyam, the ritam, which is also the sukham & sundaram, not lawlessly & according to aberrations & caprices. It was the great virtue of the ancient Hinduism, before Buddhism upset its balance & other aberrations followed, that it recognised in principle at least this fundamental verity, did not deny what God insists upon but strove, it does not matter whether perfectly or imperfectly, to put everything in its place & create a natural harmony.
Sachchidananda

The Vedanta, that solemn affirmation of the ultimate truths beyond which no human thinking has ever proceeded or can proceed, looking deep into the last recesses where existence takes refuge from the scrutiny of the Mind, affirms there as the beginning and the end of all possible description of the infinite Knowable-Unknowable three terms, Being, Comprehension and Delight. They are the initial & final trinity of existence. From them all phenomena proceed, to them all phenomena seek to return. This personality envisaged as myself, has come out of infinite being, lives in infinite being; emmeshed in the limitations of form & idea it seeks laboriously to recover itself as the infinite being. This Awareness in me which centralised in my personality suffers and examines all impressions that reach me out of the infinite existence, is a selection from an infinite Awareness contemplating itself in its whole & its parts; localised & limited, involved at first in this form it has created, it emerges out of its creation and seeks first to comprehend that and then to comprehend itself; master in some sort of its surroundings, it seeks to become master of itself; enlarging always from the factor to the sum, from the particular to the general, from the form to the essence it seeks to recover itself as the infinite self-comprehension. This Will to be & know in myself is essentially the joy of being & the joy of comprehending — Ananda, Delight; and the particular delight in me is but a spark, a wave, a foam-crest of an infinite delight; fastened at first on partial, limited & transient pleasures, it seeks always to enlarge them, to combine, to intensify; it goes out seeking for new forms of happiness; it goes in turning from the vital joy to sense-delights, from sense-delights to pleasures of emotion, from pleasures of emotion to intellectual satisfaction, from intellectual satisfaction to the self-existent bliss of the spirit which depends on no object
or circumstance; in all these motions it is seeking to recover itself as infinite Delight. In this way the final perceptions of Vedanta explain the whole process & labour of consciousness in the world.

These three, Sat, Chit and Ananda are one Trinity, Sachchidananda. They are not three different factors making a single sum, neither are any two of them merely attributes, even inseparable & invariable attributes, of the third. No doubt, they are always coexistent. Where there is no delight, latent or developed, there can be no existence; where there is no awareness self-absorbed or manifest, there can be no existence. Follow existence into utter & blind inertia, consciousness sits secret in that night; follow consciousness into the abyss of desolation, joy sits self-stunned in the mask of that misery. But their coexistence is only an exterior sign of their essential unity. They do not exist separately, because they are not different from each other, — all three are one thing-in-itself seen diversely; seen sensationally, touching the fibres of conscious life in us it is delight; seen mentally, touching the fibres of living consciousness, it is comprehension; seen spiritually, touching the very core of this living & conscious I, it is being. But the thing-in-itself is one; it is Brahman. Go behind the Trinity and you can say nothing of it but this, Tat, anirdeshyam, the indefinable, That which transcends all words & thoughts; seek to know & define it, you come back to the universal & mysterious Trinity, Sachchidananda, being, comprehension & delight. This is all that you can know fundamentally about yourself; you are That which Is, which, being, comprehends Its own existence, which, comprehending, has in its silence of being or in its play of comprehension a self-existent delight. It is all we can know fundamentally & all we need to know, for, this once grasped & pursued in knowledge, the whole of life begins to unroll itself in its secret motion & purpose to our gaze.

Against this sublime Trinity of the Vedanta, this penetrating analysis of the reality of things, this discovery of the real existence of God in the world, the appearances of that world seem to protest and militate. That which strikes us most saliently & leaps on us fiercely at every turn, is grief & pain, not delight; that
which besieges our eyes always & everywhere is not conscious awareness, but the inertia or the brute movement of unconscious Matter. Existence we cannot deny; the voice of the mighty Life in us rejects always the systems of Nihilism & leaves them to the enjoyment of a few curious & subtle metaphysicians; nothing either in science or in experience supports the purely metaphysical idea of Nullity. But this undeniable existence stands before us rather as an inextricable confusion of pleasure & pain than as synonymous with delight; in its vast fields sown with worlds we find instead of an omnipresent consciousness rather an omnipresent non-consciousness in which tongues of consciousness flame like little points & tongues of fire on a huge inert pyre of various timber. Be not deceived, answers the Vedantin; appearances can never be trusted till the secrets behind them are fathomed. To the eye’s unvarying experience the sun is a globe of fire that voyages round its worshipped earth; generations so conceived it & would have mocked at the truth; these solid appearances are an assemblage of gases; the colour of a rose is a brilliant deceit of the vision. Interrogate consciousness to find what it is or holds & unconsciousness to discover its secrets. Interrogate not only the state of waking but the states of dream & sleep. You will find at the end of long, patient & searching experiments that the confused consciousness of dream was confused only in the receiving parts of the material waking mind and behind it was a state of awareness even more perfect & orderly than the awareness of our waking life. You will find that the consciousness in abeyance of dreamless sleep was in abeyance only in the overpowered & cessant parts of the same material waking mind and behind it was a most exalted & perfect state of awareness which stands near the threshold of the House of God in which we really dwell; for here we are only labourers or overseers in His outer farms. It is admitted that when we are in sound sleep we dream; we are conscious, when we are swooned or stunned only a part of our consciousness, the outward, the here active is withdrawn. When you have interrogated unconsciousness in yourself, interrogate it in the tree & the clod. You will find, for by that time you will have entered into the king-
doms within & learned to command a self-exceeding experience of being, that in the tree & the rock there is the same being, the same consciousness, the same principle of Will to live, of delight, in a word, that is [in] yourself. The unconsciousness of the tree & the rock is the same unconsciousness as that which occupies your body when mind is withdrawn from the observation of its working. It is the sleep, the universal trance of Matter. And that means, eventually, the trance of consciousness forgetting itself in its own symbol or form. Consciousness in this its outer shell has become to the appearance something else which seems not to have any resemblance to conscious being, as gas becoming water is to appearance something else which has no remotest gaseous semblance. The truth sits veiled behind the appearance, self-absorbed; there is in all things, without exception, “That which is conscious in these conscious & unconscious existences, that which is awake in these who sleep.”
The Silence behind Life

There is a silence behind life as well as within it and it is only in this more secret, sustaining silence that we can hear clearly the voice of God. In the noise of the world we hear only altered & disturbed echoes of it; for the Voice comes always—who else speaks to us on our journey?—but the gods of the heart, the gods of the mind, the gods of desire, the gods of sense take up the divine cry, intercept it and alter it for their purposes. Krishna calls to us, but the first note, even the opening power or sweetness, awakes a very brouhaha of these echoes. It is not the fault of these poor gods. The accent of power is so desirable, the note of sweetness is so captivating that they must seize it, they would be dull & soulless, there would be no hope of their redemption if they did not at once leap at it and make it their own. But in becoming their own, it ceases to be entirely his. How many who have the religious faith and the religious temperament, are following the impulses of their heart, the cravings of their desire, the urgency of their senses, the dictates of their opinion when they fully imagine that their God is leading them! And they do well, for God is leading them. It is the way He has chosen for them, & since He has chosen it, it is the best & wisest & most fruitful way for them. Still it is their God—not one they have made in their own image as the Atheist believes, but One who makes Himself in the image that they prefer, the image that best suits with their nature or their development. “In whatever way men come to me, in that way I love & cleave to them.” It is a saying of fathomless depth which contains the seed of the whole truth about God & religion. After all it is only in this way that the conditioned can meet the Absolute, that which has a nature or dharma of its own with that which is beyond all limit of nature or dharma. After the meeting of the soul with God,—well, that
is a different matter. The secrets of His nuptial chamber cannot all be spoken.

Nevertheless, there is a higher way of meeting him than that which leads us through subjection to the Gods. By perfect Love, by perfect Joy, by perfect Satisfaction, by perfected mind one can hear what the Voice truly says if not the Voice itself, — catch the kernel of the message with a sort of ecstatic perfection, even if afterwards the Gods dilate on it & by attempting to amplify & complete, load it with false corollaries or prevent some greater fullness of truth from arriving to us. Therefore this way also, though it is high, cannot be the highest.

Circa 1913
Initial Definitions and Descriptions

Yoga has four powers and objects, purity, liberty, beatitude and perfection. Whosoever has consummated these four mightinesses in the being of the transcendental, universal, lilamaya and individual God is the complete and absolute Yogin.

All manifestations of God are manifestations of the absolute Parabrahman.

The Absolute Parabrahman is unknowable to us, not because It is the nothingness of all that we are, for rather whatever we are in truth or in seeming is nothing but Parabrahman, but because It is pre-existent & supra-existent to even the highest & purest methods and the most potent & illimitable instruments of which soul in the body is capable.

In Parabrahman knowledge ceases to be knowledge and becomes an inexpressible identity. Become Parabrahman, if thou wilt and if That will suffer thee, but strive not to know It; for thou shalt not succeed with these instruments and in this body.

In reality thou art Parabrahman already and ever wast and ever will be. To become Parabrahman in any other sense, thou must depart utterly out of world manifestation and out even of world transcendence.

Why shouldst thou hunger after departure from manifestation as if the world were an evil? Has not That manifested itself in thee & in the world and art thou wiser & purer & better than the Absolute, O mind-deceived soul in the mortal? When That withdraws thee, then thy going hence is inevitable; until Its force is laid on thee, thy going is impossible, cry thy mind never so fiercely & wailingly for departure. Therefore neither desire nor shun the world, but seek the bliss & purity & freedom & greatness of God in whatsoever state or experience or environment.

So long as thou hast any desire, be it the desire of non-birth
or the desire of liberation, thou canst not attain to Parabrahman. For That has no desires, neither of birth nor of non-birth, nor of world, nor of departure from world. The Absolute is unlimited by thy desire as It is inaccessible to thy knowledge.

If thou wouldst know Paratpara brahman, then know It as It chooses to manifest Itself in world and transcending it — for transcendence also is a relation to world & not the sheer Absolute, — since otherwise It is unknowable. This is the simultaneous knowing & not knowing spoken of in the Vedanta.

Of Parabrahman we should not say that “It” is world-transcendent or world-immanent or related or non-related to the world; for all these ideas of world and not-world, of transcendence and immanence and relation are expressions of thought by which mind puts its own values on the self-manifestation of Parabrahman to Its own principle of knowledge and we cannot assert any, even the highest of them to be the real reality of that which is at once all and beyond all, nothing and beyond nothing. A profound and unthinking silence is the only attitude which the soul manifested in world should adopt towards the Absolute.

We know of Parabrahman that It Is, in a way in which no object is and no state in the world, because whenever & in whatever direction we go to the farthest limits of soul-experience or thought-experience or body-experience or any essential experience whatsoever, we come to the brink of That and perceive It to be, unknowably, without any capacity of experiencing about it any farther truth whatsoever.

When thy soul retiring within from depth to depth & widening without from vastness to vastness stands in the silence of its being before an unknown & unknowable from which & towards which world is seen to exist as a thing neither materially real nor mentally real and yet not to be described as a dream or a falsehood, then know that thou art standing in the Holy of Holies, before the Veil that shall not be rent. In this mortal body thou canst not rend it, nor in any other body; nor in the state of self in body nor in the state of pure self, nor in waking nor in sleep nor in trance, nor in any state or circumstances whatsoever.

www.holybooks.com
for thou must be beyond state before thou canst enter into the Paratpara brahman.

That is the unknown God to whom no altar can be raised and no worship offered; universe is His only altar, existence is His only worship. That we are, feel, think, act or are but do not feel, do not think, do not act is for That enough. To That, the saint is equal with the sinner, activity with inactivity, man with the mollusc, since all are equally Its manifestations. These things at least are true of the Parabrahman & Para Purusha, which is the Highest that we know & the nearest to the Absolute. But what That is behind the veil or how behind the veil It regards Itself and its manifestations is a thing no mind can assume to tell or know; and he is equally ignorant and presumptuous who raises & inscribes to It an altar or who pretends to declare the Unknown to those who know that they can know It not. Confuse not thought, bewilder not the soul of man in its forward march, but turn to the Universe & know That in this, Tad va etat, for so only & in these terms It has set itself out to be known to those who are in the universe. Be not deceived by Ignorance, be not deceived by knowledge; there is none bound & none free & none seeking freedom but only God playing at these things in the extended might of His self-conscious being, para maya, mahimanam asya, which we call the universe.
The Object of Our Yoga

The object of our Yoga is self-perfection, not self-annulment. There are two paths set for the feet of the Yogin, withdrawal from the universe and perfection in the Universe; the first comes by asceticism, the second is effected by tapasya; the first receives us when we lose God in Existence, the second is attained when we fulfil existence in God. Let ours be the path of perfection, not of abandonment; let our aim be victory in the battle, not the escape from all conflict.

Buddha and Shankara supposed the world to be radically false and miserable; therefore escape from the world was to them the only wisdom. But this world is Brahman, the world is God, the world is Satyam, the world is Ananda; it is our misreading of the world through mental egoism that is a falsehood and our wrong relation with God in the world that is a misery. There is no other falsity and no other cause of sorrow.

God created the world in Himself through Maya; but the Vedic meaning of Maya is not illusion, it is wisdom, knowledge, capacity, wide extension in consciousness. Prajna prasrita purani. Omnipotent Wisdom created the world, it is not the organised blunder of some Infinite Dreamer; omniscient Power manifests or conceals it in Itself or Its own delight, it is not a bondage imposed by His own ignorance on the free and absolute Brahman.

If the world were Brahman’s self-imposed nightmare, to awake from it would be the natural and only goal of our supreme endeavour; or if life in the world were irrevocably bound to misery, a means of escape from this bondage would be the sole secret worth discovering. But perfect truth in world-existence is possible, for God here sees all things with the eye of truth; and perfect bliss in the world is possible, for God enjoys all things with the sense of unalloyed freedom. We also can enjoy this
truth and bliss, called by the Veda amritam, Immortality, if by casting away our egoistic existence into perfect unity with His being we consent to receive the divine perception and the divine freedom.

The world is a movement of God in His own being; we are the centres and knots of divine consciousness which sum up and support the processes of His movement. The world is His play with His own self-conscious delight, He who alone exists, infinite, free and perfect; we are the self-multiplications of that conscious delight, thrown out into being to be His playmates. The world is a formula, a rhythm, a symbol-system expressing God to Himself in His own consciousness,—it has no material existence but exists only in His consciousness and self-expression; we, like God, are in our inward being That which is expressed, but in our outward being terms of that formula, notes of that rhythm, symbols of that system. Let us lead forward God’s movement, play out His play, work out His formula, execute His harmony, express Him through ourselves in His system. This is our joy and our self-fulfilment; to this end we who transcend & exceed the universe, have entered into universe-existence.

Perfection has to be worked out, harmony has to be accomplished. Imperfection, limitation, death, grief, ignorance, matter, are only the first terms of the formula — unintelligible till we have worked out the wider terms and reinterpreted the formulary; they are the initial discords of the musician’s tuning. Out of imperfection we have to construct perfection, out of limitation to discover infinity, out of death to find immortality, out of grief to recover divine bliss, out of ignorance to rescue divine self-knowledge, out of matter to reveal Spirit. To work out this end for ourselves and for humanity is the object of our Yogic practice.
PURNA YOGA

I

The Entire Purpose of Yoga

By Yoga we can rise out of falsehood into truth, out of weakness into force, out of pain and grief into bliss, out of bondage into freedom, out of death into immortality, out of darkness into light, out of confusion into purity, out of imperfection into perfection, out of self-division into unity, out of Maya into God. All other utilisation of Yoga is for special and fragmentary advantages not always worth pursuing. Only that which aims at possessing the fullness of God is purna Yoga; the sadhaka of the Divine Perfection is the purna Yogin.

Our aim must be to be perfect as God in His being and bliss is perfect, pure as He is pure, blissful as He is blissful, and, when we are ourselves siddha in the purna Yoga, to bring all mankind to the same divine perfection. It does not matter if for the present we fall short of our aim, so long as we give ourselves whole-heartedly to the attempt and by living constantly in it and for it move forward even two inches upon the road; even that will help to lead humanity out of the struggle and twilight in which it now dwells into the luminous joy which God intends for us. But whatever our immediate success, our unvarying aim must be to perform the whole journey and not lie down content in any wayside stage or imperfect resting place.

All Yoga which takes you entirely away from the world, is a high but narrow specialisation of divine tapasya. God in His perfection embraces everything; you also must become all-embracing.

God in His ultimate existence beyond all manifestation and all knowledge, is the Absolute Parabrahman; in relation to the world He is that which transcends all universal existence while regarding it or in turning away from it; He is that which contains
and upholds the universe, He is that which becomes the universe and He is the universe & everything which it contains.

He is also Absolute and Supreme Personality playing in the universe and as the universe; in the universe He appears to be its Soul & Lord, as the universe He appears to be the motion or process of the Will of the Lord and to become all the subjective and objective results of the motion. All the states of the Brahman, the transcendent, the continent, the universal, the individual are informed & sustained by the divine Personality. He is both the Existent & the state of existence. We call the state of existence the Impersonal Brahman, the Existent the Personal Brahman. There is no difference between them except to the play of our consciousness; for every impersonal state depends upon a manifest or secret Personality and can reveal the Personality which it holds and veils and every Personality attaches to itself and can plunge itself into an impersonal existence. This they can do because Personality & Impersonality are merely different states of self-consciousness in one Absolute Being.

Philosophies & religions dispute about the priority of different aspects of God & different Yogins, Rishis & Saints have preferred this or that philosophy or religion. Our business is not to dispute about any of them, but to realise & become all of them, not to follow after any aspect to the exclusion of the rest, but to embrace God in all His aspects and beyond aspect.

God descending into world in various forms has consummated on this earth the mental and bodily form which we call humanity.

He has manifested in the world through the play of all-governing Soul with its own formative Will or Shakti a rhythm of existence of which Matter is the lowest term and pure being the highest. Mind & Life stand upon Matter (Manas & Prana on Annam) and make the lower half of world-existence (aparardha); pure consciousness and pure bliss proceed out of pure Being (Chit and Ananda out of Sat) and make the upper half of world-existence. Pure idea (vijnana) stands as the link between the two. These seven principles or terms of existence
are the basis of the sevenfold world of the Puranas (Satyaloka, Tapas, Jana, Mahar, Swar, Bhuvah & Bhur).

The lower hemisphere in this arrangement of consciousness consists of the three vyahritis of the Veda, “Bhur, Bhuvah, Swar”; they are states of consciousness in which the principles of the upper world are expressed or try to express themselves under different conditions. Pure in their own homes, they are in this foreign country subject to perverse, impure & disturbing combinations & workings. The ultimate object of life is to get rid of the perversity, impurity & disturbance & express them perfectly in these other conditions. Your life on this earth is a divine poem that you are translating into earthly language or a strain of music which you are rendering into words.

Being in Sat is one in multiplicity, one that regards its multiplicity without being lost or confused in it and multiplicity that knows itself as one without losing the power of multiple play in the universe. Under the conditions of mind, life & body, ahankara is born, the subjective or objective form of consciousness is falsely taken for self-existent being, the body for an independent reality & the ego for an independent personality; the one loses itself in us in its multiplicity & when it recovers its unity, finds it difficult, owing to the nature of mind, to preserve its play of multiplicity. Therefore when we are absorbed in world, we miss God in Himself; when we seek God, we miss Him in the world. Our business is to break down & dissolve the mental ego & get back to our divine unity without losing our power of individual & multiple existence in the universe.

Consciousness in Chit is luminous, free, illimitable & effective; that which it is aware of as Chit (Jnanashakti) it fulfils infallibly as Tapas (Kriyashakti); for Jnanashakti is only the stable & comprehensive, Kriyashakti only the motional and intensive form of one self-luminous Conscious Being. They are one power of conscious force of God (Chit-Shakti of Sat-Purusha). But in the lower hemisphere, under the conditions of mind, life & body, the luminousness becomes divided & broken up into uneven rays, the freedom trammelled by egoism and unequal forms, the effectiveness veiled by the uneven play of forces. We
have, therefore, states of consciousness, non-consciousness &
false consciousness, knowledge & ignorance & false knowledge,
effective force & inertia and ineffective force. Our business is
by renouncing our divided & unequal individual force of action
& thought into the one, undivided universal Chitshakti of Kali
to replace our egoistic activities by the play in our body of
the universal Kali and thus exchange blindness & ignorance
for knowledge and ineffective human strength for the divine
effective Force.

Delight in Ananda is pure, unmixed, one & yet multitudi-
nous. Under the conditions of mind, life & body it becomes
divided, limited, confused & misdirected and owing to shocks
of unequal forces & uneven distribution of Ananda subject to the
duality of positive & negative movements, grief & joy, pain &
pleasure. Our business is to dissolve these dualities by breaking
down their cause & plunge ourselves into the ocean of divine
bliss, one, multitudinous, evenly distributed (sama), which takes
delight from all things & recoils painfully from none.

In brief, we have to replace dualities by unity, egoism by
divine consciousness, ignorance by divine wisdom, thought by
divine knowledge, weakness, struggle & effort by self-contented
divine force, pain & false pleasure by divine bliss. This is called
in the language of Christ bringing down the kingdom of heaven
on earth, or in modern language, realising & effectuating God
in the world.

Humanity is, upon earth, the form of life chosen for this
human aspiration & divine accomplishment; all other forms of
life either do not need it or are ordinarily incapable of it unless
they change into humanity. The divine fullness is therefore the
sole real aim of humanity. It has to be effected in the individual
in order that it may be effected in the race.

Humanity is a mental existence in a living body; its basis is
matter, its centre & instrument mind & its medium life. This is
the condition of average or natural humanity.

In every human being there is concealed (avyakta) the four
higher principles. Mahas, pure ideality in vijnana, is not a
vyahriti but the source of the vyahritis, the bank upon which
mental, vital and bodily action draw & turn its large & infinite wealth into small coin of the lower existence. Vijnana being the link between the divine state & the human animal is the door of escape for man into the supernatural or divine humanity.

Inferior mankind gravitates downward from mind towards life & body; average mankind dwells constant in mind limited by & looking towards life & body; superior mankind levitates upward either to idealised mentality or to pure idea, direct truth of knowledge & spontaneous truth of existence; supreme mankind rises to divine beatitude & from that level either goes upward to pure Sat & Parabrahman or remains to beatify its lower members & raise to divinity in itself & others this human existence.

The man who dwells in the higher or divine & now hidden hemisphere of his consciousness, having rent the veil, is the true superman and the last product of that progressive self-manifestation of God in world, Spirit out of matter, which is now called the principle of evolution.

To rise into divine existence, force, light & bliss and recast in that mould all mundane existence is the supreme aspiration of religion & the complete practical aim of Yoga. The aim is to realise God in the universe, but it cannot be done without realising God transcendent of the Universe.
Parabrahman is the Absolute, & because It is the Absolute, it cannot be reduced into terms of knowledge. You can know the Infinite in a way, but you cannot know the Absolute.

All things in existence or non-existence are symbols of the Absolute created in self-consciousness (Chid-Atman); by Its symbols the Absolute can be known so far as the symbols reveal or hint at it, but even the knowledge of the whole sum of symbols does not amount to real knowledge of the Absolute. You can become Parabrahman; you cannot know Parabrahman. Becoming Parabrahman means going back through self-consciousness into Parabrahman, for you already are That, only you have projected yourself forward in self-consciousness into its terms or symbols, Purusha & Prakriti through which you uphold the universe. Therefore, to become Parabrahman void of terms or symbols you must cease out of the universe.

By becoming Parabrahman void of Its self-symbols you do not become anything you are not already, nor does the universe cease to operate. It only means that God throws back out of the ocean of manifest consciousness one stream or movement of Himself into that from which all consciousness proceeded.

All who go out of universe-consciousness, do not necessarily go into Parabrahman. Some go into undifferentiated Nature (Avyakrita Prakriti), some lose themselves in God, some pass into a dark state of non-recognition of universe, (Asat, Shunya), some into a luminous state of non-recognition of universe — Pure Undifferentiated Atman, Pure Sat or Existence-Basis of Universe, — some into a temporary state of deep sleep (sushupti) in the impersonal principles of Ananda, Chit or Sat. All these are forms of release & the ego gets from God by His Maya
or Prakriti the impulse towards any one of them to which the supreme Purusha chooses to direct him. Those whom He wishes to liberate, yet keep in the world, He makes jivanmuktas or sends them out again as His vibhutis, they consenting to wear for the divine purposes a temporary veil of Avidya, which does not at all bind them and which they can rend or throw off very easily. Therefore to lust after becoming Parabrahman is a sort of luminous illusion or sattwic play of Maya; for in reality there is none bound & none free & none needing to be freed and all is only God’s Lila, Parabrahman’s play of manifestation. God uses this sattwic Maya in certain egos in order to draw them upwards in the line of His special purpose & for these egos it is the only right and possible path.

But the aim of our Yoga is Jivanmukti in the universe; not because we need to be freed or for any other reason, but because that is God’s will in us, we have to live released in the world, not released out of the world.

The Jivanmukta has, for perfect knowledge & self-fulfilment to stand on the threshold of Parabrahman, but not to cross the threshold.

The statement he brings back from the threshold is that That is & we are That, but what That is or is not, words cannot describe, nor mind discriminate.

Parabrahman being the Absolute is indescribable by any name or definite conception. It is not Being or Non-Being, but something of which Being & Non-Being are primary symbols; not Atman or unAtman or Maya; not Personality or Impersonality; not Quality or Non-Quality; not Consciousness or Non-Consciousness; not Bliss or Non-Bliss; not Purusha or Prakriti; not god nor man nor animal; not release nor bondage; but something of which all these are primary or derivative, general or particular symbols. Still, when we say Parabrahman is not this or that, we mean that It cannot in its essentiality be limited to this or that symbol or any sum of symbols; in a sense Parabrahman is all this & all this is Parabrahman. There is nothing else which all this can be.

Parabrahman being Absolute is not subject to logic, for logic
applies only to the determinate. We talk confusion if we say that the Absolute cannot manifest the determinate & therefore the universe is false or non-existent. The very nature of the Absolute is that we do not know what it is or is not, what it can do or cannot do; we have no reason to suppose that there is anything it cannot do or that its Absoluteness is limited by any kind of impotency. We experience spiritually that when we go beyond everything else we come to something Absolute; we experience spiritually that the universe is in the nature of a manifestation proceeding, as it were, from the Absolute; but all these words & phrases are merely intellectual terms trying to express the inexpressible. We must state what we see as best we can, but need not dispute what others see or state; rather we must accept & in our own system locate & account for what they have seen & stated. Our only dispute is with those who deny credit to the vision or freedom & value to the statements of others; not with those who are content with stating their own vision. A philosophical or religious system is only a statement of that arrangement of existence in universe which God has revealed to us as our status of being. It is given in order that the mind may have something to stand upon while we act in Prakriti. But our vision need not be precisely the same in arrangement as the vision of others, nor is the form of thought that suits our mentality bound to suit a mentality differently constituted. Firmness, without dogmatism, in our own system, toleration, without weakness, of all other systems should therefore be our intellectual outlook.

You will find disputants questioning your system on the ground that it is not consistent with this or that Shastra or this or that great authority, whether philosopher, saint or Avatar. Remember then that realisation & experience are alone of essential importance. What Shankara argued or Vivekananda conceived intellectually about existence or even what Ramakrishna stated from his multitudinous and varied realisation, is only of value to you so far as you [are] moved by God to accept and renew it in your own experience. The opinions of thinkers & saints
Avatars should be accepted as hints but not as fetters. What matters to you is what you have seen or what God in His universal personality or impersonally or again personally in some teacher, guru or pathfinder undertakes to show to you in the path of Yoga.
III

Parabrahman and Parapurusha

God or Para Purusha is Parabrahman unmanifest & inexpressible turned towards a certain kind of manifestation or expression, of which the two eternal terms are Atman and Jagati, Self and Universe. Atman becomes in self-symbol all existences in the universe; so too, the universe when known, resolves all its symbols into Atman. God being Parabrahman is Himself Absolute, neither Atman nor Maya nor unAtman; neither Being nor Not-Being (Sat, Asat); neither Becoming nor non-Becoming (Sambhuti, Asambhuti); neither Quality nor non-Quality (Saguna, Nirguna); neither Consciousness nor non-consciousness, (Chaitanya, Jada); neither Soul nor Nature (Purusha, Prakriti); neither Bliss nor non-Bliss; neither man nor god nor animal; He is beyond all these things, He maintains & contains all these things; in Himself as world He is & becomes all these things.

The only difference between Parabrahman & Parapurusha is that we think of the first as something beyond our universe-existence, expressed here indeed, but still inexpressible, and of the second as something approaching our universe-existence, inexpressible indeed, but still here expressed. It is as if, in reading a translation of the Ramayan or Homer’s Iliad, we were to look at the unapproachable something no translator can seize and say “This is not the Ramayan”, “This is not the Iliad” and yet, looking at the comparative adequacy of the expressions which do succeed in catching something of the original spirit and intention, were at the same time to say “This is Homer”, “This is Valmekie.” There is no other difference except this of standpoint. The Upanishads speak of the Absolute Parabrahman as Tat; they say Sa when they speak of the Absolute Parapurusha.
In the Katha Upanishad there occurs one of those powerful and pregnant phrases, containing a world of meaning in a point of verbal space, with which the Upanishads are thickly sown. Yogo hi prabhavaprayau. For Yoga is the beginning & ending of things. In the Puranas the meaning of the phrase is underlined & developed. By Yoga God made the world, by Yoga He will draw it into Himself in the end. But not only the original creation & final dissolution of the universe, all great changes of things, creations, evolutions, destructions are effected by the essential process of Yoga, tapasya. In this ancient view Yoga presents itself as the effective, perhaps the essential & real executive movement of Nature herself in all her processes. If this is so in the general workings of Nature, if that is to say, a divine Knowledge and a divine Will in things by putting itself into relation with objects is the true cause of all force & effectuality, the same rule should hold good in human activities. It should hold good especially of all conscious & willed processes of psychological discipline, — Yogic systems, as we call them; Yoga can really be nothing but a consummate & self-conscious natural process intended to effect rapidly objects which the ordinary natural movement works out slowly, in the tardy pace of a secular or even millennial evolution.

There is an apparent difference. The aim put before us in Yoga is God; the aim of Nature is to effect supernature; but these two aims are of one piece & intention. God & supernature are only one the real & the other the formal aspect of the one unattainable fulfilment towards which our human march is in its ascent directed. Yoga for man is the upward working of Nature liberated from slow evolution and long relapses and self-conscious in divine or human knowledge.

God is That which is the All and yet exceeds and transcends the All; there is nothing in existence which is not God, but
God is neither the sum of existence nor anything in that sum, except symbolically, in image to His own consciousness. In other words, everything that exists, separately, is a particular symbol and the whole sum of existence is a general symbol which tries to translate the untranslatable existence, God, into the terms of world-consciousness. It is intended to try, it is not intended to succeed; for the moment it succeeds, it ceases to be itself and becomes that untranslatable something from which it started, God. No symbol is intended to express God perfectly, not even the highest; but it is the privilege of the highest symbols to lose in Him their separate definiteness, cease to be symbols and become in consciousness that which is symbolised. Humanity is such a symbol or eidolon of God; we are made, to use the Biblical phrase, in His image; and by that is meant not a formal image, but the image of His being and personality; we are of the essence of His divinity and of the quality of His divinity; we are formed in the mould and bear the stamp of a divine being and a divine knowledge.

In everything that exists phenomenally, or, as I shall prefer to say, going deeper into the nature of things, symbolically, there are two parts of being, thing in itself and symbol, Self and Nature, res (thing that is) and factum (thing that is done or made), immutable being and mutable becoming, that which is supernatural to it and that which is natural. Every state of existence has some force in it which drives it to transcend itself. Matter moves towards becoming life, Life travails towards becoming Mind, Mind aspires towards becoming ideal Truth, Truth rises towards becoming divine and infinite Spirit. The reason is that every symbol, being a partial expression of God, reaches out to and seeks to become its own entire reality; it aspires to become its real self by transcending its apparent self. Thing that is made, is attracted towards thing that is, becoming towards being, the natural towards the supernatural, symbol towards thing-in-itself, Nature towards God.

The upward movement is, then, the means towards self-fulfilment in this world; but it is not imperative on all objects. For there are three conditions for all changeable existences, the
upward ascension, the arrested status and the downward lapse. Nature in its lower states moves upward indeed in the mass, but seeks the final salvation for only a limited number of its individuals. It is not every form of matter that organises life although every form of matter teems with the spirit of life and is full of its urgent demand for release & self-manifestation. Not every form of life organises mind, although in all forms of life mind is there, insistent, seeking for its escape and self-expression. Nor is every mental being fitted to organise the life of ideal truth, although in every mental being, in dog & ape & worm no less than in man, the imprisoned spirit of truth & knowledge seeks for its escape and self-expression. Nature in each realised state of her building seeks first to assure the natural existence of her creatures in that state; only after this primary aim is accomplished does she seek through the best fitted of them to escape from her works, to break down what she has built and arrive at something beyond. It is not till she reaches man that she arrives at a type of being of which every individual is essentially capable of realising not only the natural but the supernatural within it; and even this is true with modifications, with qualifications. But of this it will be better to speak at greater length in another connection.

Nevertheless, it remains true that the upward movement is the master movement of Nature; arrested status is a lower fulfilment, & if perfect, a transient perfection. It is a perfection in the realms of struggle and in the style of passing forms, a fulfilment in the kingdoms of Ashanaya Mrityu, Hunger who is death, Hunger that creates & feeds upon its creations; the upward movement is that which leads up through death to immortality & realises in this earth of the body the blissful and luminous kingdom of heaven; the downward lapse is destruction, Hell, a great perdition, mahati vinashthih. These are the three gatis or final states of becoming indicated in the Gita, uttama, madhyama & adhama, highest, middle and lowest, offered to the choice of humanity. It is for each individual of us to choose. For as we choose, God shall fulfil Himself in us, towards a transient human satisfaction, a divine perfection or a decomposition of our humanity into the fruitful waste-matter of Nature.
Every nature, then, is a step towards some super-nature,—towards something natural to itself, but supernatural to that which is below. Life is supernatural to Matter, Mind supernaturnal to Life, Ideal Being supernatural to Mind, the Infinite Spirit supernatural to ideal being. We must, therefore, accept the supernatural as our goal; for the tendency of our nature to the super-nature just above it is a command of the World Power to be obeyed and not rebelled against & distrusted. It is here that Faith has its importance & Religion, when uncorrupted, its incalculable utility; for our natural mind seeks to dwell in its nature & is sceptical of supernature. Faith & religion were provisions of the All Wise Energy to accustom the natural & merely mental man to the promptings of the ideal soul in him which seeks even now to escape out of twilight into light, out of groping into truth, out of the senses & reasoning into vision & direct experience. The upward tendency is imposed on us & we cannot permanently resist it; at some time or another God will lay his hands on us and force us up that steep incline so difficult to our unregenerate treading. For as surely as the animal develops towards humanity & in its most flexible types attains a kind of humanity, as surely as the ape and the ant having once appeared, man was bound to follow, so surely man develops towards godhead & in his more capable types approaches nearer & nearer towards godhead, attains a kind of deity, & so surely the genius & the saint having appeared man is bound to develop in himself & out of himself the superman, the siddha purusha. For this conclusion no prophetic power or revelation is needed; it is the inevitable corollary from the previous demonstrations worked out for us in the vast laboratory of Nature.

We have to transcend Nature, to become super-Nature, but it follows from what I have said that it is by taking advantage of something still imprisoned in Nature itself, by following some line which Nature is trying to open to us that we ought to proceed. By yielding to our ordinary nature we fall away both from Nature itself and from God; by transcending Nature we at once satisfy her strongest impulse, fulfil all her possibilities and rise towards God. The human first touches the divine and
then becomes the divine. But there are those who seek to kill Nature in order to become the Self. Shall we follow them? No, however great & lofty be their path, however awful & dazzling their aspiration, because it is not God’s intention in humanity & therefore not our proper dharma. Let any say, if he will, that we have made the lower choice. We answer in the language of the Gita, Sreyan swadharma viguno, Better is the law of our own being though inferior, too perilous the superior law of another’s being. To obey God’s will in us, is certainly more blissful, perhaps even more divine than to rise to the austere heights of the Adwaitin & the ineffable self-extinction in an indefinable Existence. For us the embrace of Krishna is enough and the glory of the all-puissant bosom of Kali. We have to transcend & possess Nature, not to kill her.

In any case, whatever may be the choice for exceptional individuals, it is a general path of supreme attainment for humanity that we are seeking, — for I am not proposing to you in Yoga an individual path unconcerned with the rest of mankind, — and here there can be no doubt or hesitation. Neither the exaggerations of spirituality nor the exaggerations of materialism are our true path. Every general movement of our humanity which seeks to deny Nature, however religious, lofty or austere, of whatever dazzling purity or ethereality, has been & will always be doomed to failure, sick disappointment, disillusionment or perversion, because it is in its nature for the mass of humanity a transient impulse of exaggeration, because it contradicts God’s condition for us who set Nature there as an indispensable term for His self-fulfilment in the universe and ourselves as the supreme instruments & helpers on this earth of that divine self-fulfilment. Every movement of humanity which bids us be satisfied with our ordinary Nature, dwell upon the earth, cease to aspire to the empyrean within us and choose rather to live like the animals looking to our mortal future before us & downwards at the earth we till, not upwards to God & our ungrasped perfection, has been & will always be doomed to weariness, petrifaction & cessation or to a quick & violent supernaturalistic reaction, because this also is for the mass of men a transient impulse
of exaggeration & because it contradicts God's intention in us who has entered in and dwells secret in our Nature compelling us towards Him by an obscure, instinctive & overmastering attraction. Materialistic movements are more unnatural and abnormal than ascetic and negative religions & philosophies; for these lead us upward at least, though they go too furiously fast & far for our humanity, but the materialist under the pretence of bringing us back to Nature, takes us away from her entirely. He forgets or does not see that Nature is only phenomenally Nature, but in reality she is God. The divine element in her is that which she most purely & really is; the rest is only term and condition, process and stage in her whole progressively developed revelation of the secret divinity. He forgets too that Nature is evolving not evolved & what we are now can never be the term of what we shall be hereafter. The supernatural must be by the very logic of things the end & goal of her movement.

Therefore, not to be ensnared, emmeshed and bound by Nature, and not, on the other hand, to be furious with her & destroy her, is the first thing we must learn if we are to be complete Yogins and proceed surely towards our divine perfection. All beings, even the sages, follow after their nature and what shall coercion and torture of it, avail them? Prakritim yanti bhutani, nigrahah kim karishyati? And it is all so useless! Do you feel yourself bound by her and pant for release? In her hand alone is the key which shall unlock your fetters. Does she stand between you & the Lord? She is Sita; pray to her, she will stand aside & show Him to you; but presume not to separate Sita & Rama, to cast her out into some distant Lanca under the guard of giant self-tortures so that you may have Rama to yourself in Ayodhya. Wrestle with Kali, if you will, she loves a good wrestler; but wrestle not with her unlovingly, or in mere disgust & hate; for her displeasure is terrible and though she loves the Asuras, she destroys them. Rather go through her & under her protection, go with a right understanding of her and with a true & unfaltering Will; she will lead you on with whatever circlings, yet surely & in the wisest way, to the All-Blissful Personality & the Ineffable Presence. Nature is the Power of God Himself,
leading these multitudes of beings, through the night & the desert & the tracts of the foeman to their secret & promised heritage.

Supernature, then, is in every way our aim in Yoga; being still natural to the world, to transcend Nature internally so that both internally and externally we may possess and enjoy her as free & lord, swarat and samrat; being still the symbol in a world of symbol-beings, to reach through it to that which is symbolised, to realise the symbol; being still a figure of humanity, a man among men, a living body among living bodies, manus, mental beings housed in that living matter among other embodied mental beings; being & remaining in our outward parts all this that we are apparently, yet to exceed it and become in the body what we are really in the secret self, — God, spirit, supreme & infinite being, pure Bliss of divine joy, pure Force of divine action, pure Light of divine knowledge. Our whole apparent life has only a symbolic value & is good & necessary as a becoming; but all becoming has being for its goal & fulfilment & God is the only being. To become divine in the nature of the world and in the symbol of humanity is the perfection for which we were created.
The Fullness of Yoga — In Condition

We are to exceed our human stature and become divine; but if we are to do this, we must first get God; for the human ego is the lower imperfect term of our being, God is the higher perfect term. He is the possessor of our supernature and without His permission there can be no effectual rising. The finite cannot become infinite unless it perceives its own secret infinity and is drawn by it or towards it; nor can the symbol-being, unless it glimpses, loves and pursues the Real-being in itself, overcome by its own strength the limits of its apparent nature. It is a particular becoming & is fixed in the nature of the symbol that it has become; only the touch of that which is all becomings and exceeds all becomings, can liberate it from the bondage to its own limited Nature. God is That which is the All and which exceeds the All. It is therefore only the knowledge, love and possession of God that can make us free. He who is transcendent, can alone enable us to transcend ourselves; He who is universal can alone enlarge us from our limited particular existence.

In this necessity is the justification of that great & imperishable force of Nature, which Rationalism has unjustly & irrationally despised, Religion. I speak of religion, — not of a creed, church or theology, for all these things are rather forms of religiosity than essence or even always action of religion, — but of that personal and intimate religion, a thing of temper and spirit and life, not of views & formal actions, which draws a man passionately and absorbingly to his own vision of the Supreme or his own idea of something higher than himself which he must follow or become. Without a fervent worship of the Supreme in the heart, a strong aspiration upwards to It in the will or a vehement thirst for it in the temperament, we cannot have the impulse to be other than ourselves or the force to do anything so difficult as the transcending of our own ingrained and possessing
human nature. The prophets have spoken & the Avatars have
descended always for the one purpose, to call us to God, to
inspire us to this great call on our upward straining energies or
else to prepare something in the world which will help to bring
humanity nearer to the goal of its difficult ascending journey.

It may seem at first sight that there is no need for these
religious terms or this religious spirit. If the aim is to become
something superior to man, to evolve a superman out of our-
selves, as man has been evolved out of the ape,—if that state-
ment of the progression be indeed the truth,—the ape out of
inferior animal forms, they again out of mollusc & protoplasm,
jellyfish or vegetable animals, & so to the end of the series, then
what need is there of anything but the training, preferably the
most intelligent & scientific training of our mental, moral and
physical energies till they reach a point when they are transmuted
by the psychical chemistry of Nature into the coming superior
type? But the problem is not so simple, in reality. There are three
errors hidden at the basis of this sceptical question. We mistake
the nature of the operation to be effected, we mistake the nature
of the power & process that works it out, we mistake the nature
of the thing that uses the power & works out the process.

Nature does not propose to man to work out a higher
mental, moral and physical variation-type in the mould of the
present human being,—the symbol we are; it proposes to break
that general type altogether in order to advance to a new symbol-
being which shall be supernatural to present man as present man
is to the animal below him. It is doubtful whether in the pure
human mould Nature can go much farther than she has gone at
present; that she can for instance produce a higher mental type
than Newton, Shakespeare, Caesar or Napoleon, a higher moral
type than Buddha, Christ or St Francis, a higher physical type
than the Greek athlete or to give modern examples, a Sandow or
a Ramamurti. She may seek to bring about a better combination
of mental & moral, or of moral, mental & physical energies;
but is she likely to produce anything much above the level of
Confucius or Socrates? It is more probable & seems to be true
that Nature seeks in this field to generalise a higher level and
The Fullness of Yoga — In Condition

a better combination. Neither need we believe that, even here, her object is to bring all men to the same level; for that can only be done by levelling downwards. Nothing in Nature is free from inequalities except the forms that are the lowest and least developed. The higher the effort accomplished, the more richly endowed the organism of the species, the greater the chances of inequality. In so high and developed a natural movement as Man, equality of individual opportunity is conceivable, equality of natural powers and accomplishment is a chimera. Nor will the generalisation of powers or the increase of material make any difference to the level of natural attainment. All the accumulated discoveries & varied information of the modern scientist will not make him mentally the superior of Aristotle or Socrates; he is neither an acuter mind nor a greater mental force. All the varied activities of modern philanthropy will not produce a greater moral type than Buddha or St Francis. The invention of the motor car will not make up for the lost swiftness & endurance nor gymnastics restore the physical capacity of the Negro or the American Indian. We see therefore the limits of Nature’s possibilities in the human symbol, fixed by the character of the symbol itself and recognised by her in her strivings.

It is still a question whether in these limits the chief preoccupation of Nature is the exhaustion of the possibilities of the human symbol. That is rather man’s preoccupation and therefore the direction she takes when human intellect interferes with her normal progression. Left to herself & even utilising human interferences, she seems bent rather on breaking the mould, than on perfecting it, — only indeed in her more advanced individuals & more daring movements and with due regard to the safety of the general human type, but this is always her method when she wishes to advance to a fresh symbol without destroying the anterior species. The more civilised man becomes, the more she plagues him with moral abnormalities, excesses of vice & virtue and confusions of the very type of vice & virtue; the more he intellectualises, the more he insists on rationality as his utmost bourne, the more she becomes dissatisfied and clamours to him to develop rather his instincts & his intuitions; the more he
strives after health & hygiene, the more she multiplies diseases & insanities of mind and body. He has triumphed over supernaturalism, he has chained her down to the material, human & rational; immediately she breaks out fiercely into unthought-of revivals and gigantic supernaturalisms. Whatever work she is intent on, she will not be baulked in that work by the limited human reason. Through all her vast being she feels the pulsation of a supernatural power, the workings & strivings of a knowledge superior to material reason. She breaks out, therefore, she compels, she insists. Everywhere we see her striving to break the mental, moral & physical type she has created & to get beyond it to some new processes as yet not clearly discerned. She attacks deliberately the sound healthfulness & equilibrium of our normal type of intellectuality, morality & physical being. She is stricken also with a mania of colossalism; colossal structures, colossal combinations, colossal heights & speeds, colossal dreams & ambitions outline themselves everywhere more or less clearly, more or less dimly. Unable as yet to do her will in the individual, she works with masses; unable in the mind, with material forms & inventions; unable in actualities, with hopes & dreams; unable to reproduce or produce Napoleons & super-Napoleons, she generalises a greater reach of human capacity from which they may hereafter emerge more easily, & meanwhile she creates instead Dreadnoughts & Super-dreadnoughts, Trusts & mammoth combines, teems with distance destroying inventions & seems eager & furious to trample to pieces the limitations of space & time she herself has created.

As if to point her finger to the thing she intends, she has accumulated the signs of this process of breaking & rebuilding in the phenomena of genius. It is now common knowledge that genius hardly appears in the human species unattended, unprepared or unaccompanied by abnormalities in the individual body, vitality & mind which contains it, — degeneration, insanity or freak in the heredity which produces it and even disturbance & super-normality in the human environment in which it occurs. The haste of a brilliant generalisation establishes on this basis the paradox that genius itself is a morbid phenomenon of insanity or
degeneration. The true explanation is sufficiently clear. In order to establish genius in the human system, Nature is compelled to disturb & partially break the normality of that system, because she is introducing into it an element that is alien as it is superior to the type which it enriches. Genius is not the perfect evolution of that new & divine element; it is only a beginning or at the highest an approximation in certain directions. It works fitfully & uncertainly in the midst of an enormous mass of somewhat disordered human mentality, vital nervosity, physical animality. The thing itself is divine, it is only the undivine mould in which it works that is to a lesser or greater extent broken & ploughed up by the unassimilated force that works in it. Sometimes there is an element in the divine intruder which lays its hand on the mould & sustains it, so that it does not break at all, nor is flawed; or if there is a disturbance, it is slight and negligible. Such an element there was in Caesar, in Shakespeare, in Goethe.

Sometimes also a force appears to which we can no longer apply the description of genius without being hopelessly inadequate in our terminology. Then those who have eyes to see, bow down and confess the Avatar. For it is often the work of the Avatar to typify already, partly or on the whole, what Nature has not yet effected in the mass or even in the individual, so that his passing may stamp it on the material ether in which we live.

But what is this type of which the great Mother is in labour? What birth will emerge from the cries & throes of this prolonged & mighty pregnancy? A greater type of humanity, it may be said. But in order to understand what we are saying, we must first see clearly what the humanity is which she seeks to surpass. This human symbol, this type we now are is a mental being with a mental ego, working in a vital case by mind always, but upon matter, in matter & through matter. It is limited in its higher workings by its lower instruments. Its basis of mind is egoistic, sensational & determined by experience & environment, its knowledge therefore pursues wider or narrower circles in a fixed and meagre range. Its moral temperament & action is similarly egoistic, sensational, experiential and determined by environment; for this reason it is bound equally to sin & virtue.
and all attempts radically to moralise the race within the limits of its egoistic nature have been & must necessarily, in spite of particular modifications, end in general failure. It is not only a mixed but a confused type, body & vitality interfering with mind & mind both hampered by & hampering body & vitality. Its search for knowledge, founded on sense contact, is a groping like that of a man finding his way in a forest at night; it makes acquaintance with its surroundings by touching, dashing on or stumbling over them; and, although it has an uncertain light of reason given it which partially corrects this disability, yet since reason has also to start from the senses which are consistent falsifiers of values, rational knowledge is not only restricted but pursued by vast dimnesses & uncertainties even in that which it seems to itself to have grasped. It secures a few flowers of truth by rummaging in a thorny hedge of doubts & errors. The actions of the type also are a breaking through thickets, a sanguine yet tormented stumbling forward through eager failures to partial and temporary successes. Immensely superior to all else that Nature had yet effected, this type is yet so burdened with disabilities, that, if it were impossible to break its mould and go forward, there would be much justification for those pessimistic philosophies which despair of Life & see in the Will not to Live humanity's only door of escape admitting to it no other salvation. But Nature is the will of the all-Wise God and she is not working out a reduction of the world to absurdity. She knows her goal, she knows that man as he is at present is only a transitional type; and so far as she can consistently with the survival of the type, she presses forward to what she has seen in God's eternal knowledge as standing beyond. From this ego, she moves towards a universal consciousness, from this limitation to a free movement in infinity, from this twilit & groping mind to the direct sunlit vision of things, from this conflict without issue between vice & virtue to a walking that keeps spontaneously to a God-appointed path, from this broken & grief-besieged action to a joyous & free activity, from this confused strife of our members to a purified, unentangled and harmonious combination, from this materialised mentality to an idealised
& illuminated life, body & mind, from the symbol to reality, from man separated from God to man in God & God in man. In brief, as she has aspired successfully from matter to life, from life to mind & mental ego, so she aspires & with a fated success to an element beyond mind, the vijnana of the Hindus, the self-luminous idea or Truth-self now concealed & superconscious in man and the world, as life was always concealed in matter and mind in life. What this vijnana is, we have yet to see, but through it she knows she can lay firm hold on that highest term of all which is the reality of all symbols, in Spirit, in Sachchidananda.

The aim of Nature is also the aim of Yoga. Yoga, like Nature at its summit, seeks to break this mould of ego, this mould of mentalised life body and materialised mind, in order to achieve ideal action, ideal truth and infinite freedom in our spiritual being. To effect so enormous an end great and dangerous processes have to be used. Those who have been eager on this road or have opened up new paths towards the goal, have had to affront as a possibility frequently realised loss of reason, loss of life & health or dissolution of the moral being. They are not to be pitied or scorned even when they succumb; rather are they martyrs for humanity’s progress, far more than the lost navigator or the scientist slain by the dangers of his investigation. They prepare consciently the highest possible achievement towards which the rest of humanity instinctively & unconsciously moves. We may even say that Yoga is the appointed means Nature holds in reserve for the accomplishment of her end, when she has finished her long labour of evolving at least a part of humanity temperamentally equal to the effort and intellectually, morally & physically prepared for success. Nature moves toward supernature, Yoga moves towards God; the world-impulse & the human aspiration are one movement and the same journey.
Nature

If this is the nature of the operation to be effected, not a perfection of the present human mould but a breaking of it to proceed to a higher type, what then is the power & process that works it out? What is this Nature of which we speak so fluently?\(^1\) We habitually talk of it as if it were something mighty & conscious that lives and plans; we credit it with an aim, with wisdom to pursue that aim and with power to effect what it pursues. Are we justified in our language by the actualities of the universe or is this merely our inveterate habit of applying human figures to non-human things and the workings of intelligence to non-intelligent processes which come right because they must and not because they will and produce this magnificent ordered universe by some dumb blind and brute necessity inconceivable in its origin & nature to intelligent beings? If so, this blind brute force has produced something higher than itself, something which did not exist preconceived in its bosom or in any way belong to it. We cannot understand what being & Nature are, not because we are as yet too small and limited, but because we are too much above being & Nature. Our intelligence is a luminous freak in a darkness from which it was impossibly produced, since nothing in that darkness justified itself as a cause of its creation. Unless mind was inherent in brute matter, — & in that case matter is only apparently brute, — it was impossible for matter to produce mind. But since this leads us to an impossibility, it cannot be the truth. We must suppose then, if matter is brute, that mind is also brute. Intelligence is an illusion; there is nothing but a shock of

\(^1\) The following sentence was written at the beginning of this essay during revision. It was not worked into the text, and so is given here as a footnote:
Nature is Force of Consciousness in infinite Being. The opinion that sees a mechanical world in which consciousness is only an exceptional figure of things, is a hasty conclusion drawn from imperfect data.
material impacts creating vibrations & reactions of matter which translate themselves into the phenomena of intelligence. Knowledge is only a relation of matter with matter, and is intrinsically neither different nor superior to the hurtling of atoms against each other or the physical collision of two bulls in a meadow. The material agents involved & phenomenon produced are different & therefore we do not call the recoil of one horned forehead from another an act of knowledge or intelligence, but the thing that has happened is intrinsically the same. Intelligence is itself inert & mechanical & merely the physiological result of a physiological movement & has nothing in it psychical or mental in the time-honoured sense of the words soul and mind. This is the view of modern scientific rationalism, — put indeed in other language than the scientist’s, put so as to bring out its logical consequences & implications, but still effectively the modern account of the universe.

In that account the nature of a thing consists of its composition, the properties contained in that composition and the laws of working determined by those properties; as for [example] iron is composed of certain elementary substances, possesses as a consequence of its composition certain properties, such as hardness etc. and under given circumstances will act in a given manner as the result of its properties. Applying this analysis on a larger scale we see the universe as the composition of certain brute forces working in certain material substances, possessed in itself and in those substances of certain primary & secondary, general & particular properties and working as a result by certain invariable tendencies & fixed processes which we call by a human figure Nature’s Laws. This is Nature. When searchingly analysed she is found to be a play of two entities, Force & Matter; but these two, if the unitarian view of the universe is correct, will some day be proved to be only one entity, either only Matter or only Force.

Even if we accept this modern view of the universe, which, it is not at all dangerous to prophesy, will have disappeared in the course of a century into a larger synthesis, there is still something to be said about the presence or absence of intelligence
in Nature. In what after all does intelligence consist, what are its composition, properties, laws? What in its circumstances is human intelligence, the only kind of intelligence which we are in a position to study from within & therefore understand? It is marked by three qualities or processes, the power & process of adaptation towards an end, the power & process of discrimination between the impacts on its senses & the power & process of mentally conscious comprehension. Human intelligence is, to put it briefly, teleological, discriminative and mentally conscious. About other than human beings, about animals, trees, metals, forces, we can say nothing from inside, we can only infer the absence or presence of these elements of consciousness from the evidence collected by an external observation. We cannot positively say, having no internal evidence, that the tree is not a mind imprisoned in matter and unable to express itself in the media it has at its disposal; we cannot say that it does not suffer the reactions of pleasure and pain; but from the external evidence we infer to the contrary. Our negative conclusion is probable, it is not certain. It may be itself negatived in the future march of knowledge. But still, taking the evidence as it stands, what are the facts we actually arrive at in this comparison of intelligent & non-intelligent Nature?

First, Nature possesses in a far higher degree than man the teleological faculty & process. To place an aim before one, to combine, adapt, modify, unify, vary means & processes in order to attain that end, to struggle against and overcome difficulties, to devise means to circumvent difficulties when they cannot be overcome, this is one of the noblest & divinest parts of human intelligence. But its action in man is only a speciality of its universal action in Nature. She works it out in man partly through the reason, in animals with very little & rudimentary reason, mainly through instinct, memory, impulse & sensation, in plants & other objects with very little & rudimentary reason, mainly through impulse & mechanical or, as we call it, involuntary action. But throughout there is the end & the adaptation to the end, & throughout the same basic means are used; for in man also it is only for a selection of his ends & processes that the reason
Nature is used; for the greater part she uses the animal means, memory, impulse, sensation, instinct,—instincts differently directed, less decisive & more general than the animal instincts but still in the end & for their purpose as sure; & for yet another part she uses the same merely mechanical impulse & involuntary action precisely as in her mistermed inanimate forms of existence. Let us not say that the prodigality of Nature, her squandering of materials, her frequent failure, her apparent freaks and gambollings are signs of purposelessness and absence of intelligence. Man with his reason is guilty of the same laches and wanderings.

But neither Man nor Nature is therefore purposeless or unintelligent. It is Nature who compels Man himself to be other than too strenuously utilitarian, for she knows better than the economist & the utilitarian philosopher. She is an universal intelligence & she has to attend, not only in the sum, but in each detail, to the universal as well as to the particular effect; she has to work out each detail with her eye on the group and not only on the group but the whole kind & not only on the whole kind but the whole world of species. Man, a particular intelligence limited by his reason, is incapable of this largeness; he puts his particular ends in the forefront and neither sees where absorption in them hurts his general well being nor can divine where they clash with the universal purpose. Her failures have an utility—we shall see before long how great an utility; her freaks have a hidden seriousness. And yet above all she remembers that beyond all formal ends, her one great object is the working out of universal delight founded on arrangement as a means, but exceeding its means. Towards that she moves; she takes delight on the way, she takes delight in the work, she takes delight, too, beyond the work.

But in all this we anticipate, we speak as if Nature were self-conscious; what we have arrived at is that Nature is teleological, more widely than man, more perfectly than man, & man himself is only teleological because of that in Nature & by the same elementary means & processes as the animal & the plant, though with additions of fresh means peculiar to mind. This, it may be said, does not constitute Intelligence,—for intelligence
is not only teleological, but discriminative & mentally conscious. Mechanical discrimination, Nature certainly possesses in the highest degree; without it her teleological processes would be impossible. The tendril growing straight through the air comes into contact with a rope, a stick, the stalk of a plant; immediately it seizes it as with a finger, changes its straight growth for a curled & compressive movement, & winds itself round & round the support. What induces the change? what makes it discriminate the presence of a support & the possibility of this new movement? It is the instinct of the tendril and differs in no way, intrinsically, from the instinct of the newborn pup seizing at once on its mother’s teats or the instinct of a man in his more mechanical needs & actions. We see the moon-lotus open its petals to the moon, close them to the touch of the day. In what does this discriminative movement differ from the motion of the hand leaping back from the touch of a flame, or from the recoiling movement of disgust & displeasure in the nerves from an abhorrent sight or from the recoiling movement of denial & uncongeniality in the mind from a distasteful idea or opinion? Intrinsically, there seems to be no difference; but there is a difference in circumstance. One is not attended with mental self-consciousness, the others are attended with this supremely important element. We think falsely that there is no will in the action of the tendril and the lotus, and no discrimination. There is a will, but not mentalised will; there is discrimination but not mentalised discrimination. It is mechanical, we say,—but do we understand what we mean when we say it,—& we give other names, calling will force, discrimination a natural reaction or an organic tendency. These names are only various masks concealing an intrinsic identity.

Even if we could go no farther, we should have gained an enormous step; for we have already the conception of the thing we call Nature as possessing, containing or identical with a great Force of Will placing before itself a vast end & a million complexly related incidental ends, working them out by contrivance, adaptation, arrangement, device, using an unfailing discrimination & vastly fulfilling its complex work. Of this great
Force human intelligence would only be a limited and inferior movement, guided and used by it, serving its ends even when it seems to combat its ends. We may deny Intelligence to such a Power, because it does not give signs of mental consciousness & does not in every part of its works use a human or mental intelligence; but our objection is only a metaphysical distinction. Practically, looking out on life & not in upon abstract thought, we can, if we admit this conception, rely on it that the workings of this unintelligent discrimination will be the same as if they were the workings of a universal Intelligence & the aim & means of the mechanical will the aims & means which would be chosen by an Almighty Wisdom. But if we arrive at this certainty, does not Reason itself demand of us that we should admit in Nature or behind it a universal Intelligence and an Almighty Wisdom? If the results are such as these powers would create, must we not admit the presence of these powers as the cause? Which is the truer Rationalism, to admit that the works of Intelligence are produced by Intelligence or to assert that they are produced by a blind Machine unconsciously working out perfection? to admit that the emergence of overt intelligence in humanity is due to the specialised function of a secret intelligence in the universe or to assert that it is the product of a Force to which the very principle of Intelligence is absent? To justify the paradox by saying that things are worked out in a particular way because it is their nature to be worked out in that way, is to play the fool with reason; for it does not carry us an inch beyond the mere fact that they are so worked out, one knows not why.

The true reason for the modern reluctance to admit that Nature has intelligence & wisdom or is intelligence & wisdom, is the constant association in the human mind of these things with mentally self-conscious personality. Intelligence, we think, presupposes someone who is intelligent, an ego who possesses & uses this intelligence. An examination of human consciousness shows that this association is an error. Intelligence possesses us, not we intelligence; intelligence uses us, not we intelligence. The mental ego in man is a creation & instrument of intelligence and intelligence itself is a force of Nature manifesting itself in a
rudimentary or advanced state in all animal life. This objection, therefore, vanishes. Not only so, but Science herself by putting the ego in its right place as a product of mind has shown that Intelligence is not a human possession but a force of Nature & therefore an attribute of Nature, a manifestation of the universal Force.

The question remains, is it a fundamental & omnipresent attribute or only a development manifested in a select minority of her works? Here again, the difficulty is that we associate intelligence with an organised mental consciousness. But let us look at & interrogate the facts which Science has brought into our ken. We will glance at only one of them, the fly catching plant of America. Here is a vegetable organism which has hunger, — shall we say, an unconscious hunger, which needs animal food, which sets a trap for it, as the spider sets it, which feels the moment the victim touches the trap, which immediately closes & seizes the prey, eats & digests it & lies in wait for more. These motions are exactly the motions of the spider's mental intelligence altered & conditioned only by the comparative immobility of the plant & confined only, so far as we can observe, to the management of this supreme vital need & its satisfaction. Why should we attribute mental intelligence to the spider & none to the plant? Granted that it is rudimentary, organised only for special purposes, still it would seem to be the same natural Force at work in the spider & plant, intelligently devising means to an end & superintending the conduct of the device. If there is no mind in the plant, then, irresistibly, mental intelligence & mechanical intelligence are one & the same thing in essence, & the tendril embracing its prop, the plant catching its prey & the spider seizing its victim are all forms of one Force of action, which we may decline to call Intelligence if we will, but which is obviously the same thing as Intelligence. The difference is between Intelligence organised as mind, & Intelligence not organised but working with a broad elementary purity more unerring, in a way, than the action of mind. In the light of these facts the conception of Nature as infinite teleological & discriminative Force of Intelligence unorganised & impersonal because
superior to organisation & personality becomes the supreme probability, the mechanical theory is only a possibility. In the absence of certainties Reason demands that we should accept the probable in preference to the possible and a harmonious & natural in preference to a violent and paradoxical explanation.

But is it certain that in this Intelligence & its works Mind is a speciality and Personality — as distinguished from mental ego — is entirely absent except as an efflorescence & convenience of Mind? We think so, because we suppose that where there are no animal signs of consciousness, there consciousness cannot and does not exist. This also may be an assumption. We must remember that we know nothing of the tree & the stone except its exterior signs of life or quiescence; our internal knowledge is confined to the phenomena of human psychology. But even in this limited sphere there is much that should make us think very deeply and pause very long before we hasten to rash negative assertions. A man sleeps, dreamlessly, he thinks; but we know that all the time consciousness is at work within him, dreaming, always dreaming; of his body & its surroundings he knows nothing, yet that body is of itself conducting all the necessary operations of life. In the man stunned or in trance there is the same phenomenon of a divided being, consciousness mentally active within apart from the body which is mentally even as the tree & the stone, but vitally active & functioning like the tree. Catalepsy presents a still more curious phenomenon of a body dead & inert like the stone, not even vitally active like the tree, but a mind perfectly aware of itself, its medium & its surroundings, though no longer in active possession of the medium and therefore no longer able to act materially on its surroundings. In face of these examples how can we assert that there is no life in the stone, no mind in stone or tree? The premise of the syllogism by which science denies mind to the tree or life to the stone, viz that where there is no outward sign of life or conscious mentality, life & mentality do not exist, is proven to be false. The possibility, even a certain probability presents itself, — in view of the unity of Nature & the omnipresent intelligence in her works, that the tree & the stone
are in their totality just such a divided being, a form not yet penetrated & possessed by conscious mind, a conscious intelligence within dreaming in itself or, like the cataleptic, aware of its surroundings, but because not yet possessed of its medium (the intelligence in the cataleptic is temporarily dispossessed) unable to show any sign of life or of mentality or to act aggressively on its surroundings.

We do not need to stop at this imperfect probability, for the latest researches of psychology make it almost overwhelming in its insistence & next door to the actual proof. We now know that within men there is a dream self or sleep self other than the waking consciousness, active in the stunned, the drugged, the hypnotised, the sleeping, which knows what the waking mind does not know, understands what the waking mind does not understand, remembers accurately what the waking mind has not even taken the trouble to notice. Who is this apparent sleeper in the waking, this waker in the sleeping in comparison with whose comprehensive attentiveness & perfect observation, memory and intelligence our waking consciousness is only a fragmentary & hasty dream? Mark this capital point that this more perfect consciousness within us is not the product of evolution,—nowhere in the evolved & waking world is there such a being who remembers & repeats automatically the sounds of a foreign language which is unnoticed jabbering to the instructed mind, solves spontaneously problems from which the instructed mind has retired baffled & weary, notices everything, understands everything, recalls everything. Therefore this consciousness within is independent of evolution and, consequently, we may presume, anterior to evolution. Esha supteshu jagarti, says the Katha Upanishad, This is the Waker in all who sleep.

This new psychological research is only in its infancy & cannot tell us what this secret consciousness is, but the knowledge gained by Yoga enables us to assert positively that this is the complete mental being within who guides life & body, manomayah pranashriraneta. He it is who conducts our evolution & awakes mind out of life & is more & more getting possession of this
vitalised human body, his medium & instrument, so that it may become what it is not now, a perfect instrument of mentality. In the stone he also is and in the tree, in those sleepers also there is one who wakes; but he has not in those forms got possession yet of the instrument for the purposes of mind; he can only use them for the purposes of vitality in its growth or in its active functioning.

We see, therefore, modern psychology, although it still gets away from the only rational & logical conclusion possible on its data, marching inevitably & under the sheer compulsion of facts to the very truths arrived at thousands of years ago by the ancient Rishis. How did they arrive at them? Not by speculation, as the scholars vainly imagine, but by Yoga. For the great stumbling block that has stood in the way of Science is its inability to get inside its object, the necessity under which it labours of building on inferences from external study,— & all its desperate & cruel attempts to make up the deficiency by vivisection or other ruthless experiments cannot remedy the defect. Yoga enables us to get inside the object by dissolving the artificial barriers of the bodily experience & the mental ego-sense in the observer. It takes us out of the little hold of personal experience and casts us into the great universal currents; takes us out of the personal mind sheath & makes [us] one with universal self and universal mind. Therefore were the ancient Rishis able to see what now we are beginning again to glimpse dimly that not only is Nature herself an infinite teleological and discriminative impersonal Force of Intelligence or Consciousness, prajna prasrita purani, but that God dwells within & over Nature as infinite universal Personality, universal in the universe, individualised as well as universal in the particular form, or self-consciousness who perceives, enjoys & conducts to their end its vast & complex workings. Not only is there Prakriti; there is also Purusha.

So far, then, we succeed in forming some idea of the great force which is to work out our emergence from our nature to our

---

2 Intelligent Consciousness that went forth in the beginning. Swetaswatara Upanishad.
supernature. It is a force of Conscious Being manifesting itself in forms & movements & working out exactly as it is guided, from stage to stage, the predetermined progress of our becoming & the Will of God in the world.
Maya

The world exists as symbol of Brahman; but the mind creates or accepts false values of things and takes symbol for essential reality. This is ignorance or cosmic illusion, the mistake of the mind & senses, from which the Magician Himself, Master of the Illusion, is calling on us to escape. This false valuation of the world is the Maya of the Gita and can be surmounted without abandoning either action or world-existence. But in addition, the whole of universal existence is in this sense an illusion of Maya that it is not an unchanging transcendent and final reality of things but only a symbolical reality; it is a valuation of the reality of Brahman in the terms of cosmic consciousness. All these objects we see or are mentally aware of as objectively existing, are only forms of consciousness. They are the thing-in-itself turned first into terms & ideas born of a movement or rhythmic process of consciousness and then objectivised, in consciousness itself and not really external to it. They have therefore a fixed conventional reality, but not an eternally durable essential reality; they are symbols, not altogether the thing symbolised, means of knowledge, not altogether the thing known. To look at it from another point of view Existence or Brahman has two fundamental states of consciousness, cosmic consciousness and transcendent consciousness. To cosmic consciousness the world is real as a direct first term expressing the inexpressible; to transcendent consciousness the world is only a secondary & indirect term expressing the inexpressible. When I have the cosmic consciousness, I see the world as my Self manifested; in transcendent consciousness I see the world not as the manifestation of my Self but as a manifestation of something I choose to be to my Self-consciousness. It is a conventional term expressing me which does not bind me; I could dissolve it and express myself otherwise. It is a vocable of a particular language expressing
something in speech or writing which could be equally well expressed by quite another vocable in another language. I say tiger in English; I might equally have spoken Sanscrit & used the word shardula; it would have made no difference to the tiger or to myself, but only to my play with the symbols of speech and thought. So it is with Brahman & the universe, the Thing in itself and its symbols with their fixed conventional values, some of which are relative to the general consciousness & some to the individual consciousness of the symbol-being. Matter, Mind, Life for instance are general symbols with a fixed general value to God in His cosmic consciousness; but they have a different individual value, make a different impression or represent themselves differently, as we say, to myself, to the ant or to the god and angel. This perception of the purely conventional value of form & name in the Universe is expressed in metaphysics by the formula that the world is a creation of Para Maya or supreme Cosmic Illusion.

It does not follow that the world is unreal or has no existence worth the name. None of the ancient Scriptures of Hinduism affirms the unreality of the world, nor is it a logical consequence of the great but remote and difficult truth words are so inadequate to express. We must remember that all these terms, Maya, illusion, dream, unreality, relative reality, conventional value, are merely verbal figures and must not be pressed with a too literal scholastic or logical insistence. They are like the paint-brush hurled by the painter at his picture in desperation at not arriving at the effect he wanted; they are stones thrown at the truth, not the truth itself. We shall see this clearly enough when we come to look at the Cosmos from quite another standpoint, — the standpoint not of Maya, but Lila.¹ But certain great metaphysical minds, not perceiving sufficiently that words like everything else have only conventional values and are symbols of a truth which is in itself inexpressible, have drawn from the

¹ Illusion is itself an illusion. That which seems to the soul escaping from ignorance to be Maya, an illusion or dream, is seen by the soul already free to be Lila of God and the spirit’s play.
ideas suggested by these words, the most rigorous and concrete conclusions. They have condemned the whole world as a miserable & lying dream, all the more hateful & profitless for a certain element of ineffugable reality which the more clear-sighted part of their minds was compelled to realise & partially to admit. The truth in their premises has made their doctrines a mighty instrument for the liberation of great & austere souls, the error in their conclusion has afflicted humanity with the vain & barren gospel of the vanity not only of false mundane existence, but of all mundane existence. In the extreme forms of this view both nature & supernature, man & God are lies of consciousness, myths of a cosmic dream & not worth accepting. Amelioration is a chimera, divinity a lure and only absorption in a transmundane impersonal existence worth pursuing. The worshippers of God, the seekers after human perfection, those who would raise humanity from nature to supernature, find in their path two great stumbling blocks, on one side, the lower trend of Nature to persist in its past gains which represents itself in the besotted naturalism of the practical man & the worldling and on the other, this grand overshooting of the mark represented not only by the world-fleeing ascetic, who is after all, within his rights, but by the depressing pessimism of the ignorant who mean neither to flee the world, nor, if they did, could rise to the real grandeur of asceticism, but are still imbued intellectually & overshadowed in temperament by these high & fatal doctrines. A better day will dawn for India when the shadow is lifted and the Indian mental consciousness without renouncing the truth of Maya, perceives that it is only a partial explanation of existence. Mundane existence is not indispensable either to God’s being or to God’s bliss, but it is not therefore a vanity; nor is a liberated mundane existence — liberated in God — either a vain or a false existence.

The ordinary doctrine of Maya is not a simple truth, but proceeds upon three distinct spiritual perceptions. The first & highest is this supreme perception that the world is a mass of consciousness-symbols, having a conventional value, beings exist only in Brahman’s self-consciousness & individual personality & ego-sense are only symbols & terms in the universal
symbol-existence. We have said that & we shall see that we are not compelled by this perception to set down the world as a myth or a valueless convention. Nor would the Mayavadin himself have been brought to this extreme conclusion if he had not brought into the purity of this highest soul-experience his two other perceptions. The second of these, the lowest, is the perception of the lower or Apara Maya which I have indicated in the opening of this essay — the perception of the system of false values put by mind & sense on the symbol facts of the universe. At a certain stage of our mental culture it is easy to see that the senses are deceiving guides, all mental opinions & judgments uncertain, partial & haunted & pursued by doubt, the world not a reality in the sense in which the mind takes it for a reality, in the sense in which the senses only occupied by & only careful of the practical values of things, their vyavaharic artha, deal with it as a reality. Reaching this stage the mind arrives at this perception that all its values for the world being false, perhaps it is because there is no true value or only a true value not conceivable to the mind, and from this idea it is easy for our impatient human nature to stride to the conclusion that so it is & all existence or all world-existence at least is illusory, a sensation born of nothingness, a play of zeros. Hence Buddhism, the sensational Agnostic philosophies, Mayavada. Again, it is easy at a certain stage of moral culture to perceive that the moral values put by the emotions, passions and aspirations on actions & experiences are false values, that the objects of our sins are not worth sinning for & even that our principles & values do not stand in the shock of the world’s actualities, but are, they too, conventional values which we do not find to be binding on the great march of Nature. From this it is natural & right to come to vairagya or dissatisfaction with a life of false valuations and very easy to stride forward, again in the impatience of our imperfect human nature, to the consummation of an entire vairagya, not only dissatisfaction with a false moral life, but disgust with life of any sort & the conclusion of the vanity of world-existence. We have a mental vairagya, a moral vairagya and to these powerful motives is added in the greater types the most powerful of all, spiritual
vairagya. For at a certain stage of spiritual culture we come to the perception of the world as a system of mere consciousness values in Parabrahman or to a middle term, the experience, which was probably the decisive factor in the minds of great spiritual seekers like Shankara, of the pure & bright impersonal Sachchidananda beyond, unaffected by & apparently remote from all cosmic existence. Observing intellectually through the mind this great experience, the conclusion is natural & almost inevitable that this Pure & Bright One regards the universe as a mirage, an unreality, a dream. But these are only the terms, the word-values & conventional idea-values into which mind then translates this fact of unaffected transcendence; & it so translates it because these are the terms it is itself accustomed to apply to anything which is beyond it, remote from it, not practically affecting it in tangible relations. The mind engrossed in matter at first accepts only an objective reality; everything not objectivised or apparently capable of some objective expression it calls a lie, a mirage, a dream, an unreality or, if it is favourably disposed an ideal. When, afterwards, it corrects its views, the first thing it does is to reverse its values; coming into a region & level where life in the material world seems remote, unspiritual or apparently not capable of spiritual realisation, it immediately applies here its old expressions dream, mirage, lie, unreality or mere false idea and transfers from object to spirit its exclusive & intolerant use of the word-symbol reality. Add to this mental translation into its own conventional word-values of the fact of unaffected transcendence the intellectual conclusions & temperamental repulsions of mental & moral vairagya, both together affecting & disfiguring the idea of the world as a system of consciousness values and we have Mayavada.
Section Four

1914–1919
The Beginning and the End

Who knows the beginning of things or what mind has ever embraced their end? When we have said a beginning, do we not behold spreading out beyond it all the eternity of Time when that which has begun was not? So also when we imagine an end our vision becomes wise of endless Space stretching out beyond the terminus we have fixed. Do even forms begin and end? Or does eternal Form only disappear from one of its canvases?

* * *

The experiment of human life on an earth is not now for the first time enacted. It has been conducted a million times before and the long drama will again a million times be repeated. In all that we do now, our dreams, our discoveries, our swift or difficult attainments we profit subconsciously by the experience of innumerable precursors and our labour will be fecund in planets unknown to us and in worlds yet uncreated. The plan, the peripeties, the denouement differ continually, yet are always governed by the conventions of an eternal Art. God, Man, Nature are the three perpetual symbols.

The idea of eternal recurrence affects with a shudder of alarm the mind entrenched in the minute, the hour, the years, the centuries, all the finite's unreal defences. But the strong soul conscious of its own immortal stuff and the inexhaustible ocean of its ever-flowing energies is seized with the thrill of an inconceivable rapture. It hears behind the thought the childlike laughter and ecstasy of the Infinite.

God, Man, Nature, what are these three? Whence flow their divergences? To what ineffable union advances the ever-increasing sum of their contacts? Let us look beyond the hours
and moments; let us tear down the hedge of the years and the concept-wall of centuries and millenniums and break out beyond the limits of our prison-house. For all things seek to concentrate our view on the temporal interests, conceptions and realisations of our humanity. We have to look beyond them to know that which they serve and represent. Nothing in the world can be understood by itself, but only by that which is beyond it. If we would know all, we must turn our gaze to that which is beyond all. That being known all else is comprehended.

*   *

A beginningless and endless eternity and infinity in which divisible Time and Space manage to subsist is the mould of existence. They succeed in subsisting because they are upheld by God’s view of Himself in things.

God is all existence. Existence is a representation of ineffable Being. Being is neither eternal nor temporary, neither infinite nor limited, neither one nor many; it is nothing that any word of our speech can describe nor any thought of our mentality can conceive. The word existence unduly limits it; eternity & infinity are too petty conceptions; the term Being is an x representing not an unknown but an unknowable value. All values proceed from the Brahman, but it is itself beyond all values.

This existence is an incalculable Fact in which all possible opposites meet; its opposites are in truth identities.

It is neither one nor many and yet both one and many. Numberlessness increases in it and extends till it reaches unity; unity broken cannot stop short of numberlessness.

It is neither personal nor impersonal and yet at once personal and impersonal. Personality is a fiction of the impersonal; impersonality the mask of a Person. That impersonal Brahman was all the time a world-transcendent Personality and universal Person, is the truth of things as it is represented by life and consciousness. “I am” is the eternal assertion. Analytic thought
gets rid of the I, but the Am remains and brings it back. Materialism changes “I am” into “It is”, and when it has done so, has changed nothing. The Nihilist gets rid of both Am and Is only to find them waiting for him beyond on either side of his negation.

When we examine the Infinite and the Finite, Form and the Formless, the Silence and the Activity, our oppositions are equally baffled. Try however hard we will, God will not allow us to exclude any of them from His fathomless universality. He carries all Himself with Him into every transcendence.

*  
*  
*  

All this is Infinity grasped by the Finite and the Finite lived by the Infinite.

The finite is a transience or a recurrence in the infinite, therefore Infinity alone is utterly real. But since that Real casts always this shadow of itself and since it is by the finite that its reality becomes conceivable, we must suppose that the phenomenon also is not a fiction.

The Infinite defines itself in the finite, the finite conceives itself in the Infinite. Each is necessary to the other’s complete joy of being.

The Infinite pauses always in the finite; the finite arrives always in the Infinite. This is the wheel that circles forever through Time and Eternity.

If there were nothing to be transcended, the Transcendent would be incomplete in its own conception.

What is the value of the Formless unless it has stooped to Form? And on the other hand what truth or value has any form except to represent as in a mask the Indefinable and Invisible?

From what background have all these numberless forms started out, if not from the termless profundities of the Incommensurable? He who has not lost his knowledge in the Unknowable, knows nothing. Even the world he studies so sapiently, cheats and laughs at him.
When we have entered into the Unknowable, then all this other knowledge becomes valid. When we have sacrificed all forms into the Formless, then all forms become at once negligible and infinitely precious.

For the rest, that is true of all things. What we have not renounced, has no worth. Sacrifice is the great revealer of values.

As all words come out of the Silence, so all forms come out of the Infinite.

When the word goes back into the silence is it extinct for ever or does it dwell in the eternal harmony? When a soul goes back to God is it blotted out from existence or does it know and enjoy that into which it enters?

Does universe ever end? Does it not exist eternally in God's total idea of His own being?

Unless the Eternal is tired out by Time as by a load, unless God suffers loss of memory, how can universe cease from being?

Neither for soul nor universe is extinction the goal, but for one it is infinite self-possessing and for the other the endless pursuit of its own immutably mutable rhythms.

Existence, not annihilation is the whole aim and pursuit of existence.

If Nothing were the beginning Nothing also would be the end; but in that case Nothing also would be the middle.

If indiscriminable unity were the beginning it would also be the end. But then what middle term could there be except indiscriminable unity?

There is a logic in existence from which our Thought tries to escape by twisting and turning against its own ultimate necessity, as if a snake were to try to get away from itself by coiling round its own body. Let it cease coiling and go straight
to the root of the whole matter, that there is no first nor last, no beginning nor ending, but only a representation of successions and dependences.

Succession and dependence are laws of perspective; they cannot be made a true measure of that which they represent.

Precisely because God is one, indefinable and beyond form, therefore He is capable of infinite definition and quality, realisation in numberless forms and the joy of endless self-multiplication. These two things go together and they cannot really be divided.

* *
* *
The Hour of God

There are moments when the Spirit moves among men and the breath of the Lord is abroad upon the waters of our being; there are others when it retires and men are left to act in the strength or the weakness of their own egoism. The first are periods when even a little effort produces great results and changes destiny; the second are spaces of time when much labour goes to the making of a little result. It is true that the latter may prepare the former, may be the little smoke of sacrifice going up to heaven which calls down the rain of God’s bounty. Unhappy is the man or the nation which, when the divine moment arrives, is found sleeping or unprepared to use it, because the lamp has not been kept trimmed for the welcome and the ears are sealed to the call. But thrice woe to them who are strong and ready, yet waste the force or misuse the moment; for them is irreparable loss or a great destruction.

In the hour of God cleanse thy soul of all self-deceit and hypocrisy and vain self-flattering that thou mayst look straight into thy spirit and hear that which summons it. All insincerity of nature, once thy defence against the eye of the Master and the light of the ideal, becomes now a gap in thy armour and invites the blow. Even if thou conquer for the moment, it is the worse for thee, for the blow shall come afterwards and cast thee down in the midst of thy triumph. But being pure cast aside all fear; for the hour is often terrible, a fire and a whirlwind and a tempest, a treading of the winepress of the wrath of God; but he who can stand up in it on the truth of his purpose is he who shall stand; even though he fall, he shall rise again, even though he seem to pass on the wings of the wind, he shall return. Nor let worldly prudence whisper too closely in thy ear; for it is the hour of the unexpected, the incalculable, the immeasurable. Mete not the
power of the Breath by thy petty instruments, but trust and go forward.

But most keep thy soul clear, even if for a while, of the clamour of the ego. Then shall a fire march before thee in the night and the storm be thy helper and thy flag shall wave on the highest height of the greatness that was to be conquered.
Beyond Good and Evil

God is beyond good and evil; man moving Godwards must become of one nature with him. He must transcend good and evil.

God is beyond good and evil, not below them, not existing and limited by them, not even above them, but in a more absolute sense exceedent and transcendent of the ideas of good and evil. He exceeds them in his universality; they exist in him, but the values of good and evil which we give to things is not their divine or universal value, they are only their practical value created by us in our psychological and dynamic dealings with life. God recognises them and seems to deal with us on the basis of this valuation of life, but only to such an extent as may serve his purpose in Nature. In his universal action he is not limited by them. But into his transcendent being of which his highest universal is the image, they do not at all enter; there in the highest universal which is to us transcendent is only the absolute good of which both our good and evil have in them certain differentiated elements. Neither our good nor our evil are or can of themselves give the absolute good; both have to be transformed, evil into good, good into pure and self-existent good, before they can be taken up into it.

This explains the nature of the universe which would otherwise be inexplicable, inconsistent with the being of God, a forcefully inconscient and violently active enigma. God must be beyond limitation by our ideas of good, otherwise the universe such as it is could not exist whether as the partly manifested being of a divine Existence or a thing created or permitted by a divine Will. He cannot, either, be evil, otherwise in man, his highest terrestrial creature or his highest terrestrial manifestation, there could not be this dominant idea of good and this stream of tendency towards righteousness. He cannot be a mixture

www.holybooks.com
of good and evil, whether a self-perplexed and struggling or a mysteriously ordered double principle, Ormuzd and Ahriman, or at least he cannot be limited by this duality, for there is much in the universe which is neither good nor evil. Perhaps the greatest part of the totality is either supramoral or inframoral or simply amoral. Good and evil come in with the development of mental consciousness; they exist in their rudimentary elements in the animal and primitive human mind, they develop with the human development. Good and evil are things which arrive in the process of the evolution; there is then the possibility that they will disappear in the process of the evolution. If indeed they are essential to its highest possible point of culmination, then they will remain; or if one of them be essential and the other non-essential, then that one will remain and its opposite will disappear.
The Divine Superman

This is thy work and the aim of thy being and that for which thou art here, to become the divine superman and a perfect vessel of the Godhead. All else that thou hast to do, is only a making thyself ready or a joy by the way or a fall from thy purpose. But the goal is this and the purpose is this and not in power of the way and the joy by the way but in the joy of the goal is the greatness and the delight of thy being. The joy of the way is because that which is drawing thee is also with thee on thy path and the power to climb was given thee that thou mightest mount to thy own summits.
